NOTE.—When the Sun is slow, Equation to be added to Apparent Time.—When the Sun is Fast, Equation to be subtracted from Apparent Time.

ECLIPSES OF 1852.

There will be six Eclipses this year: three of the Sun, and three of the Moon, in the manner following:—

I. The first will be a Total Eclipse of the Moon, on Tuesday and Wednesday, January 6th and 7th days, and visible in New Brunswick.

| | | | | |
|---|------|------|--------------|------------|
| First contact with the Penumbra, at | 10h. | 41m. | eve. of 6th. | Mean Time. |
| First contact with the Shadow, | 11 | 42 | do. | |
| Beginning of Total Darkness, | 0 | 42 | mor. of 7th | |
| Ecliptic Opposition, | 1 | 30 | do. | |
| Middle of the Eclipse, | 1 | 31 | do. | |
| End of Total Darkness, | 2 | 20 | do. | |
| Last contact with the Shadow, | 3 | 20 | do. | do. |
| Last contact with the Penumbra, | 4 | 21 | do. | |
| Duration, from Penumbra to Penumbra, | 5h. | 40m. | | |
| Digits eclipsed; 20° 0', on Moon's Northern Limb. | | | | |

11. The second will be a Partial Eclipse of the Sun, on Wednesday, January 21st day, conjunction at 2h. 48m. mean time, morn.; and invisible here.

111. The third will also be a Partial Eclipse of the Sun, on Thursday, June 17th day, conjunction at 0h. 8m. mean time, afternoon; invisible to us.

1V. The fourth will be a Total Eclipse of the Moon, on Thursday, July 1st day, but will be invisible here.

V. The fifth will be a total Eclipse of the Sun, on Friday, December, 10th day. Conjunction at 10h. 52m. mean time, evening, and, therefore, invisible to us.

VI. The sixth will be a Partial Eclipse of the Moon, on Sunday, December 26th day, the beginning of which only will be visible to us, as the moon will set here before the middle of the Eclipse:—

| | | |
|-------------------------------------|----------|--------------------------|
| First contact with the Penumbra, at | 5h. 35m. | } Mean time, morn. |
| First contact with the Shadow, | 6 54 | |
| Moon sets eclipsed, at | 7 42 | |
| Middle of the Eclipse, | 8 23 | |
| Ecliptic opposition, | 8 31 | |
| Last contact with the Shadow, | 9 52 | } |
| Last contact with the Penumbra, | 11 11 | |

Duration from Penumbra to Penumbra, 5h. 36m.

Magnitude of the Eclipse, $8^{\circ} 7\frac{1}{2}$, on Moon's Southern Limb.

MORNING AND EVENING STARS OF 1852.

The Planet *Venus* (♀) will be *Evening Star* till July 20; then *Morning Star* till the end of the year.—*Mars* (♂) will be *Morning Star* till Jan. 24th; then *Evening Star* till the end of the year.—*Jupiter* (♃) will be *Morning Star* till May 8th; then *Evening Star* till November 25th; then *Morning Star* to the end of the year. *Saturn* will be *Evening Star* till April 27th; then *Morning Star* till November 6th; then *Evening Star* to the end of the year.

| June 28, Queen's Coronation, | Easter Monday, |
| Sept. 29, Michaelmas, | Easter Tuesday |

LIGHT HOUSES.

Board of Commissioners for the several Light Houses in the Bay of Fundy.—Robert W. Crookshank, John Ward, Isaac Woodward, Hon. W. F. W. Owen, John Wilson, Lieut. Charles Hare, R. N., and John James Robinson, R. N., Esquires.

Isaac Woodward, Esquire, Surveyor of those Light Houses in the Bay of Fundy belonging to New Brunswick, and also of those belonging to Nova Scotia which are partly supported by this Province.

Cape Sable Seal Island Light.—The first Light in approaching the Bay of Fundy, is on the South Point of the Seal Island. This is a plain white Light, elevated about 80 feet above high water mark, and may be seen in approaching the Island from any point of the compass. A very dangerous rock, under water, but upon which the sea always breaks, called *Blonde Rock*, lies about $3\frac{1}{2}$ miles S. by W. by compass, from the Light House. Between this rock and the Island, there are some dangers—the ground is rocky throughout, and large vessels, therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is situated on Brier Island, about half a mile N. E. from the N. W. point thereof. A plain white light.

Digby Gut Light.—The next light on the coast of Nova Scotia is placed on the west side of Digby Gut—from Brier Island North Eastward. The coast is very bold and not indented; the Light is therefore chiefly intended as a guide into Digby Basin—A white Light.

Gannet Rock Light.—This Light is intended to warn vessels of their approach to a very dangerous range of shoals and ledges, which extend from the Old Proprietor to the Seal Islands off Machias, a distance of about twenty miles. It is a flash light—white—twenty seconds dark and forty light in each minute. The Light House is painted in stripes, vertical, black and white.

Bearings and Distance by Compass from the Gannet Rock Light House. This Light bears from the Light house on Brier Island, N.N.W. $\frac{3}{4}$ W. 22 miles,

From the Gannet Rock to the Old Proprietor E. $\frac{1}{2}$ S. distance 7 miles.
 From the Gannet Rock to the Black Rock, off White Head Island,
 N. E. $\frac{1}{2}$ E. 7 miles.
 From the Gannet Rock to the South West Head of Grand Manan,
 N. N. W. $6\frac{1}{2}$ miles.
 From the Gannet Rock to the Northernmost of the Murr Ledges,
 N. W. $\frac{1}{2}$ N. $2\frac{1}{2}$ miles.
 To the Southernmost of ditto, called Saint Mary's Ledge, W. S. W.
 2 miles.
 From the Gannet Rock to Machias Seal Island, W. and by N. $\frac{1}{2}$ N.
 $12\frac{1}{2}$ miles.

NOTE.—Between the Northernmost and Southernmost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which Light extends Westward from the House about four miles: from this range, farther Westerly, about six miles from the Gannet Light, lies a dangerous breaker called the Bull. This may be avoided by keeping three remarkable headlands near the S. W. end of Grand Manan, open.

From Brier Island Light to the Old Proprietor, N. and by W. $\frac{1}{2}$ W.
 $18\frac{1}{2}$ miles
 The Blonde Rock from the Southernmost point of the Cape Sable
 Seal Islands S. and by W. $3\frac{1}{2}$ miles distant.

Machias Seal Island Lights.—There are two fixed white lights upon the Machias Seal Islands, elevated about forty-five feet above high water, and bear from each other E. S. E. and W. N. W. distant about 200 feet, by which circumstance of two Light Houses at the same station, they will be immediately distinguished from all other lights upon the coast, (British or American) Both the Buildings are painted white. The following are the bearings from them, viz:

To the Southernmost Murr Ledge, (St. Mary's) E. S. E. easterly.
 " Gannet Rock Light E. by S. $\frac{1}{4}$ S. 13 miles.
 " Southern Head of Grand Manan, E. by N. $\frac{1}{2}$ N.
 " Northern Head of Grand Manan, N. E. $\frac{1}{2}$ E.
 " N E. Rock, distant 2 miles, N. E. by N.
 " Little River Head, N. by W.
 " Libby Island Light House, (American,) N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights in one, as they will not then be more than three fourths of a mile from the Murr Ledges, if more than five miles to the East of the lights.

[It is recommended that the Ship's Compasses should be well compared and adjusted (particularly in new ships), before they leave Partridge Island, as serious errors have frequently occurred from want of attention on this point; and as the variation in the Bay of Fundy is seventeen degrees Westerly, or ($1\frac{1}{2}$ points) it will be found by the latest published Admiralty Charts, that the course from Partridge Island down the Bay (South Channel) between the Old Proprietor and N. W. Ledge, is S. W. $\frac{1}{2}$ S., but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

Head Harbour Light.—Next in order after passing Grand Manan and the plain white Light, (American) on West Quoddy Point, is Head Harbour Light. This is placed on the North East extremity of

Campo Bello, and is a guide to vessels entering the main Channel to West Isles, Moose Island, and the inner Bay of Passamaquoddy; it enables vessels also at all times to enter Head Harbour—it is a fixed *white* light. The building is painted *White*, with a red cross on it.

Point Le Preau Lights.—Upon this projecting head land two lights are placed, one above the other, in the same house, and distant 28 feet—Both lights can be seen from every point of the compass, where they may be useful—both are fixed and *white*. The Light House is painted red and white, in stripes of five feet broad each, horizontally.

Partridge Island Light.—This light at the entrance of the River and Harbour of Saint John, having been established upwards of forty years, requires no particular notice, further than that it is a fixed *white* light, and that the Light House is red and white, in vertical stripes.

Beacon Light.—Within Partridge Island, and upon a Spit or bar which extends about half a mile S. S. E. off Sand Point, and which dries at two-thirds ebb, stands the Beacon Tower. Upon this Tower a light is established, which is eminently useful to the coasting trade of Saint John, and to all other vessels having pilots on board, as it enables them to enter the harbour at all hours of the night. A fixed *white* light. The House is white and black, in stripes vertically.

Quaco.—A revolving *white* light is placed on a small rock off Quaco Head, showing twice full and twice dark in a minute. This light can be seen from any quarter where a vessel can approach. The Light House is painted white and red in horizontal stripes.

Cape Enrage Light.—On the point of that name, in Westmorland, nearly opposite Upper River Harbour, N. S. A plain *white* light. The House is painted white, and is about 120 feet above tide mark.

West Quoddy Light.—This is an American Light, and is placed on the West side of the entrance into the Saint Croix by Lubec and Eastport.

Cape Forchu Light.—On Cape Forchu, on the western side of the entrance to Yarmouth (Nova-Scotia), in lat. 43, 39, N. long, 66 8. W. It exhibits a plain revolving light—visible one minute and a quarter, and invisible half a minute. The building is painted white, and is elevated 135 feet above the level of the sea.

SIGNALS.

Displayed at Partridge Island, on the approach of Vessels to the Harbour of Saint John.

| | |
|---|----------|
| One ball close, for one square-rigged Vessel. | |
| One ball half hoisted for two | ditto. |
| Two Balls close, for three | Vessels. |
| Two Balls separated, for four | ditto. |
| A Pendant of any colour, for five | ditto. |
| A ditto under a Ball, for six | ditto. |
| A ditto over a Ball half hoisted, or seven | ditto. |
| A ditto under two Balls close, for eight | ditto. |
| A ditto between two Balls separate, for nine | ditto. |
| A Flag of any colour, for ten or more | ditto. |

The above are displayed at the East or West yard arm, according to the direction in which the Vessels are at first observed, and as soon as their use can be distinguished, descriptive Colours will be hoisted at the mast head, in the following order:

- A Union Jack for a Flag Ship, with or without a squadron.
- “ with a Red Pendant over, for a two-decker.
- “ with a Blue Pendant over, for a Frigate.
- “ with a white ditto, for a small armed vessel.
- A blue Pendant for a Merchant Ship.
- A red ditto, for a Merchant Brig.
- A white and blue ditto, for a Foreign Vessel.
- A white ditto, [without a ball.] for a Topsail Schooner or Sloop.
- A blue Flag pierced white, for a steamboat from Saint Andrews or Eastport.
- A Red Flag pierced white, for a Steamboat from Digby.
- A Red Flag with a white square, for a Steamboat from Boston.
- A Ball at the mast head, Vessel is on Shore or in distress.

☐ Should immediate aid be necessary, guns to be fired.

In foggy weather a gun will be fired from Patridge Island, in return for each heard at sea. There is a Fog Bell on the Island, which is rung in foggy weather, to warn vessels of their approach to the shore. Should a vessel require a Pilot her descriptive Pendant will be displayed at a yard arm in the place of a Ball

RATES OF PILOTAGE,

Established by a Law or Ordinance of the Common Council of the City of Saint John—passed 3d August, 1848.

Five Shillings per foot, for bringing any Ship or Vessel into the Harbour of Saint John, and mooring her into a safe place or berth, or securing her alongside of one of the Wharves; and Five Shillings per foot for removing and taking any Ship or Vessel out of the Harbour.

In cases where Pilots shall be detained on board of Vessels, under and by Virtue of the Quarantine or Health Laws of the Province, they shall be entitled to demand and receive from Masters of such Vessels, the sum of Ten Shillings per day, for every day of such detention, in addition to the allowance aforesaid.

Coasting Vessels, going from one part of the Bay of Fundy to another, British Steam Boats, or British Vessels drawing under six feet of water, are not compelled to take pilots; when employed, they are to be paid according to the rate above mentioned.

For removing Vessels from any mooring ground to any Wharf, or from one Wharf to another Wharf, and seeing them properly moored or secured, the following rates: For Vessels not exceeding One Hundred Tons, Seven Shillings and Sixpence; for Vessels over One Hundred and not exceeding Two Hundred Tons, Ten Shillings; for Vessels over Two Hundred and not exceeding Three Hundred Tons, Fifteen Shillings; and for all Vessels over Three Hundred Tons, the sum of Twenty Shillings.

First Distance.—From Patridge Island to Musquash Cove Head, bearing North West, Five Shillings per foot.

Second Distance.—From Musquash Head to Point LePreaux, bearing North West, Six Shillings and Threepence per foot.

Third Distance.—From Point LePreaux to North Head of Grand

Manan, bearing North West—or North Channel, bearing South East, Seven Shillings and Sixpence per foot.

Fourth Distance.—From the North Head of Grand Manan—or North Channel as aforesaid—to Machias Seal Island, bearing South, or Brier Island bearing South South East, Eight Shillings and Ninepence per foot.

Fifth Distance.—Any where outside the aforesaid distance, Ten Shillings per foot.

HARBOUR MASTER'S FEES.

On Vessels of 30 Tons and under 50, 2s. 6d.; Vessels of 50 Tons and under 75, 3s. 9d.; 75 and under 100 tons, 5s.; 100 and under 150 tons, 6s. 3d.; 150 and under 200 tons, 7s. 6d.; 200 and under 300 tons, 10s.; 300 and under 400 tons, 12s. 6d.; 400 tons and upwards, 15s.; Decked Vessels, under 100 tons, owned and registered at Saint John, and all British Vessels under that tonnage trading within the Bay of Fundy, or arriving from Ports to the Northward of Cape Cod, or the Westward of Cape Canso, or from any Port in Nova Scotia, to pay annually as follows: Under 30 tons, 3s. 9d.; over 30 and under 50 tons, 5s.; over 50 and under 75 tons, 6s.; over 75 and under 80 tons, 10s.

RATES OF WHARFAGE, established by Act 5 Vict. cap. 49, in the City of Saint John and Parish of Portland—For every decked vessel, or wood boat, of the burthen of 40 tons and under 1s. 6d. per day; above 40 tons, and under 50, 1s. 9d.; above 50, and under 60, 2s.; above 60, and under 70, 2s. 3d.; above 70, and under 80, 2s. 6d.; above 80, and under 90, 2s. 9d.; above 90, and under 100, 3s.; above 100, and under 120, 3s. 6d.; above 120, and under 150, 4s.; above 150, and under 180, 4s. 6d.; above 180, and under 200, 5s.; above 200, and under 220, 5s. 6d.; above 220, and under 240, 6s.; above 240, and under 260, 6s. 6d.; above 260 and under 280, 7s.; above 280, and under 300, 7s. 6d.; above 300, and under 320, 8s.; above 320, and under 340, 8s. 6d.; above 340, and under 360, 9s.; above 360, and under 380, 9s. 6d.; above 380, and under 400, 10s.; above 400, and under 450, 11s. 3d.; above 450, and under 500, 12s. 6d.; and 1s. 3d. for every additional 50 tons.

RATES OF SLIPPAGE AT THE CORPORATION SLIPS.

All Decked Vessels, same rates as for Wharfage; Wood Boats—Three half-pence for every Ton burthen, and allowed to remain six days each trip, for the purpose of discharging: if they remain longer to pay One Penny per ton additional for each day. No Boat to remain longer than twenty days.

RATES OF FERRIAGE ACROSS THE HARBOUR OF ST. JOHN

—Foot passenger, 2d.; Child under twelve years, 1d.; Horse, 3d.; Ox, or other large animal, 3d.; Elephant or Camel, 1s. 3d.; single Waggon, not loaded, 2d.; single waggon, with horse and one man, 6d.; single waggon, with horse, load and man, 7d.; double waggon, not loaded, 7½d.; double waggon, with horses and man, 9½d.; double waggon, with horses, load and man, 1s. 3d.; barrel, 1d.; bag, containing two bushels, 1d.; firkin, keg, or box of the same size, 1d.; cask of

lime, 2d.; pipe, hoghead, or puncheon, whether in waggon, cart, sled or other vehicle or not, except containing molasses, vinegar, rice, or sugar 9d.; every cwt. of iron, steel, or copper, whether in waggon, cart, or other vehicle or not, 1d.--Carts, sleds, drays and carriages, same as waggons.

RATES OF FERRIAGE FOR THE FERRY AT INDIAN TOWN.—Every grown per-on, 3d.; child under twelve years of age, 1 1-2d.; horse, 1s.; ox or other large animal, 1s.; calf, swine, sheep, or goat, 1 1-2d.; waggon, cart, sled, carriage, sleigh, or other vehicle, 2d.; waggon, cart, or sled, loaded with hay, oats, or potatoes &c., 3d.; handcart, handsled, or wheelbarrow, 2d.; barrel, 1d.; bag, containing two bushels, 1d.; firkin, keg, or box not larger than a firkin, 1d.; cask of lime, 3d.; pipe, hoghead, or puncheon, 9d.; hundred weight of iron, steel, copper, lead, &c., 1 1-2d. All other articles not enumerated, to be charged in the same ratio.

RATES AT THE PUBLIC WEIGHING MACHINES.

Every Load not exceeding 1000 lbs. weight, One Shilling; and One Penny for every additional cwt.; payable, half by the seller, and half by the purchaser.

HACKNEY COACH FARES.—For conveying one passenger from any public stand to any part of the City, or from any one part of the City to any other part thereof, 1s.; and for every passenger exceeding one, 1d. additional; and if any driver of any Carriage or other vehicle, shall be detained at any place by any passenger, or shall make any agreement for carrying any passengers by the hour, he shall be entitled to ask, and receive the following rates, viz:—For any time not exceeding half an hour, 1s. 3d.; and in that proportion for every half hour that such Carriage, or other vehicle shall be detained or employed. Provided always, that in case any driver shall be required to cross the Ferry to Carleton, he shall, in addition to the foregoing fares, be entitled to demand and receive the ferrriage for himself, his carriage and horses, both going and returning.

PUBLIC PORTERS AND HAND CART MEN.—For loading, carrying, and housing any goods, or any other articles, on any Hand Cart, from the Market Ship to King's and Queen's Wards, or from any other place within the limits of the first district, to any other place within the said several Five districts, the rates of prices are as follow:—For the first district 3d.; second district 3½d.; third district 4d.; fourth district 4½d.; fifth district, 5d.

MARKET TOLLS.—Beef, per quarter, 2d.; Calf, Sheep, Hog, Goat, Lamb, Kid, or Hebt, 2d.; Tub, Pail or Jar of Butter, 1½d.; Firkin, 2d.; every 10 lbs. of Roll Butter, 1d.; Cheese, ½d.; load of Potatoes under 15 bushels, 3d.; ditto over 15 bushels, 4d.; load of Oysters in shell or tub, 4d.; Turkey, Goose, or dozen of Pigeons, ½d.; pair of Ducks, Poultry or Partridges, ½d.; bag of Flour, Meal, Oats, Peas, or Beans, ½d.; Ham or Shoulder, ½d.; Eggs, per 10 dozen, ½d.; and all other articles in like proportion.

FISH-MARKET DUES.—For every Salmon, 1½d.; Codfish, Pollock, Bass, or Shad, each ½d.; Halibut, not exceeding 20 lbs. 1d.; exceeding 20 lbs. and for every 20 lbs., 1d.; every Lobster, ½d.; dozen of Halibut, 1½d.; every 100 of Capercaux, Alewives, Herrings, or other small fish, 1½d.

TIME FOR GOING THROUGH THE FALLS--(near St. John.)

The Falls are level or still water at about three and a half hours on the flood, and about two and a half on the ebb, so that they are passable four times in twenty four hours, about ten or fifteen minutes each time. No other rule can be given, as much depends on the floods in the River Saint John, and the time of high water or full sea, which is often hastened by high winds, and in proportion to the height of them.

New-Brunswick's soil our happy home,
The land of hardy worth,
Where plenty crowns the social board,
And love lights up the hearth;
The land of rock, and mount, and glen—
Of noble streams that sweep
Through vallies rich with verdure,
In gladness to the deep.
Blue are the arching skies above,
And green the fields below,
And Autumn fruits and Summer flowers
In wild profusion grow.

The towering spruce, and ancient pine,
 Our noble forests bear—
 The maple bough its blossoms
 Flings on the scented air;
 And flock, and herd, and waving grain,
 Each slope and upland crown—
 And Autumn winds from laden bough
 The mellow fruit shake down.
 The fragrant clover tempts the bee,
 In blushing sweets to pry,
 And in tall ranks, the glossy maize.
 Points upward to the sky.

Happiness is the home of industry. Indolence worketh no good.

March, March! Why the de'il don't you march
Faster than other mouth's out of your order?
You're a horrible beast, with the wind from the East,
And high-hopping hail and slight sleet on your borders;
Now, our umbrellas spread, flutter above our head,
And will not stand to our arms in good order;
While flapping and tearing, they set a man swearing
Round the corner, where blasts blow away half the border!
March, March! Have you no feeling,
E'en for the fair sex, who make us knock under?
You cold-blooded devil, you're far more uncivil,
Than Summer himself, with his terrible thunder!

When the soft breath of spring goes forth
 Far o'er the mountains of the North,
 How soon those wastes of dazzling snow
 With life, and bloom, and beauty glow,
 Then bursts the verdure of the plains,
 Then break the streams from icy chains;
 And the glad rein-deer seeks no more
 Amidst deep snows his mossy store.
 Then the dark pine wood boughs are seen
 Arrayed in tints of living green;
 And roses in their brightest dyes
 By landscape, founts, and lakes arise.

I have come, I have come! ye have called me long,
 I come o'er the mountains with light and song;
 Ye may trace my steps o'er the waking earth;
 By the winds which tell of the violet's birth;
 By the primrose-stars in the shadowy grass,
 By the green leaves, opening as I pass,
 I have looked o'er the hills of the stormy north,
 And the larch has hung all his tassels forth,
 The fisher is out on the stormy sea,
 And the rein-deer bounds o'er the pastures free,
 And the pine has a fringe of softer green,
 And the moss looks bright where my foot hath been.

No longer the sky is with the clouds overcast,
 And the young fickle herald of summer is past,
 Bright and clear shines the sun, and the soft glowing scene
 Has a tint of more deep and luxurious green;
 Through the meadows the flocks slow and quietly graze,
 Or seek the cool shade, where a shallow stream plays.
 Sweet June, there's no month so delightful as thine,
 No one when the landscape more lovely can shine,
 For the bright hues of summer and freshness of spring,
 Together are mixed on the sky-tinted wing;
 And pleasure and labour so smile in thy train,
 That we wish they may never be parted again.

Thy steps fair Spring have passed o'er the sod,
 And grass springs up where thy light foot trod ;
 Bright buds peep forth and their petals gay
 Unfold in the warmth of the noontide ray,
 While the glad bird plumes its radiant wing,
 And its clear wild notes through the woodland ring.
 The squirrel has come from its hollow tree,
 And runs 'long the wall full of frolic and glee ;
 Then darts to the ground, and peeping round sly,
 Finds 'mong the fallen leaves, withered and dry,
 The brown beechen nut that it loves right well,
 Then sits and cunningly strips off the shell.

Thy breath is abroad in the fragrant breeze,
 And the leaves expand on the waving trees :
 The eye beams bright on the fisher's home,
 That rises in sight of the blue wave's foam ;
 And blithe of heart he unfurls the sail,
 And welcomes the bland auspicious gale.
 The heavens behold the glance of thy eye,
 And smiling put on a mellower dye ;
 Changed is the storm for the genial shower,
 All balmy with breath of the leaf and the flower,
 And the rainbow dressed in its brilliant dyes.
 Its smile of promise sends warm from the skies.

Autumn, I raise the song to thee,
And greet thy bounty on the plain,
Where poppies mingle with the grain,
Like rubies on a golden sea!
The clust'ring grapes upon the vine,
The downy peach, the nectarine,
The blushing plum, the luscious pine,
And all earth's richest fruits are thine,
Thy life is one long harvest day—
Thy sickle the true scythe of Time—
And peasant boys, with uncouth rhyme,
And merry faces, sing their lay.

Flowers will fade though love may rear them,
 Leaves though born of Spring will fall ;
 Wintry winds will blight and sear them,
 Tempests widely strew them all !
 Day, though calmly, brightly shining—
 Day, the glorious, will not last ;
 Sunlight from the sky declining,
 Night o'er all her gloom will cast.
 But though flowers and leaves may wither
 From the dark earth's fading bowers,
 Time again will bring them hither :
 Spring-time leaves and summer flowers.

NOVEMBER.

[1852.]

The barns are all piled with fragrant hay,
And now thou prearest to hasten away,
Thou hast heard the wail of the Autumn breeze,
Caught the blush of fruit on the bending trees,
And hast seen through the amber husk appear,
The golden gleam of the ripening ear.
Farewell! for the grain is bound into sheaves,
The rustle is heard of withering leaves,
The fair-haired child on the margin green,
Of the clear, still lake no longer is seen,
And the bird that loved there its plumage to lave,
Has flown to some far-away, sunnier wave.

And where the sunny sky, that round
 This world of glad and breathing things,
 Comes with its sweetness and its sound,
 Its golden light and glancing wings?
 Alas! the eye falls now no more
 On flowery field, or hill, or plain,
 Now for the earth the woodlands pour,
 One glad note of the summer's strain!
 The green leaves stript have left the woods
 Towering—their tall arms bleak and bare:
 And now they choke the sounding floods,
 Or fill, in clouds, the rising air.

of Works. Fredericton, Mr. Coughlan, Clerk of Works

Board of Respective Officers.—Saint John (O. D.)—Captain C. E.
Ford, R. E., Captain Knox, R. A., and Frederick C. Frith, Esquire,
Deputy Ordnance Storekeeper.

OFFICERS OF CORPS SERVING IN THE PROVINCE.

Royal Artillery. Saint John, Captain F. Knox, Commanding; Lieutenants J. Bolton and F. C. Griffin. Fredericton, Lieutenant Peter Beddingfield.

72d Regiment. Fredericton, Lieutenant Colonel F. Murray; Cap-
tains, A. Thelluson, R. Locke; Lieutenants, the Hon. H. W. Fitz-
maurice, R. Buchanan; Ensign, W. Hay; Adjutant, A. Crombie, Lt.;
Paymaster, R. Webster; Surgeon, J. Mure; Quarter Master, M.
Boden.

Saint John. Major J. W. Gaisford; Captain Bowen; Lieutenants
Best and Wiley; Ensign Stewart; Assistant Surgeon Docherty.

Saint Andrews Ensign Couthupe.

AGRICULTURAL.

SEED POTATOES.—In communications in the November and January numbers of *The Cultivator*, on the subject of seed potatoes—the first by Mr. Murray, of Ohio, the other by Mr. Gold of Connecticut—it is claimed that those of the smallest size are equal if not superior to large ones, for seed. Now this is a subject, as Mr. Murray says, of great importance to the farmer; for if from small and indifferent seed, can be produced fair and large potatoes, as he remarks, it is time it was known.

There is no crop the farmer raises, that requires so much seed, or the seed of which costs so much to an acre, as potatoes—ranging from eight to twenty bushels, the difference being one quarter in large or small seed; or if it takes sixteen bushels, which is about the average of fair sized potatoes, to plant an acre, the same might be done with four very small ones, making a difference of twelve bushels, no small item at present prices, or fifty cents per bushel, which would be six dollars in favor of small seed in planting one acre.

Not doubting the correctness of either of your correspondent's statements, for I have heard similar ones, from respectable sources, I still am in doubt as to any good resulting from the practice; on the contrary, my experience and observation having led me to a different conclusion. For six years I have planted both large and small seed, sometimes from necessity, but have always carefully noted the difference, which has been uniformly and decidedly in favor of large seed.

I will specify two cases. In the spring of 1849, I planted two acres of potatoes, a portion of which was planted with small seed. Where I planted large seed, I had good potatoes, but where the small seed was planted I had very small, poor potatoes—the whole being new ground.

The past season I planted the same number of acres, but reserved a quarter of an acre, which I planted with small seed from the size of a walnut up to that of a hen's egg. The result was as all former crops had been with me, they were all small and worthless, besides being more affected by the rot than where large seed was used.

The difference in the vines, was perceptible as far as my potato patch could be seen. Those vines where I planted small seed, being not half the length of the others, besides having a slender and sickly appearance from the time they were out of the ground till they were harvested.

The ground had laid in pasture and meadow for forty years, never having been plowed before. I think the principle holds good of selecting the best of seed for raising potatoes, as much so as for corn, wheat or any crop raised on the farm.

Not doubting but good crops may have been raised, occasionally, from small seed, yet were I in want of seed, and had to buy, I would make three times the difference between large or small potatoes.—*Correspondent of the Albany Cultivator.*

LOSS OF MANURES.—Fertilizers are wasted both by leaching or washing, and evaporation. That they are carried off to a great extent by the former mode, may be seen by an examination of the water which runs from fields just after rains. It is evident, also, from the rich deposit which is left by streams, and the general fertility of alluvial soils. The substances which promote fertility in soils, are more or less soluble, and hence may be taken up and carried away by water. The *organic* portions are capable, besides, of assuming an aeriform state, and may be taken up by the atmosphere. The nitrogenous portion of manures, (ammonia), which is, perhaps, their most valuable property, is very volatile, and readily escapes into the air when not covered or combined with earthy or carbonaceous matters. It is also easily dissolved by water, and when the soil is unduly saturated, may be taken away by the liquid -- *Albany Cultivator*.

CATTLE POISONED BY LEAD.—A few years since, Mr. R. H. VANRENSELAIR, of Morris, Otsego county, lost seven head of cattle, (mostly full blood short-horns,) whose death, it is believed, was caused by particles of lead taken into the stomach with their food. The hay on which they were fed, was all cut with Green's straw-cutter, which has a lead roller against which the knives cut. The action of the knives constantly cuts away the lead, which falls with the fodder as it drops from the machine, and was taken up with it and fed to the stock. When the first animals died, the stomach was not examined; but while the two last were sick, it was suggested by a medical gentleman, that they might have been poisoned, and a *post mortem* examination showed that numerous particles of lead were attached to the inner coat of the first stomach, the organ being evidently inflamed from this cause. All the animals which died, were affected in a similar manner, and were probably diseased from the same cause. It may be said, in reference to this case, that no such consequences have been known to result from many other instances of the use of the straw-cutter mentioned. In explanation of this, Mr. V. R. states, that the fodder from his machine was fed very closely—that is, everything was daily swept from the floor, and given to the stock. In most other instances, probably, the finer portions of the fodder, with the dust, are left where the cutting is done, and the particles of lead, would, from their weight, be likely to remain with them.

THINNING OUT.—Removing some plants, or branches of a tree, to give the rest a better opportunity of growing large, is an important operation, especially in orchards, as a tree overburdened with fruit will not produce such fine specimens as one that has a few to perfect.

REMEDY FOR THE POTATOE ROT.—When the seed is dropped, sprinkle about a pint of slacked lime over it in each hill and then cover it. There is this value about the lime, that if it do not prevent the rot in the potatoe, it will be worth the cost and labor in fertilizing the land.

“Passing away,” is written upon the world and all it contains.

REMEDY FOR PLANT LICE—If you have any species of the aphid in your nursery, please make a trial of the following decoction: Get from a druggist $\frac{1}{2}$ lb. of Quassia, boil it 15 minutes in six quarts of water; pour off the decoction into a dish pan with handles. When cool get an assistant to hold the pan while you carefully bend down and immerse the branches, giving them a little motion to wet all the insects. Look at your trees two days after; and if the aphides are dead, and the tender shoots uninjured, use and recommend the quassia and let the whale-oil soap perform some other office.

For young and tender buds or grafts, I use the spray from a nearly spent syringe where it is not safe to bend them over the pan.

[Of the remedies, yet tried, whale-oil soap has been found most effective, and common strong soap-suds nearly its equal, and both greatly superior to tobacco water, unless the latter is made very strong, or stronger than a common decoction in hot-water.]

DUTCH METHOD OF MAKING BUTTER.—A method of making Butter, which is very generally adopted, is to churn the milk and cream together. In the Dutch method the milk is put into deep jars in a cool place, each *milk*, or portion milked at one time, being kept separate. As soon as there is a slight appearance of acidity, the whole is churned in an upright churn, which, from the quantity of the milk, is of very large dimensions. The plunger is therefore worked by machinery moved by a horse, or sometimes by a dog walking in a wheel, which he turns by his weight. When the butter begins to form into small kernels the contents of the churn are emptied on a sieve, which lets the buttermilk pass through. The butter is then formed into a mass in the usual ways. This from Prof. Traill's experiments is the most economical method, as the quantity of butter is great, and the buttermilk rich. The less butter is handled the better, though it is of the last importance that all the buttermilk should be expressed. This operation requires the greatest attention especially in warm weather, and no person should work the butter who has not a very cool hand, and that kept still colder by often dipping in cold water. But a wooden spoon or spatula is much to be preferred to the coolest and fairest-hand. The presence of any curd renders butter liable to putrefaction, and is, to a great extent, the cause of the unpleasant taste of that made carelessly in summer. Much of the butter made inland is at once salted and put into firkins holding about 56 lbs. The quality of the salt used is of much importance: if it be pure, the butter will keep its flavor for a long time, but when it is impure, and contains butter and deliquescent salts, the butter soon becomes rancid. The Dutch are very particular in this point. They use a salt that is made by slow evaporation and perfectly crystalized. The salt is intimately mixed with the butter. From three to five pounds are sufficient for a firkin of fifty six pounds.

NEWSPAPERS.—Among the various portions of the human family, Newspapers are said to be found in proportion to the population in the following ratios: in Asia, one to every 14,000,000; in Africa, one to every 5,000,000; in Europe, one to every 105,000; in America, one to every 40,000; in the United States, one to every 10,000.

MISCELLANEOUS.

TREATMENT OF SCARLET FEVER.—The following communication comes from a gentleman, in whose judgment we have entire confidence :

Cleanse the stomach by a mild emetic, such as warm water or ipecac, (but not emetic tartar—it is too prostrating for this disease.)

When the fever rises, wash the patient all over in *warm* water, rendered a little slippery between the thumb and finger, by white ley or saleratus. As frequent washings will be required—that is, as often as the fever rises—a *soft* towel should be used, and very gently, so as not to make the skin sore. On this account, when the skin is thoroughly cleansed, less ley should be used ; and if the patient becomes sore, a little rich milk in the water may be substituted. The feet should also be bathed in *warm* weak ley.

Such washings operate like a charm ; and have never failed under my observations, to put out the fever as water puts out fire—for a time ; but frequent repetitions will be necessary. A girl in my family, was washed ten times in one day ; and a neighbor who was very weak before he came under my care, was washed twenty times in one night. The effect of these applications is most salutary and soothing. I have seen a child of five years old, who was taking from her bed crying and moaning, become playful as soon as she was washed. Another child, on whom the fever had risen high in the night,—was cooled off by the same process in a few minutes.

Warm water is more soothing and agreeable than *cold* water—which (latter) ought not to be applied in this disease, on account of its inducing re-action.

If the throat is much swelled, surround it with a cloth containing hops sprinkled with hot vinegar, and extending upwards above the nose, so that the patient may breathe the fumes. Volatile liniment,—made by turning *aqua ammonia* into sweet oil in a phial and shaking it well,—may also be applied round the throat, to irritate the skin as a rubefacient.

The *strength* of the patient should be most carefully preserved, hence neither *bleeding* nor *strong cathartics* are admissible. Some indeed, live through such improper treatment, because scarlet fever is one of the most variable diseases in regard to intensity : on some being very light, and on others very severe. The more urgent the case, the greater is the danger from bleeding. *The patient has not one drop of blood to spare*—no more than he would have in typhus ; and strong purgatives are scarcely less improper. Only the mildest cathartics, like tamarinds, should be employed ; but as elder-flower tea is both sudorific and aperient, in most cases no better medicine need be sought*.

After the fever has ceased, children often become pale and bloated ; and a near neighbor lost a fine boy under the care of a regular physician, when the disease seemed over and past. In all cases however that have come to my knowledge, a dose of

* Decoctions of slippery elm, catnep, or sage, may be used where elder-flowers are not to be had.

calomel when given, has roused them from that torpid state, and they have rapidly recovered.

Be very careful for many days after, not to take cold.

GASTRIC DIGESTION.—In food there must be *bulk*: or such as possesses a due proportion of innutritious with nutritious matter, are best calculated to preserve the permanent welfare of the organs of digestion, and the general interests of the system. 2. The food should be plainly and simply prepared, with no other seasoning than a little salt, or now and then a very little vinegar. 3. Full and deliberate mastication or chewing is of great importance. 4. Swallowing the food slowly, or in small quantities, and at short intervals, is very necessary. 5. A quantity not exceeding the real wants of the economy, is of prime importance to health. 6. Solid aliment thoroughly masticated, is far more salutary than soups, broths &c. 7. Fat meat, butter, and oily substances of every kind, are difficult of digestion, offensive to the stomach, and tend to derange that organ, and induce diseases. 8. Spices, pepper, stimulating and heating condiments of every kind, retard digestion, and injure the stomach. 9. Coffee and tea debilitate the stomach, and impair digestion. 10. Alcohol, whether in the form of distilled spirits, wine, beer, cider, or any other intoxicating liquors, debilitates the stomach, and if persevered in for a short time, always induces a morbid state of that organ. 11. Narcotics of every kind impair digestion, debilitate the stomach, and tend to disease. 12. Simple water is the only fluid called for by the wants of the system: artificial drinks are all more or less injurious; some more so than others: but none can claim exemption from the general charge. 13. Gentle exercise after eating promotes digestion more than indolent inactivity or rest. Violent exercise with a full stomach is injurious. 14. Sleep soon after eating retards digestion, and leads to debility and derangement of the stomach. 15. Anger, fear, grief, and other strong emotions, disturb digestion, impair the functional powers of the stomach, and deteriorate the secretions generally.—*Dr. Beaumont.*

BUSINESS AND SENTIMENT—We are often entertained, says an English journal, by the tone of sentiment adopted in advertising a death. There is frequently a facetious union of puff and despondency. We will give a specimen of a "*death*:"—"Died, on the 11th ultimo, at his shop on Fleet street, Mr. Edward Jones, much respected by all who knew and dealt with him. As a man, he was amiable, and as a hatter upright and moderate. His virtues were beyond all price, and his beaver hats were only twenty-four shillings each. He has left a widow to deplore his loss, and a large stock to be sold cheap for the benefit of his family. He was snatched to the other world in the prime of his life, and just as he had concluded an extensive purchase of felt, which he got so cheap, that the widow can supply bonnets at a more reasonable charge, than any other house in London. His disconsolate family will carry on the business with punctuality."

The first stone of St. Paul's Cathedral, London, was laid on the 21st of June, 1675. The edifice was opened on the 2d of December 1697. It cost nearly £1,000,000.

GOLDEN RULES OF LIFE—All the air and the exercise in the universe, and the most liberal table, but poorly suffice to maintain human stamina if we neglect other co-operatives—namely, the obedience to the laws of abstinence, and those of ordinary gratification. We rise with a headache, and set about puzzling ourselves to know the cause. We then recollect that we had a hard day's sag, or that we feasted over-bounteously, or that we staid up very late; at all events, we incline to find out the fault, and then we call ourselves fools for falling into it. Now, this is an occurrence happening almost every day; and these are the points which run away with the best portion of our life before we find out what is for good or evil. Let any single individual review his past life: how instantaneously the blush will cover his cheek when he thinks of the egregious errors he has unknowingly committed—say unknowingly, because it never occurred to him that they were errors until the effects followed that betrayed the cause. All our sickness and ailments and a brief life mainly depend upon ourselves. There are thousands who practice errors day after day, and whose pervading thoughts is, that every thing which is agreeable and pleasing cannot be hurtful. The slothful man loves his bed; the toper his drink, because it throws him into an exhilarative and exquisite mood; the gourmand makes his stomach his god; and the sensualist thinks his delights imperishable. So we go on, and at last we stumble and break down. We then begin to reflect, and the truth stares us in the face how much we are to blame.—*Home Journal*

NEW MATERIALS FOR BUILDING—There is a certain district in the suburbs of Lassa, the capital of Thibet, where the houses are built entirely with the horns of cattle and sheep. These odd edifices are of extreme solidity, and present a rather agreeable appearance to the eye; the horns of the cattle being smooth and white, and those of the sheep being black and rough. These strange materials admit a wonderful diversity of combinations, and form on the walls an infinite variety of designs. The interstices between the horns are filled with mortar. These are the only houses that are not whitewashed. The Thibetians have the good taste to leave them in their natural state, without endeavoring to add to their wild and fantastic beauty. It is superfluous to remark, that the inhabitants of Lassa consume a fair share of beef and mutton—their horn houses are incontestible proof of it.

AFRICAN ELEPHANTS—The elephant of Dahomey is of immense size, and is held, like all the large animals, in religious awe. On certain occasions, or the grand festival, the flesh of the elephant is eaten by the king, and distributed by his majesty to the highest of his subjects. Two regiments of amazons are styled maugers of the forest, and one part of their duty is to supply the elephant flesh for these feasts, and the bones and skulls for the fetish houses, while the tusks and teeth are sold to the merchants in Whydah.—*Forbes' Dahomey*.

NO—is a very useful word. Be not afraid to use it.

SINGULAR GEOLOGICAL FACT.—At Modena, in Italy, within circle of four miles around the city, wherever the earth is dug, and the workmen arrive at the distance of sixty-three feet, they come to a bed of chalk, which they bore with an auger five feet deep. They then withdraw from the pit before the auger is removed, and upon its extraction, the water bursts up with great violence, and quickly fills the well thus made, the supply of water being affected neither by rains or droughts. At the depth of fourteen feet are found the ruins of an ancient city, houses, paved streets, and mosaic work. Below this, again, is a layer of earth, and at 26 feet walnut trees are found entire, and with leaves and walnuts still upon them. At 28 feet soft chalk is found, and below this leaves and then trees as before.

A DISCOVERY IN EGYPT.—The *New York Commercial* says, that a most interesting discovery has been made in Egypt. It is known that there exists in Mount Rabarah, situated on an Island in the Red Sea, a mine of emeralds, which was formerly worked by the pachas of Egypt, but abandoned in the last years of the reign of Mehemet Ali. An English company have solicited, and recently obtained authority to resume the working of this mine, which is believed to be still rich with precious stones. Mr. Allan, the engineer of the company, while directing some important excavations in this place, has discovered, at a great depth, traces of an ancient gallery, which must evidently be referred to the most remote antiquity. Upon removing the rubbish, they found tools and ancient utensils, and a stone upon which is engraved a hieroglyphic inscription, now partially defaced. This circumstance proves the truth of the opinion expressed by Belzoni, on the strength of other indications, that this mine was worked in ancient times.

The nature and form of the implements discovered, and the configuration of the gallery, the plan of which has been readily traced, prove most conclusively, that the ancient Egyptians were skilful engineers. It seems from examination of the stone which has been discovered, that the first labors in the mine of Zabarah were commenced in the reign of Sesostris, the Great, or Ramses Sesostris, who, according to the most generally received opinion, lived about the year 1650 before Christ, and who is celebrated by his immense conquests, as well as by the innumerable monuments with which he covered Egypt.

THE BIBLE IN RUSSIA.—The Emperor of Russia, so far from opposing the circulation of the Scriptures in his dominions, generously remitted, at one time, duties charged upon 20,000 bibles sent into St. Petersburg, amounting to £200. The British and Foreign Bible Society have an agency in the Russian capital, which has been actively engaged for years in scattering bibles and testaments without molestation, either from the government or from others. The total issue of this agency up to the 9th of February, 1850, amounted to 254,040 copies.

Fashion makes foolish parents, invalids of children, and servants of all.

THE BAROMETER.

On the practical use of the Barometer to Farmers and others, with Rules for predicting the Weather.

The proper use of the barometer, as a means of judging of the weather, is not generally known; or its great practical value would be more extensively appreciated—especially by farmers. It is only necessary to be well acquainted with the nature of its indications to form a tolerably good, and mostly a correct, estimate of the impending weather. For this purpose, it is here proposed to embody the most approved rules relative to the barometer; and, it may be remarked, that if all persons, affected in any way by changes in the weather, will but consult their barometer daily, they will soon be sensible of the great advantages derivable from such practice.

It should first be well understood, that the principal criterion of the kind of weather to be expected is the relative motion of the mercury in the tube, and that its absolute height is only of secondary importance, when atmospheric changes are to be anticipated. The words engraved on the register plate should not be much regarded, as they cannot always be relied upon to correspond with the state of the weather; and in fact, would show different indications at the top and bottom of a lofty house; but much greater dependence may be placed in the rising and falling of the mercury. For this reason, the words are more deserving of notice when the mercury has just moved from "Changeable" upwards or downwards.

The absolute height of the mercury is a safe prognostic when it is unusually high or low, and the following observations upon it may frequently be found to be extremely serviceable:—

1. All appearances being the same, the higher the barometer is, the more likely is the weather to be fair. When the barometer is high, it will be found that very dark and dense clouds pass completely over, and that there is very little probability of immediate rain.
2. When the barometer is low, it sometime rains almost without any appearance of clouds; and, though the sky may seem to promise fair weather, it may be depended upon that the appearances will not continue long: the face of the sky changes very suddenly on such occasions. Also, when the barometer continues low, there is seldom much rain, though a fair day is very rare: the general character of the weather at such times is short, heavy, and sudden showers, with squalls of wind from the W., N. W., or S. W.
3. The barometer is highest of all during a long frost, with a N. E. wind; and it is lowest of all during a thaw following a long frost, and accompanied by a S. W. wind.
4. In all places nearly on a level with the sea, rain may be expected when the mercury falls below 30 inches.

To judge rightly of the changes to be expected in the weather, we should especially ascertain whether the mercury is actually rising or falling. This will be always seen by regularly adjusting the index of the barometer; or we may observe—1. If the surface of the mercury be convex, standing higher in the middle of the tube than at the sides, it indicates the rising; if the surface be concave, it is falling; and if it appear level, the mercury is stationary. 2. If, on shaking or rapping the barometer, the mercury ascends higher than it stood before, it indicates the rising; but if it descends, it indicates the falling.

The following rules have been laid down and amply confirmed by long-continued experience, and may be generally relied upon:

1. The rising of the quicksilver generally presages fair weather; the falling generally indicates rain, snow, and, if the fall be great, high winds and storms.
2. When bad weather *quickly* succeeds the falling of the mercury, it will not be of long continuance. Similarly, when fair weather *soon* follows the rise of the quicksilver, we must not calculate on its continuance for any length of time.
3. On the contrary, if, in bad weather, the mercury rises considerably, and continues in an advancing state for two or three days before the fair weather sets in, we may expect a continuance of fair weather. And if, in clear weather, the mercury fall remarkably for two or three days together before the rain sets in, it is then highly probable that it will be succeeded by much rain, and perhaps high winds.
4. In winter, the rising indicates frost; and in frosty weather, if the mercury falls three or four divisions, there will certainly follow a thaw; but if it rises in a continued frost, it will always be accompanied with snow.
5. In hot weather, the sudden falling of the mercury portends thunder.

6. If the earth continue moist, and water stands in hollow places, no trust should be put in the clearest sky.

Of all persons, the farmer and the sailor are those who can, generally, from constant observation, form the best judgment of the atmospheric indications of weather; but while to the latter the barometer is of the utmost importance in indicating that a sudden change is at hand, to the former it will be found equally useful, if he be a constant observer of it, by showing him, pretty accurately, whether or not any particular change of weather is likely to be of some duration.

THE HARVEST MOON.

The daily progress of the Moon in her orbit, from west to east, causes her to rise, at a mean rate, 47 minutes and 44 seconds later every day than on the preceding. But in places of considerable latitude, a remarkable deviation from this rule takes place, especially about the time of harvest, when the full moon rises to us for several nights together, only from 18 to 25 minutes later in one day, than on that immediately preceding. From the height which her light affords, in lengthening out the day when the husbandmen are gathering the fruits of the earth, the full moon, under these circumstances, has acquired the name of Harvest Moon.

About the equator, the moon rises throughout the year with nearly the equal intervals of 47 minutes, and there the harvest moon is unknown.

At the polar circles, the autumnal full moon, from her first to her third quarter, rises as the Sun sets, and at the poles, where the Sun is absent during one half the year, the winter full Moon, from the first to the third quarter, shines constantly without setting.

The different lengths of the lunar night, at different latitudes, is owing to the different angles made by the horizon, and different parts of the Moon's orbit; or, in other words, by the Moon's orbit being sometimes more oblique to the horizon than at others. In the latitude of London, for example, as much of the ecliptic rises about Pisces and Aries in two hours as the Moon goes through in one day; therefore, while the Moon is in these signs, she differs but two hours in rising for six days together, that is, one day with another, she rises about 25 minutes later every day than on the preceding.

The signs of the ecliptic which rise with the smallest angles, set with the greatest, and those which rise with the greatest, set with the least. And whenever this angle is least, a greater portion of the ecliptic rises in equal times than when the angle is larger.

In northern latitudes, the smallest angle made by the ecliptic and horizon is when Aries rises, at which time, Libra sets; the greatest is when Libra rises and Aries sets. The ecliptic rises fastest about Aries, and slowest about Libra. The daily difference of the Moon's rising, when in these signs, is, in New Brunswick, about 23 minutes; but when she is in the opposite signs, Virgo, and Taurus, the daily difference of her rising is almost four times as great, being about one hour and a quarter.

The Moon can never be full but when she is opposite the Sun, and the Sun is never in Virgo or Libra except in our autumnal months, September and October, it is evident that the Moon is never full in the opposite signs, Pisces and Aries, except in those two months. We can, therefore, have only two full Moons in a year, which rise for a week together, very near the time of harvest. The former of these is called the Harvest Moon, and the latter the Hunter's Moon.

Although there can be but two full Moons in the year that rise with so little variation of time, yet the phenomenon of the Moon's rising for a week together so nearly at the same time, occurs every month, in some part of her course or the other.

To the inhabitants of the temperate, the north and south poles appear in the horizon; and therefore the ecliptic makes the same angle southward with the horizon when Aries rises, as it does northward when Libra rises; consequently the Moon rises and sets, not only at the same angle nearly equal, but at equal intervals of time, all the year round. Hence, there is no Harvest Moon at the equator. The farther any place is from the equator, if it be not beyond the polar circles, the angle which the ecliptic makes with the horizon gradually diminishes when Pisces and Taurus rise.

Although, in northern latitudes, the autumnal full moons are in Pisces and Aries, yet in southern latitudes it is just the reverse, because the seasons are reversed; for Virgo and Libra rise at as small an angle with the horizon in southern latitudes, as Pisces and Aries do in the northern, and therefore the Harvest Moons are just as regular on one side of the equator as the other.

At the polar circles, the full Moon neither rises in summer nor sets in winter. For the winter full Moon being as high in the ecliptic as the summer Sun, she must continue, while passing through the northern signs, above the horizon; and the summer full Moon being as low in the ecliptic as the winter Sun, can no more rise, when passing through the signs, than he does.

JOHN KINNEAR,

PRINCE WILLIAM STREET,

Keeps on hand, for Sale, WHOLESALE AND RETAIL, a
Stock of the following Goods :

A

Annatto. Roll; Arrowroot, best; Allspice; Ditto Ground; Alum;
Acid, Tartaric; Axes and Handles; Apples, Dried.

B

Borax, refined; Brimstone, roll; Blue. fig and Button; Brick. Bath;
Beeswax; Blinds, Green; Brooms and Brushes; Boxes, Sugar and
Spice; Boards, Wash; Books, Blank; Baskets, assorted; Barley,
Pearl and Pot; Beans; Blacking, Paste and Liquid; Blacking, Ma-
son's; Blinds, Green Window; Broma, Mott's; Books, Log.

C

Campher; Copperas, Green and White; Carpeting, Wool;
Cords, Bed; Corks, Bottle; Cotton, Warp; Coffee, Whole and
Ground; Caraway Seed; Cloves, Whole and Ground; Cinnamon,
Whole and Ground; Currants, Dried; Chocolate; Candles, Mould
and Dipt; Chairs, cane seat; Chairs, cane back Rocking; Ditto,
wood seat rocking; Ditto, wood seat common; Chairs, children's;
Chans; Chalk, red and white; Cornices, Gilt; Chocolate, Mott's
and Eagle Chocolate; Cocoa, Mott's prepared.

F

Fluid, Washing; Farina; Floor Cloth, 4-4 American; Ditto
Ditto, 6-4 and 8-4 Ditto, Ditto, English 4-4, 6-4 and 4-8.
Feathers, picked and cleaned.

G

Ginger, whole and ground; Glue, best quality; Glass, 7x9 to
14x20; Ditto, 21x25 to 34x45; Glassware, assorted; Glasses,
Toilet; Glasses, (Looking) and Plates; Ginger, Ground, in Tin
Foil Papers and 26lbs. kegs.

H

Heads, Wheel

J

I

Indigo, Black and Blue.

L

Locks, Carpenter's; Lamp Black; Lead, Black; Ledgers.

M

Mustard; Matte and Matting; Mattresses, Hair and Palm Leaf.

N

Nutmegs; Nails, Wrought, from 4dy to 20dy.; Ditto, Horse;
6dy to 10dy.; Ditto, ditto, 4dy to 5dy; Ditto, Cut, 3dy to 12.; Ditto,
Boat, 1 3-4 to 3 in.; Ditto, Pressed, 6dy to 12dy.

O

Oils, Boiled and Raw Linseed; Ditto, Sea Elephant and Pine;

Castor and Lard; Ditto. Florence; Oatmeal; Ochre,
Yellow.

P

Picture Frames; Pepper, ground and whole; Paints, White;
Paints, Coloured; Peas Split; Pipes, Tobacco; Putty; Paper

 Lead CASTINGS, at short notice.*

He begs leave to call attention to his IMPROVED
“Hatheway Cooking Stove,”

They have been found to effect a saving of ONE HALF
 THE FUEL, and cook better than any Stove in use.
 THOMAS C. EVERITT.

St. John, September 1850.

By submitting Certificates for the perusal of the public, the Subscriber is actuated by selfish motives in recommending articles of his own make ; but at the same time he thinks it a duty he owes to the public, to put them on their guard against purchasing a quantity of *trash*, which is now thrown into this market from the *United States*,—consisting of old worn out Stoves, and a variety of such as cannot be sold in that country, being of old fashioned and unsaleable sorts, and too light in most cases to be durable. On this subject he hopes they will judge cautiously. It is after having tried a number of different Cooking Stoves in his own house, and the use of “HATHEWAY’S” for the last three years, that he has been induced to go largely into the manufacture of that pattern, of which he now has three sizes, at £6, £7, and £8 each.

THOMAS C. EVERITT.

St. John, N. B. Sept. 1850.

Saint John, N. B. September 1845.

Mr. THOMAS C. EVERITT.—Sir, in reply to your inquiries respecting the qualities of your "Hatheway Cooking Stove," I have to remark that I have found that which I purchased of you about three years ago to be the best Cooking Stove with which I have been acquainted. It has done all the Cooking for my Boarding House, at which I frequently dine Thirty persons per day. It has given the utmost satisfaction, and has never been out of repair. In fact, if I could not procure another like it, I would not part with it now for double its original cost.

JOSEPH READ.

I have read what Mr. Read has stated relative to "Hatheway's Cooking Stove," and do fully concur in what he has said, having had one of them to do the Cooking in my Hotel for about three years past. My fire place has been closed up, and the cooking is all done with the Stove in question. I do therefore freely recommend it to the public.

Saint John, N. B.

JOHN B. LONGLEY.

I purchased of Mr. Thomas C. Everitt, one of his "Hatheway's Cooking Stove," about Sixteen Months ago, and do not hesitate to recommend it as the best description of Cooking Stove to be had. I find from a strict investigation that it does not consume one half the quantity of wood that I formerly burnt in a Cooking Stove. It broils, boils, and bakes well, and I would not part with it for double its cost if I could not get another of the same pattern.

Saint John, N. B.

M. NUGENT.

I purchased of Mr. T. C. Everitt one of his "Hatheway Cooking Stoves," about Eighteen months ago, after having examined various other kinds. There has been no other means of Cooking in my house since the Stove was purchased; and I confidently recommend it as the best description of Cooking Stove within my knowledge. It accomplishes every object in cooking and washing desired by my family, and gives the most complete satisfaction; it has never yet been out of order.

Saint John, N. B.

C. C. MACDONALD,
No. 5 King Street.

WE have read over the foregoing Certificates relative to the properties of "HATHEWAY'S COOKING STOVE," and having purchased of Mr. EVERITT and had in use of the same pattern, we do most freely recommend them to the public as the most perfect and economical Cooking Stove that have come within our knowledge.

H. G. KINNAR,
JAMES DUNN,
E. L. THORNE,

A NEW CURE FOR THE SCURVY.—Assistant Surgeon Perrin, of the United States Army, announces that he has found the Maguey, or *Agave Americana*, an admirable remedy in scorbutic affections. After a fair trial, the Maguey is considered far superior to lime juice, and other anti-scorbutic remedies. The Maguey contains a large amount of vegetable and saccharine matter, and of itself is sufficiently nutritious to sustain a patient for days.

There are 7700 veins in an inch of colored mother of pearl.

W. L. AVERY.
