# DAY'S SULKY HORSE RAKE!

---

MANUFACTURED BY  
**HOWELL & MELLISH,**  
BRANTFORD, ONTARIO.

---

The above rake is designed for hay raking and gleaning grain fields. For hay raking, having been thoroughly tested in every variety of field, and in all kinds of grass, it is offered in entire confidence to farmers and dealers. In the department of Agricultural Implements it is inferior to none as a labor saving machine. It is operated with ease by a lad 12 or 14 years of age, is remarkably simple in its construction and will easily rake 30 acres per day. It can be worked with small expense, as a boy or infirm man, comfortably seated with his feet upon the treadle, can easily operate; it makes amusement of hay raking, as boys delight to raise it and work it more readily than a man. The rake head is attached in such a manner as to act in partial counterpoise and assist in elevating the teeth as the hay is discharged, and also serves to prevent the casual rising of the teeth from the ground, at the same time allowing them to conform to the irregularities of the ground. This with the elasticity of the teeth, enables it to pass over stones and other obstacles. Horse rakes with metallic spring teeth, without wheels have long been in use, and have answered a useful purpose; but they plough into light porous ground, as the weight rests upon the teeth, and they collect dirt, dust and stones. But the Day Rake passes lightly over, and places the hay in winrows, without compressing like the revolver, in good condition for curing and pitching. It works equally as well on rough and uneven as on smooth ground.

The rake is the result of steady and repeated experiments, and its success is not problematical, as it is rapidly superceding all other kinds where it is introduced.

---

The following testimonials from well-known farmers, bear testimony to the efficiency of Day's Sulky Horse Rake.

# TESTIMONIALS.

ALEX. HOWELL, Esq.,

DEAR SIR,—This is to certify that I have used one of your Rakes this season and like it very well. I have done all my own raking, say for 50 acres of meadow and 60 acres of stubble land. If I had been obliged to have used one of the old revolving rakes I probably should not have raked one acre; therefore, I consider the Rake has paid for itself this season, and it is nearly as good as new. Yours truly,

M. D. BALDWIN.

Brantford, Sept., 1871.

ALEX. HOWELL,

DEAR SIR,—I have used your Sulky Horse Rake this season in hay only; it really surprised and pleased me too. I raked 25 acres of very rough ground which could not have been raked clean with any other rake I ever saw or heard of.

Burford, Ont., 7th Sept., 1871. WILLIAM T. HOWELL.

Wellington Square, Sept. 7th, 1871.

MR. HOWELL,

SIR,—After using your rake for one season it would be very hard for me to do without it. Although the common revolving hay rake rakes hay very well across ridges, the Sulky Rake surpasses it in raking lengthways. In raking stubble ground I am especially pleased with it, while I feel confident that it rakes it cleaner, also rakes less dirt and stones, if any at all, as are often raked up with the other rake. Part of the land I raked was rolling, which made no difference as regards the rake doing its work well. On the whole it is surprising to see how clean the little crooked wires will pick the straws up.

I am, Yours, &c., JOSEPH FREEMAN.

MR. HOWELL,

SIR,—I have much pleasure in recommending your Sulky Horse Rake to the public after using it one season, both in hay and wheat stubble.

Yours truly, DAVID MORTON.

East Zora, September 11th, 1871.

MR. ALEX. HOWELL, BRANTFORD:

SIR,—I certify that the Sulky Horse Rake I bought from you did for me all that is claimed for it in raking stubble; as I was through haying when I bought it I had no chance to try it in hay, but I have no doubt but that it will give me perfect satisfaction.

CORNELIUS CLUMP.

Dumfries, Sept. 2nd, 1871.

MR. HOWELL, BRANTFORD.

SIR,—I hereby certify that I have used the Sulky Horse Rake manufactured by you, in light and heavy hay and on stubble, with very satisfactory results, and I consider it a decided improvement on the horse rakes commonly in use about here. Yours respectfully,

JOHN BEARDSALL.

East Zorra, Sept. 11th, 1871.

Blandford, Sept. 11th, 1871.

MR. A. HOWELL,

SIR,—The Sulky Rake which I purchased of Mr. J. Cameron this season, has given great satisfaction, having tried it on hay and stubble, and can cheerfully recommend it to any of my neighbors.

F. E. TYE.

MR. HOWELL,

SIR,—We wish to say the Hay Rake we each got from you did good work; we are well satisfied. We also tried it in peas, where the peas were ripe. It did good work with little waste.

CHARLES REID.

GEORGE POLLEY

Catheart, Burford, Sept. 11th, 1871.

Ancaster, Sept. 25th, 1871.

DEAR SIR,—I have much pleasure in certifying that I found your Horse Rake all that it was represented to be, and to work well and efficiently over any kind of ground. Yours faithfully,

GEORGE LEITH.

MR. ALEX. HOWELL, BRANTFORD.

SIR,—After using your Sulky Horse Rake one season I am fully convinced that it is an implement which every farmer should have. I find that it pays quite as large a per centage on the cost as any other implement I have on my farm. For a man who likes to have his hay free from dirt and dust it is just the thing. Besides its superceding the Revolving Rake in the way it does its work it is a labor saving machine. My boy, who is 13 years old, raked 75 acres of stubble in two-thirds the time it would have taken a man to have done it with the Revolving Rake.

ELISHA STUART.

Burford, Sept. 22nd, 1871.

MR. ALEX. HOWELL,

SIR,—I have much pleasure in bearing testimony to the efficient working of the Sulky Horse Hay Rake manufactured by you. I have raked both heavy and light hay with it this season; in each case it gathered it perfectly clean. I can make as large winrows with it as can be made with any other kind of a rake; in fact I have run up winrows into bunches until it would raise the wheels off the ground. I find that it makes little or no difference with the rake in doing its work well whether the ground is smooth or rough and uneven.

C. R. BROWN.

Woodhouse, Sept. 15th, 1871

MR. ALEX. HOWELL, BRANTFORD.

Sir,—I borrowed one of your Sulky Horse Rakes to rake my stubble; as a test of its advantages over the revolving, I find that it is much easier for the horse, and that a boy, twelve years old, can operate it with perfect ease. I raked my stubble in one half the time it would have taken to have done it with the Revolving Rake. And I think I got twice the quantity of grain besides having it in much better order, as it was perfectly free from dirt and stones.

WILLIAM MATHEWS.

Woodhouse, Sept., 15th, 1871.

---

The construction of Day's Rake allows the attachment of

## Plaster and Grass Seed Sowers,

And, when combined, will do good work. Where persons desire it the manufacturers will supply it with the rake.

Every rake is made under the personal supervision of the manufacturers, from the very best material, by experienced workmen.
