TO THE TRADE

Whose Patronage We Solicit.

WE ARE SURE that you will appreciate **THE NEW GOODS**, which are offered on the following pages:

We are now in a position to offer better inducements to our customers than any other manufacturer in Canada, and can prove it if you will take the time to investigate.

In competition with other first-class manufacturers, on all patterns of like grades, sizes, weights and finish considered, **we will not be undersold.** Our plant being the newest and embodying all modern conveniences, we claim it to be the "MODEL STOVE PLANT," with advantages that enable us to economize largely in the cost of manufacturing. We use only the best material and most skilled labor in making our goods, which is creating for them **first place** among intelligent buyers.

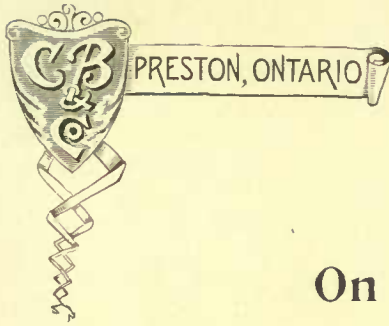

ANNOUNCEMENT.

For the accommodation of the Manitoba and North-West trade we have established an agency in Winnipeg under the management of Messrs. Wilson & Co. They will carry a complete line of our goods, carefully selected according to the locality for which they are required.

This will enable dealers to obtain goods in any quantity on short notice. Manitoba and North-West correspondence should be addressed to MESSRS. WILSON & CO., P. O. Drawer 1406, Winnipeg.

TERMS

On Stoves, Ranges and Hollow-ware.

OUR MONTHS, from end of month in which goods are shipped. All accounts to be settled by note or cash. If paid within 30 days from end of current month, 5 per cent. will be allowed; within 45 days, 3 per cent.; within 60 days, 2 per cent.; within 90 days, 1 per cent.

Goods supplied during the months of July and August will date as if shipped in September.

Freight will be allowed, as heretofore, on Stoves and Hollow-ware, but not on repairs when shipped alone. All breakages in transit should be referred to us promptly for adjustment. The amount of freight must in all cases be deducted before cash discount is calculated.

Repair accounts, net cash 30 days.

All overdue accounts subject to sight drafts.

Interest at the rate of 8 per cent. will be charged on all renewals and overdue accounts.

We ship no goods "on commission" or to be paid for when sold.

The Perfect Reservoir Range.

FOR COAL OR WOOD.

HIS RANGE is a general favorite and too well known to require much explanation. We might, however say, that it is a very successful and quick baking Range in all respects and gives excellent satisfaction everywhere. It is also very artistic, elegant and attractive. When once introduced it creates its own demand. We have hundreds of unsolicited testimonials, and would urge upon dealers to secure the agency.

The Perfect Range has the following important features :

CENTRE FIRE BOX, with Rock Ash Grate for coal, (wood fittings can also be supplied).

LARGE BACK OVEN, $22\frac{3}{4} \times 20$, which is easily heated owing to its not being connected with reservoir.

COPPER RESERVOIR, holding 36 quarts, which is constantly hot.

LARGE HOT CLOSET, 21×12 .

LARGE UPPER SHELF, which adds materially to its appearance.

SIX BOILER HOLES ; EXTENSION SHELF ; TOWEL RACK ; RESERVOIR, ETC.

WATER FRONT can be used when wanted, and when Reservoir is not desired, we furnish plate making Range with eight holes.

The Columbia Diamond Range.

FOR COAL OR WOOD.

OLUMBIA DIAMOND is an entirely new production of original design, with all the modern features of utility. The decoration of the doors and reservoir ends is bold, with deeply carved ornamentation, and the base is high and broad, being a pronounced departure from the ordinary type.

The Nickel and Tile trimmings are handsome and novel.

As a whole the appearance of the Columbia Diamond is at once massive and beautiful.

The ovens are large and so constructed that all space is available for baking. They are heated on five sides, and the flues are of the modern and popular system of sheet flues.

The fire box is properly proportioned to secure the best and most economical consumption of fuel, either coal or wood, and is fitted with either Duplex, Rockash or plain grates as desired. The grate bars can be replaced without disturbing the water front or linings.

Either brick or iron linings can be supplied, but we will always ship with iron linings unless otherwise instructed.

The tea shelf, high shelf and high closet are interchangeable, and fit all sizes, the former being supplied with every range and included in price.

The high shelf is large and does not interfere with cooking utensils on top of range. It is of the popular folding type, handsomely carved and of real utility.

The Magic Diamond Range.

FOR COAL OR WOOD.

IN THE MAGIC DIAMOND RANGE we are putting on the market an entirely new, high-class Range, with all the modern features. A construction that will work satisfactorily, with even indifferent chimneys.

The popular design and Nickel Trimmings of our Marvel has been incorporated in this new Range, otherwise it is entirely different.

The Fire Box is proportioned to secure the most satisfactory combustion of fuel, either coal or wood.

The Grates furnished are the Duplex, Rockash or plain as desired.

The Ash Pan is large and is arranged to hold and remove ashes without creating dust.

The Ovens are large and fitted with steel bottoms, insuring rapid and equal heat in all parts of oven.

These ranges have **Sheet Flues** with one flue strip extending diagonally in bottom flue, equally distributing all the heat over bottom of oven. This is the flue construction embodied in nearly all modern good working and selling Ranges. The damper openings are large, insuring free draft.

Large Copper Reservoir, with beautifully japanned lids and frame. The flues and damper opening under reservoir being large, water can be boiled in the reservoir.

The whole **Hearth** draws off and drops down under the Ash Pit if so desired. In drawing out the entire distance it does not disturb anything resting upon it. It is a large serviceable Hearth, and adds to the appearance of the Range.

The Souris Diamond Range.

THE SOURIS DIAMOND RANGE is specially constructed to burn Soft Coal and is, we believe, the only Range on the Market adapted to this kind of fuel.

The Fire Box is arranged with Pouch Feed and extremely heavy iron linings.

The Flues are extra large and easily cleaned.

Otherwise in construction and appearance it resembles the Magic Diamond, and is made in the same varieties of styles and sizes.

THIS CUT SHOWS OUR PATENT DRAW-OUT OVEN SHELF.—By pulling the handle near the lower edge of the door, the oven door is opened and the shelf slides out automatically, bringing out any articles placed upon it. As soon as the door is opened a trifle, the hook attached to the handle is firmly fastened to the shelf and cannot be disengaged from it till the door is closed again. This important feature (secured by patent) makes it impossible for the shelf to drop or to be disconnected from the oven door while the latter is open. In closing the door the shelf slides back into the oven. The door can be opened without moving the oven shelf, by taking hold of the knob above the handle, or by pressing the Patent Oven Door Kicker.

Dealers will readily appreciate the advantage of this Shelf as a selling point, and as a convenience to their customers when the Range is in use. It is the **Best Automatic Shelf** made, and is used only in Canada in Stoves and Ranges of our manufacture.

The New Favorite Diamond FOUR HOLE RANGES.

FOR COAL OR WOOD.

DOST NO MORE than good cooking stoves of corresponding sizes, and are superior to any cooking stove in many ways. The back and bottom flue space in cooking stoves are each divided into three flues; this is unnecessary in the flue construction of a range, for this reason: The flues in the range are much larger, giving better draft; the heat is more equally distributed over the oven, one side more being heated, increasing the heating capacity of the range over $33\frac{1}{3}$ per cent. more than a cooking stove. One small flue strip extending diagonally in bottom flue equally distributes heat over bottom of oven, causing all parts of oven to bake equally.

THE FIRE BOX FOR COAL is thoroughly ventilated, and oval in shape, making the fire back, front grate, and end linings concave on the inner surface, the best possible shape to resist the action of the fire. This range is supplied with either the duplex grate or our patent flat, shaking and dumping grate.

THE FIRE BOX FOR WOOD, consisting of false fire bottom, fire back and front fender, making equally as desirable a fire box for this fuel, as if made for wood only, and taking as long wood as any range with corresponding size oven. Central draft to the fire box, making a quick fire and the additional advantage of a large broiling door, and ash pan.

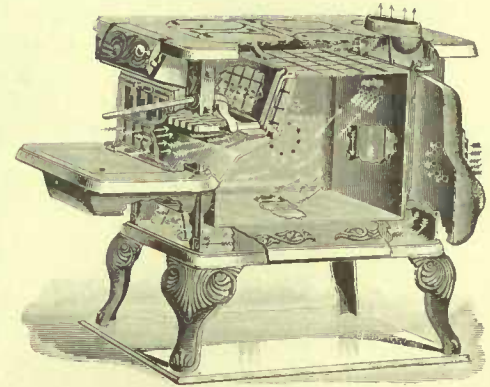

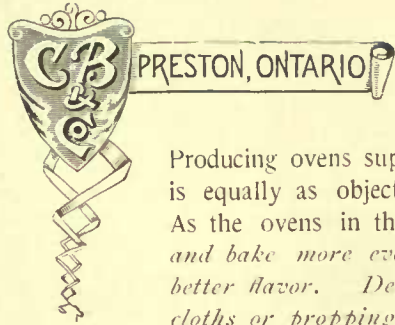

Diagram illustrating the system of Ventilating the Ovens in Favorite Diamond Ranges.

PRESTON, ONTARIO

Ovens Ventilated with both Hot and Cold Fresh Air

Producing ovens superior to all others for baking and roasting. An oven too hot is equally as objectionable as an oven not hot enough to produce perfect results. As the ovens in these ranges can be properly regulated, *bread will raise nicer and bake more evenly. Meats will retain their natural juices and have a better flavor. Delicate cakes and puddings can be baked without the use of cloths or propping open the oven door.*

Broad, adjustable oven racks. Tin lined oven doors. Shelf under oven door. Foot oven door opener. Smooth hearth. Sheet iron pan, with cast frame, well bailed. Arch-ribbed covers and centres that fit perfectly, and guaranteed to be the finest and most durable in existence. The long centre is made in two pieces and has a supporting post. Top made in four pieces. Large copper reservoir, with hard-baked japanned lids and frames. We guarantee that water can be boiled in the reservoir.

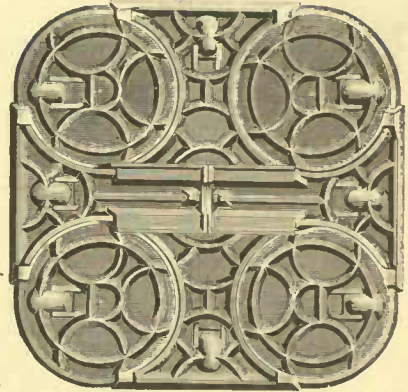

THE HIGH CLOSET is novel and beautiful. The large closet door is controlled by a weight, enabling the door to be opened to any point desired, where it will remain. It can be opened and closed by a slight touch, and when down, or entirely open, forms a large shelf in connection with bottom of closet. The closet can be easily removed from the high shelf, and the change made in a few minutes. The most valuable feature in the construction of this closet and shelf is the arrangement for heating the closet. This is accomplished successfully by extending the sheet-iron stovepipe to the collar on range top, and, leaving a flue between the pipe and cast plate supporting the high shelf and closet, air is admitted through holes at the bottom of this plate (as shown in cut) and passes through the flue between the stovepipe and cast plate, and through large holes in bottom of high shelf into closet, heating it as hot as an oven, thereby utilizing heat wasted in other ranges, and making a perfect "double heater" attachment.

THE TEA SHELF is furnished with every range, and included in the price of the range. This tea shelf can also be used on top of high shelf, making a handsome cornice and finish.

Large nickel panel on oven door, consisting of name plate, register and handle.

Nickel tea pot stands that fit both the tea shelf and high shelf. Nickel towel rack and knobs.

The carving and ornamentation molds and blacks beautifully. The castings, mounting and crating are the highest order of stove workmanship. CUTS AND LIST PRICES ON FOLLOWING PAGES.

This Cut shows the side of the Covers and centres exposed to the fire.

Favorite Diamond.

FOR COAL OR WOOD.

THE FIRE BOX for coal is oval, this being the best shape for strength and Combustion. It is also the heaviest and best ventilated fire box, and we GUARANTEE it to be the most DURABLE made. This stove is supplied with either the Duplex Grate or our new patent Flat, Shaking and Dumping Grate. When the fire box for coal is removed, and the Fire Back, False Fire Bottom, and Front Fender put in place for burning wood, they are superior to cooking stoves for burning wood exclusively, as they have fully as large a fire box as other cooking stoves of corresponding sizes, with the advantages of a large, clean ash pan, low hearth, broiling door and central delivery of draft to the wood, making a quick, hot fire, with a small amount of fuel. The ash box and pan construction are excellent. The pan is large, made of sheet iron, has cast frame, and wrought bail with stop catches. The pan catches every particle of ashes, and is easily removed and replaced. Top made in four pieces. Seven inch pipe collar. Cemented top oven plate. Adjustable oven racks. Tin lined oven doors. Foot oven door opener. Shelf under oven door. Large coal and wood feed doors. The reservoir is made of copper, is large and has handsome japanned lids and frames. The flues under reservoir are large, and water can be boiled in the reservoir. Nickel panels on oven doors, consisting of name plate, register and handle. Nickel towel rack and lid holder. The ornamentation is very beautiful, and WE GUARANTEE THE CASTINGS, FITTING, NICKEL WORK, AND ALL THE WORKMANSHIP TO BE THE BEST EVER MADE IN COOKING STOVES.

The Famous Diamond. WOOD COOK.

PUT UP IN THREE STYLES AND FOUR SIZES.

THE FAMOUS DIAMOND, for Wood only, is exceptionally adapted to the Country Trade, as it possesses all the leading features so much asked for and sought after by Town and Country Dealers.

It has exceptionally large Fire Door, with very large Fire Box, double Ash Bottom, Sectional Fire Back, Trip Oven Door Opener Cut Centres, Hearth Shelf and Tin Lined Oven Doors, and is so constructed that the Reservoir or Full Extension can be attached by simply removing the Panel on back of Square Stove.

This Stove is admitted by all to be of very handsome design, being mounted on a Fancy Skirted Base, with polished edges and neatly trimmed, with plated Oven Door Medallions, Knobs and Hinge Pins. Reservoir and Extended Stoves are trimmed with Tile Centre Plated Medallions. It has been on the market several years and is a great favorite with many dealers,

The name and design of this stove are registered at Ottawa

Putnam, with Oven.

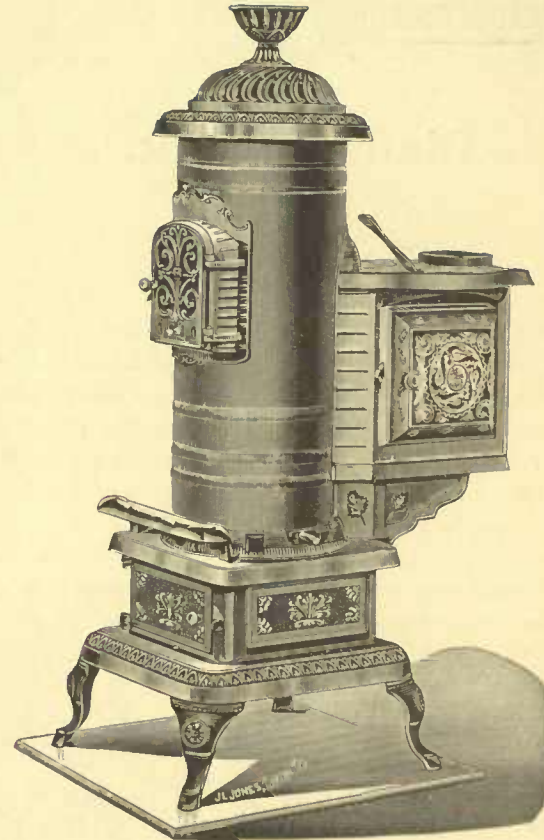

FOR HARD OR SOFT COAL.

The great drawback to the sale of self-feeding base burning oven stoves is due to their high price and great extravagance in consumption of fuel, also being generally elaborately nicked they are hard to keep clean.

In building the Putnam with oven our aim has been to overcome these serious objections, and all who have seen this stove declare it a great success. It is low in price, very neat and handsome, extremely economical and unexcelled as an operator.

It has a very handsome top and deep ash pit, dump and shaking grate, feet bolted to bottom, annular register, causing a regular fire all around fire pot, large mica feed door, with check draft damper.

Diamond Oak.

FOR COAL OR WOOD.

This new and beautiful Oak is the latest and best of its class. It is constructed with large air tight base and capacious ash pan, heavy fire pot and grate. Coal and wood grates being interchangeable and the best of their respective kinds. Absolutely tight steel bodies, fitting into cement grooves, thus overcoming the most serious drawback to all Oaks, viz., leakage of ashes. Large and perfectly fitted doors and registers. Handsome nickeled top section and foot rail, and provided with a flue extending from the bottom to the top of stove, permitting the air confined by the base to escape and at the same time drawing the cold air off the floor. Castings beautifully carved and easily blackened and kept clean.

Putnam Globe.

FOR ANTHRACITE AND BITUMINOUS COAL.

The Putnam is a new pattern Globe Cannon Stove of modern design and improvements. Its proportions are handsome. Every size arranged for sheet iron drum, when desired, without the use of additional plates, dump and shaking grate, single sliding feed door, with check draft register for controlling the fire, annular register, admitting the air equally around fire pot and grate, thereby preventing lower bowl and grate from burning out rapidly, deep ash pit, feet bolted to bottom of stove, the entire stove bolted together, and all joints cemented. Being the only cannon stove in the market having cemented joints is therefore the most economical to use.

Diamond Cone Heater

FOR ANY KIND OF COAL.

The Cone Disc Stove, as shown on page 83, has been before the public for several seasons and no stove ever gave such universal satisfaction as regards efficiency and economy. The reputation which it attained induced a number of manufacturers to bring out imitations, but, unfortunately for themselves, each faithfully copied its defective features and omitted the desirable ones. That the stove was in some respects defective we admit, unavoidably rough castings and improper ash pan arrangement being the most serious.

Our experience with the Cone Disc Stove has enabled us to remedy all its weak points and incorporate a number of new features in the Cone Heater, and we now offer it to the public as a stove unapproachable in its class. It has a handsome base, smooth castings, large ash pan, automatically clean shaking and dumping arrangement, return flue, foot rail, slicer door and a flue to permit the heated air confined by the base to escape, at the same time drawing off the cold air from the floor.

Improved Agricultural Furnace.

This new "FARMERS BOILER" is constructed on the return flue principle, which ensures good draft and utility in all the fuel consumed. It is greatly superior to all direct draft boilers now on the market.

This boiler is made entirely in sections, with ample allowance for expansion, thereby rendering it strong and durable. It has a deep ash pit and an extra large fire door, and is undoubtedly the best Farmer's Boiler in the market.

Hot Air Furnaces

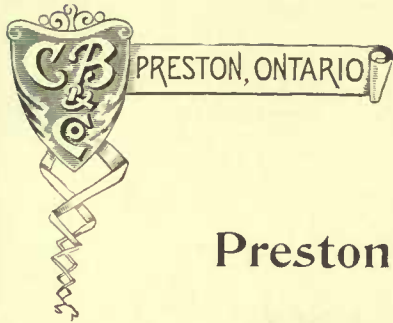

AND COMBINATION (HOT AIR AND HOT WATER) HEATERS.

WE WILL NOT attempt to go into details in this PRICE LIST, as we have a General Furnace Catalogue "OUR FURNACE BOOK," which we mail upon application.

We might, however, mention that it is generally admitted that "We lead in the furnace business," and that the "PRESTON FURNACES" stand without a rival in point of Superior Construction and Working Qualities. Our aim having always been great heating qualities with moderate consumption of fuel, and to say that we have succeeded in embodying these desirable features in the PRESTON FURNACES with phenomenal success would be putting it mildly, as the thousands of well pleased users in all parts of the Dominion will gladly substantiate.

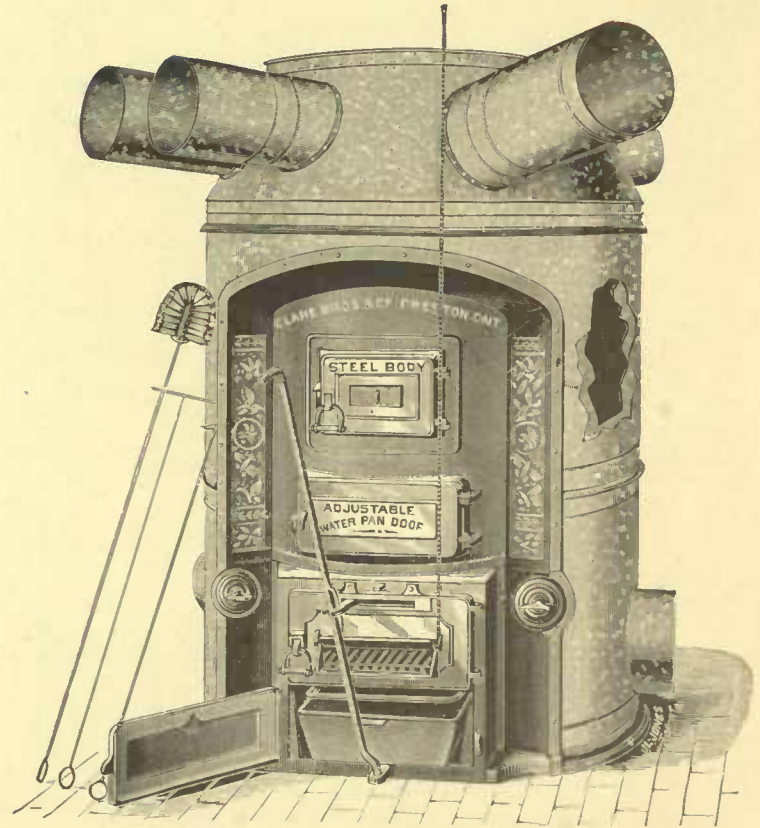

Dealers who Handle the "Preston Furnaces" Control the Business in their Localities.

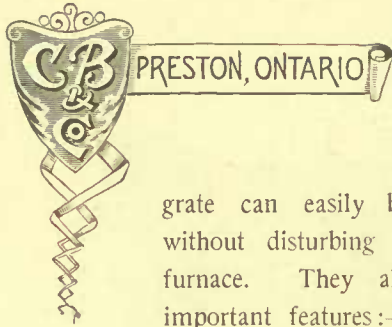

Preston Furnaces.

This cut presents a general view of our line of Pleasant Home and Marvel Furnaces as they appear when set up and encased in galvanized iron. The ash pan door being open the position of ash pan and sifter grate are shown. Cuts on following pages give a general view of construction.

Owing to our system of **Patent Fused Joints** being embodied in all our furnaces constructed of cast iron and steel we guarantee them to be absolutely gas and dust proof. Bolted, riveted and cemented joints are all right for a time, but owing to the unequal expansion and contraction they gradually give away and in a comparatively short time there is nothing to prevent the escape of gas and dust. All our Steel Body Furnaces are fitted with Draw Centre, Anti-Clinker Dumping and Shaking Grate, they can be completely dumped and are so set that surface can readily be raked. This

grate can easily be removed and replaced without disturbing any other part of the furnace. They also possess the following important features:—

Double Low Radiator, affording long fire travel and vast radiating surface.

Large Adjustable Water Pan, which can be regulated to evaporate as much water as desired.

Upright Shaker Bar to operate grate without stooping.

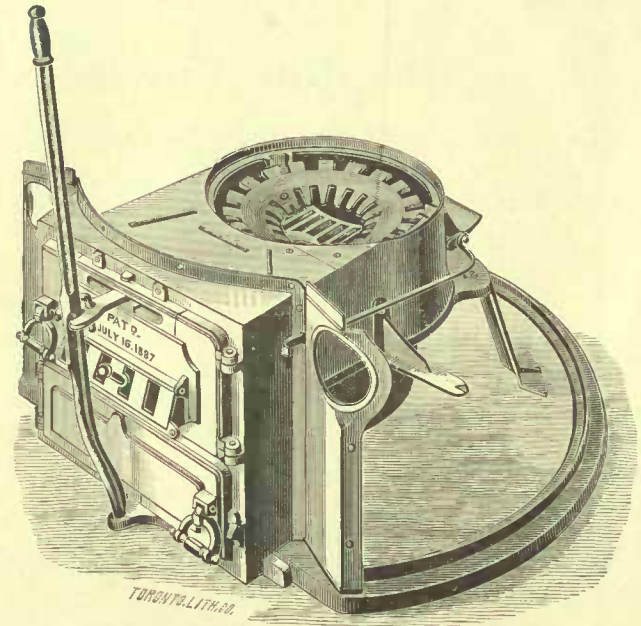

Large Dust Escape, direct with chimney and operates from front of furnace.

Extra Large Ash Pit, which contains Ash Pan and Sifter.

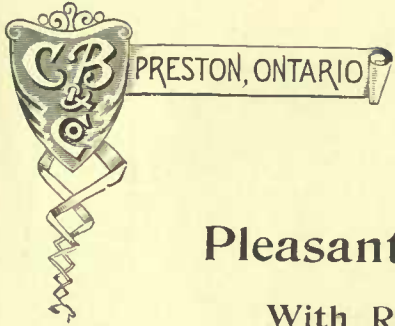

Heavy Fire Pot and large Feed door.

Handy Regulator to adjust dampers from rooms above.

We supply them brick set or portable and guarantee them to be free from imperfections.

Cut showing Ash Pit Section, Grate, Upright Shaker Bar and Dust Damper Rod.

Pleasant Home With Radiator.

Combination Heater.

(Hot Air and Hot Water).

Modern architecture often requires an apparatus by which provision can be made for warming such rooms as can not be reached by warm air pipes from Hot Air Furnaces, and economy forbids the use of more than one furnace. To meet this demand we have produced our Hot Air and Hot Water Combination Heater. As will be seen by the illustration the arrangement is quite simple and its operation positive and certain.

The boiler, it will be seen, is so constructed that the amount of hot water supplied may be varied by using one, two, three or more sections as requirements may demand.

These Heaters have been tried and tested the past three years and are giving splendid results. As regards economy and convenience we believe they are unequalled. We will gladly give special information when required regarding arrangement of Registers, Radiators, Piping, etc., for any building.

Combination Hot Water Boiler.

Made in Two Sizes.

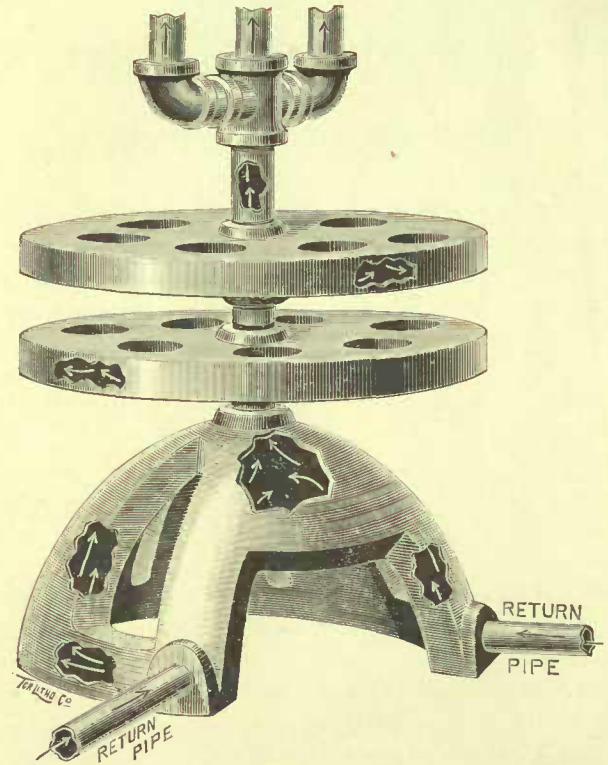

CUT SHOWS BOILER WITH TWO SECTIONS ATTACHED.

The smaller boiler will fit any of our Steel Body Furnaces, but is more suitable for two smaller sizes, No. 134 and 138. In either of these furnaces it will heat 300 feet of inch pipe, and sections added will heat 100 feet of inch pipe each.

The larger boiler will fit all excepting the two smaller sizes of our Steel Body Furnaces, and will heat 400 feet of inch pipe, while sections added will each heat 100 feet of inch pipe same as with smaller boiler.

These are very conservative estimates, and under ordinary or favorable circumstances, each boiler and section will heat much more than we estimated. Upon receipt of particulars in reference to requirements we will be pleased to advise which boiler and the number of sections will give best results.

Smaller Boiler.....	\$13.33	Sections.....each	\$5.33
Larger "	18.66	"	" 5.33

Steel Dome.

FOR ANY KIND OF COAL, COKE OR WOOD.

Brick-Set or Portable.

This cut does not do the Steel Dome justice for it is now supplied with front similar to our line of Pleasant Home with Radiator and Marvel Furnaces, and has interchangeable parts, so that low radiator can be fitted on at any time desired.

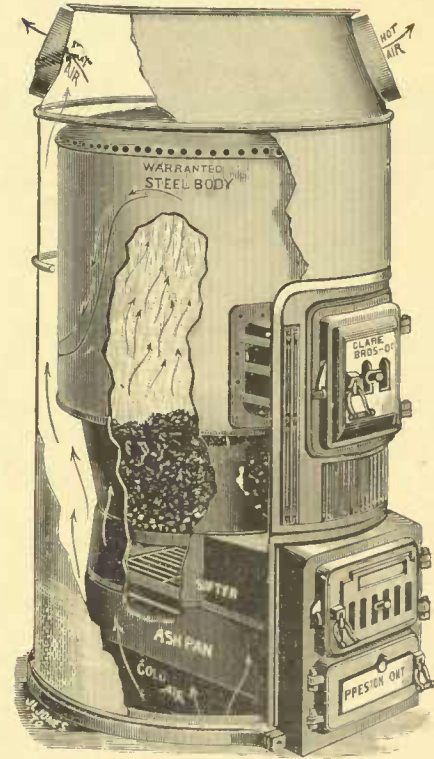

It has Dust Escape and Adjustable Water Pan, and is specially adapted to supply the demand for a first-class, low priced furnace.

It is supplied with all the latest appliances for easy management, and for quickly controlling the supply of heat, as the temperature of the weather may demand.

Sanitary Heaters.

The "SANITARY" is intended to be used when a Furnace in the basement would not be practicable.

It is especially adapted for heating school rooms, halls, and other large rooms and can be located in any out of the way part of the room practicable to its operation, and thus take up very little useful space. At the same time it will do the important work of heating all parts of the room alike.

It is simple enough to be understood by anyone and requires less attention than an ordinary stove.

Hilborn

Hot Air Wood Burning Furnace.

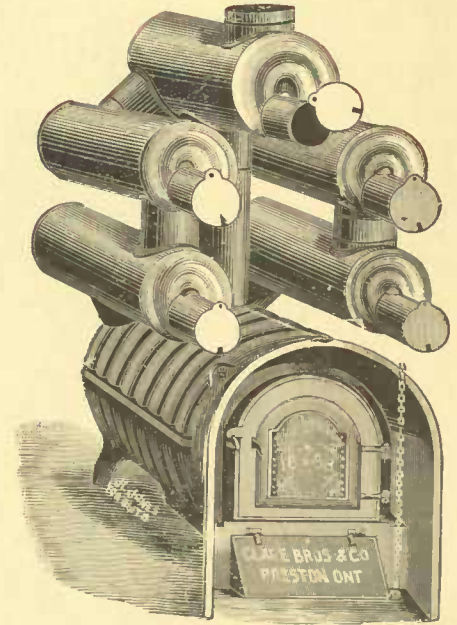

PORTABLE OR BRICK-SET.

Made in Two Styles and Eight Sizes.

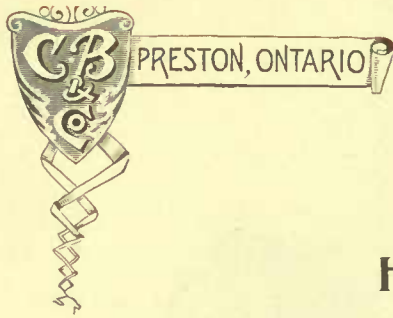

The Hilborn Wood Furnace has been a leader in the market for several years and is still without a rival in point of superior construction and working qualities.

Its durability is unquestionable, while its Large Feed Door, Deep Ash Pit and Vast Radiating Surface are features which at once give it **First Place**, saying nothing of its easy clean out system which has won for it many imitators.

No one disputes the supremacy of the Hilborn and dealers who sell it have no difficulty in controlling the furnace trade of their localities.

Self Indicating Convex Side Wall Register.

Black or White Japanned, or Bronzed.

MADE IN TWO SIZES.

6 x 10. 8 x 12.

Black or White Japanned, or Bronzed.

MADE IN TWO SIZES.

9 x 14. 11 x 17.

Prices on page 114.

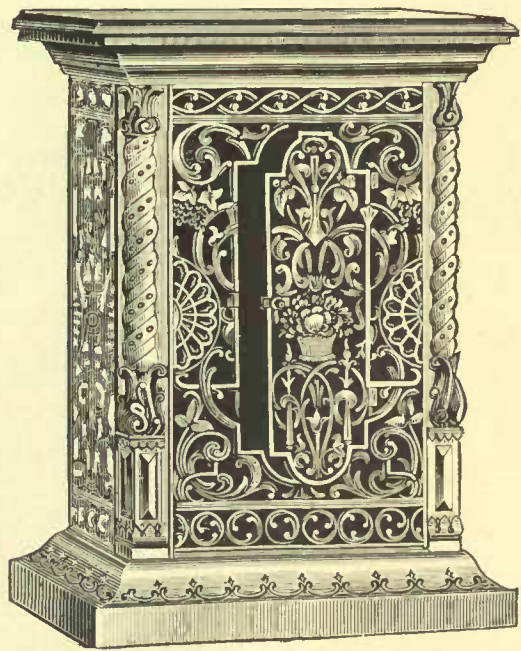

Circular Top Side Wall Register.

Black or White Japanned, or Bronzed.

MADE IN FOUR SIZES.

7 x 10. 8 x 12. 10 x 14. 12 x 18.

PEDESTAL REGISTER.

A very desirable substitute for an ordinary floor register, affording an appropriate stand for hall or parlor ornaments. It also makes a complete plate warmer for the dining room.

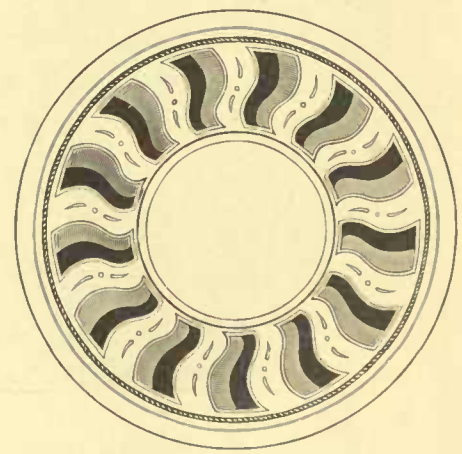

Finished in Black or White Japan, Bronzed Tipped, or Nickel Plated, with Marble or Iron Top.

DOOR PLATES.

Black or White Japanned, Bronzed or Nickel Plated.

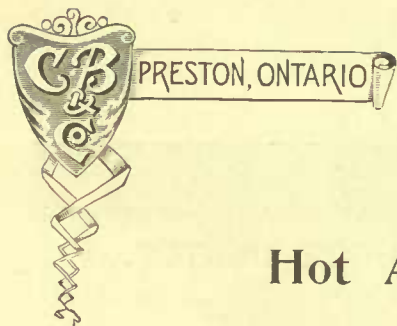

- 2 x 14. 4 x 7. 4 x 18. 2 x 17. 4 x 11.

PIPE REGISTER.

Black or White Japanned, or Bronzed.
6 in. 7 in. 8 in. 9 in.

Prices on page 114.

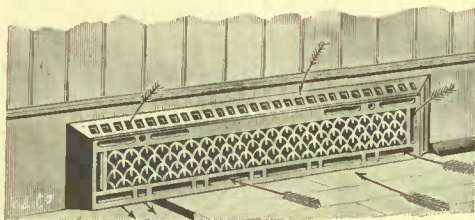

Hot Air Grating

is arranged to be bolted on cast frame which is built in the brick Hot Air Flue.

Ventilating Plate.

These are placed in base board, as shown in cut, to draw cold and foul air off floor into ventilating shaft.

VENTILATING PLATE.

4½ x 31 inches.

HOT AIR GRATING.

20 x 26 inches.

Prices on page 114.

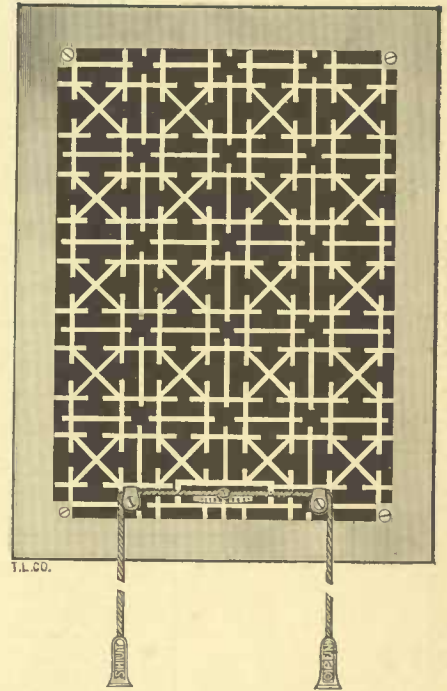

SELF-INDICATING VENTILATOR.
For Cords.

Ventilators.

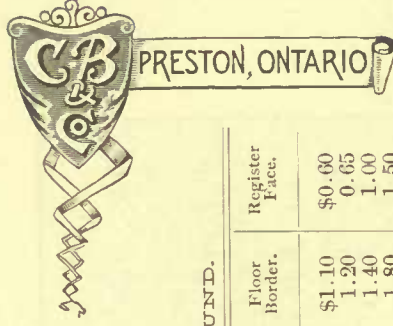

Almost all of our Registers can be arranged as Ventilators, as shown in the accompanying cuts. The Self-indicating being the most suitable since no pulleys are required, and all that is necessary is to attach cords.

VENTILATOR.
For Cords.

Prices on page 114.

Ventilators. We supply two brass pulleys, adding 60 cents to list
price when Registers are to be used as Ventilators with cords.

The Pluto Boiler.

Our aim has been to construct a Boiler that is economical, durable and cleanly, and we have succeeded in embodying these important features in the "PLUTO." Its perfect water and fire circulation, together with the enormous heating surface, renders it the most powerful and economical heater made.

These boilers are no experiment, having been thoroughly tried and tested. They have given excellent results in Manitoba as well as in the milder climate of Ontario.

The "PLUTO" Boiler has the following important advantage:—

It is sectional in ALL its parts.

The size can easily be increased or diminished.

It has less joints than any other Boiler of its class.

It will burn all kinds of fuel.—Hard or soft coal, wood or coke.

It has large Ash Pit Door, which admits Ash Pan full size of Grate and Sifter.

The Grate is easily shaken and arranged to burn all kinds and sizes of coals.

The Grate surface can easily be raked.

The Fire Pot is of the best construction, and presents the largest possible amount of heating surface; it has no fire-brick or other non-conductor to diminish its effectiveness.

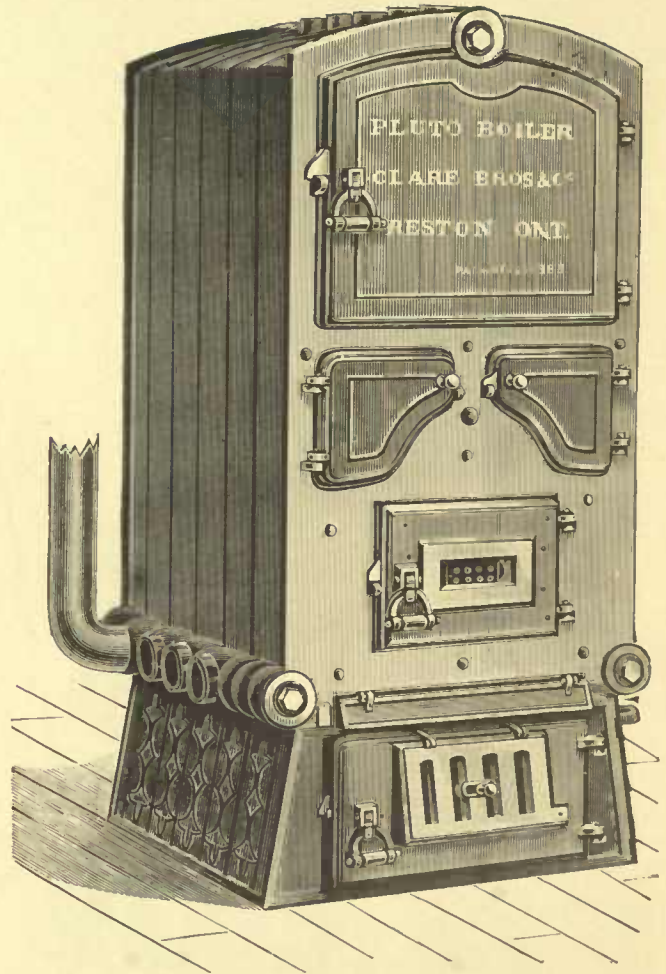

The Feed Door is of ample size to admit large rough wood, and "THE PLUTO" gives splendid results where wood is used for fuel.

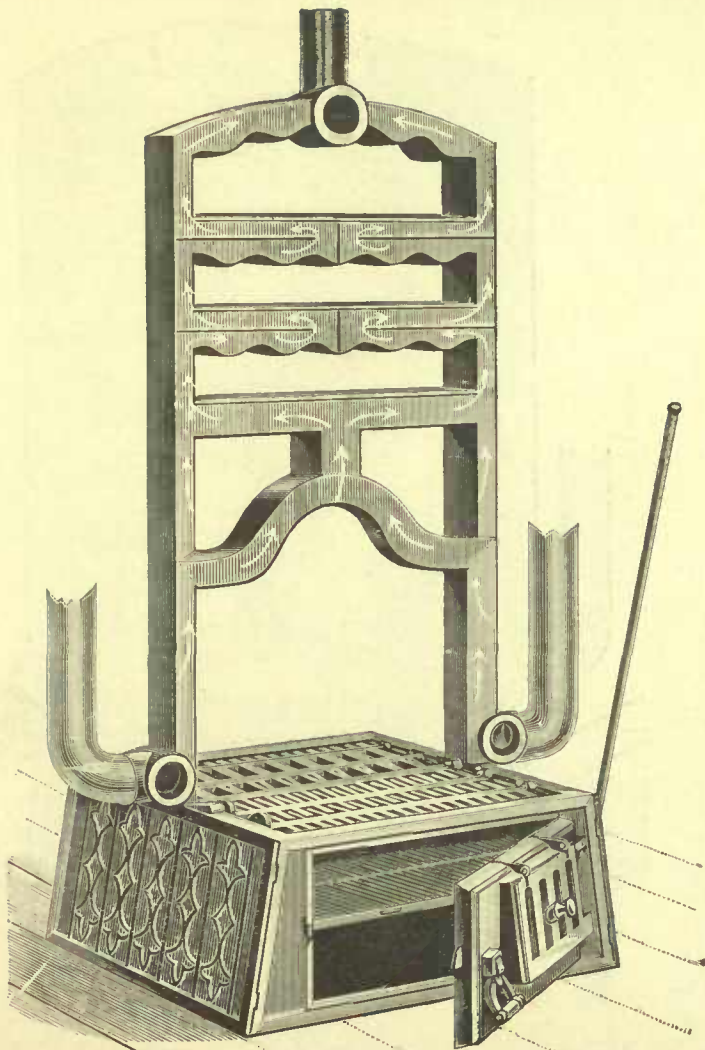

The Feed Door is fitted with a gas-consuming device.

All parts to be cleaned are easily accessible, and so arranged that the soot and ashes fall into Ash Pit. The advantages of this are plain—a clean cellar, no dust or ashes.

All Faces of Sections are planed and make a perfect joint.

A glance at cuts shows its perfect water and fire circulation.

When large buildings are to be heated, two or more boilers can be connected, so as to run separately or together, according to the temperature of the weather.

All sections are tested independently, and each complete boiler is tested with a pressure of 40 pounds.

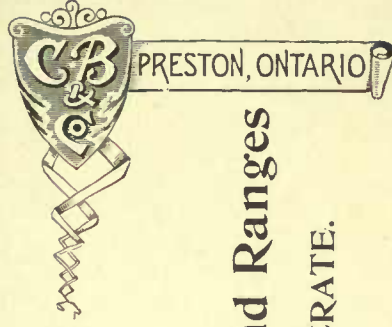

We recommend in all cases that boilers be covered with asbestos after being set up.

The PLUTO has no equal for warming private dwellings, public buildings, schools, churches, greenhouses, etc., by hot water circulation.
