COMPLETE ALPHABETICAL INDEX AT BACK OF BOOK.

THE MCCLARY MANUFACTURING CO.,

LONDON, CANADA.

Toronto, Montreal, Winnipeg, Vancouver, St. John, N. B.

SPECIAL TO OUR FRIENDS IN THE TRADE.

Since our last Tinware Catalogue was issued many changes have been made in our facilities, number of employees, and output.

Four years ago we added a large building to our Tinware Factory and increased our plant to such an extent that we considered our output would equal the demand for at least ten years to come. But times then did not point to such rapid advances in the development of the country as have since taken place, and last year we were forcibly awakened to the fact that an early increase in plant and buildings was necessary to retain our lead in the tinware business in Canada.

We had no time to lose in consideration but immediately had our plans made and perfected, and the extensive changes are now under way, and should be completed before the heavy fall business commences. The building recently destroyed by fire has been reconstructed and laid out to much better advantage. Our mammoth foundries in the south-east part of the city are nearly complete, and the space occupied by this portion of the Works will in future be devoted entirely to manufacture of goods shown in this Catalogue. When these changes have been completed we can safely say that our Tinware Factories and Stove Foundries are the largest and most complete in Canada, and compare favorably with any on the Continent.

We make these explanations merely to assure you that we are keeping pace with the development of the country and can fill your orders for some time to come as promptly as we have always done in the past.

Trusting that you are sharing in the general prosperity, and wishing to assist you with our up-to-date and high standard goods, we are,

Very cordially yours,

THE McCLARY MANUFACTURING CO.

JOHN McCLARY,
President and Gen. Mgr.

GEO. O. McCLARY,
Treasurer.

W. M. GARTSHORE,
Vice-President and Mgr.

J. K. H. POPE,
Secretary.

Works and Branch Warehouse Notes.

From the following notes some idea of the volume of business and magnitude of our works may be formed.

London—Head Offices and Works.

Established 1852.

In our London works we utilize about 15 $\frac{2}{5}$ acres of floor space, and give steady employment to over 850 people.

More than thirty clerks, salesmen, heads of departments and managers are required in the offices, and during the busy season this number has frequently to be increased ; while four travellers devote their entire time to drumming up the trade.

Toronto—A. D. KENNELLY, Manager.

Branch warehouse, 14, 16 and 18 Bay St.

Established 1879. Uses 25,000 square feet of floor space. Employs a staff of twelve people in the offices, and is represented by four travellers.

Montreal—A. A. BROWN, Manager.

Branch warehouse and tinware factory.

Office and warehouse, 334 St. Paul St.

Established 1886. Uses 23,000 square feet of floor space. Employs twenty-five people, and sends out five travellers.

Tinware factory, 99 King St. Floor space totals 23,100 square feet. Employees number forty.

Winnipeg—J. W. DRISCOLL, Manager.

Branch warehouse :

183, 185, 187 Bannatyne Ave. East.

Established 1882. Has 50,625 square feet of floor area, and employs fifteen people in the office, and three travellers.

Vancouver—W. E. DRAKE, Manager.

Branch warehouse, 305 Water St.

Established 1894. Floor area is 34,000 square feet. Office staff numbers seven; and travellers, two.

St. John, N. B.—JOHN J. FOOT, Manager.

Branch warehouse, 23-25 Prince William St.

Established 1901. Uses 31,200 square feet of floor space. Employs a staff of twelve, and is represented by three travellers.

TERMS:

FOUR MONTHS.

CASH DISCOUNT: Three per cent. may be deducted from amount of invoice if paid within thirty days from date thereon.

(If there are several invoices in a month, the average date may be taken.)

Interest at the rate of eight per cent. will be charged on all renewals and overdue accounts.

ALL NOTES OR CHEQUES must be payable at the point where the account is kept, or exchange added.

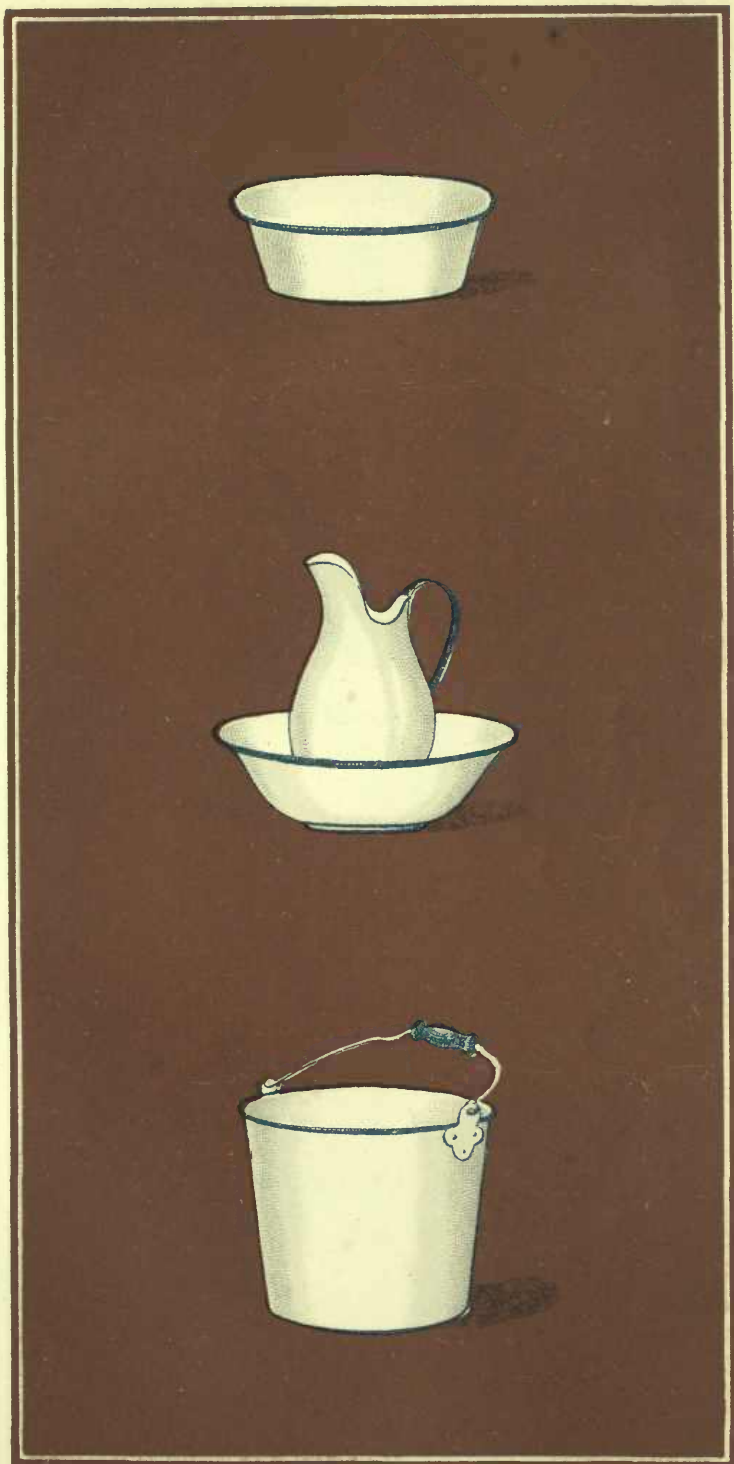

All goods shipped at "owner's risk," and after receiving carrier's receipt "in good order," our responsibility ceases.

Hoping to be favored with a continuance of the very pleasant business relations which have existed between us in the past,

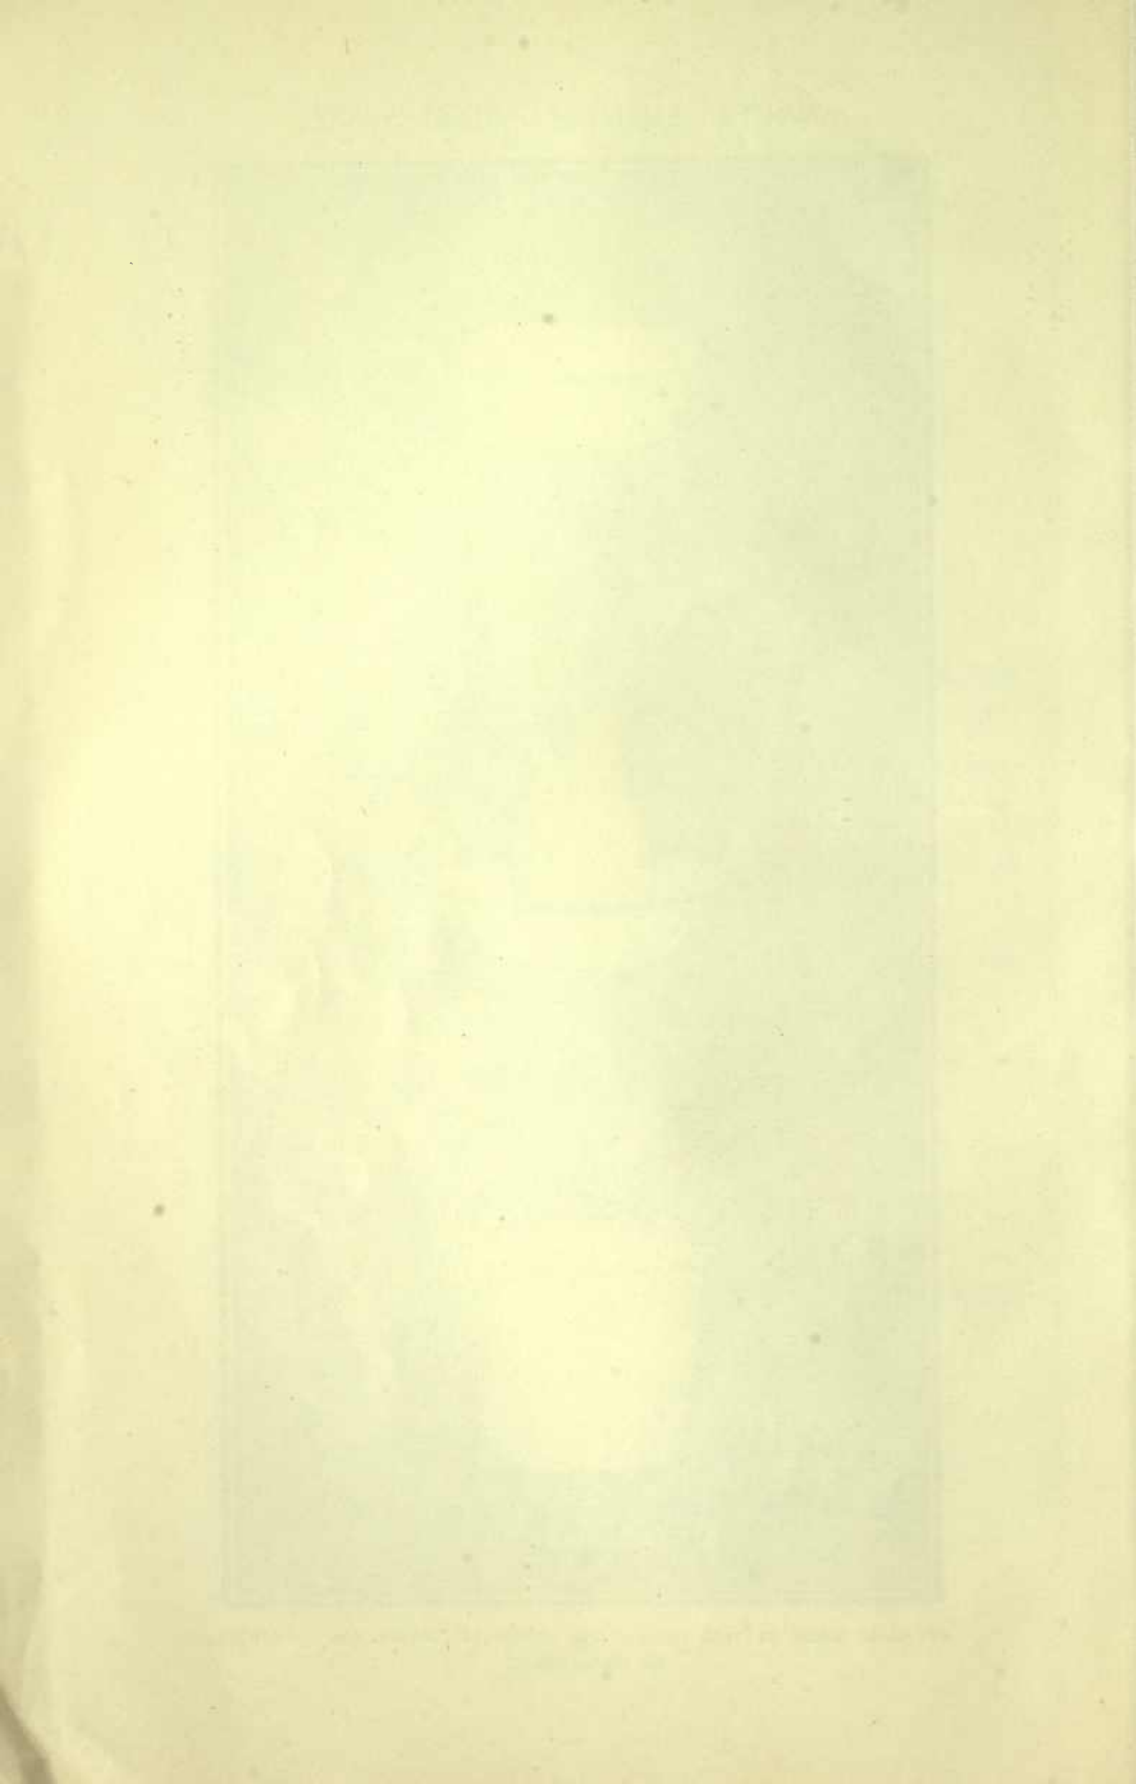

We remain,

THE McCLARY MANUFACTURING CO.

THE UNIVERSITY OF CHICAGO PRESS

ENAMELED STEEL WARES.

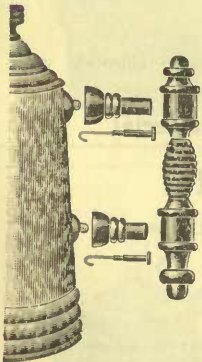

OUR BRANDS:

“White” “Famous” “Imperial”

WE manufacture and always keep in stock a complete line of these brands. In the following pages we illustrate and give the exact sizes of all articles which we make, and have specified under each article in which brands it is made.

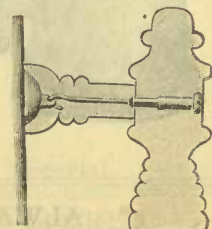

“FAMOUS” TEA POT HANDLES.

Always Cold.

“Famous” Tea Pot Handles are made entirely of wood which never gets hot, so that a woman is not forced to use a cloth to avoid burning her hand every time she handles the pot. The grooved handle gives a sure grip, so that there is no possibility of slipping in the hand. These are two strong selling features on “Famous” Tea and Coffee Pots and are quickly appreciated by every woman. They are not found on any other make of Tea Pot.

If repairs ever become necessary (they seldom do), the handle can easily be taken apart and the impaired part replaced at slight cost. Other tea pots become useless after the handles are broken.

“Famous” Wood Handles are not found on any other make of Tea Pots.

* "FAMOUS" SELF-BASTING ROAST PANS.

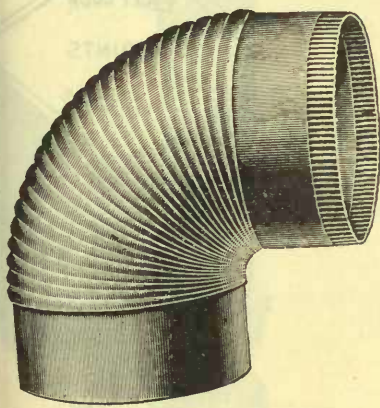

The specially new feature of this pan is the indented top, which makes it self-basting, the steam rising to the top of the pan and condensing, dropping back upon the roast at the points of indentation, thus thoroughly basting every portion of contents. The wire shoes shown, will prevent burning of contents and allow free circulation of heat under the pan, thus doing away with the inside tray or grate, which collects dirt. The top pan fits inside the lower pan, and hence the steam, rising to top pan and condensing, must run back into the lower pan and not into the oven. Ventilators are provided, allowing a current of air in and out of the pan, and a proper adjustment of these enables the cook to roast or bake to suit family requirements.

(Always supplied with pipe unless otherwise specified.)

Has direct as well as indirect draft. The arrangement of flues directs the heat around the oven baking, as in a high-priced cookstove. The simple construction of the stove renders it perfectly d when put together, and the heavy angled corners assist in preventing the stove from warping. s four 8 $\frac{1}{4}$ -inch pot holes on top. Five lengths of telescopic pipe (supplied with each stove) will end to 9 $\frac{1}{2}$ ft. Also supplied with thimble for tent, through which stove-pipe passes.

en s

ed

am rs frig- rs

als

MILK CAN AND DAIRY TRIMMINGS.

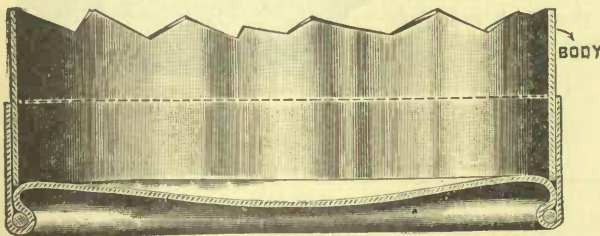

THE "SAMSON" MILK CAN BOTTOM

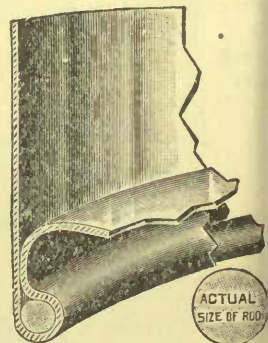

Is made of One Piece of Sheet Steel.

Every bottom of each size is of an exact diameter. Being stamped with a die there can be no variation as in a bottom made in several pieces. By the insertion of the body into the groove on the inside of bottom it takes less solder, is easier done and makes a cleaner, stronger and smoother joint than any other style of bottom. The large roll rim is formed by an iron rod being inserted in a groove and the steel being spun around it, after which the whole bottom is soaked in melted tin, thus making it all as one piece. The large roll at bottom allows filled cans to be easily drawn over the floor, while the roll will always wear round, thereby doing away with the sharp edges found on all styles of pieced bottoms.

"SAMSON" MILK CAN TRIMMINGS.

SECTION OF "SAMSON" MILK CAN BOTTOM.

Patented July 23, 1900.

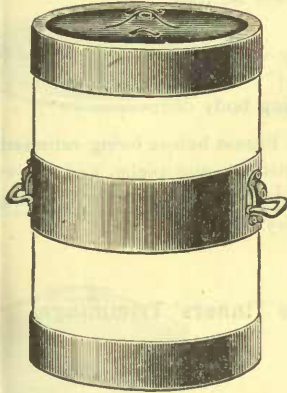

The "Samson" is the strongest one-piece Bottom in the world, and the only one-piece Sanitary Bottom on the Canadian market. The only one-piece Bottom. No rivets. No place for dirt or sour milk to lodge. No hoops to break or tear away. No sharp corners. No ragged edges to tear the flooring. Will never wear through. No strained metal.

THE STRONGEST, CLEANEST AND CHEAPEST BOTTOM MADE.

* "SAMSON" MILK CAN TRIMMINGS.

Broad Hoop Pattern.

COMPLETE SETS.—A set consists of: One Samson Bottom; Body Hoop, 6 inches wide, 20 gauge; Top Hoop, 4 inches wide, 14 gauge; one Cover, (retinned); one pair Malleable Side Handles; one pair Steel Cover Handles.

* RAILROAD OR DELIVERY CAN TRIMMINGS.

Samson Pattern.

A set consists of Seamless Cover, Seamless Neck, Seamless Breast, pair of "D" Handles, and Samson Seamless Bottom.

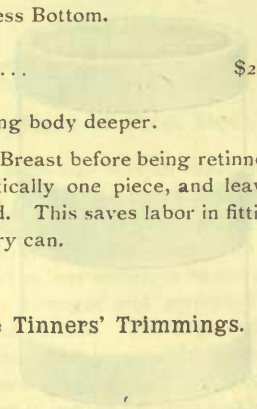

Per set

\$2.50

A set will make any size Can by making body deeper.

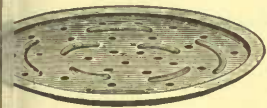

The Neck is double-seamed on to the Breast before being retinned, which makes the Neck and Breast practically one piece, and leaves only the Breast and Bottom to be soldered. This saves labor in fitting and soldering, and makes a strictly sanitary can.

For Creamer Can Trimmings see Tinnerns' Trimmings.

GLOBE STREET LAMPS.

These have many new and modern improvements: Solid Elbows, Automatic Time Extinguisher, Bottom Lift Attachment, Wind Break around the top of Lamp, making it impossible for the wind to extinguish the light. They are the most perfect Globe Street Lamps made.

The Patent Bottom Lift Attachment is a great improvement over the old way of raising Globe to light and trim, and for the purpose of removing oil fount, as the use of one hand only is required to raise the Globe. The possibility of the Globe dropping and breaking is positively avoided. The Globe is easily removed to clean.

SQUARE STREET LAMPS.

No. 10, Improved.

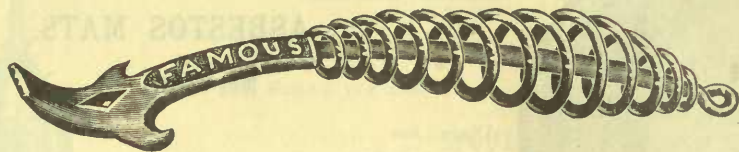

Cannot Freeze. Outside Wick Regulator.

SIZE OF WICK, 1½ INCH OR D.

This Street Lamp has a new Hot and Cold Air Combination, making it impossible to freeze in winter—no other make has this. The Outside Wick Regulator is another great improvement, as the flame can be regulated from the outside without opening the lamp. One trial will convince all of its superiority.

ICE CREAM FREEZERS AND REFRIGERATORS.

IMPROVED WHITE MOUNTAIN FREEZER.

With Crank.

This is universally the favorite family Ice Cream Freezer, because it combines more excellence than all other family freezers made. It is easy to operate, because the parts fit perfectly and therefore run smoothly.

It is remarkably quick freezing, because it has the triple motion, and will produce a delicious, smooth and even grain cream in four minutes or less.

It is exceptionally durable. The tubs are built very strong, and will not warp, leak or crack, and the cans are made of the finest quality bright charcoal tin plate.

Its beater and interior mechanism are plated with block tin, and the exterior metal parts are cast iron, finely galvanized to prevent rusting.

It is the only freezer made with a duplex malleable iron dasher and double self-adjusting scrapers, which keep every particle of cream in constant motion, causing it to freeze faster and more evenly than can possibly be accomplished by any other freezer.

We would call attention to a new and important change in the style and adjustment of the gear frame of all White Mountain Freezers from two quarts to ten quarts inclusive.

The new frame is made straight with a wedge end on the crank side of the freezer that fits the clamps into a new U-shaped ear. This holds the frame firmly, and at the same time makes an easy and quick adjustment. It is a decided improvement, and adds to the appearance of the freezer.

Ice Cream Freezers and Refrigerators

THE CAPACITIES GIVEN ABOVE ARE WINE MEASURE.
CREAM CAN BE FROZEN IN 4 MINUTES.

IMPROVED ARCTIC FREEZERS.

Special Features :

A strong waterproof Tub, bound with heavy, galvanized iron hoops ; a Detachable Hinge Top Frame, with all gearing completely covered, so that nothing can get between the cogs. Cans are made of best quality of charcoal tin plate. TINNED BEATER WITH DOUBLE SELF-ADJUSTING WOOD SCRAPING BAR.

The Can of this Freezer may be revolved after the beater is removed, which is an advantage in freezing fruit.

THE ARCTIC is positively the best Freezer in the market for the price, and second only to the White Mountain.

Capacity, quarts	1	2	3	4
Each	\$2.82	3.32	3.88	4.48
Capacity, quarts		6	8	10
Each		\$5.80	7.26	9.92

THE CAPACITIES GIVEN ABOVE ARE WINE MEASURE.

CREAM CAN BE FROZEN IN 7 MINUTES.

“TOY” PEERLESS ICELAND FREEZERS.

Will freeze cream in 3 minutes. Elegantly finished complete in every respect. Varnished natural wood tub with all exposed parts nickel-plated. Covered gearing. Beside being a most suitable toy for children, it is almost an indispensable article in a sick room.

Capacity, pints	1
Each	\$2.5

THE LEONARD CLEANABLE REFRIGERATORS.

Patented, U. S., July 25, 1882; March 24, 1885; February 2, 1886;
June 28, 1897; July 8, 1890, and August 12, 1890.

System of Refrigeration.

This system consists in discharging partially cooled air into the ice chamber. It results in a great saving of ice and much lower temperature and is accomplished in the following manner: (See sectional view.) The inner walls of the Warm Air Flues—which are removable and constructed of galvanized iron—are kept cool by the ice in the box. This offers a condensing surface to the ascending warm air, and **partially** cools the air. All vapor condensed here runs down the iron and is caught by the bottom of the ice box, which projects beyond the iron for this purpose. The air is next passed over the ice, where it is again condensed and cooled, then under the false bottom as shown by the

arrows, where it is further condensed, to the centre, where it passes to the provision chamber, **pure, dry and cold**, falling to the bottom and forcing the warm air up into the ice box to be again condensed and purified.

The air ascending from the provision chamber is condensed, or dried, by contact with all these cold surfaces—just as air condenses on the outside of a pitcher filled with ice water. This condensing also purifies the air, as any particle of matter or odors from below go with the water and flow off through the waste pipe.

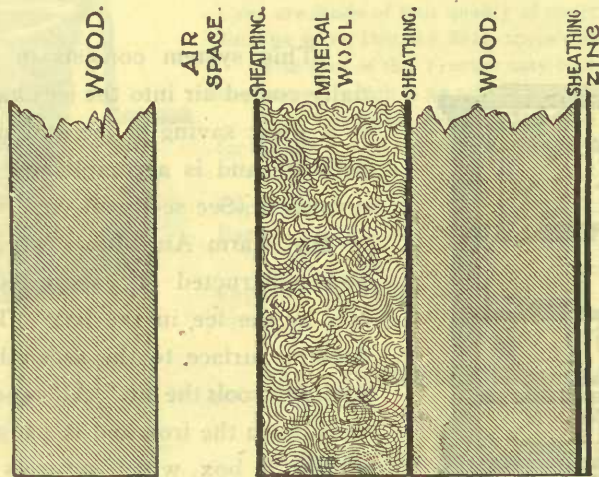

The system, by its cold iron flues and metallic false bottom, presents more cooling surface to the air in the ice chamber than any other, and consequently the air descending to the provision chamber is cooler and dryer than in any other refrigerator.

A PERFECT REFRIGERATOR.

THE LEONARD CLEANABLE REFRIGERATORS.

Insulation.

The insulating or non-conducting supremacy of the Leonard casings is unequalled, there being no less than eight separate and distinct walls separating the contents from the outside air, in order as follows :

Full size sectional view of one wall of a Leonard Cleanable Refrigerator.

Air Space and Mineral Wool.

Air is the best distributor of heat and also the greatest barrier to its transmission according as it has or it has not freedom to circulate. To prevent the conveying of heat to the inside of our refrigerators, we make the air space as nearly air tight as possible. This air space also prevents moisture from within reaching the outside case and swelling it out of shape.

Mineral Wool is a vitreous substance having the appearance of wool. It is made from the slag of blast furnaces, or other similar material, by throwing a jet of steam against a small stream of the liquid glass. In this manner it is so expanded that it contains 92 per cent. of air and only 8 per cent. of the original substance. This air is confined and held in position, consequently it cannot carry heat and makes the best known insulating material. It is also indestructible and will not mould or smell. The sheathing used in our refrigerators is the Bird Patent Water Proof Odorless Sheathing. It is called charcoal sheathing by some manufacturers and is sometimes the only material used for insulation, and only a single layer at that. By reference to the above diagram you will see that we give **eight** walls for insulation. Nothing so good as this has ever before been attempted. If you would have the best be sure you get the **Leonard Cleanable, Mineral Wool, Insulated Refrigerator.**

A PERFECT REFRIGERATOR.

THE LEONARD CLEANABLE REFRIGERATORS.

The Leonard Refrigerator Lock.

Patented, U. S., March 24, 1885, and December 25, 1889.

You know that your house doors bend inwardly at top and bottom in winter, admitting chilling drafts, caused by the inequality of temperature inside and outdoors. Refrigerator doors will bend similarly for like cause, and it is impossible to prevent it, except by the use of the Leonard Air-tight Patent Lock. As illustrated in the cut herewith, these locks have bolts which reach to the bottom and top of the door on the inside, and when the lever of the lock is turned the bevel ends of the bolts engage with the top and bottom of the door frame and draw the door into an air-tight joint. The strong, well-fitting double hinge on which the door swings secures the same effect, making the entire door, when shut and bolted, as close fitting and air-tight as all other parts of the case.

There are many locks now in use which can be adjusted and which, IF THE LEVER IS OPERATED, the door can be clamped up very nicely (?) ON ONE EDGE ONLY.

These locks, however, do not help the other edges, the top and bottom are the most important of all.

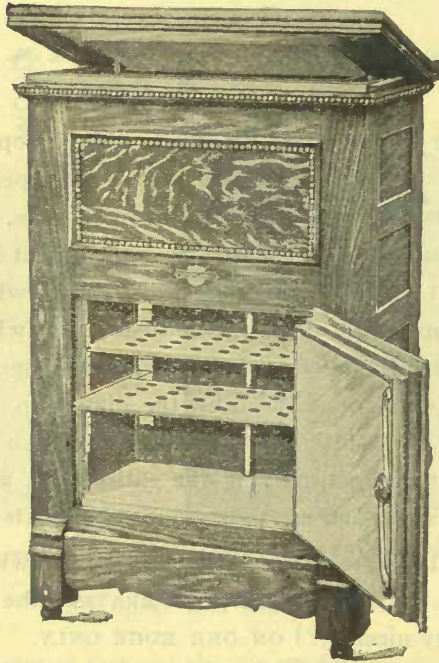

Manufacturers agree that Bidly seldom operates a lever if the door will slam, thus the adjustability in other locks amounts to nothing anyhow. Our devices put Bidly in a hole. There is no kicking this door to and leaving it leaky. It will not latch automatically, and we don't want it to. Bidly has no resource but to leave it wide open. If it is closed at all it is perfectly air-tight.

These locks can be obtained only on the LEONARD CLEANABLE REFRIGERATORS. They are so simple they never get out of order.

A PERFECT REFRIGERATOR.

“MODEL” REFRIGERATORS.

Style of Nos. 45, 46, 47 and 48.

The “Model” is a moderate priced refrigerator, but compares favorably with the more expensive lines, and is much better value for the money than many of the so-called high grade refrigerators.

It is made of hardwood, finished in Golden Oak; has heavy, solid bronze locks and hinges and is lined with zinc, while the insulation is superior to many of the higher priced refrigerators.

MADE OF HARDWOOD. PERFECTLY CONSTRUCTED. SAVES ICE.

JUST THE THING FOR SMALL FAMILIES OR CAMPERS.

OIL, GAS AND GASOLINE STOVES.

Oil Stoves have been so much improved in the past two or three years that the old time prejudice, caused by disagreeable odors, danger from explosion, etc., has been completely dispelled, while their handiness has become so generally appreciated by housekeepers that the Oil Stove has grown to be almost a necessity in every home.

With this demand already created it is only a question of handling satisfactory lines and giving them a little display in the show-room, and advertising, to develop a large and profitable Oil Stove trade.

In the following pages we show a few lines of heating and cooking Oil and Gas Stoves, and in our special Oil Stove Catalogue we show complete lines, ranging from a small lamp wick stove, for very light work, to the large Dangler Wickless Blue Flame Oil Cooking Stove, on which a complete meal can be completely and well cooked.

Among our lines are :

Dangler Wickless Blue Flame Oil Cooking Stove,

Dangler Gasoline Stoves,

Summer Queen, Golden Star,

Triumph,

“Famous” Oil Heater,

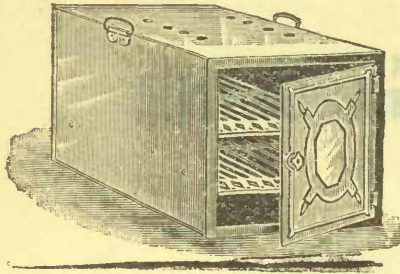

Handy Cooking Stoves and Gas Ranges,

Ovens for Oil Stoves in all Styles and Sizes.

We issue a Special Catalogue on the above lines.

Write for copy.

Light to Handle.

“FAMOUS” OIL TANK.

The Oil Tank is made of sheet copper, stamped in one piece, without seam or joint. It cannot leak or rust.

A floating gauge shows when the tank is empty or full. No need for guessing.

Cold air is drawn from floor, passing over the oil tank on all sides, keeping the oil always cool, avoiding any danger of explosion, and preventing any odor from heated oil.

A deflector spreads the flame, giving it greater heating power from the same fuel.

AT LOWEST MARKET PRICES.

USEFUL INFORMATION

THE FOLLOWING ARITHMETICAL RULES MAY BE OF VALUE :

To find the Contents in Gallons of any Square Vessel.—Take the dimensions in inches, and decimal parts of an inch; multiply the length, breadth and height together, and then multiply the product by .004329 for Wine gallons, and by .003546 for Ale gallons.

To find the Contents in Gallons of any Cylindrical Vessel.—Take the dimensions in inches, and decimal parts of an inch; square the diameter; multiply it by the length in inches, and then multiply the product by .0034 for Wine gallons, and by .002785 for Ale gallons.

To find the Contents of a Flaring Vessel.—Square the diameter of the top and bottom; add them together, and divide product of 2; then multiply the quotient by the height.

To find the Circumference of a Circle.—Multiply the diameter by 3.1416.

To find the Diameter of a Circle.—Divide the circumference by 3.1416.

To find the Area of a Circle.—Multiply the circumference by one-fourth the diameter.

To find the Circumference of an Oval.—Multiply one-half the sum of the two diameters by 3.1416.

To find the Area of an Oval.—Multiply the diameters together, and that product by .7854.

To find the Area of a Sector of a Circle.—Multiply the length of the arc by half the length of the radius.

To find the Diameter or Circumference of a Circle, the Area being known.—Divide the area by 3.1416; the square root of the quotient will be equal to half the diameter; and the diameter multiplied by 3.1416 will equal the circumference.

To find the Side of a Square that shall equal the Area of a Circle of a given Diameter or Circumference.—Multiply the diameter of the circle by .886227; or multiply the circumference of the circle by .282094.

To find the Diameter of a Circle that shall contain the Area of a given Square.—Multiply the side of the given square by 1.12838.

To find the Circumference of a Circle required to exactly admit a Square of a given Side.—Divide the given side by .225079.

To find the Surface of a Prism or of a Cylinder.—Multiply the perimeter by the height, and to the product add the area of the two ends.

To find the Contents of a Prism or of a Cylinder.—Multiply the area of the base by the height.

To find the Surface of a Pyramid or of a Cone.—Multiply the perimeter or circumference of the base by half of the slant height, and to the product add the area of the base.

To find the Contents of a Pyramid or of a Cone.—Multiply the area of the base by one-third the height.

To find the Surface of a Sphere.—Multiply the diameter by the circumference.

To find the Contents of a Sphere.—Multiply the cube of the diameter by .523598.

To find the Area of a Triangle.—Multiply the base by half the height.

To find the Area of a Parallelogram.—Multiply the base by the height.

TABLE FOR FINDING CIRCUMFERENCES WHEN DIAMETER IS GIVEN.

(Advanced by Eighths.)

DIAM.	CIRCUMFERENCE, INCHES.							
	0	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{7}{8}$

STOVES RANGES FURNACES

Our Enamel and Tinware Factories, while being the largest and most modernly equipped in Canada, compose only one-half of our great industry. In addition to Enamel and Tinware we manufacture all kinds of

Steel Heaters

Steel Ranges

Cast-Iron
Heating Stoves

Cast-Iron
Cook Stoves
and Ranges

Camp Stoves
and
Agricultural
Furnaces

Gas and Oil
Stoves

Warm Air
Furnaces

CAST AND STEEL
Registers and
Hollow Ware

Our Leaders Are:

Cast Iron Ranges: THE PANDORA.

Steel Ranges: THE CORNWALL.

Furnaces: THE SUNSHINE.

We issue Catalogues and Price Lists covering all the above lines and will be pleased to send copies and quote special discounts to interested dealers.

THE McCLARY MFG. CO.
