

OBSERVATIONS

ONTHE

Inhabitants, Climate, Soil, Rivers, Productions, Animals, and other matters worthy of Notice.

MADE BY

Mr. JOHN BARTRAM,

In his Travels from

PENSILVANIA

T O

Onondago, Oswego and the Lake Ontario,

In CANADA.

To which is annex'd, a curious Account of the

CATARACTS at NIAGARA.

By Mr. PETER KALM,

A Swedish Gentleman who travelled there.

LONDON:
Printed for J. Whiston and B. White, in
Fleet-Street, 1751.

(Frice One Shilling and Six-pence.)

BOOKS printed for John Whiston and Benj. White, in *Fleet-Street*.

(In one Volume Öctavo, the fecond Edition, Price 5s. bound.)
I. THE History of the five Indian Nations of Canada, which are the Barrier between the English and French in that Part of the World: With particular Accounts of their Religion, Manners, Customs, Laws and Government; their several Battles and Treaties with the European Nations; their Wars with the other Indians, and a true Account of the present State of our Trade with them. In which are shewn the great Advantages of their Trade and Alliance to the British Nation, and the Intrigues and Attempts of the French to disengage them from us; a Subject nearly concerning all our American Plantations, and highly meriting the Consideration of the British Nation; with Accounts of several other Nations of Indians in North America.

By CADWALLADER COLDEN, Eq;
One of his Majesty's Council, and Surveyor General of New-York.

Also,

(In Eight Volumes compleat. Price 11. 16s. bound)

II The Modern Husbandman, containing the Practice of Farming, as it is now carried on by the most experienced Farmers in the several Counties of England, for every Month in the Year. Containing,

1. The Timber and Fruit Tree improved, or the best Practical Methods of improving different Lands with

proper Timber.

2. Agriculture improv'd, or the Practice of Husbandry display'd, shewn by Facts perform'd on all Sorts of Land, according to the old plain, and the new Drill Way of Ploughing.

3. Chiltern and Vale Farming explain'd, according to the latest Improvements. By WILL ELLIS, Farmer,

at I ittle Gaddesden in Hertfordsbire.

III. The British Merchant, containing the Sentiments of the most eminent and judicious Merchants of the City of London, concerning the Trade and Commerce of the fekingdoms; particularly that which relates to France, Spain and Portugal. Illustrated with Notes and Maxims of soful to Trade in general. Compos'd by a Body of Merchants, and publish'd by Mr. Charles King, in three Pocket Volumes, Price 98.

PREFACE.

T

Mr. John Bartram, in his travels from his own house near Philadelphia to Onondago, and Oswego on the Cadarakin or Ontario Lake, It

is a misfortune to the publick, that this ingenious person had not a literal education, it is no wonder therefore, that his stile is not so clear as we could wish, however, in every piece of his, there are evident marks of much good sense, penetration, and sincerity, join'd to a commendable curiosity. It was to gratify this disposition, and that of his correspondents request in *England*, that he undertook, after other expeditions, to accompany Mr. Weisar on the business of the government, and was honoured with the encouragement of some very judicious and generous noblemen bere, since dead, and the friendship of the skilfullest botanists in Europe.

It may be proper to inform the reader, that the negotiations fet on foot in the conferences here related, produced a congress at Lancaster in Pensilvania, begun the 22d of June following, which was attended with the wish'd for success, in an amicable adjustment of all differences between the parties, under the mediation of the governor of Pensilvania. PREFACE.

HE following Journal was kept by Mr. John Bartram, in his travels from his own house near Philadelphia to Onondago, and Oswego on the Cadarakin or Ontario Lake, It

is a misfortune to the publick, that this ingenious person had not a literal education, it is no wonder therefore, that his stile is not so clear as we could wish, however, in every piece of his, there are evident marks of much good sense, penetration, and sincerity, join'd to a commendable curiosity. It was to gratify this disposition, and that of his correspondents request in *England*, that he undertook, after other expeditions, to accompany Mr. Weisar on the business of the government, and was honoured with the encouragement of some very judicious and generous noblemen bere, since dead, and the friendship of the skilfulless botanists in *Europe*.

It may be proper to inform the reader, that the negotiations fet on foot in the conferences here related, produced a congress at Lancaster in Pensilvania, begun the 22d of June soliowing, which was attended with the wish'd for success, in an amicable adjustment of all differences between the parties, under the mediation of the governor of Pensilvania. This treaty was print-

ed the same year at *Philadelphia*, and is to be found in Mr. *Colden's history of the 5 Indian Nations*. A book worthy of the readers perusal.

This journal was by several accidents prevented from arriving in England till June 1750, and is now made publick without the author's knowledge, at the instance of several gentlemen, who were more in number than could conveniently peruse the manuscript. Had he intended it for publication he would have made it probably more entertaining and perhaps have retrenched some parts that make the least figure in it.

The friend to whom he fent it, thought himself not at liberty to make any material alteration, though as it now appears, many who seek only amusement in what they read, will in those places be disappointed where only are treated of the several plants with which nature has bountifully covered the hills and valleys he travers'd, with the various qualities of the soil and climate.

But when it is consider'd, of how great importance an intimate acquaintance with the natural state of this vast wilderness, and its capacity of further improvement is to Great Britain, and how little the endeavours of our countrymen have yet advanced this work, while we are indebted to our most dangerous rivals for the little we do know, who will, if possible, repay themselves by excluding us from all we do not actually cultivate, and leave us that only while they want power to take it from us: I cannot but

but think this plain yet sensible piece merits attention. It is by pursuing the discovery of the interior state of this great continent, that we can scarcely sail attaining and end, the most worthy the aim of a great maritime power, honoured as well as strengthened by a fair progeny of the most flourishing colonies in the world, and of which a good Englishman with peculiar pleasure will find P. Charlevoix confessing (however unwilling to own any thing inconsistent with the glory of his country) that France cannot behold them without Terror.

Knowledge must precede a settlement, and when Pensitvania and Virginia shall have extended their habitations to the branches of the Mississippi that water these provinces, on the west side of the Blue Mountains, we may reasonably hope to insure a safe and easy communication with the most remote known parts of North America, and to secure the possession of a dominion unbounded by any present discoveries.

If this definable prospect appear chimerical, because great and distant, it is at least true, that no obstacle can be pointed out, but what

we may eafily remove.

England already possesses an uninterrupted line of well-peopled provinces on the coast, successively begun within less than 150 years, she sees them every year augmented by an accession of subjects, excited by the desire of living under governments and laws formed on the most exceltent model upon earth. In vain do we look for B 2 an

an equal prosperity among the plantations of other European nations because every power has transplanted its constitution with its people. This furprizing increase of people is a foundation that will bear a mighty superstructure, we need no other proof than in the wonderful growth of one of the provinces, (Pensilvania I mean) which tho' the youngest of all, yet being more particularly founded on the principles of moderation (the first of all political Virtues) and every way fam'd for the wisdom and lenity of its government, is become the admiration of these who compare it with any thing related by history, and the well-known refuge of —the oppres'd and persecuted, who chearfully abandon their native foil to purchase the inestimable blessings of liberty and peace.

The inhabitants of all these colonics have eminently deserved the character of industrious in agriculture and commerce. I could wish they had as well deserved that of adventurous in inland discoveries, in this they have been much outdone by another Nation, whose poverty of country and unsettled temper have prompted them to such views of extending their possessions, as our agriculture and commerce now make necessary for us to imitate. In this skilful Persons may employ themselves; but a more accurate observer than our author will not readily be found.

The welfare of a colony concerns the country from whence it derives its origin, in nothing for much

much as in the quantity of land broke up for tillage, the natural consequence of extending the frontier fettlements. This is not only beneficial in proportion to the increase of vent, among the new fettlers of comodities exported from the mother country; but by preventing the additional hands from applying themselves to such manufactures as may interfere with the commerce, effectually binders a michief that might flop the advantages reaped before. A jealoufy has long prevailed at home, of manufactures in America, and it has been usual for our manufacturers on various occasions to express this opinion in frequent applications to parliament. vainly hoping to force a confumption abroad from the weakest of all resources, prohibitary laws: But the wisdom of the legislature has provided the most effectual, if not the only remedy, by encouraging the vent of the growths of America, and thereby engaging the inhabitants to employ themselves in raising them: a conduct grounded on the invariable observation, that perfection in agriculture naturally precedes manufactures, wherever a country finds a market for its produce sufficient to provide itself with the latter.

Mr. Kalm's narrative of his travels to the Falls of Niagara, is a proper supplement to the journey to Oswego, his voyage begins from that place, and caries us on surther in the search of every thing worthy our notice in this country: This gentleman is well known to be

a man of worth and great skill in natural history, and his little piece besides the candour and veracity of the writer, derives a great value from its being the only account in our language of this stupendous object. P. Charlevoix an Author of good credit, (where the interest of his nation and religion are unconcerned) has given us a description perfectly agreeable to Mr. Kalm's, the much less circumstantial: It was in 1722, be was on the spot, and the heights had not then probably been taken by instruments, for he seems to think it very difficult if possible; He guesses the great Fall to be 140 or 150 feet from a measure taken by founding; and adds, that he has feen finall birds flutter just above the fall itself; we have likewise an account of this cataract Phil. Trans. No. 371. p. 69. from Mr. Borussan transmitted by Mr. Dudley. Mr. Borussan relates that the Governor of Canada's fon the Marquis de Cavagnal had founded it, and fixed the perpendicular fall at 26 fathom, this was also in 1722.

I cannot help taking notice of the alarm Mr. Kalm's arrival gave the French at Niagara. They are confcious their enjoyment of this Fort is a manifest violation of the treaty of Utrecht tho' they know the justice of the English Nation will not permit them to compell the Seneka's against their inclination to dislodge them.

Among other curious parts of Mr. Bartram's journal are his thoughts (thrown together at the end) on the Origin of the Aborigines of Ame-

rica; these conjectures are short, and it is likely occurr'd to him casually, perhaps they are not all well grounded, or at most apply'd to any but the Eskimaux, however, the same sentiments on this subject have been supported by the learned Grotius in his treatise de Origine Gentium Americanarm, and in his reply to J. de Laet.

This question has long been agitated with great warmth, and every solution of it hitherto, has sound opposers, because those who have engaged in the controversy have forgot, or wilfully mistook, that the point in dispute cannot reasonably be, whether it was actually peopled from one or more particular places? but whether it might probably be peopled consistent with the Mosaick history; other wise it would be hard to say, how all this enquiry has been so much confined to America, when the passage of the inhabitants to many other parts of the globe is attended with equal difficulties.

P. Charlevoix who has with great exactness abstracted the opinions and arguments of the writers on this subject, has observed, that besides the easy passage by sea from the coast of Guinea to that of Brazil: If it has not yet been demonstrated that the new world is contiguous to the old on the South, North-East and North-West, at least the contrary has not been shewn, so that the principal difficulties to be encountered, arise not from the want of a Pasage, but from colour, manner, and language, which seem irreconcileable to any we are ac-

quainted

quainted with on this fide the Globe. the Negroes in Guinea more fimilar in these respects, to the rest of the world? Let any one tell me, why most of the Africans are black and woolly-pated, and I will shew him why the Americans are red and without hair on their chins, and many parts of their bodies. After all are we fufficiently acquainted with the utmost powers of nature? to be fure the offspring of the fame pair in 3 or 4000 years might without a supertural interpolition become of various complexions, and suppose we were convinced of this, may not the infinite power that created our first parents, and miraculously wrought the confusion of tongues, have thus distinguish'd their posterity for purposes only known to his I ought not to omit that \mathcal{P} . infinite wisdom. Charlevoix recommends a careful observation of those Amrican languages, that have the marks of being original, and a comparison of them with those of Europe, Asia, and Africa, and gives very judicious Reasons for depending on a similar on this, preferable to that of manners; I shall only add, that Mr. Lewis Evans a companion of our author's in this journey, and a skilfull furgeon, has lately publish'd a map of New York, Pensilvania, and Fersey, with part of Virginia, Maryland and New-England, chiefly founded on actual furveys. This map includes the route here described, which seems laid down very exactly. And is fold by Mr. Bowle's map and print-feller in Cornbill.

OBSERVA-

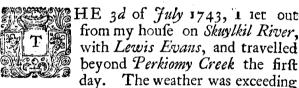

OBSERVATIONS

MADE BY

Mr. JOHN BARTRAM,

In his Journey from

Pensilvania to Onondago, &c.

hot. The 4th, we fet out before day, and stopp'd at Marcus Hulin's by Manatomy; then crossed Skuylkil, and rode along the west side over rich bottoms, after which we ascended the Flying Hill, (so called from the great number of wild Turkeys that used to fly from them to the plains) here we had a fine prospect of the Blue Mountains, and over the rich Vale of Tulpehocken; the descent into which is steep and stoney. Through this vale we travelled west.

west, and by the way observed a large spring 16 feet deep, and above 20 yards wide, which issued out of a limestone rock, the ground about it pretty level, descending gradually towards the spring which ran eastward. at night we lodged at Conrad Weisers, who is the general Interpreter, and who went with us; his business was to settle an affair with the Indians at Onondago.

The 5th, We croffed Tulpehocken Creek which runs east, and emptieth itself into Skuylkil, and a little after a small branch of Swataro which runs West into Susquebanah. These two large creeks receive most of the water of that great rich vale between the Flying Hills and Tulpehocken Hill, from which the vale and creek receive their names, and is itself so called from the *Indian* word fignifying a tortoife, unto which the natives of the country have conceived it bears fome fimi-And these two hills are the southern lirude. boundary of this fine limeftone vale, many hundred miles long, and from 10 to 20 miles broad to the northern boundary formed by the Great Blue Mountains.

Having called on a man who was to go with us and carry part of our provisions to Shamokin, he could not get his horse shod that day, but we rode to William Parsons's plantation, who received and entertained us

very kindly; his house is about six miles from the Blue Mountains.

The 6th, we fet forward and afcended the first Blue ridge, from the top of which we made an observation, Conrad Weisers Hill bearing fouth 20 degrees east, the northern profpect to two gaps, thro' which we were to pass to the North Hill, N. 30 deg. W. about 10 miles diffant. The top and fouth fide of this ridge is midling land, half a quarter of a mile broad, and produced fome wild grafs, abundance of fern, oak and chefnut trees. Descending the North side we sound it more poor, steep and stony, and came soon to the first branch of Swataro which runs between the ridges, and is 3 miles from the next branch, all very poor land; but on this fecond branch it is good low land, with large trees of 5 leaved white pine, poplar, and white oak, here we dined by a fpruce swamp.

After dinner we passed the openings of two ridges, the last of which was by the bank of the principal branch of Swataro, the soil poor and stoney; then we ascended a great ridge about a mile steep, and terribly stoney most of the way: near the top is a fine tho' small spring of good water. At this place we were warned by a well known alarm to keep our distance from an enraged rattle snake that had put himself into a coiled posture of defence, within a dozen yards of our path, but

we punished his rage by striking him dead on the spot: he had been highly irritated by an Indian dog that barked eagerly at him, but was cunning enough to keep out of his reach, or nimble enough to avoid the snake when he sprung at him. We took notice that while provoked, he contracted the muscles of his scales so as to appear very bright and shining, but after the mortal stroke, his splendor became much diminished, this is likewise the case of many of our snakes.

The north fide of the Hill is not fo flony as the fouth, but yet very poor. Thence we traveled 7 miles over feveral hollows, fwamps and small ridges, full of scrubby bushes, and still poor and stoney to the last great ridge, which is composed chiefly of gravel, as big as pidgeons or pullets eggs, and even the rocks feemed but heaps of the fame materials; the descent on the north side is very steepand rocky, large craggy rocks are disposed on all fides, most part of the way down, which brought us to a fine vale, where we lodged by a creek called Saurel, and were grievously flung all night with fmall gnats, fo that I flept very little.

The 7th, we fet out west from Saurel creek and traveled down the vale, which is pretty good land: and leaving the creek, soon crossed another runing along the north side of the vale, by the bank of which we rode through a grove

of white Pine, very lofty and so close, that the Sun could hardly shine through; at the end of this the two branches joined. Riding a little farther, we passed through a gap of a moderate hill, north by the creek fide, where we found a fishing place, mostly a deep hole near a rock; there we went west on the north fide of the creek, and dined at what is called the Double Eagle. The land hereabouts is middling white oak and huckleberry land, and by the creek fide pretty good wild grafs, and the 2d branch enters about 30 rood below; having croffed this, we went up a vale of middling foil, covered with high oak Timber, nearly west to the top of the hill, (most of the way being a white clay under a shallow furface), where we first observed the impresfion of shells in some of the loose stones, and from whence we had a fair prospect of the river Sulquehanah.

The descent from hence soon brought us to *Mohony*, our lodging for this night. Here the soil is very good throughout the neck, formed by the river and the creek, which is about 3 poles wide. It rained this night through our old, tho' newly erected lodging, which was an *Indian Cabin* that we took the liberty to remove, knowing they usually leave behind them a good stock of sleas on the ground they inhabit; however, the wet deprived me of my

rest that I had taken so much pains to secure

against the vermin.

July 8. We croffed the creek and rode along a rich bottom near the river for two miles, producing most kinds of our forest trees, and a large species of Scutelaria two feet high: thence along the river fide, near a mile N. 20 deg. E. to the foot of a fertile hill, where leaving the river, our way N. E. through feveral narrow valleys and over small hills, generally middling land, vielding oak, hickery, chesnut, and some pine, to the summit of a high hill, where we faw Shamokin Hill, diftant four miles only; going down we came to uneven flony ground producing pitch pine and oak, as far as the point of Shamokin Hill, whence we had a pleasant prospect of the fall of the river, quite cross without any great The stream runs very swift, but canoes or flat-bottomed boats may go up or down well enough: the bottom of this defcent is washed by Shamokin Creek three rods wide, this we forded to a fruitful bottom half a mile wide, beyond which, two miles good oak land brought us to the town of Shamo-It contains eight cabbins near the river's bank right opposite the mouth of the west branch that interlocks with the branches of Allegheny. It is by means of this neighbourhood that we may reasonably hope, when these parts shall be better known, that a very beneficial

beneficial Trade may be extended through the Hokio into the Missisppi and its branches among the numerous nations that inhabit their banks. It were to be wished, that the English government in these parts had been more diligent in fearthing and furveying the heads of their own rivers and the fources of the others that run westwards from the backs of their respective provinces. Yet enough is already known to justify the surmises of Mr. de la Sale, who in his Journal addressed to the Count de Frontenac expresses his sears, lest the English, from their settlements, should possess themselves of the trade on the Millessuppi. I quartered in a trader's cabbin, and about midnight the *Indians* came and called up him and his fquaw, who lay in a separate part where the goods were deposited, whether together or no I did not ask. She fold the Indians rum, with which being quickly intoxicated, men and woman began first to fing and then dance round the fire; then the women would run out to other cabbins and foon return, leaving the men finging and dancing the war dance, which continued all the next An Englishman when very drunk will fall fast asleep for the most part, but an Indian, when merry, falls to dancing, running, and shouting, which violent action probably may disperse the sumes of the liquor, that had he fat still or remained quiet, might have made

made him drowfy, and which is even carries

off by continued agitation.

As foon as we alighted they shewed us where to lay our baggage, and then brought us a bowl of boiled squashes cold; this I then thought poor entertainment, but before I came back I had learnt not to despise good *Indian* food. This hospitality is agreeable to the honest simplicity of antient times, and is so punctually adhered to, that not only what is already dressed is immediately set before a traveller, but the most pressing business is postponed to prepare the best they can get for him, keeping it as a maxim that he must always be hungry, of this we found the good effects in the sless had bread they got ready for us.

July 9. After breakfast Lewis Evans and myself went to the point of the mountain close to the N. E. branch, a mile and half up the river from our lodging, and good level rich land all the way; we walked thither, carrying our blankets with us, and slept near three hours. Here we regulated our journey, and having taken a pleasant view of the range of mountains, and the charming plane of Shamokin, 2 miles long and above one broad, skirted on the West and North by the river, and encompassed East, and partly South, with losty hills, besides a fine vale bordering the North West branch, we returned to the town and dined. In the

In the afternoon we borrowed a afternoon. canoe, and paddled up the West branch. near two-thirds as broad as the North East or main river: I went ashore on the fouth side to the point of a hill to look for curiofities. but found none; the rock confifted of a dark coloured fhelly ftone. Then we diverted our felves with fwimming, the water was chin deep most of the breadth, and so clear one might have feen a pin at the bottom. night I hung up my blanket like a hammock. that I might lie out of the reach of the fleas, troublesome and constant guests in an Indian hut; but I found my contrivance too cool for a place open on all fides, tho covered with a kind of granary, especially the wind blowing cold from the N. W.

shickcalamy and his fon, he being the chief man in the town, which confifted of Delaware Indians; he was of the fix nations, or rather a Frenchman, born at Mont-real, and adopted by the Oneidoes, after being taken prisoner; but his son told me he was of the Cayuga nation, that of his mother, agreeable to the Indian rule Partus sequitur ventrem, which is as reasonable among them as among cattle, since the whole burthen of bringing up falls on her; therefore in case of separation the children fall to her share.

 \mathbf{D}

We

We had many advantages from the company of these guides, were perfectly acquainted with that part of the country, and being of the six Nations they were both a credit and protection; and, also as we went to accommodate the differences, and allay the Heart-burnings that had been raised by a late skirmish on the back of Virginia, between some of these nations and the English, we could not but derive a considence from the company of a chief.

We coasted the river near a mile to the ford, where we had a good bottom not above 3 feet deep; this brought us to an Island near 2 miles long and a quarter broad, pretty rich at the lower end, and near the river, but the higher end sandy, from the drift left there by the floods, it therefore produces little but pitch pine. After leaving the lower end where we saw several cabbins, we once more took water for the opposite shore, but the bottom is less even, though not above half as wide as the last, which is about 400 yards.

Hence leaving the west branch about half a mile on our lest, and rich low ground between with gravel, oak and pitch-pine land on our right, we reached a pretty spring of good water, situated between the swamp and dry ground. This, since our passage over the Blue Mountains, was the only one we met with till we came near Onondage, for on that side

fide the currents and creeks are chiefly formed by the water outing and draining from the bottoms of the mountains and hills, and are gradually collected in this manner into rivulets But on the fouth of this great ridge, it gushes out between the rocks in streams big enough to turn a mill, in other places rising and bubbling out of the earth in quantity sufficient to fill a pipe an inch square, or thereabouts.

Our journey now lay through very rich bottoms to a creek 6 miles from Shamokin, a great extent of fruitful low ground still continuing. Here we found a fine meadow of grass on our right, and rich dry ground on the left. In our path lay a large Rattlefnake, but he civilly crept into the grafs, and let us pass by without danger. Our way from hence lay through an old Indian field of excellent foil, where there had been a town, the principal footsteps of which are peach-trees, plumbs and excellent grapes. A great flood came down this branch a few years past, and drove abundance of fand over this ground a great depth among the trees. It rose 20 feet perpendicular, washing away many yards of the bank, which was composed of gravel and fand, and doubtless had been raised to that heighth by former inundations, for the wood ground 30 rod from the river is several feet lower

lower than the bank; a little above this devaflation we dined.

And now leaving the river we held a new course over a fine level, then down a rich hollow to a run, where we faw a fummer duck; and fo down the run, a little beyond this turns a path to Wiomick, a town on the east branch, hence N. N. E. then N. after W. to a rich bottom near the river, where Shickealamy formerly dwelt, at the upper end of which refistless torrents had carried abundance of fand into the woods. With this bottom we left the river for the present, and kept a variable course through the gap of the mountain N. and N. W. over middling champion land, producing some pitch pine, and large white and black oak, some swamps and brooks, by one of which we lodged in a fertile valley, that we reached before night.

11. About break of day it began to rain, and the *Indians* made us a covering of bark got after this manner: They cut the tree round through the bark near the root, and make the like incision above 7 sect above it, these horizontal ones are joined by a perpendicular cut, on each side of which they after loosen the bark from the wood, and hewing a pole at the small end, gradually tapering like a wedge about 2 seet, they force it in till they have compleated the separation all round, and the bark parts whole from

from the tree, one of which, a foot diameter, yields a piece 7 feet long and above 3 wide: And having now prepared four forked flicks, they are fet into the ground the longer in front; on these they lay the cross-poles, and on them the bark. This makes a good tight shelter in warm weather. The rain was quickly over, but as it continued cloudy, we did not care to leave our shed. Here our Indians shot a young deer, that afforded us a

good feast.

12. We fet forward and travelled up the Run, bearing N. W. along a narrow valley, moderately rich, the hills hung with lofty timber, the stones generally flat, then up a steep hill, where I found fossil steel in many stones, the foil middling oak land; and here had a view of a Bluf point N. by the river fide: then descending down a steep hill N. E. we came to a rich bottom by the river; hence N. after N. W. to a creek, and so through a grove of white walnut and locust, and exceeding rich land, half a mile broad, and now fome higher level land, affording oak, hickery, walnut, locust, and pitch pine, our course generally N. N. W. till riding over a hazel plane we met eight Shawanele Indians on horseback coming from Allegheny, and going to Wiomick upon an important account, as they faid. We turned back with them to the adjacent wood, and fate down together under a shady oak; the (quaw

fquaw which they brought to wait upon them kindled a fire to light their pipes; our Interpreter and Shickcalamy fet down with them to smoke, the customary civility when two parties meet; Conrad Weisar understanding they were some of the chiefs of the Shawanese, acquainted them with our business at Onondago, a compliment they were so well pleased with, that they gave us the Tohay, a particular Indian expression of approbation, and which is very difficult for a white man to imitate well; after half an hour's grave discourse several of them went to catch the horses, and one of the principal men made a handsome speech, with a pleafant well composed countenance, to our interpreter, to the following effect: 'That they were fenfible with what an unwearied diligence he had hitherto been 'inftrumental in preserving peace and good ' harmony between the Indians and White ' People, and that as they could not but now ' commend the prudence and zeal with which ' he had effected this laudable purpose, so they earnestly entreated and fincerely hoped he would still persevere in the same endea-' yours and with the same success, and that his good offices may never be wanting on any future occasion.

The Shawanese, or Shaounous, as they are called by the French, are the same people, the Six nations: and at New York are called Satanas; they

they dwell upon the Hokio and to the fouthward of it, between whom and that of the Cherokees is a river fometimes called by that name. It was against this people the fix nations first turned their Arms with success, after they had fled before warlike Adarondacks, and having thus learn'd to conquer, ventured to attack their hitherto victorious enemies, who could not have supported this war without the unexpected assistance they received from the French.

After taking our leaves, we continued our journey to a large creek 4 or 5 rod wide which washes on each shore a charming country of rare foil as far as the river. On the other fide of this creek we rode through a deferted Town in the neck between them; a few miles more brought us to our dining place, and in the afternoon we turned our backs on this branch, and rode N. W. down a valley 20 rods wide, wooded with pitch pine on the right hand and white on the left, the Run between; then N. W. by W. by the fide of a hill and bottom of white pine, down which we rode 2 hours, upon better land, the N. W. middling land, now up a hill N.W. to a point, a prospect of an opening bearing N. then down the hill to run, and over a rich neck lying between it and Tradaughton bearing N. W. where we lodged within about 50 yards of a hunting cabin, where there were 2 Men, a Squaw and a child. child, the men came to our fire and made us a present of some venison, and invited Mr Weisar, Shickalamy and his fon, to a feast at their cabin. It is incumbent on those who partake of a feast of this fort, to eat all that comes to their. share or burn it: now Weisar being a traveller was intitled to a double share, but he being not very well, was forced to take the benefit of a liberty indulged him, of eating by proxy, and called me, but both being unable to cope with it, Lewis came in to our affistance, notwithstanding which we were hard set to get down the neck and throat, for these were allotted us; and now we had experienced the ntmost bounds of their indulgence, for Lewis ignorant of the ceremony of throwing the bone to the dog, tho' hungry Dogs are generally nimble, the Indian more nimble, laid hold of it first, and committed it to the fire, religiously covering it over with hot ashes. This feems to be a kind of offering, perhaps first fruits to the Almighty power to crave future fuccess in the approaching hunting seafon, and was celebrated with as much decency and more filence, than many fuperstitious ceremonies: the bigotry of the popish missionaries tempt them to compass sea and land to teach their weak Profelites what they call the christian religion. To this I may add another ceremony at bear hunting, as related by a celebrated author, this diversion being in the winter,

winter, when this animal is very fat, the greafe that fivins on the broth becomes a perfect oil. which the Indians frequently drink untill they burst —— As soon as the bear is killed, the hunter places the small end of his pipe in its mouth, and by blowing in the bowls, fills the mouth and throat full of fmoak, then he conjures the departed Spirit not to refent the injury done his body, nor to thwart his future fport in hunting, but as he receives no answer to this, in order to know if his prayers have prevailed, he cuts the ligament under the bear's tongue, if these ligaments contract and shrivel up, being cast into the fire, which is done with great folemnity and abundance of invocations: then it is esteemed a certain mark (as it rarely fails) that the manes are appealed. It was now time to return to our fire where we laid us down to rest.

The 13th, in the morning, the Indians repaid our visit, and entertained us with a familiar conversation for half an hour at the fire. We then set out up the creek, where I observed three noble white pine trees, with many large green cones hanging on the top and side branches over the creek, which was three rods broad and pretty deep, had these been ripe I know not how we should have got at them, as they were at the extremity of large branches, that hung over the Water, on which part of the branch they generally grow. Soon after we

came to a spacious level of midling land, oak, and pine, next to a large rich bottom, and at the upper end to an extensive grove of white pine, after this a graffy plain of 20 acres, then round the end of a hill, and along a valley, and run N. by W. high timber and good land on the hill fide N. then W. and laftly, at half an hour after 8 N. here our *Indians* shot 2 young deer. The land and timber good, brown foil, and the stones flat and gritty. From hence going over a hill we faw a gap N. N.W. and descending down a steep part of the hill to the head of a stoney brook and hollow, we made our way through it, it was full of spruce and white pine; at the bottom we killed a rattle fnake, then croffed the brook and traversed a rich bottom N. N. E. the upper end pine, spruce, oak, laurel, poplar and chesnut, some limes, stoney and brown foil, feveral times croffed the creek and over rich bottoms and stoney hill sides with laurel, pine, spruce and swamps, till towards night. On the north fide of a deep stoney yet rich foil. I found roots of Ginfeng; at night we lodged by a creek, and the two Indians that feasted with us, who accompanied us to the Cayuga branch.

The 14th, Having forded the creek we kept generally a N. N. E. course, mostly along rich bottoms interspersed with large spruce and white pine, oak, beach and plane tree, ginseng,

ginfeng, and many more. We frequently paffed the creek (which was very strong) for the mountains often clos'd on one fide; it was big enough to turn two mills. At a o'clock the Indians fished for trout, but caught none, being provided with no other means of taking them but by poles sharpened at the end to strike them, and the water deep: at the foot of a hill we croffed the creek once more, and rode along a fine bottom, full of great wild The timber was fugar birch, fugar maples, oak and poplar, our course N.W. continued till after 12'clock, then followed the east branch N. N. E. about a mile, all a rich bottom where we found a Liching Pond, where we dined, the backs parts of our country are full of these liching ponds, some are of black fulphureous mud, fome of pale clay, the deer and elks are fond of licking this clay. fo that the pond becomes enlarged to a rood or half an acre, the foil, I suppose contains some faline particles agreeable to the deer, who come many miles to one of these places, there had been a great elk there that morning, but the Indians told us that many years ago some Indians quarrelled there, in the squable one lost his life, and that this made the deer keep from thence for many years.

Now traveling up the run east, we left it on the right hand, to go up a hill covered with spruce, oak spruce, lawrel, opulus, yew, with E 2 ginseng ginfeng and ataliashum in abundance, there kept generally an east course, having several hollows and steep ascents and over many boggy rotten places, some laurel and very high timber, then down the side of a hill to an old beaver dam, over which we passed, and then over a large level of very good ground, tall timber and abundance of leather-bark or thymelea, which is plentiful in all this part of the country. Our lodging was in this

Toacious flat.

The 15th, We fet out a N. E. course; and passed by very thick and tall timber of beach, chesnut, linden ash, great magnolia, sugarbirch, fugar-maple, poplar, fpruce and fome white pine, with ginfeng and maidenhair; the foil black on the furface, and brown underneath, the stones a brown grit, the way very uneven over fallen trees, abundance of hollows, and heaps of earth, turned up by the roots of proftrate timber: hence it is that the furface is principally composed of rotten trees, roots, and moss, perpetually shaded, and for the most part wet, what falls is constantly rotting and rendring the earth loofe and spungy; this tempts abundance of yellow wafps to breed in it, which were very troublesome to us throughout our journey, on the branches of Susquebanah our course this day was generally east, and we got through this difmal wilderness about two hours before sunset, and came came to oak and hickery land, then down a fleep hill producing white pine to a creek called Conuria a branch of Towintohow, where we lodged in a bottom producing ginfeng, fareaparilla mediola, maidenhair, darallia, panax, mitela, christophoriana, with white, red and blue berries, we had a fine warm night, and one of the Indians that had fo generoully feafted us, fung in a solemn harmonious manner, for feven or eight minutes, very different from the common *Indian* tune, from whence I conjectured it to be a hymn to the great fpirit as they express it. In the morning I asked the Interpreter what the *Indian* meant by it, but he did not hear him, and indeed I believe none of the company heard him but myself, who wake with a little noise, rarely fleeping found abroad.

The 16th, We began our journey up a little hill, steep and somewhat stoney, and then through oak, chesnut, huckleberries, and honeysuckles, the land poor, sometimes white pine, spruce and lawrel; thus far N. but at half an our after seven N. E. through a great white pine, spruce swamp sull of roots, and abundance of old trees lying on the ground, or leaning against live ones, they stood so thick that we concluded it almost impossible to shoot a man at 100 yards distant, let him stand never so fair. The straight bodies of these trees stood so thick, a bullet must hit one before it could sty 100 yards, in the most

open part. At half an hour after nine, we rode down a fmall hill, and croffed a fmall run, then climb'd a steep hill of oak land, and by ten to a large creek called Uskoho, then round the point of a hill, midling land, and up fide thereof which was good, down the other fide very fleep to a Run, with good corn land to the top of a hill in fight of the east branch of Sulquebanab. so far we had pale clay land from the wilderness, though blackish on the surface, for 2, 3 or 4 inches, then down half a mile on a moderate descent, good oak and hickery land to a large rich graffy and weedy bottom; 40 rood wide, producing elm; birch, linden, lotus, whitewalnut, and very large white pine, where the land is a little higher than common; at the upper end of this bottom we dined at half an hour after 12, we fet out again at 3, course N. along a steep hill side, full of excellent flat whet-stones of all sizes, from half a foot, to 4 feet long, and from 2 inches to a foot wide, and from half an inch to a foot thick; I brought one home which I have used to whet my ax, fcythe, chizzels and knife, and is yet very little the worse for wear, it is as fine as the English rag, but of a blackish colour: this lasted two miles close to the river which is here 100 yards wide, and deep enough for flat-bottomed boats, then we came to a very rich low land, most of the way N. N. E. to the Cayaga branch, near 100 yards wide which we croffed, then rode

near a mile to the town-house, bearing N. this town is called Tobicon, and lies in a rich neck between the branch and main river: the *Indians* welcomed us by beating their drum, as foon as they faw us over the branch, and continued beating after the English manner as we rode to the house, and while we unsaddled our Horses, laid in our luggage and entered our felves: the House is about 30 foot long, and the finest of any I faw among them. The Indians cut long grass and laid it on the floor for us to sit or lie on; feveral of them came and fat down and smoaked their pipes, one of which was fix foot long, the head of stone, the stem a reed, after this they brought victuals in the usual manner: here I observed for the first time in this journey, that the worms which had done much mischief in several parts of our Province, by deftroying the grass and even corn for two fummers, had done the fame thing here, and had eat off the blade of their maize and long white grass, so that the stems of both flood naked 4 foot high; I faw some of the naked dark coloured grubs half an inch long, tho' most of them were gone, yet I could perceive they were the fame that had visited us two months before; they clear all the grass in their way, in any meadow they get into, and feem to be periodical as the locusts and caterpillar, the latter of which I am afraid will do us a great deal of mischief next sum-Here one of our hosts at the hunting cabin cabin left us to go up this branch to his own country, that of the Cayagas, this night it rained a little, and the morning was very foggy.

17th. Day, we croffed the neck to the east branch of Sulquebanab, up which we travelled along a rich bottom of high grass and woods of a fine creek, then over oak and pitch pine land to a swampy run and fine meadow ground, then east through white and pitch pine, oak, hickery and hazel bottom, and fo N. E. to the river, where grew a white pine close to the water, with four green cones on, still we kept N. E. at 10 bore S. Here the river turned thus, occasioned by some high barren mountains on the other fide, whose fides came close to it, and turned the stream in this crooked We travelled through a fine vale of manner. pine land. Here was a place where the *Indi*ans had been a pawawing. They cut a parcel of poles, which they stick in the ground in a circle, about the bigness of hop poles, the circle about five foot diameter, and then bring them together at the top, and tie them in form of an * oven, where the conjurer placeth himself; then his affiftants cover the cage over close with blankets and to make it still fuffocating, hot stones are rolled in; all this the priest must cry aloud, and agitate his

^{*} Vide Capt. Beverley's hift. of Virginia, 8-vo. a curious and useful work, and the Baron Labortan's entertaining voyages in these parts.

his body after the most violent manner, till nature has almost lost all her faculties before the stubborn spirit will become visible to him, which they fay is generally in the shape of fome bird. There is usually a flake drove into the ground about four foot high and painted. I suppose this they design for the winged airy Being to perch upon, while he reveals to the invocant what he has taken fo much pains to However, I find different nations have different ways of obtaining the pretended Some have a bowl of water, information. into which they often look, when their strength is almost exhausted, and their senses failing, to see whether the spirit is ready to answer their demands. I have seen many of these places in my travels. They differ from their fweating coops, in that they are often far from water, and have a stake by the cage, vet both have a heap of red hot stones put in. at 11 we dreffed our dinner, and found an Indian by the river fide, resting himself; all his provision was a dried eel; this he made us a present of, and we gave him a share of our dinner. Their way of roafting eels is thus; they cut a flick about three foot long, and as thick as one's thumb, they split it about a foot down, and when the eel is gutted, they coil it between the two fides of the flick, and bind the top close, which keeps the eel flat, and then flick one end in the ground before a good fire. F

At half an hour after one we fet out, middling oak land but flony, yet no great rocks; at 2 N. E. then N. good land, a rich bottom and flat stones on rising ground; we crossed the Owagan branch about thirty yards wide. Then half a mile to the town so called, where we lodged, there is very good land in this neck between the branch and main river. little before fun-set I walked out of town to regulate my journal; but the gnats were fo troublesome I could not rest a minute. bit my hands fo cruelly I was forced to give over my purpose. These are so troublesome from fun-rifing to fun-fetting that we could not rest while we were cating our victuals without making feveral fires of wet leaves round us to keep them off.

18. This morning we fent an *Indian* with a string of Wampum to *Onondago*, to acquaint them with our coming, and the business we came about, that they might send messengers to the several nations to hasten their deputies to meet them as soon as possible, for this town serves the five nations as *Baden* does the thirteen cantons of *Switzerland*, with this difference, that *Onondago* is at the same time the capital of a canton.

We fet out at half an hour after 9, and travelled till 6; this day our general course was N. and N. W. having fine level rich land most of the way, and tall timber oak, birch, beech

beech, ash, spruce, linden, elm and herb hierophilon, hepatica and maidenhair in abundance. We lodged by Front Creek in a spatious vale, and it looking like rain, we made us a cabbin of spruce bark, but no rain came.

10. We rode over good level land: after we came to very fivampy bottoms, thickets and hills of spruce, and white pine; here were three ridges of steep hills that run nearly E. and W. and with difficulty we rode over their steep cliffs, which projected close to the creek. We were several times obliged to ford it backwards and forwards. Several runs come into the creek on both fides from between the mountains, Now we came to most excellent level ground, than which nothing can be more fruitful, full of tall timber, fugar, maple, birch, linden, ash, and beech, and fhrubs, as opulus, green maple, hornbeam, hama m elis, folanum, goofterries and red currans triphilum in abundance. Here we dined by a pleafant creek and choice land. dinner we foon began to mount up a pretty fleep hill, covered with oak, birch, ash, and higher up abundance of chefnut and some hickery. This is middling land, the produce the fame for three miles as our land bears with us. It lies very high, and when cleared will have an extensive prospect of fertile vales on all fides. We then rode down a long \mathbf{F}_{2} rich rich hill of moderate descent, where grew abundance of gooseberries; all the trees were crouded with wild pigeons, which, I suppose, breed in these losty shady trees. I sound many fossils on this hill.

Another fertile valley welcomed us at the bottom, over which travelling a mile we lodged at a Run, which our *Indians* told us emptied into the lake Ontario; if so, it must run into the Cayuga river, and so to Oswego.

20. We continued our journey in this pleafant vale until we ascended a hill, beyond which a flant brought us to two ponds that run into a branch of Susquebanah; croffing this we joined a part from the Carugas country; then over a rich level to another branch big enough to turn a mill where we croffed it. It was now three-quarters after 10, then good land to half an hour after 12 yet no hickery nor oak, but elm, fugar, maple, beech, birch, white walnuts, hop, hornbeam, and abundance of ginfeng. After dinner we passed a branch of the great Susquebanab, down which lake canoes may go quite to where the river is navigable for boats. banks I found the gale like the European. This is the nearest branch of Susquehanah river to that of Onondago. Leaving this on our right, on our left we perceived a hill, where the Indians say Indian corn, tobacco and squashes were found on the following occalion:

[37]

cation: An Indian (whose wife had eloped) came hither to hunt, and with his skins to purchase another here, he espied a young fouaw alone at the hill; going to her, and enquiring where she came from, he received for answer, that she came from heaven to provide fustenance for the poor Indians, and if he came to that place twelve months after he should find food there. He came accordingly and found corn, fquashes and tobacco, which were propagated from thence and spread through the country, and this filly flory is religiously held for truth among them. Our way hence, lay over fine rich level land as before, but when we left it, we enter'd a miserable thicket of spruce, opulus, and dwarf yew, then over a branch of Susquehanah, big enough to turn a mill, came to ground as good as that on the other fide the thicket; well cloathed with tall timber of fugar birch, fugar maple, and elm. In the afternoon it thunder'd hard pretty near us, but rained little: We observed the tops of the trees to be so close to one another for many miles together, that there is no feeing which way the clouds drive, nor which way the wind fets: and it feems almost as if the fun had never shone on the ground, fince the creation. About fun fet it cleared up, and we encamped on the last branch of Sulquehanah, the night following it thundred and rained very fast, and took us

at a disadvantage, for we had made no shelter to keep off the rain, neither could we see it till just over our heads, and it began to fall.

One of our *Indians* cut 4 sticks 5 seet long, and stuck both ends into the ground, at 2 foot distance, one from another; over these he spread his match coat and crept through them, and then sell to singing: in the mean time we were setting poles slantwise in the ground, tying others cross them, over which we spread our blanket and crept close under it with a fire before us and sell fast assert.

I waked a little after midnight, and found our fire almost out, so I got the hatchet and selled a few saplings which I laid on, and made a rousing fire, tho it rained stoutly, and laying down once more, I slept sound all night.

21st, In the morning when we had dry'd our blankets, we kept along the fide of a hill, gradually afcending, the foil good, timber tall, and abundance of ginfeng; here the mufquetoes were very troublesome, it being foggy, thence proceeding down a long gradual descent on good rich soil with tall timber, sugar, maple, chesnut, cherry, linden and elm, we traversed a large valley and rivulet, then rode up a little steep hill where we stopped at half an hour after eleven, this hill was a little sandy, with some large pines growing upon it; here we walked and looked about us, having not had such an opportunity for two days, during which

which time we had a fine prospect over the vale of the great mountain we had just croffed, and which differed so remarkably from all I had ever been upon before, in its easy and fruitful ascent and descent, in its great width, every where crowned with noble and losty woods, but above all, in its being intirely free from naked rocks and steep precipices.

From these remarks, one might be naturally led to imagine, that the Waters at the flood gradually ebbed and retired on each fide, towards the river St. Lawrence and Sulquebanah, the very next ridges on either fide being narrower, steeper, and some rocks washed bare, and fo all the adjacent ridges the farther they are from this, appear to be more washed, more composed of great banks of craggy rocks and tremendous precipices, the foil more carried off, mighty rocks tumbled down, and those left appearing as if piled up in a pyramid and hereby preserved from a share in the awful ruin below among their fellows; the foil being fo perfeetly washed from their root, as evidently no longer to support them. After having enjoyed this enchanting prospect and entertaining hypothesis, we descended easily for several miles, over good land producing fugar-maples, many of which the Indians had tapped to make fugar of the fap, also oaks, hickery, white walnuts, plums and fome apple trees, full of fruit; the Indians had fet long bushes all round the

the trees at a little distance, I suppose to keep the small children from stealing the fruit before they were ripe: here we halted and turned our horses to grass, while the inhabitants cleared a cabin for our reception; they brought us victuals, and we dispatched a messenger immediately to Onondago to let them know how near we were, it being within 4 miles. All the *Indians*, men, women and children came to gaze at us and our horses, the little boys and girls climbed on the roofs of their cabins, about ten in number to enjoy a fuller view, we fet out about ten, and travelled over good land all the way, mostly an easy descent, fome lime-stone, then down the east hill, over ridges of lime-stone rock, but generally a moderate descent into the fine vale where this capital (if I may so call it) is situated.

We alighted at the council house, where the chiefs were already assembled to receive us, which they did with a grave chearful complaisance, according to their custom; they shew'd us where to lay our baggage, and repose ourselves during our stay with them; which was in the two end apartments of this large house. The *Indians* that came with us, were placed over against us: this cabin is about 80 feet long, and 17 broad, the common passage 6 feet wide; and the apartments on each side 5 feet, raised a foot above the passage by a long sapling hewed square, and sitted with

with joins that go from it to the back of the house; on these joists they lay large pieces of bark, and on extraordinary occasions spread matts made of rushes, this favour we had; on these floors they set or live down every one as he will, the apartments are divided from each other by boards or bark, 6 or 7 foot long, from the lower floor to the upper, on which they put their lumber, when they have eaten their homony, as they fet in each apartment before the fire, they can put the bowel over head, having not above 5 foot to reach; they fet on the floor fometimes at each end, but mostly at one: they have a shed to put their wood into in the winter, or in the fummer, to fet to converse or play, that has a door to the fouth; all the fides and roof of the cabin is made of bark, bound fast to poles set in the ground, and bent round on the top, or fet aflatt, for the roof as we fet our rafters; over each fire place they leave a hole to let out the fmoak, which in rainy weather, they cover with a piece of bark, and this they can easily reach with a pole to push it on one side or quite over the hole, after this model are most of their cabins built, figure annexed.

The fine vale of Onondago runs north and fouth, a little inclining to the west, and is near a mile wide, where the town is situated and excellent soil, the river that divides this charming vale, is 2, 3 or 4 foot deep, very

full of trees fallen across, or drove on heaps by the torrents. The town in its present state is about 2 or 3 miles long, yet the scattered cabins on both sides the water, are not above 40 in number, many of them hold 2 families, but all stand single, and rarely above 4 or 5 near one another; so that the whole town is a strange mixture of cabins, interspersed with great patches of high grass, bushes and shrubs, some of pease, corn and squashes, lime-stone bottom composed of sossilis and sea shells.

It feems however, to have been more confiderable when it became a conquest to the arms of Lewis 14th, at which time it must have been more compact, for history relates it to have been flockadoed. The Count de Frontenac governor of Canada, at the head of the most numerous army the French ever drew together in N. America, had the fatisfaction in 16 96 of triumphing over the ashes of Onondago, whose inhabitants terrified with what they had heard of bombs, and generally unwilling to hazard a fet battle, had already abandoned their houses after setting them afire. whatever glory the grand monarque might reap from this exploit, it is certain he gained no other advantage, as a longer stay must have inevitably starved the army, so its precipitate retreat helped our Indians to an opportunity of taking their revenge by cutting of every itragling canoe, in their return by water to Monreal.

At night, soon after we were laid down to fleep, and our fire almost burnt out, we were entertained by a comical fellow, difguifed in as odd a drefs as *Indian* folly could invent; he had on a clumfy vizard of wood colour'd black, with a nofe 4 or 5 inches long, a grining mouth fet awry, furnished with long teeth, round the eyes circles of bright brass, furrounded by a larger circle of white paint. from his forehead hung long treffes of buffaloes hair, and from the catch part of his head ropes made of the plated husks of *Indian* corn; I cannot recollect the whole of his dress, but that it was equally uncouth: he carried in one hand a large staff, in the other a calabash with fmall stones in it, for a rattle, and this he rubbed up and down his flaff; he would fometimes hold up his head and make a hideous noise like the braying of an ass; he came in at the further end, and made this noise at first, whether it was because he would not furprise us too suddenly I can't say: I ask'd Conrad Weiser, who as well as myself lay next the alley, what noise that was? and Shickalamy the *Indian* chief, our companion, who I supposed, thought me somewhat scared, called out, lye still John, I never heard him speak so much plain English before. The jackpudding prefently came up to us, and an Indian

Bey came with him and kindled our fire, that we might fee his glittering eyes and antick poitures as he hobbled round the fire, fometimes he would turn the Buffaloes hair on one fide that we might take the better view of his illavoured phyz, when he had tired himfelf, which was fometime after he had well tired us. the boy that attended him ftruck 2 or 3 smart blows on the floor, at which the hobgoblin feemed furprifed and on repeating them he jumped fairly out of doors and disappeared. I suppose this was to divert us and get some tobacco for himself, for as he danced about he would hold out his hand to any he came by to receive this gratification which as often as any one gave him he would return an awkard compliment. By this I found it no new diversion to any but my felf. In my whim I saw a vizard of this kind hang by the side of one of their cabins to another town. ter this farce we endeavoured to compose ourfelves to fleep but towards morning was again disturbed by a drunken Squaw coming into the cabin frequently complimenting us and finging.

22d. was a showery day, and we stirred

little out.

23d. we hired a guide to go with us to the falt fipring, 4 or 5 miles off, down the river, on the west side of it's mouth; being most of the way good land, and near the mouth very rich:

rich: from whence it runs westward near a quarter of a mile, a kind of a fandy beach adjoining to the bank of the river, containing 3 or 4 acres. Here the *Indians* dig holes, about 2 foot deep, which foon filling with brine, they dip their kettles, and boil the contents, until the falt remains at bottom; there was a fami-The boys in the ly residing at this time. lake fishing, the Squaw fetching water, gathering wood, and making a fire under the kettle, while the husband was basking himself on the fand, under the bushes. We filled our gallon keg full of water and brought it to Town, where we boiled it to about a pound of falt. Our guides took their arrows, made of reed and down to shoot small birds. About half way there is an excellent fpring of water, and by it a grove of Curboroit a joining to a green swamp, producing very high grass. About a mile up the river from the lake, it runs by a fleep bank at the end of a high hill. The bank was fandy, and out of it run'd a brackish water, which inclines me to think that there is a body of fossil falt here abouts, by which the plain is furnished with its intense salt brine, and that it is the vapour thereof that congeal to the trash and bushes that lye on the bank, and glitters like flakes of Ice, or Snow, in a Sunfhiny day. This day 2 deputies arrived from the Cayugas Country.

24th,

24th. Lewis and I hired a guide to go with us to O/wego for 16s. our intention was more to get provisions for our journey home, than to gratify our curiofity. In the mean time, Conrad stayed at Onendago, to treat with the Indian chiefs about the skirmish in Virginia, with a view to incline them singly in savour of our application, before they assembled in council: and here I cannot help observing, it was scarcely ever known, that an Indian Chief or Councellor, once gained so far as to promise him interest, did break his promise, whatever presents have been offered him from another quarter.

We travelled on foot to the Onendago lake, whence we had fetched the falt water the day before, there we procured a bark canoe at half an hour after eleven, then paddled down the lake, and reached the lower end in two hours course, N. W. This lake the French call Ganentaha; hence we went down the river a mile N. big enough to carry a large boat, if the trees fallen into it where but carried away, this brought us to the river from the Cayuga country, near 100 yards wide, very fill, and so deep we could see no bottom, the land on both fides very rich and low to within a mile of the Oneido river, where the river began to run swift, and the bottom became visible, tho' at a good depth. At three o'clock we came to the last mention'd river, down which the Abbany trader come to Ofenego, half

a mile

a mile farther we came to a rippling, which carried us with prodigious swiftness down the ffream, foon after we encountered a fecond. and a mile farther a third, very rough. about an hour by the fun, after many other ripplings, we found our felves at the great fall. the whole breadth of the river which is above 100 yards wide and is eight or ten feet perpendicular: here we hawled our canoe ashore, took out all our baggage, and carried it on our back a mile to a little town, of about four or five cabins; they chiefly subsist by catching fish and affishing the Alcany people to havel their *Bateans*, and carry their goods round the falls; which may be about ten or twelve poles, then they launch again into the river, and down the foaming stream that furiously on all fides dashes one half against the rocks, near a mile before they come to still water, and indeed, it runs pretty swift all the way to Of-These Indians were very kind to us, and gave us boiled corn and water melons, while they and our guide who was a relation fat over against us in the same cabin, chewing raw Indian corn stalks, spitting out the substance after they sucked out the juice. But we could not yet understand whether we were to go to the fort by land, or by water. In the morning they had catched some stout eels, and a great fish two feet long, it was round and thick, they strike them with long slender **Ihafts**

thafts 18 or 20 feet long, pointed at the end with iron fee the shape. The 2 splints of wood spreading each side, directs the point into the sish, which at a great depth it would be otherwise difficult to hit. I saw upon one of their canoes in the morning a large piece of bark spread a-cross. On this lay gravel and sand, and on these coals and ashes, which I supposed had been a sire, and the gravel placed there to save the bark. And I took it to be a design both to allure and see to strike the sish.

25th. Our guide, and feveral other Indians, lead us to the canoes belonging to the town, into one of which we got full of hopes of going by water, but were much chagrin'd to find ourselves only paddled cross the water, where we unwillingly took out our cloaths, victuals and blankets, and carried them on our backs following our guides, who were now increased to three. We had 12 miles down the river by land, most of the way middling land, some white pine and fpruce groves to pass through, but most of the way in fight of the river, which is very rapid most of the way to the On the point formed by the entrance of the river, stands the fort or trading castle, it is a strong stone house, incompassed with a stone wall near 20 feet high, and 120 paces round, built of large squared stones; very curious for their foftness, I cut my name in it with my knife. The town confifts of about

70 loghouses, of which one half are in a row near the river, the other half opposite to them. on the other fide of a fair were two streets divided by a row of posts in the midst. each Indian has his house to lay his goods, and where any of the traders may traffick with him. This is furely an excellent regulation for preventing the traders from imposing on the Indians, a practife they have been formerly too much guilty of, and which has frequently involved the English colonies in difficulties, and constantly tended to depreciate us in the esteem of the natives; Who can scarcely be blamed for judging of a nation, by the behaviour of those with whom they have the most intercourse. a judgment I am forry to confess that has (till lately) tended much to the making them in favour rather of the French, than English. I speak of private persons, not of the respective government. The chief officer in command at the castle, keeps a good look out to see when the Indians come down the lake with their poultry and furrs, and fends a canoe to meet them, which conducts them to the caftle. to prevent any person inticing them to put ashore privately, treating them with spirituous liquors, and then taking that opportunity of This officer feems very carecheating them. full, that all quarreling, and even the least misunderstanding, when any happens, be quickly made up in an amicable manner, fince a speedy

H

accomodation can only prevent our country men from incuring the imputation of injuffice, and the delay of it would produce the difagreeable confequences of an *Indians* endeavouring

to right himself by force.

Oswego, is an infant settlement made by the province of New-York, with the noble view of gaining to the crown of Great Britain the command of the 5 lakes, and the dependence of the *Indians* in their neighbourhood, and to its subjects the benefit of the trade upon them, and of the rivers that empty themselves into them. At present the whole navigation is carried on by the *Indians* themselves in bark canoes, and there are perhaps many reasons for defiring it should continue so for some years at least; but a good englishman cannot be without hopes of feeing these great lakes become one day accustomed to English navigation. true, the famous fall of Niagara, is an infurmountable bar to all passage by water, from the lake Ontario, into the lake Erie, in such vessels as are proper for the secure navigation of either; but befides, that bark canoes are carried on mens shoulders with ease, from one to the other, as far as the passage is impracticable: It will be much more easy to carry the goods in waggons, from the upper lake, into the Huron or Quatoghie lake, the strait is rendered unnavigable by the Saute St. Marie, but a vessel of confiderable burthen may fail from

from the hither end of the Erie lake, to the bottom of the lake Michigan, and for ought we know, through all parts of the 3 middle These lakes receive the waters of many rivers, that in fome places approach to near the branches of the vast river Mississippi, that a fhort land carriage supplies the communication. And here to use the words of a most judicious writer, "He that reflects on the natural state " of that continent must open to himself a " a field for traffick in the fouthern parts of N. " America, and by the means of this river " and the lakes, the imagination takes into " view fuch a scene of inland navigation; as " cannot be paralleled in any other part of " the world.

The honour of first discovering these extensive fresh water seas, is certainly due to the French, who are at this time in possession of fettlements at Fort Ponchartrian, on the ftrait between Lake Erie and the Lake Huron and at Missimahinac between the latter and the upper lake, but as these can give them no title against the original inhabitants or the five nations, Conquerors of all the adjacent nations, so it is difficult to conceive by what arguments these small posts, inhabited by no subjects of France but soldiers, can be extended to mark any possession beyond the reach of their gun's, or land actually cultivated, except by fuch as must intitle the crown of Great H_{2} Britain Britain to all North America, both as prior discoverers and prior planters, without a subse-

quent desertion.

The traders from New York come hither, up the Mohawks river, which discharges itself into Hudsons river; but generally go by land from Albany, to Schenestady about 20 miles from the Mohawks river, the carriage is but 3 miles into the river that falls into the Oneido river, into the Oneido river, into the Oneido river, and brings their goods to Oswego in the manner I have before related.

We came to the town about 12 o'clock, the commissary invited us to the castle where we dined, together with the Doctor and Clerk. After dinner we had the fatisfaction of swimming in the lake Ontario, which is some times called by our *Indians Cadarakin*, this is also the name of a french fort upon it, almost opposite to Oswego, N. it has 4 bastions built of stone, and is near half a mile in circumference; it stands where the waters of this lake are already formed into the river St. Lawrence, which makes a good road for great barks under the point of Cadarakin Bay. The famous and unfortunate Mr. De la Sale had two barks which remains funk there to this day.

These lakes are said to have a kind of slux and reslux peculiar, since it is affirmed to be sensibly ebb and slood several times in a quarter of an hour, tho' it be perfectly smooth and scarce

scarce any wind. But it is evident from the face of the earth, that the water of the lake Ontario is confiderably diminished and has lost ground a great number of years, for the fhores above a mile within land, are abundantly more low, as well as of a loofer texture then the foil beyond, whether this effect is in common to all the waters on the earth, according to a conjecture of the great Sir Isaac Newton: Or whether it be not at (least in part) owing to the removal of fome great obstruction, which by causing a fall in the river St. Lawrence, might formerly pen the waters up to a greater height than now; or only to the gradual wearing away by the perpetual passage of the water over those falls that still subsist: or to a cafual ruin of some part of one of them, I shall leave to the determination of a more able naturalist than myself.

The water was very clear and as cold as our river in May, it is well tasted and supposed to be 120 miles broad, and near 200 long, streaching N. N. W. but this must be an error, the common maps giving it a bearing to the Northward of the lake, but Mr. Bellin shews us it lies E. and W. from the observations of P. Charlevoix, on the exactness of which he thinks he cannot too much relie, and Bellin in his map of these lakes has given it this bearing

bearing. We lodged in the castle in the

captains chamber.

26th. Early in the morning I walked out looking for plants, as I had done the evening before. I observed a kitchen garden and a grave yard to the S. W. of the castle; which puts me in mind that the neighbourhood of this lake is esteemed unhealthful, we were entertained by one of the traders, with whom we breakfasted; and bought of him some dryed beef. And a gallon of Rum we got at the castle. The traders had disposed of most of their biscuit and had packed up their provision, in order to return directly to Albany: however, one of them went about to the rest and collected us a good parcel of bifcuit, a kindness we were very sensible of. After breakfast I regulated my journal, having a convenient private room to do it in. We dined at the castle, and at 3 o'clock set out for Onondago. Two Indians helped to carry iome of our baggage; the day was warm, the Indians walked faft, our load was heavy and we were sufficiently weary before we reached the town near the falls, which was about fun fer. Indeed we had the favour of shady woods all the way, we lodged where we did before. The Indian Squaws got very drunk and made a fad noise till morning. My fear least our guide was drunk also, added a good deal to an indifposition I was seiz'd with in the evening,

but in the morning I found him and his companion, to my great joy, fast asleep by the outside of the cabin.

27th. We fet out early and found our canoe fafe where we left it, and it was with much fatisfaction that I entered it. At half an hour after ten, we got to the first fall, above the great one, the *Indians* brought the canoe to fhore and made fign for us to difembark and walk along ashore, while they stept into the river, and hawled the canoe up the fall about a quarter of a mile, by good land. We reimbarked again, and at twelve came to the Oneido branch, up which the Albany traders return, after 2 or 3 months trade at Ofwego-At 3 o'clock we entered the Onondago lake, the upper end of which we gained by five, the land about the lake is pretty good and fome large marshes and rich low ground mostly on each fide, but here and there the hills come close to the water: I think it must be eight miles long and above one broad, very brackish at the falt plain; very deep in some places near the middle, but shallow for 100 yards from the shore. The *Indians* paddled the canoe a little way higher up the stream and might have brought us to the town, if the fallen trees had been removed; but whatever nature has done for them (and fhe is no where more bountiful) they are too lazy by any trouble of their own to improve; but when compelled by the most urgent necessity.

We reached the town about fun-set, equally pleased with our having improved the opportunity so well by seeing Ontario lake, and that we were returned safe to the interpreter and Indian Chiefs; those two last days had been pretty warm: our Indian guide was a sullen, illustured, and I believe, a superstitious sellow. Every now and then as we paddled up the river, he would with a composed countenance utter somewhat pretty loud for about the space of two minutes at a time, whether it was a magical incantation, or a prayer, I can't tell; I am satisfied it was no song, nor any speech directed to us, or the Indian with him, for he seemed intirely unmoved all the time.

28th, This was a rainy thundering warm day, and two deputies arrived from the Oneidoes. News came that the worms had deftroyed abundance of corn and grass in Canada. This night we were troubled with fleas, and what was worse, our men exceeding drunk and noisy; our grievances in the day were more tolerable, being only women insesting us with their company and bawling, in great good humour, indeed I perceived to no quarrel while among them.

29th, Several more deputies arrived from the *Tuscaroroes*, we went to visit a poor emaciated *Indian*, who they said was bewitched, he lived about a mile from the *Council-House*.

 ${f T}$ his

This day was warm, and feveral showers passed

by to the fouthward.

30th, Three of the Mohawks arrived, this nation dwells farthest within the province of New-York, and to the southward of the river known by their name; abundance of whites live among them, and as they are the best acquainted with the manners of the English, so they have at all times shewn the most steady affection to our people. I am sorry to say, their morals are little if at all mended by their frequent intercourse with us Christians, tho' I am persuaded it is not the sault of our religion but its professors, perhaps this may be esteemed a principal cause why they are become less numerous than any of their confederates.

This morning after breakfast, I went to the east hill, and sound a fine spring on the west side, surrounded with Arbor Vita, some a foot diameter, this water is of such a petrifying nature, that as it runs among the fallen leaves it incrusts them and petrihes in great stones as big as one can well list; there was a great piece of ground covered with them, which had turned the water-course several times, I have seen three of these springs in my travels; one on the other side of Potomack and one up Delawars at Menesinks; this hill is good limestone land, producing sugar maple, elms, beech, and some white pine, which

last had then 3 or 4 cones, on 2 or 3 trees, but

they were quite green.

This afternoon the chiefs met in council. and three of them spoke for near a quarter of an hour each, two of these while speaking, walked backward and forward in the common paffage, near 2 thirds of its length, with a flow even pace, and much composure and gravity in their countenance; the other delivered what he had to fay fitting in the middle, in a graceful tone exhorting them to a close indisfoluble amity and unanimity, for it was by this perfect union their forefathers had conquered their enemies, were respected by their allies, and honoured by all the world; that they were now met according to their antient custom, tho' feveral imminent dangers stood in their way, mountains, rivers, fnakes and evil spirits, but that by the affistance of the great Spirit they now faw each others faces according to appointment.

This the interpreter told me was the opening of the diet, and was in the opinion of these people abundantly sufficient for one day, since there is nothing they contemn so much as precipitation in publick councils; indeed they esteem it at all times a mark of much levity in any one to return an immediate answer to a serious question however obvious, and they consequently spin out a Treaty, where many points are to be moved, to a great length of time,

time, as is evident from what our conference with them, produced afterward at Lancatter begun the 22d of June 1744.

This council was followed by a feast, after 4 o'clock we all dined together upon 4 great kettles of Indian corn 100p, which we 100n emptied, and then every chief retired to his home.

31/t, In the morning, as foon as light, I walked out to look at our horses as usual, and close by a cabin spied a knife almost covered with grafs; I supposed it lost, but the Indians being not yet stiring let it lie: a little after fun-rife I walked there again, and the Squaw being at the door, her where it lay, at which she seemed exceeding pleafed, and picked it up immediately. As I came back to our cabin, I fpy'd 2 *Indian* girls at play with beans, which they threw from one to the other on a match coat spread between them; as they were behind our cabin. I turned to see how they play'd, but they feemed much out of countenance, and run off in an instant: I observed that the Indian women are generally very modest.

About noon the council fat a 2d time, and our interpreter had his audience, being charge by the governor with the conduct of thetreaty. Conrad Weif r had engaged the Indian speaker to open the affair to the chiefs affembled in council; he made a speech near half an hour,

T 2

and delived 3 broad belts and 5 strings of Wampum to the council, on the proper occa-There was a pole laid a-cross from one chamber to another over the passage, on this their belts and strings were hung, that all the council might fee them, and here have the matters in remembrance, in confirmation of which they were delivered: The conference held till 3, after which we dined, this repast consisted of 3 great kettles of Indian corn foop, or thin homony, with dry'd eels and other fish boiled in it, and one kettle full of young squashes and their flowers boiled in water, and a little meal mixed; this dish was but weak food, last of all was served a great bowl, full of *Indian* dumplings, made of new foft corn, cut or scraped off the ear, then with the addition of some boiled beans, lapped well up in *Indian* corn leaves, this is good hearty provision. After dinner, we had a favourable answer, coroborated by several belts of Wampum, with a short speech to each, these we carried away as our tokens of peace and friendship, the harangue concluded with a charge to fit still as yet, for tho' they had dispatched our business first, it was not because they were weary of us, but to This complement preceded make us eafy. other business, which lasted till near sun setwhen we regaled on a great bowl of boiled cakes, 6 or 7 inches diameter, and about 2 thick.

thick, with another of boiled squash; soon after, the chiefs in a friendly manner took their leave of us, and departed every one to his lodging: this night we treated two of the chiefs that lived in the council hall, which as I mentioned, was our quarters; they drank chearfully, wishing a long continuance of uninterrupted amity between the *Indians* and *English*.

August 1. Six of the Anticoque Indians had an audience, but when they came to it, could not make themselves understood, tho' provided with an interpreter brought near 700 miles, (they said more) but he could not understand the Mohawk Language, but only the Delawar and middling English, * so they contrived he should direct his speech to Conrad Weisar in English, and interpret this to the council. They gave broad belts of Wampum, 3 arm belts and 5 strings; one was to wipe clean all the blood they had spilt of the five nations, another

to raise a tumulus over their graves, and to

pick

* P. Charlevoix. perhaps from his own knowledge and the information he has received from his brother missionaries, tells us, that the languages of the northern part of North America, are properly 3, the Sioux or Nadonission, called by the English Norway, the Algenquin or Adirondack, and the Huron or Quatoghie of which last he makes the Iroquois called by our author the Mohawek, a dialect; but adds, he knew not what language is talked by the Cherokees, whether the language of the Anteroques be a dialect of the last which is very possible, or of the Adirondack which I take the Delawar to be, I can't determine.

pick out the sticks, roots or stones, and make it smooth on the top, a third, to cleanse the fromach of the living from gall or any thing else that made them fick; a fourth was a cordial to chear up their spirits; a fifth, to their bodies and keep them warm; a fixth, to join them in mutual friendship, a seventh, to request them to let them settle on a branch of Sulgebanah, another to intreat the 5 nations that they would take a little care to protect their women from infults while out a hunting, and the rest for such like purposes. This business lasted 4 hours, then we dined on Indian corn and squash soop, and boiled bread. In the afternoon, I went on western mountain as I had the day before on the eastern; it was very rich and full of tall timber quite to the top, the trees were linden, elm, fugar-maple, white walnut, oak, hickery and chesnut, besides ginseng, and most fort of herbs that grow on our rich lime-stone land.

These 2 days the wind was south and warm and several showers to the S. E. The council met at 9 o'clock, and the kettles of soop and a basket of dumplings were brought in for our dinner; after dinner the Anticoques delivered a belt and a string of Wampum, with a complaint that the Marylanders had deposed their king, and desired leave to chuse one for themselves: to this, as well as all the articles opened yesterday, the chiefs returned plausible

but subtil answers; then they gave us 2 strings withal, telling us, that now they had thrown water on our fire, and we were at liberty to return home when we pleased, they all took their leave, and bid us adicu by shaking hands very kindly, and seemingly with much affection. This night the young men getting into liquor, kept shouting and singing till morning.

3d, We prepared for fetting forward, and many of the chiefs came once more to take their farewell; some of them brought us provision for our journey, we shook hands again

and fet out at 9.

It was greatly to my mortification, that I was forced to return for the most part the same way I came. We had intended to go through the Mohawks country to Albany, but our 2 Indians could not be perfuaded to go that way, tho' we offered to bear their charges, and the chiefs were not willing we should leave them to pass through the wilderness alone, as they came to gratify us and further our This day was fair, and the wind S. business. In the afternoon, we ascended that lovely mountain S. W. which divides the waters that render tribute to the great streams of St. Laurence and Susquehanah. We did not directly cross the mountain, but rode a small way on its fummit under the grateful shade of those lofty trees that every way adorn it; and afterafterwards we traveled feveral miles on its S. W. fide, where we enjoyed a fine prospect of a spacious rich vale on our left hand. this hill we faw a lime stone a little bigger than my head, which is rare in these parts.

We entered the vale at 5, then croffed a run and rode along a rich level for feveral miles, and under the delightful protection of very tall trees that brought us to a creek, a branch of Sulquehanah, where we lodged fur-

rounded by ginfeng.

4th, This was a fine day, and our traveling cool, because frady, and the goosberries being now ripened, we were every now and then tempted to break off a bough and divert ourtelves with picking them, tho' on horseback.

5th, This morning was clear and cool, and now our journey was truly charming, it is scarce possible to think the advantage we had in returning from the fingle circumstance of being free from those small gnats that tormented us in our going fo grievoufly. our return being mostly in the same path, it will be needless to describe the land or its productions again.

6th, We set out an hour before funrise, the morning clear, at half an hour after ten we reached Owagan, and turned our horses to grafs, while we stopped at a cabin. Square brought in a bowl of huckle-berries,

to stay our stomachs, and soon after a large kettle full of small homony boil'd in strong venison broth; this was noble entertainment, and too good to leave any of. I heartily pityed the poor Squaw, for I believe she had dreffed it for herfelf and feveral children: she also obliged us to accept of a fine piece of venison to carry away. Here we killed a rattle snake, the second we had seen to day: at one we continued our journey through groves of pine of a stupendous stature; the land midling for 2 miles S.W. to the river, then a variable course over land of equal goodness, oak and hickery, some bottoms rich; and by three we cross'd a fine creek where we spyed a grey squirrel which our Indian would have shot, had it not been on the top of a white oak: here we found very ftony ground, great stones having been drove by one common force, into a form like that of fish scales, yet this was a mile from the river, and many yards perpendicular above the bed of it. may be the effects of the universal deluge, or some mighty torrent of water fince that, must have flowed over these stones and washed them thus bare. We travelled till about two hours by the fun, and then pitched by the river, which run full W. there was high barren mountains on the upper fide, here the river was deep and smooth enough for flat bottom'd vessels, which made us heartily wish that we K were were in a canoe, and our horses at Shamokin, for we dreaded the dismal wilderness between. We observed here an old log, which the bears had cunningly turned to pick up the snails, beetles, and grubbs, that had crept under it for shelter.

7th, We rod over middling land, producing oak, pine, and great magnolia, to the Tobicon town on the Cayugo branch; this place we arrived at by noon but stayed there all night, frighted by feveral showers that passed over the mountains in fight: indeed it rained a little here, I walked to the branch after dinner, and found abundance of fossils on the banks, but the diftance of the way, and heavy load of our baggage, were an infurmountable bar to my bringing any home. This day the Anticoque interpreter that travelled with us from Onondago, who left the path a little to hunt. misd our tract and hit upon an Indian town, 3 miles up the branch, and there picking up a Squaw brought her with him. The chief man of the town came to visit us in a very friendly manner, and our interpreter telling him where we had been, what about, and how well we had fucceeded; he testified abundance of fatisfaction that peace was not like to be interrupted, he added, when he came home his people told him, we had passed through their town, but that we had not informed them of our butiness.

This

This furnishes us with an instance of the Punctilio the Indians constantly treat travellers with, the people though earnestly defiring to know our commission, would not take the liberty to ask us. This night our fellow traveller lodged with his occasional wife in a corner of our cabin, and in the morning would have taken her with him at our expence, to the great vexation of Mr Weilar, who thought it intolerable that an intruder should gratifie his private inclinations to the shortning of our necessary provisions, already infufficient; as we did not take much pains to conceal this refentment, he had determined to part with her, though with much regret, and accordingly left her when we croffed the branch, giving her a farewell fhout; we heard this with much joy, and I believe it was as well for the parties.

8th, We continued our journey without meeting any thing worth remarking, the ground we had passed rode over in our way out, and had lodged at the very creek we spent this night at.

oth. We travelled to a fine creek big enough to drive two mills, we floped for this night at the foot of a great hill, cloathed with large Magnolia, 2 feet diameter and 100 feet high; perfectly straight, shagbark-hickery, chemut and chesnut oak. This is like a bridge between the N.E. and N.W. branches of Susquebanab: here is also a spring from whence the water runs to both branches.

K 2

10th August, We set out, the sun halfan ourhigh, travelled along a rich hill fide, where we observ'd a pretty many rocks, then down to a Licking-place by 8, where our intruder who was a good way before us shot at an Elk, and having wounded him, purfued him feveral hours. We waited his return till 2 o'clock, Lewis Evans took an observation here, and found the lat. 41. a half. Set out again at 3, and travelled over fine rich ground by a creek where we lodged. I took a fancy to afcend 2 thirds of the height of a neighbouring hill, in the way ${f I}$ came to abundance of loofe ftones, and very craggy rocks, which feemed to threaten impending ruin, the foil was black and very rich, full of great wild stinging nettles, as far as I went I rolled down several loose stomake a path for my more expeditious return. I found the Indians much disturbed at, for they said it would infallibly produce rain the pext day, I told them I had fufficient experience, it fignified nothing, for it was my common practice to roll down flones from the top of every steep hill, and could not recolled that it ever rained the next day, and that I was almost sure to morrow would be a very fair day.

over very good bottoms of Linden, Poplar and Elm, we killed a rattle linake, and ioon after found a patch of Chamerodudendron, at 8 we came to a creek winding from between the mountains

mountains on the left, then along a level to another from the right, which we croffed to our former cabin. Quickly after we reached a bad hill, where I first found the Ginseng in th's journey, the foil was black and light, with flat stones facing the east, there we passed by o, then over a bottom of laurel and pine to a creek we had feveral times croffed, when obftructed as frequently we were by hills, keep ing close to the water on the fide we were riding. At 10 we left this creek for the fake o a shorter way than we came, for this purpose we kept a S. course to the top of a high but very poor hill, which we reached about a gr. after eleven, and had a prospect still to a gap we were to pass to the river; the northside of this hill was cloathed with tall spruce, while pine and beech, the top with chefnut, scrubby oak, and huckle berries, the S. fide with fhrub, honeyfuckles &c. Our way was now over a poor pebble stoney vale of laurel, spruce firr, pine, chesnut, and huckle berries, to a Run of water; where we dined on parched meal mixed with water. We left that place at half an hour after one, and foon found ourselves much diffressed by the broad flat stones on the fide of the hill, our way lay over. Our horses. could hardly stand, but even slipt on their sides on our left a rivulet rushed from a precipice, and the mountains were so steep and close to its fides, that we were oblidged to climb to the

top of that on the west; here we suffered our horses to rest while we gathered huckle berries to eat, we travelled on the top a good way all flony to the point, which was very narrow, and the flat flones on each fide turned up like the ridge of a house, this reminded me of Dr. Burnets Theory, and his ingenious Hypothesis, to account for the formation of mountains. The descent was moderate, the land middling, oak, chefnut and huckle-berries; we found a Run here and reposed ourselves for this night, having supped on venison, shot by our Indians who left us on the hill that evening. It was fair and pleafant, and the great green grais-hopper began to fing (Catedidist) these were the first I obferved this year. Before day break it began to rain, it lasted about an hour and then ceas-The Indians infifted that was caused by the stones I rolled down 2 days ago, I told the Antecoque Indians if their observations had any truth it should have been the day before, which was remarkably fair. To this he cuningly replyed, that our Almanacks often prognosticated on a day, and yet the rain did not come within two days.

nath, This day, the land produced middling oak, pitch, pine, and huckleberries, fometimes pubbles and a shallow soil. We dined on venison (partly our own, and partly given us by the *Indians*) at a deserted town about 7 miles off: this is called the *French* town, from a *French* woman

woman who married a Delawar Indian, and conformed to their manners; she left several children behind her, who were now come to look after their horses and break the young ones. It rained very fast for an hour, and in the midst of it about half a score of the 5 Nations, who had been on the back of S. Carolina to fight the Catawba's, passed very fast through the town with one poor female prisoner, they shouted couragiously, but we learnt no particulars of this great enterprize: about 2 it cleared up, we croffed the creek and travelled about 10 miles, most of the way good rich land, extensive bottoms and high grais: I faw one lovely white Lychnus 5 feet high. Near night it began to rain, and we made a bark cabin, which kept us pretty dry, the rain continued all night with thunder.

13th, It cleared up early in the morning. We moved forward to our first cabin, where we dined on parched meal, which is some of the best Indians travelling provision. We had of it 2 bags, each a gallon, from the Indians at Onondago, the preparation of it is thus. They take the corn and parch it in hot ashes, till it becomes brown, then clean it, pound it in a mortar and sift it; this powder is mixt with sugar. About 1 qr. of a pint, distured in a pint of water, is a hearty traveling dinner, when 100 miles from any inhabitants: about 2 hours after seting out we came near the river. Here

5 of us rode over a great rattle snake unseen and unhurt. I perceived him just as my mare was over him; a little surther we saw another just by us. We travelled till near sun set, when 2 of our *Indians* were taken with a bad sit of an ague, this obliged us to encamp by the river, where our horses had excellent food. At about 20 rods from it I saw a bank much higher up; being near 30 seet perpendicular above the surface of the water, raised gradually to this height by the frequent sloods, which this western branch is much subject too. Thus by sand continually heaped upon the firm sand, it is become a strong sand bank.

14th, We passed through an old town, where we found plumbs, peaches, and noble clusters of large grapes growing, very deep in fand, left about them by the flood I mentioned just now; a little farther the land was rich and low, covered with high weeds and grass, with locust, linden, walnut and elm, the higher land with elm and oak. At 11 o'clock we reached Shamokin, here we boiled dumplins and had plenty of water melons; we stayed all night.

15th, Next day by noon we came to Mohomor, where we flayed dinner, in the afternoon we tode over some flony poor land, then piney, white oak, and some middling land.

16th, This morning I was entertained with the Mulical howling of a wolf, which I had not heard for many years, but my companions were too fast asleep to hear it, we set out early and by one had croffed the 3 ridges of the blue mountains, and the 2 fpruce vales, were the branches of Swatara ran, and dined in St. Anthonys Wilderness, as Count Zinzendorf has named it. We mounted again at 2 and climbed up the S. ridge, and at the top let our horfes rest, for they were cover'd with sweat. the mean time we look'd for water, but found none, in this fearch we found an *Indian Squaw* drying huckle berries. This is done by fetting 4 forked sticks, in the ground, about 3 or 4 feet high, then others a-cross, over them the stalks of our common Jacea or Saratula, on these lie the berries, as malt is spread on the hair cloth over the kiln. Underneath fhe had kindled a fmoke fire, which one of her children was tending. The quantity of their huckle berries growing on and between these ridges, is prodigious, the top of the S. ridge is pretty good land, and affords a fine prospect of the great and fertile vale of Tulpihocken, the ridge itself is pleasant. When we had rested ourselves and our poor tired horses, we lead them most of the way for 20 miles, this gave us an opportunity of gathering what quantity we pleafed of their berries, tho' we cat rather more than I thought we might fafely venture on, yet we found no ill confequence from our excess. When we were descended we had but \mathbf{L} 2 miles

2 miles to a house, where we lodged, it rained fast in the evening and great part of the night And we heartily congratulated ourfelves on the enjoyment of good bread, butter and milk, in a comfortable house, and clean straw to sleep on, free from fleas.

17th, Though my mare was to lame, she had not stirred 20 yards all night, yet we got this day by noon to Mr Conrad Weisars; but under the difficulty of carrying my baggage good part of the way on my back, besides being fcarcely able to get her along: when she came into the pasture, she stretched herself at full length and rose no more for 24 hours. afternoon I spent my time on Mr Weisar's high hill, gathering of feeds: here the great vale and blue mountains form a lovely prospect.

18th, I borrowed a horse of Mr Weisar,

and fet up all night at Monatawony.

19th, Before fundet, I had the pleasure of feeing my own house and family: I found them in good health, and with a fincere mind, I returned thanks to the almighty power, that had preferred us all.

In this journey into the heart of a country, still in the possession of it's original inha-I could not help fometimes to bitants: divert the length of the way by reflecting their manners, their complection different from ours, and their Traditions: this led me to conjecture at their origin, or whence whence they came into America, and at what time. Perhaps it may be equally hard to difprove or to prove that they were originally placed here by the fame creator who made the world, as foon as this part of it became habitable, for it is reasonable to suppose the almighty power provided for the peopling of this, as well as of the other fide of the globe, by a fuitable flock of the human

fpecies.

However if we are to account for their paffing from what is called the old world, there are many relations of voyages hither from the North of Europe, previous to that of Columbus, which though dark and uncertain, are neither evidently fabulous, nor even improbable from either the length or difficulties of the way. That the Norwegians, the posfesfors of Iceland, for many ages past had colonies in Greenland, is a fact too well attested to admit a doubt, from Greenland the short passage cross Daon's Streights brings us into the continent of America. If these colonies be put out of the question, it is scarce possible to think, that of the numerous sleets with which the Danes and Norwegians terrified continually the rest of Europe, none tempted by the hopes of gain, or drove by stress of weather, should ever fall in with the coasts of Newfoundland or Gulph of St. Lawrence. If it be objected that the navigators of those times

times were too unskilfull to attempt fuch a discovery, does it not furnish us with a reason to account for its being made by chance. this passage was ever publickly known, which is more probable it was not, might not the knowledge of it be lost as that to Greenland, and can we be fure that the Greenland of the Norwegians was not more to the fouthward of that country now fo called. I am not ignorant that these traditions of the Norwegian colonies, as well as many others to the same point, particularly that of prince Madoc has been treated as meer fiction; but let us not forget that *Herodotus's* account of the doubling the Cape of Good Hope has been treated fo likewise too, tho' the fact be now established to the degree of moral certainty.

Again, it is not unlikely but there may be land most of the way from America to Japan, at least-islands, separated only by narrow channels, and in sight, or nearly so, of one another. I have been lately informed of an Indian woman, well known by a person in Canada, and after an interval of many years met again by the same person in Chinese Tartary; he could not be convinced she was the same, till by discourse he had with her, she told him, that being made captive by a neighbouring nation, she had during many years been transferred by captivity, sale, or gift, from one nation to another till she was brought where

[77]

he found her. If this be true it must be Continent most of the way.

Another manner of peopling this fide of the earth, particularly S. America, might be by fome vessels of the Egyptians, Phanicians, or Carthaginians being blown off the coast of Guinea to that of Brazil, or the Antilles in their course, to or from the cape of Good-Hope; in which case, for want of those Arts and Sciences which are not to be found in America, before it's plantation by the whites, and which are seldom to be met with in a ships crew, they must take to that way of life our Indians now sollow. This conjecture is the more probable, as even in the state of persection, the art of navigation is now arrived at, this accident is often unavoidable.

But whatever was their origin, our fix nations may be now thus characterifed: they are a fubtile, prudent, and judicious people in their councils, indefatigable, crafty, and revengeful in their wars, the men lazy and indolent at home, the women continual flaves, modest, very loving, and obedient to their husbands. As to the natural disposition of these Nations, they are grave, solid, and still in their recreations, as well as in their councils. The Delawar's and Susquebanab's, on the contrary, are very noify in their recreations, and loud in discourse; but all when in liquor, whether men or women, take the liberty of shouting

shouting, finging, and dancing at an extravagant rate, till the operations of the liquor

cease; or being wearied they fall asleep.

The fix nations enjoy the character of being the most warlike people in N. America, this they have acquired by the uninterrupted state of war, they have continued in probably near 200 years, and which has been attended with such success, that has made them the dread of people above 1000 miles distant. It cannot however be supposed, but they have frequently met with several checks, especially since the French affisted all their enemies open-

ly near these 100 years past.

Their wars were formerly earried on with much more cruelty then of late, their prisoners who had the misfortune to fall into their hands, being generally tortured to death, now their numbers being very much diminished by constant wars, with both distant and neighbouring nations, and perhaps a good deal partly by the spirituous liquors, and diseases the Europeans have brought among them. very politically strive to strengthen themselves not only by alliances with their neighbours, but the prisoners they take; they are almost always accepted by the relations of a warrior flain in his place, and thus a boy of 15, is sometimes called father by men of 30. naturalizes them of course, and unites them into the tribe the deceased belonged to. This cuffom custom is as antient as our knowledge of them, but when their number of warriours was more than twice as many as now, the relations would more frequently refuse to adopt the prisoner, but rather chuse to gratify their thirst of

revenge.

Their religious notions are very confused and much mixed with superstition. Yet they seem not only to acknowledge a deity, but even to worship him in unity and spirit. What benefits they receive, they ascribe to a divine power. They have strange notions of spirits, conjuration, and witchcraft: these are agreeable to their blindness, and want of proper education among them, for I have always observed, that the belief of supernatural powers in a meer man, generally prevails in proportion to a Person's ignorance.

A Letter from Mr. Kalm, a Gentleman of Sweden, now on his Travels in America, to his Friend in Philadelphia; containing a particular Account of the GREAT FALL of Niagara.

S I R, Albany, Sep. 2, 1750.

A Fter a pretty long journey made in a short time, I am come back to this town. You may remember, that when I took my leave of you, I told you, I would this summer, if time permitted, take a view of Niagara Fall, esteemed

refleemed one of the greatest curiosities in the World. When I came last year from Quebec, you enquir'd of me several particulars concerning this sall; and I told you what I heard of it in Canada, from several French gentlemen who had been there: but this was still all hearsay; I could not assure you of the truth of it, because I had not then seen it myself, and so it could not satisfy my own, much less your curiosity. Now, since I have been on the spot, it is in my power to give you a more persect and satisfactory description of it.

After a fatiguing travel, first on horseback thro' the country of the Six Indian Nations, to Ofwego, and from thence in a Canoe upon lake Ontario, I came on the 12th of August in the evening to Niagara fort. The French there seemed much perplexed at my first coming, imagining I was an English officer, who under pretext of feeing Niagara Falls, came with some other view; but as soon as I shew'd them my passports, they chang'd their behaviour, and received me with the greatest civility. Niagara Fall is fix French leagues from Niagara Fort. you first go three leagues by water up Niagara river, and then three leagues over the carrying place. As it was late when I arriv'd at the Fort, I could not the same day go to the Fall, but I prepar'd myself to do it the next morning. The commandant

of the Fort, Monfr. Beaujon, invited all the officers and gentlemen there to supper with I had read formerly almost all the authors that have wrote any thing about this Fall; and the last year in Canada, had made fo many enquiries about it, that I thought I had a pretty good Idea of it; and now at supper, requested the gentlemen to tell me all they knew and thought worth notice relating to it, which they accordingly did. I observed that in many things they all agreed, in some things they were of different opinions, of all which I took particular notice. When they had told me all they knew, I made feveral queries to them concerning what I had read and heard of it. whether fuch and fuch a thing was true or not? and had their answers on every circumstance. But as I have found by experience in my other travels, that very few observe nature's works with accuracy, or report the truth precisely, I cannot now be entirely satisfied without feeing with my own eyes whenever 'tis in my power, Accordingly the next morning, being the 13th of August, at break of day, I fet out for the Fall. The commandant had given orders to two of the Officers of the Fort to go with me and fhew me every thing, and also fent by them an order to Monfr. Jonqueire, who had liv'd ten years by the carrying-place, and M knew

knew every thing worth notice of the Fall, better than any other person, to go with me, and shew and tell me whatever he knew. A little before we came to the carrying-place, the water of Niagara River grew fo rapid, that four men in a light birch canoe, had much difficulty to get up thither. Canoes can go half a league above the beginning of the carrying-place, tho' they must work against a water extremely rapid; but higher up it is quite impossible, the whole course of the water for two leagues and a half up to the great Fall, being a feries of smaller Falls, one under another, in which the greatest canoe or Battoe would in a moment be turn'd upfide down. We went ashore therefore, and walk'd over the carrying-place, having besides the high and steep side of the river, two great hills to ascend one above the other. Here on the carrying-place I faw above 200 Indians, most of them belonging to the Six Nations, busy in carrying packs of furs, chiefly of deer and bear, over the carrying-place. You would be furpriz'd to fee what abundance of thefe things are brought every day over this place. An Indian gets 20 pence for ever pack he carries over, the distance being three leagues. Half an hour past 10 in the morning we came to the great Fall, which I found as follows. to the river (or rather strait,)runs here from S. S. E. to N. N. W and the rocks of the great Fall

Fall crosses it, not in a right line; but forming almost the figure of a semicircle or horse Above the Fall, in the middle of the river is an island, lying also S. S. E. and N. N. W. or parallel with the fides of the river; its length is about 7 or 8 french arpents (an arpent being 180 feet.) the lower end of this Island is just at the perpendicular edge of the Fall. On both fides of this island runs all the water that comes from the lakes of Canada. Lake Superior, lake Mischigan, lake Huron, and lake Erie, which you know are rather small seas than lakes, and have besides a great many large rivers that empty their water in them, of which the greatest part comes down this *Niagara* Fall. Before the water comes to this island, it runs but slowly, compar'd with its motion when it approaches the island, where it grows the most rapid water in the World, runing with a furprizing fwiftness before it comes to the Fall; it is quite white, and in many places is thrown high up into the air! The greatest and strongest battoes would here in a moment be turn'd over and over. The water that goes down on the west side of the island, is more rapid, in greater abundance, whiter, and feems almost to outdo an arrow in swiftness. When you are at the Fall, and look up the river, you may fee, that the river above the Fall is every where exceeding steep, almost as the side of a M 2 hill

hill. When all this water comes to the very Fall, there it throws itself down perpendicular! It is beyond all belief the furprize when you fee this! I cannot with words express how am azing it is! You cannot see it without being quite terrified; to behold fo vast a quantity of water falling headlong from a furprifing height! I doubt not but you have a defire to learn the exact height of this great Fall. Father Hennepin, supposes it 600 Feet perpendicular; but he has gained little credit in Canada; the name of honour they give him there, is un grand Menteur, or The great Liar; he writes of what he saw in places where he never was. 'tis true he faw this Fall: but as it is the way of fome travellers to magnify every thing, fo has he done with regard to the fall of Nia-This humour of travellers, has occafioned me many difappointments in my travels, having feldom been so happy as to find the wonderful things that had been related by For my part, who am not fond of the Marvellous, I like to fee things just as they are, and to to relate them. Since Father Hennepin's time, this Fall by all the accounts that have been given of it, has grown less and less; and those who have measur'd it with mathematical instruments find the perpendicular fall of the water to be exactly 137 feet. Monfr. Morandrier, the king's engineer in Canada,

Canada, affured me, and gave it me also under his hand, that 137 Feet was precifely the height of it; and all the French Gentlemen that were present with me at the Fall, did agree with him, without the least contradiction: it is true, those who have try'd to measure it with a line, find it fometimes 140, fometimes 150 feet, and sometimes more; but the reason is, it cannot that way be measured with any certainty, the water carrying away the Line.—When the water is come down to the bottom of the rock of the Fall, it jumps back to a very great heighth in the air; in other places it is white as milk or fnow; and all in motion like a boiling chaldron.—You may remember, to what a great diffance Henepin fays the noise of this great Fall may be heard. All the gentlemen who were with me, agreed, that the farthest one can hear it, is 15 leagues, and that very feldom. When the air is quite calm, you can hear it to Niagara Fort; but feldom at other times, because when the wind blows, the waves of Lake Ontario make too much noise there against the Shore.—They inform'd me, that when they hear at the Fort the noise of the Fall, louder than ordinary, they are fure a North East Wind will follow, which never fails: this feems wonderful, as the Fall is South West from the Fort: and one would imagine it to be rather a fign of a contrary wind. Sometimes,

times, 'tis faid, the Fall makes a much greater noise than at other times; and this is look'd upon as a certain mark of approaching bad weather, or rain; the *Indians* here hold it always for a fure fign. When I was there, it did not make an extraordinary great noise: just by the Fall, we could eafily hear what each other faid, without fpeaking much louder than common when converfing in other places. not know how others have found fo great a noise here, perhaps it was at certain times, as abovementioned. From the Place where the water falls, there rife abundance of vapours, like the greatest and thickest smoak, sometimes more, fometimes less: these vapours rife high in the air when it is calm, but are dispers'd by the wind when it blows hard. If you go nigh to this vapour or fog, or if the wind blows it on you, it is so penetrating, that in a few minutes you will be as wet as if you had been under water. I got two young Frenchmen to go down, to bring me from the fide of the Fall at the bottom, some of each of the feveral kinds of herbs, stones and shells they should find there; they returned in a few minutes, and I really thought they had fallen into the water: they were obliged to strip themselves quite naked, and hang their clothes in the fun to dry. When you are on the other East side of the Lake Ontario, a great many leagues from the Fall,

you may, every clear and calm morning fee the vapours of the Fall rifing in the air; you would think all the woods thereabouts were fet on fire by the *Indians*, fo great is the apparent smoak. In the same manner you may see it on the West side of the lake *Erie*, a great many leagues of.

Several of the *Irench* gentlemen told me. that when birds come flying into this fog or fmoak of the fall, they fall down and perish in the Water; either because their wings are become wet, or that the noise of the fall astonishes them, and they know not were to go in the Dark: but others were of opinion, that feldom or never any bird perishes there in that manner; because, as they all agreed, among the abundance of birds found dead below the fall, there are no other forts then fuch as live and fivim frequently in the water; as fwans, geefe, ducks, water-hens, teal, and the like. And very often great flocks of them are feen going to destruction in this manner: they swim in the river above the fall, and so are carried down lower and lower by the water, and as water-fowl commonly take great delight in being carry'd with the ftream, so here they indulge themselves in enjoying this pleasure so long, till the swiftness of the water becomes so great, that 'tis no longer possible for them to rife, but they are driven down the precipice, and perish. They are observ'd when they draw

draw nigh the fall, to endeavour with all their might, to take wing and leave the water, but they cannot. In the months of September and October, such abundant quantities of dead waterfowl are found every morning below the Fall, on the shore, that the garrison of the fort for a long time live chiefly upon them; befides the fowl, they find also several forts of dead fish, also deer, bears, and other animals which have tried to cross the water above the fall; the larger animals are generally found broken to pieces. Just below the fall the water is not rapid, but goes all in circles and whirls like a boiling pot; which however doth not hinder the *Indians* going upon it in small canoes a fishing; but a little lower begins the smaller fall. When you are above the fall, and look down, your head begins to turn: the French who have been here 100 times, will feldom venture to look down, without at the fame time keeping fast hold of some tree with one hand.

It was formerly thought impossible for any body living to come at the Island that is in the middle of the fall: but an accident that happen'd 12 years ago, or thereabouts, made it appear otherwise. The history is this. Two Indians of the Six Nations went out from Ningara fort, to hunt upon an island that is in the middle of the river, or strait, above the great fall, on which there used to be abundance of deer. They took some French brandy with them

them, from the fort, which they tasted several times as they were going over the carrying place; and when they were in the canoe, they took now and then a dram, and fo went along up the firait towards the Island where they propos'd to hunt, but growing fleepy, they laid themselves down in the canoe, which getting loofe drove back with the stream, farther and farther down till it came nigh that island that is in the middle of the fall. one of them, awakened by the noise of the fall. cries out to the other, that they were gone! yet they try'd if possible to savelife. This island was nighest, and with much working they got on shore there. At first they were glad; but when they had confider'd every thing, they thought themselves hardly in a better state than if they had gone down the fall, fince they had now no other choice, than ei her to throw themselves down the same, or to perish with But hard necessity put them on in-At the lower end of the island the vention. rock is perpendicular, and no water is running This island has plenty of wood, they went to work directly and made a ladder or fhrouds of the bark of lindentree, (which is very tough and ftrong,) fo long 'till they could with it reach the water below; one end of this bark ladder they tied fast to a great tree that grew at the fide of the rock ahove the fall, and let the other end down P

So they went down along to the water. their new-invented stairs, and when they came to the bottom in the middle of the fall. they rested a little; and as the water next below the fall is not rapid, as beforementioned, they threw themselves out into it, thinking to fwim on shore. I have said before, that one part of the fall is on one fide of the island, the other on the other fide. Hence it is, that the waters of the two cataracts running against each other, turn back egainst the rock that is just under the island. Therefore, hardly had the Indians began to fwim, before the waves of the eddy threw them with violence against the rock from whence they came. They tried it feveral times, but at last grew weary; and being often thrown against the rock they were much bruis'd, and the skin of their bodies torn in many places. So they were oblig'd to climb up their stairs again to the island, not knowing what to do. After fome time they perceived Indians on the shore, to whom they cried out. These saw and pity'd them, but gave them little hopes of help: yet they made hafte down to the fort, and told the commander where two of their brethren were. perfuaded them to try all possible means of relieving the two poor Indians; and it was done in this manner. The water that runs on the east fide of this island is shallow, especially

a little above the island towards the eastern The commandant caused poles to be made and pointed with iron: two Indians determined to walk to this island by the help of these poles, to fave the other poor creatures, or perish themselves. They took leave of all their friends as if they were going to death. Each had two fuch poles in his hands, to fet against the bottom of the stream, to keep them fleady. So they went and got to the island, and having given poles to the two poor Indians there, they all returned fafely to the main. Those two Indians who in the above mentioned manner were first brought to this island, are yet alive. They were nine days on the island, and almost starved to death.* —Now fince the way to this island has been found, the Indians go there often to kill deer, which having tried to cross the river above the fall, were driven upon the island by the ftream: but if the King of France would give me all Canada, I would not venture to go to this island; and were you to see it, Sir, I am fure you would have the same sentiment. On the west side of this island are some small islands or rocks of no consequence. The east

fide

^{*} These Indians had better fortune than 10 or 12 Utowawa's who attempting to escape here the pursuit of their Enemics of the Six Nations, were carried down the Cataract, by the violence of the stream and every one perished.—No part even of their Canoe being ever seen again.

fide of the river is nearly perpendicular, the west side more sloping. In former times a part of the rock at the Fall which is on the west side of the island, hung over in such a manner, that the water which fell perpendicularly from it, left a vacancy below, to that people could go under between the rock and the water; but the prominent part some years fince broke off and fell down; fo that there is now no possibility of going between the falling water and the rock, as the water now runs close to it all the way down. - The breadth of the Fall, as it runs into a semicircle. is reckon'd to be about 6 Arpents. The island is in the middle of the Fall, and from it to each fide is almost the same breadth: the breadth of the island at its lower end is two thirds of an Arpent, or thereabouts.—Below the Fall in the holes of the rocks, are great plenty of Eels, which the Indians and French catch with their hands without other means; I sent down two Indian boys, who directly came up with about twenty fine ones.-Every day, when the Sun shines, you see here from 10 o'clock in the morning to 2 in the afternoon, below the Fall, and under you, when you stand at the side over the Fall, a glorious rainbow and fometimes two rainbows. one within the other.

[93]

I was fo happy to be at the Fall on a fine clear day, and it was with great delight I view'd this rainbow, which had almost all the colours you fee in a rainbow in the air. The more vapours, the brighter and clearer is the rainbow. I faw it on the East fide of the Fall in the bottom under the place where I flood, but above the water. wind carries the vapours from that place, the rainbow is gone, but appears again as foon as new vapours come. From the Fall to the landing above the Fall, where the canoes from Lake Erie put on shore, (or from the Fall to the upper end of the carrying-place) is half a mile. Lower the canoes dare not come, left they should be obliged to try the fate of the two *Indians*, and perhaps with less success.— They have often found below the Fall pieces of human bodies, perhaps of drunken Indians. that have unhappily came down the Fall. was told at Ofwego, that in October, or thereabouts, fuch plenty of feathers are to be found here below the Fall, that a man in a days time can gather enough of them for feveral beds, which feathers they faid came off the birds kill'd at the Fall. I ask'd the French, if this was true? They told me they had never feen any fuch thing; but that if the feathers were pick'd off the dead birds, there might be fuch a quantity. The French told me, they had often thrown whole great trees into

the water above, to fee them tumble down the Fall. They went down with furprifing fwiftness, but could never be seen afterwards; whence it was thought there was a bottomless deep or abysis just under the Fall. I am alfo of Opinion, that there must be a vast deep here; yet I think if they had watched very well, they might have found the trees at some distance below the Fall. The rock of the

Fall confifts of a grey limestone.

Here you have, Sir, a short but exact description of this famous Niagara cataract: you may depend on the truth of what I write. must excuse me if you find in my account. no extravagant wonders. I cannot make nature otherwise than I find it. I had rather it fhould be faid of me in time to come, that I related things as they were, and that all is found to agree with my Description; than to be esteem'd a false Relater. I have seen fome other things in this my journey, an account of which I know would gratify your curiofity; but time at prefent will not permit me to write more; and I hope shortly to ice you. lam, Gc.

PETER KALM.

FINIS.
