## TO THE TRADE

- ☞ We will be pleased to quote Terms and Discounts on application.
- ☞ Our **NET PRICES** will be found as low as any high grade Stoves, Ranges, and Hollow-ware.
- ☞ **BLACKLEADING** included in prices of Stoves and Ranges.
- ☞ All prices are subject to change without notice.
- ☞ **SETTLEMENTS** must be made by cash, or approved note, otherwise the account is subject to a Sight Draft. Notes or Cheques must be made payable at par in Hamilton or exchange added.
- ☞ **INTEREST** at the rate of 8 per cent. will be charged on all renewals and overdue accounts.
- ☞ **ALL CLAIMS** for deductions or errors should be made within five days from receipt of goods.
- ☞ **ALL GOODS** are shipped at "owner's risk," and after obtaining carrier's receipt "in good order" our responsibility ceases.
- ☞ **BREAKAGES.** In case of breakages in transit, customers will please notify us immediately upon arrival of such, giving full description of parts broken.
- ☞ **ALL FORMER PRICE LISTS ARE HEREBY CANCELLED.**

The D. MOORE COMPANY, Limited.

May, 1909.

The above is a miniature of Guarantee Bond, furnished with all Treasure Stoves and Ranges.

# “Sovereign-Treasure” Steel Range

Body made of the very best, heavy gauge, Wellesville polished steel.

## DESCRIPTION

**Nickel Plated** castings lift off in the latest and most approved way.

**Oven**—Ventilation is of the most perfect and modern method known to the trade. The oven door is balanced. When open it forms a rest or shelf and is flush with the oven bottom. Our oven door support is the only practical one in existence, and will stand an extra heavy weight without breaking.

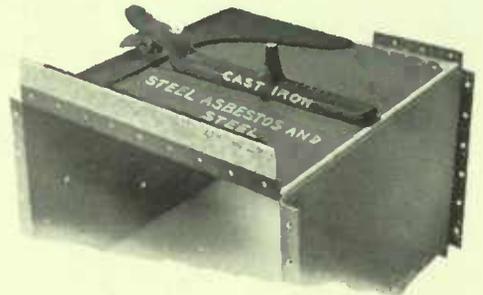

MAN STANDING ON OVEN DOOR OF  
“SOVEREIGN-TREASURE”

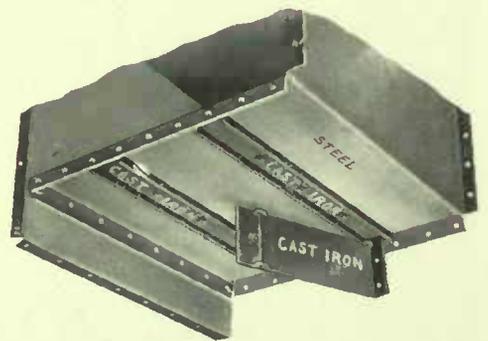

The illustration of man standing on oven door was made from an actual photograph taken in our works.

Note how strongly the oven top and oven bottom are braced.

The oven is made of one piece Cold Rolled Steel.

OVEN TOP

OVEN BOTTOM

**Boiler Like Rivetting**—All Treasure Steel Ranges are rivetted with cone head rivets instead of

Flat head.

STEEL  
ASBESTOS  
STEEL

**The Body** of all Treasure Steel Ranges consists of a double wall of steel interlined with asbestos, making the best possible construction and one that will withstand any reasonable amount of heat or wear.

No blacking is required. The Cold Rolled Steel is so very highly polished that blacking will not adhere to it. It is so easy to keep clean. A dry rag will suffice to rub off any grease or objectionable substance. The steel will return to its original lustre.

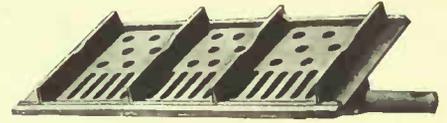

FOR COAL.

**DRAW-OUT, SHELL-BAR,  
PATENT TREASURE  
AIR BURNING GRATE**

No clinker formation possible. Perfect combustion is formed by a larger percentage of air passing through the grates into the fire bed.

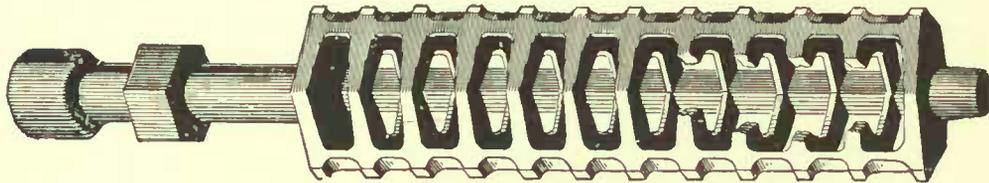

Grate draws out without disturbing the brick linings or waterfront.

FOR WOOD

**Sovereign** "Draw Out" Wood Grate supplied with each Sovereign Range, can be changed instantaneously.

Wood Grate takes wood 24 in. long.

SECTIONAL VIEW SHELL BAR GRATE

LEVER TOP LIFTER  
(Patented)

**THE NEW AND HANDY WAY TO  
BROIL, TOAST, OR FIX THE FIRE**

Press the Lever and up comes the front section of Top forming a canopy.

There is no smoke or smell.

Front direct draft damper at front edge of range, in addition to screw damper in ash pit door. Front damper can be handily regulated either on reservoir or square stove.

Ventilated oven.

Wire oven rack.

Ventilation back of fire backs or bricks, to help keep the back bricks cool.

Extra heavy fire box linings. Three piece fire back, with extra heavy centre section.

Clay fire brick back and front furnished in place of iron when ordered.

Grate frame and fire box linings can be taken out and replaced without affecting waterfront.

Cast-iron flue back—won't rust from soot and creosote.

Double steel front, lined with asbestos.

Double steel, lined with asbestos over oven top and main back.

Steel angle brace at bottom of body to keep bottom section of stove in place.

Cast oven bottom braces.

Interchangeable legs or cast base.

Interchangeable square or reservoir stove.

Beautifully rich, semi-plain ornamentation; easily kept clean.

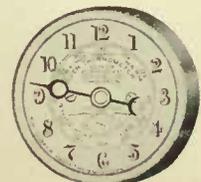

A perfect baker.

ANTI-SCORCH  
COVER

REDUCING COVER

VENTILATING  
COVER

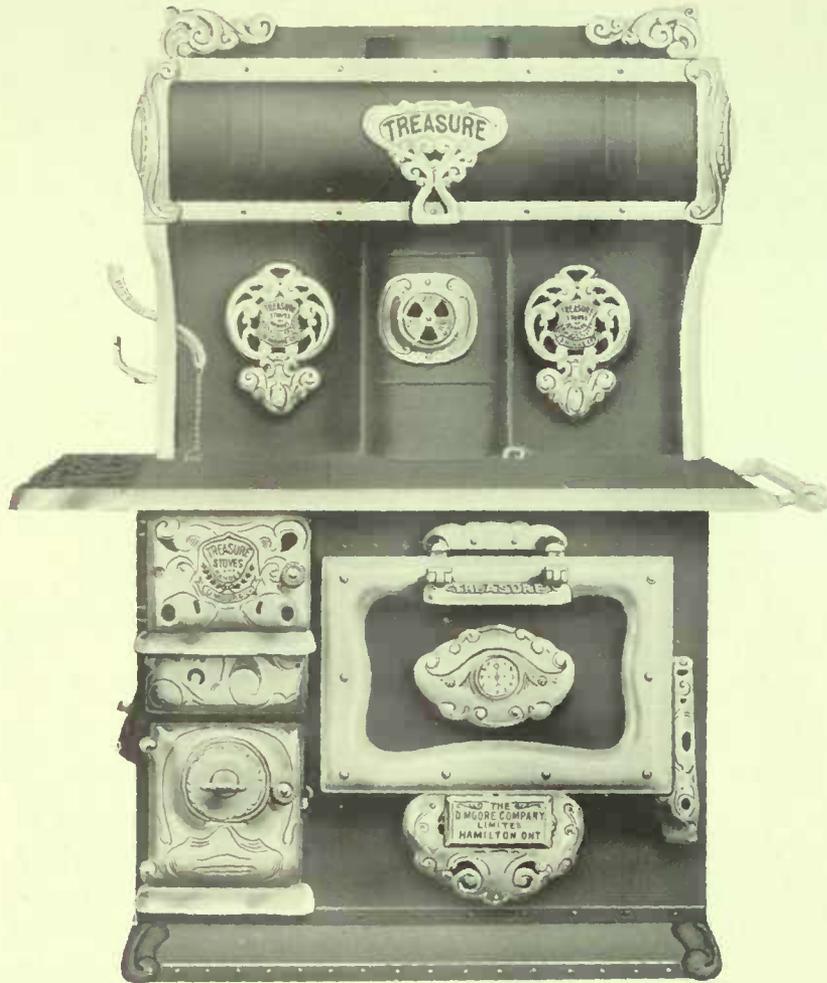

**Thermometer.**—Whenever specially ordered, we supply a reliable oven thermometer for which an extra is charged. These thermometers tell at a glance the temperature of the oven and when it is right to do the work required.

We claim the "**Sovereign-Treasure**" to be the very highest type of Steel Range construction, and we challenge anyone to produce its superior in convenience, simplicity, economy, durability and long life.

The D. Moore

Company.

SECTIONAL ILLUSTRATION

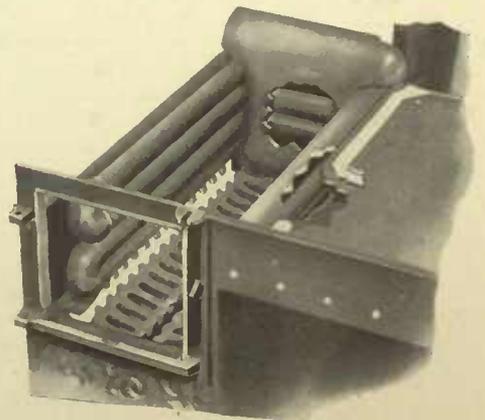

“Premier-Treasure” and  
 “Western-Treasure” High-Grade  
 Steel Ranges

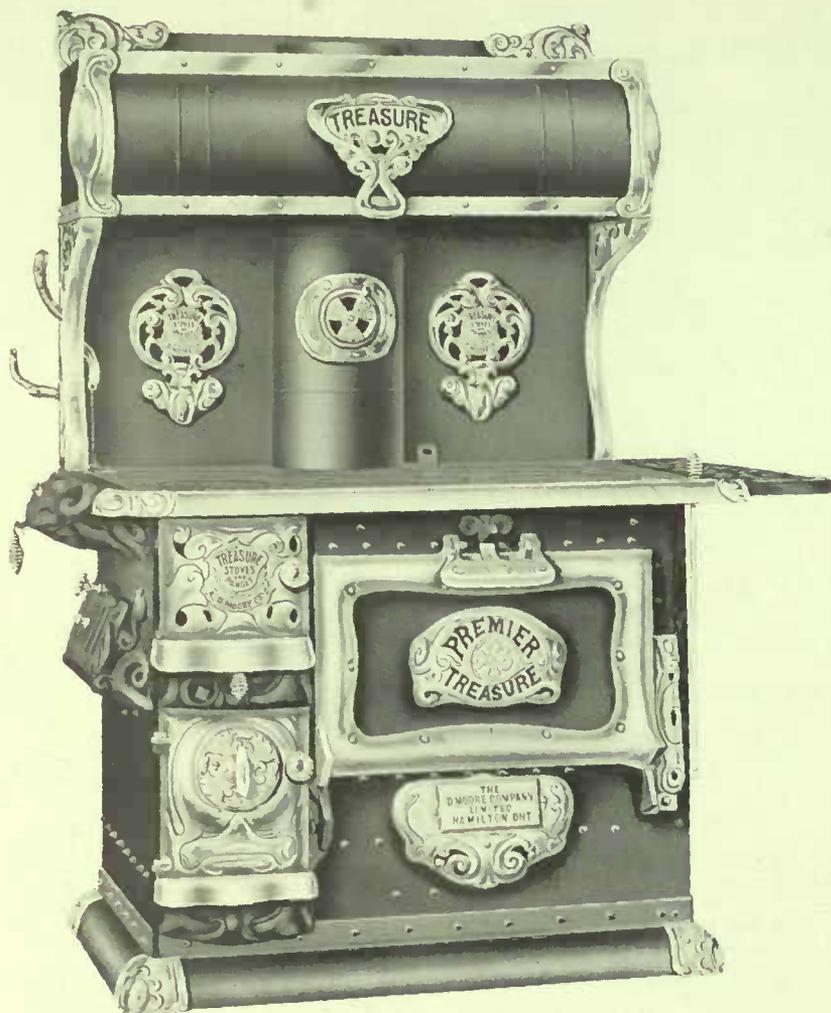

“Premier-Treasure” body is made from highest-grade Wellesville polished steel.

“Western-Treasure” body is made from dead flat American Bessemer refined steel, uniform in color.

**Water Coil** can be fitted in the “Premier” and “Western Treasure” in place of Waterfront should same be desired. We do not recommend this Water-coil for any but soft coal or wood. Where Anthracite or hard coal is used, we recommend the regular Waterfront.

General description same as Sovereign Treasure. See pages 6 and 7.

8-12 Reservoir.....	4-8 inch	17 x 12 x 10	17 inches	\$21 85	\$ .....	Bearer
9-14 “ .....	4-9 “	19 x 14 x 10	18½ inches	25 58	.....	Beautiful

Removable End Linings.

Duplex Grate.

**DESCRIPTION**—Neat, compact and durable. The body is made of heavy superior Cold Rolled Steel, Asbestos Lined and Hand Riveted with Cone Head Rivets. Has Duplex Grate and Cast Iron Fire-Box Linings, which lift out without removing a single bolt. End draft slide full length of Range. Large draw-out Ash Pan. Steel Oven Rack, 2½ in. Flues. Galvanized Reservoir, can be attached to end or back of Range, or can be used on top as a boiler if occasion requires.

## “Happy Home” Range

**THIS RANGE** is exceptionally handsome in appearance. Nothing that would add to its efficiency or appearance has been omitted, and it has many new and desirable features not found in any other Ranges.

**CASTINGS** are extra heavy, smoothly finished, and mounted with the utmost care.

The **OVEN** is unusually large and thoroughly ventilated.

The **OVEN BOTTOM** is made of heavy superior Cold Rolled Steel, strongly braced to prevent buckling or warping. Steel Ovens heat quickly and are very saving in fuel.

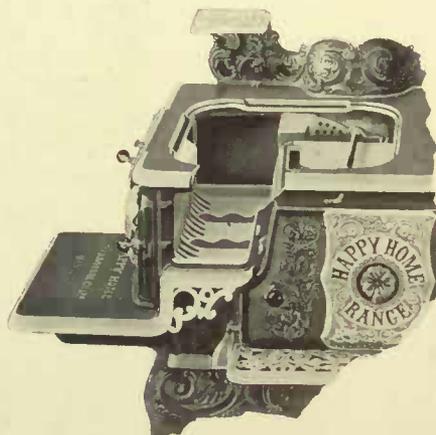

The **HEARTH** is large, with Drop Hearth Plate. The Ash Pan is very capacious and strongly made.

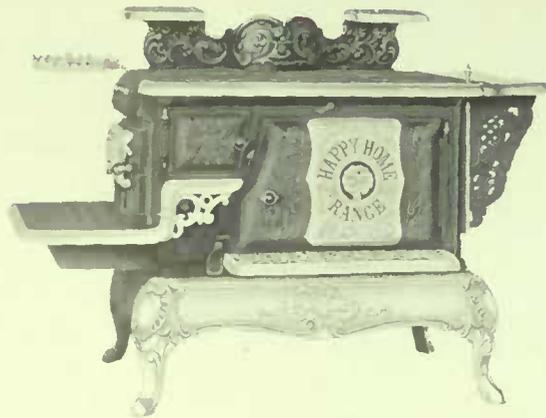

The **COVER HOLDER** is a great convenience. Avoids having to pile covers on top of the Range or on floor. Serves as a Dish Warmer.

For Burning Wood **THE HAPPY HOME** can be fitted up specially to burn wood and thoroughly adapted for that purpose. In certain sections of the country wood is becoming scarce, and coal will have to take its place. Coal Grates and Linings can then be obtained at a small cost to replace the wood fixtures, thus saving the cost of buying a new Range.

**FINISH**—The finish of this Range is par excellence—has Jewel Knobs—smooth heavy castings, together with handsome design and Nickel Work which is whitest and brightest, gives the Range an unique appearance.

**NICKEL PLATED** Oven Door Panel, Front Door Panel, Side Shelf, Front Base, two Front Legs, Main Top Edge, Tea Pot Stands, etc.

## “British-Treasure” Cast Range

### DESCRIPTION

**Distinctive** in appearance and construction. The distinctiveness in appearance will be readily appreciated by a glance at the four succeeding pages, and the essential features making the difference in construction are as follows:—

ANTI-SCORCH  
3-HOLE COVER

REDUCING  
COVER

VENTILATING  
COVER

**Covers**—With the “BRITISH TREASURE” and all other high grade Ranges we supply the Anti-Scorch, Extra Strong three hole Cover, with one each Reducing Cover and Ventilating Cover, all of which go to make the finest of Range tops.

**Thermometer**—Whenever specially ordered we supply a reliable Oven Thermometer, for which an extra is charged. These Thermometers tell at a glance the temperature of the oven and when it is right to do the work required of it.

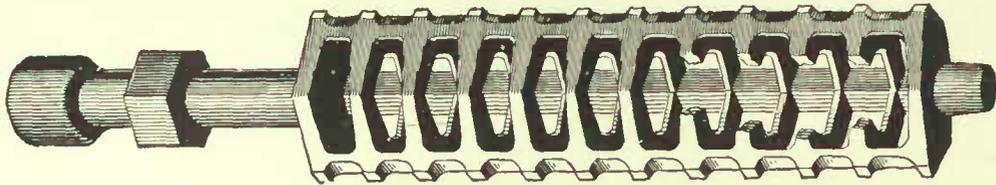

**Lift-Off Nickel**—All the nickel parts “Lift off,” thus saving a lot of trouble when black-leading. With most ranges the blacking gets onto the nickel and has to be washed off, but all this inconvenience is done away with on the “British Treasure.”

**Top Oven Plates** are covered with a non-conducting material which prevents burning or too rapid baking on oven rack. The Oven Bottom in order to equalize the baking is made of Heavy Superior Cold Rolled Steel, guaranteed not to crack.

**Guarantee**—The “British Treasure” and all other Treasure Stoves and Ranges are guaranteed against all defects. Real Guarantee Bond page 3.

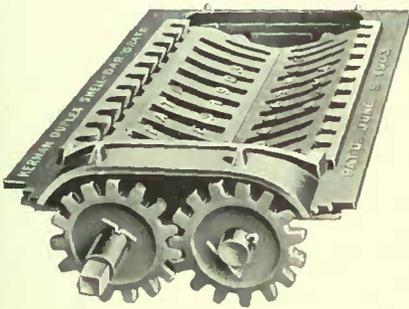

**Patent Treasure Shell Bar Air Burning Grate**—The fire box is one of the vital features in Range construction. It must be properly proportioned to meet the requirements of the oven, and it must have the largest possible air area through

SECTIONAL VIEW PATENT TREASURE SHELL BAR GRATE

the grate to insure perfect combustion. The Patent Treasure Shell Bar Grate is easy to operate and easy to repair, draws out without removing a bolt or disturbing the brick linings and water front. The air passing through the Shell Bar Grate is superheated in the air chamber of each grate bar (no other grate has this feature). Result, more heat with less fuel than can possibly be accomplished with any other grate. With each "British Treasure" we supply the illustrated Wood Bottom Grate for burning wood temporarily. This Grate slides in in place of coal grate. We also supply the Patent Treasure Shell Bar Grate with the "Sovereign," "Premier," and "Western Treasure" Steel Ranges.

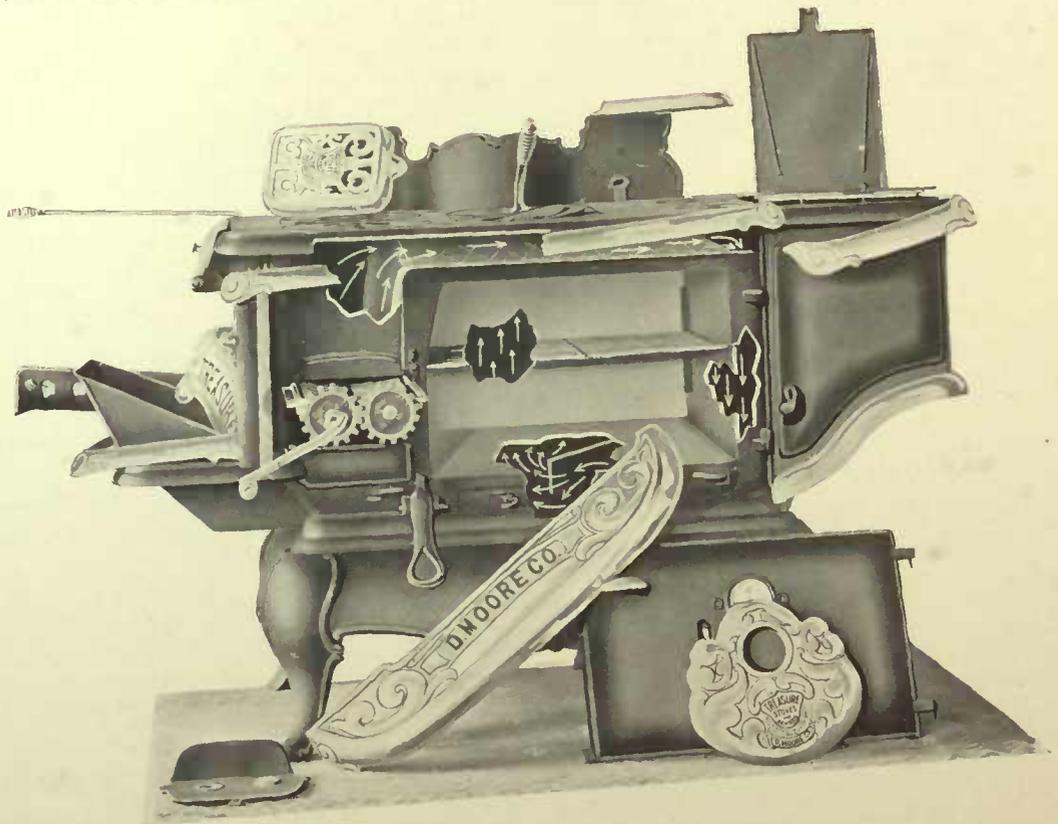

VIEW OF PATENT TREASURE SHELL BAR GRATE

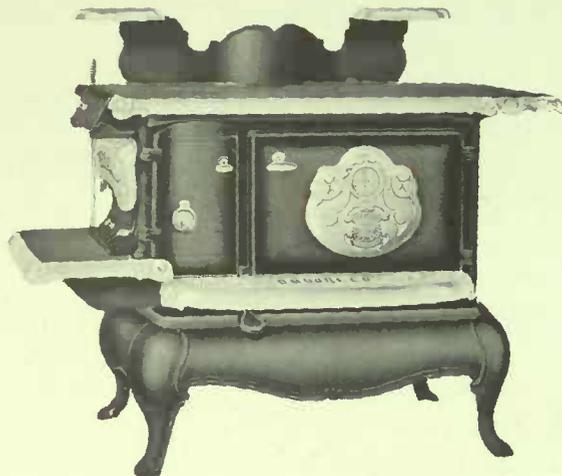

WOOD BOTTOM GRATE

Large **Sheet Flues**, easily cleaned. Hearth is large, wide and swings forward, uncovering the whole ash-pit, making the removal of ashes very easy. Extra large Ash Pan. Dampers—New construction, cannot get out of order. Top Damper connects directly with the Pipe Collar. Oven is square and exceptionally large. Oven bottom is made of superior Cold Rolled Sheet Steel, and is so constructed that it cannot possibly warp or crack. Steel Ovens heat quickly and save one-third in fuel. Reservoir—Heavy Copper, Tinned. Waterfront—Unusual heating power, which is due to its construction, size and weight, and when in place does not contract the fire box.

Sectional view of "British Treasure," showing flue construction, lift off nickel parts, etc.

Thermometer extra, supplied only when specially ordered.

**DESCRIPTION**—Large SHEET FLUES, easily cleaned. Grate—Heavy Duplex, which enables you to burn coal or wood with equally good results. Duplex Grate draws out by removing plate, without disturbing fire box linings or water front. Fire box—Well proportioned with extra heavy linings. Hearth is large, wide and draws forward, uncovering the whole ash-pit, making the removal of ashes very easy. Extra large Ash Pan. Dampers—New construction, cannot get out of order. Top Damper connects directly with the Pipe Collar. Oven is square, exceptionally large and ventilator damper in oven door. Oven bottom is made of superior Cold Rolled Sheet Steel, and is so constructed that it cannot possibly warp or crack. Steel Ovens heat quickly and save one-third in fuel. Oven Door is Tin Lined. Reservoir—Heavy Copper Tinned. Covers—Combination Cover, forming four different size holes, varying from 4½ to 9 inches; also one Ventilator Cover. Nickel-plated—Oven Door, Front Door, Oven Shelf, Kicker, Ash Guard, Front and Side Hearth Edge, Edge of Main Top, Edge of High Shelf, Edge of High Closet, Tea Pot Stands, etc. All Stoves are fitted with the Alaska (“Always Cold”) Crank Shaker, Door Handles, Towel Rod, Poker and Lifter, etc. For extras, see opposite page.

## “Treasure” Base Burners

The mechanical construction of our Base Burners is such that they burn less fuel, give greater heat, require less attention and will last longer than any other line of Base Burners made.

All joints and doors are fitted absolutely tight. The fire is always under complete control of operator.

“Treasure” Base Burners have many exclusive features.

### Special Process in Nickel Ornamentation

“Treasure” Nickel is whitest, brightest and longest lasting, is put through a special process before and after electro plating.

### Five Distinct Lines

of “Treasure” Base Burners afford the greatest choice and variety of styles, sizes and prices, to be had from no other manufacturer of Stoves in the Dominion of Canada. We have always maintained this standard of being the largest manufacturers of Heating Stoves in this country.

In comparison with other Base Burners the “Treasure” line are so constructed that heat units come into contact with a greater area of radiating surface, travel further and give more heat than any other construction.

The **Oven Flue** used in all “Treasure” Base Burners is so constructed that the fire travels over the oven top, down the back and under the oven at both sides to the base of the stove, and returns up the flue in the centre. You will note by this that the fire travels around the oven twice before entering the chimney, economizing to the extent of about 40%, and baking equal to a cook stove.

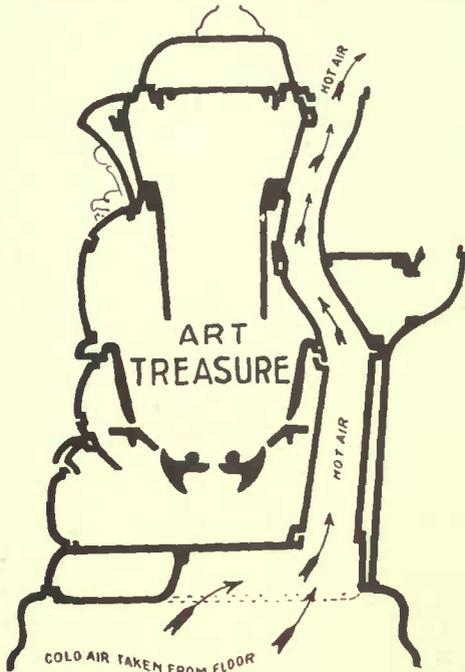

# “Art-Treasure”

## Double-Heating Base Burner

The Highest Finished and Finest Base Burner ever made. Has Full Reflector Top on Front and Sides

Showing construction and how the cold air is taken from the floor, heated and passed out the top, where it is distributed to all parts of the room. The upper end of the flue is supplied with a Pipe Collar, to which a pipe may be attached for conveying hot air to rooms above. This Flue is equal in capacity to an eight-inch Hot Air Pipe.

SECTIONAL CUT OF ART TREASURE

**The Magazine** is unusually large and has a tight-fitting, automatic working Gas Cover.

**Oven** is extra large, has two eight inch Covers, wide double Flues, which convey hot air around the Oven twice. Oven is easily regulated and bakes equal to cook stove.

**Heavy Firepot and Duplex Grate**, can be withdrawn in a few seconds without dismantling stove, saving time, trouble and expense.

**The “Art-Treasure”** is constructed on the most advanced principles, combining every modern and practical idea known to stove builders. Stove sits on Treasure “Never Break” Steel Leg Base, which adds greatly to its appearance. The swing Top, Removable Jacket and Reflector Top, Side Wings, Name Plate, Ash-Pit Door Panel and Removable Foot Rails are Plated by “Treasure” Special Process Nickel, which makes them whitest, brightest and longest lasting.

The Circular Flue used in the “Art Treasure” Base Burner is the best possible flue construction. The hot air circulating flue takes the cold air from the floor, drawing it upwards. The air, in its passage, absorbs the heat from the inside of the stove, giving 50% more heat than any other construction.

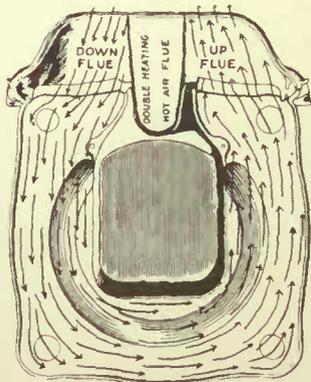

CIRCULAR FLUE

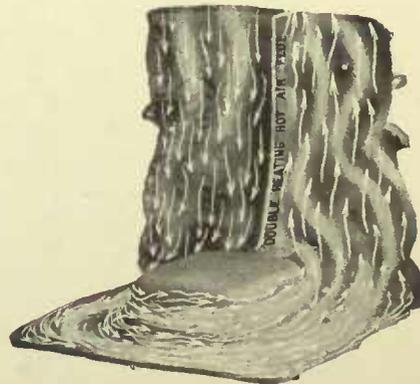

**Circular Draft Regulator** on Ash Pit Door screws in, not out. With it you secure perfect control of the fire.

**Flue Stopper** is self-sealing, air-tight and easily removed.

No. 1

No. 2

### About Flue Construction

Illustrations Nos. 1 and 2 represent the Circular Flue System as used on the “Art-Treasure” Base Burners.

**No Flue Strips** are used, and instead of the heat being forced around any short turns, as in the ordinary construction, it passes easily and freely in an undivided sheet in one direction only, around the concave bottom, thus having a greater draft and better circulation.

Wood Grate, deduct from coal list, .....	.....	.....	1 05	.....	.....

**NOTE**—Duplex Coal Grate furnished unless otherwise ordered. Orders should state if Magazine Feeder is wanted.

**DESCRIPTION**—The largest, strongest and handsomest Heater made. Absolutely Air-Tight. Fitted with Duplex Grate for Coal; Double Register Draw Centre Grate for Wood. The Steel Leg Base “Never Breaks” used in this line only. Large Double Feed Door, admits using large pieces of soft coal or knotty wood. Perfect control of fire insured by use of our Patent Circular Draft Register. Hot Blast Smoke Consumer effects perfect combustion of gases arising from soft coal. Gives most intense heat from cheapest and smallest amount of fuel.

## “Riverside-Oak”

WITH VENTIDUCT

FOR COAL OR WOOD

Number and Style	Fire Pot	List Price	Selling Price	Telegraphic Code Word
23 Coal .....	14½ inch diameter	\$38 32	\$ .....	Hack
24 " .....	16¼ " "	40 84	.....	Haddock

Special Grate for Wood furnished, instead of Coal Grate, if Required

**DESCRIPTION**—The “Riverside-Oak” is an improved principle of Direct Draft Heaters—combines an easily applied system of both Ventilating and Heating. The Ventiduct Flue removes the Cold Air from the floor (or takes Fresh Air from outside if desired) passes it through fire chamber intensely heating and thoroughly purifying it, after which it is distributed through open swing cover into room. The Fire Pot is unusually heavy and durable. The body is made of heavy polished Cold Rolled Steel. It is easily changed from Wood to Coal or vice versa, merely a change of grates, no extra linings required. It is ornamental in appearance and will thoroughly satisfy purchaser in volume of heat produced.

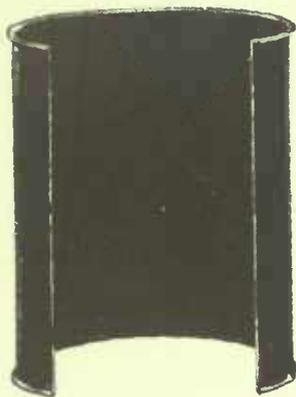

## “Oak-Treasure”

The “Oak” with the removable Duplex Grates

900 SERIES

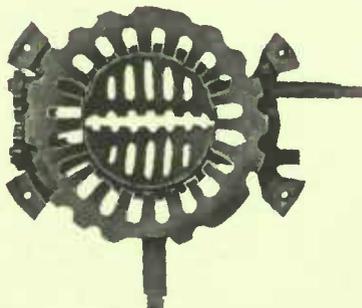

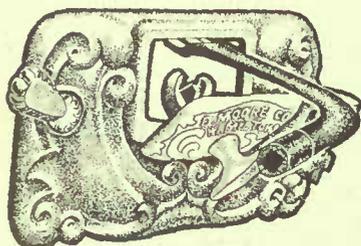

FOR HARD COAL, SOFT COAL, COKE OR WOOD

### DESCRIPTION

“Treasure Oak” Bodies are made of one piece Heavy Superior Cold Rolled Steel and Flanged Top and Bottom. In mounting, the body is forced over a flange on top of Fire-Pot into cement filled cup joint. Body flange is then turned, and over this Deflector Ring is bolted, making an absolutely air-tight joint, which cannot open or leak.

See the large, deep Ash-Pan in extra large Base

### Has Duplex Grates and Annular Shaking Gate

The Annular Shaking Ring is shaken through Nickel Screw Draft in Base Door as illustrated.

Duplex Grates are shaken at side of Base.

Grates can be easily withdrawn through Base Door by removing the four bolts which fasten Gate Frame to Base.

NOTE—Lever Handle Turn Buckles, Circular Screw Draft Regulator for Regulating Draft in Feed door. High Swing Cover with Automatic Cover Lifter Attachment. One-piece Air-Tight Ash Pit. Nickel-Steel Top Ring and Foot Rail, also Name Plate and Circular Screw Draft. Double Feed Doors. Mica Illumination, gives it a bright, glowing appearance. Large Ash Pan. Heavy corrugated fire-pot which allows for expansion.

This is positively the VERY BEST construction of “Oak” Stoves EVER MADE and gives the best satisfaction and suits every requirement. Excels many so called first-class Oaks offered for more money.

**DESCRIPTION**—Low priced Oak of modern design, and embodying many strong points. Double Feed Door permits the use of large chunks of wood, while the upper door acts as a smoke guard when coal is used. Absolutely Air-Tight, one piece Base with swing close-fitting Ash Pit Door. “Never-Break” Nickel Steel Foot Rail. Check Damper in Feed Door gives control of fire. Draw Centre Shaking Grate for Coal prevents accumulation of clinkers.

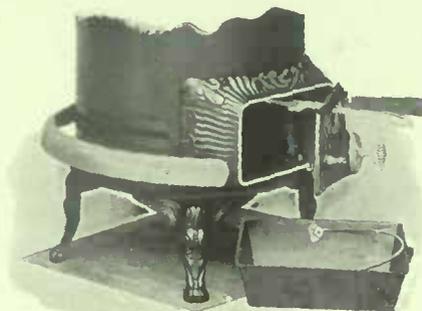

# “Moore’s” Hot Blast Heater

FOR BURNING SOFT, HARD OR LIGNITE COAL, COKE, WOOD, COBS, ETC.

### NOTE

Sectional Cut

Ash Pit Door

**REMOVAL OF ASHES**—We direct special attention to this feature. The **Ash Pan** being large, the grate can be shaken without opening Ash Pit Door. This door is fitted perfectly air-tight, giving complete control over the draft in the stove.

Cleanly and ornamental. A powerful heater.

Gives absolute uniformity of heat day and night—when coal is used.

Will burn wood for spring and fall heating.

Will produce as much heat with a cheap soft coal as with hard coal.

Only requires attention three times in twenty-four hours.

The fuel saved in one season will more than pay for stove.

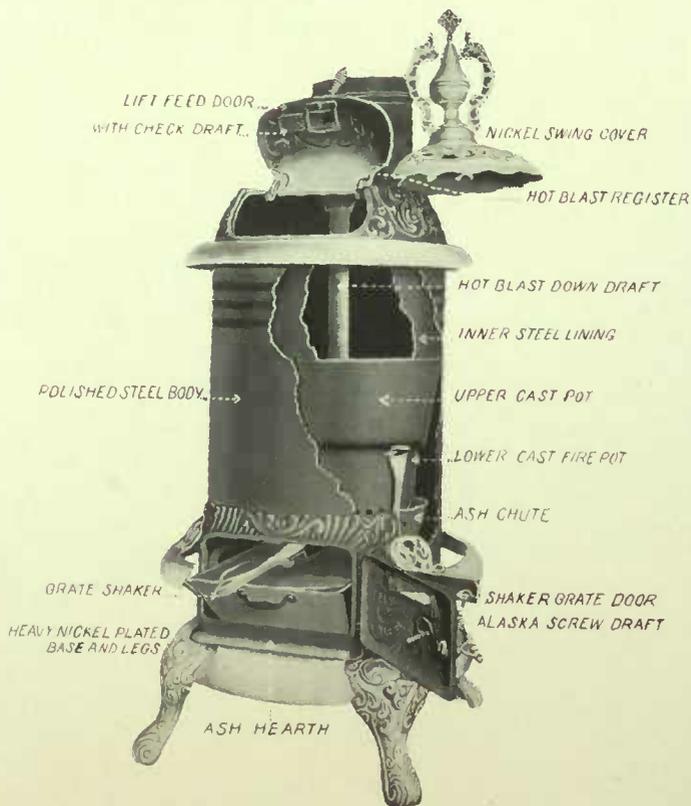

It gives these results because it burns the gas half of the coal, which is wasted in all other stoves.

**DRAW CENTRE GRATE**—The grate is fitted with a draw centre, and clinkers can be easily removed.

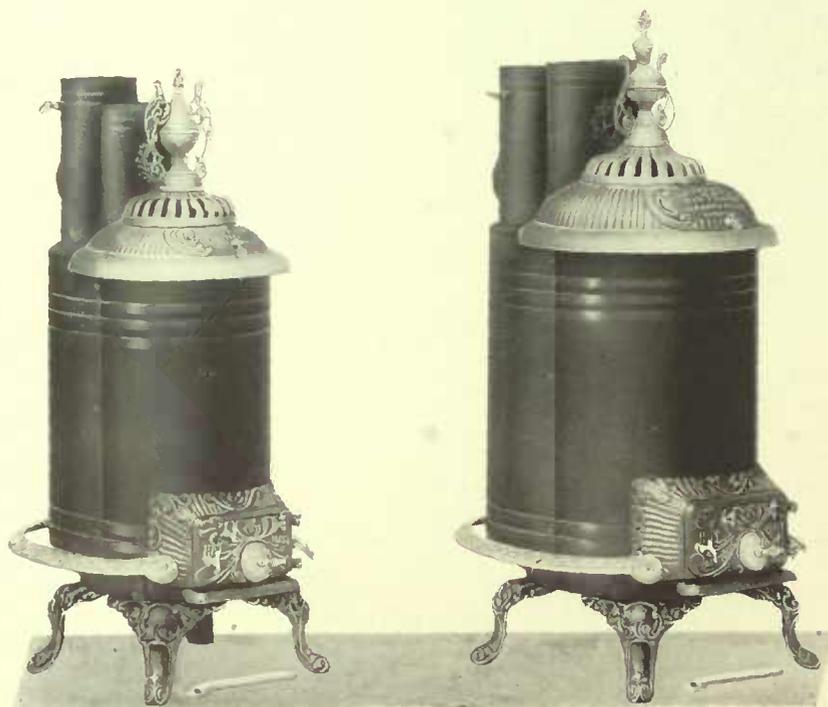

It is not necessary to remove the clinkers through the top door, which is necessary in many Hot Blasts.

Section showing Hot Blast Draft burning the gas half of soft coal

Sectional Cut

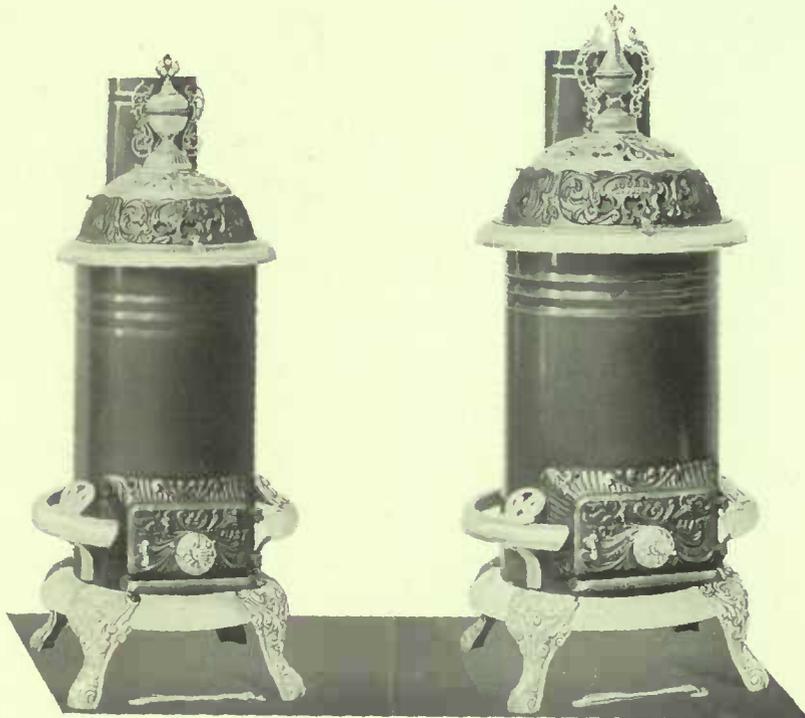

## “Moore’s” Double Heater Hot-Blast

FOR SOFT COAL, HARD COAL, LIGNITE, SLACK, ETC.

Number	Body	List Price	Selling Price	Telegraphic Code Word
1115	15 inch diameter	\$25 47	\$ .....	Holly
1118	18     “	31 58	.....	Hornet

Heavy Draw Centre Shaking Grate and Linings.     Heavy Ornamental Legs and Base

**DESCRIPTION**—The entire construction of above line, with the exception of the Double Heating Attachments, is the same as illustrated and described on page 85. The Double Heating Attachment is an entirely new feature in Hot-Blast Stoves. It takes the cold air from the floor, thereby relieving the room of the unpleasant cold drafts. The cold air is passed through an intensely heated inner chamber at rear of stove, and by means of hot-air pipes to room or rooms above, in such quantities as may be desired by operator, the quantity being controlled by damper joint supplied with every stove.

## “Moore’s” Hot-Blast

SOFT COAL, HARD COAL, LIGNITE, SLACK, ETC.

Number	Body	List Price	Selling Price	Telegraphic Code Word
315	15 inch diameter	\$23 58	\$ .....	Hammer
318	18        “	28 42	.....	Hamper

Heavy Draw Centre Shaking Grate and Linings. Heavy Ornamental Legs and Base

**DESCRIPTION**—Heavy Russia Iron Bodies. Ornamental Dome Top, Lap Jointed to body. Nickel Plated Swing Cover, Ring, Rail Base, Trimmings, etc. Hot Blast Draft, Cast Bottom, which is joined to body with our own patent arrangement, making the joint perfectly air-tight. The failing of other cast bottom stoves is that they are not air-tight. Feed Door is absolutely smoke proof. Above Top Fire Pot is Steel Lined, which prevents action of fire on body. This Lining is a specialty only to be found in this Hot Blast. Extra large Ash Pan. Grate can be shaken without opening Ash Pit Clean Out Door.

See page 82 for sectional illustrations

### Heavy Draw Centre Shaking Grate

**DESCRIPTION**—Heavy Russia Iron Bodies. Cast Iron Main Top, with Nickel Plated Swing Cover, Ring, Rail and Trimmings. Heavy Double Seamed Steel Bottom or Cast Bottom. Hot Blast Draft, which is the Draft of the stove, burns all the gas in the coal. This Draft in connection with the absolutely air-tight construction discharges a blast of fresh air over the surface of the coal, saves waste and gives a steady controlable heat. Feed Door is absolutely smoke-proof. Above Fire Pot inside is a steel lining, which prevents action of fire on the body. Extra Large Ash Pan. Grate can be shaken without opening Ash Pit Door. Clean-Out Draft Door lifts up and is held up by patent malleable attachment.

# List of Repair Parts for "Treasure" Base Burners

- No. 1 Swing Top  
 2 Swing Top Handle  
 3 Magazine Cover  
 4 Double Heater Collar  
 5 Front Section Nickel Jacket  
 6 Side Section Nickel Jacket (Specify Right or Left)  
 7 Upper Section of Magazine  
 8 Main Top  
 9 Division Plate in Magazine  
 10 Right Main Side  
 11 Side Mica Dome (specify Right or Left)  
 12 Inside Frame of Side Mica Dome  
 13 Front Mica Dome  
 14 Inside Frame of Front Mica Dome  
 15 Upper Main Front  
 16 Upper Left Side Door  
 17 Upper Left Side Mica Frame  
 18 Left Main Side  
 19 Inside Main Back  
 20 Main Back  
 21 Magazine  
 22 Back Section Nickel Jacket  
 23 Lower Main Front  
 24 Ash Pit Door Frame  
 25 Nickel Name Plate  
 26 Direct Draft Damper  
 27 Direct Draft Damper Handle  
 28 Elbow  
 29 Attachment Top  
 30 Back Flue Grating  
 31 Ash Chute (Right or Left)  
 32 Inside Cold Air Flue  
 33 Upper Back Flue Strip  
 34 Check Damper  
 35 Upper Right Side Door  
 36 Upper Right Side Door Mica Frame  
 37 Turnbuckle and Catch  
 38 Lower Right Side Door  
 39 Lower Right Side Door Mica Frame  
 40 Upper Right Front Door  
 41 Upper Right Front Door Mica Frame  
 42 Fire Pot  
 43 Annular Shaking Ring  
 44 Long 1/2 Duplex Grate  
 45 Short 1/2 Duplex Grate  
 46 Duplex Grate Cogs (specify on Long or Short Duplex Grate)  
 47 Duplex Grate Cog Yoke  
 48 Duplex Grate Cog Cap  
 49 Ash Pan Handle  
 50 Ash Pit Bottom  
 51 Lower Right Front Door Mica Frame  
 52 Lower Right Front Door  
 53 Right Nickel Wing  
 54 Left Nickel Wing  
 55 Upper Left Front Door  
 56 Upper Left Front Door Mica Frame  
 57 Lower Left Front Door  
 58 Lower Left Front Door Mica Frame  
 59 Lower Left Side Door  
 60 Lower Left Side Door Mica Frame  
 61 Poker Drop  
 62 Front Ash Slide  
 63 Nickel Foot Rail (specify Right or Left)  
 64 Leg Bottom

SECTIONAL DRAWING OF "TREASURE" BASE BURNER,  
SHOWING REPAIR PARTS

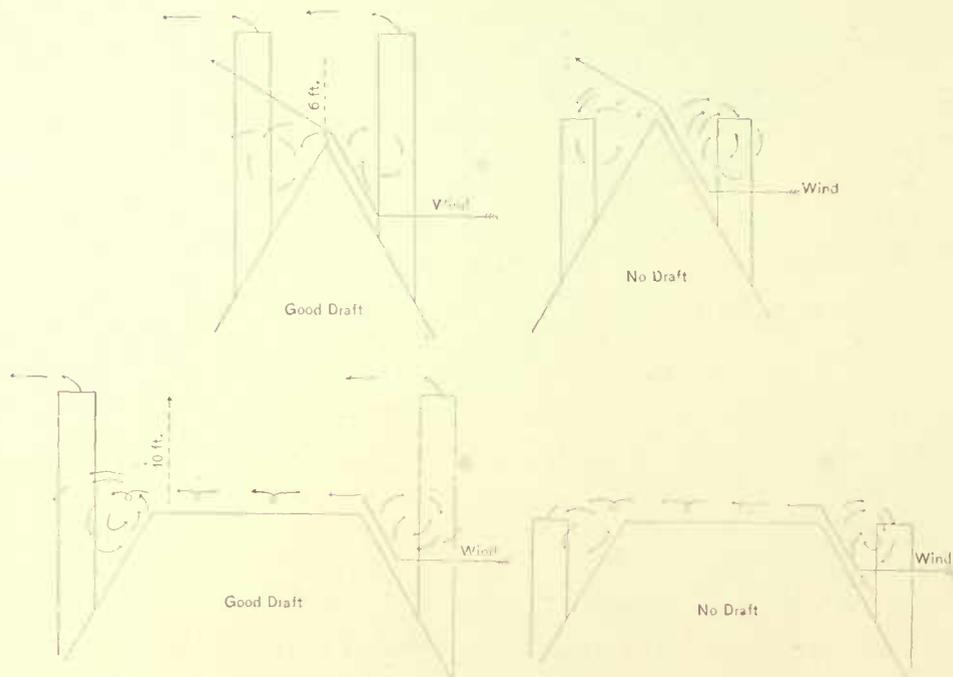

In ordering Repairs for "Treasure" Base Burners, locate piece wanted by number. Find same number on list of parts. This will give you the correct name and enable us to readily identify the parts desired.

- No. 65 Legs  
 66 Attachment Cover  
 67 Shaker  
 68 Flue Stop  
 69 Ash Pit Door Panel  
 70 Ash Pit Door  
 71 Circular Draft Regulator, Disc  
 72 Circular Draft Regulator, Handle and Screws

- No. 73 Circular Draft Regulator Yoke  
 74 Poker  
 75 Leg Base (specify whether Right, Left, Front or Back)  
 76 Ash Pan  
 77 Grate Follower  
 78 Check Damper Handle  
 79 Hinge Pins  
 80 Urn

## Useful Information

### The Chimney

Should be carried **above** any other point of the house. It is usually carried two to six feet above the kitchen, and the kitchen being usually twelve to twenty or thirty feet lower than other parts of the house, you get a poor draft when the wind is from the direction of the higher point.

The chimney which is used for the Range or Stove must not be used for any other stove or fire-place. All openings into that chimney, either above or below, except the pipe-hole for the Range, must be closed up tight. If the chimney can be closed up tight right below where the pipe of the Range or Stove enters it, such will often increase the draft.

Lead the pipe into the chimney in the most direct way. Use only one elbow if possible; every turn in the pipe injures the draft. Round elbows are much better than square elbows.

The pipe entering the chimney must go through the thickness of the brick, but must not go in any further, as such would injure the draft. Be quite sure that the opening around the pipe where it enters the chimney is closed up tight. If the chimney opening is too small to admit pipe, cut it larger. Don't reduce the size of the pipe.

Each flue should be **entirely separate**, and starting only at the entrance. In no case should the flue **extend below the entrance**; it leaves a large volume of cold air that is a hindrance to the draft.

---

Don't fill the fire box more than half full of fuel

If your Range has a RESERVOIR, keep same at least half full of water

The pipe its entire length should be same size as Collar on Range

See page 116

## Useful Information—Continued

We illustrate a few of the Causes why the Stove is Condemned—When the fault is solely in the Chimney

**A**—Often complaints are made that the cook stove will not operate, although the pipe was carefully fitted into a chimney that has a good draft, and which has been in use for many years. Investigation proves that the stove is attached to a chimney whose base contains a very large, old-fashioned, open fire-place. The remedy for this is the same as the preceding.

**B**—The chimney of the kitchen may be much lower than the main part of the house. The wind blowing over the house falls like water over a dam, sometimes almost perpendicularly on the top of the chimney; thus it beats down the smoke contained therein. The remedy is to build up the chimney, or add a smoke stack to equal the height of main building. See illustration.

**C**—A building or a large tree may be near to and higher than the top of the chimney, so that the wind passing over them would blow down the chimney.

**D**—When there is more than one opening in a chimney, a great variety of complications may affect the draft. So see that all the openings in the flue, no matter of what kind, excepting the one you are going to use, are securely closed.

**E**—When two or more stoves are connected with one single chimney, the combination is so variable that it is difficult to cover all such cases by specific direction. Common sense, directed by observation, must be used.

**F**—A new or green chimney will never have a perfect draft. It will not draw perfectly until it is thoroughly dry, which sometimes requires two to four weeks' time.

**G**—In building a chimney, a little mortar may be dropped from time to time and lodge out of sight so as to partially close the chimney. A heavy weight may be let down by a rope and worked against the inside of the flue to force an opening.

**H**—If an old chimney, the mortar may have crumbled from between the bricks so that it leaks air and spoils the draft.

All the air that passes through the chimney should first pass through the fire, unless used to check the draft.

### To Secure Good Operation in Stoves and Ranges, See :

**1st**—That the **flue door is closed tightly.**

**2nd**—That the chimney is clear and has a **good draft at pipe hole.**

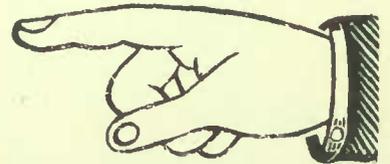

**3rd**—That the pipe **fits closely on pipe collar** of stove or range, also **where it enters the chimney.**

**4th**—That the pipe **does not enter too far** into the chimney.

**5th**—That there are **no other pipe holes open** on either side of chimney, either above or below.

**6th**—After having all these parts properly adjusted, open the direct draft damper. If you fail to get a good fire the trouble must be looked for in the flue, as **the stove or range of itself has no draft.**

**7th**—If the stove or range has a reservoir attachment, be sure the reservoir damper is turned so as to throw heat around oven when desiring to operate the oven.

**When complaints are made of Stoves or Ranges not operating satisfactorily, the following points should be investigated :**

**1—CHIMNEY.** Is it a poor one? Is it tapped with another Stove? Is there any opening below stove in cellar or elsewhere? Are stove pipes put up all right? Is it the chimney that furnishes the draft, not the stove.

**2—FUEL.** Is right Coal used?

**3—DAMPERS.** Are they regulated properly and thoroughly understood? Ask the person using stove to show you how they work them. Do they use a damper in Stove Pipe, and is it sufficiently turned off?

**4—FLUES.** Are they in position? Are they clean and in good condition?
