#### AFFINITY OF THE LATIN TO THE GAELIC.

The darkness of early history may in some cases be lessened by the light of etymological research. "The similitude and derivation of languages afford the most indubitable proof of the traduction of nations, and the genealogy of mankind. They often add physical certainty to historical evidence, and often supply the only evidence of ancient migrations and of the revolutions of ages, which left no written monuments behind them," and the assertions of those writers who disbelieve the Bible account of the creation of man, have been in part answered by a comparison of the different languages of the earth, in the learned work of Dr. Prichard.† In the following memoire pour servir, on the affinity of the Celtic and Latin, I confine my examination of the Celtic to one of its branches, namely—the Gælic, or that spoken in 1839 in the Highlands and Western Isles of Scotland; the words introduced are in modern use with about six exceptions, and may be found in the Gælic Dictionary by Dr. Macleod and Principal Dewar—(2nd edit. Edinb! 1833.)

It used formerly to be said that the Latin was merely a dialect of the Greek, but it is evident that a small part only of the language can be referred to a hellenic source.

When we reflect that the Celts, the first inhabitants of Europe, partly retired before the races which followed them and partly intermingled with those races, we may a priori suppose that some part of the Celtic language was adopted by the foreign tribes which settled in the ancient possessions of the Celts; as in more modern times the Normans in South Britain adopted a great part of the language of the Saxons, who preceded them in the conquest of that part of the island; and as it seems probable that foreigners arriving in a country would adopt some of the names given to the hills and rivers by the original inhabitants, we may contrast this probability with the fact, that in the South of Scotland, the names of many of the hills, rivers and natural divisions of the country are Gaelic, having been retained by the Saxons who succeeded the Gael in those parts.

In the following pages, it will be found, that the above two theories regarding common words and proper names are married to their corresponding facts; it will be seen that the Latin words signifying such objects as sea, earth, air, &c., and domestic animals, &c. have the same sound as their Gelic equivalents; and that the names of many of the mountains and rivers of Italy have almost unobjectionable derivations provided for them from the Gelic, while the Latin language or the Greek may be searched in vain for this purpose.

In this essay my objects are:—1st, To enquire if there be any affinity betwixt the Gwlic and Latin. 2nd, To examine the amount of the affinity and to consider which language is the more ancient, and the source of the other. 3rd, To apply the same to history.

<sup>\*</sup> Dr. Sam, Johason in a letter to Mr. Wim. Dremmond—Laft by Beswell, Vol. 2, p. 38, † Physical History of Man—3rd edit, London, 1877.

The first question mentioned above is negatived by Vaits Kennedy;\* with regard to the 2nd, I lean to the opinion that the Latin is three-fourths derived from the Celtic; with respect to the 3rd head of inquiry, it may be supposed that the early inhabitants of Rome were Celts.

Many of the Latin words hereafter mentioned have been derived from the Greek, but again these Greek words are deriveable from the Celtic, so that the question of the Celtic origin of these words remains the same.

I shall now enter in medias res and contrast the two vocabularies:-

From the evidence now given it appears probable that the origin of the Latin language and of the Roman people was chiefly Celtic, the proof of their German origin in the work of Jackel being less in amount than what is given in the preceding pages; almost the only other source to which they can be attributed, namely, the Greek, fails in providing parentage for one half of the Latin tongue, and the Greek roots from which some have derived the other half, may, for the most part, be shewn to be from the Celtic.

The proofs of their Celtic erigin would likely be made more numerous by introducing examples from the Irish, Welsh, and other branches of Celtic, the instances given being taken from one of the dialects only of that ancient language.

I have made similar researches regarding the Greek, and have found in it likewise considerable resemblance to the Celtic.

In retiring from the small stage of this short Essay, it becomes me to acknowledge the external aid of which I have made use; in the Dictionarium Scoto-Celticum, compiled by Mr. Mackintosh, Dr. Mackay, of Dunoon, and others, I found a mine of comparative philology, though of some of the cognates I thought the relationship not comparative philology, along it of some of the cognates I thought the relationship not proven; Stewart's Gedic Grammar gives eight or nine etymological references, and Archdeacon Williams has published in the Trans. Roy. Soc. Ed., two learned and original papers, which I have often quoted.

Besides the application of philological inquiries to speak for the origin, descent and alliances of nations, when there is no other evidence in existence, and to prove to infidels, who will not receive the Mosaic testimony, that the whole human race is descended from Adam, grammatice est ars, necessaria pueris, jucunda senibus, dulcis

secretorum comes, et quæ vel sola omni studiorum genere plus habet operis, quam ostentationis. Ne quis tanquam parva fastidiat grammatices elementa quia interiora velut sacri hujus adeuntibus apparebit multa rerum subtilitas, quæ non modo acuere ingenia puerilia, sed exercere altissimam quoque eruditionem ac scientiam possit.— Quintilian.
