PUBLISHERS' NOTICE.

IN these days when the *saving of time* enters into every man's calculations concerning his business, it is evident that every method of obtaining so desirable an object, should be studied and adopted. The following Tables will be found eminently calculated to answer this great purpose, in all the ordinary transactions which require correct and accurate results in relation to WOOD, LUMBER, WEIGHTS, COINS, INTEREST, &c., &c. And when it is considered that in addition to the *saving of time and labor*, perfect *certainty* as to the results is obtained by any person even moderately versed in arithmetic, it seems clear enough that such a work must not only be useful but command a continuance of public favor. And as more than fifteen thousand of this work in its old form have been already sold, it is confidently believed that there will be a still greater demand for this new and much improved edition.

BUFFALO, Sept., 1851.

RECOMMENDATIONS.

THE following extract from a letter received from Jonathan Child, Esq., late Mayor of the city of Rochester, has induced me to offer to the public a Second Edition of my Pocket Reckoner.

"For the last three years I have been extensively engaged in the Saw-mill business, requiring the use of a log book ; not being able to find any of yours in the bookstores, I purchased one published by Mr. Scribner of this city ; I soon found it varied from yours, and on a thorough comparison I found it to contain many errors. As the edition you published is entirely out of the market I have borrowed one for a short time, and the booksellers inform me it is very much inquired after, and that if you would get up a new edition, a large number of them could be sold here.

"JONATHAN CHILD."

"The statement of Mr. Child can be relied upon, and from my own knowledge of Mr. Doyle's qualifications as an accountant I concur in his recommendation.

WM. C. BOUCK."

The accuracy of the calculations can be relied on, as they have been tested in an extensive business for several years, and will be found very convenient to persons dealing in any of those articles, or hiring men for any purpose, as they will at all times afford a correctness not readily acquired by hasty calculation.

THE AUTHOR.

TIMBER MEASURE.

THE following Table gives the number of feet, inches and parts, contained in a stick of Timber of any dimension, from 18 to 36 feet long, and from 9 to 24 inches square.

The column on the left, from 18 to 36, is intended for the length of a piece of Timber, and the caption for the breadth and depth. Example — A stick of Timber 23 feet long, 15 inches broad, and 14 inches thick: to find its contents, refer to the column on the left for the length 23 feet; then on a line immediately under its dimension 14 by 15, you find the contents to be 33 feet, 6 inches, and 6 parts. Where the contents of a larger stick is required, than given in the Table; for instance, 45 feet, take the amount of 23 and 22 feet of the dimension required, add them together, and you have the contents of a stick 45 feet long. If the breadth or depth is not on the Table, where the length is given; for

instance, 10 by 8, take the amount of 10 by 16 of the same length; as 10 by 16 is twice 10 by 8, you have only to divide 10 by 16 by 2, and you have the quantity contained in a stick of 10 by 8. Where neither the breadth nor depth is in the Table; for instance, 7 by 8, find out the quantity in a stick of the same length, 14 by 16, divide them by 4, and you have the contents required.

The contents of a stick of round Timber, when squared, can be ascertained, with a small variation, by the same Table. Where the stick is of equal diameter, gird it in the middle with a small cord, and take 1-5 of the girt for the square of the side; where it is tapering, gird it in two or more places, and divide the sum of the girt for the mean girt, which when found, 1-5 will be the side of the square, the contents of which will be nearly the same as a stick of square Timber of the same dimensions.

SAW-LOGS

REDUCED TO

BOARD MEASURE.

The following Table gives the quantity of Boards produced from a Saw-Log of different dimensions. Example — I sell to a miller a Log 15 feet long, and 18 inches diameter at the small end, at a given price per thousand feet, board measure: to find the quantity of boards produced from a Log of that size, refer to the column on the left, and find the length 15 feet; and under the diameter 18 inches, you find the quantity to be 184 feet; fractions omitted.

TABLE OF BOARDS AND PLANK.

The following Table gives the number of square feet and inches contained in a Board one inch thick, from 10 to 20 feet long, and from 6 to 24 inches broad; and from 21 to 55 feet long, and from 12 to 20 inches broad. The column on the left, is the length, and the caption the breadth in inches; under which, and opposite to the length of a board, you have its contents in feet and inches. Example — Require the contents of a Board 35 feet long and 20 inches broad; by reference, you will find it to be 58 feet, 4 inches.

In measuring Boards, it is not customary to add the extra inches in length; but where ship or other long and thick plank is measured, it makes an essential difference, which, however, in some measure may be remedied, by omitting all under 6 inches over the foot, and calling all over equal to a foot — in a large quantity, the difference will be trifling.

OF

WAGES AND BOARD.

The column on the left shows the number of days; the caption the rate per month. To find the amount of 16 days works, \$10 per month, you trace the number of days to 16; follow the line until it is under \$10, the rate per month, and you find \$6,16, omitting the lesser fractions. That for Board in the same way. The wages are cast at 26 working days to the month, and the week's board at 6 days.

EXPLANATION
OF
TABLE OF DAYS.

On the left you have the month, from any day of which to compute the number of days to the same day in any other month — For example, you wish to know how many days there are from the 20 January to the 20 of August; by following the line of January, till you are under the month of August, gives you the number of days 212, and so for other months.

STONE WALL TABLE.

FIND the length in the left, and the thickness in the right hand column; then follow down the column under the height, until you come to the line opposite the length and thicknes, and you have the amount of feet required; then by adding or subtracting, you have the amount of any length, height, or thickness desired. Inches under six in the whole amount, not mentioned — over six, called a foot.

SPECIFIC DUTIES.

In the custom-house weight and gauge of goods, certain deductions are made for the box, bag, cask, &c., containing the goods, and also for leakage, breakage, &c. These deductions must be made before the specific duties are imposed.

Gross weight is the weight of the goods together with the box, bale, bag, cask, &c., which contains them.

Draft is an allowance made for waste, which is to be deducted from the gross weight, and is as follows :

On	112 lbs.			1 lb.
Above	112 lbs., and not exceeding	224 lbs.,		2 lbs.
"	224 lbs.,	"	336 lbs.,	3 lbs.
"	336 lbs.,	"	1120 lbs.,	4 lbs.
"	1120 lbs.,	"	2016 lbs.,	7 lbs.
"	2016 lbs.,			9 lbs.

Tare is an allowance for the weight, of the box, bag, cask, &c. It is to be deducted

from the remainder of any weight or measure, after the draft or tret has been allowed.

Leakage is an allowance of 2 per cent. on all liquors in casks, paying duty by the gallon.

Breakage is an allowance of 10 per cent. on ale, beer, and porter in bottles, and of 5 per cent. on all other liquors in bottles; or the importer may have the bottles counted, and pay duties on the number remaining unbroken.

Net weight is the weight of the goods after deducting the weight of the box, bale, &c., and making all other allowances.

Value of Gold Coins.
