JOS. BOUCHETTE.

## PREFACE.

Antecedently to the year 17.59 , the dominion of North America was divided almost exclusively between the Kings of England and France ; the former possessing the immense Atlantic seaboard of the continent, the latter the territories along the borders of the gigantic "Fleuve du Canada," or River st. Lawrence. But the conquest, gallantly achieved by Wolfe on the memorable plains of Abr'am, near Quebec, left, subsequently to that event, but a slender footing to the French crown in America, whilst it at once extended the empire of Great Britain from the Atlantic Ocean to the shores of the Pacific, and rendered it almost co-extensive with the whole northern division of the New World. England continued in the undisputed possession of these her immense dominions, for a period of nearly sixteen years, when those revolutionary discontents broke out in the old colonies, which ended in the declaration of their independence, and their recognition as a free and independent state, by the treaty of Paris, 3rd of September, 1;83.

Whether the reduction of Canada accelerated the separation of the original British North American Plantations, by removing the check which the relative geographical position of the surrounding French possessions was calculated to produce upon the colonists, it is difficult to say; but it is, perhaps, less problematical whether England would this day have had to boast of her valuable transatlantic dominions, had not the victory of the British hero, who fell in the consummation of the conquest of Canada, preceded the birth of the Linted States of America, as one of the independent nations of the world. Certain it is, however, that the severe consequences of the loss of the British plantations were greatly mitigated by Wolfe's victory, and the accession of the French colonies to the British empire, to which, not only from their intrinsic worth, but because of the political power and the commercial advantages incidental to the possession of them, they have since become important appendages.

In the war waged by the colonies against the mother country, the people of Canada, although so recently become British subjects, resisted with fidelity every
attempt that was made to seduce them from their new allegiance, and with bravery repulsed every endeavour to subdue them. Such devotedness was highly appreciated; and England, at the termination of the revolutionary war, directed her attention towards giving increased consequence to her remaining possessions, with the design of drawing from them some of the supplies she had been accustomed to receive from the countries recently dismembered from the empire. It was some time, however, before the efforts of the mother country were attended with any degree of success, and a new order of things established, by which the languor that marked the growth of the colonies as French plantations, gradually gave place to a system of more vigour in the agricultural improvement of the country, and a more active development of its cominercial resources.

If the British dominions in North America be viewed merely in relation to their vast superficies, which exceeds $4,000,000$ of geographical square miles, their importance will become apparent; more especially when the manifold advantages of their geographical position are properly estimated. Glancing at the map, we see British sovereignty on the shores of the Atlantic, commanding the mouth of the most splendid river on the globe; and, sweeping across the whole continent of America, we find it again on the coasts of the Pacific Ocean, thus embracing an immense section of the New World in the northern hemisphere, reaching at some points as far south as $41^{\circ}$ of north latitude, and stretching northward, thence, to the polar regions. But the importance of these possessions should be estimated less by their territorial extent than by the resources they offer, their capabilities of improvement, the great increase of which their commerce is susceptible, and the extensive field they present for emigration.

The British North American provinces occupy but a comparatively small portion of the aggregate superficies of the whole of the British dominions in the western hemisphere; yet they cover about 500,000 geographical square miles, and contain a population which in round numbers amounts to nearly a million and a half of souls. Of the above superficies, the province of Lower Canada embraces almost one half, whilst its population absorbs nearly an equal proportion of the whole population of the North American Colonies. The inhabitants of Lower Canada are chiefly Catholics, the number of that persuasion being about 7-Sths of the totality. Of the remaining eighth, rather more than $\mathcal{Q}$-3rds belong to the Episcopal and Presbyterian Churches, and somewhat less than 1-3rd comprises all other denominations.

In point of local advantages, situation and fertility, Lower Canada is decidedly one of the most valuable and interesting sections of the British Colonial Empire; and although its climate is rigorous during part of the year, the clearness
and wholesomeness of the atmosphere, atones, on the one hand, for its severity, whilst the abundance of snow that falls in winter, contributes, on the other, to the vigour of vegetation in summer.

The general features of the country are bold and imposing. The St. Lawrence, in its greatest amplitude, flows majestically through the heart of the province, receiving, on both its banks, the ample waters of many a fine river, opening convenient natural avenues to the collateral parts of the country. Upon a rocky and commanding eminence, 400 miles from the Giulf and about 650 from the sea, stands Quebec, the capital of those colonies and the key of the country, with a seaport calculated to harbour first-rate line-of-battle ships; 180 miles further up the St. Lawrence is the Howishing city of Montreal; which yields to Quebee in the strength of position, only. It enjoys an excellent seaport, also, and, being the emporium of the American and Epper Camada trade with the province, is rapidly increasing in commercial opulence and population. The following statement of the recent imports and exports at Quebec, much of the latter of which had passed through Montreal, will convey some idea of the activity of commercial business at the principal seaport in the province.

Imports fior 1830 and 18:31.

To agriculture and commerce, by which the importance of the province may be estimated, emigration may be superadded as a consideration of no insignificant moment, when we reflect that nearly 50,000 emigrants from the United Kingdom were, in the course of this year (1831), landed on the wharfs at Quebec. Pre-
eminently, therefore, as is Lower Canada the immediate scene of this emigration, every information relative to it that could be conveyed to the people of this comtry, and especially the people of Ireland, may appear particularly desirable; and although the following work necessarily contains a variety of topographical details of no pressing utility to the emigrant, it will be found to embrace much information for his guidance, arising out of the experience of those who have preceded him in the formation of new settlements.

In consulting a work containing so many statistical details, the reader will, naturally, be desirous of knowing the sources whence the information it conveys may have been derived, and it is satisfactory for the author to be able to state, that those sources can be relied upon for their accuracy and respectability. The seigncurial tenure of the lands, which prevails in by far the greater portion of the inhabited parts of Lower Canada, and the ecclesiastical divisions of the province, offer, of themselves, the most valuable means of statistical information.-The seigneur is competent to give the boundaries, dimensions, and subdivisions of his estate; its soil, surface, and its general topography, which he usually has graphically exhibited in maps, to which the author has, in most cases, had free access. The curate, as well as the seigneur, is acquainted with many of these particulars, and is moreover competent to form a correct estimate of the produce of the parish over which he presides, the extent of the lands in cultivation, the nature and amount of the farming stock and population. Upon all these points, besides a variety of others, have the seigneurs and curates of the province been, severally and particularly, consulted, both by personal application from the author, and by circular queries, to which the most ready and ample replies were almost universally communicated.

The volume of exact information conveyed, in formal returns to the legislature, by the very intelligent class of the community to whom we have already referred,-the gentlemen of the Roman catholic clergy,-upon all matters connected with the circumstances and statistics of the vast number of Roman catholic parishes of the province, constituted also a further corroborative fund of facts of considerable importance.

The claborate investigation of the subject of crown lands by a committee of the House of Assembly, of which Andrew Stuart, Esq. was chairman, having elicited a variety of iuformation relative to the tenures, topography and statistics of the colony, has likewise furnished a portion of the materials upon which the author has had to work.

The information relative to the townships is derived from sources no less authentic and respectable. A considerable part of it, the author possessed in the
official records of his own office, through which all soccage grants have been made since the existence of the colony. Another part was collected from the official and non-official returns and statements of resident township agents, upon which the utmost reliance could be placed. A third resource was found in the principal landholders and leading inhabitants of the townships, who were regularly consulted, in a series of queries, upon the local, agricultural, statistical and religious state of their respective sections of country. In addition to these multifarious means of information, the public returns of the census of 1895 were carefully consulted, and to the whole mass of documents thus accumulated, were superadded the results of three official tours performed by the author in 1890,1891 and 1897 , in the course of which he visited the settled extremities of the province, and tratersed the old and the new settlements in almost every direction, noting with care, as he went along, the information with which he was furnished, on the spot, by the intelligent inhabitants whom he consulted, and sketching the country as he proceeded.

Out of these combined materials has grown the following Topographical Dictionary. There are many minute points connected with the topography of a country, of the utmost importance to those seeking for complete information as to its resources, for the arrangement of which, as well as for the facility of reference, the alphabetical form affords distinguished advantages; and this has induced the author to prefer the lexicographic plan, which he confidently presumes will be found to combine many and important advantages, from its comprising, under one view, all the particulars that call be required upon any one point. Thus every county, parish, seigniory or township is described under its particular head, with reference to its boundaries, extent, locality, soil, de.; its statistics are then tabularly detailed, together with the description and amount of its agricultural produce and live stock. After the description of each seigniory or fief is an extract of the original title thereof, taken from the archives of the province.

The lakes, rivers, roads and canals come also under their respective names, and are all described in topographical detail. Under the head "Province" will be found a general description of Lower Canada; and under that of St. Lawrence an ample and somewhat nautical account of that important river. The system of opening roads through the forest, and of commencing clearings for settlement in the wilderness, will be found explained under the heads of Hull, Rouds, Veit Settlements, and incidentally in various other parts of the work; and as this information is derived from the experience of practical settlers, it is the more valuable to the emigrant who may eventually take lands in Lower Canada.

In fact, nothing has been omitted which the author conceived might be of the slightest interest or importance, and which the researches of, and the accumu-
lation of documents for, now nearly thirty years, could enable him to embody in such a work. That it is altogether free from defects it would be presumptuous probably to hope, especially when it is considered that such a work is the first of the kind that has been undertaken, not only for Lower Canada, but for any other of the British colonies; yet the author may vouchsafe to say, that the general correctness of the information may be fully relied upon. In the method and systematic arrangement of the Dictionary, the author has pleasure in acknowledging the assistance he derived from Mr. Thomas G. Bucke; and he trusts that the frame of the work and the classification of the details will be found judicious.

The author, in fine, has studied utility far more than elegance; the earnest desire of conveying information and not a visionary prospect of literary fame, to which he cannot presume to aspire, has brought him again before the public, and he confidently hopes to receive that indulgence which, he thinks, he may claim, from the motive by which he has, avowedly, been actuated, in the publication of a Topographical Dictionary of Lower Canada.

London, October, 1831.

## A B E

Abagrabrastr, or "small water," rises in the rear of Trois Pistolles, $S$. It is a river, or rather a chain of lakes, formmes one of the head branches of the r. Toledo, which it enters a little below L. Orsale Wallagamuch.

Abawsherd-h, river, rises in a small le, connected ly a portage with L. Orsale Wallagamuch, one of the sources of the Toledo. It runs N. W., cutting off thes. angle of the $S$. of Trois Pistolles, and joins the r. of that name. By means of this R., which is narrow, rapid and obstructed ly falls, the Indians pass in canoes from the $\boldsymbol{r}$. Toledo to the St. Lawrence.

Abenafis, e. Indians.
Abercromby, township, in the co. of Terrebonne, is in the rear of the Augmentation of Mille Isles and joins Kilkenny N. e. When this township was originally surveyed it was considered barren and the lands unfit for cultivation; but more recently the reverse has proved to be the case, and both sides of the North River, which traverses this township in a $\mathrm{N} . \mathrm{w}$. direction, already present a tolerably large and improving settlement of Canadian farmers, who have been unadvisedly located by Mr. Dumont, proprictor of part of the seigniory of Mille Isles, and who, in conse-

A BE
quence of the great deficiency of superitial extent sustained by him in the augmentation of that scisniary, produced ly the interfernce of the anterior seignorial grant of the Lake of the Two Mombtains, has thought himself at liberty to execed his scignorial limits, and has acoordinarly conceded the lands on both sides of the North River to the lateral depth of nearly seven miles within the township of Abercromby. These coneessions extend, generally, three arpents in front on the river by 30 in depth, and pay an annual rent of tive limes and 3 bushels of wheat. The number of concessions is alout 120 and the population amounts to about 170 ; there are 40 heouses, one saw-mill, and a potashery belonging to Mr. Laviolette. The total annual priduce of this new settlenent may be said to be about 2 good bushels of wheat and other grain, besides :300 bushels of potatoes and dit) of Indian corn. There are in the settlement
 71 piss. Many of the settlers make excellent maple shgar, of which about 2000 lls s. are made annually. The lands in this $\mathbf{T}$. are generally uneven and broken, locing traversed by rocky ridges. The soil is light and in many parts stony and sandy; but there are some valuable tracts of ex-

## A CH

cellent land and meadows. This $\mathbf{T}$. is well watered by scveral rivers and creeks, and a few small lakes. A few militia locations were made here, but, as the lots were not laid down with sufficient precision in the hasty survey made in 1803 , the settlers could not enter into possession. - L'ngranted and unlocated 35,600 acres, exclusive of reservations-1st Sept., 1829.

Acadie, county, in the District of Montreal, bounded n. w. by the co. of Chateaugay, s. by the province line, e. by the r. Chambly or Richelieu, n. s. by the co. of Chambly, and s. w. by the $\mathrm{N} . \boldsymbol{e}$. line of the $\mathbf{r}$. of Hemmingford and part of the S . of Beatharnois, is 221 m . long and 20 broad, and comprehends the S S. of La Colle and $\mathrm{D}_{\mathrm{e}} \mathrm{L}$ (ery, the T . of Sherrington and the isles in the R. Chambly or Richelieu nearest to the county, and which are wholly or in part opposite, viz. Isle aux Nois, Hospital Id. and Ash Id. The centre of the co. is in lat. $45^{\circ} 9^{\prime} \mathrm{N}$. lon. 820 w . It contains $2 \cdot 12$ sq. miles, several parishes, one town, and three villages, and sends two members to the provincial parliament. The place of election at ite. Margucrite de Blairfindie. The principal rivers are, the Montreal, La Tortue, and La Colle. The chief town is Dorchester. About one-half of the population is Canadian, the other half American, English, Irish, and Scotch.

Achigan, river, takes its rise from Echo Lake, in the $\mathbf{T}$. of Abercromby, and from the Killarney lakes and many streams in the r. of Kilkenny. These numerous waters unite and form the Achigan, in the settlement of New Glasgow, in the Augmentation to Terrebonne. It crosses the S. of

## A N C

Lachenaye, enters the S . of l'Assomption, towards the middle of its depth, forming a considerable bend; and, after being increased by the Ruisseau des Anges, it waters the village of St. Roch, and in a very winding course leaves the $S$. for that of St. Sulpice, where it falls into l'Assomption about two miles above the village of that name. Although the Achigan may be called a large river, it is not navigable and is only used for mills and for bringing down the timber felled in the upper parts of the adjacent seigniories and townships.

Acton, a township in the co. of Drummond, is bounded e. by Roxton and Ely, w. by Upton, and N. N. e. by Grantham, Wickham, and Durham. About one half has been surveyed and granted, but no part is settled. The land is level, and, lying rather low, is overspread with several swamps covered with spruce, fir, white pine, cedar, \&c.; the drier tracts are timbered with ash, beech, maple, and birch. It is watered by two large branches of the r. Yamaska.-Ungranted and unlocated, 9372 acres, exclusive of reservations-1 st Sept., 1829.

Adstock is a projected township in the co. of Megantick; it adjoins Tring and Thetford and is not surveyed.

Ahpmoojeene-Gamgok (L.), $c$. Sit.John, R.
Argle, one of the principal isles at the eastern extremity of the Id. of Montreal. The soil is good, and chiefly in grazing land. There is a productive farm with a tolerably good house.

Alder (R.), ve r. des Aulnais.
Aldfield, a projected township in the rear of Onslow and in the co. of Ottawa.

Algonguin, $r$. Indians.
Amherst, a projected township in the rear of Ponsonby and in the co. of Ottawa.

Ance à Beaufils (F.), in the co. of Gaspé.
Ance a Catherine (Cove), v. Saguenay, r.
Ance à la Barque (Cove), $i$. Saguenay, r.
Ance à la Bataille (Cove).
Ance au Bateau(Cove), $u$. New Longueil, S.
Ance au Coq (Cove), v. Le Page, S.
ANce au Snelles (Cove), r. Mitis, S.
Ance de Berthifr (Cove), in Berthier, S., and co. of Bellechasse.

Ance de l'Etang, fief, in the co. of Gaspé, is chiefly above little Fox River, which traverses the E. extremity. The S. of Grand Vallée des Monts is on the w.

## A N T

Title.-" Concession du 20me Septembre, 1697, faite par Louis de Buadc, Gouverneur, et Jcan Bochut, Intendant, au Sieur Francois Inazen et Denis Riarin, de $l^{\prime}$ Ince de l'Etang, située au bas du fleuve st. Laurent, sis linues au dessous de la Valléé des monts de Cutre Dram', aver une demi lieue de front de claque coite de la dite Ance, sur une lieue de profondeur."--Rigitic dintculanct, Nio. $\overline{5}$, folio 18.

Ance des Morts (Cove), in the co. of Gispr.
Ance des Morts (love), in Mitis, $\stackrel{\text { S }}{ }$.
Ance Sablon (Cove), on the Labrador coast, at the E. extremity of the province, to which it was reunited, with other territory, by act of the imperial parliament in 1820.

Ance St. Jein (Cove), in

Ance snell (Cove), in the s. of cote de Beaupre.

Axidews brook, in the co. of Bonaventure, runs into N . bank of the Ristigouche near its mouth.

Ange Gardien (P.), r. Cote de Bratpre, S.
Ange Gardien (V.), cote de Braupre, S.
Anges, des, a rivulet. Ruisseau des Anges rises in Lachenaye, s.. and, running E., cuts the division line into l'Assomption, S ., where it enters the Achigan about one $m$. above the $r$. of ist. Roch.

Ann's Town, $v$. Beauharńois, S.
Antaya or Durvilhier, fief, is in the S. and P. of Berthier, and in the co. of Berthier. It fronts the St. Lawrence and is bounded w . by Dautre. It extends $1 \frac{1}{2}$ league along the river and one in depth; and, with the adjatent Isle au Fuin and the intermediate islets, was conceded, 29th Oct., 1672 , to the Sieurs de Comporté. The soil is good and generally well cultivated and settled. The surface is generally level.

Title.—"Conersion du 29 me Octobre, 1672, faite par Jean Talon, Intendant, au siener de cominirts, d'une demi lieue de terre de front, sur une liculde prothinder, a prendre sur le fleuve st. fanment, bornée dinn cort prat la concession du sieur Duatré, tirant sur le fleuve ct descemdant cession du shew Duatre, tirant sur les terres non-concedecs; avec l'Islc au Fuin et i-lut. vers les terres non-concedecs; avec lisle au Foin et i- lets
situés entre la terre ferme de son front et la dite Islc aun situes eatre la terre ferme de son front et la
Foin."-hrewistre Intimum, No, I, folio 20 .

Anthony (L.), v. Murray Bay.
Anticosit, island, in the Gulf of St. Lawrence. This island, on account of its extent, georraphical position and importance to mariners, is of considerable interest. It is now comprehended in the co. of Suguenay, being reannexed to the province of Lower Canada by an act of the imperial parliament passed in 1825. It previously formed a part of Labrador. This isle was conceded in March,

A $\mathrm{N} T$
1680, to the Sieur Jolliet. Its situation is in the widest part of the entrance into the sit. Lawrence, lying w. s. w. and e.s.e. Its lengtl is about le:; m ., and its extreme breadth about in, containing about $1, i 30,0100 \mathrm{sif}$. atres. Although it has neither bay nor harbour sufficient to protect ships from the dansers of the sea, having only many small crecks, it is not altogether unprovided with the means of succouring persons who may be shipwrecked or in want of an asylum against that perilous clement. The surface is in general low and the soil and timber of very inferior quality. On the . of the island the shore is occasionally more elevated, and three remarkable high lands or mountains breal the monotonous appearance of this large extent of flat land; one is opposite Little Jupiter river, another in the rear of s. $w$. Point, and the third, called Table Momotain, is near the $w$. extremity of the island. The rivers are of no importance. On account of its gengraphical position, this island is of great interest to all navigators who sail up the st. Lawrence from the Atlantic; therefore, the learings of its extreme points have been frequently determined, particularly by Major Hulland, Mr. Wright and, lately, by command of Admiral Nir Charles Ofle. by Mr. John Jones of his majesty's ship Hussar, who seems to have ascertained their precise situations with the rreatest accuracy; his authority, and particularly as it is the most recent, is here given :—W'est Point, lat. $49^{\prime \prime} 52^{\prime} 29^{\prime \prime}$ n., lon. $64^{\circ}$ $36^{\prime} 54^{\prime \prime} 9 \mathrm{w}$; variation, 22" 5\% w.; East Point, lat. $41^{\circ} 8^{\prime} 30^{\prime \prime}$ n., Ion. 6$]^{\circ} 44^{\prime} 50^{\prime \prime} 9 \mathrm{w}$.; variation,
 $64^{\prime \prime} 15^{\prime} 1^{\prime \prime} 4 \mathrm{w}$. ; South-west Point (by the author's former map), lat. $4!{ }^{\prime \prime} 23^{\prime}$ N., lon. $6: 3^{\prime} 44^{\prime} \mathrm{w}$. -By a recent act of the provincial assembly, two light-houses are to be crected on this island, one at the East Point and the other at the s. w. Point. As the navigation of this part of the gulf is considered by sailors in general as very dangerous, no apolugy is uecessary for the insertion of the following extract from "N:iling Directions," by $\mathrm{M}_{\mathrm{r}}$. Lambly, who, by order of government, placed the direction boards and mailed them to trees near the beach, the branches being first cut off.-_' Two lengues s a. from the west end of the island of Anticosti lies Cape I Ienry, the west side of Grand Bay; Caje Eagle forms the east side of this Bay, and they are N. $w$. and s. E. of each other, three miles distant. This bay lies N and s . and rums $2 \frac{1}{2} \mathrm{~m}$.
into the island, with good anchorage for small vessels in from 21 to 4 fathoms water. In running down from the west end of the island come no nearer than ten fathoms: the breakers will be seen on the shoal which lies from the beach $\frac{1}{4} \mathrm{~m}$.; and when you are down to Cape Henry, haul into six fathoms, towards a long flat spit of sand, which lies s. e. from this cape; it is very regular; five and six fathoms a good birth from it. Run along this spit and round the s. E end of it in four fathoms at low water, and come to anchor; you will then be $1 \frac{1}{2} \mathrm{~m}$. from the houses, which stand on the north side of the bay. This bay is about one mile across; at this anchorage small veseds may anchor farther in, with shelter from s. $w$, and even s.s. w. winds; but the outer anchorage is exposed from s.s. w. round to the s. E.-Mr. Delisle lives on shore here at the houses, and remains all the year, and government has put a quantity of pro. visions into his possession for the supply of unfortunate shipwrethed persons, which are issued in regular quantities to each man; the captain giving him receipts for the expenditure.- The Reef that is to the westward of the west end of the island does not lie farther off than two miles, and at that distance you cross it in ten fathoms, but it is very narrow, and only three casts of the leal can be got.- From Grand Bay to the s. w. point of the island the shore is all bold, and so steep there is no trusting to the lead. You may stand to the island within one mile, and you will see all the danger on the beach: there is not a reef or a rock to be seen $\frac{1}{4} \mathrm{~m}$. from the beach.-The great river which is just to the west ward of the s. w. point of the island is called Jupiter River; its proper name here is Sal River.-The shore from the s. w. point to the south point is all bold likewise, and no danger ; ships may safely stand to within one mile from it. There is no anchorage on any part of this side of the island except Grand Bay.-Two leagues to the westward of the south point of the island is Jupiter River (called Shallop Creek in the charts). Mr. Hamel lives here, and has in his possession the same quantity of provisions, and for the same purpose as Mr. Delisle, at the west end of the island, viz. 16 barrels of flour, 8 barrels of pork and 8 barrels of peas; and there is also another depot of provisions in the possession of Mr. Godin, who resides at Fox Bay. This place is five leagues $N \cdots$. from the cast end of the island. -Off the south point of the island lies a reef of

## A $\mathbf{R} \mathbf{G}$

rocks two miles. This is the only danger on the south side of the island. The east end of the island is flat two miles off, and lies from the south point e. s. e. distant seven leagues. There are no inhabitants on any part of the island, except those mentioned.-Jupiter River (or Shallop Creek) is very small, with just water in it to float a boatload of provisions at low water ; small vessels may anchor in a small cove just to the westward of the creck; and there is one anchorage on a spit of sand that runs from the east side of the river (with a N. s. wind) in four fathoms. One cable length off there is twenty fathoms and a little farther off fifty fathoms.-In the year 1808 direction boards were placed along the island to assist any unfortunate person to find the provision posts that are mentioned above: viz., one on the west end of the island, marked, 'Two Leagucs East to the Provision Post.'-Four leagues s. e. from Grand Bay anuther, marked, 'Four Leagues West to Provision Post.'-On the pitch of the s.w. point one, marked, ' 'Ten Leagues West to Provision Post.' -In a small cove, to the eastward of the s.w. point, another, marked, ' Ten Le:ugucs East to Provision Post.'-Half-way between this board and Shallop Creck stands another, marked, 'Six Leagues East to Provision Post.'-And near the cast end stands another, marked, 'Seven Leagues V.est to Provision Post.'- The island of Anticosti is thought to be very dangerous to ships coming to Quelece, but it is not so dangerous as is said. When sailors can see the island they may make free with it ; and, by doing so, they will always get faster to the westward with foul winds than in the offing; and by keeping within two or three leagues of it they will be clear of the strong s. E . current that always runs in the offing. There is no danger of being embayed, and the floods are pretty regular near the island. Tides at Anticosti flow on the full and change days 11 o'clock; rise 10 fcet in spring tides, and 4 feet in neap tides, and run tide and quarter."

Tith:-"Concerdé en Jiats lino, par Jacques Duchesman, Intendant, au -icur Jollict."—hésistre a'Intendance, No. 10 a 17 , folio (1).

Appenin, river, in the S of Lauzon, falls into the left bank of the Etchemin.

Arbreala Croix (F.), e. Champlain, S.
Argentevil, seigniory, in the co. of Two Mountains, is bounded, s., by the Grand or Ottawa river, n. by the Gore of the т. of Chatham,

## ARGENTEUIL.

E. by the S. of the Lake of Two Mountains, and w. by the T . of Chatham. This seigniory is two leagues in breadth and four in depth (hy Title), containing about $58,000 \mathrm{si}$. arpents. This property was granted, March 7,1725 , to Mons. d'Aillebout, and now belongs to Mitio. ( $\because$ Johnson. 520 farm lots, measuring about 19.000 arpents, are conceded and mostly built upon and cultivated; but the lots and settlements are neither separately regular nor uniform with cath other, either in size or position, the rivers and brooks having been made in general the front boundaries; in consequence of which many irregularly formed tracts intersect the settlements. $-2,000$ arpents are under cultivation, and 31,060 in wild woodland. The soil fronting the Ottawa is composed of clay, sand, and gravel, and much of it is calcareous: the central sections are clay, loam, and marl, intermixed with some high and stony land. The north side, though mountainous and rocky, contains many fertile intervals. The land, which abounds in stone, is generally very fertile when cleared and cultivated. The wood is much diversilied, varying according to locality ; the higher lands producing beech, birch, hemlock, and maple; the level and low lands yielding spruce, soft maple, ash, elm, cedar, \&e, on the mountainous and roky parts are hemlock, white spruce, \&c.; and neat the brooks is white pine, though not in great abundance. The roads and bridges are kept in good repair, and there is one established ferry, which is at the Carillon Rapids. The rates are, for a footpassenger $6 \boldsymbol{l} l$, for a saddle-horse 1 s . $8, \mathrm{l}$, and for a carriage $2 s$. The Ortawa, which flows castwardly, is navigable as far as the south-western angle of the seigniory, where the navigation becomes obstructed by the foot or termination of the rapid of the Long Sault, and where this river is to form a junction with the intended Grenville canal. The Nortir River runs ohliquely through the seigniory, and, though not lares, is of much advantage, as it affords many mill-sites. Its current is generally rapid, and only partially navigable. Besides these important rivers, there are many never-failing small streams and brooks running into and through the seigniory: they are called West River, River Ronge, Jawis Brook, Clark's Brook, Pine Brook, \&c., all extremely beneficial to the lands through which they llow. -The population exceeds $\mathbf{2 8 0 0}$ souls, chicfly episcopalians and presbyterians, who have their re-
spective churches; and a clergyman of each persuasion is attached to the parish of $\mathrm{S}_{\mathrm{t}}$. Andrews, which is at present the only parish in the seigniory, though another will be crected comprising the settlements of North River down to Pratel Rider or to Muddy Creck, which nearly traverses the seigniory. Under the auspices and direction of the Royal Institution six public sehools have been established and supplied with male teachers: many of the scholars are instructed gratuitously, and their arease number is about 180 . Besides these public schools, there are three private establishments under the dircetion and tuition of females. Parents and grardians in this seigniory scem, happily, to appreciate the gond that must eventaally result from carly instruction. There ate two excellent flour-mills, a paper-mill, a cardins and fulline mill, three sawmills, four potash-works, two distillerice, two bricklilns, six blackimiths' forges, and three tanneries. The numbr of trabemen and artisans is about las, viz.

The hamed eattle is gencrally of a grombl breed, and, though not of the larest size, is hardy and woll adapted to the cibate. The fammers are very attentive to its improvement, and consider the crass between the English and Canadian the most thivins ; and, as much of the stii is adapted for gowl pasturage a quantity of excellent beef is produced for the market. There is every reason to hope that a grad bred of harses will be ultimately obtained, for many English, American and Dutch horses have been introluced, which, crossed with the Canadian race, will produce a sturdy breed of drateght horses, fit for any elimate or service some attention is paid to sheep and swine, though neither can le comsidered of the best breed, nor are there many more reared than are rerguired for the use of the inhabitants.The annual consumption of grain in the $S$ is about three-fourths of the produce. IIay is ahmandant, the meadows yidding dim toms, 100 of which are sold to persons employed in the lumbertrade on the Ottawa. Hemp is raised in many parts of the seigniory, though mot extemsively, its cultivation being considered expensive.-Tl:e lower part of

## A R G

this seigniory, bordering on the Ottawa, is tolerably well cleared from wood, and contains large patches of fine meadow and pasture, ascending gradually from the river to woodlands of great extent, which yield timber of different kinds of first-rate size and goodness, and which have hitherto been very little thinned.-Scarcely a third part of the scigniory is divided into settlements, and the remainder presents many temptations to agricultural speculation. The concessions on the bank of the Ottawa are the most numerous and perhaps the best cultivated: others are on the Rivière Rouge, in a range between it and the North River, and along both banks of the latter, all exhibiting strong indications of a thriving industry. The island Carillon, 3 m . long by $\frac{3}{4} \mathrm{~m}$. broad, is very good land, but at present not used; which, with a smaller island near it and another at the entrance of North River, are appendages to the seigniory.-The village of St. Andren's occupies both banks of the North River, and, in point of beauty and situation, has the advantage of even St . Eustache. In 1824 it contained 28 or 30 houses, and 200 inhabitants, now increased to 55 houses and about 330 souls, composed of American and British born subjects. It also contains a grist and saw mill and an extensive paper-mill, belonging to Mr. Brown, opposite whose residence is a handsome bridge over the river. Perhaps, through all the upper part of the district of Montreal, no tract of equal extent will be found of greater fertility or possessing more capabilities of improvement ; and, if fertility of soil and easy access to water conveyance be duly appreciated, it will not be easy to select a tract more advantageous to settlers than the seigniory of Argenteuil.

Armagh, township, is in the rear of the Augmentation to La Durantaie and the S. of l'Epi nay. There are no settlements in this $\mathbf{T}$. The Rivière du Sud traverses the s.w. extremity. The soil is not very good; but there is meadowland between the hills and the rocky ridges that traverse it in a s.w. and N.e. direction.- Ungranted and unlocated, 41,000 acres, exclusive of reservations-lst Sept., 1829.

Arnold, river, rises in the high lands in the $T$. of Clinton and falls into the $s$. extremity of $L$. Megantick. It derives its name from the American general Arnold, who, in the year 1775, passed part of his troops down it when conducting his army through an almost unknown country to besiege Quebec.

Arthabaska, township, in the co. of Drummond, is a triangular piece of land, situated between Chester and Halifax on the s.e., Bulstrode, Stanfold, and Somerset n.w., and Warwick s.w., containing a much less extent than a full township. The land is much of the same nature as that in the townships of Halifax and Chester, but in some parts lower, and rather swampy. The timber is chiefly birch, beech, elm, and some pine, with much of inferior qualities upon the swamps. Several branches of the Nicolet and Becancour run through it. No part is settled.-Ungranted and unlocated, 15,600 acres, exclusive of reservationslst Sept., 1829.

Arundell. A projected township in the rear of Harrington t . in the co. of Two Mountains.

Ascott, a township in the co. of Sherbrooke, advantageously situated at the forks of the river St. Francis, bounded n. by Stoke, s. by Hatley and Compton, E. by Eaton, and w. by part of the

## A S C

branch of the St. Francis that connects with Lake Memphremagog.-In every point of view this is a desirable tract: the land is of exceedingly good quality and so well varied as to answer all the purposes of the farmer; the timber is beech, maple, pine, basswood and oak; it is watered ly some rivers of considerable magnitude, branching off into the adjacent townships of Compton, Clifton and Eaton, which in their course through this S. turn several grist and saw mills. Settlements on a very large seale have been made and several farms, by the sides of the rivers, have attained a degree of flourishing superiority, that shows their improvement to have been very rapid, at no part of the land was granted prior to the year 1803. The majority of the settlers here, as well as in most of the neighbouring townships, are Americans. who, since their domiciliation, have taken the oaths of allegiance to the British guvernment. These people, generally very industrious and persevering, are unquestionably much better managers of their farms than the Canadians, particularly when they take the land in a state of nature. By the system they pursue, a tract of ground, from its first clearing, becomes fruitful and turns to account in a much shorter period than if under the hands of provincial farmers, who would follow the methods of their forcfathers: for the American is an experimentalist and varics his operations according to the nature and quality of the materials he has to work upon. Thic population is 1000 . Several factories and saw and grist mills have already, in some degree, laid the foundation of commercial speculations that bid fair to obtain a considerable increase. In the encouragement of these, the navigations by the St . Francis into the St. Lawrence and through Lake Memphremagog and the rivers branching from it into the United Stites, the main road by the is. Francis towards Three Rivers and Queture, and several other roads leading into the different townships, will luy greatly instrumental. At the forks of the St. Francis and at the foot of the great fall are Hyatt's mills, in a most convenient situation. This valuable property bolongs to Mr. Gilbert Hyatt to whom, with several associates, the township was originally granted, and who is at present the greatest land-holder.-A rich mine of iron ore, much impregnated with sulphur, has been discovered on a farm near Sherbrooke, and a mineral spring near the

## A SH

centre of the $\mathbf{T}$.-The cultivation of hemp has been found productive, and the distillation of whisky from potathes is a source of much profit.-Neat cattle and live stock in general ire in a flourishing state of improvement.-The village of Sherbrooke occupics an clevated situation on both banks of the river Matog, at the Forks of the st. Francis. It contains about 75 housis, and its settlements are connected ly a tolerably good liddere, near which are Mr. Goodhue's mills. The churches and the greater part of the village are in Orford, but the old court-house and the gaol are on the Ascutt side of the river. The population is about $: 360$. It is the scat of the jurisdiction of the inferior district of st. Francis, and is a place of more gunctal resort than any of the villages in the neighbouring townships: it is, as it were, the emporium of the township trade, and the place of transit through which the chief part of the township commodities are conveyed to the St. Lawrence: these commodities are, chiefly, pot and pearl-ashes, horses, horned cattle, and some shecp. At some distance from the village is Belvidere, remarkaldy well situated, the residence of the Hon. W. B. Felton, the proprietor of large tracts of land in this and other townships.-Lennoxville, about 3 m . s. of Sherbrooke, is situated in lut 10, ith range, on : rising ground on the $s$. side of a bramch of the St. Framcis. It contains about 20 houses, and its population is about 120 . The church, seated on a rising ground s. of the roal, is built of langer size than is necessary for the extent or population of the parish. The houses of this village are scattered along the public road leading to Compton and other townships near the province line.

Cingranted and unlocaled 12,243 atres, cxclusive
of rescrvations-lst sipt., 1829 .
Ash (I.), e. Richelife, r.
Asiberusk or Asiberrisif, river, discharges
its waters into the head of L . Temiscouata, and takes its rise in a chain of small lakes in the ridge of mountains to the N. W. of that L., separated from Trois Pistolles r. by a short portage.

Asilburton, a projected township in the rear of l'Epinay, $S_{\text {., }}$ in the co. of l'Islet.

Asilford, township, in the co. of l'Islet, is in the rear of the $\mathbf{S}$. of St. Roch des Aulnais. Its average superficial extent is 10 miles square. A few ranges of lots have been surveyed and some militia locations made, but no settlements have been formed. The soil cannot be considered very good but it is susceptible of cultivation, and abounds with pine timber, some beech, maple, spruce, \&r. It is traversed in many parts by rocky cliffs, and is watered by several rivers and creeks, the principal of which is the River Ouelle.-Ungranted and unlocated 20,000 acres, exclusive of reservations1 st sept., 1829.

Asintitsi, lake, in the co. of Saguenay. The diameter of this small circular $L$ is about 5 m ., and its waters are conveyed to L. Assuapmoussoin through the small n. Red Carp, that runs into the n. Miskahouska.

Asitpekachigin, river, empties itself into the Gulf of St. Lawrence.

Askistcuf, lake, in co. of Saguenay, receives the waters of the small L. Patitaouaganiche, which is in lat. $48^{\circ} .18^{\prime}$ : their united waters fall into the Nekoaba $\mathbf{R}$, which also reccives the waters of L. Nekoaba, and empties itself into L. St. John. Askatiche, river, falls into L. St. John.
As-magudman, river, runs into the left bank of the Matapedia.

Assuapmocssons, lake, in the co. of Saguenay, is 10 m . long. It lies in lat. $49^{\circ} 27^{-1} \mathrm{~N}$. lon. 7350 w . It receives the waters of several lakes, among which are the Necout i, Ashratsi, and Miskahouska; the last two unite their waters by moans of the Fed ('arp river which rises in lake Ashratsi; these waters form the n. Miskahouska, which, being increased by a small river that rises in lake Necout.i, soon after falls into the $\mathrm{N} . \mathrm{w}$. extremity of $\mathbf{L}$. Assuapmoussoin, which is connected with the $n$. of that name by portages leading to the Shecoubish lake and river. At the N. e. extremity of L. Assuapmoussoin is a King's Post.

Assuapmolssoin or Asuap, "The Indian's Ambush," or "The Place where the Elk is laid wait for," a river of the first magnitude, rises in

A S S
unknown lands in the Saguenay country, and running in its general course from N. W. to s. E. receives the tributary waters of the Shecoubish, the Twashega and the Salmon rivers, and falls into the western side of L. St. John. At the mouth of this R . lie two islands covered with brushwood : one, not less than $1 \frac{1}{2} \mathrm{~m}$. long, produces elm, ash, fir, and alders. Below this island the r . is not less than $\frac{3}{4} \mathrm{~m}$. wide, and above it nearly $\frac{1}{2} \mathrm{~m}$. The land at the entrance of the $R$. is of excellent quality, chiefly alluvial. Ascending the river, the land on the $w$. side is better than that on the $E$. and the timber principally consists of elm, ash, cedar, fir, balsam, red spruce, white and red pine, yellow birch, some poplar and white hirch. On the e. bank the timber consists of tamarack, white birch, spruce, fir, balsam, aspen, and pine ; cypress and a red or Norway pine are commonly observed on both banks. At $4 \frac{1}{2} \mathrm{~m}$. from its mouth and above another considerable island the river becomes very shallow and the current runs down, with much swiftness, to a cluster of three islands of the same character as the one already described. The Portage au Saumon, on the w. bank, just below the Salmon n , is 1200 yards, leading partly through woods and partly on the beach. Here the Assuapmoussoin falls in two cascades : the uppermost is, more strictly speaking, a perpendicular fall of about 15 feet, affording in the basin below a propitious site for a mill. Higher up is Porlage à lours, lying on the $\mathbf{E}$. side of falls which are at least 50 feet in perpendicular height, and have a fine effect. Its length is nearly $1 \frac{1}{\ddagger} \mathrm{~m}$. and it leads through a growth of cypress, small red pine and fir, produced on a sandy poor soil. Still higher up is the Petit Portage à lCours, which is 350 yards across a narrow tongue of land. Here the $\mathbf{r}$. describes a crescent falling over the rocks in a very picturesque manner and the sand-banks, on both sides, afford but a very poor idea of the country. $\quad \frac{3}{4} \mathrm{~m}$. higher up are Pemouka Rapids and carrying-place. The portage is 660 yards over the rocks, which, in spring, are covered by the $R$., and the carrying-place is then made on the opposite bank. The Porlage of Pcmouka or "Last Pine," so called from its being opposite the last pine that is to be seen through the interior country, leads through a white spruce or tamarack swamp. About 30 m . up the river the land ceases to be good, and, at the Portage à l'Ours, the country is only fit for hunting the caribou and
the moose. This inferiority of soil continues to the foot of the Grands Rapides, alwut 9 m . higher, where the land becomes totally unfit for cultivation, being traversed by a range of rocky mountains that produce nothing but fir and spruce trecs. The Company of the King's Posts have a tradingpost on this r., about 45 m . from its mouth. From this post to L. St. John the Assuapmoussoin is one continued rapid.

Aston and its antmentation, a township in the co. of Drummond, in the rear of the S.S. of Becancour and (iodefroi; bounded n. f. ly the River Becancour, s. w. by the N. f. line of the S . and aug. of Nicolet. On the Becancour and Riviere Blanche the land is rather high, but, a short distance thence, it descends into a low that. The soil in general is good, and would no doubt prove highly productive if brought into cultivation. In situations near the rivers the timber is oak, clm, pine, beech, birch and maple; in other directions it is either cedar, hemlock or spruce-The Blanche and the Becancour, the banks of which are extremely picturesque, water it very completely.This $\mathbf{T}$. and its aug. have been surveyed, and a great extent granted and located; but there are no settlers, except a few in the front ranges. Militia locations were made, and 800 abres granted to Capt. Douglas on the E. branch of the Nicolet.The new road, leading from the ferry opposite to Three Rivers into the southern townships, traverses the aug., and passes at the ferry near Capt. Dourlas: residence, which is rendered by its hospitable proprietor of areat assistance to travel-lers.-Lngranted and whlocated $26,3,3,2$ acres, and 6,164 in the augmentation, caclusive of reserva-tions-lst Scpt., 18こ!

A-tcrafimicoots, river, runs into the Gulf of St. Lawrence.

Atcoor, a small river that runs into the r . Trijis Pistolles.

Aubert Galifon, fief, and De l'Islaf, in the co. of Beauce, are the last two scignorial ficfs on the River Chaudiere, which separates them from each other.-Aubert Gallion is bounded, s. w. and s. E., by the t. of Shenley, N.e. by the n. Chaudiere, and $\mathrm{N} . \mathrm{w}$. by Yaudreuil, S . It is twol. square, and was originally granted to Dame $A$ ubert in 1736 , and is now the property of Jacob Pozer, esti. The land in both fiefs is good though generally mountainous and broken, and on the Chaudiore thickly settled, but the farms exhibit neither good management nor much care; nor did the inhabitants till
lately enjoy that character for industry and its attendant comforts so visible in many other parts of the district. The timber in both fiefs is generally of a good quality and in profusion. Aubert Gallion forms part of the $P$. of St. François and contains a grood grist and saw mill. The first concession is tulerably well settled. The proprietor, being a German, invited a number of his countrymen to cmigrate and settle in this fief, which he effected at much expense; they have been very successful in the raising of hemp and its preparation for use.

Tifle.—"Comronion du $\because 1 m e$ suptembre, 1736, faite par Charles Marques do Brawhannes, (imumemeur, et Cilles Heriunarl, Intendant, ì Dame veuve Iuthot de deux lienes de tirre de frome et de deux tiomes de protendeur, due cité da Sul ouest de la riviere du Soult de Chumbior, en remontant, a commencer à la fin de lit tomeonion arcorda-
 se trouveront dans la dite ivière dams létendue de deux lieues, et des deun ciotis dicelle; leopuch inden et islet. seront partauses par egale portion entre la dite veme Ahbert et le siour de lIN, anquel nous arom arcorde aut jourdhui partille concecion du citio du Nom-unt de la dite riviire."-Resific dIntendance, No. *. filh, 11.

Aubigny, town, r. Lat zov, $s$.
Arceland, a township in the co. of sherbrooke, lies betweta Hereford, Drayton, and Newport, bounded w. by C'liftom, and e. by Emberton. The land is uneven and rusged, in some places mountainous and in others sinking into swamps; the level and dry tracts have a pretty good seil, which, if brought under culture, would answer moderate expectations, and some patches in lower situations appear fit for hemp. The timber is a mixture of most kinds fund on the surrounding tracts. This r. is abundantly watered ly a weat number of streams and brooks, some of them flowing into the sit Francis and others into the Connectiont River. The N . half of the township has leen granted, but no part of it is settled, and a sort of footpath runs through it, by which the Indians frefuently make their way to the River Chaudiere- Cngranted and unlocated 20,9010 acres, exclusive of rescrvations-1 st $\mathrm{K}_{\mathrm{c}} \mathrm{pt}$., 1429.

Aremats, des, "River of Alders," called, in the Indian or Cric languages, Peshikaouinamishushihi, is the narrow outlet, wind of the lake Kiguagomishish, ber which that L. discharges itself into La Belle Rivi re. Although 9 m . long, if followed in its windings, this r. is in reality only 3 m . in a straight lince, and about 2. vils. wide. There is but one canoe portage, which is 5.00 yds long, and lies alout a mile from Lake Kiguagomishish; and thence to the Belle Rivicre there is a path, preferred by those who have no duty to perform in the canoss, because
the river is much obstructed by alders and canoes pass with difficulty. This n, flows through an alluvial soil composed of layers and mixtures of sand and clay. The course of this river is exceedingly tortuous, and, being narrow, is much obstructed by fallen trees; and the entanglement and intertwining of the branches of alder, with which both banks are covered, render portages sometimes necessary where there is plenty of water and little current. The Portage des Aulnets, however, is occasioned by the river tumbling over the rocks. The timber on the banks of this r. is elm, ash, spruce and some pine and fir. The r. des Aulnais runs, with a gentle current, into the $\mathrm{N} \cdot \mathrm{E}$. side of a lasin formed by the Belle Rivière, having passed over a pieturesque fall occasioned by a felspathic rock. On the s. shore is a narrow chamel which leads to Lac Vert.

Acheres, des, (R.), v. des Aulnais, r.
Avvais, des, river, rises in several small lakes, and joins the Batiscan near the w. line of Perthuis, S .

Avinon, Baie ì l', v. Oliatchouns, r.

## B.

Back Lake, v. Drayton, t.
Badpely, river, in the co. of Saguenay, fallsinto Lake Kigu:gromishish, and is supposed to be a communication between it and Lake Kiguagomi. This is a very pretty $\mathbf{r}$. though choked with alders; its course is from 7 to 8 miles, and it passes through a rocky country, covered with a small quantity of black earth, and falls into Cushcouia bay. Along the banks of the $\mathbf{r}$. is a mixture of red and white spruce with some pine, white birch and sapin, and the soil is a mixture of clay and sand. This r. derives its name from Lieut. Baddely, employed by the colonial government to make a geognostical survey of this part of the Saguenay country.
Baie des Allouettes, $v$. Saguenay, r.
Baie des Rochers, $v$ Sagufnay, r.
Baie du Febtre, c. Baie St. Antoine.
Baie St. Antoine, or Lefebvre, seignory, in the co. of Yamaska, is bounded s. w. by Lussaudiere, n.e. by Nicolet and, in the rear, by Cour-val.-Two leagues in front and depth. -Granted Sept. 4th, l683, to Sieur Lefebvre, and is now the property of Mr. Le Blanc.-This is in all respects a very productive tract of land: in the front the Longue Pointe, Pointe aux Pois and Pointe à la Garenne, all stretching boldy
into the St. Lawrence, form the extremities of two large bays; to the e. of Pointe à la Garenne is the Baie du Febvre, also trenching deeply into the seignory. For some distance on the margin of these bays is a marsh that in the summer affords excellent pasture, singularly intersected in all directions by numerous small and clear rivulets, from which to the main road, crossing the seignory from E . to w ., are some very rich and luxuriant meadows. From the main road the land continues a gradual elevation to the rear ; the soil is mostly a fat clay or good black mould highly fertile. Except in the marshes and meadows, which have much inferior wood, the timber is of the best kinds. The river Nicolet, crossing a small part of the s.e. corner, is the only stream towards the back of the seignory.-About two-thirds of this property are under culture and can boast of some farms in a very flourishing state, particularly near the roadside. The want of water corn-mills is supplied by several wind-mills. The church is placed about the middle of the seignory on a rising ground, below which are several good houses, almost sufficient in number to form a respectable village; among them are two or three shops and a tavern, for which the situation is not ill chosen, as the place is a great thoroughfare. A main road strikes off towards the southern townships.-In this S. 136 persons are employed in agriculture without receiving wages, and 61 are hired labourers, one quarter of whom would take new lands.-The farms are chicfly between two and three arpents in width. The population consists of native Canadians.

Statistics.

Some Indian corn is grown, and also a considerable quantity of hay.

Title.—"Concession du 4me Septembre, 1683, faite par Lefebvre de la Barre, Gouverneur, et de Meulles, Intendant, au Sieur Lefelv're, des terres nonconcedées, d'environ deux lieues de front, joignant au Nord-est la terre viron deux lieues de front, joignant au Nord-est la terre
du Sieur Cressé, d'autre au Sieur de la Lussaudiere, du Sieur Cressé, d'autre au Sieur de la Lussaudiere, au
Sud-ouest, au Nord-ouest sur le lac St. Picre, sur pareille quantité de profondeur, à prendre dans le bois vis-à-vis al dite largeur, avec les isles, islets, et prairies qui se rencontreront sur le dit espace.
Insinuations du Conscil Supérieur, lettre B. folio 31.

## B A S

Baif St. Paul, (V. and P.) v. Cote de Beaupre, S.
Baie St. Paul (S.), r. St. Paitis Bay.
Barfond (T.), between Hereford and Barnston, in the co. of Stanstead, is not a full township, having only seventeen lots in each range. Istact W. Clarke, esq. obtained a grant of the greatest part of it in 1802, and other grants were made previous to 1821. No part is settled, although it is a tract that promises to become valuable, as the land is everywhere excellent and the timber good. It is watered by many rivulets and streams, cepecially by a considerable branch of the river st. Francis, which traverses the township in a winding course near the $w$. division line.

Barsston, township, in the co. of St:msteald, is on the province line, and next to stamsteal, T. The surface is a continual succession of hill and dale. The chief part of the land is good for the growth of grain and other usual productions; some swamps are met with in the low parts. The timber embraces almost every sort, but the best are beech, maple, elun, ash, fir and some oak. It is watered ly several small lakes, rivers and streams, on which there are grist and saw-mills. The $w$. half was granted in 1:01 to Massrs. Lester and Morrogh, and the greater part of the s. half belongs to Sir R. S. Milnes, Bart., none of which was settled in 1811; but since that period many of the lots have been settled upon, and some without the permission of the legal proprictor. This T. is traversed by several roads of communication from the surrounding townships, especially from Stanstead and Hatley. The settlements are in a tolerably flourishing state, and the population, chiefly in the western half, may be computed at 1, 6.50 . - This settlement may be called a continuation of that of stanstead, from their relative connexion. Barnston contains two corn-mills, four saw-mills, screral schools, several pot and pearl asheries.-Cigrouted and miocater, $5.34: 7$ acres.

Barre, rivulet, in the S. of Nonnoir. Ruisseau Barre rises a few miles from Mount Johnson, and, beirg joined by two nameless rivulets, increases the stream of n . du Rapide below fief St. Michel; their united streams fall into $\boldsymbol{\text { r. des }}$ Hurons.
Bartifelemy (I.), v. Saguenay, r.
Baegte, du (I), v. Richmond, t.
Ba (lyes, aux (I's), $v$. Trois Pistolles, S.
Bastonals, river, in the co. of Portneuf, rises in a small pond $\mathbf{E}$. of Long Lake, through which

BAS
and the gr. and lit. Wayagrancke Lakes it flows and joins the St. Maurice n . a little below the l'ust of La: Tuque, and about 10 miles above Isle au Noix- - Asecuding this r ., its width is found to valy from 20 to 25 yards; it flows through an alluvial tract of good land, cxtending to the adjacent hills, which intercept the conrse of the n. and octanion a fall of near 130 ft .. formed of 3 cascoules and presenting an excellent site for a mill. The portage here, about 30 chains or 660 yards N. n. e. of the mouth of the R., is 32.7 yards long. From this portage, $1 \frac{1}{4} \mathrm{~m}$. upwards, the stream is swift and very winding, and the banks exhibit a favourable appearance for settlements, although to an inconsiderable width, as the mountains follow the general direction of the r., which suddenly leads s. s. e. and is secm issuing from a small lake, where the land is low, excepting on the s. side where it rises at a short distance. The prevailing timber from the st. Maurice to this $\mathbf{L}$. is red spruce, fir, birch, red pine, and some maple. Near this lake the Lomp Portage commences; it is nearly 4 miles and leads through uneven land, in many places swampy or hilly and poor. The swampy parts are very wet and sometimes socky, timbered chiefly with spruce, fir, birch and cedar ; and on the hills are fir, birch, pine and some maple. The soil hore is in general sandy or of a light loam. The upper landing of this portage lies on the borders of a small lake ahout $\frac{1}{6}$ m. long and $\frac{1}{4}$ broad, which is connected with the Circat Hayagamache $\mathbf{L}$. by the Bastonais rumning in a narrow channel. The deputy surveyor-senctal, who explored this part on the comany, ascended the lake as the sun was sinking behind the distant hills. The seene it exhilited was truly splendid and was rendered the more impressive, while he padded over the unruffled surface of this beautiful slect of water, as the hills celhoed the characteristic song of the viyagers; and the oceasional shrill cry of the loon, with which this lake abounds, cnbanced the peculiar interest and wildness of the seme-This $\mathbf{L}$., which is 9 m . from the mouth of the Bastomais, is of very incegular figure. Its trays are deep, and it is 11 m . lomg by 3 in width and contains 4 or. islands towards its N . side, and several others, at its head, where the river enters it. The adjacent land, s. w, is hilly, and on the parts that rise gradually from the $\mathbf{L}$. the timber is chiefly spruce, pine and birch.Above this m . is the 3 d prortage on the Bastonais; it extends, E. s. $\mathbf{E}$., 9711 yards over very rocky, poor

## BASTONAIS.

land timbered with spruce, white birch, cedar and basswood. The n. runs on the right side of the portage, and forms a cascade of 20 ft . perpendicular fall. From this portage to the next, which is 100 yards, the land is low and of a scanty soil with some hills in the background, and the timber is chiefly tamarack, white birch and pine, some cedar and red spruce. From the last-mentioned portage to a stiff rapid, impassable except for light canoes, the r . is very winding and narrow; the land, though still low, is of a better description, and is susceptible of cultivation.-A little higher up is the lake called the Little $\mathrm{IF}^{-}$ayagamacke, which is 26 m . from the mouth of the Bastonais: it is surrounded by gentle swells, timbered chiefly with fir, spruce and pine, growing on a sandy soil Its greatest length is about 41 m . and its breadth 2. Near this L . is a very long and rough portage, extending $1 \frac{1}{3} \mathrm{~m}$., and traversing a broken, rugged tract, timbered with balsam, pine, poplar, fir and spruce. This portage leads to a small lake that empties its waters into the $\mathbf{L}$. Wayagamacke. Higher up is the 7 th portage, which is 135 yards long, and reaches the borders of Long Lake, which is nearly $3 \frac{1}{2} \mathrm{~m}$. in length, and in some places about ${ }_{\frac{1}{4}} \mathrm{~m}$. broad. The land on its borders is hilly, sandy and rocky, clothed with white birch, spruce, fir and small pine. It lies about $\mathrm{N} . \mathrm{E}$. and s . $w$., and at the head of it is the 8 th portage, 1150 yards long. This portage leads along the elevation that borders on an extensive tamarack swamp to a small pond and the first waters of the Bastonais River. This small pond, the bottom of which is a deep bog, is surrounded by an immense white spruce swamp, and affords a subject for geological speculation. Here are to be found a quantity of large rounded water-worn rocks near the outlet, that are heaped together on the borders of the lake and cover the land for a few yards.

Bastovals, Nonth, river, rises in a leech pond not far from the head waters of the $\mathrm{N} . \mathrm{E}$. branch of the Batiscan, in the co. of Quebec, and falls into the St . Maurice about $1 \frac{1}{2} \mathrm{~m}$. above the post of La Tuque, in the co. of Portneuf. Nearly at the head of this $\mathbf{r}$. is Crooked Lake, surrounded by low, swampy land, and timbered chiefly with tamarack and fir. From this l. the r. takes a N. course through land timbered with red spruce and balsam. After running through another small $\mathbf{L}$. the r . improves considerably, being about 30 or 40 ft . broad in places: the banks generally low,
although occasionally bold and rocky. The prevailing timber at this place is red spruce, a favourable indication of the nature of the soil. Soon afterwards the r . forms a cascade of 15 ft ., and $\frac{1}{2} \mathrm{~m}$. lower down is a rapid, whence the current runs very swiftly to another rapid or rather cascade. The country here assumes a mountainous aspect; the granite rock forming the w. bank of the r . is nearly vertical, rising to about 50 ft., the summit covered with moss, while the opposite bank is an extensive horizontal plain, stretching to the foot of the mountain that approaches a cascade, where the r. contracts into a narrow channel formed by pendent cliffs, which rise about 50 ft . perpendicular. The $N$. Bastonais does not appear to have formed its present bed, which seems here to have been created by some convulsion of nature; for, though the mountains are at a distance and the country to the s . w. a horizontal plain, the river takes a sudden direction towards them and leaves the plain to follow its broken course through the mountains. Here several hills, unconnected with any adjacent chain, rise out of the great plain, generally in conical shapes, and may be seen at a considerable distance. The r. having passed over a rapid, down which canoes are shot unloaded, slopes its course s.s. w. between hills over a few rapids to the head of a considerable fall and the portage Dori, 300 yards long.-Soon after, the river contracts to a narrow channel and falls in a cascade of about 50 ft ., which is divided by two islands into small channels, that increase the rushing noise of the torrent as it foams with splendid effect over the rocks. The islands are covered with moss and the stinted fir tree, while the surrounding country is generally wooded with the tall red spruce, diversified by the smooth water-worn surface of the rocks in the vicinity of the fall, whose whiteness contrasts with the dark shade of the fir tree, giving an interesting effect to the scene.-A mile below Portage Doré is Lake Kajoualwang, which is $10 \frac{1}{2} \mathrm{~m}$. long. The surrounding land is similar to that of Lake Edward. The hills do not rise to any considerable height and are timbered with spruce, fir, white birch and pine. The L . forms a large bay on the w., out of which runs the N. Bastonais, which penetrates the country for 60 miles and discharges itself into the St. Maurice. The ascent of the r . to Lake Kajoualwang, hitherto unexplored, is effected by the Indians in 8 days, and the descent in 5 , there being only 5 portages. -

## B A T

At the mouth of this r . very fine doré and pike are caught, with which the post at La Tuque is amply supplied.
Batiscan, river, in the co. of Champlain, is formed by the junction of two hramehes, one descending from the N. e., in the co. of Quebec; the other from the N. W., in the co. of Portneuf, and falls into the St. Lawrence in the S. of Batiscam. The n. w. branch rises in Leech Pond, near the source of the Bastonais and about 11 m . from Little Wayagamacke L. This branch, near its source, is about 22 yards wide; its banks are low and composed principally of white sand, producing an abundance of huckleberries, and the prevalent timber is tamarack, fir, birch, and some pine. This stream flows with a gentle current through low swampy land to a portage about $1 \frac{1}{2} \mathrm{~m}$. from its source, where the carrying place, about nine furlongs in length, leads over a rough tract of land rising from a wet tamarack swamp up a steep mountain, and then descending to another leech pond on a level with the swamp on the other side of the mountain. This pond is $\frac{T}{2} \mathrm{~m}$. long and less than $1: 30$ yds. wide. The rocks on the portage are granite and gneiss and the soil is generally sand or light loam, covered with a thin vegetable mould. The bottom of this small lake or pond is muddy and shallow. Between this l. and another is a portage 130 yds . wide. The features of the last-mentioned L . vary essentially from the other mud lake or pond, although so very near each other; its bottom is gravelly and its water clear, and its level higher; its shape is like that of a bird in its flight and the adjacent land assumes a bolder character, although not better adapted for agricultural purposes: the soil is sandy and covered with blueberries. The next carrying-place is 1000 yards and lies through tolerably good land bearing spruce, some black birch, cedar, fir and balsam. Another small lake is at the end of this portage, where the land again becomes wet and swampy, timbered with spruce and fir, and descends steeply to the border of the lake, round which it is generally low and produces spruce and fir. From this $\mathbf{L}$. there is a portage of 290 yds., over an extensive swamp, to a lake which supplies the first waters of the N. E. branch of the Batiscan. This lake is about 1 m . long. The portage separates the two branches.-The progress of this branch to its junction with the N. E. branch, in the aug. to Grondines $\mathbf{S}$., has not been ex-plored.-The n. E. branch of the Batiscan rises

## BAT

in the last-mentioned L., at the head of which is a 1 ertage of 150 yds , to the borders of Luke Edward, into which a fine rapid stream, following the portage, falls with a cascade of 15 ft , offering a propitious site for a mill. Lake Eadurard, which derives its name from an Indian hunter of Batiscan, is $: 36 \mathrm{~m}$. fr. the farthest extremity of Great Wayagamecke $L$., and 19 m . from that of the lesser lake of that name. It may be said to form two lakes, owing to a large island which extends nearly the whole length of it, and which in some places is about three leagues broad. The greater sheet of water is the N. w. passage. The s. E. is used ly hunters coming from Batistam. About one m from the portage Lake Educard acpuires grater dimensions, extending e. s. e. - The land, ats far as Limer $P^{\prime}$,int, about 9 miles from the $w$. extremity of the $L$, rises gradually from the L . into gentle swells timbered with fir, spruce, white birch and pine, and some parts are considered suse ptille of improvement. Farther N . e the land is more prominent and the shores in many places rocky and barren. The 1. afterwards contratis to ! m. and the land becomes more mountamus and broken, rising in many places from an iron-bound shore into cliffs of granite; the timber on these mountains is tir, tamarack and small white birch. At the head of the lake, which is about nine miles from Dinner Point, a stream about $1: ;$ yards wide enters it, with a gentle current, through :un alluvial soil extending to the foot if some high hills. This R. leads to a pretty lake surrounded by mountains of no favourable appearance fir settlement. Beyond this $\mathbf{L}$. is a prigtage of :ow yds. lealling to another L., whose waters increase the N. a. lranch of the Batiscom ; the land round this L. is mountainous and rocky. The next portage is $f(1)$ yds., and passes over a mountain beyond which the N.e. branch appears an insignificant stream. The general course from the N. W. to the N. s. branch, up to the last place here described, is about e. n. e: 30 miles. The latter lius very nearly on a level with the former, and, ruming s. through unexplored lands, crosses the n. part of the S. of Perthuis and joins the $\mathrm{N} . \mathrm{w}$. branch in the augmentation to Grondines S. -These branches lacing united form the river Batiscan, which then takes a $s$ course and passes diagomally through the 2nd aug. to St. Anne S., and then, rumning through the N . $w$. angle of the 1 st augmentation to that seignory, it enters the s. of Batiscan, where it falls into the St. Lawrence about 2 m . below the
$v$. of Batiscan.-The Batiscan is nearly of the same extent as the Jacques Cartier r., and the good lands on it extend at least 30 m . in a straight line from the $\mathrm{s}_{\mathrm{t}}$. Lawrence. The entrance of the Batiscan is obstructed by a sand bar, but, the water being deep, it is navigable for several miles, when the stream becomes impeded by rapids and falls. This river affords an abundant supply of the petite morne, a species of codfish, in catching which, and in salting it for market, the inhabitants are employed during the winter to the latter end of January. In the summer a great number of cels are caught.

Batiscan, Little, is a small river that discharges itself into the castern bank of the river St. Maturice, about 2 m . below the Rat r. It communicates with the Batiscan River by 5 portages and 4 lakes, from which it derives its name. The first lake of magnitude is only about 1 league from the it. Maurice.

Batisene, seignory, in the co. of Champlain, has the St . Lawrence in front, the S . of Champlain and its ang. on the s. w., and Ste. Marie with the aug. to stc. Anne on the N. e. ; its breadth is about 2 leagues and its depth 20 ; granted $M$ urch $3 \mathrm{~d}, 1639$, to the Order of Jesuits, and is now reverted to the crown.-This $\$$. comprises 3 parishes-St. Stanislas, St. Françnis, and $\mathrm{s}_{\mathrm{t}}$. Genevieve; and its settlements occupy three principal concessions or ranges-one on the N . Lawrence, in front, and a double concession along each side of the $\boldsymbol{r}$. Batis-can.-The number of conceded lands or farms is 113.-Bordering on the St. Lawrence the land is low, but it soon obtains a gradual rise for the distance of nearly $4!$ leagues to the interior; it

B A U
then becomes mountainous as it gains upon the n. w. ridge. The soil in the lower parts, like the adjacent seignories, is a light earth, rather sandy, covering a stratum of good clay ; but, proceeding northward, the soil gets stronger and is enriched for a considerable space with fine black mould, affording many capital tracts for the growth of all kinds of grain. In the front the wood is nearly all cleared away and the land cultivated for 2 or 3 miles inward, and for rather more than 5 miles on both sides of the r. Batiscan, on which are many good settlements which appear very neat and well managed. The whole of this seignory has not been explored, but, as far as it has been visited, it is found to produce excellent timber of the best kinds.-La Petite Rivière Champlain, with some smaller streams, water the front, besides the Great Batiscan River, which, though rolling a much broader current, is so shallow as not to be accessible for boats higher than 6 or 7 m . from its mouth. Over this R. and the Champlain are ferries, where canoes and scows are always in readiness on either side for travellers, carriages, \&c. In addition to the main road, that crosses the seignory, others ascend, for several miles, on each side of the Batiscan and communicate with the adjacent grants. About 6 miles up on the east side of this river is the foundery of the same name; it consists of a furnace or smelting-house, a castinghouse, two forges, dwelling-houses and various other buildings. The manufactures once carried on here were similar to those of St . Maurice ; the original proprictors being dead, the works have been stopped and the establishment is abandoned and in decay.

Stutistical Table of the Seigniory of Batiscan.

Titc._('oncosion du 23me Mars, 1639, faite par Monsieur de la Firte, pour la Compagnie, aux révérends pertes Jésuites, du ficf de Butiscan, joignant d'un corré un quart de liene ath dela de la riviere de Baticion au Nurd-ent, et dautre cotí au similoulet, un quart de liente au delà de la d'autre cont au sumburt, un quart ar herte au deade da fondeur. Cahiers dIntcndance, No. $\because a ̀ a$, folio 29.

Battures à la Carpe, r. l. St. Peter.
Battures aux Allouettes, v. Saguenay r.
Baudet, au, river, traverses, diagonally, the t . of Lancaster and enters the $S$. of New Longueuil at the s.w. corner of the concession, Cúte St. An-

## B E A

dre, and, cutting the division-line in several places, falls into L. St. Francis at Pointe au Baudet.

Baudouin, Dame, fief, $\begin{array}{r} \\ \text {. Tilly } \mathrm{S} \text {. }\end{array}$
Bay of Gaspe (F.), $\mathfrak{i}$. (rasp, Bay.
Bayonne, river, in the co. of Berthicr, rises in several small streams in the extremity of the aug. to Berthicr. After the union of the:se streams, a little beyond Castle Hill, the Bayome enters the aug. to Lanoraye, and, taking a s. course, is allosmented by other small streams near the church of St. Elizabeth, then turning e. it enters the s. of Berthier and receives a stream from alowe the church of St. Pierre; it is afterwards increased by the Bonaventure Creek that traverses the settlements of St. Esprit ; the Bayonne then hastens to the St. Lawrence, with which it unites its waters near the village of Berthier opposite Isle Castor. This $\mathbf{r}$. is deep and navigable for loaded boats for 4 or 5 m . from its mouth; higher up its navigation is prevented by rapids and falls. There are 2 falls of 16 ft . perpendicular. The great diversity of character in the lower one is remarkable: the rock over which the river falls is of hard wray limestone in deep horizontal layers, marked here and there with small seams of quartz; the bank, a little below the fall, is a perpendicular mass of blue and white marble, out of which runs a strong spring of most pungent acrid taste, with a strong bituminous smell, and immediately contiguous to this the bank is of common limestone, in shallow layers, with a dip of ( $5: 5$ degrees.

Bean, a small river in the $S$. of Beauharnois.
Beacere, county, in the district of Qublec, is bounded N. E. by the co. of Bellechasse, s. w. by part of the S. of Saint Giles, by the townships of Broughton, Tring and part of shenley, to the s. E. boundary line of the $S$. of Aubert Gallion, thence along the s. e. boundary of the last-mentioned $s$. to the a Chaudiere; thence s . up the middle of the r. Chaudiere, and through the middle of the $\mathbf{L}$. Megantick, to the entrance of Arnold R.; thence up that r , to the s . boundary of the province: on the N. w. by the co. of Dorchester, and s. e. by the s. boundary of the province.-It comprises the seignories of Jolliet, Saint Etienne, Sainte Marie, Saint Joseph, Yandreuil, Aubert Gallion, Aubert de l'Isle, the townships of Frampton, Cranbourne, Watford, Jersey, Marlow, Rixborough, Spalding, Ditchfield and Woburn, and that part of Clinton, E. of Arnold $\mathbf{r}$ - This co. is 68 m . in length, and its average breadth is $21 \frac{1}{2}$; but at its s. cxtremity it is 60 . Its centre is in lat. $40^{\prime \prime}$ N., lon. $70^{\prime} 35^{\prime}$ w.

B EA
This co., containing 1,987 sq. miles, is uneven and mountainous and abundantly watered by numerous rivers and streams, the principal of which are the Chandire, du Loup and la Famine. This co. is intersected by numerous roads including the new Kennebec wad, which presents a shorter and more direct communication from Quebee to Boston in the L. S. The er. of Beance sends two members to the provincial assembly and the place of clection is alternately at Ste. Marie and Sit. Joseph.

Beacharnois or Villechacte, seignory, in the co. of Beauharnois, extends along the St Lawrence if 1 . by as many in depth (ly title), and is bounded in the rear by the r. of Hemmingford, s. w. by Godmanchester and Hinchinbrook, and n. e. by the isc. Chateauguay and La Salle and the т. of Sherrington.-This tract was granted on the 122 th of April, 1729, to Sieur Claude de Beauharnois, and is now the property of Edward Ellice, Esquire, M. P.-In this seigniory are the following interior divisions named Catherine's Town, Helen's Town, Mary's Town, Orme's Town, North and South George Towns, William's Town, James's Town, Russel Town and Edward's Town. There are three Catholic missions, viz., $\mathrm{S}_{\mathrm{t}}$. Clement, St. Timothée and St. 1!artin, not yet erected into parishes. The church in St. Clement's parish is an unseemly building, and will soon be replaced ly a handsome structure, as measures to that effect are in active progress. At St. Timothe there is a neat suall church with a spire; and that at $\mathrm{s}_{\mathrm{t}}$. Martin, when completed, will be large and handsome. On the r. Chateauguay, in the division of s. George-town, there is a presbyterian church.-There are 47 concessions in this $S$. and the superficies exceeds 254,016 arpents, of which 133 are in concession and 120,208 remain unconceded. The quality of the timber is generally excellent and the pine and oak, the latter particularly, have always been esteemed superior to almost any other growth in the province. -There are three schools on the foundation of the Royal Institution; one at Williamstown, one at North Georgetown and one at Ormstown: parts of the seigniory entirely British.-In the

Canadian part there is no public school. Among the few Canadians who have any wish to give education to their children the practice prevails of taking a teacher into the house of one individual and coilecting there the children of as many parents as are desirous of this benefit, each paying his quota of the expense. Of these private schools there are not more than four or five. Their benefit is very limited, and little else than the catechism is tanght.-Besides the townships this $\mathbf{S}$. contains la Grande Ile and other smaller isles, a village and two domains.-La Grande Ile is formed by the waters of the S . Lawrence and is 21 m . in circumference, and has been, in some degree, inhabited for more than twenty years.-Beauharnois villuge, in Ann's-town, is well situated on the e. side of the mouth of the r. St. Louis and on the bank of the St . Lawrence. It contains about 60 houses besides a manor-house, one-third built of stone and many two stories high, a grist and saw-mill and three taverns, and the steam-boat that plies from Lachine to the Cascades stops at this village, where it takes in its daily supply of wood.-At the mouth of the St. Louis is also the domain called St. Louis, and the other domain, named du Ruisseau, is in Helen's Town.-This S. contains three corn-mills, one at Annfield, one at Péche au Saumon, on the r. Chateauguay, and one at Norton Creek Bridge ; one saw-mill on English River, and several considerable not and pearlasheries exclusive of numerous kettles scattered through the woods.-Many of the cultivators having been bred to trades follow them or not as convenience or prospect of emolument prompts.There are no fairs, but there is an annual plough-ing-match in October.-The general state and condition of the cattle among the Canadian settlers in this $S$. cannot be praised, no care being taken by them for their improvement. The horned cattle are diminutive and ill-shaped, the sheep small and coarse wooled. The swine, their chief animal food, are of very inferior quality, long in the legs, coarse in the flesh and bad fatteners. The reverse of all this may in general be said of the cattle belonging to the English settlers, who pay particular attention to the different breeds and keep them in good order. The Canadian horse may be considered as the best bred and most thriving animal, but will be always subject to deterioration until the system of emasculation is generally practised. From the pains Mr. Brown, Mr. Elliee's agent, now bestows on this branch of rural

## BEAUIARNOIS.

economy, and from the inclination evinced by the Canadians to imitate his laudable example, it is reasonable to expect that a very great improvement will soon take place in every kind of cattle.-The principal roads in the $\mathcal{S}$ are as follow :- Alomer t . St. Louis; on both sides of the r. Chatemguay in progress of connexion through Godmanchester and Hinchinbrook, with those leading to the $v$. of Four Corners and Fort Covington in the I. S. ; on both sides of English liver ; the road into the I'.S. from La Prairie by St. Constant through Hemmingford ; and the roads in front of each concession and their comecting branches.-The principal roads are gencrally kept in very good order. -There are no toll bridges; but three firry boats are established on the Chatcauguay, the property of individuals who take what toll they can get.several places in this $\leftrightarrow$ are well adapted for the cultivation of hemp, particularly a considerable tract in the disision of James' town, to the west of Blueberry-phain.-In agiontural operations both horses and oxen are used. The Canadian settlers usually plough with two yokes of oxen and one horse, but all other agricultural work is done with horses. The best farmers among the British settlers use the swing plough with one pair of homses, but the new sottlers almost entirely use oxen. For other purposes harses and oxen are indiscriminately used as fancy or comenience di-rects.-The produce of hat is rery uncertain. In 182s it was five times the amount of :my of the three preceding years.- The quantity of flax sown is generally very small; only ( 0 ! bushels of thaxsecd are supposed to be sown annually.-The quantity of homespun manufactures may be cstimated from the number of sheep:-4100 sheep, yielding, on an arerage, 213 . of wool cach, and 1 lb . being required to make 1 ell of ctoffe del peys (the common grey cloth) produce 420 ells, $\frac{1}{3}$ of which is made into other woollen stuffs, which require not, on an average, more than ;ib. of wool per cll. -In this S. Americans sometimes contract for wood to make potash and afterwards quit the lands, which consequently become reduced in va-lue.-In the front are a few swampy places covered with cedar and spruce firs, of no very great extent and generally between the banks of the Chateauguay and the Sit. Lawrence, a mean breadth of about 3 leagues. In the divisions of James Town and South George Town is a level space about $3 \frac{1}{2} \mathrm{~m}$. by 2, called Blueberry Plains, an horizontal stratum of rock, of the quartz species, from the crevices of which spring immense
quantities of the shrubs that bear the berries after which it is named.-The rivers Chateauguay and St. Louis run through the $S$. from s. w. to N. E . Out of the former many and not inconsiderable streams branch off to the interior, some of them crossing the Province line into the American territory; the principal are called the English River, Bean River, Rivirre aux Outardes and Sturgeon River. By the Chateanguay, a tine river, navigable for boats and the usual river-eraft, large quantities of the timber felled in Beauharnois and the adjacent townships of Godmanchester and IIinchinbrook are brought down into the si. Lawrence. There are roads leading along it from which others branch off to the I'. S.-Previous to the commencement of hostilities with the U. S. the population was a mixture of ('anadians and Americans, the litter amounting to about $9(1)$ families, who, on that event taking place, immediately withdrew into their own country.--Whether estimated by the mildness of the climate, the general groodness of the land, the variety of timber of every description, among which oak, chm, pine and beech are in great quantities, the advantage of water comveyance at all times, from the heraking up of the frost until the commencement of wint r , or $\mathrm{b}_{\mathrm{y}}$ its contiguity and casy acess by main roads to the State of New York, this may be universally allowed to be a most valuable tract of land, affording as good a basis for improvement as perhaps any uther in Lower Canada. This s. is unexceptionable in point of locality as well as for all agricultural prorposes abounding with many sots particularly comgenial to the growth of hemp and Hax. The relative pusition of this $i$. and the adjoining townships with the United states must ensure great dedvantages. expectially as they lie contiguns to the line of communication to Montreal, with roads in many directions, numerous routes for an expeditious water conveyance and a fertile soil ; these are solid reasoms for conjecturing that this part of the district of Montreal will attract the attention of traders and cultivators, and vie, in a few years, with most others of the province in population and agricul-ture.--The following bays, points, \&c. are in Beauharnois Channel, in front of thes.-viz. Domaine du Buisson, Pointe aux Erables, Rapide de Boulcau, Rapide Croche, Knight's Island, Les Faucilles (a rapid), Hungry Bay, and Cartier's Point.-Laurence Brown, Esq, to whom the author is indebted for valuable information, is the resident agent.

## Beaujer, or La Coine, s.

Be.monovi, Seignory and Augmentation, in the co. of Bellechanse, lies iectwern Vincemes and La Durantaie and is bounded in front lyy the st. Lawrence, and in the rear ly St. Gervais; its breadth is $\frac{3}{4}$ league, its depth $1_{2}^{1}$.-Granted Nov. 3d, 1062, to Sieur des Islets de Beamment; the augmentation, April 10th, 171:3, to Sieur de Beaumont and is of the same dimensions as the original grant: they now belong to Fereol Roy, Esq. -The farms are 3 arpents in front liy 40 in depth; and the lands conceded prior to 18.59 were granted on the following terms: 20 wols jer front arpent by 10 in depth, one sol for quit rent, one capon, the olligation of grinding corn at the Banal mill, and with a rescrvation of timber for the purpose of building churches, mills, \&c.-The capon is supposed to have been never demanded.A great many of these landholders neeglected to take a legal contract of concession, thinking that the seignior's letter would be soldy sufficient to secure them in quiet pessssion of their lands. Some unfortunately lust their letters and others lost the copies of their contracts (the minutes of which were burnt at Quebee.) Nfter 1759, when their titles were required to be produced, those who were unable to do so were obliged to obtain new ones, when, instead of 20 sols being required for each front arpent, besides the sol for quit rent, 30 sols were imposed, and more frequently even 40 . There are, in this parish, only 9 or 10 persons at

## B E A

most who pay one sol only by way of quit rent, without any other rent.-This tract presents, generally, rather a light and sandy soil and rises to a considerable elevation on the bank of the river, but preserves a tolerably level surface when compared with the adjacent grants. The greater part of the seigniory and a considerable portion of the augmentation are in a flourishing state of cultivation. Adjacent to the St. Lawrence there remains little timber, but, penetrating farther into the interior, much may be found of first rate quality. Several small streams water the S. very plentifully, and the augmentation is intersected by the rivers Boyer and du Sud. The church and parsomare-homse are seated on the bank of the St. Lawrence, and a grist-mill is on the Riviere du Sud. The seigniory is crossed by several roads leading into the adjacent grants.-The farish of St. Etitme de Becumont includes the first two ranges of Beaumont and Vincennes, part of Livaudiere, fief Mont-a-Peine and as far w. as the habitation of Jean Boilard.

Rigintr d'Intondance, No. 6, folio 31.

Beauport, river, rises about 1 m . above Charlbourg v., in the S. of Notre Dame des Anges, and winding in an e. direction falls into the St . Lawrence near the s. w. boundary of the S. of Beauport. It turns the signorial mill, an oil-mill, and a grist-mill at its mouth.

Beavport, seigniory, in the co. of Quebec, bounded n.e. by the Côte de Beaupré, s.w. by Notre Dame des Anges, in front by the St. Lawrence and in the rear by the township of Stoneham. It is one league broad by four leagues deep. It was granted, Dec. 31, 1635, to Robert Giffard, Sieur de Bealuport; but by that concession its depth was limited to $\frac{1}{2}$ league ; on the 31 st Mar. 1653 , the other 2 leagues were added: it is now the property of Narcisse Duchesnay, Esq. The original concessions in this scigniory were granted prior to 17.9 , and each farm, extending 3 arpents in front ly 30,44 , or 50 in depth, pays a quit rent of 40 sols and one capon for each front ar-pent--The surface of this S. embraces a variety similar to that of the neighbouring seigniories, being intersected by ridges of different heights; between the first rise of the ground and the beach of the sit. Lawrence, is a level space ranging the whole breadih of the grant, occupied as meadows, pastures, or gardens; the soil is black mould intermixed with clay or marl: on this flat there are many large globular fragments of gramite quite detached and lying loosely on the surface. Hence, penetrating farther to the interior, the soil varies considerably, almost as frequently as the inequalities of the land. On the front ritge, where the road passes, are flat ledges of rock, that in some places for a considerable extent are quite bare, and in others but very superficially covered with a layer of carth; more inward these rocks disappear and are succeeded by a dark mould, or a yellowish loam which continues to the skirts of the mountains. - In the front parts of the S. remains but little wood; in the interior, however, and on the heights, the timber is of the best quality, beech, birch, and maple.-Thiss is watered w.e. by the River Montmorenci, over which is a convenient bridge a short distance above the falls, by the $P_{\text {ctite }}$ Riviere de Beauport, and by many small streams falling into the $\mathrm{s}_{\mathrm{t}}$. Lawrence forming rivulets along the beach at low water: about two leagues from the front is situated Lake Beauport or Waterloo, and at a short distance farther on the River Jaune ; some small mountain streams flow between

## B E A

the different ridges.-The cultivated land extends about six miles from the St. Lawrence and is, for the most part, in a state of excellent tillage, producing all kinds of grain abundantly, vegetables, \&c. In various parts of the $\mathbf{S}$. are quarries of stone, that furnish an excellent supply for the new buildings in the neighbourhood and in the city-of Quebec; there are also in many places indications of veins of coal, but no attempt has yet been made to work them. A large quantity of maple sugar is made here, and indeed in all the adjoining seignories. On each side of the road along the St. Lawrence the houses in this $S$. are so thickly placed, that they seem to be the prolongation of one town; the farm-lands and garden-grounds in a most flourishing state; the orchards and occasional clumps of trees combine to render this road one of the most pleasant in the environs of Quebec. The roads communicating with the adjacent grants are enlivened by houses and gardens at short intervals from each other, throughout nearly their whole distance--On the road leading to the capital, the populous Village of Beauport is situated on a gently rising ground; it contains from 60 to 70 houses, many of them built of stone and distinguished by great neatness in their exterior appearance: the church and parsonage-house are situated on the s. side of the road, the former much more observable for solidity than for beauty or embellishment: regularity and neatness are prevalent through the whole village. This village is the residence of many families of the first respectability besides tradesmen, artisans and farmers. On the declivity of the hill, w. of the church, stands a manor-house, an ancient irregular stone building, designed originally for defence as well as residence: chiefly remarkable for the extraordinary thickness and solidity of the walls. A little to the $w$. of this house, and on the bank of the River Beauport, are the distillery and mills erected about 40 years ago by the Hon. John Young at a very great expense; they are seated on the $w$. bank of the river, over which there is a bridge leading past them; the distillery belongs at present to Mr. Racy, and the mills to the heirs of the late T. M'Callum, Esq. The buildings and other appurtenances of the distillery form a hollow square exceeding 200 yards on each side: in the middle of this square are several large stone buildings, communicating with each other, containing a still-house, malt-house, granary, ma-

## B E A

chinery, \&c. of every description for carrying on the whole process of distillation and rectifying to a very large extent. The r. Beauport is mavigable as high up as these premises for small decked vessels, which anchor along the wharf adjoining. The mill is both extensive and complete in a building three stories high; the water for working it is received from the Beauport into a large reservoir or dam above the road, whence it is conveyed to the mill ly an aqueduct.-On an eminence to the north-castward are two handsome stone dwelling-houses with gardens and summerhouses, surrounded by a wall; from their singularly beautiful situation, and the rich prospect they command over the basin of Queber and surrounding distant objects, they obtain much notice: the Hon. H. W. Ryland is proprictor of both.The Falls of the Montmorenci present the most majestic spectacle of the neighbourhood, and indeed one of the grandest in the province $I t$ the foot of the Falls is situated the large timber cstablishment, originally commenced and conducted by Messrs Usborne, Paterson, and C 10 . and now the property of Peter Piternon, Esif. It consists of a large saw-mill working 33 saws, including several of a circular shape ; also a store-house, dwellinghouses for workmen, a large and convenient wharf, and several booms for the reception of floating timber at high water. Ships anchor oposite to this establishment and are loaded with the assist. ance of scows and flat-bottomed river craft. The masts are generally floated along the sides of the ships. The handsome residence of the proprictor is seated on the summit of the hill w. of the Falls. -The late Hon. Juchereau Duch may, in 18:21. commenced a settlement immediately in the rear of the lands previously conceded below Lake Be:nport or Waterloo. All the proprictors in the new settlement formed by Mr. Duchesnay, with few exceptions, are English, scotch, and Irish; some are proprietors and merchants, others merchants only, artificers and labourers; several of the latter are employed in the king's works.-The settlers on Lake Beamport who could handle the axe and were industrious had sufficient employment as labourers, and were paid by the acre at the rate of 10 dollars, if clearing for crops, and 5 dollars for branching, felling, and logging only; other settlers not possessed of capital and who could not handle the axe, resorted to Quebec for employment.-The quantity of land cleared in these new settlements
is from 3 to 400 arpents: the expense of clearing 10 dollars each arpent, without the removal of stumps; there is no land, or lot of land, where the stumps have been removed by these settlers, an opinion being prevalent among them that such removals tend to impoverish the land; the stumps therefore are suffered to remain and decay ma-turally.-The first and principal settler on Lake Beauport is Mr. Shadgett, and the following st:atistical account of the settlement was drawn up in 1824.

Population - la;
Land in cultivation - 51 arpents.

muison."-Registric d'Intendanct, Let. B. fotio I.

Bearrinage (F.), ve St. Giles S.
Beaurivage, river, traverses the $S$. of St. Giles diagonally and near its N . angle leaves that S . and enters Lauzon, where it receives the Ruisseau Gosselin and the Rivire Rouge, and, meandering in its approach to the church of St. Anne, passes afterwards through unconceded lands and falls into the Chaudiere at the e. extremity of fief $S_{t}$ Denis. This river is in no place navigable; its fall is very considerable and its current, in spring and autumn, very powerful. In the heat of summer the waters are very low and sometimes insufficient to duive a grist-mill of one pair of stones: in the upper part of $S_{t}$. Giles $S$. the led of the river is prineipally solid rock.

Braver Brook, runs into the n. Assomequagan.

Breancour, a large river, winding beautifully in a very devious course, rises in the townships of Broughton and Leeds, whence it branches into those of Inverness, Halifax, and Ireland, where many minor streams flowing from numerous small lakes fall into it. After traversing the townships of Nelson and Somerset and the fronts of Stanfold and Bulstrode, in an easterly direction, for about $4(i$ miles, it alters its course to north-west, running about 21 miles more between Aston and Maddington and through the seigniory of Becancour, where it discharges itself into the St. Lawrence. The banks towards its source are high, steep and frequently rocky, but decrease in elevation as the $\boldsymbol{r}$. descends. The current being embarrassed by falls, rapids and shoals, is navigable only at places for canoes and loats. In the broader parts are some small islands covered with fine trees, which, viewed from the banks, display the varied hues of their foliage with pleasing effect. Within the limits of Becancour scigniory are two mills on this river. Isle Dorcal, a small low islamd, covered with underwood, divides the mouth of the Becancour into
two channels. The valley which this river waters consists generally of cultivable lands, and in many places the soil is of the first quality. The scenery on the banks of the Becancour is much admired, and near the great falls in the front of Blandford т. the river is remarkably picturesque. The fall is about 24 ft ., or, comprising the cascades above, about 60 ft ., and near it is a superb situation for a mill. In this river are the maskinongé, the doré and other excellent fish.

Becancour, seigniory, in the co. of Nicolet, is bounded, s.w. by Godefroi, n. e. ly fief lbutord and by the townships of Aston and Maddington in the rear. $2 ; 1$. in front by 2 in depth. Granted April 16. 1647, to Sicur de Becancour, and now the property of the heirs of the late Lieut. Col. Brucre, Etienne Le Blanc, Esq. and Ezekiel Hart, Esq. The lands, conceded prior to 1750 , pay a quit-rent of one livre and a capon for one arpent in front ly 30 in depth, subject to the obligation of grinding corn at the scignorial mill, the right of pre-emption, droit de retrait, and a reservation as to timber. Three-fourths of the property belonging to Mr. Le Blanc, being conceded prior to 17.9, are, consequently, held under these conditions. Much higher terms are now demanded for the unconceded lands.-Towards the St. Lawrence the $s$. is flat and of an excellent and exuberant soil, producing good hemp and flax.The timber is not much entitled to notice, the lowlands affording none but of the most inferior sorts, and the ligher situations only beech, maple, birch and a little pine.-Three-fourths of the $S$. are in cultivation, and several of the farms exhibit a high state of improvement; the best are on the St Lawrence, and on each side of the rivers Becancour and Blanche. Besides these rivers, this S . is watered by the Godefroi, Lake St. Paul and Lac aux Outardes.-The main road along the St. Lawrence crosses the $\boldsymbol{r}$. Becancour just above Isle Dorval, and two others lead up the river, one on each side. The want of proper roads has, for many years, been a great impediment to the comfort and prosperity of the inhabitants, and has materially retarded the formation of new settlements. This inconvenience has lately been in some degree obviated, and, by an act of the provincial legislature, the sum of $£ 500$ has been granted for the improvement of the road from Gentilly to Becancour. - From the front of the $S$ to Three Rivers is a ferry over the St .

## BELL

Lawrence.-Just above Isle Dorval and on the w. side of the n . Becancour was the hemp-mill, \&c. established by government and placed under the late Mr. Campbell. The church, parsonage and a few houses surrounding it, are situated on the e. bank of the Becancour: a short distance from which is a village of the Abenaqui Indians, consisting of a few ill-built wooden houses, or, more correctly speaking, hovels; the manners and occupations of these people are precisely similar to those of the village in St. François. -The parish of la Nativité de la Ste. Vierge et de st. Pierre, or Becancour parish, by virtue of a decree of the council of state, March 3, 172., which confirmed the regulation of $\mathrm{sin}^{1} 2(1,1721$, comprehends all the frontage on the s . Lawrence, extending from fief Cournoyer to fief Godefroi, including fief Dutord and all the S. of Becancour.-The following statistical account includes the whole parish, viz. the fief Dutord as well as the S. of Becancour.

 Backwheat コンin

Bellechasse, river, rises in the $S$. of $\kappa_{t}$. Michel, in the co. of Bellechasse, and, traversing the adjoining $S$. of St. Vallier to its N. e. corner, falls into the St. Lawrence.

Belle Fleur, river, falls into the Saguenay below Ha Ha bay and is 66 ft . wide. At its mouth is a valley of very good, cultivable ground,

## B E L

containing 15 or 16 acres, behind which are rocks that rise in gradations.

Belleisle, river, rises in the S. of Deschambault, and, running s., cuts off the s. E. angle of the S . of La Chevrotiere, and runs into the N . side of the St. Lawrence.-v. Deschambault, s

Belle Riviere, called by the Indians Kushpahigan, " a place which is ascended," runs into the s, f. side of lake St. John. At its mouth, called Koutspigm, the land on both sides forms a sheet of fine bright sand, but it improves gradually and rapidly as the $\boldsymbol{r}$. is ascended. For 2 miles from its mouth the soil on both sides is an alluvial Hat, extending some distance from the banks to a rising ground which keeps a parallel direction with the river; the soil on this flat is clayey, occasionally exhibiting a surface of rich loam, or vegictable mould, and produces elm, ash, fir, black and yellow birch, alders, spruce, and pine. From the 2 nd to the end of the 6 th mile, up the stream, the r . is deep and rapid, the banks occasionally bold, the land in many places excellent, and the timber is clm, spruce, black, white, and yellow birch, ash, poplar, pine, and balsam with some cedar and alder. The $\boldsymbol{r}$. then, at the lower landing of a portage, is contracted to about 10 yards; the rushing waters precipitating over rocks, the wilduess of the surrounding scenery and the cliffs, 75 ft . in height, impending over the basin and river, form a very interesting and picturesque cascade with a grood site for a mill. Here the portage is upon the N . bank and is $\frac{1}{4} \mathrm{~m}$. long, leading over a very high hill, where the land is again level to the upper landing at the head of another full of about 20 ft . high, making the difference of elevation altogether between 50 and 60 ft . Here the land is of good quality, composed of a dark argillaceous loam beneath a rich vegetable mould; the varieties of timber are red spruce, ash, balsam, black and white birch, cedar, elm, red and white pine. This description of land forms the leading feature of the country along the banks of the Belle Riv. to the R. des Aulnais, about ${ }_{4}^{5} \mathrm{~m}$. above the portage ; the general course of the R . is $\mathbf{s}$. $\mathbf{e}$. Here the Belle Riviere forms a large basin, in the centre of which is an island of excellent land. The river enters this basin at the s. e. end, with a cascade of 10 feet, falling through a narrow contraction not exceeding 2 or 3 yards at most. On the N . $E$. side of the basin the r. des Aulnais

## BEL

enters with a gentle current. For about $\mathbf{3 m}$. higher up the Belle Rivière the land is more broken and hilly, rising in some places nearly 100 feet above the bed of the river, whose general course is from the basin about s. s. w., and is not less than 30 yards wide. In the vicinity of the small streams, that flow into the main river, are some valuable beds of blue soft marl and frequently much clay forming the sides or slopes of the hills. The timber on their banks is ash, elm, fir, and balsam, and, for a few miles in the interior, spruce, pine, balsam, and birch, and the land is of arable quality.-This $\mathbf{n}$. is navigable for large batteanx for many leagues, and further on for bark canoes.

Bellevue, fief, lies between the S.S. of Vercheres and Contrecour in the co. of Vercheres. It is bounded by Cournoyer in the rear, and contains $\frac{1}{2}$ l. in front, by one 1 . in depth. Granted 3d Nov. $1\left(7^{2}\right.$, , to Sieur de Vitre, and now belongs to - Chicoine, esq. All this slip is under good cultivation but is not watered by river or stream.

Tille.-" Concession du 3me Novembre, 1672, faite par Jean Talon Intendant, au siew de l'iré, d'une demi lieue de tront, sur une lieu de profondeur, à prendre depuis les terros de Comficiar, en remuntalt vers les terres non con-cedées."- R, wistre d' Iutendance, No. 1, folio 31.

Berail, river, rises near the rear-line of the S. of Beloul, and, taking a $\mathrm{N} . \mathrm{E}$. course, is joined by a small stream from the $\mathrm{N} . \mathrm{w}$., running nearly parallel. It falls into the Richelieu opposite Isles au Curf. It works a grist and saw-mill.

Beleil, seignory, on the $\mathrm{N} . \mathrm{w}$. of the river Richelieu, in the co. of Vercheres; is bounded w. by the S of Chambly, e. by that of Cournoyer, s. by the R. St. Lawrence and N . by lands stretching to the rear of the S . of Cap St. Michel and the adjoining small fiefs, and which form an augmentation to Belœil.-2 1 . in front by 11 deep, and the augmentation is nearly of the same superficies.The principal grant was made, January 18, 1694, to Sieur Joseph Hertel and the accessory one, March 24, 1731, to Sieur de Longueuil. The Baroness de Longueuil is now proprietor of both. -The soil along the Richelieu is light, but in some places it is as rich as any in the district of Montreal. The uncleared parts afford some beech, maple and birch timber but more of spruce, fir, cedar and inferior sorts. The N. e. part is well watered by the little m. Belœil, along the banks

## B E R

of which is a range of excellent concessions; some smaller streams traverse the lower part and likcwise fall into the Richelieu. Various good roads lead through the $S$. and the main road follows the course of the r. Richelien. The houses of the settlers, many extremely well built, are dispersed through the different concessions; here and there a few together, but no village. The church and prsonage-house are near the Richelicu.-A few arpents, fit for cultivation, in the $P$. of St. Anne, are reserved in wood, which is becoming scarce.That part of the augmentation that lies at the rear of the $s$. of Varennes is settled, but the parts abutting on the rear of la Trinite and St. Michel are still covered with wood.-In this S . are 260 families. The most flourishing settlements are in the first three ranges on the $\boldsymbol{r}$. Richeliea.

Belsiamite, river, in the co. of Saguenay, falls into the gulf of St. Lawrence, a little above Bustard Bay.

Benolt, lake, lies near the r. Saguenay, from which it is approached by the portage of Pelletier bay. It is of considerable extent, of very irregular shape and is surrounded by mountains of no great height.

Bergenonnes, les, two rivers in the co. of Sa-

B E R
guenay, emptying themselves into the St. Lawrence, a few leagues below the estuary of the $\mathrm{m} . \mathrm{H}_{\mathrm{i}} \mathrm{l}$ guenay. One of these rivers has been ascended $1 \frac{1}{2}$ league, and nothing worthy of remark was discovered except some prairies, which are supposed to produce annually from 7 to 8000 bundles of hay. The land susceptible of cultivation on the banks of this river may extend from 4 to 10 arpents from the water, and is bounded by rocky mountains, whosc only ornament is moss and a few tufts of juniper. The shore of the St. Lawrence and the interior from the point "Des Grandes Bergeronnes," as far as that of "Bon Desir," 3 leagues below it, have been explored. The shore, which is at most 100 feet high, on account of its gradual ascent, offers a rich vegetative border.

Berisford, a projected township in the rear of Abercromby, in the co. of Terrebonne.

Berthier, county, in the district of Montreal, bounded N. e. by the co. of st. Maurice, s. w. by the co. of Lachenaie, N. w. by the northern boundary of the province, and s. e. by the river St. Lawrence; it includes all the islands in the St. Lawrence, nearest to the co, and in whole or in part fronting it. It comprises the sis of Berthier and its augmentation, Du Sublio or Yurk. part of Masquinongc, Fief Chicot, the sis. of Lanoraye, Dautray, Lavaltrie and their augmentations, Daillebout, De Ramsay, the T . of Brandon, part of the $\mathcal{S}$. of Lanaudicre, the re of Kildare and the islands of St. Iguate and Dupas.-This co. is 24 m . broad and its depth to the $\mathrm{N} . \mathrm{w}$. boundary of the province 240 m ., containing $5,760 \mathrm{sif}$. m ., of which 624 m . are in settlements bordering on the St. Sawrence and in the adjacent unconceded lands.-The s. extremity of the co. is in lat. $40^{\circ} 2$ n., lon. $73^{\prime \prime} 1{ }^{\prime}$ w.-This co. sends 2 members to the provincial parliament and the place of election is at the $v$. of Berthier. It contains 7 parisher, besides parts of 2 others. The face of the county, for 15 m . from the St . Lawrence, is generally low and level; it then assumes a bolder aspect and becomes uneven, and, in the vicinity of lake Maskinongé and the rear of the T . of Kildare, it is mountainous, the land, nevertheless, being more or less susceptible of cultivation as far as the exploring surveys have extended, beyond which little is known of the country; its gencral character, however, has been ascertained to be mountainous, traversed by various rivers and streams, and watered by several lakes. The surveyed and

## B E R

settled parts of this co. are abundantly watered by the rivers Chicot, Bayonne, Great and Little Chaloupe, St. Charles, Brook River, St. Joseph, St. John, L'Assomption, part of the r. Maskinongé and the t . of that name. The Bayonne and the Chaloupe spread into several branches and the $\mathbf{r}$. L'Assomption, by far the largest, winds and traverses the co. in a s. direction. Along the sides of these rivers are flourishing settlements and good roads.-This co. includes several islands in the St. Lawrence, particularly those that lie contiguous to the $\mathbf{S}$ of Berthier.-To those who are desirous of making new settlements this co. presents numcrous advantages, arising from the quality of its soil, population, agriculture, and local situation.

Benthier, river, is about 16 m . from the f . Nockinongí; it is not navigable for any distance although there is a considerable body of water.

Derthier, seigniory, in the co. of Bellechasse, has the river St. Lawrence in front, St. Vallier s. w, St. Thomas n. e., and the Rivicre du Sud in the rear. It is 2 leagues in front by as much in depth. Granted Oct. 29th, 1672, to Sieur Berthicr; it is now the property of the ladies of the General Hospital at Quebee and is held under a lease for $2!9$ years by Claude Denechaud, esq., of which 13 years are unexpired. He pays an annual rent of $60 /$ and 45 bushels of wheat. This gentleman holds half the domain by purchase and the other half belongs to Mrs. Ruelle. This seigniory is bounded on the map according to a private surwr. Its irregularity arises from a cession made

BER
by the proprietor, Jan. 22, 1728, to the seignior of Riviire du Sud-A light sandy earth, varied with yellowish loam, is the prevalent kind of soil and is highly productive of grain of all kinds; the largest proportion is under culture and an improved system of husbandry. Many of the farms are in a flourishing condition, of which those on the Rivière du Sud and the bank of the St. Lawrence are perhaps the best and most conspicuous. Along the front the ground is rather low, but it gradually rises to a small ridge about a mile from the shore, from the summit of which a very interesting prospect unfolds itself; the r. St. Lawrence, between Jl and 12 m . across, is beautifully varied hy groups of islands, lying off the w. end of Crane Island ; the w . end of the island of Orleans, with all its rich diversity of scenery, and the lofty mountains rising behind Cape Tourmente complete the distant view; the descent from the crest of the ridge down to the shore is a continuation of well cultivated fields, enriched with almost every object that can make a landscape perfect; these, with the addition of the church, and a small cluster of houses charmingly seated, almost close to the water, on the edge of a little cove called Le Trou de Berthier, when viewed from the main road, are well calculated to give a stringrer an cxalted idea of the picturesque beauty of the country. Another chain of heights, somewhat more elevated, rises between it and the rivicie du Sud, on which there is some fine timber ; in other parts of the $S$. wood is not abundant. The rivers du Sud, à la Caille and Belle Chasse provide an ample and complete irrigs:tion for every part. Near the Riviire du Sud stands the church of St. François and, at a short distance from it, a gristmill worked by a little rivulet flowing into the river. Numerous good roads intersect every part of the $S$; the main or post-road is on the bank of the St. Lawrence.-The rivers afford salmon, eels, white fish, \&c. The horses are, generally, of the Norman breed.

The parish of St. Francois is bounded s . by the first concession of Berthier, s. by the rear-line of the seigniory, e. by St. Pierre, and w. by the di-vision-line of St. Vallier. It consists of 3 concessions, each of 42 or 60 arpents in depth. The farms are 3 arpents each in breadth, and extend in depth to the rear-line of the coneessions. The land consists of a good, black, strong soil on a blue clay. The timber is not remarkable, and is a

B E R
mixture of pine, spruce, maple, birch, \&c, This parish is watered by the river du sind and by the Jyason which turn 4 mills, viz., one for grinding corn, one for sawing, one for fulling, and the 4th for carding. - On the N . side of the main road are the church, presbytery and a most convenient house called a convent or, more properly, a numnery or school for the education of girls. All the establishments of this kind are superintended by two or three nuns from the congregation of eucber.-. This parish produces a considerable number of live stock and one half of the shcep and young stock are sent for sale to the Quebec market. Amons the inhabitants enjoring case and comfort in this

B E R
parish may be particularly mentioned $M r$. Fracu lieut.-colonel of militia, whose residence is on the s. side of the r. du Sud and opposite to a hambenn. bridge; his extensive furm buildings sufficiently denote the productivencess of his farm and his comparatively numerous stock of attle, which const:of 9 horses, 28 cows, 6 oxen, 10 sherp, \&e, se
The most flourishing concessions are on the is side of the du Sud, that on the s. side, extendin: to the mountains, is still covered with wood. 'ili. cure of this parish serves also the parish of Beithier, between which and $\mathrm{S}_{\mathrm{c}}$. Francois there is a wool road of communication.

Stutistics of the Parishes of Berthiner and St. Pramois.

Berthifer, wiguiory, in the co. of Berthicr, with its fiefs and augmentations, is bounded s. w. by the S. of Dautre and augmentation, N. F. by those of Dusable or New York and Manhinmer, in the rear by the $r$. of Erandon and in front by the St. Lawrence. Granted 27th April, 1674, to M. Berthier ; the augmentation granted 31 st Dec., 1732 , to Sieur Pierre L'Etage. This property is now 2 ; 1 in front by 4 in depth, containing 13 superficial lugues, and the only part not belonsing to the Hon. James Cuthbert, a gentleman remarkable for his urbanity of manners and hospitality to strangers, is a fief comprising one half of I. le Dupas and about 2 l. in length. The majority of the concessions were $\{$ ranted prior to 175:, each measuring 3 arpents by $40,30,94$, \&c., according to local circumstances, and on the conditions usual at the time.-Thiss. contains two
parishes and the hatf of a thiri, lifanses of comcessions and an island inhabited. There are 7it lands granted; and the most populous concenamis are those on the rivers Bayonne, St. Esprit, and Eit. Cuthbert. Three-fourths of the s. are under witure and one-fourth in wood: in the first 4 leatw" of its depth the surface is level and, in the rear, precipitous and rocky. LIsle Dupas, an artior ficf, lies in this S. There are also two otice fief included within the lateral lines of the sejenimay the fief Chicot on the $N$. $E$. side of the $\begin{gathered}\text {., and the }\end{gathered}$ fief Dorvilliers on the s. $w$. side.-Iron ori, buth mountain and bog, of excellent quality, and fresstone are found in this S.. and an extensive hat .. pure yellow ochre has latcly been"discome: 1 b itr. Cuthbert, which, being calcined or he ated, assumes a beautifully red colour; the vin, from 12 to 14 inches deep, of a tematous quality, lies aitrua 6 inches under a surface of verutabic carth. On the lest cultivated ranges the wood is nearly all cleared away; but on the withers, and in the back districts, there still remains abundance of $b_{\text {cos }}$,r chenuffage or fuel with some little maple, becth, cedar, hemlock, butternut, pine, larch, clan, .ant lirch. The soil in genetal is good, except towards the rear, whore it is rocky and sterite; in
I: :
the concession called St. Cuthbert it is a tine vegetable earth, several inches deep, on a subsoil of strong clay; in that of St. Esprit a strong deep loam; in St. Pierre a rich light earth; in St. Catherine a small part is a good loam, and the rest of somewhat inferior quality; in St. Jean there is a mixed soil equal in fertility to either of the others.-In front of the St. Lawrence the land is low, especially towards the N. E. boundary, but the arable is very productive, and the remainder is a succession of very fine meadows. The other parts of the $S$. are but indifferent in quality, and some of it about the back boundary even barren and unfit for tillage.-Most of the concessions are farmed in a very good style; but those where the greatest improvement is visible are St. Cuthbert, St. Esprit and St. Pierre, where industry and careful arrangement have produced case and even affluence. Wheat is the chief production of these lands, which are fit, generally speaking, for every species of culture and produce annually about 100,000 bushels of grain. The important articles hemp (which grows spontaneously near every ruin) and flax, might be raised in almost any quantities, if the farmers would adopt a different method of cultivation. The rivers Chicot, La Chaloupe, Bayonne and the Bonaventure Creek afford a convenient and equal irrigation. About .) miles from the $v$. of Berthier, on the s. w. bank of the Bayonne, is a very copious salt spring, strongly impregnated with inflammable gas, from which the inhabitants, when Admirals Walker and Phipps respectively blocked up the St. Lawrence, made a considerable quantity of salt, and they now make use of the water to knead their bread. The water is always cold as ice, and is found cfficacious in sprains and white swellings. -Up wards of 1000 able-bodied men are furnished for the militia.-The main road by the St. Lawrence, and the different roads through the concessions, are maintained in excellent repair. The winter traverse between Berthier and Sorel is on the ice, winding among the islands; it is computed to be about 5 miles and very secure.-The bridges across the rivers are free of toll.-The domain of Berthier, on the s. w. side of the river Bayonne, contains $335^{\circ}$ arpents, approaching in goodness to the best of the district. In front of the $S$. several fine islands form the $s$. boundary of the Chenail du Nord; they are named Isles Randin, Dupas,

Castor, \&c.-In this S. is a school for girls, well attended, under the direction of the sisters of the congregation; and there are also 4 private schools for boys.-There are 3 villages built, generally of wood, Berthier, St. Cuthbert, and Pierre-ville.-The village of Berthier is pleasantly situated on the N . side of the Chenail du Nord, and forms one principal street, consisting of 125 houses placed, sometimes at long intervals, on the side of the main road to Quebec: many of them are extremely well-built and handsome. There are, exclusive of dwellings, a great many granaries and storehouses for general merchandise, it being a place of some trade, whence British manufactured goods are dispersed over the neighbouring populous seigniories, and whence also large quantities of grain are annually exported.-The population is 850.-The church that claims notice not only as being a handsome structure, but for the elegance of its interior decoration, is situated at a small distance behind the main street. This village being about mid-way between Montreal and Three Rivers, in the direct route of the public stagecoaches that have been established upon the plan of those in England between the former place and Quebec, and being also the principal intermediate post-office station, is a place of great resort und considerable traffic. At the inns travellers will always find good accommodation. On passing through the Chenail du Nord, the village with its gardens, orchards, meadows and surrounding cultivated fields, form together an agreeable and pleasing assemblage of objects, although from the flatness of the country the prospect is not marked by any of those traits of grandeur so frequently observable on the $N$. side of the St. Lawrence, descending towards Quebec. The land is here so little above the level of the river, that in the spring, when the melted snow and ice occasion a rise of the waters, it is sometimes overflowed to a considerable distance, and much damage is done to the lower parts of the houses in the village and to the goods deposited in the stores. These inundations have occasionally been so great that it has been necessary to remove large quantities of wheat from the upper stories of the granaries. - In the entire S . of Berthier, including the augmentation, there are

[^0]BI C
There are artisans and mechanics of every description, besides some carriage-makers and many masons; among them are

In the parish of Berthier all the lands are conceded, except the woodlands near the mountains where the sugaries are, and those lands are rendered unfit for cultiration by ravines, hills, rocks and sands, over which there is no road.

B I C
The p. of St. Cuthbert was erected about 31 years ago and measures three leagues in front, between Berthier and Maskinongé, on the road from Montreal to Queber, and consists of a considerable part of the S. belonging to the Hon. James Cuthbert and of three other fiefs. Its $\mathbf{E}$. boundary is the n.e. line of the county. It contains .isw families and 300 farm-lots are settled upon, most of which are three arpents in front by 30 or 40 deep. The church is on the w. side of the n . Chicot, about 2 m . in the interior. This $\mathbf{p}$. extends over : large portion of Berthier and the adjoining S. n.e.

Bic, river, in the S. of Bic, is about 20 feet wide, small and well bridged. It is not navigable for boats or even canoes and the falls prevent timber from being floated down.

Bic, seigniory, in the co. of Rimouski, bounded in front by the s. side of the s . Lawrence, N. a. by the S. of Rimouski and s.w. by a part of the S. of Truis Pistolles, called Richard Rioux.-Two leagues in breadth upon the river 1 y Q 2 in depth. -Granted with the Island of Pic, lying in front, May 8, 1675, to M. de Vitre. The island is nearly 3 m . in length by $\frac{3}{4} \mathrm{~m}$. in lreadth.-In 1774 , a dispute having arisen between the proprietors of Bic and Rimouski, it was determined ly the Court of Common Pleas that the middle of the embouchure of the river Hatté should be the boundary between the two scigniorics.-This $s$. has a few settlers on the coast solly, but none on the new road that traverses this $s$. from Trois Pistolles to Mitis. The surface of this S . is very uncven and mountainous; the high mountains of Bic and Cap l'Original are conspicuous oljects to the voyager as he sails up the St. Lawrence. The best land of this S . lies in the rear ranges and in the intervals between the rocky ridges that lie parallel with the St. Lawrence. The general

## B I Z

qualities of the land and timber are similar to those of the Rimouski portage, which lies contiguous. In the Bay of Bic small craft can lie completely land-locked and on its borders are a few settlers. The adjacent low lands produce fine hay; the high lands are rocky and the soil light and stony.

Bircit Island, v. St. Maurice, r.
Bird Mountain, c. St. Miaurice, h.
Bizard, isle, is scparated from the s. w. end of Isle Jesus by the r. des Prairies. It is nearly of an oval form, rather more than 4 m . long by 2 broad. -No records relative to this property have been preserved in the secretariat of the province; but when the present owner, Pierre Foretier, Esq., did fealty and homage on the 3 d February, 1781, he exhibited proof of its having been granted on the 24 th and 95 th of October, 1678 , to the Sieur Bizard.-It is a spot of great fertility, wholly cleared and cultivated.-A good road passes all round it, near the river $s^{t}$. Lawrence, and another crosses it about the middle: by the sides of these roads the houses are tolerably numerous but there is neither village, church, nor mill.-Population $7 \%$

## Black Bay, v. Onslow, T . <br> Black Bay, v. Lochaber Gore. <br> Black Lake, $v$. Ireland, t.

Black River, in the co. of Saguenay, runs through a very extensive and fertile tract of level land, the greater part of which is on the King's Post side of the river, and on which about 200 families might gain a comfortable subsistence.This r. falls into the N . side of the St . Lawrence, opposite Hare Island and about 20 m . above the R. Saguenay. It forms the N. $\mathbf{E}$. boundary of the S. of Mount Murray.

Brack River, 2 . Manicolagan.
Blainiflle (S.), v. Mille Isles.
Blairfindife (P. and V.), v. Longueuil, b.
Blanche, Grande Rivière, in the co. of Ottawa, rises far in the interior and, traversing the eastern quarter of Portland, runs through part of Buckingham and entering Templeton, between the 7 th and 8 th ranges, winds most singularly upon that line as far as lot No. 11. Thence it runs $s$. to the division-line between the 1 st and 2 d ranges, and, winding e. through the 2 d range, discharges itself at lot No. 3 into an arm of the Ottawa, which connects that river with one of the ponds. It is about 130 ft . wide and is navigable for bateaux in the spring about 15 miles; it then becomes rapid; its course is about 100 miles, and it is well stocked with fish.-Certain lumber dealers have destroyed the bridge, which had been built over the River Blanche, for the purpose of floating their rafts with more facility down that river into the Ottawa.

Blanche, Petite Rivifre, rises in the high lands of Buckingham, in the rear of the 5th range, winding $\mathrm{N} . \mathrm{w}$. it enters Templeton, where it winds transversely through the two front ranges, then re-entering Buckingham, at the s.w. extremity of the r., it falls into the Ottawa.

Blanche, river, copiously waters the t. of Lochaber and its 3 principal branches unite rather more than 1 m . from its junction with the Ottawa, in the centre of the front of the r.-It is about 130 ft . wide and is navigable for bateaux in spring only, for about 5 or 6 m . from its mouth. It is well stocked with fish.

Blanche, river, rises in the rear of Kildare t. and enters the 3d range of Rawdon, where it joins the n. E. branch of the Riviore Rouge.

Blandford, township, in the co. of Nicolet, is bounded s. e. loy the River Becancour, n. w. by Maddington and Gentilly, n. by Livrard, and n. E. by the aug. to Deschaillons.-This t. was erected, by letters patent, in 1823 , and contains 54,131 acres.-There are 13 ringes of concessions subdivided into 214 regular and $\% 2$ irregular lots. -The principal grantees of the crown are Louis Lagueus, Jean Langevin and charles Langevin, Espres, we-The land is Encrally level with many savannas and the soil, for the most part, grod. The soft wood cousists of fir, spruce, pine, sapin, cedar, wild cherry, ash, maple, alder, elm, white wood, walnut, \&c.-There are some hills, from 30 to $t(\mathrm{ft}$. in height, running from N. E. to $\mathrm{s} . \mathrm{w}$. This т. is watered by the Gentilly, the Little du Chene, lake Sit. Louis, lake Sit. Eustache, and many smaller lakis. In all of them there is fish.-The grant of this township being so recent there is no road, except a good winter road from Gentilly to the river Becancour, 1.5 miles in length, which traverses the township; a branch of this road, 4 or 5 miles long, leads to St. Yi.ree; there is also a similar communication between Gentilly and the rive: Becancour, running between Blandford and Maddington, from 12 to 13 miles in length -1 . 1 out $6(0)$ acres have been cleared, a saw-mill erceted, and a patent hand-mill for grinding corn, imported from England ly the principal poptions, the grat utility of which has already been ceprienced ly the inhalitants of this and the neiphouring townships. -The price of l blour is 2 s . (id. a day without board, and 1 s . o'. with board. - In inchi of the land in this $\mathbf{T}$. is, probat:ly, adapted to the cultivation of hemp and fas--There are about ifty or sixty sectlers on the crown lands along the river becancour, six leagues from the St Lawrence The principal grantecs of Plandford have expended about 250\% on the promotion of seitlements, and giving them means of communication, but all that has been thereby attained is a winter road of no use in summer. The settlements and clearinss along the river Becancour have cxtended considerably, and the only check which restrains the vouth of the neighbouring seigniories, who are in want of land to form seitlements, from coming

B L O
forward, is the want of a communication with the settlements in the scigniories.

Bleurie, river, rises in a lake in the s. of De Lery and running s. falls into Jackson's Creek, nearly opposite Isle aux Noix in the r. Richelicu.

Bleurie, seigniory, in the co. of Rouville, is bounded N.e. by the sis. of East Chambly and Monnoir, s. by the s. of subtevis, and w. by the river Richelieu.-Granted, Nov. 30, 1750, to Sieur Sabrevais de Blearie and is now the property of Gen. Christic Burton.- According tw the terms of the original grant it ought to be $\$ 3$. in front by 3 in depth; but as the grants of the adjoining seigniories are of a prior date, and as such an extent could not be taken without infringement upon bthers, it now forms a triangular space of much less superficial extent. Althoush lying generally low, with large swamps in many places, there are some tracts of very aood land and also some fine timber; the spots that we cultivated lie chiefly upon the Richelicu, and hear but a small proportion to the whole.-A new road, called the Bediord Turnpike, coossines it diagonally to the river, opposite Fori sit. Jula, has been traced and measured in the fict and is now proceeding upon. A jaint company has undertaken it and obtained an act of the provincial parliament for the purpme: when completed it will greatly enhance the value of this and the other properties through which it passes, by opening a shorter communication with Montreal and by rendering the intercourse with distant places much more eas.

Blondelle, de la, river, in the S. of Cite do Beaupre, rises near the s. bank of the re ste Anne and crosses the road to it. Paul's Bay

## BON

after being joined by a smaller stream about 3 m . from its mouth it turns a mill. It falls into the N . side of the St . Lawrence.

Blueberry Hills, in the co. of Saguenay, are between Commissioners $L$. and Bouchette L., on the Ouiatchouan communication.

Blueberry Plains, v. Beauharnois, S.
Bois Brulé (L.), $v$. Settrington, t.
Boisclere, river, rises near the source of the 1. Huron in the aug. to the S . of Lotbiniere; being joined by some little streams it enters the $S$. of Lotbiniere, and, near the rear line, joins the r. du Chene.

Borsvert, river, runs into Lake St. John, in the co. of Saguenay. This r. has been explored for about $\frac{1}{2} \mathrm{~m}$. from its mouth; it was then found too narrow and too much obstructed for farther progress. Aspin, white spruce and white birch form the principal part of the timber, and the soil consists of a mixture of clay and sand.

Bolton, township, in the co. of Staustead, on the $w$. side of lake Memphremagog, is bounded n. by Stukeley and Oxford, s. by Potton, w. by Brome.-This is one of the first townships that was laid out.-The surface is uneven and rather mountainous, being crossed diagonally by an irregular chain of heights, wherein several rivers have their sources, and which divides the waters that fall into the Yamaska and other large rivers to the northward, from those flowing into lake Memphremagog and the Mississqui in the opposite direction. The lands on the low parts are tolerably good, but those to he e. are the best and present some fine settlements, well cultivated and producing every sort of grain. On the streams that intersect this part are several corn and grist-mills.

Bonarentcre, county, in the inferior district of Gaspé, is bounded $E$. and N. by the co. of Gaspé, and consists of such part of the inferior district of

## BON

Gaspé as is included between the co. of Gaspé and the district of Quebec, including all the islands in front thereof, in whole or in part, nearest to the co., which comprises the Seigniory of Shoolbred, the Indian Village of Mission and the settlements above and below the same on the north of the river Ristigouche, the townships or settlements of Carlton, Maria, Richmond, Hamilton including Bonaventure, Cox including the town of New Carlisle, Hope including Paspebiac, La Nouvelle and Port Daniel.-The length of this co. in front is 166 m ., its greatest depth 47 , and its narrowest part, at Seminac river, is 21 , and it contains 4014 sq. m.-The centre on the r . Ristigouche is in lat. $48^{\circ} 3^{\prime}$ N., lon. $66^{\circ} 35^{\prime} \mathrm{w}$.-It sends one member to the provincial parliament and the places of election are Richmond and Hope.-The population is a mixture of Arcadians, English, Irish, Scotch and Canadians.-The extensive front of this co. stretching from Point Macquereau on the E. to the Cross near the rise of the s . branch of the r . Wagansis on the w., affords considerable advantages: the bay of Chaleurs and the r. Ristigouche, with the numerous bays and coves with which they are indented, supply numerous and productive cod-fisheries, for which the D. of Gaspé is particularly noted.-There is much land in this co. well adapted for the cultivation of grain in general and also for hemp and flax.-The land on the Bay of Chaleurs, from Port Daniel to New Richmond, a distance of more than fifty miles, extending, on an average, two miles inland, is a rich soil consisting of red clay covered with a thick coating of vegetable mould, easy of cultivation and producing the finest crops. The timber upon it is black birch and maple, interspersed with white birch of large growth, pine, spruce, fir and white cedar. On the Ristigouche are some fine spots of meadow and interval lands.-The settlers have cleared, upon an average, about 15 acres upon their lots, which consist of 100 acres upon a front of 3 acres; the old French custom. The lots in the proposed new townships are directed to be laid off in farms of 105 acres upon fronts of 20 chains, which is considered a very great improvement. Towards the front the lands are generally low and gradually rise to the high table land, that spreads over the interior of the peninsula formed by the St. Lawrence and Chaleurs Bay. From this high land descend the

## B O N

rivers that fall into the St．Lawrence and the bays of Gaspé and Chaleurs．This part of the interior，however，has never been explored；our knowledge of it is founded on the reports of In－ dians and hunters．－This co．is abundantly wa－ tered by numerous rivers：the principal are the

> Ristigouche
> Matajediad
> Great (ax-miferliace
> Little Caーが电diac
> Bomarentore
> Graat Nourelle
> Little Nourelle
> $\begin{aligned} & \text { Little Nourelle } \\ & \text { East Nouvelle }\end{aligned}$

The principal bays，\＆c．in the front are

| Port Daniel | Blatk Cint |
| :---: | :---: |

Bonsecours, seigniory, in the co. of Lotbinière, between Desplaines and Ste. Croix, is bounded in the rear by the former and contains about $1 \frac{1}{2} 1$. in breadth by 2 in depth. Granted July lst, 11:77, to Francuis Bellanger. The banks of the r. St. Lawrence are here high but the rise is gradual.-This S . is abundantly supplied with timber of good quality, and large quantities are annually felled for firewood and sent to the Quebec market.-There is scarcely any water-The S . forms part of the parish of St. Antoine.
Titlc.-"Concession du ler Juillet, 1677, faite par Jacques Douchessumux, Intendant, au Sieur F',ungois BelLuisir, des terres quii sont le long du deuve St. Laurent, du coté sud, entre celle qui appartient à la Demoiselle Gemevieve Conhara, en remontant le dit feuve, jusquaa celle de la Demoiselle veuve Amiot; contenant le tout une lieue et demie, ou environ, de front, avec deux lieues de
profondeur."-Insinations du Conseil Supéricur lcttre, B, protonde

Boxsecours, seigniory, in the co. of Richelieu, lies between the $S$. of Sorel and the river $Y$ amaska, having the $S$. of Yamaska for its $\mathrm{N} . \mathrm{E}$. boundary. Granted, August 8, 1702, to Sieur Charon and is now possessed by Mrs. Barrow. The same kind of land prevails generally through this and the adjoining seigniories, of which but a small
part can be deemed of superior quality. Much the largest proportion of this grant remains covered with natural wood; but little good timber can be found, though the inferior kinds are abundant enough.

Title:-" Concession du Sme Août, 1702, faite au Sieur Charon, par Hector de Coliere, Gouverneur, et Jean Buchart, Intendant, de deux lieues de terre ou environ de front, sur pareille profondeur, le long de la rivière I'amaska, icelle compris à prendre vis-à-vis celle accordée au Sieur René Fézérct, bourgeois de Montréal, tirant d'un côté̀ à la Seigneurie du Sieur Petit, et de l'autre aux héritiers du feu Sieur Bourchemin, avec les isles, islets, prairies et battures adjacentes."-Régistre d'Intcudunce, No. 5, folio 35.

Bouchards, isles, lie in front of the SS. of Vercheres and Contrecour, in the St. Lawrence. —Granted, Nov. 3, 1672, to Sieur Fortel.-The largest is about 5 m . long and $\frac{1}{2} \mathrm{~m}$. broad. The land, excepting some good meadow and pasture, is covered with wood and produces some very fine timber. The soil is excellent. These isles are in the $\mathbf{P}$. of St. Sulpice.

Title.-" Concession du 3me Novembre, 1672, faite par Jcun Talon, Intendant, au Sieur Fortcl, des isles contenues dans la carte figurative que le Sieur de Becancour a donnée et qui sont coltís A, reservant de disposer en faveur de qui il plaira au Roi de celles cottés B."一Régistre d'Intendunce, No. 1, folio 23 .

Boucherville (F.), v. Ste. Marguerite, s.
Boucherville, seigniory, on thes. side of the St. Lawrence, is in the co. of Chambly; bounded w. by the fief Tremblay, e. by the S. of Varennes and by Montarville in the rear. 114 arpents in front by two leagues in depth. Granted, 3d Nov. 1672, to Sieur Boucher and now belongs to Madame Boucherville.-The quality of the land, if not of the first class, is far above mediocrity, being for the most part a lightish mould inclining towards sand, and, with careful husbandry, by no means deficient in fertility. Nearly the whole is under cultivation, and generally produces very good average crops of all sorts.The wood remaining is inconsiderable in quantity and only of inferior kinds.-Two small rivulets that fall into the St. Lawrence partially water this S. towards the front, one of which works the seignorial mill. There is no stream in the lower part. - A main road leads from the village of Boucherville to the Richelieu and thence to Chambly: several other roads, well kept up, pass through all the settled parts of the S.-All the lands in this S. were conceded prior to 1759 , and have been subdivided among a great number of inheritors,

## B O U

whose mode of concession has not been uniform, nor have their conditions, rents, \&c., been equal ; for the particulars of these differences it would be necessary to examine the contracts of each fief. -The village of Boucherville is most agreeably and conveniently seated on the bank of the river St. Lawrence: it contains from 90 to 100 houses, a church and parsonage-house, a chapel and a convent or rather a residence for two or three of the sisters of the congregation of Notre Dame at Montreal, who are sent here from the chief establishment as missionaries for the education of females. There is likewise a school for boys. In this place many families, who still retain some of the titles of the ancient noblesse of the country, have fixed their residence and formed a society, in which much of the ceremony and etiquette that used to characterise the titled circles of the French nation is still observable; diminished indeed in splendour, but unabated in precision. Many of these residents have built some very good-looking houses, rendered rather conspicuous by forming a strong contrast with the major part of those belonging to the other inhabitants, which are by no means calculated to attract notice, for symmetry and proportion seem to have been as much set at defiance in their construction as regularity has been neglected in the laying out of the streets. This omission, however, detracts little or nothing from the general amenity of the situation.-The draining of Bouchercille Swamp, very properly, excited the attention and public spirit of the provincial parliament and a sum of money, sufficient for the purpose, was accordingly voted. The commissioners ascertained that it was the excess of water from the $S$. of Montarville which overflowed the swamp, and that it was impossible the water could be made to pass off through that seigniory, although it could readily do so through Varennes and Longueuil. Proper water courses therefore have been made, which, being established by law, will be of great advantage to these seigniories; lands of the best quality having been rendered useless by the sudden and frequent inundations which could not be prevented. The whole of the parts of Boucherville and Varennes (from the sources of the waters which run eastward) lying near Montarville and Belœil, are now protected against the Montarville waters, and may be cultivated with the greatest advantage; the more so because the lands are

## B O U

of the lest quality.-The parish of Boucherville comprehends all this $S$. and part of the S. of Montarville.

dites Bourdon."-Régistrc d'Int'cndunct, No. 1, folio 6 .

Bourglouis, seigniory, in the co. of Portneuf and in the rear of Pointe aux Trembles, is bounded s. w. by D'Auteuil, n. w. by Faussembault, and in the rear by waste lands. $-2 \frac{3}{4}$ leagues in front by 3 in depth. Granted, May 14, 1741, to Sieur Louis Fornel. This grant still remains in its natural state and no part is cultivated, although the soil is tolerably good, especially on the $R$. St. Anne, being principally a strong loam.-The timber is various and ash, beech, birch, pine, and maple are found of good quality and large di-mensions.-It is watered by the river Ste. Anne towards the rear and by many small streams which rise in the mountains s. of that river and fall into the Portneuf.

Tith.-"Concession du l4me May, 1741, faite par le Marquis de Branhurnuis, (iowverneur, et Gilles Mocquart, Intendant, au bicur Louis Fornt, de deux lieues et trois quarts, ou environ, de terre, sur trois lieues de profondeur, derriere la seigneurie de Newille, appartenant au Sieur Dimiluisi, bornée sur le front par la ligne qui sépare la dite serimburie de $N_{\text {raville }}$ des terres non-concedés, au Nord-est par la ligne de profondeur du lief S\% Augustin prolongée au Sud-ouest par une ligne parallele it la précédente, a prendre sur la ligne du tief de Bilair aussi profonㄹ.te, et par derrière aux terres non-concédées."-Réristre t'Iutendance, No. 9 , jolios.

Bourgmarie, East, seigniory, in the co. of Yamaska, is situated in the rear of the seigniory of Yamaska and is bounded $w$. by the river of that name, s. by St. Charles, and E. by De Guir. It extends 50 arpents in front by nearly 2 leagues in depth. Granted, Aug. 1, 1708, to Marie Fézurct and is now the property of Mrs. Barrow.This tract is what the Canadian farmers term very good land: in fact it is of rather a superior quality, and, if moderately well managed, would yield abundant crops of grain: at present about a third part of it is under cultivation. It produces a little good timber with abundance of the inferior sorts such as basswood, spruce fir, hemlock, and cedar.-Besides the navigable river Yamaska it is watered by the river David, that winds a very mazy course and turns a grist-mill; on each side of this river there is a road, and another that skirts the Yamaska.-The church has no resident curé, and the duties are performed by the minister of St. Michael de Yamaska.

Bourgmarie, West, seigniory, in the co. of Richelieu, extends from the rear of the $\mathbf{S}$. of Sorel to the r. Yamaska; bounded s. w. by Bourchemin and n. e. by Bonsecours; about 60 arpents in front and $1 \frac{1}{2} 1$. in depth.-Granted, Aug. 1, 1708, to Marie Fézéret and is now the property of Mrs. Barrow.

Titlc._" Et aussi au Sud-est de la dite rivière un autre reste de terre non-concédé d’environ soixante arpens de front sur une lieue et demie de profondeur, tirant au Sudest aw terres non-concédées, joignant au Sud-ouest le fief St. Churls, appartenant au Sieur Fézirtt, son père, et au Nord-onest la Selpnemries de Lavalliàre."—légistre des Foi et Hommagi, No. 11き, folio 64 .
Bourg Royal, $v$. Notre Dame des Anges.
Boyer, river, rises in the rear part of Lauzon S., and traversing the fiefs Martinière, Livaudicire and the augmentation to Beaumont, enters St. Michel S., and, cutting off the western angle of St . Vallièr S ., runs into the St . Lawrence nearly opposite St. Jean in the island of Orleans. This small river is about 30 paces wide and so obstructed by sand-banks, trees, \&c., that the lightest canoe cannot pass; but at its mouth it is navigable, at high water, for small vessels of 30 tons. There is a bridge of wood over this river free from toll.
Brandon, township, in the co. of Berthier, adjoins the aug. to the S. of Berthier s. $\mathbf{E}$. and is bounded $\mathrm{N} . \mathrm{w}$. by waste lands of the Crown, s. w. by the S. of De Ramsay, and n. E. by the S. of Maskinongé: its N. e. limits are irre-
gular because Lake Maskinongé being in the $S$. of that name no part of this township extends to the lake. It is in other respects similar in its dimensions to other inland townships. It has been surveyed and laid out in ranges and lots, and the greater part of the lands numbered were granted to the officers and privates of the Canadian militia who served during the last American war. Some few emigrants have been located in this $\mathbf{r}$. and 12,000 acres have been granted, under patent, to Edmund Antrobus, Esq., where at present there are no settlements: in fact there are no settlers in the т., with the exception of one English family that arrived in the spring of 1820 . The lands, up to the 9 th range, are renerally of excellent quality, and from the 9 th range towards the N. w. the surface is uneven and mountainous. - $A$ road has been made to the front line of this т. from the rear of the last concession of the $S$. of Berthier, $4 \frac{1}{2} \mathrm{~m}$. in length, under the authority of the provincial parliament. The road is sood and practicable and is 18 feet wide, except in two places where, from the great difficulties arising from granite ledges which required blasting, the road has been left 12 ft . wide. In all situations where the land was low or marshy ditcles have been made along both sides of the road. The country traversed by this road is generally hilly with easy acclivity and descent, and although many ledges of rock are to be met with the land is generally fit for cultivation. The sum of $\mathbb{E} .300$, appropriated for the making of this road, has not been sufficient to enable the commissioners to give it that degree of perfection which would be required to ensure it from early repairs and give permanency to its advantages, although it now presents a smooth and easy surface with twelve bridges of excellent and substantial structure: the bridges must be materially injured and the road much obstructed whenever passing tempests shall uproot the contiguous trees, an event of almost monthly occurrence. In addition, therefore, to the propricty of giving a greater permanent width to the road, it would be advisable and highly advantagcous to cut down the trees on both sides for the space of 25 feet at least, to add ditches where they might serve as drains, and to blast the obstructing rocks; for these improvements a further sum of $£ .150$ might be sufficient. It will be found absolutely necessary to continue this road up to the centre of the townships, as the

## B R A

only possible means of bringing it to that degree of usefulness and general benefit that must have been contemplated by the pecuniary grant of the government, especially as it ends in the midst of an impervious forest. It might be continued to Lake Maskinonge for $\mathbb{t} .300$, and, in a direct line, to the front line of the 8th range for $£^{\prime} .010$, which would be of still greater innortance.-The $\mathbf{T}$. of Brandon contains an area of $4(1,(1)(1)$ atres of excellent land; the crown and clergy reserves being among the best suited to European settlers. A portion has been located to the select and embodied militia who served during the last American war, and these grantees, or most of them, will be so cxhausted by the expenses incident to their grants. that they will not have it in their power to open and complete this road of entry, without which the labour and expense bestowed upon their lots will be lost; whereas the following idvantages must inevitably result from the completion of it. - lst. The speedy settlement of :a valuable township. $Q^{2}$. Easy access to the crown and clergy reserves. 3d. Immediate relief to the settlers already established on the N . $w$. side of the lake and now totally excluded from all communication. 4th. A great facility to the militia for the performing of their location duties and their securing to themselves the bounty of his majesty.-The timber of this T . is gencrally of good quality and many places abound with pine fit for mastiny. Maple is also abundant and leases are gramted for the purpose of making sugur from that tree.

Bras, le, river, rises in the parish of St. Gervais, and traversing the aug. to St. Michel s where it divides the 5 th and 6ith concessions, falls into the Rivière du Sud about half a league liclow a grist-mill in the S. of St. Vallier. It is about 30 paces wide in the aug. to $\mathrm{S}_{\mathrm{t}}$. Michel, and so much obstructed by sand-banks, trees, 太心., that it is not navigable even for the lightest canoe. Over thiR. is a wooden bridge free from toll.

BR 0
Bras de L'Est, river, in the S. of L'Islet, about 11 yards wide.
Bras du Ouest, river, in the t. of Tring. A road has been recently opened from this r . to Craig's Road in Leeds.
Bristol, township, in the co. of Ottawa, is between Onslow and Clarendon and is bounded in front by the $\mathbf{r}$. Ottawa. It is but thinly settled and has no regular roads.

Brome, township, in the co. of Shefford, is bounded e. by Bolton, w. by Dunham and Farnham, s. by Sutton, and n . by Shefford.-Some part of the land is good, but other parts so mountainous and rocky as to be unfit for culture; the best will produce grain of most sorts and hemp and flax might also be grown in several places. On the N. w. side, where it is rugged and high, some good timber is found and also great quantities of good bog and mountain iron-ore.-Near Lake Brome, about nine miles in circumference, a few settlements have been made, that afford a favourable specimen of what may be done upon the lands that are at all susceptible of tillage. Several small rivers fall into the lake, upon which some grist and saw-mills have been erected. The population on the L . is about 600 .

Brompton, township, in the co. of Sherbrooke, is irregular in figure, bounded N. E. and N.w.

## BRO

by the T. of Melbourne, s. by Orford, e. by the river St. Francis and w. by Ely. In the N. part and by the river the land is of a very fair quality, fit for cultivation and likely to produce good crops of wheat or other grain. The superior sorts of timber consist of elm, maple, beech, basswood and birch. The s. part is uneven, rough and rocky and, generally speaking, useless, untractable land.-It is watered by several brooks and streams and by a lake covering several lots in the tenth and eleventh ranges and spreading into Orford.-On the r. St. Francis, contiguous to Melbourne, some settlements have been formed on which are a few well-cultivated farms.The portages occasioned by the great and little Brompton Falls are on the west side of the river within this township.-The population amounts to about 255. The principal landholders are Mr. William Bernard and his associates, the original patentees.

Broughton, township, in the co. of Megantic, though somewhat mountainous contains much land of a good quality. Many of the inferior swells, if cultivated, would produce wheat and other grain. Some parts are well calculated for hemp and flax, and many other parts are tolerably good natural grass lands.-Well stocked with beech, maple, birch, elm, and other useful timber besides abundance of wood of inferior quality.Watered by several branches of the Becancour, some rivulets flowing into the Chaudière and by one or two small lakes. The N . w. half, consisting of 22,000 acres, was granted to Messrs. Jenkins and Hall and is now the property of the latter, who has made some progress in forming a settlement and in cultivating a part of it and has erected some mills. From this settlement to the S . of St . Joseph, on the Chaudière, there is a moderately good road and another, under the authority of an act of the provincial parliament, has been opened from the r. Bras du Ouest in Tring to Craig's Road in Leeds, 24 m .43 chains

## B U C

and 20 links. The whole extent has been opened 12 ft . wide and the stumps cut close to the ground; no ditches have been made at the sides nor has any considerable bridge been made. The country traversed by the road is mountainous but fit for cultivation, and in some parts excellent soil ; there are seven steep hills over which the road has been necessarily carried. The road runs mostly through the waste lands of the Crown and which are of a description to encourage settlement. The sum of $£ .300$ currency has been expended in the exploring, surveying and opening of the road ; and $\mathfrak{E} .150$ more would cover the expenses of constructing a bridge over the river Bécancour (the only considerable stream, being one chain wide) and of cutting the steep hills on the road.-The population is about 75.-Cingranted and unlocated, 12,401 acres.

Brulées Isles, v. Laczon, S.
Bruno (F.), u. Maskinonge, S.
Buckingham, township, in the co. of Ottawa, is bounded w. by Templeton, e. by Lochaber, in front by the river Ottawa and by the waste lands of the Crown in the rear.-It is divided into twelve ranges and each range into 28 lots of 25 chains 71 links in breadth by 81 chains 66 links in depth, making a superticies of $2(0)$ acres, exclusive of the ustul allowance of five per cent. for highways. The first four ranges and one-half of the fifth were surveyed and marked in the field in 1802 with the exception of the late Capt. Robertson's 2000 acres, which were laid out on either side of the river au Lièvre two years antecedent to that period. The land in Buckingham is similar to that of the neighbouring townships except from the fourth range N., when it becomes more bold and conspicuous and, rising to a greater elevation, is in various places steep and abrupt. From the fourth range s. to the borders of the Ottawa the surface is low and generally level, occasionally rising and falling in gentle slopes of fertile land, covered with large and well-grown timber. The major part of the first range is overflowed in the spring and fall

## B U C

by the rise of the Ottawa, which copiously irrigates the soil and leaves, when the waters recede, most wholesome and rich pasturage. The surveyed part of this $\mathbf{T}$. is most abundantly watered by the river au Litre and numerous inferior rivers, streams and rivulets, which meander through the т. in various directions and discharge their waters into the Ottawa and river au Lieure-N. of the basin into which the r. au Lievre discharges itself is a most propitious site for a village ; but here the lands granted to the late Cilipt. Robertson are left in an absolute state of nature. The next eligible prsition for a village is the crown reserve, No. 10 , in the second range, in the proximity of the basin, half of which has recently been located to an individual who might probably surrender his claim if proposals were made and compensation tendered. In that case the nearest crown rescrve to No .10 would be appropriated for the church and other oljects. Mr. Bigelow, the actual proprietor of a large portion of the granted lands in this T ., has commenced the crection of a saw-mill on the r au Lievre and cleared several acres adjacent. In $16: 27$ he had cleared above 400 acres; 300 of which were, the yan preceding, in crops of grass, grain, potatoes, su. He commenced his improvements in 1824, and in three years erected several houses, barns, stores, \&c. Sce, and was still animated with a laudiable desire to make additional improvements for the benefit of himself and other settlers in this and the neighbouring townships.-Of the part of this township that has been surveyed 16,910 .ure were granted under letters patent, in 1799 and 18\%3, to Capt. Robertson, Elias Hawley, Wades. Dunning and others.-The roads are bad.

Bucklant, township, in the co. of Bellechasse, is bounded n ly St. Gervais, La Mar-
tinière and Mont-à-Peine, N. w. by Jolliet and Frampton and in other places by the waste lands of the Crown.-The surface is much varied, in many places rising into considerable swells, with intervals rather swampy but the soil is in general excellent; even the wet lands are by no means of a bad quality. Every species of grain and grass, besides hemp and flax, might be produced in great abundance.-Principally timbered with beech, birch, maple, ironwood, basswood and elm with a great deal of cedar, spruce fir and black ash.Completely watered by several large streams and branches of the Etchemin and many rivulets, on nearly all of which are very eligible situations for mills and much good meadow land along their borders.-Large quantities of maple-sugar are made here by the inhabitants of St. Gervais.Only $\frac{1}{4}$ of the r. has been surveyed, which is now the property of William Holmes, Esq. of Quebec. -The rear concessions and the $\mathbf{s}$. $\mathbf{E}$. ends of the central concessions are almost, if not entirely, unfit for agricultural purposes and impracticable for roads being everywhere rocky, uneven, mountainous and barren; the hills bare of trees or verdure are in general in the form of sugar-loaves, perfectly precipitous on all sides, and so close together that the space between their bases rather resemble ravines than valleys, and are covered with rubbish, rocks, moss and decayed small stunted trees.-The highest part of this hilly country is a ridge of lofty mountains rising gradually from the $s$. angle of the $\mathbf{T}$. and pursuing a $\mathrm{N} . \mathrm{e}$. direction, after traversing the head waters of the $\mathbf{r}$. du Sud, terminates near the source of the $\mathrm{N} . \mathrm{w}$. branch of the main stream of St . John. In April, 1825, the average depth of the snow on this ridge was ascertained to be 9 feet, while in the $\mathbf{T}$. of Frampton, at its base, it was hardly 20 inches - St. Roonacs Hill is a very high mountain in the т. of Buckland about $2 \mathrm{~m} . \mathrm{N}$. e. of the Crapaudicre Mountain in the S. of Frampton, and is the highest land between the St. Lawrence and the St. John in that direction.-Population about 30.- 'nggranted and unlocated $^{2} 0,000$ acres.

## C.

Cabineau or Nambanscutcook, river, rises in Long Lake in the co. of Rimouski and taking a N. E. course enters the S. of Madawnka and s. of the portage, 3 m . from Long's, falls into Lake Temiscouata, a little below the $v$. of Kent and Strathern. It is said to be 30 ft . wide but of no great depth.

Cabinot (R.), c. Cabineau.
Cachee, river, rises near the $s$. w. corner of Lanaudiere, and traversing through the n. w. angle of Carufel joins the Little Maskinongé $r$. in the S. of Dusablé.

Cachef, river, in the $S$, of Blainville, rises s. of the Chemin du Grand St. Charles and near the adjoining $S$. of Rivière du Chene. It runs s. and falls into r. Jesus.

Cacona or Kacouna, fief, in the co. of Rimouski, fronts the St. Lawrence and is bounded n. e. by Villeray, s. by the Rivière Verte and waste lands, s. w. by the $S$. of Riviere du Loup. One eighth of this fief is in rocks and savannas; the whole is conceded and divided into 5 concessions, which diminish in number of settlements in proportion to their distance from the St. Lawrence. In the first concession the soil is light with a clay bottom, the ridge or highlands being a mixture of sand and gravel. More than one half is cultivated. The soil of the 2 d and 3 d concessions is stronger and more clayey and is traversed by a ridge of highlands susceptible of culture; the lower part in the 2 d concession presenting the appearance of a valley. Several savannas or plains are in both concessions and one-third of each is cultivated. The 4 th and 5 th concessions are more level and one-fourth of the 4 th and oneeighth of the 5 th are cultivated. The 4 th concession is divided into two parts by the Riviere Verte.-The wood on the highlands is birch and maple and in the lower parts sapin, white thorn, beech and cedar.-As there is no corn-mill, the inhabitants are obliged to carry their corn to the Rivière du Loup mill. As horses only are used in ploughing, the number of oxen is small. Onefourth of all the agricultural produce and onethird of the cloth and linen are sold: cloth at $2 s$. $3 s .6 d$. and $5 s$. per yard and linen at $1 s .6 d$. to $1 s .8 d$. Every farmer on an average makes annually 300 lbs . of butter, of which two thirds are sold.

Callemant, Calumet.
Calumet, Calamy or Callemant, river, in the co. of Two Mountains. The source of this $n$. is unexplored, but it descends in two streams írom the unsurveyed part of Grenville; one called the Calumet, the other its east branch: they form a junction about the centre of the fourth range in Grenville, whence their united waters are discharged into the r. Ottawa at lot 16 in the second range. Its general course is $s$., the eastern arm running nearly parallel to the river Kingham. It is about 60 or 70 'it. wide and very rapid, and is navigable to a short distance only. It runs about 40 m . and makes tine falls for mills, and near it are quarries said to be of marble. It abounds with fish.

Calvaire, lake, in the S . of Desmaure, is about $1_{2}^{1} \mathrm{~m}$. long and lies between the Riviere du ('ip Rouge and the St. Lawrence. It will always obtain a large share of admiration when viewed from the surrounding heights, where it presents a rich and diversified prospect, the margin being charmingly varied by cultivated lands, here and there broken by small woods and numerous clumps of trees, rising by gradations from the water's edge one above the other. This pretty little lake discharges itself by a small stream into the St. Lawrence 1 m . e. of the church of St. Augustine.

Camouraska, v. Kamouraska.
Camus, river, in the S. of Berthier and co. of

Bellechasse. The Ruisseau Camus rises behind the highlands in the front of the S . and runs $\mathrm{N} . \mathrm{w}$., then turning suddenly to the N . it empties itself into Ance de Berthier, on the $s$. shore of the St. Lawrence.

Canals.-The advantages to agriculture and commerce to be derived from the facilities offered by artificial water communications are duly appreciated by the legislature of this province, and various sums of money have been voted and applied to this object with a liberality worthy of the important results that may be expected to flow from such useful labours. Of these sums, amounting to $£ 180,000$, about $£ 130,000$ have been expended in the progress and completion of the Lachine Canal, a fact that must prove more honourable to the public spirit of the colonial government than the most just and eloquent eulogium. The innumerable rivers of Lower Canada will facilitate, and their numerous natural and impracticable obstructions will render necessary, a large number of camals, in order to develop the almost infinite agricultural resources of this increasing colony. The experience of the past proves that these necessary labours have been successfully begun ; and, as the prosperity and population of the country increase, these enterprising efforts will become more numerous and extended. The rivers and lakes will ultimately connect the remotest townships, and convey their produce into the broad bosom of the St. Lawrence. Some canals have been completed, some are in progress, and many are in contemplation.

The Lachine Canal has been completed under an act, passed in the lst George IV., for making a navigable canal from the neighbourhood of Montreal to the parish of Lachine. The commencement of this canal, at first a private undertaking, will be ever memorable in the commercial history of the province ; for though it is not quite eight miles in extent, its advantages are of the first importance to the navigation of the St. Lawrence, on which the prosperity of Upper and Lower Canada most particularly depends. By means of this canal two very great obstructions in the river are avoided, sault St. Louis and Sault Norman ; and had the canal been continued a little farther to the $\mathrm{N} . \mathrm{e}$., so as to have entered the St. Lawrence below the current of St. Mary, its benefits to the navigation would have been still greater. As it is, however, there can be no doubt of its immense utility, and,
notwithstanding the enormous sum expended in its completion, its eventual profit. Although the cost has far exceeded the original expectation, yet the execution is such as to do credit to those who effected the several departments of the work. The rock and other excavations are well and neatly done, and the locks and bridges are handsome and made with a view to durability, being superior to any in America and inferior to none in Europe. It will hardly be credited, although strictly true, that the gunpowder expended upon the rock excavation by the contractors cost them above 10,000 dollars.-The length of the river basin and of the aljoining wharf is about 350 yards: the latter is formed of stout timber placed obliquely on end, well tied behind and carefully filled up with earth, but it is impossible to speak decisively about the effects of its pressure until it is tried. The fences have been a source of heavy but unavoidable expense; therefore a railing of cedar, on a more durable plan, being thought the most economical, the commissioners have erected a very strong and neat railing of that material along the $\mathrm{N} . \mathrm{w}$. side, from the banks above the canal wharf up to the bridge of the lower Lachine road, which, besides being ornamental, will protect the canal and allow of an excellent public walk in summer. Trees are here planted, which, if they succeed, will add to the appearance and form a shelter from the sun; these trees have been procured and planted by means of voluntary contribution. As repairs will always be occasionally necessary, the canal commissioners still continue their services, which however are given gratuitously. These repairs are indispensable from causes produced by the severity of the climate, which no artificial means can thoroughly guard against ; but a great eventual saving will arise from immediate repairs being made when needful. These repairs, however, will be chiefly confined, for many years, Ist, to the holes caused by the percolation of the canal water through the banks where they are raised above the level of the solid ground: 2 d , to the tunnels which convey under the bed of the canal the natural streams; for when the thaw is sudden these tunnels cannot at once discharge the accumulation of water thereby produced, and a breach may be the consequence if they are not properly attended to. 3d, The passage of the Little Lake or river Saint Pierre, across the course of the canal, cannot be avoided and must, every spring, be a

## CANAS.

source of danger to the banks and of expense in their repairs, which no art can thoroughly guard against, as no tunnel for its passige under the canal could possibly have been made of a magnitude to deliver, at once, the quantity of water which collects in the low grounds between the (otes Saint Pierre and Saint Paul at the breaking up of the winter. This tunnel is 5 ft . in diameter. -The eventual profit that will arise from this spirited enterprise is placed beyond doubt by the following account of the progressive increase of the tolls which have been annually received

Abstract of the act passed (Mar. 14, 1829) to establish certain rates, tolls and duties on the Lachine Canal, and to provide for the care and management of the said canal.
"1. From and after the passing of this act the following rates, tolls, Ne. shall be prayable on boats, Ne. parsing through the canal; which said rates shall be paid for the whole dintance between Lachine and IIontreal in incending or deremding the said canal, and as in proportion for each and wery mile of the said distance that any such boat, \&c., or merchandise or effects, may pats or be conveged upon the said canal:

" 6 . Commissioners not entitled to any remuneration for their services.
" 7 . Commisiomers declared a body corporate. A summons served on the serretary, in any action against them, sufficient to compel them to appear
" $\%$. 'ommissioners may employ lock-kerpers and other assistants, and allow a reasonable remuneration for their services.
"9. Rates and duties to be paid to such perroms, and at such places near the canal and in such mamer, as commiswomers may direct and appoint.
" 10. In cases of damage done to the canal or to the milges, ke. by any boat, Xe., such boat may be seized and Wetained until the jnjury is repaired.
"11. (omminsioners authorized, where the province ought by law or equity to bear the charge of makins, \&cfences along the canal, to aste with the proprietors of land, on whirh the fences are, to allow a reasomatle indeminty for the trouble of making and kepping the same in repair.
" $1:$. Trolls to be paid over quarterly to the receiver. gencral.
"13. Salary allowed to secretary, treasurer and toll. collector, not exceeding zonl
" 1. Sceretary, treasurer and toll-collector, lefore entering into the duties of bis said ofice, to conter into bond to his majerty for the taithful discharge of his duty.
"1.5. Coniminioner to render an account to the legislature.
" 1 it. Continuance of this act not to exeed Dec. 31 , 14.31."

Chambly Canal.-Commissioners have been chosen to carry into effect this important undertaking, so necessary to the general interests of the province, and particularly to all the settlements near the r . Richelicu and the districts of Quebec and Three Rivers. Its line of communication is to run along the Richelieu from the Chmany basin to the village of st. John in the barony of Longrueuil, a distance of 11 miles. A sum of money has been appropriated for this purpose by a vote of the Assembly, Mar. 2.2, lise?, and it was then decreed that the undertakine should be commenced as soon as the Lachine C'amal was completed. That enterprise was finished in autumn, 1820; but no steps have as yet been taken to open the Chambly Canal, excepting those of surveying and tracing out the line.-It is supposed that the objects of this canal might be attained by a much shorter line and at a much lens expense than what will be required by the present plan; and it has leen suggested, that if some improvements were made in the navigation of the r. Richelieu, a canal of five miles only would be sufficient. The improvements surgested to be made in the $\mathbf{r}$. $\mathrm{S}_{\mathrm{t}}$. John, or Richelieu, have been thus detuiled:-"Commencing at the rapids of St. John, a channel $\mathbf{6 0}$ or 80 feet wide for crafts drawing 4 or is fect water could be made over these rapids by simply forming a dyke the length

## C A N

of the rapids. A bank answering for a towing-path might be made of the stones and rocks in the rapids, at the head of which an elbow might be carried out the distance required to throw into that channel a sufficient quantity of water. From the foot of these rapids to the head of Chambly rapids, there is no other obstruction than a few scattered rocks at the Mille-roches and a shallow place at St. Thérìse, each about six acres in length, and both of which could be, at a trifling expense, made navigable for a vessel drawing four or five feet of water; the first by removing the rocks, the second by the junction of the two islands at St. Thérèse. By this junction, the great body of water which now passes over to the $\mathbf{e}$. between the two islands would be retained in the $w$. channel, which would, it is believed, give a sufficient depth of water. Should, however, the junction of the islands not raise the waier sufficiently, by putting out an clbow from the head of the main island towards the east, as much water as could be required might be brought into the west channel, which channel, being confined to a narrow space by the island alluded to above and the main land, could be raised to any height, as it would altogether depend on the length of the elbow.-These improvenents, as simple as they may appear to some, and which it is believed would not cost above 5 or $£ 6000$, would undoubtedly give a navigable river from St. John to the head of Chambly rapids, a distance of about seven miles out of eleven, leaving only between four or five miles of obstruction, viz., the length of Chambly rapids. From the head of Chambly rapids to the basin, the river may perhaps offer but few advantages. Should it therefore be found necessary to cut through the land there, there is a fine head of water; and, it is said, by going back a few acres, there is a ravine rumning through a barren part of this section of the country, which would offer many advantages to such an undertaking. At all events, should it be found necessary to avoid both ravine and river at these rapids, it would be a work of minor consequence when compared with the Herculean task proposed by Mr. Price's fourteen miles plan, which, besides the additional expense of making a canal seven miles longer than necessary, would involve the undertaking in an unavoidable and enormous expense for the purchase of the land, for the making and keeping in repair the numberless bridges
that would be required and the fences that would be necessary on each side of the canal."

Grentille Military Canal extends from the ba$\sin$ to Greece's Point, in the т. of Chatham, more than 6 miles. It was opened by the two companies of the royal staff corps belonging to the military establishment immediately contiguous to Grenville basin. This important work was conducted under the immediate superintendence and direction of Major Duvernet. This officer having sailed for England with his company, the command at the Grenville station devolved upon Captain Read. The canal is cut through the solid rock in various parts, forming an aggregate length of about 4 miles of rock excavation, to an extreme depth, in some parts, of 30 feet. Its average width at bottom is from 25 to 30 feet, and at top from 35 to 40 , and the depth of water is computed at from 5 to 6 feet. The object of the Grenville Canal is to connect the navigable sections of the Ottawa River interrupted by the impetuous Long Sault rapid and other inferior rapids below it, especially that in front of Mr. M•Robb's property, at the foot of which he has very judiciously laid out a village, now called Davis Village.

The Cascade Canal, in the S. of Soulange, has been made in order to avoid the danger of passing the cascades at the entrance of the St. Lawrence into lake St. Louis. It is usually called the Military Canal, and is constructed across a point of land through which all boats now make their way to the locks at Le Buisson. It is 500 yards in length and is furnished with the necessary locks. On each side, land 100 ft . wide has been relinquished by the proprietors of Soulange and Vaudreuil, which is reserved for public purposes. At the entrance to the canal from lake $\mathrm{S}_{\mathrm{t}}$. Louis is a guard-house, where a small party of military is always stationed.

## Cananshing (L.), v. O Cananshing.

Canards, aux, or au Canead, river, is near the e. extremity of the S. of Mount Murray. On this little r. mills might be erected. It falls into the St. Lawrence and its mouth forms a safe harbour for boats and small craft. The battures opposite extend about 8 or 9 m . and, being without any useful vegetable production, they continue to be the resort of immense collections of water-fowl. -At Echaulfaud aux Basques, near its mouth, are large masses of iron ore in wide veins.

Cap Brule, in Cote de Beaupré, S.
Cap de l' Abatis, in Cote de Beaupré, S.
Cap de la Gribanne, in Cote de Beaupré, S.
Cap de la Magdelanes, seigniory, in the co. of Champlain, is bounded s. w. by the river St . Maurice, N. e. by the S . of Champlain and its augmentation and hy the St. Lawrence in front. -The breadth is 2 leagues and its depth 20 , extending $x$. into the interior.-Granted Mar. 20, 1651, to the order of Jesuits and has now devolved to the crown.-It contains 17,767 arpents in concession and the sreater part of the lands conceded, as well as of the lands unconceded, are not susceptible of cultivation. There is, however, one concession of 40 arpents wholly settled, and one of 20 arpents partly settled with $\overline{5}$ or 6 houses on the Si. Maurice, below the Forges. A small number of the non-conceded lands have been enclosed, but there is no road to them. 800 superficial arpents were conceded prior to 1759 , at the rent of an copre per arpent, at which rent they still continue.-The few young persons who take new lands prefer taking them near their relatives or friends, however inferior in quality they may be; and the soil of almost the whole of this $\mathbf{S}$. is a white sand. - The timber towards the interior has attained a very fine growth.-Compared with the great extent of the grant, a small portion only is under cultivation, which lies principally on the St Lawrence and on the St. Maurice almost up to the Falls of Gabelle. The settlements, however, are not remarkable for very good management ; the wheat and other crops, therefore, are but indifferent on land that might be made to yield abundantly; for the situation of the farms on the banks of the rivers and the quality of the soil are both favourable to agricultural im-provement.-The Quebec road passes, almost close to the St. Lawrence, by the ferry over the St. Maurice to the town of Three Rivers. This ferry, by which the established post-road is continued, is nearly 2 m . across. The price demanded from each person is $2 s .6 d$. and in like proportion for horses and ca riag.s; but about $1 \frac{1}{2} \mathrm{~m}$. higher up;

## C A P

the river there is another, where the charge is only $3 d$. each person, and $1 s .3 d$. for a horse and carriage. By the side of this road stands the church with its presbytery.-At the mouth of the St. Maurice are the islands Bellerive, au Cochon, St. Christophe, La Croix and L'Abri; they are low and almost covered with wood of the inferior sorts, but afford some very good grazing land. It was once in contemplation to throw a bridge across this river opposite to Isle $\mathrm{S}_{\mathrm{t}}$. Christophe: it would prove of great public utility and, on a route so much frequented, such an undertaking could hardly fail of being profit-able.-Between Isle Belterive and the main land there is a very good situation for laying up river craft during the winter, where they remain secure in about 8 feet water, and ese:pe injury from the breaking up of the ice in the spring.

Car Mallarid, v. Cote de Beaupre.
Cap Tourmente, r . Cote de Beaupre.
Cap Rosier, in the Gulf of St. Lawrence, about midway between Griffin's Cove and the extreme point of Cape Gaspé, at the entrance of Gaspé Bay.-Population 54; keel boats 4; annual produce of potatoes 75 bushels; agricultural stock 1 horse, 1 ox and 3 cows.

Cap Rouge, river, rises in the highlands near the rear boundaries of the S . of Desmaure. In the serpentine course it describes in passing diagonally through the S . it receives many small streams from the right and left; its banks are elevated, but the eminence is attained by a very gradual slope, or it may be said more correctly, that it flows through a narrow valley abounding in natural beauties of the most picturesque kind, and possessing all the charms that can be looked for in the most skilful landscape composition. This m. enters the $s$. of Gaudarville and gradually bending s. falls into the St . Lawrence near the s.w. angle of that seigniory. Its course in

CA P
general is eminently beautiful and picturesque. In Gaudarville it feels the attraction of the ebb tide of the St. Lawrence so strongly, that at low water its bed is nearly dry, and can be crossed with the utmost ease without the assistance of the ferry-boat; but at high water boats of considerable burthen can enter it and ascend as high as the mill, about $\frac{3}{4}$ of a mile from the St. Lawrence. At its mouth is an established ferry, where boats and scows are always ready though not alwars necessary.

Caps, des, river, in the $S$. of Blainville and Lachenaye, rises in the concession Bouchetteville and runs into the St . Lawrence opposite the most eastward island of the cluster called The Pilgrims.

Cap St. Glaude, rivulet, in the S. of Vincennes, rises in the plains that extend from the $\mathbf{S}$. of Montapeine and discharges itself into the St. Lawrence. It works five mills; one for carding, one for fulling, another for sawing and two for grinding corn. Near its mouth is a fall of about 150 ft ., at the bottom of which is one of the cornmills.

Cap St. Ignace, fief, in the co. of l'Islet, is bounded $\mathrm{N} . \mathrm{E}$. by the S . of Vincelot, N. w. by Gagné fief, in the rear by the $\mathbf{S}$. of Ste. Claire and in front by the St. Lawrence. It is $\frac{1}{2}$ l. in front by 1 league in depth and is the property of Mons. Vincelot. No document relating to this grant has been found among the records lodged in the surveyor-general's office.-Well watered by the Bras St. Nicholas, which runs transversely through the middle of the fief.-Very little timber remains.- 3 concessions have been granted, and 2 of them are settled.-This fief is mountainous and rocky, except in the front concession which, however, is not entirely without rocky places and hillocks. Some rushes that grow here are good food for cattle, and without which the horses could not be supported. The horses are generally of the Norman breed and with little or no improvement. Orchards are more numerous here than in other parts of the district. All the inhabitants living $w$. of the church carry their corn for grinding to the Moulin à Cardé in the S . of St. Thomas, which is a loss to the seignior of Cap St. Ignace.-The parish of St. Ignace comprehends the fief of that name with Goose and Crane Islands (Isles aux Oies and aux Grues), which are the property of Mr. M'Pherson and contain several settlements, which with the salt

## CAP

marshes are very valuable; the proprietor has an extensive farming establishment and rears a large stock of cattle : the excellent butter which he sends to the Quebec market in considerable quantities is sold for $1 d$. or $2 d$. per lb . higher than any other.

\section*{Statistics of the Parish of St. Ignace, including Goose and Cranc Islands. <br> Population 1,805| Churches, R.C. 1 | Presbyteries <br> | Anntul Agricultural Produce. |  |  |  |  |  |

Cap St. Michel or La Trinite, seigniory, in the co. of Vercheres, joins Varennes s. w., the fief Guillaudiere n. m. and is bounded by the augmentation to Belreil in the rear and by the St. Lawrence in front. One league in front by $1 \frac{1}{2} 1$. in depth.-Granted, 3 d Nov., 1672 , to Mons. de St. Michel and is now the property of Jacques Le Moine Martigny, Esq.-A diversity of soil prevails, the greater part of which is good, being either a fine black or a grayish mould that proves fertile when tolerably well managed. The whole $\mathbf{S}$. is under cultivation.-The rivers St. Charles and Notre Dame run across it, and are sufficiently deep to be navigable for boats of burden.-The uncleared lands, scarcely half a league square, afford hardly any other wood than the spruce fir, a species of very trifling value.-On the rivers are two corn-mills and one saw-mill.-Part of the S . is divided into four small fiefs, held by Messrs. Delette, Beaubien, Gautier and Mondelette, containing together $\frac{1}{7}$ league in breadth by 12 1. deep.-Two islands in the St. Lawrence, lying in front of this grant, are appendages to it ; each nearly $\frac{3}{4} \mathrm{~m}$. long and from 8 to 10 arpents broad; cattle are sometimes pastured on them.

Title.-_LLe titre de cette Concession n'a pas itti trouve dans le Secrétariat. Par un acte de Foi et Hommage, rendu le 3me Aôt, 1676, devant Mr. Duchesncau, alors Intendant, il paroit que ce fief doit avoir une liene de front sur une lieue et demie de profondeur, situr sur le fleuve St. Laurent, entre les concessions de Mr. de Varcmes et Laurcnt Borncy, Sieur de Grandmaison, avec deux petites islés vis-it-vin de sa devanture."-Régistre des Foi et Hommage, No. 27, foluo 182, le 10 me Féarír, 1'781.

s. w. of ditto. - About 12,000 arpents are in a state of cultivation and about 9,000 unconceded, the greatest part of which is fit for agricultural improvement.-There is a superb quarry of limestone; also a species of potter's earth fit for paint-ing.-The cattle is generally good, and the inhabitants carefully attend to its improvement.The fief Muric-4me is in this S. to the N. E. of the r. Maskinongé and enjoys the right of banalité over the entire S. The rear joins the S. of Lanaudic̀re. In Carufel are one private school, 5 saw-mills, many limekilns, 3 blacksmiths, many carpenters and wheelwrights and 10 or 12 joiners.-This S. produces from 20 to 25,000 bushels of wheat, 15,000 bushels of oats and as much peas and barley.
Tith.--" Concession du mois de Mars, 170.5, faite par Philippe di Rigaud, Gouverneur, et Framois de Brauhtrnois, Lutendant, au Sieur Jean Sicard, Sieur de Carufl, de lespace de terre qui rete dans la riviere de Masquinongé, dans le lac St. P'irrre, depuis cille qui a d'té cidevant accordée au Sieur Lcgardcur, jusqu'au premier sault de la dite rivière, ce qui contient deux lieues ou environ de front sur pareille profondeur."-Régisire d'Intendance, No. 5, fulio 40. Caliers d' Intend. more authentic.

## Cascade Canal, v. Canals.

Cascades, des (V.), v. Soulange, S.
Cascapediac (G.), river, in the co. of Bonaventure, rises in the rear of the $\mathbf{T}$. of Richmond and traversing over a great part of that r., enters the adjoining t. of Maria near its s. e. angle, where it falls into the bay of Cascapediac and forms an excellent harbour for vessels of every size.

Cascapediac (L.), river, in the co. of Bonaventure, rises in the rear of the T . of Hamilton and running s. w. enters the T. of Richmond, where it empties itself into Cascapediac bay about 6 miles from the mouth of the Greater Cascapediac.

Casimaquagan, river, runs from the e. into the r. Matapediac, affording at its mouth a favourable site for a mill and an excellent situation for settlers. It is said to be navigable for many miles and abounds with valuable pineries.

Cas'or, island, at the N. w. end of l. St. Peter and at the mouth of the $\mathbf{r}$. Bayonne, is between Randin and Isle Dupas.

Casupscull or Cosurscoul, river, in the co. of Rimouski, rises in a L . towards the s. boundary of the co. It runs s. w. for the greater part of its course, then taking a sudden turn more to the $w$. soon enters the $\boldsymbol{E}$. side of the Matapediac, and is the largest stream that empties itself into that river being navigable for 50 or 60 miles.

## C A X

Cat, river, so called in Algonquin, meaning Pole Cat, is a small stream running into the western bank of the St. Maurice above the Upper Matawin island.

Catherine's Town, v. Beauharnois, S.
Caudie, Grande, river, rises in a lake at the N. $\mathbf{E}$. angle of the $\mathbf{T}$. of Dorset, running s. to near the centre it takes a sudden turn $E$. and in the 5 th range leaves the $\mathbf{T}$. for that of Shenley, where it falls into the r. Chaudiere near the s. angle of that $\mathbf{T}$.

Cawood, a projected township in the co. of Ottawa, is bounded e. by Shorn, w. by Mansfield, s. by Litchfield and N . by waste lands of the crown.

Caxron, township, in the co. of St. Maurice, is bounded s. w. by lands belonging to the Forges of St. Maurice, s. by St. Etienne and Dumontier, s. w. by Hunter's 'Town and N . by waste lands of the crown.-Here are only a few settlers, although a large number of acres were granted to the officers and privates of the Canadian militia who served during the last American war. The т. is abundantly watered by numerous rivers and lakes, among which are Lac O Cananshing and Lac des Perchaudes.-As the value of the townships is so much accelerated and increased by the formation of new roads, the anxiety of the legislature of this province ought, in that respect, to be duly appreciated. The following extract from the report of the commissioners appointed to open a road of communication from the old settlements of $\mathrm{Ya}_{\mathrm{a}}$ machiche to the r . of Caxton will prove that such undertakings are easily executed, and will afford some interesting information relative to this valuable though unsettled township.-The report is dated Feb. 1, $1830:$-"We proceeded to open and complete the said road by day labour. Beginning on the road of Picdure, about 12 acres from the River du Loup, we opened a new road across the concession of Picdure, beginning in the division line of one Gilmet and Lachance, and continued Northward to the next concession of Bellechasse, distance 24 arpents. The land in this route is low with some hills intervening and thickly wooded ; one arpent of which was causewayed, five high hills reduced and made accessible, and ten bridges built none of which above 18 ft . long; widening and completing the road on the concession of Bellechasse (which had been opened) to the land of one Callier, distance about 6 arpents.

## C H A

From Bellechasse, on the line of Callier's land, toward St. Joseph concession, a new road is opened and completely finished to the concession road of St. Joseph, a distance of 52 arpents, through a thickly wooded country : in the course of this road nine bridges were built, none of them above 18 ft . long; five hills reduced and made accessible and 23 arpents of road causewayed. Arriving at it. Joseph at lot No. 48, the road, which was merely opened to the T , we completed by widening and extracting all the stumps to lot No. 69 , at the township line, distance 42 arpents, in which eight bridges were erected, none above 18 ft ; six steep hills reduced and made easy of access and nearly one arpent of savanna causewayed, making in all about $4 \frac{1}{2}$ miles. The whole of the road is 18 ft . wide and where necessary ditched; the stumps are every where extracted and the whole line has a beautiful appearance. Came to the place of beginning and continued the road to the bank of the River du Loup, below all the chutes and rapids; thus giving a communication from the township of Caxton to the St. Lawrence by the river du Loup, which from this place is navigable for boats and rafts, and also a communication to Machiche by the roads of St. Joseph, Bellechasse and Picdure. . . . . A road was opened through the Ist and $\mathrm{Un}^{2}$ ranges of the $\mathbf{T}$. to the distance of 52 acres, and also across the first six ranges and between the 3rd and 4th ranges to lot No. $1!$; and another road along the front line of the $\tau$. from the 2 nd to the 5 th range, making in all, including the road first mentioned, 15 miles. Throughout the whole extent the land was found to be of the best quality, the wood consisting of maple, lirch, beech, ash, Ne. In some places the land is low, where the woods are cedar, spruce, \&c. These places required to be causewayed or ditched, which has been partially done About $£ 100$ would finish all the roads in this $T$. We believe that with $\{150$ we might be able to go over the whole line, and complete what yet remains to be done on the 6 th and 7 th ranges; and also to open a road between the 5 th and 6 th ranges to the Great Lake, which would open a large tract of very fine land."

Cedres, des (V.), v Soulange, S.
Chaffers Brook rises in two streams near the s. line of Inverness and towards the centre of that r. joins the r. Clyde.

Chaleurs Bay may be called an arm of the

## C HA

gulf of St. Lawrence and is bounded on the N . by the counties of Giasp and Bonaventure and on the $s$ by New Brunswick. The entire n. coast of this extensive bay from the gulf to the river Ristigouche, which discharges itself into the $w$. extremity, is in Lower C'anada.-This bay extends from E . to $\mathbf{w}$. about 88 m . and its greatest width is alout 20 . The navigation of the bay is perfectly safe and the anchorage, every where, so good that neither ship nor fishing-boat was ever known to be lost. Storms are not more frequent in this bay than at Quelse, and, although they occur here oftener than at Peres and in the bay of Gaspe, the air is more humid and colder; about the same difference exists between the air of Quebec and Montreal.

Chalotpe, G. and L., two rivers that rise in the S . of Lamorave and its augmentation. The greater river rises in two branches $w$. of the church of St. Elizabeth, and after recciving the Little Chaloupe, increased by Sit. Charles Brook, it takes in the s.w. branch and enters the S. of Berthier, where it falls into the St. Lawrence nearly 1 m . above the $v$. of Berthier opposite Isle Randin

Chambly, county, in the district of Montreal, is bounded $n$. w. by the river St. Lawrence; s. m . by the river Richelieu or Chambly, together with all the islands in the rivers it. Lawrence and Richelieu nearest to the ro., and in wbole or in part fronting it ; s. w. by the $\times$. E . boundaries of the seigniories of Laprairie and De Lery, and N. E. by the co. of Verchires; it comprehends the seigniories of Boucherville, Montarville, Longucuil, fief Tremblay, Chambly West and the barony of Longueuil.- It is 33 m . long and averages in breadth $11{ }_{i}^{1} \mathrm{~m}$., and contains 211 sq . miles. It $=$ centre is in lat. $4 \boldsymbol{j}^{\prime \prime} 29,30$, lon. $73^{\circ} 1730^{\circ}$ The population is $12,9 \% 2$, of which tive Canadians and the remainder English, Irish, Scotch, and Amcricans - It contains i parishes and part of the $\mathbf{P}$. of Blairfindie, $\pm$ villages and the town of Dorchester (cronconsly inserted in the co. of Aralif). This co. sends two members to the provincial assembly, and the place of clection is Longueuil.-In agricultural produce and population this co. vies with most in the province, and the quality of its soil is inferior to none. The surface in general is extromely level with the exception of the mountain of Boucherville, remarkable for its conspicuous appearance and height: on its summit are two beautiful small

## C H A

lakes and a corn and saw-mill at the source of a small river that runs s . w . and falls into the r . Montreal about 1 m . w. of Chambly Basin: both these rivers turn several corn-mills. The little r. Montreal winds prettily through the co. in an e. direction and falls into Chambly Basin. Besides these rivers this co. is abundantly watered by the n. Richelieu and the beautiful Basin of Chambly, by which it is bounded on the E. and N. E.-Numerous roads traverse this co. in every direction: the principal are those along the rivers, the Boucherville road, the Chemin à la Grande Savanne and the Laprairic road.-Almost the whole of this co. presents good and flourishing settlements and lands in a good state of cultivation.

Chambly (R.), v. Richelieu, R .
Chambly, East, and Chambly, West, in the cos. of Rouville and Chambly divided from each other by the n. Richelieu.-The extent of each seigniory is 3 leagues in length by one league in depth; and both were included in one grant to M. de Chambly, Oct. 29, 1672.

## CHA

Chambly, East, is in the co. of Rouville, and is bounded s. E. by Monnoir ; N. e. by Rouville and Beloil ; s. w. by the barony of Longueuil.The land, nearly level, is generally equal in quality to any in the D . of Montreal and is, nearly all, under a very favourable state of cultivation.-This part of the original grant now belongs to the heirs of the late Lieut.-col. de Salaberry, C. B. and to Lieut.-col. de Rouville.-The r. Richelieu or Chambly, whose entire course in this $\mathbf{S}$. is navigable, by passing through the original grant, dividing it into E . and w ., affords many advantages.

Chambly, West, in the co. of Chambly, is bounded n.w. by the seigniories of Longueuil and Montarville and s.w. by the barony of Longueuil: it now belongs to Samuel Hat and Henry Bender, Esqs.-There are no lands unconceded, and twothirds were granted prior to the conquest. The concessions extend 3 arpents by 30 and the rent is 1 sol tournois and a quart of wheat.-The greater part of the youths in this parish are desirous of forming new settlements; a few are in a condition to do so and others are equally desirous but want the means, and yet none will settle in the townships.-The surface, like that of $\mathbf{E}$. Chambly, is level and the land is good, well settled and cultivated.

Chambly Basin is a beautiful expansion of the river, nearly circular, and about $1 \frac{1}{2} \mathrm{~m}$. in diameter : it is embellished by several little islands, covered with fine verdure and natural wood, as ornamentally disposed as if regulated by the hand of art. Three of them lie at the mouth of the river Montreal; some smaller ones, called the Islets St. Jean, are spread in a very picturesque manner, at the descent of the rapid of Chambly; the dark-hued foliage of the wood, that nearly covers them, forms a pleasing contrast to the brilliant whiteness of the broken current. When rowing on this magnificent sheet of water, in a fine day, the prospect is truly enchanting. The three steeples of Chambly, Canton and de la Pointe, nearly represent the extremities of a triangle, whose sides are bordered with objects which by their size, beauty and variety, most agreeably interest the beholder.On the rapids above the Basin are the elegant and extensive corn-mills belonging to H. Bender and S. Hat, Esqrs., seigniors of East and West Chambly respectively. These mills, 7 in number, work 24 sets of stones and are never in want of water:

## ('HAMBLY.

their excellence tempts the inhabitants from every part of the surrounding country, to a considerable distance, to bring their wheat thither yearly; the more so, as they are destitute of such an adrantage in their own parishes, owing to the want of proper water-courses; this is particularly the case below the Chambly basin, where the comparative stillness of the river precludes the possibility, with any prospect of advantage, of building mills of this description.

Chambly Fort is on the w. side of the basin which, when seen from a distance, has some resemblance to an ancient castle: it was built (of stone) iy Mons. de Chambly, some years previous to the conquest of Canada by the English, and is the only one of the kind within the province; its form is nearly square, containing several buildings and all the requisite means of modern defence which have been put into substantial repair; the approaches to the fort are not protected by any out-works, nor is there a ditch round it. Before the late houtilities with America only a small detachment of about two companies formed the garrison, but, when the war began, the advantageous position and proximity to the enemy's frontier pointed it out as a strong point d'appui, where troops misht be assembled and an extensive depit formed: during the season for operations, in the ycars 1812,1813 , and 1814 , there was always a considerable force encamped on the plain near it, which in the lastmentioned year exceeded 6000 men; during this period additional storehouses and other buildings were erected on the ground that has always been reserved by sorernment for such purposes.

Chambly Village, built on one of the most beautiful spots in Lower Canada, is in West Chambly and on the bank of the Richelieu, not far from the fort : it contains 90 or 100 houses, chietly built of wood, forming one principal street ; many of the houses are elegantly built and shaded by lofty poplars. At the s. end of the village are some large and valuable mills close to the rapid of Chambly, and near the mills stands a good manorhouse. This place is a great thoroughfare, as the main road from Montreal to the American states passes through it, which, with the continual resort to the mills, occasions a good deal of activity among the traders and mechanics, and contributes very much to its cheerfulness as a place of residence; among the inhabitants are reckoned many
of the most respectable familics of the district, invited hither by its agrecable situation. The landscape of the surrounding country is rich and well diversified, affording several very beautiful points of view ; and there are many spots whence they may $l^{n}$ seen to great advantage. The regular and venerable fort, the mills, the little elcgant church of $\mathrm{S}_{\mathrm{t}}$. Joseph, houses dispersed among well cultivated fields, the various woodland scenery near and remote, the distant point Olivier with its village and beautiful chureh, the more distant mountain of Chambly or Rouville, the continual change of objects on the basin and river, with the singular appearance of unwieldy rafts descending the rapid with incredible velocity, will amply gratify the spectator's admiration.
('hambly ('ollege is in the village and is a flourishing establishment, founded by Mr. Mignault. the cure, aided by the principal inhabitants of Chambly. The zeal and liberality of that gentleman on this interesting occasion, have been universally acknowledged.-This edifics is at present only a one-sided building, to which two wings will be added when circumstances require the addition; it is 60 French feet long inside the walls and 50 ft . broad. There are two stories above the gromid floor, which contains the kitchen, the refectory and domestic offices; the first story comprises the hall of recreation, 35 ft . 1 y 2.5, a parlour and the room of the principal; and at the back are the school-room, the French school, the housekeeper's room and a corridor. On the second floor are the domitory, 60 feet by 2.5 , four chambers for the tutors and scholars and a corridor. The college is built on ground a little higher than the street and is isolated from all other buildings. The following inseription by desire of the founder, Mr. Migmalt, is to be inscribed on the building:

Fhunina :arpe vides parvis e fontion orta.
The foundation stone was laid June 12th, lowis, and the building was finished by the 1st of Feb. following It already contains 7.1 scholars who reccive an elementary, mercantile or classical education. Boarders pay $20 l$. per annum and day bovs a piastre per month.

The Parish of Chrmbly, by a regulation confirmed by a royal decree, Mar. 3, 1722 , extends 3 leagues in front along the r. Richelieu and one н 2

## CHA

league in depth on each side of that river; the frontage extends one league above and two leagues below Chambly Fort.

Tillc.-" Concession du 29 me Oct. $167 \boldsymbol{2}$, faite par Jíun T'rton. Intendant, au Sieur de Chambli, de six lientes de terre de front sur une lieue de profondeur, a prendre sur la rivière St. Inmis (Chambly) savoir trois lieues au Nord de la dite riviere (dux lieues en deça du Fort que y est bàti et une lieue au delia) et trois lieues au Sud de la dite rivière."-Résislre d'Intendance, No. 1 , folio 10 .

Cimmouchouin (L.), v. King's Posts.
Champlain, county. The boundaries of this co., as prescribed by the recent act of the provincial legislature, are found to be impracticable. The act directs that it shall be bounded N . e. by the co. of Portneuf; s. w. by the r. St. Maurice; s. E. by the St. Lawrence, and N. w. by the northern boundary of the procince. The r . St. Maurice had not been so fur explored, before the passing of the act, as to enable the legislature to foresce the difficulty that would arise in carrying this part of it into execution. Since that period the St. Maurice has been explored far into the interior by the deputy surveyor-general, who has discovered that its course runs so much more to the $\mathrm{N} . \mathrm{e}$. than was expected that it entirely crosses the co. of Champlain and enters that of Portneuf. By this unforeseen winding of the $\mathbf{R}$. it is impossible that the co. of Champlain can be bounded both by the St. Maurice and the province line; it is therefore more than probable that the course of the St. Maurice will be preferred, being a natural boundary and rendering the county more compact than it would be if bounded by the province line, which boundary would create confusion in the administration of justice and be an inexhaustible source of inconvenience between the inhabitants of the counties of Champlain and St. Maurice. Taking for granted that this co. will be bounded by the course of the St. Maurice from the St. Lawrence to Portneuf, it will be 66 m . in depth by 23 in breadth and contain 783 sq.

## C H A

miles.-Its centre on the St. Lawrence is in lat. $46^{\circ} 28^{\prime} \mathrm{N}$. , lon. $73^{\circ} 1730^{\prime \prime} \mathrm{w}$.-By the act above mentioned this co. contains the SS. of Ste. Anne and its augmentation, Ste. Marie, Batiscan, Champlain and Cap de la Magdelaine ; it also includes all the islands in the St. Lawrence nearest to and in front of the county. It contains 5 parishes and the population is entirely Canadian. The principal town or village is Ste. Anne. This co. sends two members to the provincial parliament ; the place of election is at the ferry nearest to the St. Lawrence on the N . F . side of the r . Batiscan.-This co. is exceedingly well watered by rivers and lakes; the principal rivers are the Batiscan, the St. Maurice, the Champlain, part of the r. Ste. Anne, and their tributary streams. These rivers traverse the county in every direction. -The land in the front of the co. is in general level and the soil light, but, towards the interior, the surfice is uneven, occasionally traversed by ridges of hills, and the soil stronger with much of it fit for cultivation.

Champlain, river, rises in the S. of Cap de la Magdelaine and taking a course n. E. traverses the Aug. to Champlain and enters Batiscan where it turns $s$. and after becoming the boundary between that $S$. and Champlain, falls into the $S t$. Lawrence.

## C H A

Champlain and its Augmentation, in the county of Champlain, lie between Cap de la Magdelaine and Batiscan. The seigniory is $] \frac{1}{2}$. in front by 1 league in depth and was granted Sept. 22, 1664, to Etienne lezard, Sieur de la Touche. The Augmentation, of the same breadth as the seigniory and 3 l . deep, is bounded in the rear by the т. of Radnor and waste crown lands; it was granted Apr. 2xtli, lif17, to Mad. de la Touche, and the present proprictors are Mr. Munro and Mr. Poole.-In the front of the S. the soil is a yellow lomm mixed with sand; in the rear it is stronger and better, in many places so grood for the cultivation of flax, that it is to be regretted that so profitable and important an article is not attended to.-The timber is rarious and, though not of first rate quality, is not too much mixed with the inferior surts.-This $s$. is watered by the little river Champlain and by many small streams, which rise at a short distance in the interior and, winding down the gradual descent to the St. Lawrence in little rivulets, cross the main road, agreeably diversifying the meadows and cultivated grounds along the front. The n. Champlain works a corn and a saw-mill.-About one third of this seigniory is cultivated in a neat style and, by the side of the Quebec road, displays many good houses with thriving farms almost wholly cleared of wood. - A very small proportion of the aug. is under cultivation; the remainder continues in a state of woodland producing some capital timber.-The narrows of the rivers supply abundance of the fish called fritr morre in the beginning of winter, and in the spring considerable quantities of cels are taken. The corn grown here is consumed by the inhabitants, who sell a little hay. The horses are, generally, of the Canadian breed.

The Parish of Chamllain, low a regulation confirmed by a royal decree, Mar. 3, ] 72, , extends 2. 1. along the St. Lawrence, viz. from Batisc:m to fief l'Arbre à la Croix, from Champlain to fief de Marsollet and from Y'Arbre a la Croix to Cap de la Magdelaine, comprehending the depths included in these boundaries.-A few years since, the inhabitants of the v. Hayotte in the P . of Champlain were alarmed by the following extraordinary oc currence: a tract of land, containing a superficies of 207 arpents, was suddenly moved about 360 yards from the water's edge and precipitated into the

## C H A

river Champlain, overwhelming in its progrest barns, houses, trees and whatever lay in its course. The earth thus removed, dammed up the river for a distance of 26 arpents. The effect was instantancous and accompanied by an appalling sound; a dense vapour, as of pitch and sulphur, filled the atmosphere, oppressing those who witnessed this awful convulsion almost to suffucation. A man named Dube, who was on the ground at the time, was removed with it to a considerable distance, and buried up to the neck, but was extricated from his perilous sithation without sustaining any serions injury. The course of the river being thus whstructed, the waters were swelled to a great height by this extraordinary event. Dube last an ishand of 5 arpents, which he had on the river. Another inhabitant, named Hamelin, also sufticred a lass of land, wheat and hay ; and a third, named Frateis Gussett, had his hay and grain destroyed.-The parish church and parsonage-house are man the road.

Cifarlesbourg, fief, village and mountains, $v$. Notre Dame des Anges, S.

Cimarleston (V.) v. Hatley, t.
Cinateauguay, river, in the co. of Beauharnois, rises in several branches descending from the State of New York into Hinchinbrooke, where it forms the boundary line between that r . and Godmanchester; whence it traverses the S. of Beauharnois separating Jamestown from Ormstown, South Georgetown from North Georgetown, and Williamstown from Annestown ; it then enters the $\mathbf{S}$. of Chateauguay, waters the settlements of Si. Jean, and at the n. e. angle of the S. falls into the St. Lawrence, washing two sides of Isle St. Barnard. About the middle of the third concession of Ormstown the Chateauguay receives the river Outarde and, near the $\mathrm{N} . \mathrm{w}$. angle of Williamstown, the united waters of North Creek, Black River and other tributary streams. The Sturgeon river, from the rear of the S. of Chateauguay, falls into it about $1 \frac{1}{2} \mathrm{~m}$. below the church in the Canadian settlements of Williamstown. The Chateauguay is navigable to a considerable distance above its mouth for bateaux, the smaller sort of keel boats and canoes. Large quantities of timber were formerly conveyed in rafts down this river from Godmanchester and Beauharnois, but the trade of this article has much diminished since the settlements have increased.

Cinatlauguay, seigniory, in the co. of Laprairie, joins Beauharnois, s. w., Sault St. Louis, n. e. and La Salle in the rear; the front stretches 21. on the St. Lawrence by 3 in depth.-Granted Sept. 29th, 1673, to Mr. Le Moine, Sieur de Longueuil, and at present belongs to the community of Grey Sisters at Montreal.-Through the whole of this property there is very little variation in the land, which lies nearly on a level and is generally of good quality; the arable producing very fair crops of grain of all kinds.-All the lands or farms are conceded; about 100 were conceded in 1759 , each, measuring 3 arpents in front by 30 in depth, paying 1 sol tournois per superficial arpent and a capon for each front arpent.There are some good ranges of settlements along the borders of the St. Lawrence, on both sides of the rivers Chateauguay and St. Regis and also in

## C H A

the intermediate spaces, which may be reckoned about one half of the whole grant and they are under pretty good cultivation. This $\mathbf{S}$. has one village and on the west side of the Chateauguay, near its discharge, stands the church dedicated to St. John and on its banks are also a corn-mill and a saw-mill. At the mouth of this R. is Isle St. Bernard, sometimes called Nuns Island, about one superficial mile in extent and very well cultivated. This isle is an appendage to the grant and contains a house usually denominated a convent, a term certainly misapplied, for it will in no way answer the description of such an establishment, unless the residence of two members of the order to which the property belongs may be allowed to convert it into a mansion of that description.-The r. Chateauguay crosses this S . diagonally and is navigable as far as the $\mathbf{S}$. extends. The Sturgeon river rises in the rear of the $S$. and in a winding course runs through the w. division line into the S. of Beauharnois. The first waters of the river St. Regis rise in the $\mathbf{E}$. part and immediately leave this $\mathbf{S}$. for that of Sault St. Louis.

Chateau Richer, (P.), v. Cote de Beaupre, s.

Chatham, township, in the co. of Ottawa, joins Grenville, w., the S. of Argenteuil E., and is bounded in front by the Ottawa river and in the rear by Wentworth. This 9 . is 9 m . in breadth and 12 in depth; its dimensions, divisions

## CHATHAM.

and subdivisions are with few exceptions the same as other river townships, some of its original grants having been made in compact tracts or blocks, which were subsequently laid out so as to meet the exigency of the actual settlements made previous to the survey in 1803 . The lucal position of Chatham is highly favourable, and the lands may be divided into two classes. The first embraces the lands comprised between the Ottawa and the seventh range, which are generally level, rising in some parts intogentle acclivities commonly called maple ridges, and, in other places, falling by easy slopes that terminate in extensive natural meads that afford rich and excellent pasturage. Intermixed with these are many small cedar swamps which are not, however, of any material disadvantage. The land in this part of the r. is calculated to produce hemp and flax and every variety of grain raised in Lower C'math, The lands composing the second class are comprehended between the seventh range and its rear outline and are higher and more uneven and broken, being traversed in various parts by mountains and high rising grounds, which are generally intermixed with intervals of rich soil. The hills are in some places barren, particularly on the borders of Grenville. Of this section of the $\frac{3}{4}$ may be said to be fit for cultivation, and the lands to that extent were located to Scotch emigrants in 1814 , who have since that period improved and cultivated a large portion.-The timber in this $т$. is of a superior description, and, though considerable quantities have been felled and disposed of, much valuable pine and oak with some elm are still to be found, also beech, lirch, maple, \&c.-This $т$. is watered by the North river, which enters at the 5 th concession on the e. side and returns to Argenteuil at the 3rd concession; and also by the West river, an arm of the North river, which strikes into this r. near the Argenteuil Chute corn and saw-mills, and runs through the centre in a $s$. direction, and is navigable nearly 6 miles through the Chatham lots, where, in the ll th and 12 th ranges, it breaks into several lateral streams and irrigates the surrounding country. The lots are finely watered by the number of streams diverging from the extreme point of this river. In the rear part are 8 or 9 small lakes, the largest from 40 to 50 acres. By the Riviere du Nord the timber felled in this and some of the adjoining
townships is floated down to the Ottawa.- ith Grenville canal lesins about 3 m . within this s - 34, ifis) acres are granted under letters patent to various individuals: the following proprietors in 1806 and 1812, obtained lands in separate compact tracts in the first four ranges uninterrupted by reserves, viz. the late Col. Rumertom, the late Mr. MeDougal, Dr. Bimen Fraser, Lauchlan MeLean, John Robertsom, and Daniel Sutherland, Esq. with others of his family. The lands in the 5th, 6th, 7th and the greater part of the 8 th range, are also under patent and were granted mostly to the persons abore-named and to Wm Fortune and the late P. L. Panct whose patent for 2,200 acres bears date as far back as 17.110. About two thirds therefore of the lands have leen granted within the last 30 years, when the first settlements in Chatham commenced.- 8,000 acre are under cultivation.-The first ramge of thi township exhibits most prosperous and flouristind settlements, with good houses and well cultisate: farms, especially along the pullic road. In the second range neat farm-houses and cxtensive improvements are likewise to be seen, the they are more scattered over the country. Beyond the fourth range the vast tracts of granted lands, up to the eighth range (in which are situated several blocks of crown and clergy reserves) remain almost : total wilderness, checking the advancement and prosperity of the now emigrant settlement in the rear third of Chatham, whose inhalitants are industriously contending against the disadsantag: of the want of roads to the Ottawa. This new settlement has, however, the advantage of an casy outlet through the S. of Argenteuil.-Tlecr: is a good road across the front continuings alons the Ottawa, the main route from Montreal to the upper townships on the bank of that river ; twe other roads lead towards the rear, one an far as the the range and one as far as the 12 th whin ends at Chute mills; another road lies beoween the ! 1 th and 10 th ranges. In this s . are two public schools under the direction of the lioyal Institution, each attended by about 50 pupils and conducted by male teachers.-Two saw-mills ate built on small brooks, one on the bank of the Ottawa and the other in the Qnd range- The cattle are chietly of the English and American hreeds -Linen cloth is made here to some extent, but the principal articles of commerce are timber ant

## CHATHAM.

potashes.-The village is called Davisville and contains

| 21 Dwelling houses | 1 Blacksmith's shop |
| :---: | :---: |
| 2 Merclant stores | 1 Tailer's shop |
| 1 Tamens | 2 Carpenters and joiner |

The population is 1073 ; and the total quantity of grain raised, chiefly Indian corn, is above 20,000 bushels, one third of which is sent up the Ottawa to supply persons engaged in the timber trade. -The inhabitants of the old patented lands in Chatham are English, Scotch, Irish, Americans and a few Canadians. The lands held under military locations are chiefly settled by emigrants from Scotland and compose the new settlements. Scotch emigrants were located to lots of 200 acres, which covered the residue of ungranted lands in 1819, but 48 have forfeited their lots from various causes.--The handsome and well situated setticments on the front of Chatham, combined with the prospect of the majestic Ottawa, together with the flourishing settlements and neat villas on the opposite shore, especially the village at Point Fortune, form a coup d'cil truly interesting, particularly when it is remembered that all this is the work of about 30 years. -In front of the т. are some small islands that form several rapids.

Chatham Gore.-The emigrant settlements in the Gore in the rear of Argenteuil are chiefly established on the borders of a fine lake about 1 m . in length by ${ }_{+}^{1} \mathrm{~m}$. in width. The land composing this tract or Gore is in general fit for culturc, and the front part has been recently surveyed and divided into 4 ranges containing several beautiful lakes, on the borders of which are the houses of the new settlers. The surface is mountainous and the soil rocky, but not so much as to prevent the establishment of excellent farms. The soil is a clayey sandy loam, for the growth of wheat and Indian corn not to be surpassed, and is generally fit for any other grain. The timber is chiefly maple and beech, but there are many other varieties of useful wood: the maple affords large quantities of sugar. 1500 acres and upwards are under cultivation: the annual produce per acre is 20 bushels of wheat, 30 of Indian corn and other grain in proportion. The average price of labour is from 2 s . to half a dollar a day, but in summer agricultural labourers are scarce at any price, the different canals employing at high wages all the superfluous population. Hemp could,
doubtless, be cultivated to great advantage and flax is already grown on most farms.-Three roads lead from the S . of Argenteuil, but they do not afford a comfortable conveyance. If the contemplated road to the Rideau should ever be cut, it would of course tend materially to improve this part of the country.-A meeting-house has been lately erected, and the rector of St. Andrew's performs service at stated periods. The settlers in the Gore are all Irish and exclusively of the church of England.-A school-house has also been lately erected, and the scholars are from 30 to 40 . -One of the proprictors of lands in the Gore is Mr. Perkins, a naval officer, whose residence is near lake Bouchette. Here are several potash factories but no corn-mill; the inhabitants are obliged to take their grain for grinding and their timber for sawing to the Argenteuil seignorial mills, a distance of 6 or 7 miles.- Here are about 300 head of neat cattle, chiefly of a mixed breed between the American and Canadian; if they are not so profitable as the new breeds they are, at least, useful and hardy animals.-Several beautiful lakes in the $\boldsymbol{r}$. and the Gore abound with trout, pickarel, eels and other varieties of fish. The waters of lake Bouchette are clear as a diamond and afford abundance of fine salmontrout : it is about one mile in circumference, and is bounded by Chatham, Wentworth and the Gore. These lakes, when the country becomes more clear of timber, with the fine diversified hill and dale scenery, will afford one of the most picturesque and romantic spots in the province.When it is considered that only a few years ago this whole tract of country was a dense forest, several miles from the residence of a human being, it must strike every one with surprise that so much has been effected by poor settlers without capital or any other resource but their labour. Branches of each family having been in the habit of working during the summer on the canals, they have, by saving the produce of their industry, been able to cover this extensive tract with their herds and flocks. These people left their native land with trifling resources, without patronage, guides or protectors, and are now living in comparative plenty without excepting, perhaps, a single family; and there is not a finer looking company of militia in the province than the settlers of the Gore.

Chats, des, (L.), r. Ot'rawa, r.
Childierf Falls, $v$. Ottana, r
Chafinere or Kettle Lake, or Otawa, r.
Chaudiere, river, in the cos. of Beauce and
Dorchester, derives its origin from the springs and streams that feed Lake Mcgantic, which separates the т. of Marston from Ditchficld; it flows N . from this lake 40 m . to the s . of Aubert Gallion and then N . w. into the St. Lawrence, a distance of 61 m ., making its whole course $\mathbf{1 0 2} \mathrm{m}$. from Lake Megantic.-The first stream of any magnitude which falls into the Chaudiere is the r. Eugenie in the projected 'r. of Gayhurst; it then forms the $\mathbf{E}$. boundary of the $\mathbf{T}$. of Dorset, where it receives numerous tributary streams. The Chaudiere is joined by the Grande Coude near the s. angle of the . of Shenley, and after receiving many rivulets it becomes the partition boundary of the S.S. of Aubert Gallion and Aubert de l'Isle, receiving near the $s . w$. angle of the latter the $r$. du Loup; hence it proceeds to the s. of Vaudreuil which it divides into two nearly equal parts without being much increased, the small stream Touffre des Pins being the only $\kappa$. it receives in that S., excepting perhaps one near its s . division line, which is at present unexplored ; after this it enters the S . of Ste. Marie which it traverses, becoming the partition boundary of the S.S. of St. Etienne and Jolliet, and in its course receives numerous additions but no waters of any note. It then traverses the $S$. of Lauzon and, about 4 m . from its estuary, receives the r . Beaurivage and still nearer its mouth takes in le Grand Ruisseau and then disembogues itself into the St. Lawrence, about 6 m . below Quebec on the opposite side of the river. - Although the Chaudiere is not navigable throughout for boats or even canves, on account of its numerous rapids, falls and other

## C HA

impediments, yet it maintains a character of some importance, being equal if not superior in magnitude to the sit. Francis.- The length of country which it traverses is about 100 miles, and the breadth probably not much $l$ css for the most part than 30 ; the extent of land, therefore, which it clears from redundant waters must be from 2,500 to 3,000 spuare miles. In breadth it varies from 4 to 600 yards, and its stream is frequently divided by islands, some of them containing many acres and covered with timber-trees: the banks in general are high, rocky and steep, rather thickly clothed with wood of indifferent growth; its bed is rugged and much contracted ly rocks jutting from the sides, which occasion violent rapids. The descent of the stream over the different shelves occasions falls of considerable height, one of which is particularly celebrated for its beauty and surrounding scenery, but the cause, which contributes so much to the grandeur of its appearance, renders it unservicable as a water communication Although of no utility as a water conveyance, yet the Chatiere traces out a route whereby an casy access may be had into the American territories, during the whole year. From Quebec, along the E. bank, there is an excellent road for about $5 \%$ m. and thence a tolerably grod one in continuation as far as R. du Loup, where the C anadian settlements at present terminate.-The most celebrated of the Chaudire Frulls are about 4 m . from its mouth. Narrowed by salient points extending from each side, the precinice over which the waters rush is scarcely nore than 130 yds. in breadth and the height from which the water descends is about as many fect. Huge masses of rock rising above the surface of the current, just at the break of the fall, divide the stram into three portions, forming partial cataracts that unite before they reach the basin which receives them below. The continual action of the water has worn the rock into deep excavations, which give a globular figure to the revolving bodies of brilliant white foam and greatly increase the beautiful effect of the fall. The spray thrown up, being quickly spread by the wind, produces in the sunshine a most splendid variety of prismatic colours. The dark-hued foliage of the woods, which on each side preas close upon the margin of the river, forms a striking contrast with the snow-like effulgence of the falling torrent: the hurried motion of the flood, agitated among the rocks and hollows as it forces its
way towards the St. Lawrence, and the incessant sound occasioned by the cataract itself form a combination that strikes forcibly upon the senses, and amply gratifies the curiosity of the admiring spectator. The woods on the banks of the river, notwithstanding its vicinity to the capital, are so impervious as to render it necessary for strangers who visit the falls to provide themselves with a competent guide. Few falls can be compared with this for picturesque beauty. The best view is to the left from a ledge of rocks that project into the basin, from this spot the scene is surprisingly grand; the next point of vicw is from a parallel ledge behind the former ; there is also another good view from the ledge of rocks above the fall, looking down and across the fall and up the river.

Chawgis or Ocau Droushta, a large lake N. n. w. of Lake St. John. It is on the r. St. Maurice.

Cilene, du, b. Du Chene.
Cirertsey, a projected township in the co. of l'Assomption. In this T . is a chain of mountains, beyond which are 3 leagues of rich meadows on which some persons, without any right whatever, have mown upwards of 6,000 bundles of hay. On these mountains are two or three lakes abounding with fish; beyond which for upwards of 6 leagues the land is very fit for cultivation and produces hard wood, oak, pine and a great quantity of maple from which $50,000 \mathrm{lbs}$. of sugar are made annually.-At the outlet of the lakes many siwmills might be erected.-Good roads are opened as far as this r.—Some of the inhabitants of $S$ t. Sulpice settled here before 1821 ; but, having lost their settlements by means of persons who obtained grants from the Crown, they declined settling there.

Chesham, a projected township in the co. of Sherbrooke.

Chester, township, in the co. of Drummond, lies between 'Tingwick and Halifax, and is bounded n. w. by Arthabaska and s. e. by Ham and Wolfestown. This r. has great advantages in point of locality with a soil, in every respect, fit for all the purposes of agriculture though still remaining almost unbroken by the plough. The timber is mostly beech, maple, pine, birch, elm, basswood, butternut, cedar, spruce and hemlock.-Watered by large branches of the Nicolet and Becancour, which wind through it in various directions.The whole $\mathbf{T}$. has been surveyed and two quarters

CHI
of it were granted in 1803, one to the late Joseph Frobisher, Esq. and the other to various individuals; the other two quarters have been located to the officers and privates of the Canadian militia who served during the last American war. Two or three farms are settled along Craig's Road which traverses this T . diagonally.-Ungranted and unlocated 4,975 acres.

Chevrotiere, $v$. Li Chevrotiere.
Chibouet, river, rises in the recesses of the forest in the co. of St. Hyacinthe; it waters the $S$. of De Ramzay and, running in an irregular course, falls into the $r$. Yamaska near the $w$, angle of that seigniory.

Chichester, a projected township fronting the Ottawa and lying between Sheen and Whatham. It is watered by a stream called the Black River.

Chicot, fief, $r$. Dcpas, F.
Chicoutimi Postr, i. King's Posts.
Chicoetime, river, or Shekutimish which means "farther out it is still deep," furms the s. boundary of the peninsula near Lake $\mathrm{S}_{\mathrm{t}}$. John in the co. of Saguenay. It rises in Lakes Ouiqui and Kenwangomi, between which and its fall into the Suruenay, about $7 \frac{1}{2} \mathrm{~m}$. to the s.w., are 6 or T portages, otherwise the Chicoutimi would be navigable for bateaux ; but on account of the cascades and rapids which render these portages necessary, canoes only can pass up the R ., with which the inhabitants of the Post maintain a traffic with those of L. St. John, the more direct communication by the Saguenay, through the Grande Décharge, being impracticable.-Soon after the Chicoutimi has left $\mathbf{L}$. Kenwangomi it falls 15 ft . into a basin surrounded by high mountains, and this fall causes the first portage, called Portage des Roches or Assini Caputagan, which extends 200 yards and leads over the rocks which in spring are covered by the m . The basin here formed by the Chicoutimi is nearly $\frac{3}{4} \mathrm{~m}$. in length. This r. then runs down with considerable swift-

## C H I CO L' T I MI.

ness for about $1 \frac{1}{2} \mathrm{~m}$. and is embanked by high rocky hills rising to about 200 fect; there the mountains terminate, resting about the region of $\boldsymbol{L}$. Kenwangomi. The land on the banks then becomes level and appears to improve being timbered with spruce, fir, pine, a few elms and cedar. Occasionally on the left, when the fire has burnt up the vegetable mould, the soil is discovered to be rocky and barren.-About $3!\mathrm{m}$. below the Portage des Roches is the Portage de l'lslet, or Ministouthi Caputagan, so called from an islet in the middle of the r. ; this islet is longer than the portage which is about 700 yards and lies through good land, a rich dark loam timbered with black birch, spruce, pine and ash. The river is then divided into two channels by a large istand ; the s. W. channel is broken by cascades and rapids, and the N.E. is a long rapid, which is frequently passed down by canoes.-From the foot of this portage to the Beau Portage, or Milow Caputagan, is two miles; the river averages about 80 or 90 yards wide, its right bank being high and rocky, while its left is good soil timbered with elm, ash, spruce, birch and pine. On approaching the Beau Portage which lies on the right bank the land is a light, coarse, yellow loam possessing a great proportion of sand and is timbered with spruce, white birch, pine and some elm. Beau Portage. about 2.50 yards long, lies through tolerable land, chicfly sandy loam timbered with white birch, red pine, poplar and spruce and avoids the cascates about 20 feet in elevation.- $7!$ miles hence is the $i$ intage de l'Enfant, or I'ashkow Crputagan : the lamks of the r . exhibit in this distance much improsement in soil and timber, the former generally an argillaceous loam and the latter spruce. elm, ash, fir, pine, black and white birch and some cedar. The river, which varies from 4 to 6 chains in width, is occasionally interspersed with well-timbered islands, most of which are alluvial. The general course of the river between Beau Portage and the Portage de l'Enfant is about N. N. W. ; between these portages the latest explorer met a canoe containing an Indian family; their astomishment at beholding a canoe of strangers was singularly expressed by a smile or rather a silent laugh, for which peculiarity the Montagnais nation is distinguished by the Indian name Papinashuah, which signifies laughers or sneerers. Four miles from Portage de l'Enfant is Isle an Sepulihre, which derives its name from having been the
burying-place of two persons who were drowned. The Portage de l'Enfant, about 200 yards long, is so called from an accident which occurred about 50 years since to an Indian, who, in passings this portage, left a young child in his canoe which was carried off by the current and passed over a very considerable fall without upsetting, to the great surprise of the father and of all who have seen the place. The Falls of l'Enfant are between 40 and 50 ft . taking the astades collectively. The portage lics over tolerably good land, a yellow loam timbered with spruce, ash, cedar, poplar, chm and pinc. From the lower landing it is but 20 chains ateres the basin at the fow of the falls to the Portage du Chien, on the right bank of the river.-The lortage du (hirn also about 200 yds. in length, leads over very good ground and avoids is cascade of about l.5 feet in height; it is timbered with cedar, fir, birch, red spruce, white and red pine. The land down the n . preserves that character of fitness for settlement which it more or less exhibits from the Portage de l'Islet, and a few streams discharge themselves on both sides. - $1 \frac{11}{2}$. firther down is the landing at the Pomage de la Potessićre or Mritu C'aputagan, vulgurly called $K_{i l}-K_{i t}$, at the head of a high fall which at its edge is divided by a small island. The portage is nearly 200 yds. lones and the falls about 45 ft .-At the Portage of ('hicoutimi, above the falls, the river contracts to less than 25 yards while opposite the portage it is about l20). This portarre is about a mile below Ka-Kia. The land in that distance is of an excellent description and the timber is $t \cdot 1 \mathrm{~m}$, ash, pine, fir and some white birch. The Portage of Chicoutimi or shetutimish C'aputngen, $\mathbf{2} \mathbf{m}$. in length on the left bank of the river, is very level with the exception of a gulley formed by a small rivulet near its s. w. end.-The Falls of chicoutimi are about 40 or $\overline{\mathrm{N}} \mathrm{ft}$., tumbling through a contracted channel over the rocks that interrupt its rapid course into the basin that forms part of the harbour of Chicoutimi.-From an eminence, which overlooks the harbour, the moble stream of the saguemay is seen to flow in majestic silence towards its confluence with the $\mathrm{S}_{\mathrm{t}}$. Lawrence. Although not possessing the bold features of $\mathbf{L}$. Kenwangomi, the great breadth of the river, the striking sconcry, the group of buildings in the foreground and the small solitary chapel on the adjacent eminence, form a combination of most interesting objects.-The banks of the Chicoutimi

## C H O

are not above 30 feet in height near the R. , but at the distance of about 10 chains on each side there is a second bank about the same height. The timber and soil are the same as in the peninsula formed by this r., the Grande Décharge and the s. e. side of Lake St. John.-However safe the harbour of Chicoutimi may be as to winds and moorings, it cannot accommodate ships of considerable draught without their groundingat low water ; for vessels that draw more than $1 \frac{1}{2}$ fathon cannot reach the basin of the Chicoutimi River, on account of the narrow channel between the shoals that set out from Pointe aux Trembles and the Chicoutimi Point, and in the channel the water is at most but two fathoms. Outside of the shoal, which extends about 300 yards into the stream of the Sa guenay, vessels can anchor in 3, 4 , or 5 fathoms, nearing Cape St. Francis about a mile below the post. Vessels are also exposed to a very strong current at the ebb tide, which would require their being moored to the shore, besides the anchor. The tide rises between 16 and 18 ft . perpendicular in $4 \geq$ hours flood.-The harbour and this part of the Saguenay are frozen over from the 1st or 5 th of December to the 10 or loth of May.

Chiens, aux, river, in Blainville, rises in a small lake or pond about midway of the line that livides that S . from the S . of Rivière du Chene. It runs N. e. past the $v$. of Ste. Therèse and with a gentle inclination $s$. discharges itself into the r . St. Jean or Jesus.

Chien, au, a small stream that runs into the R. Naguenay.

Chigoubiche, river and lake, in the Saguenay country. The River forms the lake and has two branches forming an angle like that of the rivers Richelieu and $\mathrm{S}_{\mathrm{t}}$. Lawrence.-The Lake is about 3 l. long and is shallow though deep enough to carry large boats. It is separated by one carryingplace only from Lake Chuamoushuane.

Chimepanipestick, river, in the co. of Saguenay, runs into the mouth of the St . Lawrence about 16 m . above the bay of Seven Islands.

Chinouagomi (L.), $v$. Kiguagomi, l.
Chinouagomishish (L.), $c$. Kiguagomishish,
Chipiloginissis, $c$. East Lakes.
Chissouematou, river, rises in the highlands s. of Mistissinnys Lake and running N . w. falls into the Assuapmoussoin not far from the $\mathbf{L}$. in which that R . rises.

Chomonchoan, lake, in the Saguenay coun-

## C L I

try, not far N . from the L . in which the r. Assuapmoussoin takes its rise.

Chosse, à la, river, runs into Lake St. John from the $N$. $w$.

Christie Manor, r. Noyan, S.
Chuamoushuane Post, r. King's Post.
Chuanousinuane, river and lake. The river runs into L . St. John and is navigable for large bateaux for many leagues and farther up for bark canoes; on the right and left are several small lakes. Lake Chuamoushuane is formed by an expansion of the r.; it is nearly 71 l long and is shallow though deep enough to carry large boats.

Chub, river, runs into the St. Maurice from the N. $\mathbf{e}$, between the Iroquois rapids and the mouth of Ribbon River.

Cinqs, des, river, falls into the r. St. Maurice opposite Lower Matawin Island.

Clarendon, township, in the co. of Ottawa, is bounded s. by Bristol, w. by Lac des Chats, n. by Litchfield and $\mathbf{f}$. by waste lands of the crown.It possesses numerous small streams, including Prendergast river, all running into Lac des Chats and the Ottawa; and on the boundary-line separating the 8th and 9th ranges are two small lakes called Lake Irien and Decoy Lake.-This township is but thinly settled in front and has no regular roads. It is the last $\mathbf{T}$. settled on the N . bank of the Ottawa and is 150 m . from Montreal. -Ungranted and unlocated, 31,729 acres.

## Statistics.

Clifton, township, in the co. of Sherbrooke, joins Compton w., Auckland e., Eaton n., Barford and Hereford s. The surface is mountainous and broken; the soil good and generally clothed with birch, maple and beech interspersed with spruce, fir, and a small proportion of pine and poplar. The settlements are chiefly on the road to Eaton in the 2 d and 3 d ranges, and in the corner of the T . on Salmon river. The soil, which is unexceptionable, would produce grain of every kind abundantly. Some swamps covered with

## C L O

cedar and black ash spread in different directions and might be drained with the greatest facility.The timber is spruce, beech, ash, maple, birch and basswood; the spruce greatly predominating Watered by 2 or 3 rivers and by many less considerable streams, all of which ultimately fall into the St. Francis ; it is also watered by some small lakes in which are trout, succors, chub, perch and eels.-Though large grants have been made to several persons since the year 1704 , they have attracted but few settlers.-The roads improve but slowly, and there is one bridge.-At a private school from 12 to 15 scholars are instructed.-T The population in 1827 was 60 and is now 83 .-lngranted and unlocated, 1,000 acres.

Clinton, township, in the co. of Sherbrooke, is a small tract, only equal in dimension to the quarter of a township. It is most agrecalbly situated at the extremity of Lake Meguntic, joining Marston N . and in other directions surrounded by Chesham and unsurveyed wastes. The soil in general is of the very first quality, exhibiting many large patches of luxuriant pastures. The timber is pine, beech, maple, birch, tir, spruce and cedar.-It is watered by the river Arnold and some other streams falling into the lake. No part is settled, although the r. abounds with numerous excellent situations, where the land is fit for cerry species of agriculture.

Cloridon, seigniory, in the co. of Bonaventure, fronts the r. Ristigouche. The boundaries of this S. were formerly settled by an agreement between the heirs of Roni d'Encau and Mr. de Fronsac. This S. extends from the mouth of the R. Percépic up the r. Ristigouche.-It has never been settled and is now the property of the crown. An historical account of it and its extent are included in the title.

 Com sop lufle 1) fula, 53.
Clyde, river, rises in Lake William in the r. of Halifax, whence, through the line that divides that $\mathbf{r}$. from Inverness, it enters Lake Lomond, taking an e. course. After running through that L. it is soon increased by the Black River from the N . and the Bullet River from the s. After rewiving Chaffers Brook it runs to the divisionline of Inverness, near which it enters the a. Becancour in the 14 th range of the $T$. of Nelson.

Coaticook or Kawathotek, river, in the co. of Sherbrooke, rises in the state of Vermont and a little below the $v$. of Norton enters the rear line of the $т$. of Barford at its $s$. w. angle; then running along the boundary-line it enters the 7th range of the $r$. of Compton and running through that r., bearing to the N. e., enters the 7 th range of the $\mathbf{T}$. of Ascott, where, near the $v$. of Lennoxville, it empties itself into the $\mathbf{n}$. St. Frambis. -In Compton it turns Conroy's mills in the 5th range and Pennoyer's mills in the 2 nd. It is so much obstructed by falls, which form good sites for mills, that its only advantage for transport is the running of logs to the different mills.

Colerinve, a projected township in the co. of Megantic, bounded N . by Thetford and Ireland, e. by Tring, s. by Winslow and w. by Garthby. Watered by lake Sit. Francis and some small lakes and streams.

Colembia Falls, r . Ottawa, r.
Columbia Pund is a small lake in the t. of Hull at the e. extremity of the 5 th range. It is fed by a stream that rises in the 7 th rangre, which passes through the lake and conducts its waters to the Ottawa a little s. of the estuary of the Gatineau.

Comeathieue, (R.), v. Kacuathieue.
Commishioners' Lake, in the co. of Saguenay, is on the $\boldsymbol{r}$. Ouiatchouan and is separated from

Bouchette L. by Blueberry hills. It receives several rivers, among which are Red river from the n. w. and the rivers Davis and Gouldie from the $w$.
Compron, township, in the co. of Sherbrooke, joins Ascot N. w., Barnston and Barford s. E., Hatley s. w. and Clifton N. e. and is in no respect inferior to Ascot. In various parts it has many wide spreading but gentle rises of most excellent land thickly covered with pine, maple and beech timber of fine quality and large size.Completely watered by the rivers Coaticook and Moose, the former connecting with Lake Tomefobi and both with the St. Francis, besides many less considerable streams near which are some fine breadths of luxuriant meadow and pasture. -An industrious population, about 1200 souls, inhabit numerous settlements on the banks of the rivers, where most of the farms appear to be in a very thriving and excellent condition, generally producing crops of wheat of excellent quality, and in quantity far beyond the home consumption. Many large patches of land might be very beneficially employed in the culture of flax and hemp. The principal rivers work several mills and there are some manufactories of pot and pearl-ash.-Through the most cultivated parts roads have been opened and bridges thrown over the rivers, all kept in good repair, by which a communication is formed with the main road to Quebec and with the state of Vermont.-There are a few traders and artisans, who, in following their respective trades, create something like the first rudiments of commerce and confer a comparative importance upon this increasing settlement. This township was erected by patent in 1802, when 26,460 acres were granted to Jesse Pennoyer, Esq. and several associates, much of which was immediately cleared and is the best settled and best cultivated part of the $\mathbf{~}$.; the greatest portion of this grant is at present held by various settlers, M. Pennoyer having retained no more than a sufficiency for his own use. In the year 1810, 13,110 acres in the easternly part were granted to Sir Rob. S. Milnes, Bart., and several lots of it are now in an advanced state of cultivation; the whole, from the general quality of the soil, by a little industry and good management, might be turned to a very profitable ac-count.-The common price for clearing lands in this T . is from 10 to 12 dollars an acre.

Connheticut Lake, in the t. of Drayton, forms part of a large $\boldsymbol{R}$. of the same name that runs into the state of Vermont.
Contrecgur, seigniory, in the co. of Vercheres, is bounded by Bellevue and Cournoyer s. w., St. Ours N. e. and by St. Denis in the rear--Two leagues in front by two in depth. -Granted Oct. 29th, 1672, to Sieur de Contrecceur and is now the property of the heirs of Monsieur de Laperriere.-The land is rich and fertile, in some few places flat and low but almost every where in a favourable state of cultivation; it produces good crops of grain of escellent quality. So much of this $S$. issettled that the tracts of woodland are insignificant, in proportion to the whole extent, and in these tracts timber of large dimensions is scarce.-The Ruisseau La Prade, rising about the middle of the $\mathbf{S}$., and several smaller streams contribute to the fertility of the soil and in their course work some mills. -All the lands are conceded and most of them prior to 1759 , on the royal terms. There are five ranges of concessions of different depths, separated by as many public roads intersected by others running from the Saint Lawrence, and also by the main road extending from St. Denis and St. Antoine, on the r. Richelieu, to the St. Lawrence, a distance of 21 . whence there is a ferry to La Valtrie on the opposite shore; the fare is 2 s . for a foot passsenger and 7 s . 6d. for a horse and carriage. In the second range of concessions is the Brulle St. Antoine and in the fourth Le Grand Brâlé: these places derive their appellations from the method, sometimes adopted, of clearing the lands by burning the wood upon the ground where it is felled, after such parts of it as are wanted for immediate use are removed; or else by setting fire to the trees and underwood while standing: when once fairly on fire, they
will often continue to burn for weeks before the flames are subdued．How far the conflagration has spread is shown by the blackened and scorched appearance of the contiguous woods，and by the many half consumed trunks and roots that remain for years in the ground，being extirpated only as the farmer＇s leisure offers convenient opportunities． Accidental fires sometimes occur in the forests， which，being spread by the wind，and no means taken to extinguish them，occasion brúlis to a great extent．－There are two neat churches and parsonage－houses in this $s$ ．but no village；the houses however are numerous，distributed along the different roads in the concessions and towards the banks of the St．Lawrence．－The group of small islands in front，called Les Islets de Con－ treccur，is an appendage to the $S$ ．

Tith．－＂Concesion du ？！）Octobre， 1672 ，faite par Jtan Tolm，Intendant au sieur de comtrecorer，de deux lieues de terre de front sur autant de profondeur；à prendre sur le tieure St．Laurcht，depuis les terres du Sicur de St．（onrs，jusqu＇a cellen du Sieur de l＇illeray．＂－

## COTEDE BEAUPRE.

intervenes 51 . in length, which has always proved most injurious to the progress of the settlements about St. Paul's Bay, there being no means of communication between the two settlements, except by water and the uncertain route of Le Chemin des Caps.-The roads in this important S. have undergone considerable improvements latterly. The road traced in 1815 by the Dep. Grand Yoyer, Chevalier D'Estimanville, which runs circuitously along the front of the S., being found inconvenient, a new one has been opened by order of the legislature and money for its completion voted. This road was opened in 1818 by Mr. Fournier, under the direction of the commissioners of roads appointed by the Assembly; it extends from the $\mathrm{N} . \mathrm{w}$. end of the Route de St . Antoine to the r. Ste. Anne, $Q_{4}^{3}$ miles. The sum of 10001 . having been voted for the purpose of making settlements on this road, 13 settlers were established previous to the 8th Jan. 1830, and a house was then being built for a settler at the 14th or last post.-The mean depth of the cultivated lands in this S., measuring from the front, is as follows:

The height of the most elcrated parts of the $S$. is as follows:

> Cap Tourmente $\quad 1592$ feet, measured.
> Montarne ite. Anne $\quad 1960$ feet, supposed.
> Cap Maillard $\quad \therefore 200$ feet, supposed. Mountain Remy from 6 to $7(11)$ feet.

The Parish of Ange Gurdien, by a regulation of Feb. 20, 1721, confirmed by a decree of Mar. 3, 1722 , extends $1 \frac{1}{2}$ l. along the St. Lawrence and is bounded w. by the r. Montmorenci; E. by the r. du Petit-Pré which separates it from the p. of Chateau Richer; it comprehends the whole depth of that part of the $S$. All the farms in this r . were conceded previous to 1759 , each extending 3 arpents in front by $1 \frac{1}{2}$ league in depth, at the rate of 20 sols for each front arpent. This parish is populous and well settled and the main road, passing along the eminence almost fronting the river, presents a number of very good houses on each side, which, with those on the rising grounds more in the interior, have a most picturesque effect. Many young agriculturists have left this $\mathbf{P}$. and that of Chateau Richer and settled in the districts of Montreal and Three Rivers; but none go to the townships.

The Parish of Chateau Richer, by a regulation confirmed by a royal decree of March 3, 1722, in which it is called la Paroisse de la Visitation de Notre Dame, extends w. from the r. du PetitPré, which separates it from the parish of Ange Gardien, to the R. au Chien e. which divides it from the $\mathbf{P}$. of Ste. Anne. It runs $2 \frac{1}{4}$ l. along the shore of the St. Lawrence and comprehends the whole depth of that part of the S. In this $\mathbf{P}$. are the ruins of a Franciscan monastery, built at the beginning of the last century, on a little rocky promontory on the bank of the St. Lawrence; its destruction took place at the time the British army, under Gencral Wolfe, was encamped on the E. side of the river Montmorenci : the exterior walls and part of an adjoining tower still remain. On a rising ground, in the rear of these ruins, stands the parish church, rather a handsome structure with two spires: from this spot a wide-spreading and beautiful prospect unfolds itself, comprehending a large portion of the river, Cap Tourmente, the Island of Orleans, Cape Diamond and the intermediate scenery of well-cultivated tracts bounded by distant mountains to the N . and s . About $\frac{1}{4}$ league from the church is a charning cascade on the river Sault à la Puce.-All the farms in this parish were conceded before 1759, each 3 arpents in front by $1 \frac{1}{g}$ league in depth, paying a quit-rent of 20 sols for each front arpent.
The Parish of Ste. Anne, by a decree of the council of state, Mar. 3, 1722, which confirmed a regulation of Feb. 20, 1721, extends one league in front along the St . Lawrence and is bounded w. by the p. of Chateau Richer and e. by the p. of St. Joachim from which it is separated by the r. Ste. Anne, and stretches to the rear line of the S .-All the lands or farms in this $\mathbf{P}$. were conceded prior to 1759 , each extending 3 arpents in front by $1 \frac{1}{2}$ league in depth, subject to the moderate payment of about 2 livres old currency for each front arpent as a kind of quit-rent.

The Parish of St. Joachim, by a regulation made $S_{\text {ept. }} 20,1721$, confirmed by a decree of the council of state, March 3, 1722 , extends 11 leagues along the St. Lawrence from Cap Tourmente e. to the n. Ste. Anne, w. and n.This is one of the most beautiful parishes in Lower Canada; it is thickly inhabited and the lands are of good quality and in high cultivation, producing wheat and other grain very plentifully; it contains also some very luxuriant pasturage.

## COTEDE BEAUPRE.

Nearly all the farms in this parish were conceded prior to 1759 , each extending 2 or 3 arpents in front by $1 \frac{1}{2}$ league in depth, subject to a quitrent of about 2 livres old currency per front arpent; for the small number of farms conceded since 1759 the seigniors must pay very moderate rents, for the farmer, who pays most, is annually charged for his farm only $9,9.1$. in money and a quarter of a bushel of wheat; the greater number pay much hess. The farms in this parish are very unequal in extent and much divided; many on the st. Lawrence are $1 \frac{1}{2}$ league in depth by 1,2 , or 3 arpents in front; others are bounded s. w. by the river Ste. Anne, s. e. by the St. Lawrence and the road called Traitcarré and some on that road by a concession called St. Elzeard; so that the depth of these farms varies from about 25 to 75 arpents. Besides the farms of a uniform breadth, there are others varying from a quarter of an arpent to 15 or 20 arpents. The only part of all these farms fit for cultivation is that extending from the St . Lawrence to the foot of the hills; it would be useless to attempt to turn the other parts to profit. These farms are so much divided that a farmer sometimes possesses land in 5 or 6 different places. The farmers, in general, rear their families in rustic respectability and nothing more. All the lands fit for cultivation are occupied; many are unconceded n. e. of ist. Féreol, but the climate is there so severe that corn cannot generally be grown to advantage; the farmers, therefore, instead of breaking up new lands, have neither the courage nor the means of cultivating the lands conceded between 1740 and 1750 .The new road communicating from it. Paul's Bay to this parish traverses some good lands lying N.E. of St. Joachim parish and N. w. of la Chaine des Caps, extending from Cap Tumrmente to Cap Maillard. - The parochial church has nothing remarkable in its exterior, but the interior is decorated in the most elegant manner, and it would be difficult to select a parish in all the province whose inhabitants excel those of st. Joachim in social, moral, and religious duties.In this parish, delightfully situated on a rising ground, at a short distance from Cap Tourmente, is a charming country residence called le Coteau Fortin, with a chapel and various outbuildings, belonging to the seminary of Quebec, to which many of the superiors retire every year during the
summer.-From 150 to 200 barrels of eels are caught by the inhabitants in this r. and at les Caps.

The Parish of st. Fereol lies n. w. of the parish of St. Joachim and is about 21 . in front. The settlements range chiefly along the w. bank of the r. Ste. Anne for about 6 m .; and the cleared lands commence 5 or 6 arpents e . of the Rivitre a la Rose. Some of the inhabitiants are sufficiently rich, but many of them are poor and receive charitable assistance from the inhabitants of the adjoining P. of St. Joachim.

The Purish of Petite Revière, by a regulation of sept. 20, 1721, confirmed by a decree of the council of state, Mar. 3, 1722, externds one 1 in front along the $\mathrm{s}^{\mathrm{t}}$. Lawrence. The road through the settlements of this parish is, for about 6 miles, well settled on each side, the houses neat and the farms in a respectable state of tillage. The road continues to La Martine, a settlement about 3 m . in the interior, whence it goes through C.té St. Antoine and Citi. St. Gabriel, as far as the n . Remus, about $10 \frac{1}{2}$ miles. At short intervals through this route are houses and farms in a flourishing state. From 8 to ! $\boldsymbol{\omega}$ ) barrels of cels are annually caught by the inhabitants in this parish and at des C'aps in the neighbourhood.
The Parish of Baie de St Paul, ly a decree of the 3rd of March, 1722, which confirms the regulation of Scpt. 20, 1/21, includes the S. of du (Goullire, 3 l. on the St. Latwrence s.w. and the Isle aux Coudres In St. Panll's Bay and along the river du Gouffre the settlements are girted by a lofty range of mountains, stretcling N . from the $\mathrm{S}_{\mathrm{t}}$. Lawrence and enclosing a valley about 13 m . in length and from 1 to $1 \frac{1}{2} \mathrm{~m}$. in breadth, the greatest part of which is numerously inhabited and very well cultivated, notwithstanding the land is in many places very rocky and uneven : several spots on the sides of the hills, being difficult of access from their clevated and precipitous situation, are tilled by manual labour and are extremely fertile in grain of most kinds. On this tract the houses of the inhabitants are nearly all of stone, very well built and whitewashed on the outside, which greatly adds to the gaicty of the general prospect of the settlement, as well as to the neatness of their individual appearance. Scveral small streams descend from the mountains, and aftur meandering through the valley fall into the Rivicre du Gouffre, turning in their way several saw and corn-mills. The main road passes at the foot of

COU
the bounding heights to the extremity of the cul－ tivated land in Cote St．Urbain，and on each side presents many neat and interesting farms and set－ tlements in a very improved state．The church of St．Pierre is situated on the bank of the Rivière du Gouffre．

The Parish of St．Urbain，by a decree dated Sept．8，18：27，extends about 9 miles along the $\mathbf{R}$ ． du Gouffre by about 9 miles in depth．－This $\mathbf{P}$ ．is watered by two arms of the du Gouffre．－The soil

COU
is sandy．－Several saw－mills are about $\frac{1}{2}$ l．from the chapel；and on the rivulet Remy is seated the new seignorial mill at a short distance from the old one．In this $P$ ．is a considerable quantity of iron ore and a magnetic ore，a large specimen of which the author laid before the literary society of Quebec with specimens of white lead：this ore was found in the vicinity of the lower corn－mill at St．Paul＇s Bay．

Title.-" Conecenion du ler Mars, l69j, faite par Lamis di Buade, Cowromeur, et Joun Bochart, Intendant, au sieur de Com pareille profondeur du coté du Nord de la riviere Richepareille profondeur du cote du Nord de la rivere Richeen descendant la dite riviere."一Registri d'Intimbunce, No. 4, folio 19.

Courval, seigniory, in the co. of Yamaska, is in the rear of Baie St. Antoine or Lefebvre and extends to the $\mathbf{T}$. of Wendover.- 21 . in breadth by 3 in depth. Granted $\mathrm{Sc}_{\mathrm{c}}^{\mathrm{tt}}$. $25 \mathrm{th}, 175-1$ to Sicur Cressé and is now possessed by - Badeam, Esq. - But little of this grant is cleared; the land however is much above mediocrity : in a few swampy places is found the timber usual on a wet soil; the uplands produce beech, maple, birch and pine.This $S$. is watered by the s. w. branch of the Nicolet and by the St. Francis, on which is a corn-mill belonging to the seignior.-The settlers are established upon the banks of the two rivers and have improved their farms very fast; their number would have been greater if the rents imposed were more easy.- The only road is that from St. Antoine to the new townships.

Tille-_" Concession du 25 me Septembre, 1754, faite au Sieur Cresse; par le Murquis Duquesne, Gouverneur, et Francois Bigot, Intendant, de deux lieues de front sur

COX
trois lienes de profondeur, située au bout de la profondeur de la Nemneurie vulgairement nommé la Buir St. Antoinc ou du Fither, an bord du lac St. Pirrer, larpuelle Sitignemic à deux licmos ou environ de front, sur deux licues seulement de profondeur, ct se trouse e thelave entre le fief du ment de profondeur, "t se trouve ethlave entre le fief du Sictur Crese pere, audird-cht, et un autre fiet apparte-
nant au Sieur Lassaudióre au Sul-oucet."-Registrc d'Intondume, No, 10, filla, 19.

Covey's Hill, $u$. Hemmingford, T.
Cox, township, in the co. of Bonaventure, is bounded e. by the $\mathbf{r}$. of IIope; s. by the bay of Chaleurs; w. by the r. of Hamilton and s.by waste lands of the crown.-It is watered by the r. Bonaventure and contains the town of New Carlisle and the village of Paspebiac.-New Carlisle is partly in Cox and partly in Hope, but the greater part is in Cox. It is a small fishing town and is laid out with a view to future compactness and regularity. It is centrically situated on the Bay of Chaleurs; the houses are built of wood and a gaol, a court-house, a custom-house and a school have been erected. The situation is very healthy, and the adjacent lands rank among the most fertile in the district. Numerous settlements extend on each side, occupying nearly the whole front of the townships of Cox and Hope, and which, including the town, contain nearly onehalf of the whole population. These settlements are in a much more improved state than any of the others. The want of corn-mills is seriously felt by the inhabitants, and greatly retards the progress of agriculture: there are good mill sites on a river that takes its source in a small lake in the r., and which runs near these settlements. In front there is an excellent beach, where the fish is cured and dried. - The Fillage of Paspelniof is s.w. of New C:arlisle, and is seated on the margin of the Bay of Chaleurs. This village is the principal commercial depot of a company of merchants trading under the firm of Robins and Co. The Company made its first establishment at Paspribiac in $176 \%$ and was obliged to abandon it, from the autumn of 1773 to the spring of 1783 , on account of the depredations of the Americans. Since that period they have continued it unremittingly to the present day. They have built 20 square-rigged vessels, which carry :350 tons, besides a number of small ones, for the coasting trade, of 30 to 65 tons each. Their establishment comprises 8 dwelling-houses, 10 store-houses, with a sail-loft, rigging-loft apd mould-loft for shipbuilders and 11 sheds. The annual amount of outfits and supplies imported from Europe is upwards к 2

## CRA.

of $£ 10,000$ sterling. They export annually from 22 to 27,000 quintals of dried codfish, about 100 barrels of pickled fish and 30 to 50 tons of cod-liver oil. Besides this establishment the company have an extensive fishing-post at Percé, one at Grand River and one at New Port, where the ships' crews and a number of servants from the parishes in the environs of Quebec, in all about and sometimes above 350 men, are employed from the beginning of May to the latter end of August, and about half that number till the close of the navigation in the latter end of Nov. The trade they carry on in the district of Gaspé supports about 800 families, which are supplied by the Company with all necessaries for the fisheries, wearing apparel, \&c. \&c.

small stream formed by three rivulets. It turns a mill at its mouth on the s. E. side, opposite Isle Madame.

D'Autruile, seigniory, in the co. of Portneuf, is in the rear of the augmentation to Belair and is bounded N. E. by Bourglouis ; s. w. by the s. of Jacques Cartier; N.w.by waste crown lands.-Half a league in breadth by $4!1$ in depth. Granted, Feb. 19, 1693, to the Sicur d'Auteuil.-This mountainous tract is still in a state of nature, and is indeed likely so to remain. It produces some good timber and, judging from the different kinds, the soil may be considered above mediocrity. - The r . Ste. Anne traverses it near the middle.

Titlc:-"Comeession du lome Fevrier, 1u9\%, faite par Louis de Buadh, Gouserneur, et Jian Bochart, Intendant, au sicur $D^{\prime}$ Auteril, d'un reste de terre non-conced d', qui a pour de fromt la ligme de profondeur du Sieur Trien Dustult; au Nord-est la ligne du Sieur Dupont, au Sindouest celle du fief du dit surne D'Autcuil; et au Nordouest la ligne qui sera tirie au bout de quatre licnen et demie; ensemble les rivières et ruiseanu et tout ce que s'r trouvera comphiv."-- Misistre d'Intentunct, No. $\mathbf{t}$ fillio 10.

## Dautre (F.) , c. Lanoraye.

David River, in the co. of Sugucmay, runs from the north and empties itself into the right bank of the r. Peribonea, $3 \frac{1}{t}$ miles from L. St. John; it appears to be navigable for canoes for a great distance and continues about 10 chains wide as far as the first portage, which is about $9 \frac{1}{2}$ miles from its mouth.

Divid River, in the co. of Yamaska, is formed by the Ruisseau des Chenes and other small streams rising in the I . of Upton, which meet in the $S$ of Deguir and that of Bourgmarie East, where this $\mathbf{R}$. waters the domain of J. Wurtell, Esq. and turns the mills belonging to that gentlemion; it soon after enters the S. of Yamaska and falls into the $r$. of that name a little above Isle Joseph.
Davis River, in the co. of Two Mountains, is formed by the waters of several lakes in Chath:an Gore, and running s. into the $s$. of Argenteuil falls into the North River.

Davis River, in the co. of Sugucmay, runs into Commissioners' Lake from the w. opposite Blueberry Plains.

Davis (V.), v. Chatham, t.
Dawson's Lake, in the Gore of Chatham, lies in the 2 nd and 3 rd ranges and in the centre of that part in front, which has been surveyed.

De Lery, seigniory, in the co. of Acadie, bounded N. e. by the larony of Longueuil; w. and N. w. by the t. of Sherrington and the $s$ of La Prairic de la Magdelaine; s. by the S. of La

## D E L

Colle and E . by the r . Richelieu.-2 2 . in front by 3 in depth. Granted, 6th April, 1733, to Chaussegros de Léry and is now the property of General Burton. - The whole of this tract is low, having in many parts cedar swamps and marshes that spread over a large space: where the land is dry a good black soil generally prevails, which, when cultivated, proves very fertile. The proportion settled is much less than that in the adjoining grants, a large part still remaining in its natural state of woodland.-The river Montreal runs through this $S$., and the r. Bleurie and Johnson Creck rise and fall in it. A small lake, near the middle, frequently overflows the surrounding low lands and makes a marsh to a considerable distance; but neither the marshes nor swamps are so deep as to prevent draining, which, judiciously performed, would in a short time render the land fit for the plough or convert it into excellent meadows; however, while there remains so much land of a good quality to be granted, which comparatively requires so little trouble to clear and improve, it is most probable that these tracts will long continue in their present condition. The best settled parts are about the woods of Acadie, and by the road leading to the state of New York, which, with a few other dispersed settlements, may amount to about one-third of the whole seigniory. The road that passes through the woods of Acadie, being the military route to the frontiers and the line of march for troops moving in that direction, has been benefited by some substantial repairs and has, in many parts, been causewayed for the passage of artillery and heavy bag-gage.-Near the boundary of La Colle is a small place called Butonville, composed of a few houses distributed without regularity on each side of the main road.-In the Richelieu, near the mouth of the Bleurie, is Isle aux Noix, formerly the property of the late General Christie but now belonging to the Crown; it is a flat, a little above the level of the river, containing only 85 acres; it lies $10 \frac{1}{2}$ miles from the boundary-line, in an excellent situation to intercept the whole communication by water from Lake Champlain; it is, consequently, a most important military station and has been fortified with all the care its commanding position deserves. In this isle is a place for building ships, where the Confiance of 32 guns was launched.

Derry, a projected township in the co. of Ottawa, lies e. of Portland and N. of Buckingham and Lochaber.

Deschaillons, isle, in the r. Richelieu and in the centre of the S . of St. Ours. The Ruisseatu la Prade falls into the Richelicu N. w. of this isle, and the $v$. of St. Ours is about 1 m . to the s. e .

Dischaillons (S.), v. St. Jean DeschailLons, S .
Deschambault, seigniory, in the co. of Portneuf, is bounded N. E. by the barony of Portneuf; s. w. by La Chevrotiore; by the St. Lawrence in front ; by waste lands of the Crown in the rear.One l. in breadth by three in depth. Granted Mar, 1, 1652, to Demoiselle Elconore de Grande Maison and now belongs to Louis de la Gorgendicre, Esq. and the Hon. Juchereau Duchesnay. -This, in almost every respect, is a very valuable property; the soil is of unexceptionable quality, being a mixture of good clay with a little samd, a fine yellow loam and in many places a rich black mould, which in the vicinity of Point Deschambault has a stratum of rock beneath it. The surface is uneven, and from being a fine level Hat near the river, it rises in small ridges mounting, by gradations, one above another nearly to the rear limits of the seigniory. From the $w$. also there is a gradual acclivity from the plain to the height of Point Deschambault ; on this plain the land is every where fortile; the greater part being in an excellent state of cultivation, the mumerous farms on each side of the main road, with their substantial houses and every requisite appendage, afford pleasing evidence of the industry and good husbandry of the proprictors. In this $S$. are 6 ranges of concessions, $t$ of which ate orcupied in farms and mother is in progress of being settled. On the ranges towards the interior many of the lots display an equal share of good management, which is the case with nearly all the limd under tillage, amounting to a full third of the whole scigniory.-The timber is of a moderately good quality and is mostly beech, maple and pine: there is, however, some wood of inferior descriptions.-The rivers Stc. Anne, crossing the rear, La Chevrotiére, Belleisle and a few smaller

## DESCHAMBAULT.

streams contribute to the luxuriant fertility of the soil. In the r. Ste. Anne, which is rapid every where in this $S$., is a fall of about 130 ft . At the mouth of the Belleisle, when the tide flows, the water is 10 or 12 ft . deep and admits boats and schooners, which are there protected from the ice during winter. It meanders through this $S$., where it is remarkable for its subterranean channel of about 7 or 8 arpents in length; and in the line, that separates the lands of Joseph Baronet and Joseph Morin, this r. runs under a rock by means of holes formed by nature and thus traverses the lands of the latter s. E . A little short of the place where the water rises out of the earth is a crevice in the rock, which seems to have been occasioned by an earthquake. In this crevice many attempts to catch fish have been made unsuccessfully; but nbout an arpent lower down is a second crevice, about a foot wide and 60 ft . long, where very fine trout have been caught and even eels -The Point of Deschambault has a considerable elevation, and stretches boldly into the river to the Richelieu rapids; the face of it appears a firm clay and sand without any interposition of rock or stone. On this point the church of Deschambault is built, and on the summit of the salient extremity is a very beautiful grove of pine-trees, remarkable rather for regularity and equality of size than for individual magnitude. A little below the church, on the sloping side of the point, is the manor-house of Monsr. de la Gorgendiére. The river St. Lawrence forms a large curve between Cap Santé and Point Deschambault, and either in ascending or descending the combination of objects that it presents is highly interesting and agrecable. The point was formerly a sort of military post, as the French, in 1759, had a battery upon it for the purpose of defending this pass of the river against any force that might have been sent upwards; indeed, this situation with the superior height of Platon, on the opposite side, might easily be fortified so as completely to command the passage either way, and, together with the difficulties of the Richelieu rapid, would render any attempt to force it very disastrous.-In this $\mathbf{S}$. is one village, consisting of 15 houses of wood, 1 inn, 4 dealers, 2 shoemakers, 2 blacksmiths, 1 miller. -The eel-fisheries in front of the $S$. are productive and almost every inhabitant has a fishery ; besides eels, doré, carp, achigan and a number
of sturgeon are caught; in autumn the epland abounds and in the winter the petite morue, a species of small codfish. In the r. Ste. Anne salmon and salmon-trout are taken in abundance. From July to the beginning of October the salmon is caught by the light of a torch. In the winter bears and wild deer are hunted.-The parish of Deschambault is 21 . in front by 3 in depth, and is divided into two seigniories; the more considerable, belonging to Mr. Louis Fleury de la Gorgendiére, is $1 \frac{1}{2} \mathrm{l}$. in front by 3 deep; the other, belonging to Mr. Louis Garriépy, is half a league in front and 3 leagues in depth, and is to the s.w. The church, by virtue of a decision, May 14, 1731, the seignior of Deschambault, who offered to furnish land to build a church, upon which the copyholders of the $S$. were obliged to build a presbytery and provide for the expense pro rata. This judgment, which gives the right of patronage to the seignior, was made by virtue of an edict of May, 1679.-The presbytery is prettily described in the following verses sent to the author, with information relative to the parish, by Mr. J. B. B. - C. P.

Sur un mont escarpe que cent bcaux pins couronnent, De leur feuillage epais les ombres t' enviroment.
Les vapeurs et les vents conduisent les vaisseaux
Sur un fleuve à tes pieds qui déploie ses caux.
Sur toi séjour heureux soufle le doux zéphire;
Pour l'orner avec l'art la nature conspire.
Near the church is a little village of 12 houses only, and in the second range of concessions are 2 other little villages of 12 or 15 houses each in a tolerable state. The church is agreeably situated on Cap Lauzon in the first range. There are 2 public schools in which reading, writing and arithmetic are taught ; there are als ${ }^{\circ} 2$ private schools.--The cattle are generally good and their different breeds carcfully attended to, particularly sheep and swine: every farmer, one with another, winters 12 to 15 sheep, about 3 pigs, 5 cows, 3 calves and 2 or 3 horses.-All the wheat and peas grown are consumed in the r., and about 1730 bushels of oats are annually sold.-The roads are sufficiently good, with the exception of some which are in a bad state. There are no bridges of consequence.-The soil in general is congenial to the growth of hemp, and every farmer makes on an average from 25 to 30 lbs . of flax ready for spinning. - In several places are quarries of stone, but the best is in the concession called St. François.-There are two

## D ES

mineral springs; one on the farm of Louis Delisle, the other on the farm of Pierre Perrault. Each family makes, on an average, about lis ells of flannel stuff annually.- IIorses are generally used in husbandry, oxen very seldom.-In the parts bordering on the St. Lawrente agreat number of small codfish, petites morues, are caught from the middle of Dec. to the midde of Jan. They always come at the same time of the year, and, prasing all the rivers as far as Three Rivers without entering any of them, come up the st. Lawrence for the purpose of spawning, and always asemd thongh the first.channel of Three Rivers. - In this $p$ are I ship yards, in which $\overline{5}$ vessels hew wen buit, varying from 10 to 160 tons enel?

 au Nord du fleuve s . Lament, "mbenant unc licue de front sur trois liencs de protondeur, tenant dill cont: du

Desmaure or St. Augursin, scigniory, in the co. of Portneuf, is bounded N . e. by Gaudinville; s.w. by Pointe aux Trembles; in the rear by Guillaume Bonhomme and Fausembant ; in front ley the St. Lawrence. - No official wowd has been found relative to this grant, consiquenty its original date and precise dimensions are not known. Les Dames Religierses of the Gencral Hospital of Quebec, to whom the proputy blemses, in performing fealty and homage, 19th Mar. 1 gi!i, produced as their title an act of adjudication, dated Sept 22, 1733; but which was indecisive of the dimensions of the $S$., no notice whatever beins taken of the extent. By the regulation of the parishes of the province, it is designated as containing $-y_{2}^{1} 1$. in breadth by $1 \frac{1}{2}$ l. in depth. With a surface varied

D E S
and uneven this $S$. possesses a rich and fertile coil. which on the large swells and high lands is a lightish loam, but in the hollows and valleys, lyinu letwecn them, it is generally a wond black mould. The situation is so favourable for all works appertaining to aysiculture, that full three-fourths of the whole sugnisy is under tillage; the farms. and ind wh the major part or the coneconions, appar to great admatare and display many fow ahle specimens of careful hustandry. In proportion to the increase of cultivation the quantity of timber has diminisled and little of superion quality is stantimes: the ermmom kinds are not in meth greater abtablame-It is wateed hy the Rivi re du fon Rouge, betwen which and the St. Lawrene is Lec (avaire-The land horderBng the St. Bowrene is the hiebest in the seigniory, whene there is altemation of ridge and valleys, the fomer diminishing in lught as they apronch the rear : omdany, composing together a most agreable undulation in tise perpertive senery. This provery is very emanenwhty comsed ly reds, in ahost ever direction and nos: of hem are bept in good repair ; that : Dugg he bont is called the pus: roed : ancther,
 moninated the stage ound on each situ of the Bivire due Co longe a rad leats to the s. wi Pointe aux Trembles, whil soreal intmediate ronds in conavien; be the sides of each are many fine seduments, the loones well lait and the farms showing every appearance of combert and eren ablhence. The church, seated on a mint projecting into the St. Lawrence, a corn and a saw-mill upon a little lamel of livi re du Cap Romse, between two indy banks where it dixChatges into the St. Lawrence, waphese a pleasing peint of view cither from that river or the emimence just above the mills. On both sides of the muth of the Cap Fange are the extensive timler cstahishnent and ship-yand belonging to Alessrs. Athinsm, who hold a govermment confrate and furnish timber and masting for the use of the royal navy. An extensive shoal, or wather ieef of rocks, bounds the whole front oit the seiwhory: the Ists Donbour lic upon this reef, "lpme the s. w. lumatary. This $t$. is in the P. of st Augustin. with the exception of La coite Sit. Ange in the Brd comeessim, which is serval by the cure of Viclle larate to whom it pays tithes.

The Parish of St. Augustin comprehends parts of the SS. of Desmaure, Fausembault and Belair, and belongs to the ladies of l'Hotel Dieu at Quebec. It contains 4 concessions, those nearest. the St. Lawrence the most populous. $\frac{1}{5}$ ths of the P. are under cultivation and ! th in wood. There is one school, supported by the parish, in which 60 scholars are instructed in French and English. Near the church, 130 ft . by 52 , built on a point projecting into the St . Lawrence, is the small but pretty village of St. Augustin, consisting of 14 houses including an inn, through which the post road passes. The horses are of the Canadian breed and though small sufficiently good. Nearly all the grain grown is consumed in the $\mathbf{P}$. The roads are not kept in good repair, and there is one bridge over the r. Cap Rouge. Both horses and oxen are used in agriculture. Some surplus manufactured articles are produced for sale. Although the soil is not generally adapted to the growth of hemp, yet it is in some degree cultivated.-The lands in this $\mathbf{P}$. were all conceded prior to 1759.

Deverbois (S.), $v$. Terrebois, S.
Districts. The province of Lower Canada is divided into 5 districts. The three superior districts are called Montreal, Three Rivers and Quebec, being so named from the principal town in each district. The two inferior districts are called st. Framicis and Gaspé. The districts are the judicial divisions of the province having courts of superior and inferior jurisdiction sitting at prescribed terms, which are generally the same as those in England. In the superior districts the jurisdiction of the Court of King's Bench is unlimited ; but in the inferior districts the civil jurisdiction is, in some degree, circumscribed by the power of appeal in certain cases, and all prosecutions for capital crimes must be carried on in the courts of the superior districts. The seats of jurisdiction are as follow :

## DISTRICTS.

the Courts of King's Bench of Superior Jurisdiction in the province.

Court of King's Bench._-Established by the 34 (reo. III. c. $6, \$ 2$, as a court of original jurisdiction, in all matters over $\mathbb{L} 10$ sterling, or relating to any fee of oflice, duty, rent, revenue, or other sum payable to his Majesty, titles to lands and tenements, ammal rents, or such like matters and things, where the risbts in future may be bound, excepting those purcly of Admiralty jurisdiction. An inferior tribunal of the same court is also beld for the trial of all cases where the subject of contest is fll sterling and under. The Court of King's Bench has also cognisance of all criminal pleas.

Prociadial Court of Three Rivers - Established by $3 t$ Geo. III. c. 6 , for the trial of all matters amounting to £10 sterling or under, in which the provincial judge sits alone and rives judgment, from which there is no andorl.

Proimbial Cout for the Inferior District of armpe. Provincial Cumt for the Inferior District of Girye-
This court, established lyy 34 Ger. III. c. 6, § 14 , and its powers extended by subscquent enactments, hinconni-anme of all matters of tion currency and under, with an appal to the court of Kimgs Bench, Quebec, in all matters above $\underbrace{20}$. At New ('arlislean Juferior ('ourt tor sums under tod sterling is held, and a Superior Court for the sums ahnve $\mathcal{E Z O}$.

Pracincial ('ourt for tha Infirmo District of St. Frantis.
 all matters amounting to $E_{2} \underbrace{}_{i}$ and under, with appal to the Couts of Kimers Bemeh, Mantreal or Wirer Rivers, according to the situation in the Superior District of the place of action.

The names of the counties, seigniories, fiefs and townships included in each district being given in Vol. I. p. 170, and each of them being particularly described under their respective names in this dictionary, it will be here necessary to give only a general and brief view of each district, particularly as many of their important features are described in the general description contained in the preceding volume.

The District of Quebec extends, on the north side of the St. Lawrence, from the N. E. boundary of the S. of Ste. Anne, or s. w. boundary of the county of Portneuf, to Anse Sablon on the Labrador coast. On the s. of the St. Lawrence this district extends from the N. E. boundary of the S. of Livrard or St. Pierre les Becquets, or n. e. boundaries of the cos. of Nicolet, Drummond and Sherbrooke to Cap Chat, where it is met by the $w$. limit of the Inferior District of Gaspi. On the n. w. this district is bounded by the Hudson's Bay territory or East Maine; and on the s. e. by the province of New Brunswick and the state of Maine in the U.S. This part of the boundary is, however, at present still unsettled, the governments of Great Britain and the United States being equally dissatisfied with the decision of the King of Holland. This subject is treated more at large in the lst Vol., under the head of Boundaries, to which the reader is referred.-This di-
strict embraces the most magnificent portion of the great St. Lawrence and many of its valuable islands, the important river Sugucnay, and the whole extent of lands known by the name of the Saguchay Country, large scctions of which have been rewntly explored, and are described at lengti in the 3 rd section of Vol. I.-The general ceature of this disirict is bold and mountainous, presenting a range of high lands on cach side of the t.t. Lawrence, particularly on the north; from these ridges, in many places, is a considerable extent of fine land gradually sloping to the river, and from Watane to Quebee, in particular, the shore of the proud St. Lawrence is fringed with benutiful setflements, adomed with the most interesting and picturesque scenery. Although the gencral character of this district is uneven and mountainous, especially in the interior, the quality of the soil is not inferior to that of any other district. It is traversed in every direction by roads and enriched with flourishing settlements, especially along and near the s . Lawrence, and on the borders of the rivers generally. The roads more particularly deserving notice are-the Mitis or Kempt road, recently traced and opened, which offiers a convenient route of communication from the s . Lawrence to the Bay of Chaleurs and the $w$. and $s$. parts of the district of Gaspe; the 'Temiscouata Portage road leading to Nuw Brunswick; the Kennebec road communicating with the U.s; Crage's Road; and the new and useful communication from St. Joachim to St. Paul's Bay, known by the name of Commissioners' Roal, or (hrmin Nouveau de la Baie St. Paul (vide ('ire tio Bearm, ré). This district includes the city of Quebec, the capital of the province, from which it derives its name, and is abundantly watered by numerous and important rivers and lakes; the more considerable of which are as follow :

The District of Montrall is bounded e. by the $\therefore$. f. boundary of the ficf Dusabl: or Nouvelle York on the N . side of the St. Lawrence; w. by the co. of St. Maurice; s. by the counties of Yamaska, Drummond and Sherbrooke; w. and s. w. by the province of Upper Canada, the river Ottawa, and the most western limits of the province; s. by the province line, lat. 4.5 N . from St. Regis to the river Connecticut, and thence $1 y$ that river to its source in the high lands; thence by the N . boundaries of the states of New York and Ver-mont.-The general character of this district is low and level, especially the settled parts, with the exception of a few isolated mountains in the s. section.; the land, however, rises towards the province line and assuming a bolder outline is in some parts even mountainous, particulariy in Hem mingford and Bolton and the vicinity. On the $n$. side of St. Lawrence the range of high-lands, so remarkable in the district of Quebec, traverses this district about 6 or 7 leagues N . of the Lake of Two Mountains, and stretching w. to the Grand Calumet on the Ottawa traverses that river. N . of this ridge the country is more or less uneven and mountainous and mects the range of highlands that divides the waters running into Hudson's Bey from those that empty themselves into the St. Lawrence.-The soil, which is in general cxcellent and offers the greatest advantases to asriculture, is traversed in every direction by numerous public roads and by-roads, thickly settled and presenting well cultivated farms. The climate, locality, soil and other advantages, render this the richest and most populoas district of the province. It cont ins the city and island of Montreal and the towns of William IIenry and Dorchester, besides numerous fourishing villages. This district is bounded by the Oitawa or Grand River for 355 miles, and is amply watered by other
rivers, streams and lakes, the principal of which are as follow :

The Distritt of Three Rivers is bounded N. $\mathbf{E}$. ley the boundary of fief Dusablé ; E. by the n. e. boundary of the $S$. of Ste. Anne; on the $N$. side of the St. Lawrence: on the s. side of that r . this district is bounded by the $w$ boundary of the S. of Yamaska and the N. e. boundary of Livrard or St. Pierre les Beequets; s. w. by the boundaries of the counties of Berthier, Richelieu, St. Hyacinthe, Shefiord and Stanstead; s. e. by the s. w. boundaries of the counties of Portneuf, Lotbiniére and Megantic, the river Chaudiére, Lake Megantic and Arnold River ; N. w. by the Hudson's Bay territory or $\mathrm{N} . \mathrm{w}$. limits of the province; s. E . partly by the province line lat. $45^{\circ} \mathrm{N}$., the Connecticut and the high-lands stretching from the head of that river eastward.-The surface of this district is, $N$. of the St. Lawrence, level in the vicinity of that river, and farther in the interior $\mathrm{i}_{i}$ assumes a bolder aspect and, becoming mountainous, partakes of the character of the Quebec district. South of the St. Lawrence it is level until it approaches the townships in the neighbourbood of Aseot, where it rises into large swells and is in many parts mountainous. The soil in this section of the district is excellent, but on the borders of several of the rivers and nearer

## DISTRICTS

to the St. Lawrence it becomes light and sandy; towards the border of the province it is infinitely better. The soil N . of the St. Lawrence is decidedly light and sandy but susceptible of the advantages of good cultivation, and in the interior of the country it is stronger and stony. This district is traversed ly numerous roads in every direction, for although $N$. of the St. Lawrence the roads do not extend above 5 or if leagues, on the s. side they extend as far as the province line, branching off into the somthern townships.-Tle old settlements or sciguiorics in this district extend along both sites of the sit. Lawrence and up each side of the principal rivers. The townships chiefly lie in the s. section extending from the province line northward. foweal villages are in this district: Mahiche and Rivière du Loup on the N., and Nienlet on the s. side of the St. La:irence; also Sherbroke and Stanstead in the townships; besides these is the town of Three Hivers from which the district derives its name.-This district is exceedingly will watered by mumerous rivers, streams and laties; the principal of which are as follow:

 was established by an act of the provincial leatislature, chap. 77 of the :nd year of Gco. III., and is in the form of a paralle hegran, more than 50 m . in width from w. to es, and upwards of 1001 n 1: . from $n$. to $s$. Its superficial extent is supped to cover 3,000 sq. miles or $2,000,000$ of acres.Although this district is included in that of intiee

Rivers and is therefore described with it, excepting a small part in the district of Montreal containing 4 townships and part of a $\bar{b}$ th, a farther notice of it is decmed proper as it is perhaps the most fertile tract of the province. It extends from the s. bounds of Wickiann, simpson, Warwick and Arthabaska to the s. boundary of the province; its $w$. limits are Lake Memphamages and a linc traversing Bolton wetween the 2.2 nd and wird rames, and extending along the $E$. boundaries of Stukely, Ely and Actom; on the E. it extends to the $w$. bounds of the cos. of Me game and Beanco. The semeral nurfice of this district is rather level, but tow ards the boundary line, in liat. $4.0^{\prime \prime} \mathrm{N}$. and the r . Comnecticut, l,y which the district is bumbled s., it rises into large swells and is rather mountainous. It is most abundantly watered by numerous rivers, streams and lakes, and is travered he many roads on which are new but flourishing settlements. I is chief villages are -herbroble and stantand and the courthasi is at the former place. The diedtand most interesting settlementa lie in the first three ranres of thwaslips from the province time-This district contains about 3.sin square mils, in which are thity-cight towntips and part of another, which are parioularsed in the list wiven fon the district of Three Riversaminathed with an asturisk: Tide

The toferior Destrit of (iergéli on the i: catremity of the province and on the s. site of st. Lemance. It is boundel $w$. he the district of
 Fawrme, ands be the frovie of New Brunswick and the B:y of chaterrs. The land in general, which is of an excellent quality, abounds with a variety of timier, as maple, hech, birch, spruce, \&e. 太心. and ahmost invemstible pinerics, which, together with the ced and samon fiveries, "hy? the state commothics for womation. The whole district is rentarking well watered with numerous streans, which tale thir rise in the mountans that bound the re st Damonce and run in rarious diections to f? lay of elatlum and into the gulf and h. S. Hawrence; they abound with various linets of tish, and most of then trawese trats of land cothed wiin immonse pineries. Notwithstomding is atrantases in richness of sorl, \&e, the district of Gaxe is $\Rightarrow$ vously lackwatd as regrects .rymblure This may in stme rimame be attributed to the exten-
sive fisheries and lumber trade, which form the chief occupation of its inhabitants. Between Cap Rosier and Cap Chat the coast is mountainous and barren. The industry of the inhabitants is chiefly employed in the fisheries, regulated by an act of the assembly of the 47 th of Geo. 3rd; they also carry on a triffing trade in peltry and build on an average one ship and 3 or 4 small vessels an-nually.-The communication between Gaspé and Quebec may be kept up by three different routes: one by pursuing the coast of the gulf and river St. Lawrence; the second by following the course of the $\boldsymbol{r}$. Ristigouche as far as the r. Matapediac, and along it as far as L. Matapediac ; thence by Kempt road to the St. Lawrence near the commencement of the old settlements : the third route is by proceeding along the Ristigouche river nearly

## D 0 R

up to its source, whence there is an Indian footpath or portage road of 9 miles to the $\mathbf{r}$. Ouiauksquack, which runs into the river St. John, 15 miles above the Great Fall, whence the traveller proceeds in the road of the Temiscouata portage; this is the least difficult of the three, and the distance by it from New Carlisle to Quebec is 390 m .; this may be shortened 18 or 20 m ., by a road that has been blazed from the n . Wagansis to Green River, which descends into the r. St. $\mathrm{J}_{\text {ohn }}$ in the Madawaska settlements.-The principal town is New Carlisle-This district, from its peculiar situation as a peniusula, the capabilities of its soil, its abundant and valuable timber and its extensive fisheries, is susceptible of being made, at no very distant period, equal to any other district in Canada.

Ditchfield, a projected township in the co. of Beauce, borders the e. side of Lake Megantic and is bounded s. by Woburn and n. E. by Spalding.

Ditton, township, in the co. of Sherbrooke, is bounded w. by Newport ; e. by Marston and Chesham ; n. by Hampden and s. by Emberton. The surface is irregular, in several places rising into large eminences, but in general of a moderately good soil timbered with beech, birch, basswood and maple, intersected by some large streams that fall into the St. Francis. The s. w. quarter has been surveyed and granted, but no part settled. - Ungranted and unlocated, 33,000.

Domaine, du, river, in the S. of Cote de Beau-
pré, rises in two lakes in the rear of Cap Tourmente, at least 800 ft . above the level of the $\mathbf{S t}$. Lawrence, into which this R. falls.

Donbour, isles, in the r. St. Lawrence, are 3 islets lying off the $S$. of Desmaure, midway between St. Augustin and Pointe aux Trembles.

Dorchester, county, in the district of Quebec, bounded n. e. by the co. of Bellechasse; s. e. by the co. of Beauce; s. w. by the co. of Lotbinière and n. w. by the r. St Lawrence. It consists of and comprises the $S$. of Lauzon only, to which $S$. the reader is referred for additional particulars relative to this co. It is $18 \frac{1}{2} \mathrm{~m}$. in length by $18 \frac{1}{2}$ in depth and contains 342 sq . miles. Its centre on
the St. Lawrence is in lat. $46^{\circ} 38^{\prime}$ long. $71^{\circ} 16^{\prime}$. It sends two members to the provincial parliament; the election is held at the place nearest to the $\mathbf{r}$. Etchemin, between the parishes of $\mathrm{S}_{\mathrm{t}}$. Henry and Pointe Lévi, and at St. Nicólas.

Dorchester ( V .), r. Longemil, b.
D'Orcainmilie, fief, in the co. of Quebee, N. E. of l'Epinay, is a small grant containing only a superticies of 3575 arpents made May, 1675 , by Letters Patent, to the Rilijisises: of tic General Hospital of Quebec from whom it has never been alienated.-The soil is a light sandy earth intermixed with clay about the front: proceeding inwards it changes to a black mould, and in the vicinity of the mountains it is a gool ycllow loam. Fron the river St. Charles the surface is uneren and continues ridge above ridge to the rear, where it is still more abrupt and broken. Near the river are fine meadows and pasturs. About one-half of the arable is in a state of very grod culture, producing wheat and other grain abundantly, also garden vegetables in great quantity and variety. The lower parts are but scantily timbered; but on the rising grounds and the skirts of the mountains there is a profusion of fine beech, maple, birch and other woods of the best description. The little river Jaune and several small streams, all flowing into the st. Charles, amply and conveniently water the cultivated lands.

Tall.-" Concession du mois de May, lai.) faite par Lettres latentos de Sa Mapesti, am Lames religieuses de l'Hôpital Général, du Comeri dorsainville, contenant en superticie trois mille cinq cens soixant et quinze arpens,

 17, folio is:

Donset, township, in the co. of Megmatic. on the $w$. side of the river Chaudicre, joins Shenley $x$. and is encompassed on the other sides by unsurveyed lands. This is a large township, comsisting chiefly of fine rises of good land, very fit for tillage and almost every where favourable for the culture of hemp, and flax, though no settlements have hitherto been made in it ; the most inferior part is along the rocky bank of the river Chambire. It is well stocked with baswored. birch, maple, beech and elm timber: some of the swamps are covered with cedar and hemlock. A, mirally well watered by large lakes and a mumber of rivers that wind through the T .; the more remarkuble are Lakes M•Tavish, Oliveira and Margucrite, and the r. M•Tavish : the waters of all the rivers, streams and lakes fall into the Chandi.re: on their banks are found some fine breadths of excellent meadow land. The whole was granted to Mr. John Black, but now belongs to the hairs of the late Simon M'Tavish, Esid.
Dortal, isle, in the $s$. of Bementr, divide: the mouth of the r. Becancour into two priats; it lies about 1 m . v . of the v . of Becancour.
Dorval or Isles: Courcelefe, in Lake st. Louis, lic on the $s$. w. side of the island of Montre:? , opposite the mouth of a i . of the same name.
Doncale, river, rises in Cito St. Framosis in the island of Montreal ; this small stream runs: in a very irriguous course, and falls into Lake si. Louis in front of Intes Courcelles.
Dorvilifiat (F.), a. Antaya.
Dorvillier, ficf, in the co. of Champlain, is bounded n.e. by Francheville ; n. by the first aus.

## D R U

to. Ste. Anne; s.w. by the S. of Ste. Marie and s. by the St . Lawrence.-It is $\frac{1}{2}$ league in front by 1 league in depth and belongs to the Hon. James Cuthbert.

Doughas, town, in the co. of Gaspé, is at the entrance of the r. Nt. John and on the s. side of (tispe Bay. This town was laid out about the year 1785 and named after Adm. Sir Charles Douglas, then commanding on the Camada station, the father of the present Sir Howard Douglas. For Sintistirs, vide Gaspé Say.

Drayron, township, in the co. of Sherbrooke, lies e. of Hereford, in the rear of Auckland and Emberton, and is bounded s. by the main branch of the r. Comnecticut. This $\boldsymbol{t}$. has not been surveyed and subdivided and no grants have been made, although a tolerably large settlement has been formed on Indian Stream and r. Connecticut ly persons from the U. S., who affect to have commenced their settlement, in $17\left(r_{2}\right.$, under the auspices and by virtue of a proclamation of Sir Alured (llark, at that time governor in chief. This settlement consists of 20 families, who have mad: extensive improvements and are reapectably settled. The lands which these persons occupy form one of the points in dispute lotween his majesty's government and that of the United states. The population is about 60 ; the principal settler is Dr. Taylor, who occupies 1,000 acres of which 100 are cleared; this gentleman has a good house and a distillery. This r . is watered by Indian Strem and Hall's Stream, also by Back Lake and other small lakes, all of which contain trout, succors, chub, perch, eels, \&c. Over the rivers two bridges have been built, but the roads improve slowly. At a private school from 12 to 15 scholars are instructed.

Druminond, county, in the d. of Three Rivers, bounded N. by the cos. of Yamaska and Nicolet; E. by the co. of Megantic; s. by the co. of Sherbrooke ; w. by the co. of Shefford. It contains the townships of Aston, Bulstrode, Stanfold, Artha-

D U
baska, Chester, Ham, Wotton, Tingwick, Warwick, Horton, Wendover, Simpson, Kingsey, Durham and Gore, Wickham, Grantham, Upton and Acton, together with all the gores and augmentations of those townships.-Its extreme length is 66 m . and its breadth -17 , and it contains 1,674 sq. miles. Its centre, on the St. Lawrence, is in lat. $46^{\circ} .0^{\prime}$. long. $7^{20} .0$. It sends one member to the provincial parliament and the place of election is Drummondville.-The surface of this co. is very diversified and there are considerable swamps. -'The principal rivers are the Becancour, which bounds the co. r. e., the St. Francis, the main branches of the Nicolct, and their tributary streams. The only lake of any magnitude is Lake Nicolet in the augmentation to the $\boldsymbol{r}$. of Ham.-The chief roads are those along the r. St. Francis, one from Three Rivers to Shipton called Bureau's Road, C'riag's Road, and the road recently opened from Drummondville to Sorel. These roads are tolerably good in the more settled parts of the co., but quite the reverse in other parts, where the lands are in a state of widderness, on account of the difficulty of keeping them in repair.

Drumondville ( ${ }^{r}$.), v. Grantham, t.
Du Chene or Pointe du Chene, river, rises in a lake in the fourth range of the aug. to Grenville. It runs e. to another small lake and turning suddenly s. directs its course to the Ottawa, which it enters at the s. extremity of the division line that separates the т. of Grenville from its augmentation.

Du Chene (G.) or Belle Riviere, rises in the aug. to the $S$. of Lac des Deux Montagnes,

## D U D

and, penetrating the division line of the $S$. of Rivière du Chêne near the N. $w$. angle, runs through and nearly across the seigniory to the v . of St. Eustache where it falls into the Ottawa. This $r$. is about 60 or 70 feet wide and is not navigable. It turns several mills and abounds with fish.
Du Chene, river. Petite Rivicre du Chêne rises in the $\mathbf{r}$. of S . Benoit in the S . of Lac des Deux Montagnes, and running N. e. reccives the r . au Prince one mile below the church; continuing in the same direction for about 2 miles it joins the greater Rivière du Chêne.
Du Chene, river. Petite Rivière du Chine rises in the $\mathbf{T}$. of Blandford, and running N . and N. e. traverses the S. of Livrard and enters the S. of Deschaillons where, at the N. E. angle, it falls into the St. Lawrence.-Navigable for canoes and rafts below the saw-mills.
Du (hene (S.), c. Riviere du Chene.
Du Chene (V.), c. Riviere du Cifene, S .
Duck Lakes, in the co. of Queber, are small and lie between Lake Kajoualwang and Crooked Lake.

Dudswell, township, in the co. of Sherbrouke, is bounded by Westbury and Stoke s. w. ; by Wece don N. e.; by Wotton n. w. and by Bury s. e.The land where it is level is applicable to the culture of grain: in some places it is unceven and from the sixth range rises into a considerable mountain that stretches westward into Wotton; its top is flat table land and, from its being wholly free from trees or underwood, derives the name of the Bald Mountain. In this r. is a great rariety of timber, beech, maple, birch, basswood, butternut, ${ }^{\circ}$ elm and some oak, pine, spruce and cedar. - The St. Francis with many small streams provide an ample and complete irrigation.-Only one quarter has been laid out, which was granted to Mr. John Bishop and others; he is now the principal landholder: on this part some farms have obtained a very respectable state of prosperity.This $\boldsymbol{T}$. will doubtless be much benefited by a line of road now in progress, pursuant to an act of the legislative assembly granting a sum for that purpose, which was passed Mar 14, 1829. The extent of road to be made under this act is 21 miles, commencing at the north line of Dudswell and terminating at the district line of Quebee and Three Rivers. This road has been opened liy

D U D
contract, the whole distance, 11 feet wide. The surface of the country generally traversed by this road is good and suitable for cultivation and, with the exception of a few lots, will make excellent farms; there are on this route but few hills, and none which would offer any great obstruction; the most considerable is about 11 m . north of Dudswell. To bring this road into use and make it answer the intended purpose, the following additional improvements should be made. 1st. The road heretofore opened but now grown up with bushes, from Craig's Bridge in Ircland to the Dudswell road, about 10 miles, should be reopened and completed, which would require about 150 per mile. This section of the road is mostly very good land for settlement and the hills not bad; the lands on these 10 miles are nearly all granted. 2nd. A road should be opened from Dudswell line to the settlements in Dudswell, about 5 miles, which would also require 450 per mile ; this distance is through ungranted lands, or mostly so, which are of the first quality for settlement and there are no bad hills; the whole of the lands on this route are well watered, and there is an excellent mill site about 10 miles north of Dudswell line, and another near $\mathrm{N}_{\mathrm{i}} \mathrm{c}$ 8 miles north of that line. :3rd. From the settlements in Dudswell a road has been opened through Westbury, Eaton, Clifton and Hereford, to the province line, about 50 miles; the land throughout is grood, but, the scttlements being few and scattered, the road has been but little used and is in a bad state. The completion of this road would be highly beneficial in promoting the settlement of that section of the province, and would thus render a direct communication from the province line at Hereford to Quebee practicable, the distance being about 140 m . As part of this lastmentioned road includes the settlements of Dudswell and Eaton, the expense of completing it would be $\sqrt{5} 50$ per m . for 30 m . 4th. A road has been opened from Lennoxville in Ascot, up the St . Francis r., through the settlements in Westbury and intersecting the Dudswell road, 17 m . ; this road is important for the convenience of Ascot, Compton, Hatley, Barnston and Stanstead, being the most direct route to Quebec, and its completion is an object of the utmost importance; there are a few setulers upm this road, which runs through good lands and would probably also re-
quire $£ 50$ per mile to complete it；upon this route the lands are all granted．5th．The road from Ascot to Eaton should be completed，about five miles unsettled and the road extremely bad； it would require $£ 250$ ；in some parts of this road the lands are poor，but it connects extensive settle－ ments in Ascot and Eaton．－Cingrented and m－ located，18，663 acres．

## Dundef（ $\mathrm{T}^{\circ}$ ），v．Indian Lands．

Dunham，township，in the co．of Missiskoui， between the S ．of St．Armand and Farnham，ad－ joins Sutton and Brome e．and Stanbridge w． The situation and quality of the land render it a valuable tract．It has plenty of timber，such as maple，beech，birch，elm，butternut，iron－wood， white and black ash；also good oak and pine． The upper lands are rather hilly，having many horizontal seams of rock lying a little below the surface；but on the more level parts the soil is generally a rich black mould with，here and there， a mixture of sand．This r．yields all sorts of grain in abundance，and，in many places，is peculiarly fit for the growth of flax and occasionally for hemp． swamps，not very extensive or numerous，are covered，generally，with cedar and tamarack； but they might be drained without much trouble， and cleared to great advantage．－Watered by se－ veral branches of the Yamaska，by Pyke River and two beautiful little lakes，the largest spread－ ing over about 600 acres in the 6 th range．Here are a greater number of roads，mostly kept in good repair，than perhaps will be found in any other т．，leading through Farnham to the Yamaska and also to the state of Vermont．The Pyke River and some of the smaller streams work several mills．This was the first t ．erected，in Lower Canada，by letters patent，bearing date 1－：16；it was granted to the late Hon．Thomas Dunn，whose heirs are at present the greatest landholders．Nearly the whole is settled，and many extensive farms are worthy of notice for their flourishing and improved state，producing great quantities of wheat，barley and oats，besides most other articles peculiar to the country．Per－ haps no tract of land of similar extent，through the whole of the province，is better calculated for a judicious experimental farmer to demonstrate how much the present stock of agricultural know－ ledge among the Canadian husbandmen may be increased．－In this $\mathbf{T}$ ．are several pot and pearlash manufactories，a church，a methodist chapel and 25 houses called Frost Village．

## D U T

Dusable or Nouvelle York, seigniory, in the co. of Berthier, is in the rear of Maskinongé between Berthier and Carufel-l league in front by 3 in depth. Granted, Aug. 15, 1739, to Louis Adrien Dandonneau Dusable; now the property of the Hon. Ross Cuthbert.-A small ridge of rising ground crosses this grant, a little north of the road to Quebec, which seems to separate the fertile from the barren parts; south of it the soil is rich, productive, well settled and under good cultivation; but on the opposite side of the height it is very indifferent and thinly settled by a few farmers, who are compelled to exert their utmost industry to procure a living. The whole tract is almost free from wood, the little remaining only fit for fuel. A small stream, called Rivière Cacher, runs through the lower part and works one corn and one saw-mill.-This S. is in the parish of Maskinongé.

Title.-" Concession du 1.jme Aoit, 1739, faite par Charles, MItrquis de Bearthurumis, Gouverneur, et Gilles Hocquart, Intendant, au Sieur Lonis Adrien Dandonneart D) "sathi, d'une étendue de terrein d'environt une lieue de front sur trois lieues de profondeur; laquelle sera bornée pour la devanture au bout de la profondeur de la concessiou accordce par Mr. Talon au Sieur Joun Baptiste Lr-
curdcur lo Bme Novembre, llite, appartenant aujourdhui gurdcur le 3me Novembre, Ilit: appartenant aujourdhui cédén par le dit Sieur Tulon, le 9 me Octobre, 1672 , anx Sieurs I'rre et Jcan Buptistc Ligardeur, dont le dit Sieur Petit est aussi propristaire, et par la ligne de la Seigneurie du sieur Sicard de Curuftl; aus Sud-oue-t au fief du Chicot, et continuation du dit tief; et par derriere aux terres non-

Duturt or Linctot, fief, in the co. of Nicolet, is bounded n. e. by Cournoyer; s.w. by Becancour; in the rear by the r. of Maddington and it fronts the mouth of the R. Becancour opposite Isle Dorval. The original title of this concession has not been found, therefore its date and dimensions, as granted, are both uncertain ; it is however at present a quarter of a league in front by nearly 3 leagues in depth, and is the property of Mons. Bellefeuille.-The soil and timber are similar to those of Becancour.

Title.-" On n'a pu trouver le titre de cette Concession ni dans le Secrétariat ni dans le bureau du Papier Terrier, de sorte qu'on ne conuoit ni l'étendue de son front ni le nom du concessionaire originaire. Elle est placée sur la carte d'apres les lumieres quion a pu tirer des titres dees concessions voisines.- Par le réglement de letendue des concessions voisines. - Gar le reglement de letendue des
paroisses fait par le Gouverneur et l'intendant, cet fief paroisses fait par le Gourerneur et Intendant, cet fief
paroit avoir un quart de lieue du front du precedent fief de Becancour qui devoit avoir deux lieues et trois quart de front."

## EAR

## E.

Eagle Lakes, called by the Indians Chipiloginissis, in the co. of Rimouski, consist of five or six lakes, connected with each other by a line of water running from N . to s . Their accumulated waters run N. w. into the r. St. John, with which these lakes are also connected by an Indian line of communication branching into two portages, one leading to the $\mathbf{r}$. a little below the mouth of the r. Marienequacktacook, and the other opposite the mouth of the r. Madawaska: another portage connects one of these lakes with a stream that flows into the $\boldsymbol{r}$. Restook.

Eardly, township, in the co. of Ottawa, is bounded e. by Hull; w. by Onslow ; s. by waste lands of the Crown ; s. by Lake Chaudière. Its breadth is the same as that of other river townships, but its lateral lines, running magnetically N ., differ widely in their depth, the E . line being 1,099 chains, the $w$. line only 325 , owing to the curves in the shore of the lake, which runs about N. w. and presents a diagonal front to this township of 14 miles, from its $E$. boundary in the lst range to the $w$. limits of the 9 th. This r . is indented by two large bays: the first lies above a small river which falls into the Lake at lot 8 ; the second extends from lot 21 to the $w$. bounds of the $r$., and in this bay two other small rivers discharge their waters, which, with several inferior streams, fertilize the front ranges. The soil, in many places suited to the cultivation of hemp and flax, does not yield in fertility to Hull. This r. is well timbered with elm, beech, maple and pine, and may be said to possess every local advantage met with in the townships below it. From the foot of the hills, which lie along the 6 th range, to the margin of the lake, the country is generally level or rising into rich and gradual swells of excellent land.-This r. is but thinly settled and in front. It is well watered by small lakes but contains no considerable rivers, and has no regular roads.-A tract of 6,411 acres of the E . section of this T . was granted, in 1805, to the Sandford and Lukin families and others, the greater part of which has been since conveyed to other individuals; subsequently, 2,600 acres were patented to the Muclean family; these two grants occupied nearly the whole of the front. Large tracts of excellent land are yet ungranted,

EAT
which, if placed under the superintendence of an active agent, may in time become a settlement of interest and consequence. Out of the prosperous colony of Hull the settlements of Eardly may be said to have originated; they are chiefly in the e. quarter and are traversed by the Hull road, which extends to the 14 th or 15th lot ; many neat and well-cultivated farms are on this part of the road as well as a school-house, which is attended by 20 to 2.5 youths of both sexes. - $i n-$ granted and unlocated, 19:500 acres.

Eitos, river, is formed by two streams which water the townships of Ditton, Newport and Auckland, and meet in the r. of Eaton about $2 \mathrm{~m} . \mathrm{N} . \mathrm{E}$. of the church. The r. then winds a N . course into the $\mathbf{T}$. of Westbury, where it falls into the $\mathrm{S}_{\mathrm{t}}$. Francis in the 14 th lot of the $\mathrm{Q}^{n}$ range.

Eatos, township, in the co. of Sherbrooke, is bounded e. by Newpurt ; w. by Ascot ; n. by Westbury and $s$. by Clifton.-The w. half, of which a great part is settled, was granted in 1800 , to Mr. Josiah Sawyer and others. The farms ly care and industry are brought into good condition, assuming a very flourishing aspect. This tract is of a uniform and favourable quality, generously repaying the farmers wherever it is under tillage. The $\mathrm{N} . \mathrm{w}$. part generally is low and swampy; the other parts may be called hilly, being a series of bold swells whose bases may be traced by the courses of the streams. The soil in general is stony and occasionally sandy. Towards the $\mathrm{N} . \mathrm{w}$. , at an angle with the horizon of between 60 and 70 degrees, masses of granite are occasionally met with on the surface, as well as large masses of alluvial rocks, some having the appearance of vitrifaction. Slate of excellent quality for roofing is abundant, and black-lead ore has been found. The rocky strata are invariably argillaceous.-The timber is more remark-
able for diversity of kind than excellence of quality; pine, birch, basswood, spruce and hemlock are plentiful; that which covers the summits of the ridges is generally hard wood, viz. maple, beech, birch and basswood; on the slopes is a mixture of spruce with occasional patches of cedar where the land is very wet.-This r . is not watered by any stream of magnitude, but intersected by numerous small rivulets and brooks. On the principal river, called Eaton River, are several good mill sites, of which some are occupied, and two bridges. Several corn and saw-mills have been erected on some of the streams.-Flax sufficient for domestic use is grown; and though hemp has not yet been tried there is no doubt of its answering, particularly in places. The annual produce per acre, which might be increased under a better system, is, wheat 15 bushels, oats 20 , rye 15 to 20 , potatoes from 2.50 tw 300 . Indian corn is not much grown.-A considerable number of horses and fat cattle are sent annually to market. The cattle, in generial, are of the breed common to the eastern townships, and are considered good of their kind. The wages of agricultural labourers 2.s 6/. a day, and the highest wages in harvesttime 3 s. 4 d. There is a fair proportion of artisams, but they do not follow their trades separately from farming pursuits, but when they are employed in mechanical trades they receive 3 s. a day.-A large quantity of pearlashes is produced-This т. is divided into two parishes by a line through the Gth range of concessions: the N . portion is called st. Peter's, the $s$. part St. Pauls. There is a church in each parish. There is one schoul, provided by the Ruyal Institution, in which are 00 scholars on the average; there are likewise 2 or 3 private sthools.-The roads are not good though in an improving state.-About 9000 acres are cleared. - C'ingrunted and unlucated, 3100 acres.

Eau Chaude, de l', river, at the s. e. angle of Buckland, is a large, deep and rapid stream and fordable during one or two months in the year.

Eboulemens, les, seigniory, in the co. of Saguenay, fronts the St. Lawrence and lies between the seigniories of Le Gouffre and Murray Bay and is bounded in the rear by waste crown lands.-3l. in breadth by 2 in depth.-No record of this grant has been preserved but it appears by on act of fealty and homage performed Apr. 3d, 1723, by Pierre Tremblay, then proprietor, that he produced a concession of this tract-made to Pierre Lessard, but the date was not quoted. It is now the property of Marc P. de Sales La Terricre, Esq. M. P. P.-The name of this seigniory indicates convulsions of nature of which we have only some very loose traditions. According to the history of Canada by Charlevoix, some violent shocks of an earthquake were felt in 1663 throughout the whole of Labrador to the Bay of St. Paul. Others say that, before 1663 , this part of the country had experienced shocks of earthquake, and they believe that Jacques Cartier, in his first voyage to Canada, sailed up the St. Lawrence from the north without meeting any obstacle; and that on his second voyage, wishing to follow the same track, he was stopped between the Isle aux Coudres and the north by a considerable renversement des terres, and this déplacement has ever since been called la Grande Pointe des Eboulemens, which forms almost an island considerably serrated by the r. St. Lawronce. The traditions prevalent among the oldest inhabitants support this opinion and also the idea, that the creeks formed near the point were formerly only one, or that the passage followed by the first explorers of the country has undergone some change. This coast has been subject to frequent shocks of earthquake; the most alarming in the memory of the oldest inhabitants was in Jan. 1757, when the earth cracked in many places without any accident except the fall of some chimneys. During the winter of 1791 this part of the country was again agitated by shocks that continued during 40 days, but they were less violent than the former. These extraordinary efforts of nature are still often felt every year, and occasion sudden transitions from heat to cold and yice versû. The shocks are more perceptible in winter than in spring or autumn, and
those in summer are the least felt. From these natural causes without doubt this seigniory has derived its name. The lateral parts of the great Pointe des Eboulemens, which is almost an island of 14 square arpents, form two large creeks into which many little rivers discharge their waters, which at high tide are sufficiently deep to receive vessels of above 100 tons and which there ride in safety in all weathers. These rivers are fordable at low water and wind across 10 to 12 arpents of breakers, which produce an abundant pasturage and a quantity of d'herbe sallé. This seigniory, particularly the beautiful settlements whose verdant fields crown the summits of the sloping hills which rise amphitheatrically from the St. Lawrence, and all the coast extending from St. Paul's Bay to Malbay afford the most agreeable and picturesque variety and are comprehended in one view. The face of this seigniory is in seneral excessively mountainous; but the soil is not inferior to that about St. Paul's Bay, and is in many parts equally productive. The shore of the St. Lawrence is here very lofty, especially about Cap aux Oies; but the edges of the bays, between the different projecting points, afford some good patches of meadow and pasture land: from the elevated bank of the river the ground continues to rise ridge over ridge until it reaches the mountains in the rear, which are at least 1800 ft . above the level of the sea. In the concessions called Godefrei, Dorothée, St. Joseph, and St. George, some very good settlements, in an improved condition, present themselves on the slopes of the high lands and in the intervals: the whitewashed cottages and farm-houses, frequently embosomed in thick clumps of trees, have an appearance singularly picturesque. The inhabitants are chiefly settled in 3 ranges of concessions; the first range occupies the borders of the river and comprehends a ridge of land of the greatest fertility, producing corn, roots and all the fruits grown in Lower Canada, to a degree of perfection only to be accounted for by its favourable situation, which is at the base of mountains that protect it from the inclemencies of the north. The second range is on the highest elevation, where the road from St. Paul's Bay to Malbay passes over a distance of 91 . The inhabitants have built extensively in stone and wood, and, in spite of the unavoidable difficulties of the mountainous situation, the roads are good
and passable for every description of carriage. The valley that contains the villages of St. Joseph and St. Godefroi, on one side of which is seated the parish church, is at least 3 leagues in circumference and the church, 120 ft . by 60 , presents one of the finest prospects. From this eminence the view commands the Isle aux Coudres, separated from the land by a channel one league in breadth, and all the country, on the opposite side of the $\mathrm{S}_{\mathrm{t}}$. Lawrence, from Kamouraska to the environs of $\mathrm{S}_{\mathrm{t}}$. Thomas and even to the lower part of the Island of Orleans. The manor-house is in the cuntre of this valley on the bank of the little river, Ruisseau du Moulin, near which is built the sigmorial mill which never ceases to work in the driest summer, being constantly supplied with water from the river which is fed ly two small lakes. On this river, which conveys the purest water to the door of every house, is another corn-mill and also two saw-mills, in which a large quantity of timber is cut for exportation. The beneficence of the Creator, every where apparent, seems to have united in this $s$. numerous bencfits as a counter region. The different valleys on the sides of the mountains present nearly the same picture.-In the second range the soil is a light yellow, more or less mixed with mail, and cextremely fertile. The climate, in consequence of the varied exposure of the lands, is very various and the difference is even perepertille in going from one farm to another; neverthelcss, corn and leguminous roots of all kinds prosper as well here as in the first range, although sown and harvested fifteen days later. In the first range the autumnal mists dissolve in rain, in the second they descend in snow. The north and north-west winds are frequent.-A large portion of the third range is cleared from wood, and the soil is less flinty and generally more level than in the second range. This part of the scigniory is behind the front chain of mountains that bounds the $s$ t. Lawrence and extends over a plain from 6 to 7 leagues in depth to the great chain of mountainous rocks. The newly settled inhabitants of this range produce an abundance of corn from their lands, which are cultivated with the hoe. The autumnal frosts are later here than in the second range, which causes the belief that the surplus population, which migrate to this concession and multiply rapidly, will find abundant means
of subsistence. In spite of the local disadvantages, which entail on the inhabitants laborious modes of cultivation, instances of emigration to the plains are rarely known. Their well aired climate and their vigomos corporeal powers appear, as it were, identified. This little colony of Camadian mountaineers may be compared to the inhabitants of switzerland, or the sicutch highlanders.-This s. is watered by several streams, but principally by the rivulets du Moulin, du Mouton, de L'Eglise and du Cap aux Oice, which descend from the rear and wind between the different ridges in a manner truly decorative.- On the du Moulin, near its discharge into the st. Lawrence, are seated an excellent corn-mill and saw-mill; at a short disiance from which stands the manor-house, a large and substantial stone building, with numerous appendages.- $s$ everal roads lead along the St. Lawrence, where the ground is practicable, and in other places over the mides; they are in general tolerally good but frequently ascend some very long and fatiguing hills. The want of a road to Quebec is one of the greatest disadvantages of this and the adjoining seigniorics. The industrious inhalitants are, as it wre, imprisoned during six months of the year, and can only export their surplus provisions while the navigation is open. The different sums appropiated liy the Ihouse of issembly for the parpere of opening al commmication between St. Joachim and Si. Paul's Bay have beco expended chesty in searching for a convenient line of route, and have lecen totally lost by abandoning the road opencd in 1815 or 16 by the Chevalier D'Estimanville, at that time assistint chief overseer of roads. The sum of $£ 19 \% \pi$ expended since, under the mamarement of commissioners, was only sufficient to open :a commumication of ! leagues acruss difficult places, where there are many expensive coits and hiviges to make. This road can never be fimished without the intervention of the legislature, the inhabitiants being inscnsible to every thing to which they have not been habituated, and without this road this interesting part of the country will remain for a long time neglected. This $s$. and those of Le Gouffre and St. Paul's Bay, being denied access by land with other seigniories, owing to the intervention of a barren tract in Citti de Beaupre, the principal part of the disposable produce is transported to Quebec by water, in which trade

## E B O

many schooners are almost continually employed during the season of navigation: their cargoes consist chiefly of grain, live cattle and poultry, besides large quantities of pine planks.-In the bays are some good banks for fishing, which is resorted to as a means of livelihood. Great abundance of excellent fish and large quantities of herrings are caught, besides loche, cod, sardenne, l'eplans, caplans, pilchards, eels and some salmon. The porpoise, which was formerly taken in abundance near the coast, is now become more rare; nevertheless, there is still oil made sufficient for the consumption of the inhabitants. - All the front of this S . contains limestone ; the more elevated peaks are granite and there are many quarries of freestone of superior quality - The timber is of vigorous growth ; the woods contain but little maple and much wild cherry, birch, pine, spruce, poplars, cedar and in general all the dwarf trees usually found in the forests of Canada.-Sulphureous springs of various strength and aggregation are very common; there are also many ferruginous springs, but their medicinal qualities are not sufficiently appreciated by the inhabitants.Ten schooners and four chaloups, carrying nearly 300 tons, continually ply to and from the port of Eboulemens to Quebec, and the chief articles of trade are deals, boards, firewood and some wheat. -In the S are many potters, 2 joiners, 2 shipwrights and 5 blacksmiths.-Each of the 3 cornmills drives 4 pairs of stones.-The horses are generally of the original Canadian breed and, though small, are extremely docile and willing. The horned cattle which the late Colonel Nairne, the seignior of Malbay, imported from Europe have multiplied and bring greater prices than any others, and, notwithstanding the degenerating influence of the long Canadian winters, they preserve the shape and qualities of their superior breed. Sheep are reared in great numbers, but the inhabitants pay no attention to selection. The number of farms conceded in this S . is 284 , containing 24,607 arpents. 17,229 arpents remain unconceded.-This $s$. is in the parish of Notre Dame de Bon Secours, which also includes a small portion of the s . of Murray Bay. The population of this P . amounted, in 1826, to 1800, although, by an error in the census taken in that year, the number is said to have been only 1400.

Echauffaud aux Basques, v. Canards, r.
Есно Lake, in the f. part of the t. of Abercromby, is one of the sources of a nameless stream that descends to New Glasgow and joins the Achigan.

Ecureuils, les, or Belair, and its augmentation is a seigniory in the co. of Portneuf. It fronts the St. Lawrence and is bounded s. w. by the S. of JacquesCartier ; N. e. by Point aux Trembles and in the rear by D'Auteuil.-It is $\frac{1}{4} 1$. in breadth by 1 league in depth. Granted Nov. 3rd, $16 \% \cdot$, to the Sieurs Toupin. The augmentation, of the same breadth as the seigniory and 21 . in depth, was granted Jan. 20th, 1706, to Marie Magdelaine Mezérai, widow of Jean Toupin.Though composed of a soil nearly similar to the front part of the seigniory of Jacques Cartier, Belair cannot vie with that property in fertility. -The lands are all nearly conceded and most of them settled. Many of the concessions were granted before 1759 , and those that have been granted since are held on the same terms as the former. There are some neat and well managed farms. The unconceded lands are of indifferent quality, and many of them totally unfit for agricultural purposes-The river Jacques Cartier crosses the $S$. diagonally, and it is also watered by the Rivière aux Pommes, a pretty winding stream that flows

## ECU

into the former. The timber has been nearly all cleared off, and what remains is very inferior both in kind and value.-Several roads cross this grant and one, intersecting them at right angles, runs from the banks of the St. Lawrence to the Jacques Cartier.-The augmentation is generally mountainous, but the land is not of a bad quality; it is only partially cultivated near the seigniory and is tolerably well timbered with beech, ash, maple, pine and birch, and is watered by the liiver Portneuf and some of its branches. The road from Jacques Cartier bridge crosses it, on each side of which there are a few neat settlements.-The Parish of St. Jean Baptiste des Ecureuils is divided into three fiefs, belonging to Messrs. Desclienay, Hart and Alsop. The church, though small, is large enough for the congregation. The parish contains cof familics, threc-fourths of whom, appreciating the advantages of education, supply the means of supporting a public school to which all the children of the parish can easily have access; in this school the elements of the French, Latin and English languages, arithmetic. \&c. are taught. -There is no want of tradesmen in the s . This P. was for a long time celcbrated for the quality of its corn, but for some years this reputation has been on the decline. The presbytery is spacious and very commodious. The church, though small, is large enough for the congregation, and the parishioners are inspired with an extraordinary zeal in its decoration ; their contributions for this purpose have frequently been surprising.

## E S H

veuve de feu Jtan Toupin, d'une demi lieue de terre de front sur deux lieues de profondeur derrière la Seigneurie de Béluir, le front à prendre immédiatement à une lieue du fleuve St. Laurent."-Régisitre d'Intendance, No. 5, folio 41 .

Edwarid (L.), v. Batiscin, r.
Edifards-town, i. Beauharnois, s.
Ely, township, in the co. of Shefford, bounded E. by Melbourne and Brompton; w. by Roxton ; N. by Acton and s. by Stukeley. The whole of this T . has been surveyed and the s. F . quarter granted. The land is good and, if cultivated, would prove fertile; the low land, though rather wet, is not unfit for tillage and produces some of the best kinds of hard, black woods.-This $\mathbf{T}$. is watered by branches of the Yamaska and other streams.-Here are very few settlers. 000 acres were purchased by Mr. Wim. Hall of Quebec for £100.-Cugranted and unlocated 2,800 acres.

Emberton, a projected township, in the co. of Sherbrooke, is bounded by Ditton, Auckland and Drayton, and is watered by the R. Margalloway.

Enfant Jesus, de l' (P.), v. Moxtreal.
Englisir Bay, on the N. shore of the it. Lawrence, in the co. of Sigumay, lies between St. Panovace and Manicouagan Bay.

English River, in the $S$. of Beauharnois, rises in several springs in the rear of William's Town and, winding to the front, joins the Chateauguay nearly 1 m . above the church.
Ennies, des, river, rises in waste lands in the rear of the 2 nd aug. to Ste. Anne, in the co. of Champlain, and watering the rear part of the $s$. of Batiscan falls into the $r$. of that name.

Estrif (I.), v. Magbalen, I's.
Erien Lake, in Clarendon, lies near the centre of the r ., between the 9 th and 10 th ranges and E. of Decoy Lake.

Escoumaine, river, in the co. of Siguenay, falls into the N . shore of the St. Lawrence about 10 m . below the r . (irande Berzeronne.

Eshganetsogoor, river and lake, in the co. of l'Islet. The river rises in the mountainous and waste country lying s. of the rear boundary of the r. of Ashford; running s. it receives one stream from the $\mathrm{N} . \mathrm{E}$. and another from the $\mathrm{N} . \mathrm{w}$. , both descending from small lakes. The r. then forms the lake of the same name and, taking a s, w. direction, joins the Daquam about 6 m . above the junction of that river with the r. St. John.

Esher, a projected township, fronts Lake des Allumets, in the co. of Ottawa, and lies between
the projected townships of Hastings and Sheen. In Esher the Hudson's Bay Company have a Post. Etchemin, lake, is in the cos. of Bellechasse and Beauce and lies in the angle formed by the junction of the townships of Ware, Standon and Cranbourne; it supplies one of the main branches of the r. Etchemin.-No part of the District of Quebec is better calculated to be the centre of an extensive and flourishing settlement than the vicinity of the Lake Etchemin; no inland situation could be selected better adapted for the site of a village than the margin of this beautiful sheet of water, which is somewhat more than 4 m . long, navigable from one end to the other and abounding with fine fish. The shores of the lake, without assuming the appearance of rocks, are bold and picturesque and the margin in most places either pebbly or composed of the finest sand ; it is surrounded by excellent land, presenting on all sides a moderate and gradual ascent from the water and three or four good mill-streams enter the lake at different points. On a small peninsula on the N. side is every appearance of an extensive mine of iron ore: bog ore has been found in great abundance not far from the s. w. side, and indeed on all sides, for many miles round the lake, there are strong indications of this valuable mineral. This lake is in a most central situation; at the head of a considerable branch of the r. Etchemin, and within a mile or two of the head waters of the River St. John and of considerable streams communicating with the Chaudiere ; it is in the direct line of the nearest and only practicable route of communication with the River St. John, and is by nature appointed the great highway between Qucbec and the lower provinces; it is also in the line of the nearest road to the State of Maine and enjoys, moreover, the advantage of proximity to the road lately opened to the Kennebec settlements, wherefore the distance by that road may be shortened by descending in a direct line down the valley of the Etchemin to Pointe Lévi, in lieu of the circuitous route by the Chaudiere: so situated, few inland places in the province possess superior advantages as a commercial entrepot to the Lake Etchemin. A village in this situation, communicating with Quebec at the short distance of sixteen leagues, would, when the country in the ricinity has somewhat advanced in settlements, offer a most convenient place of deposit for the produce of the neighbouring country, as well as for that of
the St. John district and the state of Maine: being in the high road from the capital, at the distance of a short day's journey, it would also form an intermediate point of departure for all the extensive countries lying to the suuth, south-east, east and north-east. The value of an easy and safe inland water communication with the lower provinces must be obvious, and will ever be an object of the utmost importance to the inhabitants of the British North American colonies.

Etchemin, river, in the cos. of Beauce and Dorchester, rises on the s. e. boundary of Standon, and, having the $\mathbf{T}$. in a direction at right angles with its general course, it enters Cranbourne and, swecping along the s.w. base of the mountains, again returns N. E. before it enters Frampton, forming in its course a rocky peninsula of 6 m . in length by half that in width: a good water communication exists round this peninsula, the Etchemin being deep and navigable from lot 19 to lot 28 , but not lower, for it becomes a wide and shallow stream on a rocky bed; the rapids in the 10 th range extend only a short distance. After watering the $т$. of Frampton and the $S$. of Jolliet, it enters Lauzon and traverses the whole of that $S$. to the St. Lawrence, into which it falls between the domain and fief Ursuline.-When the extensive country through which this r . runs, now wholly uninhatited, has been settled and brought into a state of improvement capable of reimbursing the cost, an inland water communication from Pointe Lévi to Madawaska, and perhaps eventually even to the Bay of Fundy and the distant Atlantic, would neither be doubtful as to its beneficial result nor very costly in the execution, by simply improving the bounty of nature furnished by the rivers St. John and Etchemin.-At the Lepper Falls of the r . is an Indian carrying-place and the remains of a canoe have been there found, which indicate, perhaps, a nearer route to the navigable waters of the St. John than that discovered by Mr. Ware. From Lake Etchemin to the Middle Falls the descent is very trifling, so that, it is believed, the décharge du Lac might by embankment be made navigable for ${ }^{\text {b }}$ boats: the descent at the falls is not more than twenty feet, and the ground is favourable for the construction of locks: from the falls to Ware's River, at the s. angle of Buckland, eight miles, the Etchemin is narrow, deep and navigable, flowing through an

## FAR

alluvial valley: from the last-mentioned place to the Bridge of Ste. Claire, 18 m ., is over a hilly tract of country, but in a graíual slope, affording numerous and considerable streams as feeders to a canal ; and, lastly, from the Bridge of Ste. Claire to Pointe Levi, about 21 m . is over a fine level country very favourable for the excavation of canals, so that the whole length of the canal connecting Pointe Lévi with the River St. John would not, in all probability, exceed tifty miles, if so much. Perhups the bed of the Etchemin, above the Lower Falls, might, by embankment, be made navigathe for a great part of the distance, the fall being in most places very inconsiderable.

Elgenie, river, rises in l. Oliveira in the 9 . of Dorset, in the co. of Megantic, and taking a s. course enters the T . of G:yhurst, through which it winds gracefully in a gentle current until it falls into the Chaudierc near Pointe Ronde.

## F.

Fimine, la, river and lake. The river rises in several branches, in the т. of Ware, which unite with other branches, one of which deseends from Lake la Fanine in the t. of Watfurd, and running into the S . of Aubert de L'Isle falls into the Chaudiire near the $w$. angle of the $\mathbf{P}$. of $\mathrm{S}_{\mathrm{t}}$. Barbe. The lake is in the extensive swamp lying in the rear of Ware and Watford.

Farnian, township, in the co. of Shefforl, is bounded N . by the r . of Granby and the $s$ angle of the S . of St. Hyacinthe; s. ly Stanbridge and Durham ; e. ly the r. of Brome, and w. ly the aug. to the s. of Monnoir. It is watered throughout by the first branches of the r. Yamaskia. The land is of good quality, generally similar to that of Stanbridge though perhaps with a grcater proportion of indifferent tracts; in the s.w. parts are wide-spreading swamps.-The best parts are timbered principally with beech, elm and maple; on the marshy parts are the usual inferior sorts.Watered by large branches of the river Yamaska, on which are many corn and saw-mills.-Several roads cross in every direction. Along the banks of the streams are some good patches of settlements. Nearly all the land is granted. In 1798, Mr. Samuel Gale and others obtaincd a large portion and still continue the greatest landholders: in 1805, a grant was made to the family of the late Coloncl Cuyler, and in 1809 the westernly
part, being the "rest and residue of Farnham," was laid out and 10,176 acres granted to John Allsop, Esq. and others, his associates, who still retain the property.- Cinyrautcel and unlocated 1272 acres.

Statistics.

Fachmidarla, sejgniory, in the co. of Portneuf, is bounded s.e. by Guillaume Bonhomme and St. Gabriel ; s.w. by Neuville and Bourglouis; $\therefore$ by Desmaure and $\therefore$. by waste lands. This $S$. is irregular in front and depth; its superficial extent about 12 l ., one-thind of which is in lakes, rivers and mountains. From the s. of Desmaure to the r. Jatulues Cirtice it is only a narrow slip of land, 3 l. broad, and 91 l deep; beyond that river it spreads to a breadth of 8 m . with an additional depth of 31 . granted Feb 20th, 1693 , to Nicur de Gaudarville and now the property of Juchereau Duchesnaye, Esq. The front of this S . is 3 l . from the St. Lawrence and its first two ranges of concessions are settled by natives of the country; a third range is conceded to natives but is not settled. The principal seitlenents are on the Jacques Cartier, consisting of about 80 farms on each side of the r. ; there is also another settlement more to the n. besides those on Lac St. Joseph, on the discharge of which are an oatmeal mill, a saw-mill and a bridge 60 feet by 18. A great part of the lands were conceded before 17.99 , and more recent concessions hate been made which are held under the ancient tenure. The land that remains unconceded is of very indifferent quality, and much of it is totally unfit for agricultural purposes. That part of the seigniory lying between Gaudarville and Guillaume Bonhomme, though rather mountainous particularly towards the river, is of good quality; the land rising gradually affords many

FAU
opportunities for cultivation ; the soil is either a middling sort of loam or a layer of black earth, of no great depth, upon a stratum of sund: the farms exhibit good tillage and are by no means defective in fertility.-There is a tolerable variety of timber ; the maple, beech and birch are particularly good : inferior wood is in great abundance.-Several roads lead to the adjoining seigniories on each side, and one from Desmaure up to the Jacques Cartier, but there is scarcely a stream to be met with until reaching that river; thence northward, this S . is mountainous, continually rising until it approaches the great $\mathrm{N} . \mathrm{w}$. ridge, and is very well clothed with timber but it is generally unfit for cultivation.-This $s$. is watered partially ly the r. Jacques Cartier, by Lac St. Joseph and Lae Bonhomme besides some smaller lakes in the ravines, and also by several little branches of the r. Portneuf which rise in the skirts of the mountains.-Part of this S. is in the parish of St. Augustin and part in the p. of Ste. Catherine, which lies behind it and is served by the same curé. (I'ide Gaudarville, and for stiatistics of Ste. Catherine, P. vide Desmaure.)

Title.-"Concession du 20me Février, 1693, faite par Iouis de Buadc, Gouverneur, et Jcan Borhart, Iutendant, au Sieur de Gaudarzille, de trois lieues de profondeur au derrière du fief de Gaudariulle, ensemble toutes les terres attemantes qui sont derriere les fiefs des hicurs Desmanres et Guillaume Bonhomme, et jusqu'a la profondeur de la mème ligne du Nord-est au Sud-ouest, qui terminera les dites trois lieues, ensorte que tout ce qui est compris en la prisente concession sera borné d'un bout, par devant au suidest, par les lignes qui terminent les profondeurs des dits fiefs de Gaudaruille, Bonhomme ct profondeurs des dits fiefs de Gaudarcille, Bonhomme ct Dismaure, et par derrière au Nord-ouest par une ligne courant aussi Nord-est et Sud-ouest qui terminera la profondeur des dites trois lietus par derrière le dit fief de Gaudarville, et sera prolongée droit jusqu'au fief de Ncuvillc, et par un cotre au Nord-est, d'une partie des terres du fief de Sillery, d'une partie de celles de Gaudaraille, et des terres du dit Bonhomme; et de l'autre cutí, au Sud-ouest, bornée des terres du tief de Newillc."-Reigistre d'Intendance, No. 4 , folio 11 .

## FOU

Fenmes, ruisseau des, a small rapid stream descending into the N . shore of the r. Saguenay, nearly opposite Ha Ha bay. The Descente des Femmes forms a good harbour for vessels.
Fere, river, rises in a small lake behind the high lands near the rear line of the S. of St. Roch des Annais, and taking a w. course washes the boundary line of that S . and Reaume, where it receives a small rill from the s. and turns a mill, from which it strikes off to the N . and running to the village in St. Roch des Annais falls into La Grande Anse in the r. St. Lawrence.
Ferme, petite, river, rises and falls in the $s$ of Côte de Beaupré; it runs through the domain of St. Joachim into the St. Lawrence about 4 m . from the mouth of the r. Ste. Anne.
Ferre, river, rises in several lakes in the waste lands in the rear of the S . of Bourglouis ; it runs s. w. through the S. of Perthuis into Long Lake which is the source of the $\mathbf{R}$. Noire.
Fitcis's Bay is a long sheet of water in the $\mathbf{t}$. of Stanstead emptying itself into Lake Memphramagog. It receives the waters of a considerable lake that cuts the division line of Stanstead and Hatley. At the mouth of this bay is a small island.
Flamahnd, river, runs into the r. St. Maurice above the N . Bastonais r .

Fleur, la, river, in the Island of Orleans, rises in the high lands, and taking a s. w. direction runs through the fief Mons. Poulain into the south channel of the r. St. Lawrence.
Forges of St. Maurice, v. St. Etienne, f.
Foccallet or Caldwell Manor, seigniory, in the co. of Rouville, is bounded n. by the S. of Noyan; s. by the state of Vermont ; e. by Missiskoui Bay, and $w$. by the r. Richelicu. Granted, Ap. 1, 1738, to Sieur Foucault ; 2 l. in front by $2!1$. in depth. -The line of boundary between Lower Canada and the United States runs through this S., by which a great part of it is placed.within the state of Vermont - The face ofthis $S$. is generally level, though slightly undulating and regularly interspersed with swamps and gently rising grounds; the land though low is superior in quality to the other low lands on the east bank of the Richelieu, and may be cultivated with the greatest success; but this superiority, joined to the benefit of having water communication at its east and west boundaries, bas yet attracted but few settlers, who are chiefly American farmers, - and are settled in different parts of the S.-Apple

## FO U

orchards flourish well in this $\mathbf{S}$. and various kinds of the plum and cherry are cultivated with success. The forest timber consists of white pine, white oak, cedar, ash, elm, maple, beech, hemlock, larch and fir.-The roads are mostly in good repair ; 5 principal roads are established by law, 4 of which lead from the province line N . through the s . and one from Missiskoui Bay w. to the river Richelieu; these are intersected by several shorter roads There is a ferry over the Richelicu at the province line, where the river is one mile broad; the rates of ferriage are, for a waggon drawn by two horses 3s. 9 d ., a waggon with one horse $2 .: 6$. 6 , a foot passenger $1 s$.-This s . and that of Noyan adjoining are divided into 2 parishes; the $w$. parish, which includes the protestant episcopral church of Foucault, is called St. Thomas; there is no parsonage house nor public school, but there are 4 private seminaries in each of which are taught, on an average, 2.5 scholars.-Foucault is about equally and uniformly settled in every part. The population in 1825; amounted to 1051; the number is now increased. About the of the land are under cultivation, and the soil is highly favourable to the growth of hemp and tlax; the latter is cultivated by every family for domestic use.-The average eorn produce is about 20 bushels per acre: wheat, rye, Indian corn, oats, barley and buck-wheat are raised in abundance, and peas are cultivated to a considerable extent. The annual consumption of wheat, rye and Indian corn, for food, is about 8400 bushels of each; and of Indian corn, peas, buck-wheat and oats, for fattening cattle and pigs and feeding horses, about ! 1010 bushels.-One corn-mill and one saw-mill have been erected on Wolf Creek by Captain John Taylor, which, from the smallness of the stream, can work only about 4 months in the year. There are 4 permanent potash factories and several private ones of minor importance: there are also 2 tanneries.-Putash, lumber, beef cattle, pork and grain are the principal articles of traffic, which are exchanged for merchandize.-The price of agricultural habour is $Q_{s}$. $6 d$. a day; and a mechauic carns 5 s.-Amons the tradesmen are 1 saddler, 1 wheelwright, 3 blacksmiths, 3 cordwainers, 1 hatter.-Milch cows and labouring oxen prosper well, and sheep are reared in sufficient numbers to supply each family with wool for winter clothing.-Although no mine nor mineral has been discovercd, some specimens of rock crystal, garnet and emerald have been

FOX
found, also various petrifactions on the shores of the Richelieu.-This S. is watered by Wolf Creek that flows into South River, also by Missiskoui Bay on the $\mathbf{E}$. and by the r. Richelicu on the w.; these rivers abound with fish of delicious flavour.

Fox, rivers. Great and Little Fox rivers are about 2 m . from each other, both falling into the gnlf of St. Lawrence, between Griffinis Cowe and Little Vallée in the co. of Gaspé. Great Fox river runs through the s. angle of fief Anse de l'Etang.

## F R A M P T ON.

Frampton township, in the co. of Beauce, in the rear of the SS. of St. Joseph and Ste. Marie, on the river Chaudicre, bounded N. $\mathbf{E}$. by the r . of Buckland; s. w. by the S. of Jolliet and s. E. by the r. of Cranbourne. This township is situated at the commencement of the mountainous tract of country separating the waters of the St . Lawrence from those of the $S_{i}$. John, and consequently presents, on its near and farther sides, very different appearances. The s. e. side, from about No. 16 to 28 , is intersected from s.w. to N. E. by a chain of clevated mountains, in many places impracticable for roads, frequently rocky and otherwise unfavourable for immetiate settlement. Like the other parts of the township the elevated portions are, however, very much superior to the valleys, which are generally swamps covered with stones and producing inferior descriptions of timber such as sapin, spruce, some birch and cedar.-As far as is now known, neither this nor any other portion of the r. contains any limestone or sand.-The N. W. half of the т., although also hilly, is much superior to the opposite side; all the hills may be cultivated to their summits, the valleys are in gencral good soil or cedar, alder and ash swamps. The land is every where stony, but the stones are loose and on the surface. The soil is a strong white or ycllow clay, producing very superior crops of wheat and other grain, potatoes, turnips, \&c. The grass, in the cultivated valleys, is very fine and is thought to be the cause of the superior quality of the butter made in Frampton. The uplands are timbered principally with maple and birch with a mixture, more or less, of ash, spruce, iron wood, beech, hemlock, \&c. In the valleys and alluvial points on the river are cedar in great abundance, alders, clm, ash, spruce, pine, with many other kinds of soft timber, and occasionally also birch and maple, but there is no white birch.-In the valleys are found considerable quantities of potter's earth.- The whole of the township is uncommonly well watered, and there are a great many very excellent mill seats on the various branches of the r. Etchemin, as well as on the waters communicating with the Chaudiére.-This township will be costly in bringing into cultivation from the number of stones on the surface; but, once cleared, it will become a very valuable and productive settlement, particularly to graziers.-The most conspicuous mountain is called the Crapaudière; it
is in the 9 th and l0th ranges, No. 15 to 20 , and is only a link of others as high or higher, extending from it to the N. E. and s. w.-The N. E. half of the $\mathbf{T}$. is traversed by the river Etchemin in its whole extent. There are two small lakes in the 3rd range, abounding with excellent trout; both communicate with Pyke River, a branch of the Etchemin.-Roads have been opened and made passable for wheeled carriages in the 1 st , $2 \mathrm{nd}, 3 \mathrm{rd}, 9$ th and 11 th ranges, nearly half way ihrough the $\mathbf{T}$; and a cross road, in very tolerable order, has been made between lots $\mathrm{N}_{0} .2$ and 3, from the front to the rear the whole way. The road in the 9 th range is opened and passable for 7 miles, and that in the 3rd nearly as far. Other roads are projected and in progress, and a road in continuation of that in the 9 th range has been traced to the river St. John (distant from the s. e. side of the r. 17 miles) by order of government.-There are no bridges or ferries established over the Etchemin in this $\boldsymbol{\text { a }}$, but it has now become absolutely requisite that a bridge should be built over that river, as the communication between the inhabitants is often cut off by floods, \&i.-This т. has not been erected into a parish yet, and there is only one place of religious worship, a Romon Catholic chapel, recently erected in the 3rd range, where service is occasionally performed. From the situation of this township it ought to be divided into two parishes, for the $\mathrm{N} . \mathrm{E}$. and $\mathrm{s} . \mathrm{w}$. sides ought to be distinct. On the south side an appropriation of crown lands has been made for the support of the school; on the $\mathrm{N} . \mathrm{E}$. side there is no reserve for this purpose or any other of the kind. The s. w. side of the T. in the 1 st , 2 nd , 3 rd and 4 th ranges has been settled from 1816, and at present contains the greatest population, about 170 . The settlement on the $N$. $E$. side was begun in 1823, 7 years later than the other side; the total number of souls on the N . E . side is 101 .-The chief proprictors in this township, enumerated according to the extent of land they respectively hold, are, Mr. Gilbert Henderson, Colonel Jacques Voyer, Mr. P. E. Desbarats, Hon. Mr. Justice Pyke, Mr. William Henderson, Hon. James Irvine, heirs of Labrućre, Colonel Vassall, Colonel Armstrong, besides several other persons who possess from 100 to 800 acres each. -In the N. $E$. side 900 acres of forest are cut down, of which 618 are cleared and cultivated. On the s.w. side it is sup-

## F R A M P TON.

posed that the quantity of land improved is about one-third more than on the N . E . side.-There is no village although there may be about 60 houses in the township, and no trade is as yet carried on. -The average annual crop of wheat produced on an acre of new land is 20 bushels, potatoes from 18 to 25 . The produce on the $\mathrm{N} . \mathrm{s}$. side of the $r$. was nearly as follows, in l827, and very much under an average crop.

| $\begin{array}{r} 1,510 \\ 550 \end{array}$ | Whels of potatos |  | 50 bushels of barley |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | ditto | tumips | 4) | ditto | peas |
| 415 | ditto | wheat | 11.5 | ditto | rye |
| 730 | ditto | Oats | $\because, 300$ | bundles | of hay |

The total produce is more than is required for the consumption of the growers; the surplus is, however, in great demand for new settlers (many of whom had no land cultivated in $1: 97$ ), and in the adjoining seigniory. It is supposed that the produce of the s . w. side was more than double the above, as there are fewer new settlers, and also a greater surplus for sale out of the township. The seasons for sowing and reaping are about a fortnight earlier than in the vicinity of Quebec. On the s.e. side Mr. Jesbarats has erected a saw-mill, corn-mill and oatmealmill: on the $\mathrm{N} . \operatorname{s}$. side Mr. G. Henderson has a saw-mill, corn-mill and oatmeal mill.-There are many tradesmen, particularly masons, bricklayers and joiners, who, in most instances, work all summer in Quebec while their families look aficr their farms. There are also shoemakers, weavers, cattle doctors, wheelwrights, blacksmiths and other mechanics settled in both sides of the township.The average price of agricultural labour is from 2 ... to $2 s .6 d$. per day, the labourer boarding himself, or from $1 s, 6 d$. to $2 s$. with board.-There are appearances of iron ore in several places; the stones are clay slate interspersed with a few boulders of granite, and some few detached pieces of porphyry have also been seen; quartz and quartzstone clay slate is very common.-Flas grows well but hemp hits not been tried, although there is no doubt of its growth; hops are found indigenous in several places.-The neat cattle hitherto introduced are of the common Canadian breed, which, perhaps, with some improvement by judicious crossing, are the best calculated to thrive in a hilly country.-There is scarcely any part of the T . where the stumps have as yet rotted out
from the cleared lands, consequently very little ploughing is performed, and when it becomes necessary it is probable that oxen will be used exclusivcly. The average price for clearing is from $£ 210$. to $£ 3$ per acre. This sort of clearing leaves the stumps on the land, but it prepares it for seeding. (onsiderable quantitios of saw-logs were cut on the N . $\mathbf{E}$. side previous to the lands being granted; in fact, the land was in general stripped of all the pine and spruce timber fit for lors in the vicinity of the river. This illegal conduct has been very injurious to the inturests of the grantees, who have therely been deprived of the only immediate source of commerce to cnable them to carry on their settlements.- Out of the nenty granted for the improvement of internal communications the sum of $£ 300$ was here expendet. The opening of the projected road to the r. Si. John would be of the gratest advantage to the r. generally, emecially if curried on to the United States, to which it would then be the direct road from Quebec.-This T. is considered decidedly superior in soil and situation to Buckland, Crambourne and Standon; and, of all the settlements in the rear of the Prench grants below the n. Chaudicre, it is the most forward in improvements and population. It has ben occasionally visited ly a great many bears, which destroyed some cattle and lacerated others; active measures, howner, have been tak:n l, the settlers to prevent the future intrusion of such troublesome visiters- $\Lambda$ s the progress of settlenent in this part of the province manly, if not entirely, depends on the state of the roads through this r., the House of Assembly has wisely contributed sums of money for the purposes of opening new roads and the erection of a bidge over the Etchemin. Commissioners were appointed, whose judicious and faithful dischatge of their inaportant duties is alike honourable to themselves and the assembly which sclected them. They were appointed under the provincial act, Oth George IV. chapter 13, " to "pen and make two roads in the county of Dorchester, whereof one shall lead from the old settlements east of the River Chaudiere as far as Lake Etchemin, and the oilcer from the settlements in the ninth range of the township of Frampton, as far as Lake Etchemin on the north-cast side of the River Etchemin." The lst road is that from the r . Chaudiere towards l. Etchemin, through the T. wi Cranbourne, about 33 miles, viz.

1st. From St. Joseph Mill on the Cbaudicre to rear line of St. Joscoph, or front line of Cranloourne 2nd. From thie end of said road to the intersection of road number three, carried through 5th range of Cramburne
ird. From 4th range of Frampton to sth range of Cranbourne, carried through between lots 14 and 15 of Cranbourn:

4th. From end of last-mentioned road to interscetion of the rear line of Crambourne, between the 7th and sth ranges
Sth. From termination of road carried through Frampton on the north-east side of River Etclemin to Lake Etchemin, carried on, as ncarly as min to Lake Etchemin, carried on, as nearly as possible, the rear line of Cranbourne

## Total

9
3

Of the above roads, the first three have been opened about $16{ }_{4}^{1}$ miles fit for winter roads. There are no ditches, and no stream refuires a bridge above (; or 8 feet span, but no bridges have been made. The width of road opened is 10 feet. The whole of this part of the country is hilly and extremely well watered, but no portion of it is mountainous; the road is not carried over any steep hills, nor are there any streams requiring public bridges; but the portion of the road leading from the Chaudicre as far as the crown lands in Cranbourne is extremely swampy, and could not be made passable for carts without a very heavy expense. The timber on the adjoining lands has been mostly destroyed by accidental fires, and the quality of the soil is entirely unfit for settlement. The remainder of the road is on the crown lands, which are every where tolerably good, and in some places excellent and very fit for settlement. The remainder of the road proposed to be opened passes entirely on the crown lands, which, with the exception of a small portion in the peninsula in the N. E. corner of Cranbourne, are of good quality and well adapted for settlement, when the roads from Frampton, by which alone they can be advantageously approached, are made good. There are no hills to impede this road, nor any swamps of any extent to increase the expense of making it, but there are two considerable streams to cross, which will require public bridges, viz., one over the main branch of the river Etchemin, and the other over the outlet of the lake of that name. These roads lead directly to a very valuable portion of the waste lands of the crown (exclusive of those they more immediately pass through) in Standon, Ware and Watford, all of which are of a description to encourage immediate settlement when roads are made to them - The other road it will require it in many places. It has been opened 11 feet wide and in places where no settlements are commenced, the wood has been cleared to the distance of a chain on each side. A considerable portion of this road, and more particularly the first two miles, runs through low land and requires logging at an expense of from $£ 50$ to Lif a mile. The country traversed by the road, so far as it is made, is all good soil and mostly in progress of settlement; there is only one steep hill, beyond which the road is excellent; it is at the commencement and does not exceed an acre in descent. That part of the road which remains to be opened traverses a fine tract of country on the s. side of a gentle slope, forming one side of the valley of the Etchemin usually called Les Aulnaies. There is only one hill to ascend, which may be done gradually, and a space not exceeding 1 mile of low land requires logging and ditching; one large bridge and five smaller ones will be required before the road can be travelled. No road in this; part of the country can be more important than this, it leads and indeed passes through in one place the unsettled lands in Buckland, and passes through the first range of Standon, at the distance of from $\frac{1}{2}$ to $\frac{3}{4} \mathrm{~m}$. from the most valuable portion of the crown lands in Standon, and thence directly to Cranbourne Road now opening; which until this road is completed will be entirely useless, and the only road by which the waste lands of the crown in Standon, the N. E. part of Cranbourne, the fine tract of country on the $T$. of Ware surrounding Lake Etchemin, and a considerable portion of Buckland, can be approached.-The bridge over the r. Etchemin in this $\mathbf{T}$. is erected on lot 2 in the 8 th range. The length is 321 ft . with two arches of 64 ft . each arch 17 ft . high in the centre by 13 at top; centre pier $\mathbf{5 0} \mathrm{ft}$. long by 20 wide at base; the abutments from 34 to 45 ft . wide. The expense

## F R A

of building this bridge has been about $\mathfrak{L}^{25} 5$, viz.-

In rendering an account of their proceedings to the House of Assembly the commissioners very justly remark that no similar work could be constructed in the province for less money. It is here not improper to observe that the long experience of the author, as surveyor-general of this province, and the evidence of facts prove how judiciously the commissioners for the opening and improving of the internal communications are chosen; the economical and judicious manner in which they direct their important labours, particularly the personal supervision which they bestow, ensures promptness of execution and confines the expenses within the limits of the estimates; therefore the sums voted for such purposes are never exceeded without attaining an adequate and generally an unexpected benefit. The money expended on these roads and bridges has, exclusive of the object in view, been of the greatest possille advantage to the adjoining country, both seigniories and townships, and a small additional sum granted for improving the roads in this valuable r . would have the immediate effect of settling the principal main roads up to the boundary of Cranbourne, and thereby open the most valuable portion of the lands in that r. for immediate settlement, which cannot otherwise be effected. The commissioners strongly recommend the opening and making passable, for summer carriages, three main roads in this r. leading towards the waste lands of the crown beyond, and traversing a tract of excellent country offering every inducement for immediate settlement: viz. lst, a road on the n. e. side of the r. Etchemin; 2nd, a wheel-carriage road on the s.w. side, of the r. Etchemin, from the new bridge to Cranbourne, about ten miles. This road will open a direct communication with the upper valley of the Etchemin, called Les Aulnaies des Mirres, and lead directly to the best lands in Cranbourne; 3rd, improving the present main roads in the 3rd and 4th ranges of this $\mathbf{T}$., by which alone the road at present opened in the s. w. part of Cranbourne can be approached, and the communications from the parish of Ste. Claire through Frampton and Cranbourne to the r. Chaudiére, opened for carts.

## GAD

The author cannot conclude this account of the т. of Frampton without publicly expressing his acknowledgments to Wm. Henderson, Esq., a large landed proprietor, whose public spirit and enterprising talents render him a most valuable member of the Literary Suricty of Quebec, and are highly useful to the prosperous advancement of the best interests of this part of the province.

Francheville, fief, in the co. of Portneuf. This small $F$. fronts the St. Laiwrence and is bounded n.e. by La'Teseric; N. w. by Reste des Grondines and N . by the r . Ste. Anne.

Francileville ( F ), v. Grondines, S .
Francheville (F.), v. La Trisierie, S.

Gagouchigaou or Gagouchigaoumy, river, falls into the s. bank of the r. Ristigouche.

Gamache (F.), v. Cap St. Ignace.
Garnet, river, in the waste lands in the co. of St. Maurice, runs w. into Lake Kempt.

Garthby, a projected township in the co. of Sherbrooke, lies n. e. of Weedon. The Lake St. Francis severs this tract into two nearly equal parts.

Gaspe Bay, in the Gulf of St. Lawrence, on the s. $\mathbf{e}$. side of the co. of Gaspé, lies between Cape Gaspé and Whale Head; it runs about 16 miles into the land and is about 5 miles broad: from its extremity two inlets, called the $N . W$. and s. w. arms, penetrate a considerable distance into the interior and receive the waters of several streams that flow from the mountains: the bay itself is deep and well sheltered; the shores are lofty and the settlers are nearly all fishermen. The basin is said to be one of the best and most commodious harbours in America, and is capable of containing more than 300 vessels in the most perfect security. It is easy of access and may probably become of importance, as a rendezvous for the homeward and outward-bound fleets. At present, it is frequently resorted to by ships on their way to and from Europe, meeting with tempestuous and adverse weather in the Gulf. This place deserves attention from persons skilled in nautical affairs, and competent to give a correct view of the advantages it possesses as a port. Ap-
plications have been made for grants of water lots in the basin, which it might be expedient to grant under certain conditions, such as the immediate erection of wharfs and store-houses for the convenience of shipping and trade, taking care, however, to make suitable reserves for public purposes, such as laying up and repairing vessels, \&c. The whale fishery is carried on with some success by a few active and enterprising inhabitants, who are almost exclusively employed in this kind of fishery. Four or five large schooners, manned each with from eight to twelve able and skilful persons, are occupied in whaling during the summer months. This business yields about 18,000 gallons of oil, which is principally sent to Quebec. The number of hands employed in reducing the blubber to oil, preparing casks and other incidental labour, may amount to about 100. In summer the bay is refreshed by a sea-breeze which commences about nine in the morning and lasts till sunset, and is succeeded by a land-breeze that continues till the morning. The singular reflection of objects on the shore during calm weather is remarkable in this bay; the whole face of the shore, opposite to that on which the spectator stands, suddenly appears to change and presents the most fantastic appearances, which continually vary until, by degrees, the whole disappear and leave nothing to be seen more than the natural appearances. - Grande Grève is a tongue of land projecting into the gulf that forms the $E$. shore of the entrance into Gaspé Bay. This place, with its environs, is settled by fishermen. The population amounts to 352 . The live stock is 3 horses, 21 oxen and 25 cows.Vielle Femme or the Old Woman is a rock contiguous to the cape and is evidently a fragment or section of it, the space between them having been evidently worn and carried away by the sea, or broken off from the cape by some convulsion of nature. In fine weather this remarkable rock offers to the eye of the spectator at Douglas m., 15 leagues off, the appearance of a ship doubling the cape with a fair wind : this appearance is rendered still more striking by the reflection on the rock, on which appear shades of colours that look like the flags of a ship streaming in the air.-Several rivers empty themselves into Gaspé Bay : the principal are called the $\mathrm{N} . \mathrm{w}$. and s. w. arms of the bay and St. John's river. The s. w. arm, in particular, affords good anchorage and an easy resort for vessels during the most violent tempests, which prevail in the gulf at certain seasons of

Gatineau，river，rises in some large lakes far in the interior of the country，between the rear of the t ．of Hull and Hudson＇s Bay ：these lakes have been visited by the Indians only．It enters Hull at lot 23 of the 16 th range and traverses the T diagonally，varying in width from 10 to 20 chains，and finally disembogues into the Ottawa in the t．of Templeton，about half a mile below the E．outline of Hull．－Steam－boats have ascended this $R$ ．for 4 miles，and it is navigable for the heaviest bateaux and other small vessels for 5 miles from the Ottawa：then it becomes rapid for about 15 miles and turns two mills．It is navi－
gable for canoes, it is said, for above 300 miles; and the Indians ascend this $\mathbf{r}$. when they go into the back country for the purposes of trade. It is a large, wild and rapid stream, and above 5 miles from its mouth is so obstructed by falls and rapids that timber cannot be brought down it-at least the experiment, it is believed, has never been tried. It abounds in views of the wildest and most romantic scenery. At its confluence with the Ottawa in lot 27 of the front range of Templeton, this $\mathbf{r}$. is nearly 20 chains wide. It is well stocked with fish and the usual sorts are bass, pike, pickerel, maskinongé, cat-fish, sturgeon, eels, $\$ c$. On the e. bank is a hill which may become an object of notice in a military point of view from its shape and commanding position. Ascending the R. beyond this point, cascades and rapids are not unfrequently to be met with, some of which are remarkable for their beauty and variety, environed as they are by a rather picturesque scenery, particularly in the 7th range of Hull where a small saw-mill, situated at the foot of a rapid, breaks into view. The agitated waters, flowing fast between a small island and the main bank, which, on this side as on the other, is much clevated above the bed of the river, produce a fine effect. This river, though well worthy of research, is remarkably little known. It is the largest of the Ottawa's tributaries and joins it 3 miles below the Chaudière Falls, nearly opposite the Rideau, discharging at least five times as much water as that river. Our ignorance of it is partly explained by the common report of its course; because, for upwards of 100 miles before it joins the Ottawa, it flows parallel with and but a short distance from it, so that no Indian traders have found it worth their while to make establishments on it. This river has been wholly unfrequented by the lumber-dealer on account of the great rapids and falls near its mouth, at one spot said to be 100 feet perpendicular. It is supposed that the Gatineau will present one of the finest pieces of river navigation in Canada, after passing the heights from which it descends near its mouth. The variety of minerals known to lie on the banks of this $\mathbf{R}$. renders it an object of still higher interest.
Gatineau and Augmentation, seigniory, in the co. of St. Maurice, is bounded w. by Grosbois ; E. by Pointe du Lac; in the rear by the $\mathbf{T}$. of Caxton

## G A U

and in front by the St . Lawrence.- $\frac{8}{4}$ l. in front by $1 \frac{1}{2} 1$. in depth. Granted, Nov. 3, 1672, to Sieur Boucher, junior. The augmentation, of a similar breadth and 4 l. deep, was granted, Oct. 21, 1750, to Demoiselle Marie Josephe Gatineau Duplessis.-The land is of rather a lighter soil than that of the adjoining grants, but it is equally fertile and under nearly the same mode of culture. -Watered by the two rivers Machiche, whose banks for a considerable distance upwards display some good and thriving settlements, which are connected by many good roads besides the public road that crosses them.

Tittc.-" Concession du 3me Novembre, 1672, faite par Jean Tulon, Intendant, au Sieur Boncher, fils, de trois quarts de lieues de terre de front sur une lieue de proquarts de lieues de terre de front sur une lieue de protondeur, a prendre sur le Lac St. Picrrc, depuis la conces-
sion du Sieur Boucher son pere, jusqu'aux terres non-consion du, Sieur Boucher son peire, jusqu'aux terres
cédées."-Réristre d'Intendance, No. 1, folio 37 .
cédées."' Résistre d' Intendance, No. l, folio 37.
Augmentation.-" Concession du 2 lime Octobre, 1750 , faite par le Marquis de la Jouquiere, Gouverneur, et Franfois Bigot, Intendant, à Demoiselle Marie Josephc Gatinctu Duplessis, de quatre lieues de profondeur derrière le fief Gatineau, situé sur le Lac St. Pierre, et sur le même front d'icelui."-Régistre d'Intendance, No. 9, folio 71.

Gaudarville or Guardarville, seigniory, in the co. of Portneuf, is bounded N. e. by Sillery and Notre Dame des Anges; n. w. by Desmaure and Guillaume Bonhomme; in the rear by the $\mathbf{r}$. Jacques Cartier and in front by the r. St. Law-rence.- 45 arpents broad by 4 leagues in depth. Granted, Feb. 8th, 1652, to Louis de Lauson, Sieur de la Citière. The present proprietor is Juchereau Duchesnay, Esq.-This grant consists of nearly the same species of soil as Desmaure and the lower part of Fausembault, but superior in fertility and good cultivation. For nearly 3 l. from the St . Lawrence it is entirely settled; thence it becomes mountainous with scarcely any part under tillage, though many patches appear to be tolerably good arable land.-The front being thickly inhabited has but little timber, but further on good beech, maple and pine are found in plenty.-Its general fertility is aided by several little streams that trace a mazy course through it and run into the r. St. Charles, and also by the lower part of the Rivière du Cap Rouge. On the west side of this river, near its discharge, there is a gradual slope from the high bank down to a delightful and well-cultivated valley extending almost to the r. St. Charles, and joining the level tract of low land that spreads for a great distance in the rear

## G A U

of Quebec.-This S. is intersected by numerous good roads in all directions: the main one, along the St. Lawrence, ascends several steep acclivitics, especially in the vicinity of Cap Rouge, of which travellers seldom fail to feel the effect, particularly in the summer.

The following account of the new settlements in Guadarville and Fausembault was given before a committee of the House of Assembly in 1823, by Lieut.-Col. Duchesnay, the proprictor.-"These settlements, mostly of Irish emigrants, were commenced in Oct. $1: 820$. The number of grants amount to $2: 2$; and there are about 2.25 resident proprietors, about 80 children or more, and about 70 or 80 labourers employed. Very few of the settlers had any capital to begin with, must of them had hardly any thing; they were, therefore, obliged to overcome the difficulties incident to new settlements and the want of capital by great privation, extreme economy, occasionally labouring for money to provide provisions, working industriously while provided, and when unprovided repeating the same means.-During the summer many of the settlers obtained employment as tradesmen or labourers in the king's works in Quebec; others could not, from the number wanted being supplied. The wages to tradesmen wore from 4. to $5 s$ a day, and to labourers from $2_{s}$ to $\underline{Q}_{\text {s. }}$. Gd. a day. To these settlers the Quebee Society of Emigrants save five pounds currency in provisions for the use of those in urgent necessity, and lent to others $10 l$. currency for the purchase of seed. Provisions were besides given to 4 or 5 families and some of the women were assisted by the Quebec Benevolent Society. Some clothing was also charitably given by Mr. Le François, cure of St. Augustin, to some of the men, women, and children. In order to assist the settlers, the proprietor (Col. Duchesnay) liberally advanced to them provisions and seed, opened roads and procured work for some and employed others; and the sum of $25 /$. currency was expended by the commissioners for the internal communications to assist in making a road to the settlement.-The rents are 30 s . currency per lot of 90 arpents, deducting the usual charges for the difference of money (argent tournois), wheat, capons, corvées, \&c.: for nearly 4 years no rent was required. Above 670 arpents of land have been cleared (1823) in St. Patrick settlement. For clearing out the stumps, 50 s. per square arpent are

G E N
generally paid.-As no capital is required to obtain lands, and as no rent is paid for the first 3 or 4 years, the settlers are highly pleased with their lands and the tenure; and if there were more lands in the seigniories similarly situated there would be no difficulty in obtaining more settlers: the only obstacle now ( $1: 2 \cdot 3$ ) is, the lands to be conceded are at a greater distance, which however would case to be an inpediment if roads were made," $\mathbb{C}$.

Tifli:-" (butenant quarante-cing arpens de front sur quatre licues de profondeur; tenant du citi: du Nurd-est au tief de sill ry, appartenant aux riverendolion Ji-nites, ct du cole du Sud-onest au fief de Desment, appartemant an Sieur Anhit. - Cette comecosion a pour date le s de

 folio 6 :s.

Gautiner, river, rises in the lakes of the t. uf Abercromby and falls into Riviere du Nord.

Gayiurst, a projected township in the cos. of Megantic and Sherbrooke, lies between the $\mathbf{T}$. of Winslow and the r . Chatudicre and is bounded N. E. by the t. of Dorset. The s.e. angle of this tract is watered by the R. Eugenie and by another R. whose precise course is unknown: both rise in the $w$. angle of Dorset.

Gentilly, river, rises in Lake St. Louis and several other sources in the $\mathbf{T}$. of Blandford. It runs w. into the T . of Maddington, where it has many branches. Below the saw-mill in Blandford it is navigable for canoes and rafts. From Maddington it runs in a serpentine course through the S . of Gentilly from s. to N . and falls into the St. Lawrence about a mile N. F . of the church.

Gentilly, seigniory, in the co. of Nicolet, fronts the St. Lawrence and is bounded N. E. by Livrard ; s. w. by Cournoyer ; in the rar by Maddington and Blandford.-2 $2_{1}^{1}$. in front ly 2 in depth. Granted, Aug. 14th, 1675 , to Michel Pclletier, Sieur de la Perade, and now the property of Messrs. de Lery.-For a great distance the s. bank of the St. Lawrence is low, in many places but little above the water's level; it here assumes a different character, rising high and steep, whence there is a gradual descent towards the rear. The soil in front is a sandy loam and good clay, but further back it changes to a strong black mould very favourable to argriculture. The first and second ranges of concessions near the $\mathrm{S}_{\mathrm{t}}$. Lawrence, and on the river Gentilly, exhibit judicious management: the land in cultivation amounts to about $\frac{1}{2}$ of the $S .-4$ ranges are conceded, 3 of

## GENTILLY.

which are in a great degree inhabited: the grantees of the 4th labour industriously, each on his respective farm. The farms in the lst concession, viz. those that front the river St. Lawrence, extend 40 arpents in depth ; those of the other ranges extend to only 30 .-There are no roads across the non-conceded lands, nor are they surveyed. The seignior lays out a range, and, when all the lands or farms of this range are conceded, he lays out another, and as soon as possible the grantees apply to the grand-voyer to open the necessary roads. The lands conceded before 1759 were granted in lots or farms of $\frac{1}{4}$ or $\frac{1}{2}$ league in front, 40 arpents in depth, and oftentimes the depth was only limited by the extent of the seigniory : since that p riod, an arrangement being made with the grantees, such lands have been reduced to 40 or 30 arpents in depth, and were charged by the seigniors with very moderate rents, which have not been in-creased.-The youths are in general desirous of making new settlements. The fathers take in concession as much land as they are able, in order to provide for their children who settle as near as possible to their relatives and friends. There are still about 2 ranges of 30 arpents in depth unconceded. Among these there are, as in every other part of the s., good and bad lands: the latter are generally taken by the grantees for wood.-Nothing in this. S. retards the establishment of new settlements, which are increasing fast, and the seignior demands moderate rent only.-The timber on the banks of the Gentilly is of the best kind and quality, but that in other parts is only fit for firewood, and, for that purpose, large quantities are cut and rafted down to Quebec.-This property is watered by the river Gentilly and two or three smaller streams, which work one corn and one saw-mill.

Road from the S. of Gentilly to the r. Bécancour. This important road has been commenced by commissioners chosen for the purpose by the provincial assembly, as its general utility to the townships on the Bécancour is most obvious, particularly to Blandford, Maddington, Bulstrode and Standon, which will thereby be connected with the old settlements on the St. Lawrence: it will also become in a short time, if it be continued to Somerset and Nelson, part of the line of communication between the St. Lawrence and Craig's Road. Notwithstanding the care and attention to economy evinced by the superintendant, the
commissioners have been unable to make this road but in a very imperfect manner, on account of the nature of the ground over which the road passes. From the St. Lawrence, as far as the rear of the S. of Gentilly, the ground is tolerably favourable to the opening and making of a road; but from the point last named to the river Bicancour the land is for the most part low, wet and difficult to drain, unless some labour be spent in clearing and opening the rivers and water-courses which cross the road. The timber on almost the whole of this ground is of large size and consists of cedar, hemlock, ash, larch, \&c.-an evident proof of the fertility of the soil, as well as of the difficulty of clearing the road and freeing it from stumps and roots, which must nevertheless be taken out before the work can be made durable. These difficulties inevitably made the performance of the work now done on the road tedious and expensive, at the same time that they convinced the commissioners that when once well made the road in question would yield to none in the province in facility of repair or in goodness. The commissioners caused the part of the road first commenced to be causewayed and ditched. Perceiving in a short time that the funds placed at their disposal were insufficient, they thought it their duty to open this communication from one end to the other, even in an imperfect manner, rather than complete a part and leave the remainder unopened. They were, however, able to do no more than to cause the timber to be cut down, the roots and stumps to be taken out, and 18 ft . in the middle of the road to be levelled, leaving uncausewayed and without ditches a multitude of places which it becomes every day more and more difficult to pass with safety. The last-mentioned inconvenience has been in part diminished by the work done on the road by the owners of lands in the $r$. of Blandford, by the causeways they have made, and by their clearing out the river Gentilly and two of the principal water-courses.-Of the sum appropriated ( $£ \neq 0$ currency) there remains in the hands of the commissioners $\mathbb{L}^{2} 24.1 s .21$. To prevent the total loss of the money already expended, it would be necessary that a further sum should be appropriated for the completion of the work already commenced, and for making the necessary ditches, bridges, causeways and clearings. Independently of the work which remains to be done in order to complete this road to Blandford, it

## GOD

would be desirable that the legislature shonld grant to the persons, to whom lands have been conceded in the back concessions of the S. of Gentilly, an aid to enable them to finish more promptly a road which was verbalized in 1828 and in great part opened by them. $£ 175$ currency would be sufficient to finish this road together with that to Blandford, and thus an easy and uninterrupted communication would be established between the new settlements on the river Becancour, in the townships above mentioned, and the settlements on the St . Lawrence from which they are distant about 17 miles

Tihk:-" Concession du lime Aoùt, lazti, faite par Jacyues Duchersmau, Intendant, à Midhl Pchlitier, Sieur de la Perude, de la Scigneurie de Geutilly, contenant deux líeues et demie de front sur le fleuve $S t$. Lourent, à prendre aux terres du Sieur IIfrtcl en insecendant, et denx lieues de profondeur."-Prgistc d'Internduner, No, folio 11 .

Georgetown, i. Beauilarnois, S.
Georgevile (V.), $e$. Nuyin, S.
Glaises, aux, river, in the S. of Pointe du Lac, falls into Lake Si. Peter between the rivers St. Charles and aus Loutres.

Godbret, river, in the co. of Saguenay, falls into the mouth of the St. Lawrence between Cap st. Nicholas and Cap des MI onts Pelés.

Godefroi, river, rises in Lake St. Paul, of which it is the main outlet into the St. Lawrence. Its whole course is short, not above 2 m. , and forms the division line between Bécancour and Gentilly.

Godefroi, river, rises near the front of the $S$. of Roquetaillade and running N. E. traverses Godefroi, and near the N. m. angle of that S . falls into the St. Lawrince.

Godefroi, seigniory, in the co. of Nicolet, is bounded n. e. by Bécancour and the most n. extremity of the т. of Aston; s. W. by Roquetaillade; in the rear by Aston and its aug., and in front by the St. Lawrence. - 3 l. in front by 31 . in depth. Granted, Aug. 31, 16.2, to Sieur Godefroi and is now the property of Etienne Le Blanc, Esq. and Mons. Loiseau.-Estimated generally, the land is valuable; in the front, indeed, it is rather light and sandy, but it soon loses that character and towards the interior improves into a fine black mould; in the rear it lies low and has one or two small swamps and, perhaps, as many brulés: a little draining would, in a short time, convert the first into fine meadows, and the latter might be as

GOD
easily improved into good arable land.-Wood is plentiful, although there is little of first-rate qua-lity.-The rivers Ste. Marsurite and Godefroi, with many small rivulets, wind through this $S$. and water it completely.-About two-thirds are settled and partly in a state of superior cultivation, particularly on the road or Chemin du Village, as it is called, that goes from Becancour to Nicolet, the Citeanx Vuide Poche, Beausijour, St. Charles and Cite du Dirul. Between the different ranges there are roads leading to the Route de St. Gregoire, which communicates with the main road near the ferry across the St. Lawronce. The church of St. Gregoire, surrounded by a ficw wellbuilt houses, is situated on the cast side of the route near the Chemin du Villatre. The $f$. boundary of Godefroi is supposed to pass down the middle of the river Godefroi from Lake St. Paul.

[^1]Godmanchester, towninj, in the co of Beauharnois, on the s. side of Lake Sit. Francis, is bounded in the rear by the n. Chateauguay, that separates it from Hinchinbrook; by a small part of the province line that divides the British from the American dominions, and by the Indian lands.This r., in situation, climate, local advantages, soil and timber may be considered as one of the most valuable tracts in Lower Canada. It is 14 m . in front by average depth of 7 miles, and is divided into six rangus, each being subdivided into 61 lots, averging 107 chains in depth by 19 chains in breadth, and a space, one chain wide, is left between the ranges fir a road. This t. is watered by L. St. Fiancis, Dead Creck and the rivers (hateanguy and a la Guerre. The wencrality of the lands on the borders of the lake are low, but the soil is ra, and in many parts affords excellent meadows. Most of the lands along the river Chateanconay matso be said to

## GODMANCHESTER.

be low and of a good quality. Towards the interior the country throughout ascends and forms large swells of hard timbered land, traversing the township nearly in a parallel direction with the front and intermixed with tamarack and alder swamps, which are more extensive in the $\mathbf{E}$. part. The soil generally is a yellow loam mixed with various sorts of sand, clay and marl and in some places stony. The timber is chiefly beech, birch, maple, ash, elm, some pine and the remains of oak: the swamps are principally timbered with tamarack, cedar and spruce.-This т. was surveyed in 1788 , when the greater part was allotted and located to the Canadian corps employed in the first American war; since which the greater part has been granted, under patent, to sundry individuals who had purchased these lands of the original locatees.-The settlements in this township may be divided into parts, viz, the first, embracing the whole front of the township, extends along the lake, and is chiefly settled by Canadians, among whom are intermixed a few more recent settlers, principally Scotch emigrants; the second part, called the Irish Emigrant Settlement, is more immediately towards the centre of the township, w. of the Riviere a la Guerre and the road traversing to the Chateauguay-they occupy lots in the 2 nd , 3 rd and 4 th ranges; the third settlement is that which extends along the banks of the Chateauguay, composed of American and Scotch emigrants. Many of the American settlers along the river have settled without authority since the last war. The fourth and last settlement consists of the lands of Edward Ellice, Esq. M. P. and are chiefly occupied by Americans. In various parts of the $\boldsymbol{T}$. a few persons hold permits of occupation, but the majority have settled without leave or any sort of authority whatever.-The Canadian settlements along the borders of the lake have improved since 1820 , but in no degree proportionate to those of the Americans and emigrants who have settled since that period. It ap-
pears obvious, that, before that time, the old Ca nadian settlers chiefly depended for their support upon the resources of fishing, hunting and the cutting and rafting of timber; the last resource has been carried on extensively for many years, and in consequence timber of a large size, principally oak and pine, has become rather scarce in the vicinity of the lakes, rivers and creeks. The road which extends along the borders of the lake is in many parts very indifferent.-Mr. Wm. Hall, of Quebec, purchased 700 acres in this T . for $£ 120$, and the whole has been settled without his permission. The lots in the first range (all of which border upon the Lake St. Francis) are, by means of the windings of the shore and the headlands and points which project into the lake, considerably augmented in their length, and their superficial contents are much beyond the portion of 100 acres assigned by government. Although the quantity of land in this T. actually under improvement is very limited, but a small number of the lots remain ungranted, unoccupied or unclaimed.-The Village of Godmanchester is at the second fork of the $k$. a la Guerre and is built on government land: it contains 82 persons in 16 families, who are traders, mechanics or labourers.-The rapidly increasing population and importance of this $\boldsymbol{T}$., the general fertility of the soil and its favourable situation between the St. Lawrence and the province boundary line, render it extremely probable that in a few years it may become the channel and centre of an extensive commercial intercourse with the inhabitants of the United States.

The following statistical tables give an interesting view of the progressive advancement of the settlements in this township.-In 1828 there were 240 families, viz. 71 Irish, 69 Scotch, 60 Canadian, 30 American, 7 English, 3 German, making a population of 1413 ; and the land improved was 2505 acres.

Gosembin, river. The Ruisseau Guselin rises in the rear part of the $s$. of Gatw. in the co. of Lotbiniere, and running into the $\therefore$ of Lauzon is joined by the Rivire Noire and falls into the r. Beaurivage.

Gouffre, de, or St. Paul's Bay River, in the co. of Suguenay, risus partly in several streans running s. from the rocky hills called Jont des Roches and partly from others that run s. from the centre of the T . of Suttington. The: stremms unite in the waste lands $\therefore$. of settrincten and form the Goutfre, which windinge s. divides the $\mathbf{r}$. of St. Crbain, in C'ite de Beaupré, from Racourcie, and descending towards the St . Lawrence receives the waters of several rivers, particularly from the s. $w$, and enters that $R$. nearly oppoite Isle aux Coudres. This river miy be considered as one continued rapid, though of moderate violence: the only obstacles to its fre navigation arise from an accumulation of boulders in several parts of its channel, over which it is dificult for a canoe to pess without striling. It is in most places shallow, but its shallowest places might be asily rendered narigable, and without comit for bateaux by removing mily such of the boulders as are most in the way of the channel. To drown these boulders would not be easy and would accision a great loss of acellent lind, unless expensive banks were formed to retain the water:. This river is surprisingly circuitots, consilering the rapidity of its current, and is perhaps ene-third longer than the road between St. Crbain's turish and the hay. Although the $r$. is not ensily ascended, being full of rapids, the excellent wad on its right bank renders this inconvenience lighter.
-In the parish of St. Urbain and in Recobrcic, on both banks of the river, are mines of ore extending from 100 yards to 2 miles; the ore is of that excellent quality called by mineralogists magnetic oxide of iron and by miners rock ore. There is also bog ore in the low grounds adjacent to this r., in the beautiful valley through which it cir-
cuitously takes its conese. The valley commence: in the parish of $\mathcal{S}$. Urbain and continues 6 or ; leaguc; to the St. Lawrence, and is periaps halt a lewue wide. 'There is also a cross valley on the left bank of the ra, which is said to communicate with the valley of the Mallay river. 'Ther valless are expeed to injurious frosts on account of the nenth winds that rush down them canly in the fall.-It apears that the rive is madly gaining on the $w$. bak and reveding fom the casiom, miane to the alluvial section that the former mesints in many facs, while the latter forms in gencral a gradual ary to the fori of the mountains, which on the caticin side is mach nearer the river than on the western. The spring torrents rush with such impltuosity as to tear atway a pertian of the fiebu barrier oppracel to them. paricularly at $t$ b sudden bends . 1 the river when their (fiect is aeatest. Ine:e torrent: by undermining the lan:s som make it dob-heary, and the superincumben: mass falling is gradually removed to the lay, where a sucies of delta is forming. The height of the banks on cach sike of this n . varies from 1 to 0 of ft , and near its entrance into the bay one small limestone racl lifts its head above water in mid-channel. The sandy nature of the soil at the mouth opposes little resistance to the action of the current, which when strongest steds upon the there emtiguous,
 side, and in this way one prepeciof oi lands tiads himself precosed of the proputy of his neighbone. When property in this phace beomes ator valuable, and this natural encroachment more asergavated, it will probably become a sulject of litigation. The estuary of this river. with the excreption of its bed, is almost dry at low water, but it affords a convenient strand for river-creft and boats.

Gouffre, du, river, Jirf: di: Nortiomst, in the is of cote de Beatupi rises in a lake in the $p$. uf La Petite Rivière and takes a n. f. course until it reaches the concession St. Gabriel, when it turns: to the s. e. and soon enters the r. du feutire, about 1 m . above the ferry that lies near the mouth of that r .

Goblifies, le, signiory, in the co. of bugtenty, fronts the St. Lawrence and is boundel w. liy the R. du Gouffre; w. by the S. di Jex Eboulemens, and in the rear by waste crown lands - It is about $\frac{1}{2}$ l. in front ly 4l. in depth along the $r$. du

## G R A

Gouffre. Granted, Dec. 30th, 1682, to Pierre Dupre and is now the property of Madame Dra-peau.-This $S$., on the $\mathbf{E}$. side of the river, is nearly the counterpart of the opposite settlement in Côte du Beaupré, possessing almost the same kind of soil and cultivated in a similar manner.-The capes Corbeau and La Baie, projecting into the St . Lawrence, are of great height and rise abruptly from the water's edge: they are connected with the chain of mountains that ranges along the $\mathbf{r}$. du Gouffre far into the interior; diverging at first a short distance from it, leaving an intermediate tract of good land, but afterwards drawing quite close upon its bank.-The first concession, bordering upon St. Paul's Bay and coasting the river, shows a range of settlements where agriculture has obtained no small degree of improvement: some trifling degree of amelioration has also been obtained in the rear of this range. From the capes, that form the exterior points of the bay on either side, the ridges of high lands describe a circuit before they close upon the river: their lofty and craggy summits form a grand amphitheatric back-sround to the picturesque and highly romantic situation generally known as the St. Paul's Bay Settlement.-There are several routes or concession roads that lead into the interior to the concessions of St. Ours, St. Croix and the village of $s t$. George.

Titte.-" Concession du 30me Décembre, 1682, faite par Leffibre de la Barre, Gouverneur, et De Mealles, Intendant, à Picrre Dupré, d'une demie lieue de terre de front sur quatre lieues de profondeur, joignant douze arpens de terre qui sont depais la borne de Monseigneur l'Evéque de terre qui sont depuis la borne de Monseigneur T' Eveque
de Quelce, en descendant vers le cap aux Oics: le tout de Qutucc, en descendant vers le cap aux oics: le tout concede a titre de fef et Seigneurie, avec le droit de
(h)dsee et de e eche; pour la dite concession et les douze hasse et de leche; pour la dite concession et les douze
arpens plus haut mentionnes (a lui concedes par Mr. de arpens plus haut mentionnes (à lui concedes par Mr. de
Frontcnac) ne faire qu'une seule et même Seigneurie."Frontinac) ne faire qu'une seule et mème Seigneurie
Insimtutions du Conscil Supéricur, Lettre B. folio 19.

Gecmimez, river, rises in the s. angle of the co. of Bonaventure and runs into the $\boldsymbol{\pi}$. Ristigouche between the rivers Gaduamgoushout and Pscudy.

Grais la (Falls), r. St. Maurice, r.
Graisee, il la, river, in the seigniories of Vaudreuil and Soulange, traverses Côte St. Louis and appears to connect the waters s. of Isle Perrot with those v . of Grande Isle.

Granby, township, in the co of Shefford, is bounded n.e. by Milton ; e. by Shefford; s.w. by Farnham and x. by the S. of St. Hyacinthe.-The land is generally of a useful quality, principally composed of a blackish loam, over which, in some places, there is a layer of fine vegetable mould,

## G R A

from which good crops of wheat and other grain might reasonably be expected; many parts are particularly eligible for the growth of hemp and some for flax. The timber consists of beech, elm, butternut, maple, pine and a little oak. The parts laid out were granted in 1785 to officers and privates of the British militia, who served during the blockade of Quebec in 1775-6.-Watered by various streams ruining into the $N$. $w$. and s. branches of the r. Yamaska.

Grand Calumet (I), v. Ottawa, r.
Grande Coudee (r.), v. Coudef.
Grande Decharge, v. Saguenay, $r$.
Grande Gireve, $v$. Gaspe Bay.
Grandfond, du, river, runs w. into the r. Saguenay above Chicoutimi.
Grande Isle lies between L. St. Louis and l. St. Francis and fronts Catherine's Town and part of Helen's Town in the $\mathbf{S}$. of Beauharnois.-It is $4!\mathrm{m}$. long by nearly $1 \frac{1}{3} \mathrm{~m}$. broad. On the s. side a redoubt was thrown up and a road made across the isle to communicate with Citeau du Lac, in the S of New Longueuil, by Col. de Lotbinière in 1813. This isle, with 2 or 3 smaller ones adjoining, are appendages to Beauharnois. The Grande Isle divides the stream of the St. Lawrence into 2 channels; that on the $s$. side is called the Beauharnois Channel, in the course of which are the rapids Croche, Les Faucilles and De Bouleau, the latter both intricate and dangerous to pass.

Grand Lac, e. Lac St. Joachim.
Grande Mere (Falls), v. St. Maurice, r.
Grani Pabos, seigniory, in the co. of Gaspe, extends along the entrance of the Bay of Chaleurs $2 \frac{1}{2}$ leagues E of the river of Grand Pabos, and half a league $w$. of it towards the river of Little Pabos.-Granted to Sieur Réné Hubert, Nov. 14, 1696.-On the $w$. side of the bay is the little $r$. of Pabos and on the opposite side on an eminence are what the fishermen generally call their sum-mer-houses. Many currents of water descend into this bay from a chain of numerous small lakes on the s.w.

Tille:-"Concession du I tme Novembre, 1696, faite par Louis de Buade, Gouverneur, et Jcan Bochart, Intendant, au Sieur Réné Hubert, de la rivière du Grumb Pubus, autrement dite la rivière Duval, situéc dans la Buir des Chalcurs, avec deux lieues et demie de front du critic de l'Est de la dite riviere, et demi lieue du cuté de l'Oucst, en tirant vers la rivière du $P^{\prime}$ ctit Pabos, icelle comprise sur pureille pro-fondeur."-Régistre d'Intendunce, $N_{i}(\overline{5}$, foliv 3.

Grandpre or Madrid, seigniory, in the co. of St. Maurice, is on the n. side of Lake int. Peter, between the Aug. to Rivière du Loup and the sis. of Grosbois and Dumontier. - One league in front by 3 in depth. Granted, July 30, 160,5 , to Pierre Boucher, Sieur de Grandpré and now belongs to the Hon. Louis Gugy.-This seigniory is singularly overlaid by that of Riviere du Loup, which, from being a prior concession and the term of the grant expressing half a league on each side of the river, leaves but a small irregular frontage on the lake for Grandpré. This tract, in soil and timber, strongly resembles that of Riviere du Loup, but it is by no means so well settled; there is, however, every probability of its becoming, in a few years, an estate of considerable value.

Titce_" Concession du 3ume Juillet, loos, faite par Louis de Buade, (rouserneur, et Jcan Buchart, Intendant, à Picrre Bouchcr, Sieur de (irandpré, d'une lieue de terre de front dans le Lac St. Pic\%e, tenant d'un citi aux terres concédées de la rivière Famachiche, et de lautre à celles de la Riziere du Lunp; ensembie les inles, islets et battures adjacentes,"-Réspisirć d'Intcolunce, No. 4, folio 18.

Grande Riviere or Quiauksquack, rises near the Portage of Wagansis and the extreme point of the co. of Bonaventure, near the first waters of the Ristigouche; it runss. $w$. into the r. St. John about 5 m . above the Great Falls. This river would be navigable for canoes if cleared of trees. The greatest part of its borders is covered with maple, building wood and mixed wood. The land through which it runs appears fit for culture, for its whole course, 8 leagues, is through good land, and the people on the Madawaska settlement have commenced other settlements near the mouth of this $n$. which promise well. The navigation is in many places obstructed by jambs of drift-wood, torn away by the floods in the spring which form dams across the R . and which, gradually filling up with soil, sometimes divert the course of the river into new channels.

Grande Riviere, seigniory, in the co. of Gaspé, lies in the Bay of Chaleurs and extends $1 \frac{1}{2}$. in front by 2 l . in depth. It is between the S. of Grand Pabos and Cap D'Espoir towards Isle Percíe.

Title.-" Conce-sion du 31me Mai, 1697, faite" par Louis dr Buade, Cooverneur, et Joun Bochart, Intendant, au sícur Jtarmes Cochu, de la Gramde Riziore, situce dan la Buic des C'mimers, avec une lieue et demie de terre de la Buic des lum lieurs, avec de profondeur, à prendre depuin la front sur deux lieues de profondeur, a prendre depuix la
scimeurie du Grund Pabos, appartenant au Sicur Roms

Grand Ruisseau rises near the s. w. boundary line of Lauzon, and running N. E. falls into the n. Chaudiére about 2 m . from its mouth.

Grand Ruisseau, river, rises in two small streams in the S. of Rivicre Ouelle. These little streams, at whose confluence and betwern the forks are some settlements, unite near the boundary line of Ste. Anne, and in that S. run a short course into the St. Lawrence.
Grande Vallee des Monts, seigniory, in the co. of Gaspé, lies between Anse de 1Etang and Magdalen, on the s. side of the St. Lawrence.21 . in front and 31 . in depth. Granted to Sieur Francois Hazzeur, Mar. 23, lion.-It is 91 . from the r. Magdelaine and 41. from L'Etang.-A river of the same name divides this $S$. into two nearly equal parts. - This $s$. also includes the isles and islets in front and in the $n$. Grande Villic des Monts.

Tifle._" Concession du 23me Mars, 1691, faite par Louis de Buade, Gouverneur, et Jiun Bochart, Intendant, au Sieur Francois $I I_{\text {azer }}$ ur, d'une étendue de terre de deux lienes de front, au lieu appeĺ́ la Grithd V'allé' dres 14 ments Notre Dame, dans le fleuve st. Laurent, du cite' du Sud, à deux lienes de lat riviere Wharghelainc, et quatre lienes de
 romentre à la dite foulher des dhomen, gui sera dans It milieu des dites deux lieues de front sur trin liene: de profondeur dans les terres, aser les isles et indete qui pourront se trouser sur la devanture des dites deux licues, it dans la dite riviere sur la profondeur de- diten truin lienes." - Ricistre d'Intendance, No. +, folio 3.

Grand Village, v. Lafzon, S.
Grandillef, seigniory, in the co. of Kamouraska, is bounded N . e. by the s. of Islet du Portage ; s. w. by the S. of Kamouraska; in front by the St. Lawrence; in the rear by the unsurveyed r . of Bungay.-- $\frac{3}{4}$ league in breadth by 4 1. in depth. Granted, Oct. 5, 1707, to Maric Anne de Grandville, widow of Sieur de Soulange.

One half now belongs to Mr. Taché and the other half to Mr. Joseph Fraser.-4 ranges are conceded and subdivided into 126 lots or farms. One quarter of the S. is unfit for agricultural purposes. The parts under cultivation are, all the two front concessions, three-fourths of the 3rd and the front road of the $41 \mathrm{l} .-\mathrm{In}$ this S . are pineries.

Till'..." Concession du 5me Octobre, 1707, faite à Dame $\overrightarrow{f_{r} r i r}$ lmne de Grundrille, veuve du Sieur do Sou-
 Liarent, ì commencer joiguant le Sicur de Foulon, dont la conecession commence à deux lieues audessus de la riviere de Kamouras/a et finit une liene audessous, et en descendant au Nurd-est, joiguant son ancienne concession, arec les isles ret islets, banes et battures qui se trouveront vis-i-vis icolle, laquelle sera incorporie et pointe avec la dite ancienne comecsion, pour des deux nen faire qu'une."

Grandville and Lacminaye, seigniory, in the co. of Kamouraska, fronts the St. Lawrence: it is bounded s. w. by Islet du Portage and the unsurveyed lands of Bungay ; N. e. by the $s$. of Terrebois; in the rear by the $\mathbf{r}$. of Bungay and waste lands - 2 leagues in breadth by 3 in depth. Granted, June 2nd, 1096, to Sieur de Grandville and de la Lachenaye. - There are some very fertile patches of land; a small portion of the $\mathbf{S}$. is cultivated, but it is not at present in a very flourishing condition. The best farms are near the main road that passes close to the river.Tiumber is sufficiently plentiful and some is of the best kinds.-This $S$. is but sparingly watered by a few small streams that descend into the $\mathbf{S t}$. Lawrence, and possesses nothing worth notice: there are indeed ranges of concessions marked out which bear the names of St. André, Bouchetteville, Marie Louise Adelaide, Ste. Rachel and St. Theodore: of these St. André only is in a good condition; in the others the ground has scarcely becn broken. A corn-mill is seated on the livivire des Caps at its junction with the little stream called Fouquet.-The Parish of St. ftudié comprises, besides this S., the SS. of Islet du Portage and Grandville. In this parish is a consid.rable extent of land unconceded, although it is very fit for cultivation; there is no road across these lands and but few have been even laid out. It does not appear that any of the concessions ware granted previously to $175!$; it is difficult to discover why some farms extend 40 arpents in depth while others extend to $: 10$ only, and why 40 sols were at first exacted per arpent and the rent afterwards increased with the addi-

## G R A

tion, in many instances, of a sugar rent, sugar being very often the only return made from the new lands. A considerable number of persons are both willing and able to make new settlements; and a great number of farms remain unoccupied in the neighbourhood, some of which are of very good quality. The principal obstacle that retards the settlement of these lands is the want of roads across them. The church is seen to emerge very prettily behind two or three hills, and, combined with the Pilgrim isles to the northward, forms an interesting subject for a sketch. Mr. Marquis, a very respectable landholder at this place, is the first who has yet tried the use of embankment of low land in this province to prevent its being inundated; he has found the principle to answer perfectly, and means to extend his labours to other inundated parts of his estatc. Two leagucs below St. Andre is the entrance to the Temiscouata Portage, and about 14 acres west of it stands a comfortable inn kept by Madame Pirron.

Granifam, township, in the co. of Drummond, fronts the w. side of the r. St. Francis: it is bounded s. by Wickham; N. and w. by Upton. On the St. Francis the ground is high and broken by several deep ravines.-Much iron ore is found in the neighbourhood. - Large extents produce fine luxuriant natural grass, which, after coming to maturity, dries upon the ground and is little inferior

## G RANTHAN.

to good meadow hay.-The principal proprietors are the heirs of the original grantee, the late William Grant, Esq. About one half of the clergy reserves are leased and have been rapidly improving since the terms have been rendered more favourable. The front ranges are the most settled, some as far as the 9 th range. The chief proprietors in the township of Grantham are the Hon. John Richardson of Montreal, Licut.-Col. Heriot of Drummondville, Mijor Ployart, ('ipt. Steigar and the heirs of the late Col. De Chambault. Mr. Richardson has about 30 Canadian families improving land for themselves which they have purchased from him at 5. per acre upon credit. Col. Heriot has built a large house, round which he has elcared about 200 ares of land. A corn and saw-mill are now in operation, and a stone corn-mill is erected at the Drummondville Falls. That gentleman has likewise several lots of land with clearings which are cultivated by others on shares, i.e., he receiving one half of the produce in lieu of rent. There are two bridges of nete in this T. ; the Prevost Bridge over the Provost river near its mouth, on the high road from Three Rivers, where Col. Heriot has mills; and Richardson Bridge, two miles above, upon the Yamaska road leading to S.rel.-The average produce per acre is from 16 to 20 bushels of wheat, and every lind of grain is raised. The cattle is of the American breed, and good breeds of sheep and swine have been introduced by Col. Heriot. The price of agricultural labour is, with board, f'2 a month during harvest and 301 : at other times; young men $\mathscr{L} 12$ per annum. -The pestroad passes through this r. and Wichham, and the mail goes through once a wed from Quebec to Buston. There is also a road from Drummondville to Sorcl and to Long Point in the adjoining $T$. of Wickham. The provincial legislature has expended $\mathfrak{l}^{2} 200$ in making a road from Drummondville ferry to the upper line of Wickham, joininer Durham, li! m., which, when completed, will be the best communication from the eastern townships to Sorel and Muntreal: an additional expenditure of $£ 700$ will be requisite to complete the road in a manner which will enable the back settlers, who are poor and few in number, to keep it in repair. The commissioner has cleared the road of trees, underwood and windfalls about 36 feet wide, and has in general felled all the leanins trees and most of the dry tree; close to the road:
he has erected two large bridges and several smaller with squared timber coverings; he has also made several new causeways and repaired the old, covering them with earth although not deep enough : he has also made several ditches on each side of the road in the wettest places, and has cleared of stumps and roots about one-third of the breadth. The face of the country through which the road passes is, in general, flat and sandy, very fit for a road but not for cultivation, except ia few lots on the last 2 m ., where the land becomes good and is settled. The continuation of the road through Durham, Melbourne and the townships on the side of the Sit. Francis to the province line, is wall settled and trayerses good land, capable of maintaining an immense population.-The road from Drummondville to the S. of Deguir has alow experienced the enlightened liberality of the provincial legislature. The sum of $£ 000$ has been voted towarls its improvement and 10.3 l lis. 3 id . expended: the additional sum of $\ell 400$ will be required to finish it. As the public utility and convenionee of this road are unduestionable, no doubt can be entertained of the liberality of the provincial assembly, more especially as without this additional grant the money expended will be entirely lust. Hat the soil over which this road runs been any other than what it is, the sum voted for the purpose would have been sufficient; but the country being very low and flat, and the soil a decp black earth intersected by many swamps of greater or less extent, the waters having no outlet spread over a ${ }^{\text {areat }}$ part of it and the ground arjacent, which created a vast deal of additional expense and labour. The road being at first made only 3.3 ft . wide was liable to le blocked up by trees blown across it, whenever the wind was high, as well as to other accidents; it has therefore been opened throughout its whole length to the breadth of from lof to 110 feet, leaving about 20 feet clear of every obstacle that might impede the traveller. A bridge across the river Prevost, which crosses the road near the village of Drummondville, has been built in a more substantial manner with the heaviest and most durable wood of the neighbourhood: it cost $14 ; 18 \mathrm{~s}$. The length of the road is $16!$ miles. Until this road is completed, the inhabitants of Drummondville are obliged to transport their produce to Surel either by the r. St. Francis or by the present circuitous route, a distance of no less than 17 l .

## G R A

while Drummondville is only 9 l. distant from Sorel in a straight line and across a fine level country, most suitable for a road, having no hills and but one river to impede the progress of any carriage, while the present mode of conveyance is attended with innumerable inconveniences from the unevenness of the road, ferries, \&c. if the goods are sent by land, and by many rapids, portages, \&c. if conveyed by water, together with the great distance of the journey, which considerably increases the expenses of transportation. -The Parish of Drummondville extends over the township of Wickham as well as Grantham and contains two churches, both situated in the village of Drummondville: one is attended by members of the Church of England and the other by Roman Catholics. The village is on the r. St. Francis and was built under the direction of Lieut.-Col. Heriot, C. B. for the accommodation of disbanded veterans. It was destroyed by fire June 22,1826 Its chief trade is in grain and pot and pearl ashes; it carries on an extensive traffic with Sorel as well as with the neighbouring townships and those more in the interior to the south. It contains 2 schools, one public and the other private, in each of which 20 scholars are instructed. The settlement of Drummondville was commenced in 1816, during the administration of sir George Drummond. It is particularly indebted to Col. Heriot, member of the provincial parliament for the co. of Drummond, for its original establishment and progressive advancement. That gentleman has been at considerable expense in building several corn and sawmills: his house and establishment, erected on an eminence at the $\mathrm{N} . \mathrm{w}$. extremity of the village, add materially to the beauty of the scenery when viewed from the opposite bank of the St. Francis. -Lingranted and unlocated, 13,315 acres.

Statistics of the Parish of Drummondville.

## G R E

Green Island, v. Isle Verte, S.
Green Point, $v$. Ouiatchouan, r.
Green River discharges into the r. St. John, 6 leagues below the church in the settlements of Madawaska.

Green River or Quamquerticook, in the co. of Rimouski, rises N. e. of Middle Lake, and, running s. through the country, receives the waters of several smaller streams; it passes $w$. of the Quamquerticook mountains and joins the n . St. John about 3 m . below the church belonging to the Madawaska settlements.

Grenville, township, in the co. of Two Mountains, with its augmentation, is bounded in front by the Ottawa; e. by Chatham; in the rear by the waste lands of the crown and by La Petite Nation. It possesses many local advantages besides the Military Canal. The front was surveyed and subdivided in 1788, in 1807 the s. E. section was laid out and subdivided, and in 1821 and 2 the survey was extended to the 7 th range. The lands thus surveyed are not of a very favourable description, being bold, abrupt and mountainous, in many parts divested of soil yet offering at the foot of frequent mountains rich, fertile and in some places extensive intervals, composed of a siliceous earth very fit for cultivation. The hills and cliffs are chiefly of a condensed granite of various colours. The most conspicuous ridge of highlands rises not far from the St. Lawrence at the $\mathrm{s} . \mathrm{w}$. angle of the T ., and, extending N. E., traverses it obliquely as far as the 6 th range, where it enters Chatham. The meadow-land, which lies at the base of these hills in the front, is overflowed in the spring of the year by the Ottawa, from lot No. 8 to the w. line of the $T$. This part and the remainder, comprehended between those highlands and the St. Lawrence, form a triangular space of fine level and well irrigated soil, which was at the time of making the old grants considered by the grantees as the only culturable section of the 9 . Proceeding northward, from the Grenville heights to the 7 th range, the face of the country presents only a succession of ascents and descents, abrupt hills and stupendous mountains, interspersed, nevertheless, with rich vales whose fertility is almost an adequate compensation for the many sterile and unarable parts of the $т$. On the banks of the Calumet limestone of a superior species is to be found in abundance, also stone of various colours with

## G R E N VILLE.

which mantelpieces have been made; and in No. 10 of the 5 th range a black-lead mine is worked. The surface of this $т$. is in general mountainous with many small valleys of excellent soil, and some of the hills afford good land for tillage. The soil varies from the richest clay loam to the poorest fox-land, and in many places would produce hemp and flax. The mountains in the t . are more prominent about the centre, drawing towards River Rouge, but in the aug. they prevail most on the E. side towards the s. of Petite Nation, rising to great heights in cliffs and broken surface, approaching a great lake in the l0th range, then stretching E . crossing the line to the $\mathbf{R}$. Rouge. An extensive valley embraces the E . part of the augmentation from about the 4 th range, and spreading along the Beaver Mcadow Creek from the r . Rouge on the E ., and embracing variously from No. 1 to 3 in the augmentation until it reaches the base of the mountains in the 9 th range, still bounded by the r. Rouge, from which there is an easy and gradual ascent, generally, throughout the whole extent. The soil in that valley is chiefly argillaceous, sometimes becoming a surface of strong yellow loam mixed occasionally with a siliceous rock, timbered with elm, maple, birch, tamarack, some cedar and ash, pine and hemlock, and is particularly watered by large rivers and their tributary waters flowing to the Rouge. The numerous valleys, particularly the one just mentioned, offer the best situations for settlers in the township and its augmentation.This r . is abundantly watered by many rivers, rivulets, small lakes and ponds, which traverse it in every direction. The principal rivers are the Kingham, the Calumet and the river Rouge. Many of the lakes are well stored with trout. West of the river Rouge, and in the 3rd and 4th runges, are five small lakes, into which flow many rivulets and inferior streams that rise in the upper part of the r.; the waters of the lakes, issuing by several small channels, meet and are discharged ${ }^{\text {. }}$ into the Ottawa between the front lots Nos. 24 and 25. On the Kingham is the only saw-mill in this r.; it belongs to Mr. Kaine.-The south and only surveyed half of this township is traversed by several roads, the principal of which being that opened at the expense of the province, which runs almost parallel to the N. bank of the Ottawa, entering Grenville at lot No. l, above the canal; passing through the military depot at
the basin, it crosses the Kingham over which there is a good bridge, and thence continues w. to the e. boundary of La Petite Nation. This road appears to have been marked out with little judgment, as a comparatively trifling deviation from the existing line might, in more than one place, have rendered it much better, and the necessity of so many bridges and canseways would have been avoided. This high-road is good as far as the 7 th lot, after which it becomes impassable. Along the Kingham there is a tolerably good road, leading to Mr. Kaine's residence and saw-mill. The rivers generally in this т. present numerous millsites which must ultimately prove highly advantageous. Westward towards the river Calumet. over which there is a bridge, the road is thlerably good and has many new settlements with some well cultivated and prosperous fields; but the habitations and barns are by no means calculated to impress the traveller with an idea of ease and comfort. A few such settlements are scattered along the remainder of the road to the division line, between the $S$. and the augmentation of Grenville. Along the road w. of the C'alumet bridge to the lofty ridge of highlands are excellent patches of good land clothed with hard timber, which are, however, ly no means so extensive as to make up for the stony and unculturable parts of the $\boldsymbol{r}$. This road continues. though very bad, along the e. branch of the (alumet, and, passing occasionally by the door of a solitary settler, terminates in the 7th range. It should be observed, in justice to the inhabitants of these parts, that they have surmounted, with the most industrious and praisworthy perseverance, the various obstacles presenting themselves in regions so hilly and forbidding, and have succeeded in the attainment of a degree of rustic cnjoyment leyond what might have been reasonably anticipated to exist in the 4 th, 5 th and 6 th ranges of Grenville at so early a period of its settlement. Several other by-roads communicate with the interior settlements and are more or less of the same description. The best settlements are in the east section, most of which is granted under letters patent.-This T. appears to be particularly adapted to the breeding of cattle of all kinds, for all that have been introduced have thrived amazingly. The extent of land under cultivation is 970 acres and 100 of pasturc. The average produce per acre is, wheat 10 bushels, Indian corn 15 , and
oats 20. Wages vary from 8 to 10 dollars a month.-The village contains 50 inhabitants and is built in No. 7 of the 2nd range, and in 1788 one square mile was set aside for the purpose, and 400 acres allotted to the church and other public institutions. In 1821 the s . half of lot 7 was surveyed and laid out in streets and in two-acre lots of 4 chains in breadth by 5 in depth. Not more than 6 or 8 houses have been erected, and these without the least regard to regularity. Locations are made to those who are desirous of settling here, and will contract to clear their lot and build a house within one year from the date of their location ticket. In the village is one school attended by 40 scholars.-The Military Establishment chiefly consists of the staff corps. The dwellings of some of the soldiers and labourers are scattered on each side of the Grenville Canal, and others live in tents. The houses of the officers are new, neat and comfortable. This important canal has been chiefly cut, blasted and excavated through solid rock: it is nearly completed, and the work is solid and durable. (For farther particulars of this canal see "('avals" and vol. i. page 155.) -The principal landholders in this T . are Archibald MrMillan, Esq., the heirs of the late Col. Taylor, Major Ritter, and Capt. John M'Gillivray, berides several others who hold grants to an inferior extent. Mr. M Millan obtained in 1808, for himself and others, 1230 atres under letters patent and subsequently a grant of lot No. 8 , in the 2 nd range, which it is to be regretted was not reserved for the use and disposal of the Crown on account of its contiguity to the village.- Cingranted and walocated, in the r. 10,200 acres, in the aug. 10,130.

Grey Pine, river, runs into the Grande Decharge that connects the Sing. r. with L. St. John.

It is $1 \frac{1}{2}$ chain wide and in places very rapid; the banks are low and the soil on each side sandy but very level. It appears to run nearly parallel to the river Terres-Rompues. At $3{ }_{4}^{1} \mathrm{~m}$. from its mouth there is a fine little cove on the left, and, a few chains higher up, another on the right. One mile from this is a portage, 2 miles long, that runs towards the n. w., leading to lake Patispiscasmetche, which is altogether irregular, and round which are first seen small and very low rocks, extending but a small distance from the banks. Having passed these, the land becomes level and sandy.

Griffin's Cove, in the co. of Gaspé, lies n. of Gaspé Bay, between Great Fox river and Cap Rosier.

Statistics.

Grondines, les, seigniory, in the co. of Portneuf, is bounded s. w. by the S . of Ste. Anne and its augmentation; n. e. by La Tesserie; in the rear by the projected T . of Alton and waste lands of the crown; in front by the St. Law-rence.-Granted in three parts, viz. the w. part, one league in front by ten in depth, 20th Mar., 1638, to the Duchess d'Aiguillon for Les Dames Hospitalieres of the Hotel Dieu of Quebec; the e. part, $\frac{3}{4}$ l. in front by 31 . in depth, 3rd Nov., 1672, to the poor of that hospital; the aug. to the e. part, 2 l . in depth by $\frac{3}{4} \mathrm{l}$. in front, 25th Apr., 1711, to Louis Hamelin: the whole is now the property of Mr. Charret. - Throughout the greater part of these grants the soil is indifferent; a thin layer of poor earth upon a solid bed of stone: here and there a few patches of - better quality may be found, and all the known lands on the Grondines' side of the rapid of the R. Ste. Anne are of good quality.-Five concessions have been conceded and part of another; the first 4 are cultivated and the first 3 settled.-A small ridge extends across the $S$. near the front, between which and the St . Lawrence there is very good meadow land.-The timber is of inferior qua-lity.-The principal settlements lie on the main road just beneath the ridge and on the r . Ste.

## G R O

Anne. The soil and timber in general are barely above mediocrity, yet there are some well cultivated farms, owing to the industry of the occupiers rather than to the fertility of the soil. Somewhat more than a fourth part is under cul-ture.-This S . is very well watered by the ite. Anne, the Blanche, and the Batiscan which traverses its N . extremity, also by a small river in the front that falls into the St. Lawrence; the last turns a corn and a saw-mill.-This S. has a chureh and a parsonage-house, but the service is performed by the curi of a neighbouring parish.-The main road crusses the $S$. ncar its front: a road ascends the Ste. Anne on each side and another leads to the back concessions. In the Sit. Lawrence the extensive shoal, called Les Battures des Grondines, stretches along the front. There are two small fiefs in this S. called Francheville, which, ly default of inheritance, have reverted to the crown.

Grosbors or Machiche, semiory, in the co. of St. Maurice, on the N . side of Lake St. Peter, is bounded n. e. by Pointe du Lac and Gatineau; s. w. by Rivière du Loup and Grandpre and in the rear by Dumontier. -1 . in front by 21 . in depth. Granted Nov. 3, 16,2, to Sieur Boucher and is now the property of the Hon. Louis Gugy, Mr. Johnstone and Mr. Dumoulin.-This S. is

G R O
rather low towards the front, but retiring from the lake there are some few rising grounds. The soil and timber are very similar to those of Rivii re du Loup and Grandpre.-Watered by the r. dul Loup and the sreat and little rivers Machiche over which, where ther are intersected by the main roads, are bridges substantially built of timber and possessing a light and pleasing appearance. About $\frac{3}{4}$ ths of the $t$. are conceded and the settlements, in front and on the banks of the rivers, are very flourishing; the houses and farm buildings, well constructed, prove their proprictors to l very industrious and in easy circumstances. On the east side of the main or Quebere rath that here resumes its course close to the r. St. Lawrence, are the church and prestotery of Machiche with a cluster of houses, forming a small neat village.-The interior is travered hy many roads leading to the scigmiorics in the rear, as well as to those on each side. - On the different stramare some good corn and saw-mills.

The I'rish of ste. Ame de Tomathiche comprehends Gatincau, Pointe du Late and the front part of Groshois or Mathiche. Some lands in the $r$. are still unconceded, and, although not of a rich quality, they are susecptible of cultiv: tion. About one-third of the contessions in this p. were granted before 1759 and sencrally measured 3 appents by 40 and were let at low rents, viz. 2 or 3 capons and a crown in moncy.- All the young persons are desirous of settling either at home or abroad, but would universally prefut settling near their relations, particularly as it would be the least expensive. - Here are two schools, one for boys and the other for girls, both supported ly the parish; the number of scholars is 28 boys and 30 girls, who are instructed in English and French.- The p. contains 2 villages, one near the church on the r. Petite Mathiche, the other on the Grande Machiche; cach contains about 30 houses. -The church is 120 ft . he fo, losides which there is a chapel.-There are 3 corn-mills: ${ }^{2}$ of them on the Grande Machichto which are built of stone and are 2 storic's high, the other is on the r. du Loup.-One-fourth of the grain grown in the parish, in good scasons, is sold in meal or flour and much provision is sent to the Quebee market.

The Parish of St. Leon comprehends the rear part of Grosbois and Machiche and the whole of Dumontier and Grandpre. In this r. are ficon-

GUE
cessions and 400 farms; the 2 nd concession $w$. of the r. du Loup is the most inhabited. This $\mathbf{p}$. is watered by the Ruisseau Chakouna and by the R . du Loup, which is very rapid and in general navigable for bateaux. A little village surrounds the church ; the houses are built with wood and the church is 120 ft . by 52 . There are several saw-mills, one on the r. du Loup, 2 on the Chacouna and 2 in the ravines.-In this $P$. are some non-conceded lands susceptible of cultivation, in different places, amounting altogether to 1 league,

G U I
including lands kept for the purpose of wood only. Over these lands there is no road, but the grantees form roads as they are wanted.-The non-conceded lands are not surveyed, and no concessions were made, within the precise limits of this P ., before 1759.-The number of persons desirous and able to make new settlements would be considerable if they could procure farms in the nonconceded lands, which would supply 60 farms of a tolerable quality.

Statistics of the Parishes of Ste. Anne de Yamachiche and St. Leon.

Tifl:-" Concession du 3me Novembre, 1672 , faite par Jean Tann, Intendant, au Sieur Pierre Boucher, di Grandpre, dune heue et demie de terre de front, sur deux de profondeur, à prendre, savoir, trois quarts de lieue an dessuls de la riviere ì Marcin (Machichc) et autant audessous de la dite rivière."-Régistr a' Intendance, No. 1, folio 39.

Gros Rcisseme, a rivulet, in the S. of Murray Bay, rises in the concession St. Jean, and running s., dividing concession Joyeuse from the 2nd concession of Terrebonne, it divides the 1st concession of Terrebonne into two nearly equal parts, and then falls into the St. Lawrence.

Grosses Roches, des, is a rivulet that runs from the $\mathrm{N} . \mathrm{E}$. and joins the Saguenay near Bay st. Etienne; about 14 m . from the St. Lawrence.

Gierre, a la, river, in the township of Godmanchester, rises about the middle of the 2 nd range, and running $\mathrm{N} . \mathrm{w}$. falls into Lake St. Francis. At the upper forks of this R. is built the r . of Godmanchester. The navigation of this $r$. and its branches is of material advantage to the inhabitants of that township. This $\mathbf{R}$. is navigable for canoes for some little distance above the Forks; but as there is a sand bank or bar at its
mouth, with only 18 inches of water, it is there navigable only for flat-bottomed boats. About 30 chains from its mouth are two small farm-houses on the e. bank, opposite to which is a chantier. The depth of the water from the lake to the first forks varies from $\bar{j}$ to 8 ft . and thence to the second forks from 3 to 4 ft .

Guillaudiere, fief, in the co. of Vercheres, fronts the St . Lawrence and is bounded $\mathrm{N} . \mathrm{E}$. by St. Blain ; s. w. by Cap St. Michel and in the rear by the aug. to Belœil.- 30 arpents in front by a league in depth.-Granted, Nov. 3, 1672, to Laurent Borney, Sieur de Grandmaison, and now belongs to - Hertel, Esq.

Title.-"Concession du 3 me Novembre, 1672, faite par Jean Talon, Intendant, à Laurent Borncy Sieur de Grandmaison, de trente arpens de front sur une lieue de profondeur, à prendre sur le fleuve St. Laurent, depuis les terres du Sieur de $\boldsymbol{S t}$. Michel, en descendant vers les terres non-concédées."—Régistre d' Intendance, No. 1, folio 28.

Guillaume Bonhomme, seigniory, in the rear of Desmaure, is bounded N. E. by Gaudarville; s. w. by Fausembault and N . by the R. Jacques Cartier.-One league in breadth by two in depth.

## H A L

Granted Nov. 24th, 1682, to Guillaume Bon-homme.-This tract is uneven and mountainous; near Desmaure, the lowest and most level part, the soil is a black mould, but, receding towards the Jacques Cartier, a light-coloured loam prevails much covered with loose stones: only a small portion of the land is in cultivation. The timber is both abundant and good, particularly on the high grounds towards the rear. Scarcely a stream or rivulet traverses the interior.

Tith.-" Concession du 24 me Novembre, 168 , faite par Lefint, Gouverneur, et Dc Mralls, Intendant, a Guillaume Bombumme, des terres qui sont au bout de celles de Mr. Jucheroune de la Firté, tirant vers la riviere.Juctuc's Mr. Jucturcue de la Forte, tirant vers la rivitre. Jucyuts

H.

Ha Ha Bay, or Baie difs Has! e. SagueNAY, R.
$H_{4} H_{A}$, seigniory, in the co. of Rimouski, is between Trois Pistolles and Bic. It is but thinly settled.

Hail Bay, in Commissioners Lake, s.w. of Lake St. John.

Haldimand, a town in Gaspé Bay, situated on a tongue of land formed by the estuaries of St. John's River and the s.w. arm of Gaspe Bay.This town was named after Gencral Haldimand, who, about the year 1785 , was Governor of Canada, which at that time was called the Province of Quebec.

Halifax, township, in the co. of Megantic, between Chester and Inverness, bounded N. w. by Arthabaska and Somerset, and s. e. by Wolfestown and Ireland.-The soil is generally excellent and would yield abundantly under almost :any system of agriculture, and in many places would produce hemp and flax: in the N. E. part, which is low, are a few swamps, which might be easily reclaimed by ditching; in the opposite direction the land is uneven and rises as it inclines towards the s.-Thetimber is similar to that of Wolfestown and Ham.-Watered by some small rivers and streams and the picturesque little Lake Pitt. The s.e. half has been laid out and granted, but none of it

## HAMI

is cultivated : Craig's Road passing through a part of it may be, perhaps, the means of attracting some settlers. The principal landholders are the heirs of the late Joseph Frobisher, Esq. and Mrs. Scoti and family.-Ungranted and unlocated 7200 acres.

## Statistics.

$$

Hall's Stream rises in the t. of Auckland; running s. through the N. w. part of Drayton it enters Hereford at the 6 th range, and continuing in the s. $\mathbf{e}$. quarter of that $\mathbf{T}$. joins the r . Connecticut on the boundary line. On this stream are good sites for mills; but as its course is (ib)structed by falls it is of no other navigable advantage than for the transport of logs to the mills. Its middle branch waters the N. F. quarter of Hereford and its $\mathbf{N} . \mathrm{w}$. branch circulates about the centre of that $\mathbf{T}$.

Ham, township, in the co. of Drummond, between Wotton and Wolfestown, joins Tingwick and Chester n. w. and Weedon s. e. One half has been granted among several individuals. The land might be brought into cultivation with great advantage, and would produce wheat or wther grain, and many parts are fit for flax and liemp. The surface is diversified by many large swells of inconsiderable elevation, covered with wood and some few places in the valleys are rather swampy. -The timber is maple, beech, basswood, birch, hemlock and cedar. - Watered by part of the river Nicolet, which here has its source in the beautiful lake of the same name, near which the road communicating with Craig's Road is designed to pass. -Cingremted and unlocticd 18,500 acres.

Hamel Lafe, called by the Indiams Assinigaashtets, " a rock that is there," is the largest lake on the r. Pastagoutsic, which runs from Lake Kenwangomi s. E. of Lake St. John.

Hamilton, township, in the co. of Bonaventure, lies between Cox and Richmond, and is bounded in front by Chalcurs Bay and in the rear

## H A R

by waste lands.-The Village of Bonaventure is pleasantly situated on the w. side of the harbour of the same name. The land on each side of the town is level and good and produces great quantities of grass for cattle. The soil is a fine gray earth on a clayey sub-stratum, which appears fit for the cultivation of hemp and flax; but the season is supposed to be too short for the growth of grain, the frost generally commencing in the beginning of September and continuing to the middle or end of May. This village or town is advantageously placed for the cod-fishery, and is susceptible of great improvement. The bank on which the fish are generally cured is very extensive and is divided into 95 lots, each extending 10 ft . in front and 120 ft . in depth, sufficient space for curing the fish taken by one shalloup. A vacancy of 10 ft . is left between the lots for the purpose of piling up the fish when cured; and 100 ft . is appropriated, at the point of each beach, for a public landing-place. In the roadstead there is sood anchorage for shipping, and the common tides rise from 7 to 8 ft . The town lot consists of 60 acres; and 1040 ft . of ground divided into 30 lots, each 240 ft . square, to be subdivided into 8 divisions, each 60 ft . in front by 120 in depth, with 200 acres adjoining for the benefit of the town. This $v$. is only a small place, containing about 25 houses and a church: its whole dependence is in the fishery.

Himpden, a projected township in the co. of Sherbrooke, is an irregular tract of land lying between Marston, Ditton, Lingwick, Stratford, and (ayhurst.

Hare Isfand lies nearly in the middle of the St. Lawrence, and fronts the s . of Rivière du Loup and that of Terrebois: it is nearly 8 m . in length by an average breadth of about half a mile. It is low and flat, extending in a direction nearly parallel to the shores of the Si. Lawrence. The soil is good, but wholly uncultivated. At each extremity are long and dangerous shoals stretchins from it. On the s.e.side lie the three small islands called the Brandy Pots : on the w. side is placed the telegraph No. 13, the last in the chain from Quelse.

Harrington, a projected township in the co. of Two Mountains, lies between Wentworth and Ponsonby and is bounded in front by Grenville. Its s . w. angle is watered by the r . Rouge.

## HAT

Hastings, a projected township in the co. of Ottawa, fronting Lake des Allumets and lying w. of th r. of Esher.

Hatley, township, in the co. of Stanstead, is bounded s. by the r. of Stanstead; N. by Ascot; E. by Compton ; w. by the Lake Memphramagog, a branch of the river St. Francis, and Lake Scaswaninepus. The surface is irregular, in some places hilly, and the quality of the land very variable. The soil E. and N. E. is good and most kinds of grain might be grown; and $w$. it is rather superior ; the middle very indifferent, rugged and swampy. On the best lands beech, elm, maple and ash grow in abundance ; in the swamps spruce fir, cedar and alder. Towards Ascot and Compton are some extensive settlements, where the houses and out-buildings are substantially constructed, the farms cultivated with industry and much ability and well stocked with cattle. On the border of Lake Memphramagog is another range of improving settlements.-Watered by several lakes besides Lake Tomefobi, which is entirely in this 1., and by some small rivers and streams, which as they wind through the cultivated lands turn corn and saw-mills. Many roads lead to the adjacent townships, and others communicate with main roads leading to the states of Vermont and New Hampshire. One of the most extensive landholders is Henry Cull, Esq., lieut.-col. of the militia; a gentleman highly esteemed for his public spirit and the industry and good-will with which he encourages every species of improvement. The tirst settler in the r. was Capt. Eb. Hovey.

The Parish of Cherleston commences on the line between Stanstead and Hatley, and on the line between the 8th and 9 th ranges of Hatley; thence $\mathbf{N}$. on the same line it crosses Lake Tomefobi ; thence on the w. shore of the lake $N$. until it intersects the line between the 4 th and 5 th ranges; thence $N$. on the same line to the $N$. line of Hatley; thence E . on the same line to the line between the 2 nd and 3rd ranges of Compton, and s. across that $\mathbf{~}$. to the line between the 2 nd and 3rd ranges in Barnston, and then $w$. to the w. line of that T ., and then N . to its $\mathrm{N} . \mathrm{W}$. corner; thence $w$. to the place of beginning.-In this parish stands the Village of Charleston, near the N. E. corner. It is very pleasantly situated on the main road leading from Sherbrooke to Stanstead Plain: it contains about 20 neat houses and 115

## H E M

inhabitants: it has a protestant episcopal church, a school-house, a brewery and a distillery. The site of the $v$. is in Nos. 5 and 6 of the 1st and 2nd ranges.-Robt. Vincent, Esq. was the first inhabitant and settled here about 20 years since. —Ungranted and unlocated 10,641 acres.

Hemison, river and lake: the r. rises in the T. of Buckland and partly in the lake; taking a s. w. course, it enters the т. of Frampton and joins the r. Etchemin a little below Papa Isle.

Hemmingford, township, in the co. of Beauharnois, is on the boundary line between the province and the United States, having N. w. the i . of Beauharnois and N. F. that of La Colle. This township has been laid out for close settlements, that is, to be granted by single lots to persons, upon condition of immediately taking possession and beginning to improve them; a large portion of the $T$. is settled and some of the farms are in a thriving state. There are five complete ranges of 200 acre lots, and the remainder of the $\mathbf{T}$. is divided in a similar manner to Hinchinbrook; but a proportion of these reservations has been let under lease. Although the surface is very uneven and several high ridges rise in various directions, with many large seams of flat rock a little below the surface, there are many tracts of superior quality fit for the growth of grain, hemp and flax. On the N. E. and N.w. sides are some swamps covered with cedar, spruce fir, tamarack, \&c. On the high lands the timber is beech, maple, elm, birch, \&c.: along the 2nd range are some oak and pine of large dimensions and good qua-

HEM
lity.-This $\mathbf{T}$. is well watered by the r . Montreal descending to the Richelieu, and by many small streams that descend from the heights to the Cha-teauguay.-There are many roads, but most of them very indifferent, and practicable only in winter when rendered firm and solid by the frost. -There is only one corn and saw-mill in this $\mathbf{T}$. built in the 5th range.-The population consists of 150 families, of whom 70 are from Ireland, 24 from the United States, 19 from England, 11 from Scotland, 10 American loyalists and 3 from Germany. Of the population 345 souls are on the crown reserve without any title.-This $T$. consists of 58,600 acres; about 0067 acres are under improvement, of which 4242 are among the granted lands, 1320 on the crown reserves and 505 on the land located by the agent.-Hemmingford Mommain or Cocy, Hill has about the same perpendicular elevation as the Rouville cone and commands an extensive horizon. This mountain, from its conspicuous height, is worthy of notice. It occupies a space of about $3 \stackrel{1}{2}$ miles in length by 2 in breadth and rises by gradations, almost about 1,100 fect from the level of the sit. Lawrence. The ascent on the N . side, though rather abrupt, is notwithstanding casy of access, but on the e. it is more gradual ; on the s. side it rises out of a low swamp in the vicinity of 2 small lakes, and rises nearly 200 feet in a perpendicular cliff. From the top of this mountain can clearly be elistinguished the mountains of Muntreal, Pinacle, Mansfield and Camel's Rump, and a most commanding view of the surrounding country.

Comparative Statement of Incricis.

Hemmingway Brook joins the r. Connecticut near the most $s$. point of the $r$. of Drayton on the boundary line.

Henryville (V.), $\tau$. Noyan, S.
Hereford, township, in the co. of Sherbrooke, is bounded n. by Clifton and Auckland; w. by Barford ; e. by Drayton and s. by the boundary line. The greater part may be called tolerably good land and generally applicable to any kind of agriculture : the surface is uneven and, approaching the river Connecticut, rather mountainous.The s. part of the $T$. is partially settled, 1600 acres being under cultivation: most of the settlers are on the banks of Hall Stream and Leech Stream and the lands between them.-There is only one reserve under lease; it is in No, 7 of the 7th range and belongs to the clergy.-The timber is various and in general good, consisting of maple, beech and birch, mixed with spruce fir and a small proportion of pine and poplar.- In the year 1800 the southern half was granted to $J$ ames Rankin and others; but a very small progress has been made towards its settlement: a few farms, however, are in a tolerably good condition. -This r. is well watered by several branches of the Connecticut, aided by many small streams descending from the high lands. The branches of the Connecticut are called Hall's Stream on which 16 families are settled, and Leech Stream on which 10 families reside, and on both streams are good sites for mills; it is also watered by Leech's Pond and other small lakes, in which are trout, succors, chub, perch, eels, \&c.-There are 4 bridges, two king's highways and 2 or 3 cross-roads : one of the highways extends from line 45 to Eaton through Clifton, the other from line 45 through Barford to Compton.-The Hereford Mountain is in the 5 th and 6 th ranges and in the $\mathrm{N} . \mathrm{w}$. part of the т.-The land under crop averages 180 acres and about 500 acres are annually mowed. Flax of excellent quality is produced, and hemp grows luxuriantly but is liable to the effects of early frosts; wheat is the staple commodity and its produce from new land is from 15 to 20 bushels per acre and other grain in proportion. The annual consumption of wheat is about 750 bushels and that of other grain 1000 bushels.-This $\mathbf{~}$. is well adapted for grazing and rearing neat stock, horses and sheep, and also for dairy farms. Some of the settlers keep 30 head of neat cattle, besides horses and sheep. Agricultural labour is high;
from 1 to $1 \frac{1}{4}$ dollar a day without board, with board from 10 to 12 dollars a month, or $\frac{s}{4}$ ths of a dollar per day in summer and 6 to 8 dollars in winter, or $2 s$. 6d. a day.-During haymaking wages are $3 s .4 d$. a day, at other times from 8 to 12 dollars a month. Mechanics are paid one dollar a day.-The articles of trade or rather traffic consist in beef, cattle, butter, cheese, pork, pearlash and grain.-In this T. are two private schools: in each from 12 to 15 scholars are instructed.Engranted and unlocated, 16,200 acres.

Hertrl, fief, fronts the St. Lawrence and lies N. E. of Champlain and s.w. of Batiscan. It has one corn-mill on the R. Champlain, which waters it through its whole extent. It belongs to les Chartiers.

Hertel, rivulet, in the $S$. of Champlain, turns one flour-mill.

Hinchinbrook, township, in the co. of Beauharnois, is bounded s. by the boundary line; N. E. by Beauharnois and is separated from Godmanchester by the r. Chateauguay. This m. contains 38,000 acres, of which 18,850 have been granted by letters patent: from 11 to 12,000 acres were granted to non-resident persons in 1821, many of whom were then residing in the United States; soon after these lands were granted some of the grantees died, and some left the country and were never afterwards heard of: on this tract are some few families without titles to the lands they occupy. This t . is divided into 8 ranges and every range into lots of 200 acres each. From the province line N . are three full ranges, but the remainder is more irregularly divided and is appropriated to crown and clergy reservations, in large portions or blocks as they are technically termed. The surface is somewhat uneven but the soil, although rather light and in many places stony, is .

## H I N

good, excepting only a very few swampy tracts which are covered with cedar, spruce fir and hemlock trees. The large knolls, or rising grounds, are thickly clothed with good timber. Towards the Chateauguay, in some places, the surface subsides into valleys and gentle slopes, where there are large breadths of fine meadows well watered by several branches of that r . The settlers are s. c nerally near the river's side and in eligible situations along the frontier, in which direction there are several roads passing into the state of New York. The roads are in many parts bad, but are nevertheless frequented by loaded waggons. An immense stock of fine timber still remains in this township, although, for ycars past, vast quantities have been cut and rafted down the Chateauguay to Montreal and Quebec.-In this т. are 295 fimilies, of which 79 are from Scotland, 78 from Ireland, 22 from the United States, 15 from England, 12 Americin loyalists and 5 from Germany ; making an aggregate population of 1214 souls. inity acres are claimed under orders in council, of which 2595 are under improvement. 16,325 acres are settled upon under the authority of the agent, of which 3044 are under improve-ment.--The Village of Hinchinbrook, called Huntingdon, is built on each side of the r. Chateanguay ; the portion in Godmanchester on government ground and the other side on the property of Wm. Bowron, Esq. acquired by purchase. The village is laid out in 3 rows on lots 1 and 2 in the front range of this r . in extensive village plots of from 10 to 20 acres each, which have been mostly located ; and those in the 1 st and 2nd ranges, bordering on the river, are nearly all settled upon or occupied. The village lots Nos. 4 and 5, in the front of the front range, are reserved for pullic purposes, where the inhabitants are about to erect a schoolhouse. The village of Huntingdon, lying partly in Hinchinbrook and partly in Godmanchester, is connected by a strong bridge across the river Chateauguay, made of timber and stone, 240 feet in length, which cost the inhabitants $£ 250$. This village is inhabited by Irish emigrants and contains a population of 125 souls; and although the number is not so great as it was some time ago, yet the present residents appear to succeed in their different occupations and are likely to become permanent settlers: they are composed of small farmers, mechanics, traders, \&c.-Vacunt lands, 19,150 acres.

## H O R

Hops, township, in the co. of Bonaventure, is bounded s. by Chaleurs Bay; w. by Cox ; e. by the settlements of Port Daniel and n. ly waste lands. It is watered by the Lower r. Nouvelle and a part of the town of New Carlisle and its settlements range along the front from the s. $w$ angle to the r. Nouvelle.

Hudnersfiend, a projected township in the co. of Ottawa, is bounded s. by Clarendon; e. by Bristol and Aldtield; N. by Shorn and Cawood; w. by Litchfield.

Hull, township, in the co. of Ottawa, is bounded E. ly Templeton; v. by Wakefield; w. by Eardley and s. by the river Ottawa. It contains 82,429 acres, and was surveyed and subdivided in 1801 under a warrant of survey issued in favour of Philemon Wright, Esq., two of his sons and seven asociates, who obtained a grant of 12,000 acres under letters patent in 1806 . The order of council was granted Mar. 22, 1800. The grant to Mr. Wright, \&c. embraced the whole front of the township and comprehends the ranges $1,2,3$ and parts of $4,5,6$, with 2 lots in the 7 th range, through which the $R$. Gatineau runs. The associates in this grant reconveyed, as was the practice at that time, the greater part of the lands to their leader, as an indemnification for expenses incurred in the survey and for patent fees on the grant, by which means Mr. Wright became the principal and almost sole proprietor of the lands thus granted, upon which it appears he and his sons have made improvements to the considerable extent of 4703 acres in culture, 24 houses, \&c.This т. extends 16 ranges in depth; each range being subdivided into 28 lots of 26 chains in breadth, by 80 chains 80 links in depth. Such
are the authorized dimensions of the lots of land in river townships throughout the province, excepting, of course, the lots broken and indented by the sinuosities of the river or lake upon which they front, as in the 1st, 2nd and 3rd ranges of this r.-Hull is 120 miles from Montreal and is in the centre of a fertile country, possessing every agricultural advantage in soil and climate. The general features of Hull are mountainous: a range of hills, named by the Indians Perguatina, runs through the middle from E . to w . ; the highest part is not supposed to exceed 900 ft . above the level of the Ottawa: on each side of this range and occasionally upon it are tracts of excellent land and the swamps are comparatively few and of small extent. The front of the $\mathbf{T}$. is, generally, a plane undulated by gradual swells as far back as the highlands in the 6 th range, which traverse the $т$. in a curvilinear direction almost parallel with the Ottawa. Beyond these the surface rises into more frequent and abrupt slopes, though by no means unfit for tillage, and becomes a rich pasturing and grazing country, much prized as such by the inhabitants. The soil in the level parts and in the intervals frequent in the hilly sections is excellent, and, when under proper cultivation, produces in abundance wheat, rye, barley, oats, potatoes, \&c. In the immediate vicinity of the Chaudière or Columbia Falls the soil is poorer, being very rocky and sandy; but at a little distance this inferiority disappears and the soil becomes a strong loam.-This $\mathbf{T}$. is traversed by several roads; the principal begins at the steam-boat landiug, passes through Wright's Village and running along the front strikes the Chaudière Lake between the 2nd and 3rd ranges; thence it follows the margin of the lake and enters Eardley : this road is very good and on it is the greater portion of the most flourishing settlements of Hull. This road is called Britannia Road and extends 7 m . Being the first road made in this T ., the mode of forming it may be interesting as well as useful ; Mr. W. first marked it out as far as the lake, then ploughed it on each side and threw the earth to the centre to form it oval; he then levelled the hills and laid the stuff from the top into low places, built bridges and paved the road, where necessary, with broken stones; he also built stores at each end for the deposit of different kinds of goods for the accommodation of the upper country.-From Co-

## H U L L.

lumbia Farm two roads branch off in different directions. One, passing along the edge of Columbia Pond, leads to the Gatincau Farm, remarkable as being the spot selected by Mr. Ph. Wright in 1801 for his first and original habitation, and as such is not divested of interest, being, as it were, the parent of the actual flourishing settlement of Hull. The other read directing its course $w$. winds suddenly at lot No. 8, and rejoins the main front road; meanwhile the Columbia Road continues towards the N . until it meets the River Gatineau in the 7th range, where Mr. Christopher Wright's new farm is situated. A road from Chaudicre Lake, cutting at right angles the Britannia Road, leads into the back settlements, where, of course, no good roads can at prescat be expected: on this road few settlements are to be secin beyond the 4 th and 5 th ranges, from which to the 3rd range the farms progressively increase and towards the Chaudicre Lake the road pasecs tpparently through an old-settled country. The road communication from Hull to Montreal is bad and in 1321 was impracticable for any horse or team. A road, 16 ft . wide, has been cut by the government commissioners, over (it miles, to the head of Long Sault and 71 bridges built. There arc $\pm$ places where either ferries must lic established or large bridges built and the ravines or gullics filled up to enable teams to pass. The remaining (i) miles to Montreal are passable. Mr. Ruggles Wright, the postmaster of this T., in his cridence as to this road, said, that the inhabitants and travellers of every description have suffered great inconvenience for the want of a roud, that there have been several mails lost and horses drowned by attempting to transport the mail on the ice early in the fall and late in the spring (there being no land road, and that not a year has passed for the last twenty-five years back that accidents have not occurred either in the loss of property or men's lives, as there are about four wecks at these seasons of the year, between the opening and closing of the boat navigation, when the river is not passable, owing to the ice at the Chaudiere breaking up 15 days earlier than it does 60 miles below, and that this is the only possible communication they have to and from a market. Mr. Wright has, with some assistance, opened all the roads to make it possible for his people to pass and repass. One stone causeway, in particular, cost him above $£ 1000$.

The total sum expended by him and some of his neighbours upon these roads, during the 20 years after he first obtained the property, amounted to 1221117 s .6 d . besides 205 S expended by the government commissioners making a total of 1:316i; 17s. 6d. The extent of roads made with this money is about thirty miles.-This T. abounds with execllent timber, which is ehiefly beech, birch, maple, pine, elm and some oak, hiswoud and hemlock; the oak is fit for naval purposes and much of the pine for masts of large dimensions. Of the oak there are $4 \mathrm{specics:} \mathrm{the} \mathrm{white}, \mathrm{rock}$. scarlet and red. Of the pine lind there are 10 : the white spruce fir, balsam fir, shrub pine, hemlock spruce, yellow pinc. Ameriem larch or tamarack, black spruce fir, pitch pinc, red or Norway pine and white pine. Of the birch 5 sorts: the yellow, black canoe, white and dwarf hirch. Of the maple 6: the soft or white maple, black surar maple, red or hard maple, sugar maple, striped maple or morsewood, and another specics for which there is no English name. Of the bech 2 species, and also of the ash 2 speries, the white and black. The walnut, the hickory and the buiternut, a species of the walnut, and red and white cedar. Of the cherry there are 3 kinds; of the willow 6 ; of the basswood 2 ; of the clin 2 , the common and slippery elm: 太心e. There are in all, as far as have been observed, ti2 peries of forest trees and upwards of $\mathbf{6 0}$ shrubs.- II ull is abundantly watered by rivers, lakes and numerous tributary streams; the Gatinean is the primechal river, and in a large and rapid stream runs diagonally through the t. from N. E. to f. W. and is only navigable for canoes. In the chain of hiorhlands are a great many lakes, some of which are exceedingly beautiful and abound with exeellent trout. The principal lake lies in a transerse position from lot 23 in the 11 th range to the commencement of lot 28 in the 13 th ranns ; it is 3 m . in length by $\frac{3}{4} \mathrm{~m}$. in breadth and foms a narrow pass of about 16 chains wide on the division line between the 11 th and 12 th ranges, which intersects a small island situate about midway from shore to shore ; its shape is extremely irregular and at lot 28 it branches off into Eardley; its waters discharge into the Gatineau at the line between the 15 th and 16 th ranges, thus running in a contrary direction to the current of that river-a singularity occasioned by the highlands which stretch across the 8 th, 9 th and 10 th ranges, and form a natural

## H U L L.

division of the waters flowing north and south.The Columbia Pond is a small lake lying at the extremity of the 5 th range; its waters fall into the Ottawa a little south of the estuary of the Gatineau.-An iron bed of great richness has been discovered in the township, but it has never been worked. There is also a lead-mine on the Gatineau River, known only to the Indians, who have brought down quantities of it; but the situation has not been precisely ascertained, owing to the reluctance which the Indians have to communicate discoveries of this nature. Marble of the finest quality is abundant: there is a very fine bed of this mineral on the Gatineau River, near the first rapid, about 400 yards above the still water, where a steam-boat may float with ease and safety. This bed of marble is supposed to be of immense extent ; it appears in the neighbourhood of the ironmine and the Lac des Chits abounds with it ; that which appears at the surface is of inferior quality: this quarry forms a precipice one mile in length and 60 or 71 ft . high and is of a remarkably white appearance ; it is a fair species of white marble without vein. There is limestone of the best quality on the borders of the Gatineau, and also a lead-mine in the 10 th or 12 th range. Granite is found in the interior, on the ranges of rocks or monntains.-In this $\mathbf{T}$. are several excellent and well-cultivated farms, and Mr. Wright has from 5 to 6,000 acres under cultivation; his son, Mr. T. Wright, has two establishments in the 7 th and 8th ranges on the e. bank of the Gatineau ; his lands are advantageously situated and in a high state of culture, affording excellent pasture.-The Columbia Farm is situated in the 4th range, about $1 \frac{1}{V}$ mile from the Ottawa and w. of Mr. Wright's house. The extent, position, and culture of this farm deserve to be particularly commended. The convenient and judicious subdivision and economy exhibited in the management of this farm are truly meritorious, and reflect great credit upon the enterprise and judgment of the proprietor. All kinds of grain are produced in abundance and hemp and flax may be cultivated with great success. Mr. Wright one year raised a very considerable quantity of hemp and sent a very fine specimen, measuring 14 ft . in length, to the Hemp Committee of Montreal ; he also sent two samples of the seed with two bundles of the hemp to the Society of Arts at Quebec, and was complimented in return with a silver medal ; from a
certificate which he received from the Hemp Committee it appeared that he raised, that year, 11 parts out of 13 of the total raised in the province. Although this is a very fine country for the growth of hemp, Mr. Wright was obliged to discontinue growing it on a large scale on account of the expense of preparing it for market, the hemp-peelers charging him one dollar per day, or one bushel of wheat, labourers being very scarce: he saved nearly 100 bushels of seed, which he sold in Montreal at a fair price, and was obliged to send the hemp to Halifax in Nova Scotia for sale. He now grows only small quantities for his own use.-The expense and process of clearing and fencing an acre of wild land, its usual produce, and the process of clearing, according to Mr. Wright's evidence before the Committee, are as follow:-The process of clearing consists in three things: cutting down the under brush at $7 s .6 \mathrm{~d}$. per acre; chopping down the wood in rows, two rods wide, at 2.5 s . per acre; firing, burning, and branding fit for the harrow, at 27 N .6 d . per acre, after which the work is done. The total expense of clearing is therefure $£ 3$ per acre, and the common price of putting in the crop is $10 s$. per acre. The poorer settlers find themselves occasionally constrained to adopt a more imperfect mode of clearing: they first cut out the brush and small trees, leaving the larger trees standing, which shade the land so that they do not get more than half a crop. The produce per acre is from 2 to 400 bush. of potatoes, 25 bush. of oats or wheat, 30 bush. of Indian corn, 200 bush. of turnips.-Mr. Wright's constant aim to improve the breeds of cattle has been attended with much success; he brought over from England, many years past, at great expense, some of the best Herefordshire and Devon breeds, by way of experiment ; these cattle crossed produced a breed justly celebrated, which also, crossed with the Canadian breed, produce excellent cattle.-Wright Village is pleasantly situated at the s. E. angle of the $\mathbf{~}$. occupying the front of lots No. 2, 3 and 4 in the 3rd range; it contains a handsome church, 68 ft . by 28 ft . with a steeple 121 ft . high, it stands on an eminence facing the river, decorated with much taste and surmounted by a neat spire. Nearly in front of the church, close by the highway, stands a stone house of two stories, where an hotel establishment is carried on, affording comfortable accommodations. Opposite to these,

H L L L.
on the other side of the main road and on the bank of the river, are the corn and saw-mills, a blacksmith's forge, stores, \&c. and a spacious and conspicuous stone edifice with a cupola, often mistaken for a church from its singular construction. The mill-dam projecting out upon the reef of rocks, towards the rapid, is remarkable for its extent and solidity. w. of the mill are the long causeway and bridge, over which the public road is continued. (in the dirst rise of the hill, w. of the bridge, is the landsome and comfortable habitation of Phikemon Wright, Esq. There is also a post-office. As the present village is exclusively the property of Mr. Wright and his sons, competition in trade is not so active as perhaps the general interests of the $\boldsymbol{T}$. require. It might therefore be expedient to establish a govermment village, open to emigrants settling there; and lot 21 , in the ${ }^{2}$ nd range, appears to be a very propitious site for that purpose, on account of its contiguity to the Chaticre Lake, an expansion of the Ottawa; lot 14 in the range also affords an advantageous site for a village, which might be built at the junction of two roads, near which there is a saw-mill and alse a tolerably well-cultivated farm. Mr. Wright carries on the timber trade to great extent and has a large manufactory of jot and pearlawhes. His first expert of timber was to Montreal, and, in le: 1 , he arrived at Quebee with the first timber ever sent there from the banks of the Ottawa. The expense of conveying timber to Quebec being less than to Montral is the reason why, in 1823 , above 300 common cargocs were sent to Quebec and not one to Montreal through the same channel : in a few years, without doubt, this quantity of timber sent to the Quebee market will be quadrupled, and the exports from this r. of various other articles, such as flour, beef, pork, Rt.. will be increased in the same ratio.-In this $\mathbf{T}$. are 3 schools attended by about 150 scholars, who are instructed in reading, writing and arithmetic; they are supported by voluntary contributions and two of them are under the patronage of the Royal Institution in Canada. The $\quad$. at present consists of one parish, in which are a protestant episcopal church and a methodist episcopal chapel, but there is no parsonage-house.-The population is constantly and rapidly increasing and, with the exception of the rising generation, is almost entirely American. The inhabitants in 1824 wore placed under the superintendence of Mr. Wright, who has adopted various means to excite the in-
dustry and secure the comfort and happiness of all classes of his little colony; and perhaps in no part of the province will $l_{n}$ found more industry and a better understanding among the settlers, for they seem universally to enjoy a degree of ease and comfort seldom to be met with in settlements of such recent date: crery thing exhibits a decree of aftluence and social prosperity not reasomathy to be expected i:n settlements formed within 30 y ars ; -neat dwelling-houses, many of them two storics high, cxtensive barns, \&c., well-cultivated fields and enclosumes, numerons eatile grazing, latre flocks of slecp wandering over a grateful soil and cropping an abundant pasturage, - llese utjects, happily combining the pleasures and advantages of rural and pastoral life, not only delight the riccasional visiter, but are calculated to inspire the emulation and encourage the kopes of many a fosponding cmigrant. The reader will wet fail to ask, "Fron whom are all these benefits derived ? Whose perswering talent and cincrprisime piris first pierced the groow of these forests and converted a windernes of trees into fields of com? Whose induntrious hand first theew into this natural desert the seceds of plenty and prospuity ${ }^{\prime}$ "The answer is, Mr. Philemon Wright, an lamble American from Woburn in the state of Masadhesets: through hardships, privations and dangers that would have appalled an ordinary mind, he penetrated an ahost inaceessible comtry, and where he found desolation and solitude he introduced civilization and the bucful arts; by his almost maided skill and intefatigahle industry the savage pathes oif a dreary wilderness have been changed into the cherfiul haunts of man ; the gloomy upland lorests have given way to miling corn-fields; the wet and wild savanas, sinking under suntad priace and cedar, have been cleared and dranced into luxuriant meadows; the perilous waterfail, whose hoarse noise was once the frightful voic of an awful solitude, is rendered obedient to the laws of art, and now converts the majestic tenants of the forest into the habitations of man and grimes his food; the rivers and lakes, one iruitful in vin, now breed their living produce bor the use of human beings, and, with deep and rapid current, transport on their smooth and ghasy surface the fruits of his industry; the deep recesses of the earth are made to expose their mineral treasures, from the birthday of time conccaled. In finc, the judicious and persevering industry of one successful adventurer has converted all the rude ad-

## H U L L.

vantages of primeval nature into the germs of agricultural, manufacturing and commercial prosperity. Mr. Wright, however, has been amply rewarded for his honourable exertions; his private fortune has been increased in proportion to the good he has created, and the liberal conduct of the provincial government towards him has been unbounded: 9,145 acres have been granted to him and his family in Hull and Lochaber, under letters patent; 7,000 acres in Hull have been reconveyed to him by his associates and not less than 5,000 acres in Templeton, making altogether 21,145 acres. The proceedings of Mr. Wright in forming the extensive and important settlements of Hull have been detailed by him, and are highly interesting and useful; interesting as developing the successful exertions of an enterprising and indefatigable settler, and uscful as being well adapted to guide and encourage others in forming settlements in a country as remote from civilization as from assistance. After having visited the extensive tract which was dastined to become the theatre of his exertiens and the reward of his useful enterprise, he returned with his two companions to his native home, Woburn, in the state of Massachusets, having determined on the measures proper for him to pursuc. After hiring about 2) men an! providng himself with mill-irons, axes, scythes, hoes and all other tools thought by him to be the most useful and neccssary, together with a number of barrels of clear pork (pork freed from the bones), he commenced his journey with 14 horses, 8 oxen, 7 sleighs and 5 families. This emigration took place on the 2nd of Feb. 1800. Un the 10th of the same month Mr. Wright arrived at Montreal and then proceeded towards Hull, travelling generally among the old settlements only 1.5 m . a day for the first 3 days, because the sleighs were wider than those used in that country and because it was necessary that the horses and oxen should go abreast. During these 3 nights he stopped with the habitans, and arrived on the 1 th day at the foot of the Long Sault, which was the extremity of the travelled roads in that part of Lower Canada. From this place he was still 80 miles from his place of destination; and there not being any road and the snow deep, he was obliged to halt and alter the teams so as to so singly, while a part of his men proceeded forward to cut a road through the snow. After these necessary preparations he proceeded on for the head of the Long Sault, observing in due
time to fix upon some spot near water to encamp for the night, particularly observing that there were no dry trees to fall upon them, and if there were to cut them down. Then he cleared away the snow and cut down trees for fire for the night, the women and children sleeping in covered sleighs and the men with blankets round the fire and the cattle made fast to the standing trees; in this situation about 30 persons spent the night. Before he retired to rest he prepared sufficient food for the next day so as to lose no time when daylight appeared, always observing to keep the asemen forward cutting the road and the foraging team next the axemen, and the families in the rear; in this way he proceeded on for 3 or 4 days, observing to look out for a good place for the camp, until he arrived at the head of the Long Sault. From that place he travelled the whole of the distance upon the ice until he came to the intended spot, about 65 miles. The guide whom he hat taken with him on his first journey was as much unacquainted with the ice as the whole of the party, not one of them having ever travelled up this ice before. Their progress was very slow and impeded by their fear of losing any of the cattle, and the axemen in the front were obliged to try every rod of ice, which, being covered with snow about a foot deep, it was impossible to know whether it was safe without sounding it with the axe. On his journey up the river, the first day, . Mr. W. met a savage and his wife drawing a child upon a little bark sleigh, who gazed at the party with astonishment, more especially at the cattle; as if they had come from some distant part or frema the clouds; their astonishment appeared to increase as they walked round the teams, the party having halted; and they tried to hold a conversittion concerning the ice, but not a word could be understood. The Indian pointed to the woods, as if giving directions to his squaw to go there and make herself comfortable; she immediately went off and he proceeded to the head of the company without the promise of fee or reward, with his small axe trying the ice every step he went, as if he had been the proper guide or owner of the property. They passed on until the approach of night; when, the banks of the river being high, about 20 feet, it was found impossible to ascend them with the sleighs; they therefore left them on the ice and ascended the banks of the river, and clearing away the snow cut down large trees as usual to make a fire, carefully observing

## II U L L.

that no stooping or dead trees could fall upon them, and after cooking supper and getting regular refreshment they spread their bedding round the fire and made themselves as comfortable as they could, having nothing over them but large trees and the canopy of the heavens. Before daylight they cooked their breakfast and provisions for the day and, as soon as daylisht appeared, they were ready to proceed. The Indian, who had behaved with uncommpp civility during the night, having taken his regulir refreshments, proceeded to the head of the company as he lad done the precedines day with uncommon agility. All being under weigh as soon as daylight appeared, they proceeded as usual without meeting with any aceident; when night was approaching they did the same as the nirht before and began their mareh carly in the following morning, the Indian tahing the lead as before. Owing to the decpness of the snow, it took them about (idays in passint up this river, about it miles, when they all arrived safe at the township of Hull. Nter some little trouble in cutting the brush and bants, ther ascended the height, which is about 21 fect from the water. The Indian, after he had seen them safc up the bank and spent the night with them, intimated that he must return to his squaw and child; and after receiving some presents for his great scrvices, he took his departure for his squaw, having to go at least (in miles. The party thanled him in the best manner thev could make him understand, and three times hiczacd him; and he left in ereat spirits, buing well pleaced. Mr. Wrishi arred Mar. Jth and immediately, with the assistante of all hands, felled the first tree, for every person who was able to use the axe endeavoured and assisted in cutting; after which they commenced cutting down and clearing a spot for the erection of a house, and continued cutting, clearing and crecting other buildings for the accommodation of the families and men. As swom as they commenced cutting. and clearing, the chiefs of two tribes of Indiuns who live at the Lake of the Two Mountains came to them and viewed all their tools and materials with astonishment and would often hoop and laugh, being quite unacquainted with tools or things of that nature. 'They also viewed with astonishment the manner in which the oxen and horses were harnessed. They seemed to view all things with great pleasure. Some of them fetched their children to see the oxen and horses, having nover seen a tame animal before, being brought
up near the sreat lakes to the westward: they would also ask the liherty of using one or two axes to see how they could cut down a tree with them, as their own axes are very small, weighing only half a pound and Mr. Wright's axes wcighed from four to tive pounds. When they had cut down a tree they would jump, hoop and huzza, being quite pleased with having cut down the tree so guickly. They reccived a glass of rum each and returned to their sugar-making in the greatest harmony. They continued very friendly to pass backward and forward for about ten days, often receiving small presents, for which they made returns in sugar, venison, \& $x$. Their chiefs assembled towether and procured an English interpreter, George Brown, who had an Indian wife and family and who spoke both lamgages. They requested him to demand of Mr. W. Wy what authority he was cutting down their wom and taking pussession of their land. To which he answered - ! y virtue of authority recival at Quebee from their ereat father, who lived on the other side of the watior, and from Sir John Johnstom, the agent in the Indian department, through whom they recoive their yearly dues from government. They could not be made to believe that their arcat father or other persons at Quebee would a': w flem to cut down their timber and elear their land and destroy their sugaries and huntingground without constilias them, as they had been in the peaceable and quiet $\mathrm{p}^{\text {resersion }}$ of their lemds for sencrations past: and in this part of the country were their chef hunting-gromods, at graics, fisheries, \&e.; and they were afinid the seitlers would destres their beaver, their deer and theit sugaries. After a long conference, carried on with grool temper on both sides, and with sound argument on the side of the poor Indians, it wate agreed to leave the question to the decision of the proper athoritios at (biclice, which atiterwards deciled against the labians, beatso their ance tors had ben compelled to wede their comenter for certain anmual presents, which the Indians conceived to be an inadequate comarenation? they, however, submitted to the decision with gond hith and almost without a mummer. They thein asiced that Mr. W. should be a lmother chicf; and if any dificulty occurred, it should be settled among the chiefs. They then proceded to crown him in their usual manner as a brother chief; after which they dined together and kissed cach other's checks, and a number of other ceremonies passed too numerous

## H U L

to mention, such as burying the hatchet and a number of other usual Indian formalities. After this ceremony the settlers and the Indians often assembled together in the greatest harmony in both villises upon various occasions and always with the greatest friendship and good understanding, without having to revert to one question for the law to decide. The judicious and just eulogium which Mr. Wright has passed on the Indians ought not to be omitted :--" I must acknowledge that I never was acquainted with any people that more strictly regarded justice and equity than those feople have for these twenty years past."-After having arranged with the Indians, Mr. W. continued cutting down and clearing a spot for the erection of a house and other buildings for the accommodation of the families and men.-Thus were the important settlements of Hull commenced ; and it is to be regretted that the plan and extent of this work will not allow the author to trate their gradual increase and improvement to the present date; for a more ample account would prove very beneficial to all who are desirous, by imitating Mr. Wright's laudable example, to obtain affluence and happiness through the medium of emigration-unfortunately so necessary at present to the superabundant population of the mother country.-Ungranted and unlocated 21,250 acres.-The following statistical statements, made in the years 1820 and 1828 , will show the increasing prosperity of the settlements in Hull.

Humguin, river, in the co. of Rimouski, runs into the s.w. side of the r. Matapediac, about 3 m . below Lake Matapediac.

Hungry Bay, in Lake St. Francis, expands into the w. side of Catherine's Town in the $S$. of Beauharnois. A canal is projected to extend from this bay to the first waters of the $\mathbf{r}$. St. Louis.

Hunter's Brook, at the s.w. extremity of Drayton т., joins the r. Connecticut between Hall's Stream and Indian Stream.

Hunterstown, township, in the co. of St. Maurice, in the rear of Riviere du Loup, Grandpré and Dumontier: bounded e. by the projected T. of Caxton; w. by lands claimed by the late Charles Lanaudicre, Esq. as belonging to the S. of Maskinongé ; N. w. by waste crown lands.A tract of very little value, being a continued stratum of rock lying very near the surface; toward the rear it rises into broken and almost mountainous ridges. Pine and maple are abundant, but cedar, spruce and hemlock much more so.The Rivière du Loup with some small lakes and little rivulets water it very well. 24,620 acres were granted in 1800 to Mr. John Jones, the present proprietor.

Huntingbun (V.), v. Hinchinbrook, t.
Huntsburgh (I.), v. St. Armand, S.
Huron Village, $v$. St. Gabriel, S.
Hurons, des, river, rises in the S. of St. Charles; in the co. of Rouville, and running s. w. traverses the $\mathbf{S}$. of Rouville, where it receives a small stream that rises in a lake on the summit of the Rouville Mountain and then striking into Chambly East it receives the united waters of the rivers Barre and du Rapide: after this increase it runs more to the w. and loses itself in Chambly Basin. The course of this R . is only 20 miles, although it is of considerable magnitude: it not only contributes to the fertility of the soil, but by its sinuous meanders forms a strong feature of embellishment.

## I.

Indian Lands and Indians. Adjoining Godmanchester on the west is a space reserved for the use of the domiciliated Indians of St. Regis and commonly known by the name of the Indian Lands: it forms a triangle bounded by Lake St . Francis, Godmanchester and the line of $45^{\circ}$ : its side on the lake is about 10 miles and that on the line $12 \frac{1}{2}$ miles. The land is, generally, of supe-

## INDIAN LANDSAND INDIANS.

rior quality and well furnished with fine timber. Of the 17,320 acres of leased lands in this settlement, there are upwards of 4000 low and unfit for cultivation, except at a great expense; on these grow black ash, elm, cedar, pine and tamarack. There are besides about two thousand acres of open marsh, not leased, which grow nothing but coarse grass, bushes of various kinds, willows and alders.-'these open marshes were of considerable use to the settlers on their first arrival in furnishing winter food for neat cattie, but now that the inhabitants have all got part of their farms sown with tame grass, these marshes are comparatively of little value and are likely to remain so for generations to come, as nothing but the lowering of the Citeau du Lac rapid can make them fit fur cultivation. This, if not done ly the hand of man, but left to the gradual operations of the stream of the St. Lawrence, will take a longer time than is casy to be calculated.-The remaining pratt of the leased land consists of rising grounds of no great elevation, which, if cleared, would look like so many islands in the midst of those swales. Where the ridges are highest the land is rather stony, but taking the dry lands on an average the soil is good and fit to raise any sort of crops, with respect eitleer to quality or quantity, that will grow on any other part of Lower Canada. The timber urowing on these ridges consists of maple, birch, beech, basswood and occasionally some hemlock; and these rilges once produced considerable quantities of white pine and oak. The only stream of consequence in the settlement is Salmon River, which, from its mouth to the province line, a distance of four miles and upwards, is navigable for vessels not drawing more than four feet of water: this R . is a great thoroughfare for the admission of American produce.-Among the various obstacles to the improvement of the settlement, the want of roads is not the least. The dificulty and expense attending the bringing of the Grand Voyer to such a distance has, no doubt, been one of the causes of the want of roads in this place; and now that part of the difficulty has been surmounted and a road laid out, there remains a still greater, viz. the doing the necessary work. Owing to a great proportion of the St . Regis Indian reservation being low and swampy marshes, it is necessary to pave the way over which the line of road runs with logs, which makes the labour neces-
sarily so heavy, that unless some legislative aid is obtained, it must be a long time before any road can be in such a state as to render travel. ling comfortable. Although the marshes in this tract are neither few nor small, there is not the slightest vestige of any of the discatises which usually attend such places. In fact there is not a more healthy people on the whole continent of America.

The Indians, who were the atwriginal inhabitants of the province of Lower Camada, have not been nearly exterminated without leaving materials for melancholy reflection. Even trilus of savages camot be swept away from the carth without creating a sentiment of regret and a moral derived from the mutability of cvery thing human. Their extinction having been principally fficted by the thirst of dominion and the hunger of avarice, assisted by superstition, leaves no enviable trace of the milder virtues of the christians. The few remains of these persecuted tribes are seattered about the province and peaceatly sulmit to the slow and gradual amelioration of more civilized habits. Their rude principles of unenlightened faith are already supplanted liy the doctrines of the Roman Catholic ereed, to which they universally subscribe; and if a greater number of schools were established among them, it is probable that in a few years their origin would be only known by their colour.-The names of the
existing tribes and their places of residence in this province are as follow :

Indians of the Algonquin and Tête de Boule nations hunt along the r. St. Maurice. The familics that occupied the hunting-grounds between the rivers Ste. Anne and St. Maurice are entirely extinct.

The Abenaki Tribe reside in the Indian Village in the cast side of the r. St. Francis, in the S. of St. François. The village consists of about 40 cabins or houses of wood indifferently built. These converted Indians subsist upon their own lands in that seigniory by raising, in their peculiarly careless manner, some Indian corn and potatocs, and by rearing poultry and pigs: they sometimes increase these means by fishing and sometimes by hunting parties: the latter is but a precarious resource, as they are compelled to go to an immense distance before they can meet with game to repay their labour ; for as the habitations of civilized men have spread over the province, the animals that were the prior occupants have fled for protection to the recesses of more distant forests. This $v$. contains a church and a parsonage-house, at which the missionary who superintends the religious concerns of the tribe always resides. An interpreter also has a permanent residence among them. Some of this tribe inhabit an Indian $v$. in the $\mathbf{S}$. of Bécancour, which is a little below the $\mathbf{v}$. of Becancour and consists of some houses of wood, ill-built, or rather cabins. The manners and occupations of these Indians are precisely the same as those of the v. of St. François. They have also a village in the co. of Rimonski, at the fonfluence of the rivers Madawaska and St. John;
and another at the mouth of the r. Ristigouche, in the co. of Bonaventure, called the Indian Village Mission.-The Abenaki Indians of the $v$. of St. François hold, by letters patent, 8150 acres in the t . of Durham.

The Algonquins and Iroquois Tribes inhabit an Indian village in the $S$. of the Lake of Two Mountains, which is agreeably seated on a point of land projecting into the lake and consists of about 60 houses, a church and a parsonage-house, where a missionary always resides. The Indians of this village are the descendants of a tribe that inhabited or frequented the lands bordering upon Lake Huron; the few who survived the massacre of that race by the treachery of their enemies effected their escape, and their progeny now occupy 2 or 3 small villages in different parts of the province. Those of the village of the Two Mountains are become civilized and have adopted many of the manners and customs of the Canadians and acquircd a knowledge of the French language, which they use fluently: they are quiet and inoffensive and preserve the greatest harmony among themselves and civility towards the other inhabitants. They place an implicit confidence in the resident minister, whose influence over them is unbounded. Some lands are assigned to them near their village, which they cultivate with wheat, Indian corn and other grain; of late years they have also planted potatoes in considerable quantities: from these sources, increased by the produce of the chase, which a part of the men follow during the winter season, a subsistence is derived which, apparently, they enjoy with some of the comforts of civilization.

The Montagnais or mountaineer nation, called in the Cree language Papinashuah, which means " laughers or sneerers," are descended from the Algonquins and frequent the immense tract of country lying from the mouth of the St. Lawrence northward to the Hudson's Bay territory ; they are generally a harmless people without any fixed habitations, wandering in the limits assigned among themselves as hunting-grounds, their only means of living being by hunting and fishing. In 1804 there were about 1000 of these Indians, women and children included, between the River St. Maurice, King's Posts, Mingan Seigniory and coast of Labrador. In 1809 their number had diminished to about 800 and in 1824 it amounted to only

## I N D I A N S.

700 at most, owing to starvation, small-pox, fevers and the inordinate use of spirituous liquors. When they go on board of vessels rum is their principal object, by which they get so much intoxicated that often in getting ashore they upset and many are drowned. When in a state of intoxication they often sleep in damp places, by which they get their death. During summer they subsist on fish, fowl and eggs, of which they have great plenty; and in winter on beaver, deer, partridges and porcupines; and, when they are near lakes, ly cutting holes in the ice, they get trout and white fish: the former they take with hooks, the latter with nets; but as this is a kind of laborious work, the ice being from 3 to 4 feet thick, they seldom try it except when in a state of starvation. They have at great repugnance to agricultural labour and have no traditions among them besides a faint idea of the order of the Jesuits, who taught them the first principles of religious worship, and, having the greatest influence over them, converted almost all of them to Christianity. When the Jesuits first settled among them, in the reign of Louis XIV., on the borders of Lake St. John, the Montagnais nation was in its greatest prosperity. The number of Indians in the vicinity of L. St. John is now very inconsiderable; there are only 10 families on the border of the lake, about the same number in the Chicoutimi country, and about 15 families on Lake Chuamouchouan, which is $\% 1$. w. of Lake st. John and the last post in the Saguenay country. Their numbers have also greatly diminished in the wretched country round Lale Mistassinni, which abounds with peltries of various kinds, since the time when the NorthWest Company held the King's Post, and more particularly of late years, since ardent spirits have been introduced among them. Their number has also been reduced by the small-pox, brought from Europe in the apparel and blankets given to them in exchange for their furs: with this disease from 50 to 100 have died in a day. There are now only 50 or 60 families who trade at the posts of the company: without these causes of mortality the number would have been at least 500. Their number has also been decreased by starvation, from the want of those animals which were once used for their sustenance and which they first began to destroy in too great profusion many ages ago. The Company of the Indies,
which had an exclusive right to the trade, having greatly enhanced the value of elk-skins, which then abounded in this country, induced the natives to destroy that animal merely for the sake of its skin; thus that improvident people destroyed almost totally the species of animal which supplicd their chief subsistence. From that time their numbers gradually decreased. Whenever one of the members of a Montagnais family dies, a victim to want, he is buried on the spot by the others, who immediately afterwards remove their camp to another place and so on until only one remains, when he abandons the place altogether and rushes heedless through the woods till he himself drops, the last victim of despair and starvat-tion.-The dress of the females of this tribe is singularly varied in colours, and it usually consists in a loose piece of blue cloth trimmed with scarlet for their lower garment and a mantle of printed calico. Their hair is rolled up on each side of the head and twisted round with red tape, or with ribloon, to which they are very partial; a cap of a conical shape made of red, blue, green and white cloth, is generally worn, from beneath which a long queue of hair, twisted round with red tape, hangs down their back. The women smoke and drink spirits like the men. The usual dress of the men is very slovenly; it consists, generally, in an old bluc coat or frock, or calico shirt, with linen trousers. The whole native population now does not much exceed $36 \%$; in a few ycars the race will be extinct, for the chase is continually diminishing.-Mr. Peter Chasseur, a mincralogist of Quebec, in his communication to a committee of the House of Assembly, speaks of the present condition of these destitute human creatures in the following affecting terms:-"' In mentioning White Birch Point I should add, that the tract is of no value to the Company of the Northern Posts, because it can in fact be useful only to those whose intention it is to render the productions of the soil profitable, instead of speculating upon the imbecility and ignorance of a tribe which is kept in a state of dependence probably as revolting to humanity as the slave-trade in another hemisphere. The visitant of that wilderness, which is in our immediate vicinity, cannot fail to experience the most afflicting sentiments on observing the natives of the soil, whom the weight of years prevents from gratifying the

## I NDIANS.

excessive avidity of a foreign master, contesting for the remains of the most worthless animal which I had stripped of its skin. The slave knows that laws exist which at least protect his existence, but of that our Indian has not the slightest idea. The number of those unfortunate persons who die of hunger and want would be yet more considerable if the humanity of the servants of the Company of the Posts did not frequently supply their wants."

The Irvquois or Muhauks live in the villages of St. Regis, at the head of Lake St. Francis, and Coghnawaga, in the S. of Sault St. Louis, of which seigniory they are the proprietors, as well as of a tract in the neighbourhood of St. Regis called Indian Lands.-Coghnawaga is on the banks of the St. Lawrence and consists of a church, a house for the missionary and about 140 other houses, principally built of stone, formed into 2 or 3 rows, something resembling streets, but not remarkable for cleanliness or regularity: their occupants may be about 900 , who chiefly derive a subsistence from the produce of their corn-fields and the rearing of some poultry and hogs, sometimes assisted by fishing and hunting, which however they do not, as in an uncivilized state, consider their principal employment. This tribe, the most numerous of any brought within the pale of Christianity in Canada, has long been settled within a few miles of their present village. That the fierce and restless spirit of the wandering savage can be, in a great degree, civilized, these Indians are a proof: some of the men of this village and of the village of the Two Mountains were employed in the British army, and no difficulty was found in bringing them under strict discipline, or in confining their operations within the laws of modern warfare.-The rillage of St. Regis, also inhabited by the Iroquois tribe, is in a rich and beautiful country and well situated at the western extremity of the Indian Lands. The boundary line between Canada and the United States passes through it. About 50 houses or rather hovels, a church, a chapel and a house for the catholic minister, who is a missionary from the seminary of Quebec, compose the village. The habitations are poor, ill-built and more than commonly dirty; attached to them are small gardens or rather enclosures, where Indian corn and potatoes are planted, which, with what they raise on the Petite

Isle St. Regis and some other isles in the St. Lawrence near the village, all of which are their own property, added to the produce of their fishing and sometimes hunting parties, constitute nearly their whole means of subsistence; for indolence, mistaken for the spirit of independence, destroys every idea of improving their condition by the profits of agriculture.-A reservation of land has been made for them by the American government similar to the tract called Indian Lands.

The Hurons, or Yendat Tribe, in industry and a genius fruitful of resources, in bravery and eloquence, always surpassed all the other tribes of this part of the North American continent. Charlevoix accuses them of consummate treachery, and says that they united higher virtues with greater vices than any of the Indian tribes; his testimony, however, should be viewed with suspicion, for the historian of an invading and exterminating enemy is not the best evidence to prove a want of good faith in a cheated and ruined race. When the French first settled in Canada, the Yendat nation comprised 40,000 souls and occupied the fairest portion of the North American continent. This once powerful tribe were treacherously destroyed by the Iroquois, who, under the specious pretence of alliance, obtained the confidence of their opponents, and by an indiscriminate massacre nearly extirpated the whole race: the few who escaped fled towards the habitations of civilized man and established themselves in the rear of Quebec, many hundreds of miles from their native country on the borders of Lake Huron. In the year 1642 their celebrated chief, Ahatsistari, was baptized and the Yendat warriors soon followed the example of their favourite chieftain. The melancholy remains of this warlike race are chiefly living in a village in the $S$. of St. Gabriel called La Jeune Lorette, where they live by the chase and by fishing, drawing no part of their subsistence from the regular pursuits of agriculture. The Indians of this village are the

INDIANS.
descendants of the Huron Indians formerly domiciliated at Sillery. They are a quiet, peaceable, honest, industrious people and loyal subjects; have always been very faithful and devoted to his majesty's service when required, although on one occasion their answer to the governor was misrepresented. They are extremely useful both in peace and war, being always ready to go on publie duty. Their number has been so much reduced that it is now become quite inconsiderable; in 1821 the population of La Jeune Lorette was 137, including only 32 heads of families, 3 unmarried young men above 21 years of age and 2 unmarried young women above 18 ; in the preceding 10 ycars there were 45 baptisms, 8 marriages and 29 burials. In 1822 4 , the pricst says, there were 28 or 29 families and about 70 communicants; by another account it appears the families amounted to about 35 and 20 persons were absent.-March 13, 1651, a grant of $2 \frac{1}{2} 1$. in the $s$. of St . Gabriel was made to these Indians; and the settlement at La Jeune Lorette was made in 1697; this Indian village is between 8 and 9 m . from the city of Quebec and is seated on the e . side of the r. St. Charles, on an eminence commanding a charming view of the river tumbling and foaming over the rocks and ledges to a great depth; the prospect is also in other respects most interesting, varied and extensive, comprising the beautiful city and environs of Quebec and extending wide and far over the southern shore of the St. Lawrence, terminated by the softened forms of the distant southern mountains. The number of houses in the $\mathbf{v}$. is between 40 and 50 , with something like the appearance of neatness in their exterior ; they are chicfly built with wood and a few of them with stone. The church was built in 1730 at the expense of the Jesuits, the Indians working at the building and defraying part of the cost in furs: in 1824 the church and parsonage-house were much in decay, but, since the extinction of the order of Jesuits, the Indians have been no longer able, on account of their poverty, to make the necessary repairs. A Huron schoolmaster is supported partly by the government, but chiefly at the expense of the poor inhabitants. The mill was built in 1731 by the Jesuits out of the revenues, as the Indians suppose, of the estate belonging to the Huron nation. When the mill was first erected the Jesuits allowed the Indians a bushel of wheat annually to each family, but this allowance did not continue
long ; it was soon reduced to one-half, that is, the Indians paid half-price for it: for the last $41 ;$ years they have had none of this allowance; the schoolmaster however had, till the death of the last of the Jesuits, an allowance of one bushel of wheat per month; the commissioners now allow him $5 s$. a month in commutation. The Indians know not on what account the Jesuits discontinued the allowance of wheat, but when it ceased they began to ask the Pire Giroux for their lands at Sillery. The allowances at present made to the Lorette Indians by the military government consist in annual presents in elothes for the warriors, women and children and eight days' rations; they are also allowed arms and ammunition as warriors always ready for military service: these allowances were formerly made by the French to the Indian tribes. Mr. Berthelot, agent to the Jesuits' estates, demanded rents of the Indians, but they refused; he threatened to prosecute, they wished him to do so, but no prosecutions have taken place. The articles manufactured in the village of Lorette and carried to market, or out of the village for sale, are mocassins, snow-shoes, sashes, baskets, Indian sleighs, fur caps and mittens, collars of porcupine quills, purses, reticules, bows, arrows, paddles, snall canoes and little figures of Indians. The lows and arrows and mocassins are very neatly finished by the squaws. For these articles they occasionally find a sale, but at half the price they formerly obtained, and are often obliged to barter them for merchandise. Sume of these Indians are joiners and house-carpenters and others are obliged to work as day labourers, there being much poverty; and four families, consistiner of about 20 persons, are reduced to absolute want. The greater number have no land, but mercly an emplacement; 40 arpents, however, are allotted to them in common, and some plant a few potatoes and sow a little Indian corn and a few oats on some little pieces of land, which they have received from their parents or purchased. Hunting and fishing, ly which they support themselves, are very precarious modes of living. 'ithe Huron nation had, fomerly, for their hunting and fishing limits the country extending from the $n$. Chicoutimi as far as the mouth of the r. St. Maurice; they used also to hunt and fish on the south shore of the St. Lawrence as far as the river St. John. Before that time the IUrons had no limits for hunting and fishing, and were masters of the
country as far as the great lakes; their ancestors permitted no one to hunt or fish on their lands, and in former times if a nation came to hunt upon the lands of another nation, their so doing became a cause of war. Nearly 200 years ago the Seven Nations made an alliance with each other, to live in peace and in common, that is to say, that they were to eat with the same spoon, micoine, out of the same porringer; which signified that they were all to hunt together on the same lands to avoid all disputes with each other. For the last 50 years the Abenakis of the river St. John, the Micmacs and the Malécites have hunted over the lands of the Hurons and destroyed all their chase. When the Hurons had their chase entirely to themselves, it was a law among them to kill full-grown animals only, and to spare the young ones. Beaver they did not kill from June to August, because neither the fur nor the flesh was good for any thing at that season; the infringement of this law was considered murder; nor did they kill partridges during that season, because they were sitting. The other nations, who came to hunt on their lands, were not so considerate ; those foreizn Indians killed both the full-grown animals and the young, and especially the beaver which always resides in the same place. In consequence of this lawless conduct the chase has been destroyed and the Hurons reduced to want; for they cannot, as their ancestors did, kill the strangers who intrude on their lands. The Hurons complain that even the Canadian peasantry take upon themselves to hunt and fish and destroy every thing, spreading snares for wild pigeons. The Indians frequently complain of want of means to suppress the disorders frequently occasioned by white people resorting to their village, and say, that they can easily keep their own people in order, but that they have no authority over the whites. The Lorette Indians now hunt as far as the sources of the Ste. Anne and the Batiscan. They take beaver, otter and martin, though these animals are less numerous than formerly. Their hunting season begins about the 2.th March and towards the end of May they return. Some hunters begin about Michaelmas and return when the rivers are frozen. When the Indians meet with ravines, if they are not too wide, they cross them by means of a tree which they fell for the purpose; when they are too wide to be passed in that manner, they use small rafts. The moose-deer or elk, for-
merly very common round Quebec, is now very scarce; it was once one of the chief sources of the wealth of the numerous savage tribes. It is only in the fine days of spring, when the snow-shoes are casily borne up, or when in the early part of the day, after the usual frost of the night, large tracts of the country can be visited on the hard even substance without this encumbrance; and when the open rapids are the resort of waterfowl, and the lakes afford an ample supply of fish; that the vast solitudes, in which the moose-deer is found, can be advantageously visited: these solitudes are diversified by scenes of the wildest grandeur. The moose is the largest quadruped of the continent, often standing seven feet high; its immense palmated horns, its downcast head and short body give it a savage aspect, but it is of a timid character. It weighs as much as 10 and 12 cwt . and its flesh is of the most delicate flavour and considered very nutricious. It is not gregarious like the other species of the deer, but generally the male, female and one or two fawns accompany each other. In summer its swiftness makes its pursuit almost hopeless, and it is only in deep snows that it becomes a prey to the hunter. Its hoofs, unlike those of the rein-deer, are much sharper and more stiff, and during the whole season at each step it sinks to the ground. It cannot therefore travel far in the winter, and it early selects with its mates a spot for its beat where the bark and tender shoots of the hard wood abound; the formation of its teeth and its huge powerful upper lip, are well calculated to strip the bark from the trees, which in summer it does to the height of 40 or 50 feet. At each new fall of snow the party tread it carefully down throughout their beat. If surprised by the hunter they will sometimes not flee, but with the stupid defiance of the sheep paw the snow and threaten resistance; if a dog approach them, the male, with a blow from his foreleg which he uses very dexterously, will lay it dead at his feet: in this case they easily fall a victim to the gun. Generally, however, their acute senses of hearing and smelling apprise them of the approach of the hunter, and they run off at great speed, until overpowered by their own timorous efforts they sink. When the hunter appears on his snow-shoes he finds them out of breath, floundering in the snow and turning a very piteous look towards him, claiming his kindness. They however often again suddenly take

## IND

new life, and turning round several times on the same spot, beat a solid place to give combat ; the gun soon despatches them. If they continue to run the hunter pursues, and coming up cuts with his tomahawk the tendons of the hind legs and soon secures the prize. The skin is made into shoes, and the hair of the mane is dyed and employed in the elegant ornaments of bark work, shoes, \&c.: the hair is now so highly prized that as much as can be held in the hand sells for a dollar. The extension of the settlements and the incursions of other Indian tribes upon the hunting grounds of the Lorette Indians, to prevent which all their applications have failed, have so completely destroyed their chase that it is with the greatest difficulty they contrive to get a bare subsistence. These reasons induced them, in $18 i=4$, to subscribe a sum sufficient to defray the expenses of some of their chiefs, who undertook to cross the Atlantic in order to petition the king to redress their grievances. The object of their petition was principally to obtain the possession of the seigniory of Sillery, near Quebec, which was granted to their ancestors in 1651 and to which they believe they have a just right. The grand chief, the second chief, the chief of their council and the chief of the warriors arrived in England and were introduced to his majesty George IV. and had the honour of a long conversation with him, each wearing a gold medal which had been presented by the king. They appeared in their grand national dress: their faces were painted and their hair, long and flowing, was decorated with feathers and with the tails of various animals. To their ears were appended large silver rings of rude and fantastical workmanship; their noses were decorated with similar ornaments and they wore silver plates on their arms. They were armed with tomahawks and scalping knives, which they wore in ornamental belts. The lind reception, condescension and gracious manners of the king tended much to alleviate the severity of their disappointment by being referred to the Canadian government, whose duty it was to examine into their claims. The Notes of Mr. Neilson on the attorney-general's opinion on these claims, a copy of which is in the hands of the author, seem to prove much in their favour; but these Christian Indians are poor and friendless; it appears that Providence alone can help them.-For Statistics of Lorette, vide $\mathbf{S t}$. Gabriel, S.

Indian Stream, in the F. of Drayton, is

## IR E

formed by 3 branches descending from the $\boldsymbol{T}$. of Auckland; the eastern is called the Rapid Branch, the western is named the West Branch ; all of them meet in the $s$. angle of that $r$. and their united streams immediately enter the t. of Drayton, where, continuins as. course, this $R$. entirely traverses the T . and in its s . w . angle joins the R . Connecticut. On this r. are good sites for mills, but as it is obstructed by falls, the only navigable advantage it affords is the transport of logs to the different saw-mills.

Interion Viflage, $v$. Silipton, t.
Invenness, township, in the co. of Megantic, lies between Malifax and Nelson and is bounded N. w. by Somerset and part of Nelson; s. e. by Leeds. The land in the s. quarter is of superior quality, and in the other parts generally above mediocrity, except an extent of swamp of about 8000 acres to the northward, which is covered with hemlock, spruce fir and cedir. On the dry lands, timber is in great abundance and of an excellent description.-Watered by Lake William, and several small rivulets.-The s. w. part was granted to the late Joseph Frobisher, esi. and now belongs to his heirs.-The settlements have been rapidly increasing during the last few years. - Cogranted and unlocated, 15,500 atres. In 1828 there were

Irfland, township, in the co. of Megantic, joins IIalifix and Inverness n. w.; Wolfestown s. w. ; Leeds and Thetford N. E.-The N. w. part consists of land of an unexceptionable quality and fit for the growth of grain of all kinds, hemp and flax. The s. e. part is not arable, being only a series of rugged mountains running to a considerable dis-
tance, with many small lakes and swamps in the intervals. The N. w. quarter, the only one that has been surveyed and granted, now belongs to the heirs of Joseph Frobisher, esq.: this is a fertile spot, and inhabited by a few families, forming what is called Lord's Settlement.-Beech, maple, birch and many other sorts of timber, are found in great abundance.-Watered by several rivulets and by Trout Lake.-Craig's Road passes through this т. and crosses the Becancour at Kemp's Bridge. The corn and saw mills are found of great utility in this interior part of the country. The settlements have rapidly increased of late years.- Cngranted and unlocated, 14,614 acres..

Annual Agricultural Produce.
 Lici Stock.

Isla Water, a stream that rises in Buchland and enters Frampton where it joins the Etche$\min$.

Isle aux Coldres, seigniory, about 2 m . from the N . shore of the St. Lawrence, nearly opposite to the Bay of St. Paul, is in the co. of Saguenay.- $\mathbf{5} \mathrm{m}$. in length by 66 arpents in breadth and 5 leagues in circumference. Granted Oct. 99 th, 1687 , to the ecclesiastics of the seminary of Quebec, to whom it still belongs.-Compared with the neighbouring mainland, the island is low, though near the centre are some few rising grounds: the shore in one or two places rises abruptly from the water, and is covered with thick creeping shrubbery, but in general the ascent is gradual and easy. The soil throughout is of a good, prolific quality and nearly all under tillage, producing grain of all kinds far beyond the consumption of the seigniory: there are a few meadows and pasture grounds. The farms, 400, are divided into two divisions, called Côte du Cap à la Branche and C'ite de la Baleine, which are very little watered by streams of any description; in the former, which is at the $w$. of the island, the soil is light and the farms are 50 arpents by 2 or 3 ; in the latter or east end the farms are 33 arpents by 2 or 3 ; the centre of the island is a
strong black soil, but its general character throughout is light. The hay grown on the beach is rich and abundant, and about 63,000 bundles are made annually. The price of oxen is 30 dollars, sheep 6 s ., pork $1 s$. per 1 lb ., turkeys and geese 5 s ., fowls from 1 s. to $1 s .6 d$.-North of the island there is anchorage for shipping.-Alex. Tremblay, a miller, has erected a stone mill, 36 ft . by 30 , on Rivière Rouge, which works 2 pairs of stones. A small quantity of wood of very inferior kinds still remains on the high ground, about the middle of the island. -There is one parish, in which are a church and a parsonage-house, and the inhabitants live in neat well-built houses on each side of a good road that makes a complete tour of the island.-The battures and shoals near its low and sandy shore are very productive fishing-banks; the little bays are the rendezvous of numerous small craft, employed in transporting to Quebec the surplus produce of the island and of the opposite seigniories.-The principal mineral production of this island is the garnet of Cap à l'Aigle which is there found in as great abundance and in as much purity of colour as at any other place in the known world:-This beautiful island Charlevoix represents as having been detached from the main land by a violent earthquake, but it exhibits no other symptoms of such a catastrophe than a whirlpool between it and the opposite shore; this channel, at low water, is dangerous for boats and canoes, which are liable to be thrown on the limestone rocks to the right of the entrance into St. Paul's Bay. It is, however, more probable that this island, which is formed on a rocky basis and covered with alluvial soil, has obtained its present appearance from the gradual accumulation of alluvial soil brought from the mountains by the r . Gouffre and other streams in their rapid descent into the bay, where the water is turbid and discoloured ; the whirlpool naturally concentrates this constant efflux of soil and forms the island.

Titlc.—" Concedŕe le 29me Octobre 1687, par le Muryuis de Brisay, Gouverneur, et Jian Bochart Intendant, aut Séminuire de Quedect, avee les buttures qui sont autour dicelle."-Resisitre d'Intcndance, No. 3 , folio 11.

Isle aux Noix is in the river St. Maurice. The land is of good quality and contrasts strongly with the banks of the river, which discover, particularly on the w. side, nothing but hills and barren cliffs of granite.

Isle aux Reacx, in the St. Lawrence, lies off the N. e. end of the Island of Orleans. It is about half a league long and about 8 arpents broad. It was given to the Jesuits, Mar. 20, 1638, by Mr. de Munimayny.

Title_-"Concedée le Bme Mars, laise, par Mr. de Montmarn!, aux revérends pères Jisuites."-Cahiow dIntond. $\approx$ is!, fulio 71 .

Isle Jesus, seigniory, in the co. of Terrebonne, in length 21 m . and 6 at its greatest breadth; it lies N. w. of the island of Montreal, from which it is separated by the Riviore des Prairies, and from the main land by the Riviere St. Jean or Jesus.Granted, with the Isles aux Vaches adjacent, 23rd Oct. 1689, to the bishop and ecclesiastics of the seminary of Quebec, by whom it is still posscssed. The original name was L'Isle de Montmagny; but soon after its grant the proprietors thought proper to bestow on it the appellative it now bears. -In size this island is second to Montreal. The land is every where level, rich and well cultivated: on the s . E . bordering the river, are some excellent pastures and very finc meadows; the other parts produce grain, vegetables and fruits in great perfection and abundance. Almost every corner being turned to agricultural uses, very little wood remains, except what is left for ornament on the different farms. There is one road entirely round the island, and one runs through the middle lengthways; these are connected by others, that open an casy communication between cvery part of the island. There are 3 parishcs, St. Vincent de Paul, St. Rose and St. Martin. The houses, mostly built of stone, are dispersed by the sides of the roads; now and then a few are placed close together, but nowhere in sufficient number to be called a village. Around the island are several

## I S L

corn and saw-mills on the two large rivers; in the interior there is no stream of sufficient force to work either. The saw-mill on the Rivière des Prairies is never stopped for want of water, but sometimes by a superabundance. About midway of the Riviere des Prairies is the strong rapid called the Sault au Recollet. The rafts of timier that are brought down the Ottawa from the upper townships descend this river into the St. Lawrence at the Bout de L'Isle. The communication lictween Isle Jesus and the islands of Montreal and Bizard and the main land is kept up by several ferries in convenient situations for maintaining a continual and sure intercourse.-The farms being all occupied, some persons are desirous of making new settlements but have been deterred by the high rents demanded by the seigniors and by the free and common soccage tenure of the townships.

The purish of St. Vincent de Paul is in the centre of the s. part of the island, and the farms are conceded, some of them prior to $175!$; the rates on which they are held are, 1st. 2 sols for each superficial arpent, and $l$ sol as quit rent for each front arpent--2nd. 2 sols townois for each superficial arpent, and 1 sol as quit rent for cach front arpent.-3rd. 1 sol tournois for each superficial arpent, half a bushel of wheat for every 20 superficial arpents, and $l$ sol as quit rent for each front arpent.
The purish of $S$. Rose is in the $\times$. w. part of the island, and all the farms are conceded.
The parish of st. Martin lies in the s. w. part of the island. All the farms are conceded, some prior to 1759 , on the same terms, viz. 2 sols for each superficial arpent or 1 sol tournois for each superticial arpent, and half a bushel of wheat for every 20 superficial arpents, or 2 sols tommois for each superficial arpent: the quit rent has always been the same, viz. 1 sol for each front arpent. The church, 126 ft . by 40 , is $1 \frac{1}{2} \mathrm{~m}$. from the 1 l . des Prairies. The soil of this p . is not very fertile nor is it turned to the best advantage. 2Iany of the inhabitants carry fire-wood to Quebec mar-ket.-(For a farther description of Isle Jesus, vide vol. i. p. こll.)

Isles and Islets．－Those not included in the following alphabetical list are inserted under their specific names．－Birch Island，in the r．St．Mau－ rice and in the $T$ ．of Radnor．－Brandy Pots， several small islets in the St．Lawrence，lying s． off the $\mathbf{N} . \mathrm{s}$ ．end of Hare Island；on the largest a Telegraph is erected．－Crane Island or Isle aux Girues，opposite Cap St．Ignace，S．－Des Cinqs Island，in the r．St．Maurice．－Esquimaux Isles， near the coast of Saguenay in the Gulf of St． Lawrence．－Fox Island，near the N．E．extremity of the Saguenay coast in the Gulf of St．Law－ rence．－Goose Island，in the r．Ottawa，midway between the т．of Templeton and the opposite shore，about $3 \frac{1}{2} \mathrm{~m}$ ．below the mouth of the $\mathbf{n}$ ． Rideau－Another，$v$ ．Cap St．Ignace，S．－Grande Isle，v．rivers Batiscan and Saguenay．－Grosse Isle，one of the Kamouraska Islands．－A small island in Lake St．John．－Hamilton Isle，in the r． Ottawa，lies off the $\mathbf{T}$ ．Lochaber，about one mile long；near it N．E．is another isle of smaller size．－－Hare Island，lies off the $\varepsilon$ ．end of Mount Murray，S．－Holt＇s Isle，in Lake Memphra－ magog；this little islet lies within $1 \frac{1}{2} \mathrm{~m}$ ．of the commencement of the R．Magog and is in the 14th range of the т．of Hatley．－Hospital Island，in the r．Richelieu below Ash Island，and between the SS．of Foucault and Lacolle．－Isle à l＇Aigle，at the mouth of North Channel，where it enters Lake St．Peter．－Isles à la Rasade，in the St．Lawrence，lie off the N． $\mathbf{E}$ ．angle of the s ．of

ISLESANDISLETS.

Trois Pistoles.-Isle au Canot, in the St. Lawrence, lies $N$. of Crane Island and is about $1 \frac{1}{2} \mathrm{~m}$. long.-Isles au Cirf, in the R. Richelieu, between the SS. of St. Charles and Beloil.-Isle au Chat, in the mouth of Lake st. Francis, off the s. $w$. angle of Grande Isle.-Isle """ Foin, $v$. Antaya, S.-Lsie au Horon, at the siault St. Louis, at the mouth of Lake St. Louis. J.lle au Ruison, at the entrance of Lake Sit. Peter, lies between the isles La Pierre and Du Moine, and is on the $s$ side of Routh Channel-Isle au Sepmer, $r$. Chicoutimi r.-Isles aux Pawnes, in the $\mathrm{S}_{\mathrm{t}}$. Lawrence, lying off the mouth of the r . Trois Pistolus-Is'e amx (\%mese, in the r. du Nord, about one mile from Davis, $v$. in Chatham. - Isle aur Cochons, in the St. Manrice, lies opposite the mouth of the R. Sit. Manice-Bs/r aux Corneilles, one of the Kamouraska Islands.-Is/es aux Proists, in the r. St. Maurice, is a fine island near $\xlongequal[\sim]{-}$ mile long.-Isle anx Cimes, $\ell$. Crane I lanti.-1 $\therefore$ aux Harangs, lies off Cap au Diable in the s of Kamouraska.-Isle aux Herons, in the St. Lawrence, N. w. of Crane Island.-Isle aur Noix, in the R. Richelieu, at the mouth of Johnsm's Creck.-Iste aux Oies, $r$. Sit Ignace, I.Isle aur I'ommes, lics off the s. of Isle. Verte to which it belmegs-Isle mur Ruisins, in Lake Sit. Francis, at the mouth of the r. aux Raisins.filtes arer Sidins, in the r. Chaudime, is in the S. of St. Marie.-Isle uux Tctes, $r$. La Colle, S.Isles ant Toarfes, two small islands in the Lake of Two Mountains, between the s.w. extremity of the Island of Montreal and the S of V:andrenil.-/sis Betruli, will, near the estuary of the Ste. Anne, diviles that in. into two streams. -Isle Bellerice, the largest islet in the mouth of the r. St. Maurice.Isle Bic, in the St. Lawrence, lies off the s. of Bic in the co. of Rimunski.-Isle Biauette, in the St. Lawrence, s. of I le Bic.-Isle Bouquct, r. Laprairie, s.-H.le lirnté, in the st. Lawrence, lies nearly opposite the mouth of the Kamouraska ; on this isle a Telegraph is stationed.-One of the Kamouraskia islands.-I $F l^{\prime}$ G'incillien, $^{\prime}$ at the entrance of the Lake of Two Mountains, lies off Argenteuil, in which $s$. it is included.-Isle ('asconds, in the s. w. channel of Lake Sit. Louis, lies about midway between Isle Perrot and Mary's.-town in the S. of Beau-harnois.-1sle Chareau, v. Isles Communes.Isles Communes or Isles Percées, consist of Isless St. Joseph, a la Commune, Chareau, and two others without names; this range of isles extends
along the front of the $S$. of Boucherville on the s. side of the Lit. Lawrence, and are included in the grant of that $S$.; the largest is about $\frac{3}{4} \mathrm{~m}$. in breadth; they are quite flat and level; some of them afford good meadow, and others common pasturage made use of by the inhabitants of the village of Boucherville.-Ishs de Contrecomer, on the a. shore of the St. Lawrence, lie off the S. of Contrecour to which they bolong.-Isle de Cirurs, in the St. Lawrence, lies nearly midway between the S . of st. Thomas and the parish of St. Joachim in the $S$. of Cite de Buapre - $i$. St. Ignate Isle. —lalr de Gramont, a little islet lying s. w. of the $v$. of Kamouraska in the S. of that name.-Isle de la lrovidene. one of the Kamouraska islands.Isles de la Villtier, on the N. shore of the St. Lawrence, lic off the S. of La Valtric to which they belong.-Isles des Sobles, several islets lying v. e. of Isles aux Oies and at the entrance of Lake St. Peter--Islta: Deschaillons, in the r. Richelien, at the mouth of Ruisseau la Prade in the S. of St. Ours.-Isles des deux Titis, in the St. Lawrence, N. W. of Crane Islimel.——Sle des Pciote, in the R. Yamaskia, about $1{ }_{2}^{1} \mathrm{~m}$. above the mouth of the r . David-Isles Dembour, 3 small islets lying off the front of the $S$ of Desmaure, in the it. Lawrente. Isle du Gruide Decharge, at the N. r. side of Lake Sit. John, fronting Grande Isle-- Isie du Labri, in the mouth of the n.it. Maurice.-Isle du Milierte, a small isle in the mouth of the river st. Manrice. Isle de Muim, at the entrance of Lake Sit. Peter, lies s. $w$. of the mouth of the n. Yamaska.- $1 / 1 \mathrm{c}$ dut Portage, lies at the N. e. end of the Island of Montreal, a little below Isle site. Therese, and is of no value.-Isle dit Sable, off' the N. shore of the it. Lawrence, near the front of fief Dorvillice in the co. of Champlain.-Isle Filiquet, $t$. Laprairie S.-Isle Jalobois, in the r. Yamaska, a little alove Yamaska church.-isle Joseph, in the r. Yamaska, nearly one m. below the mouth of n. David, in the S. of Yamarka- $I$ : 1 la Peche, in the r. St. Maurice, lies at the N. e. extremity of the rear of Datisiam. The Indians and the inhabitants of the post of La Tuque frequently resort to this little island for the purpose of inhing, and an abundance of white fish, dore, carp, bass, pike and eels are caught every year.-lsif la Pierre, at the entrance of Lake St. Peter, lying on the N. side of South Chamnel. - IN la l'orcier, in the r. Yanaska, a little below the chureh of Yamaska.-Isle Mudeme, in the St. Lawrence,
lies s. off the N. E. point of the Island of Orleans, about $\mathbf{l}_{\frac{1}{4}} \mathrm{~m}$. by $\frac{1}{2} \mathrm{~m}$. broad.- $v$. St. Ignace Isle.Isle Patience, in the St. Lawrence, lies N. of Isle de Grace.-Isle Percées, 3 islets in the St. Lawrence, lying off the $s$. of Rivicire du Loup.- $v$. Isles Communes.-Isle Plate, at the entrance of Lake St. Peter, lies midway between Baie St. François and Maskinongé Bay.-Isle Randin, in the St. Lawrence, lies between the $S$. of Berthier and the s. w. end of Isle Dupas.-Isle Ronde, v. Isle St. Ignace.-Isle St. Alexandre, in the r. Etchemin , and in the S . of Jolliet.-Isle St. Barnabé, in the St. Lawrence, lies off the S . of St . Barnabe opposite to the mouth of the R. Rimouski.-Isle St. Bernard, or Nur's Island, on the s. E. side of Lake St. Louis, lies at the mouth of the Chateauguay, dividing that R. into two streams.-Isle Ste. Catherine, in the r. Etchemin and in the $S$. of Jolliet-Isle St. Elzear, in the r. Etchemin and in the S. of Jolliet.-Isle St. Ignace, the largest isle at the mouth of the r. Ste. Anne,-v.St Ignace Isle.-Isle St. Jean, in the R. Etchemin, and in the s. of Jolliet-Another, in the S. of Yamaska, is formed by the two branches of the r. Yamaska, one running into Baie St. François and the other into the Bay of La Valliére.-Isle St. Joseph, in the r. St. Francis, near its mouth, lies in the N. angle of the S. of St. François.-v. Isles Communes.-Isle Ste. Marguerite, 3 isles in the St. Lawrence, one at the mouth of r. Ste. Anne, another, N. W. of Crane Island, and the 3rd is the smallest islet in the mouth of the $\mathrm{r} . \mathrm{St}$. Maurice-Isle Ste. Morie, in the r. Etchemin and in the S. of Jolliet.-Isle St. Pierre, in the r. Etchemin, and in the S. of Jolliet.-Isle Ste. Susanne, in the r. Etchemin, and in the S. of Jolliet.-Isle Ste. Therese, in the r. Richelieu, between the four connecting angles of the $\boldsymbol{s}$. of Longueuil, e. and w. by Chambly and Bleurie.Another at the lower end of Montreal Island Isle St. Thomas, in the r. Etchemin, and in the S. of Jolliet.-Isle Smidt, in the R. Yamaska, opposite the church of Yamaska.-Isle Taudreuil, in the Lake of Two Mountains, lies near the S. of Vaudreuil to which it belongs.-Isle Verte, $i$. Verte.-Kettle Island, in the r. Ottawa, lies off the $\boldsymbol{T}$. of Templeton, a little more than 2 m . below the mouth of the r. Rideau. - Kinight's Island, in the Beauharnois Channel, between Grande Isle and the N. e. angle of Catherine's Town.-La Croix Isle, v. Cap de la Madaleine, S.-Long

Island, in the co. of Ottawa, is in the R. aux Lievres at the head of Lake Mistake.-Murr Isle, near the coast of Saguenay, in the Gulf of St. Lawrence.-Mataucin Island, in the R . St. Maurice, is about $\frac{1}{4}$ mile in extent and the land is very good.-Lower Matawin Island, from this island there is a route by 5 lakes and 4 portages to the great Lake Matawin.-Murr Isles, in St. Lawrence Gulf.-Nun's Island, v. Isle St. Bernard.-Old Fort Isles, near the N. F. extremity of the Saguenay coast in the Gulf of St. Lawrence.-Papa Island, an islet in the r. Etchemin in the $T$. of Frampton-Petite Isle, in the r . Yamaska, a little above the s . point of Isle St. Jean.-Pine Island, in the $\mathbf{r}$. St. Francis, between Wickham and Ipton.Prison Island, in the mouth of Lake St. Francis, lies about midway between the w. part of Grande Isle and the estuary of the Riviere de l'Isle.-Province Island, in Lake Memphramagog, near the province line and between Stanstead and Potton. -Red Island, in the St. Lawrence, lying about 6 m . N . of Green Island- $\mathrm{S}_{\mathrm{c}}$. Mary's Isles, near the Saguenay coast in the Gulf of St. Lawrence, opposite the mouth of the R . Watagaia.-St. Ragis Isle, in front of the mouth of the r. St. Regis, belongs to the Indians of the $v$. of $\mathrm{S}_{\mathrm{t}}$. Regis.-Traverse Isles, in the r. Ottawa, lying off the s. w. line of Lochaber Gore, are several small isles between Black Bay and the N. w. angle of the $\mathbf{T}$. of Plantagenet in Upper Ca -nada.-Washmisker Isles, near the Saguenay coast in the Gulf of St. Lawrence.-White Island, in the St. Lawrence, extends down the $r$. at the N. E. end of Hare Island : about 5 m . long and $\frac{3}{4} \mathrm{~m}$. broad.- Wrolf Island, near the Saguenay coast, in the Gulf of St. Lawrence near Southaker ledge.
Islet du Portage, seigniory, in the co. of Kamouraska, is bounded N. e. by Lachenaye; s. w. by Granville ; in front by the St. Lawrence. -One league in front and one in depth. Granted, Oct. 29, 1672, to Sieur de Granville.-Isle du Portage forms part of this seigniory.

Titlc. - " Concession du 29me Octobre, 1672, faite par Jcan Talin, Intendant, au Sieur de Grancillc, de I'Isle nommée du Portage sur le fleuve St. Laurent, avec une demi lieue de terre en decà et une autre au delà de la dite Isle, sur une lieue de profondeur."一Régistre d'Intendance, No. 1, folio 14 .

Inle Verte (S), $v$. Verte.
Iwashega or Twasheg.a, river, runs from the n. w. into the r. Assuapmoussoin.

Ixworth, township, in the co. of Kamouraska, is an irregular tract in the rear of the S . of S te. Anne and the Aug. to the $s$. of Rivii re Ouelle. No more than 1206 acres have been surveyed, which were granted to Matthew O'Meara, the whole of which is most execellent land: it joins Ste. Amme and some part of it is in a very forward state of cultivation : on the remainder of the r . is a large quantity of excellent pine timber, much of which is transported by the Riviere Ouclle to the St. Lawrence and thence to Quebec.-Enyranted and unlocted 32,000 acres.

## J.

Jame--tows, $c$. Beauharnois, s.
Jacques Cabtifr, river, derives its name from the celchnated navigator, who discoverel the country and wintered in the estuary of this r . in 1.733 . It takes its source from several small lakes in the exterior near the prallel of lat. $48^{\circ} \mathrm{N}$. and about lon. $71^{\circ} 9{ }^{\circ} \mathrm{w}$. After running a very circuitous course through a mountainous country that is but little known, it reaches the townships of Tcwkesbury and Stoneham; passes through them and runs in a s.s.w. direction about 41 m. through st. Ignace, St. Gabriel, Fausembault, Neuville, Belair and the fief Jacques Cartier, where it falls into the St. Lawrence. From the townships its stream displuys a character of great wildness; grand and impetuous, hurrying through valleys between the lofty mountains, and frequently tashing with violence over the precipices and immense fragments of rock that oppose its progress. The bed being extremely racky, the great number of falls and rapids and the vehemence of the torrent, particularly in the spring and after the autumnal rains, render it gencrally impassable for canoss or boats of any deseryiption. The banks are exceedingly high, and at intervals for considerable distances, are formed of strata of limestone, or of granite rock, in many places lofty, rugged and majestic, partially displaying a few stunted pines in the interstices, or covered with creeping shrubbery, and in many parts presenting only the frowning aspect of huge barren masses

## J A C

heaped perpendicularly one upon another. From the heights on each side of the river spread extensive forests, through which are various paths, kept open during all changes of season by the Indians, and chietly ly those of the village of Lorette, who consider the lands to an immense distance northwards as their hunting-grounds. The gencral view along the course of the river is varied, picturesque and extraordinary, presenings a thousand combinations of unrivalled grandeur, beauty and wild magnificence. In its course through it. Galricl it approaches within 16 m . of Quebec ; about nine niles before it reaches the St. Lawrence is the highly interesting and romantic new bridge of Jacques Cartier. The stream is here precipitated over many large frasments of granite that occasion a perpendicular fall of comsiderable height, the effect of which is greatly iacreased by the incessant roar of the torrent, as it forces its way through the hollows and excavations which it has made in its rocky bed and in the sides of the chamel. This bridge is worthy of notice for the lightness and solidity of its construction; the natural high bank of the river on each side is finished with masonry into solid piers, whence the arch, entirely of timber, forms a handsome and lofty segment; neur the $w$. end is a small, well-built cottage, most romantically situated, in which the collector of the bridge-tolls resides. From this bridse the river continues its impetuous character until its waters are lost in the current of the St. Lawrence. The river Jacfues Cartier, viewed with a military uere, forms a most powcrful natural barrier and may be termcd one of the outworks to the city and environs of Quebec: the velocity of the stream would make it extremely dangerons to attempt fording it ; the height of the banks renders them inacewsitle, cxcept in a very few phaces, and these could only be ascended with much dificulty by a small number of persons at a time, which, with the numerous advantageous positions alomg the whole range of the river for $\mathrm{j}^{\text {mating }}$ a defensive fors:, would altogether constitute it a complete line of security : the French, after they were expelled from Quebec in 17.59 , retired behind this river. On the eastern side of the river, at a short distance before its confluence with the St. Lawrence, where its high bamk, receding considerably from the margin, leaves a rather extensive that a little above 42
the water's level, are some corn-mills and several stores belonging to the heirs of the late Mr. Allsop of Quebec. They are the remains of a much greater and more valuable establishment.-This highly interesting and romantic river appears to run a course of about 50 miles and to collect its waters from a space of 20 to 30 miles in breadth, comprehending about 1250 square miles.-This celebrated river was formerly the terror and often the grave of travellers.-For some ycars past it has become the object of public attention; three bridges have been erected over it, and the citizens of Quebec visit it at proper seasons in parties of pleasure. It abounds with tish, especially salmon, works numerous mills and a distillery, and is particularly remarkable for the sudden swelling of its waters after rain; almost the least shower produces an instantaneous effect. Many of the more majestic features of the scencry on this r . are seen to the greatest advantage in winter, when the severity of the congelation exhibits the banks and the bed of the stream in every varicty of fantastic appearance, and when its frozen artificial pendants in all the diversity of figure and size resemble the stalactics of the richest natural grotto.

Jacques Cartier, seigniory, in the co. of Portneuf, fronts the St. Lawrence and is bounded s. w. by the b. of Portneuf; n. e. by Belair and its aug and in the rear by waste crown lands.It is $\frac{1}{2}$ league in breadth by 5 . in depth. Granted Mar. 29, 1659, to Dame Gagnier, widow of Jean Clement de Wauls, Chevalier, and Seigneur de Monceaux. Now the property of Messrs. de Lery and Mr. Allsop.-Although the surface is very irregular and broken, the land in general is of a moderately good quality ; in some places the soil is light and sandy, in others a layer of black vegetable mould upon a stratum of limestone, and to the rear, where it becomes rather mountainous, a good light loam; each of these different kinds is sufficiently fertile and several ranges of concessions are in an excellent state of cultivation, containing many productive and valuable farms. The timber is various both in lind and quality; the maple and birch are good, and, along the banks of the rivers, are some superior pines: the common sorts are very abundant.-The Rivers Ste. Anne and Portneuf cross this S., but the principal $R$. by which it is watered is the Jacques Cartier. The main road passes along the front of
the S. and crosses the Jacques Cartier by a ferry about 300 yards broad, where, on account of the violence of the stream, the boats are traversed from side to side by means of hawsers stretched across; the charge for a foot-passenger is $3 d$., for a horse $6 d$., a horse and carriage $9 d$. and $1 s .3 d$. for a carriage and two horses. The road, as it passes in the vicinity of the river and winds up the lofty banks, is exceedingly steep; but nevertheless it is much frequented, although there is another road from Quebec that passes over Jacques Cartier bridge and which is rather shorter and by which almost all the inequalities of the ground are avoided.-Less than one-third of this $S$. is cultivated; some of the best farms are near the road that passes along the St. Lawrence, and, on the s . w. side, near the road leading from the bridge to the barony of Portncuf. - Jacques C'arier fief is included in this $S$. and lies on the s.w. side, extending to the entire depth of the $S$. It has a frontage of about $\frac{1}{2} \mathrm{~m}$. on the R. Jacques Cartier.

Tith.—" Concession du 29 me Mars, 1659 , faite par la Compagnie, à Dame Gugnicr, veuve de futu Jtan Clement de Wauls, Chevalier, Seigneur de Monceatr, d'une demi lieue de large sur le bord du tleuve St. Lanernt, avec cinq lieues de profondeur de terre en tel endroit quil plaira à Mr. D'Aillebout, Gouverneur.-Ensuite de cette concession est une copie d'un certificat du Sieur Bourdon, du 2.3 me Octobre, $160!$, que la Dame de Monctaur lui ayant remis la concession ci-dessus, par ordre de Mr. $D^{\prime}$. 1 illcbout, lors Gouverneur, pour prendre par la dite Dame possession de la dite demilieue ; avec demande de lui accorder la dite concession depuis la rivière Jacques Cartier, juspu'a la concurrence de la dite demi lieue, descendant en bas, par lequel certificat il lui donne acte de diligence, comme clle prenoit le dit il lui donne acte de diligence, comme elle prenoit le dit
 - Papier Tertadance.

Jeremie Isles, in the mouth of the St. Lawrence, lie near the Saguenay coast, about 9 m . above Belsiamite r. and Pointe. Near these isles is a north-west post that derives its name from them. The northern shore of the St. Lawrence, here and at Belsiamite, is not so high as the southern shore opposite, which may be distinctly seen from the N . shore. The soil of the Saguenay coast, hereabout, is composed of a white and yellow sand and presents to the view, from the river, a pleasing succession of white cliffs intersected with forest trees. Belsiamite Pointe is a low sandbank extending far into the St. Lawrence and is overgrown with spruce and sapin: on its s. shore are a few Indian wigwams inhabited by some of the

## J E S UITS'ESTATES.

Montagnais tribe, who traffic in seals and furskins when ships arrive near the coast and the weather allows them to go on board for that purpose.

Jersey, a projected township in the co. of Beauce, is a triangular tract lying between the rivers Chaudicre and Du Loup and is bounded s. by Narlow. A small part in the s. e. angle has been surveyed and granted.-Cngranted and unlocated, 30,1010 acres.

Jescits' Estates.-The Jesuits, in this province, were at first only missionarics; they afterwards obtained a patent which enabled them to purchase lands and hold property as in France. The property they afterwards possessed in this country was very considerable and was acquired by grants from the kings of Franec, by gifts or donations from individuals and by purchase. On the death of Father Cisot, the last of the order, in March, 1800 , their procrty became vested in the English crown.-Their very extensive possessions in this province may be inferred from the following description of part of their property.

Batiscom.-By deed, M.r. 13, 103:), James de la Ferte, abbot of Ste. Mary Malleleine of Charteaudun and canon of the ling's chapel in Paris, wive this seigniory irrevocably, and in the strongest terms imaginable, to the Fathers of the Company of Jesus settled in New France, and their successors. - The depth of this seigniory seems to have been omitted in the original deed through error, but it was afterwards ascertained to be 20 leagues.-This seigniory was given to the reverend fathers settled in New France for them and their successors, to be held as an absolute fief with the right of holding high, inferior and petty courts of justice and subject to fealty and homage to the said James de la Ferti and his heirs, according to the usage and customs of fief in the provostship, of Paris, subject also to the payment of a silver of the value of sixty sols at the end of every twenty years to the same James de la Ferte and his heirs, from such time as these lands should be cultivated, to be possessed by the fathers Jesuits, or applied and transferred to savages or others becoming christians, and in such manner as the futhers shall think proper, so that these lands shall not be taken out of their hands while they shall think proper to hold and possess them.-Motives
and considerations.-This seigniory was given for the love of God.

Sichir, or Lorhommes Mountain.- By deed of Nov. 2thh, 160:2, Mensrs. Lefevre de la Barre and Demeuilles, governor-general and intendant of New France, granted this seigniory to William Bonhomme', to be held as a fief and seigniory with right of holding high, inferior and petty courts of justice, torether with that of hunting and fishing, but subject to fealty and homage-By deed April lioth, $160 \cdot$, the above errant was confirmed by the ling.-This seigniony was purchased in different parcels by the reverend fathers of the Company of Jesus (with the right of holding high, inferior and petty courts of justice, and that of hunting and fishing within the limits thereof) subject to fealty and homage, from some of the descendants of William Bonhomme, and from other persons who had purchased some parts of his descendants.

Cap dr la Madelcine.-By deed March 20 h, 1051, Juncs de la Ferte, abbot and canon, gave this seigniory as a gift irrevocable to the reverend fathers, tosther with the right of seigniory and privileges that he had and might have in and to the lands so conveyed, which were granted to him by the New France Company; with the reservation, that all former grants made and sibued by him should from that time forward be dependent of said scigniory, and held under the same reverend fathers, Jesuits of Cimialia, in the manner they were before held under the same James de la Ferte, which lands appear to be two arire fiefs, Marsolet and Hertel.-Mcitiee: and considerations.-This seigniory was riven to the reverend fithers in Canada for their collece: and houses, to be by them held in the same ananer as they were before that time possessed by the donors, to be enjoyed, done with and dispored of by the fathers, Jesuits, and their sucecsors ia New France, as they shall think proper for the benetits of the savages converted to the christian faith, and in order to help towards subsisting the Jesuits in the said county; the whole conformable and according to the customs and constitutions of the Company of J esus without any civil obligation.

Isl' aus Reaux.-By deed Mar. 20. 1638, the New France Company granted these islands to the reverend fathers Jesuits and their she-

## JESUITSSETATES.

cessors as a seigniory.-Motives and considrto-tions-This island was given to the religious order of Jesuits and their successors for ever for the purpose of feeding cattle for their houses, in consideration of their exposing their persons to the greatest dangers that can be encountered among the savages, in endeavouring to bring them to a knowledge of the true God and to lead a civilized life, and on this sole condition, that the Jesuits should acknowledge to hold the same under the New France Company and report the state of the culture and improvement of this island at the end of every twenty years.

Laprairie de la Madeleine.—By deed April lst, 1647, Francis de Lauzon, ling's councillor in the court of parliament of Bordeaux, gave and granted this seigniory to the religious order of the (ompany of Jesus.—Motives and considerations.-This seigniory, including the islands of Bouquet and Fouquet and the small islands called Islettes au Jones, was given and granted to the religious order of the Jesuits, on condition that they should send such persons as they might think proper to cultivate the lands, and that the donor should be a partaker of the benefit of their prayers and holy sacrifices, and in consideration of the assistance given by that religious order to the inhabitants of New France, and of the dangers to which they daily exposed themselves in bringing the savages of that country to a knowledge of the true God.

Nutre Dame des Angrs.- By deed, Mar. 10, 1026 , Henry de Levis, duke of Ventadour, viceroy of New France, granted this fief and seigniory to the religious order called Jesuits.

By an edict of the French king for the cat:blishment of the New France Company, all gifts and grants made prior thereunto were revoked.

By deed Jan. 15, 1637, the same lands under the same descrition given of them in that by the Duke of Yentadour, were given by the said company to the said religious order with this exception, " the river of Notre Dame de Neauport excluded;" but adding such meadows, lakes, rivers, ponds and quarries as may be found within the said lands."
By deed Jan. 17, 1652, John de Lauzon, governor of New France, granted to the said religious order, the same lands specified in the pre-
ceding deeds to be held en Franc aleu, with all the seignorial and feudal rights, and with these conditions; "The right of fishing on the rivers opposite to their said grant, to the exclusion of all other persons, and granting also to them the meadows that were covered and uncovered by the tides."-Moivies and considerations.-This seigniory was granted to the fathers of the Company of Jesus and their successors, to be by them enjoyed for ever as their property en Franc aleu, with all the seignorial and feudal rights, on condition, that in appeals from the decision of the judges by them to be established in said seigniory, resort shall be had to the grand senechal of New France, or his lieutenant at Quebec, in consideration of the scrvices they rendered as well to the French as to the savage inhabitants of the country.

Islest. C'hristopher.-By deed October 20, 1654, John de Lauzon, governor and lieutenant-general of New France, gave this island to the reverend fathers of the Company of Jesus, in Franc Almoin. —Molites and considerations.-This island was given to the reverend fathers, by them to be held in Franc Almoin for ever as a fief, with power to concede the same or such parts thereof as they may think proper, to tenants subject to cens et rentes, but without being themselves subject to any charge or condition whatever, in consideration of the zeal manifested and the care taken by the said reverend fathers, and the benefit that religion receives from them in the conversion and instruction of the savages, which could not be sufficiently acknowledged.

St. G'abriel, or the Tuo Lorettes.-By deed November 2, 1667, Robert Gifford and Mary Renouard, his wife, gave to the reverend fathers Jesuits the seigniory of St. Gabriel, with the benefits and prerogatives thereunto belonging, excepting half a league in front by the whole depth of this seigniory, which they had on the same day given and granted to the hospital of nuns settled in the city of Quebec, and now composes the fief called St. Ignatius.Motives and considerations. - It was given to the reverend fathers, in consideration of the great friendship that subsisted between them and the donors, and in order to reward the said fathers for the many good and agreeable services they had rendered to the donors.

## J ESUITS'ESTATES.

Seigniory of Sill ry.-By deed October 23, 1699 , Messrs. de Callieres and Bochard, general and intendant, granted this seigniory to the reverend fathers Jesuits. - Motiees and comsidero-tions.-This seigniory was granted to the reverend fathers Jesuits, by them to be enjoyed for ever as their property, with the same rights and privileges with which the same lands were given to the savages by deed from the New France Company, bearing date 13 th March, 16.51, viz.: as a freehold (cu Franc a'en) with all the seignorial rights that the said New France Company had, or pretended to have in them ; together with that of fishing in the river St. Lawrence along the front of the lands so given to them, to the total exclusion of all other persons without their leave and permission ; together with all the meadows, herbage, \&c. lying along the said river, and those that are covered and uncovered by the tide. In fine, with all the rights and privileges that a seigneur can enjoy; together with the right of holding high, inferior and petty courts of judi-cature.-Motives and considerations.-In consideration of the great spiritual and temporal assistance given by the said reverend fathers to the savages of this country, and the enormous expense they had been at in supporting the missions to the said savages for whom they had purchased lands in several places at a great expense.

Three Rivers-Fiof Puchingmy.-By deed Oct. 23, 1690 , Hector de Callieres, governor, and John Bochard, intendant of North France, granted this fief to the fathers Jesuits with the rights and privileges annexed to the scipniory of Sillery, both of which are comprehended in the same deed. -This fief consists of four perches of land in front by eight in depth and twenty toises square added thereto, bounded N. E. by St. Louis-street and s.w. by St. Anthony's-sirect; in front by the street that divides this fief from the inclosure of the town of Three Rivers and in the rear by Notre Dame-strect.—. $\mathrm{H}_{\mathrm{h}}$ tios and considerations. - This fief was granted to the reverend fathers $J$ esuits, to be enjoyed by them as their property fur ever, according to the customs of Paris. It was given to them in consideration of the spiritual and temporal assistance they rendered daily to the savages of this country, and of the great care they took and the enormous expense they had incurred in supporting the missions to the said savages.-By
deed of Feb. 15, 1634, the New France Company granted this fief and seigniory to the reverend fathers of the company of Jesus. This deed contains a direction to Mr. de Champlain, then commandant of the New France Company, to put the said fathers into the possession and enjoyment of the 600 arpents of land so granted to them, at or near the place called the Three Rivers, where the New France Company was then forming a settlement; but Mr. de Champlain having died before this mandamus came to hand, the following was obtained.-By deed, Aug. 26, 16:35, M. de Montmagny, the lings lieutenant in New France, by order of a mandamus of the 26 th Feb., $1: 37$, to him directed by the said New France Company, put the company of Jesus in New France into the real and actual possesion of a tract of land, which he then caused to be bounded and limited in the following manner: 1st. By erecting a wall at the s. E. side, near the said brick manufacture, to serve as a boundary mark, under which he caused coals and brieks to be put, which wall and boundary runs from the s. E. to the x . w. back into the country. On the $s$. $w$. side he caused another wall to be crecterl, running also from s. E. to N . W., from the extremities of which he caused a line to be drawn along the rowd leading along the river St. Lawrence to scrve as a boundary line along the front, which measured $1: 0$ perches; that is to say, from the wall or boundary at the $\mathrm{N} . \mathrm{F}$. and near the brick-kiln io the rivulet called St. Magrdalen's, that falls into the river St . Lawrence at the point of the Iroquois, 150 perches; and from that rivulet to the end of the other wall or boundary at the s. $w$. side 10 perches. N. B. The depth from the front to the rear is not mentioned in this deed, but it is found to be no more than 2.5 arpents in depth; it was therefore erroneously stated in this deed as amtaining 500 square arpents, lecause 19 arpents in breadth by 25 in length make only $17 .-B_{y}$ deed, Aug. 15,164 , the reverend fathers of the company of Jesus gave $1 \frac{1}{2}$ arpent in front by 2.5 in depth to serve as a common for the inhabitants' cattle, reserving to themselves the right of pasture therein for 10 head: and ly deed, June 9, 1650 , the Jesuits transferred for the same purpose 11 arpents of land in front by 25 in depth, the above arpent and a half included, makins 350 square arpents, out of which they reserved 35 , the real

## JESUITS'ESTATES.

amount is therefore 315 ; $;$ arpents in front by 25 in depth, making 125, above and joining the common, 35 square arpents joining the rear of the common, which they reserved. They also made a temporary grant of 16 arpents, which have since been united to the common. They also reserved some land back of the common within the same lines above the hill, which did not belong to this parcel, and does not therefore cause any diminution of the 31 ir given for the common.By the same deed Mr. de Montmagny gave to the reverend fathers 14 arpents of land in front, joining to the 5 arpents by 2.5 that remained to them at the $s$. $w$. side of the said 5 arpents in front. By deed Mr. de Mezy, governor, and Francis Delaval, bishon of Quebec, granted to the reverend fathers of the company of Jesus 4 arpents in front by 2.) in depth, above the 14 arpents given them in lieu of what they gave to the common and joining to them at one side; the side lines of which also run s. E. and N. w., making 100 square arpents given them as a gratification on account of the lands they gave being of greater value by their contiguousness to the settlement than those they got, which lay at a greater distance. This parcel now consists of $2: 3$ arpents in front, running along the river St. Lawrence, by 25 in depth, joining on one side to the common, from which it is divided by a line running $\mathrm{s} . \mathrm{e}$. and $\mathrm{N}, \mathrm{w}$., and the other side of the second rivulet that runs into the river St. Lawrence in the way to lake St. Peter, making 52.; and $2 \frac{1}{2}$ arpents in breadth between the rear of the common and the hill, and thence running along the whole back line of said common, making 35 sutuare arpents, out of which they reserved 5 arpents in front by 25 in depth, making 125 above and joining the common, 35 square arpents joining the rear of the common which they reserved. They also rescrved, or rather made temporary reservations of 16 arpents, which have since been united to the common within the same lines above the hill, which did not belong to this parcel and does not therefore cause any diminution of the 315 given for the common. By the same deed Mr. de Montmagny gave to the reverend fathers 14 arpents of land in front, joining to the 5 arpents by 25 that remained to them at the s. $w$. side of the said 5 arpents in front- By deed, Aug. 8, 1664, Mr. de Mezy, governor, and Francis Delaval, bishop of Quebec, granted to these re-
verend fathers 4 arpents in front by 25 in depth, above the 14 arpents given them in lieu of what they gave to the common joining to them at one side, the side lines of which run also $s$. $\mathbf{E}$. and N. W., making 100 square arpents given them as a gratification on account of the lands they gave being of greater value by their contiguousness to the settlement than those they got, which lay at a greater distance. This parcel now consists of 23 arpents in front, running along the river St. Lawrence, by 25 in depth, joining at one side to the common, from which it is divided by a line running $s . E$. and $N$. $w$., and at the other side of the second rivulet that runs into the river $\mathrm{S}_{\mathrm{t}}$. Lawrence in the way to lake St. Peter, making 52: square arpents.-By deed, Aug. 26, 1637, Mr. de Montmagny put the reverend fathers into possession of 96 arpents of land at a place called C'otcaut de la Descente, lying n. w. behind the fort or habitation which he the same day caused to be laid out by John Bourdon, engineer, \&rc. This parcel consists of 96 square arpents of land joining on one side to the road that runs along the said Cotecu de la Descente, bearing e. quarter $s$, and at another side by a wall then erected, under which he put coal and bricks, running w. a quarter $\mathrm{N} . \mathrm{w}$. or thereabouts; at another side by a little hill, which they then named Coteau de st. Louis.-By the same deed and on the same day, Mr. de Montmagny put the fathers into possession of 4 arpents and 8 perches, or thereabouts, lying very near the habitation or fort of Three Rivers, on the $\mathrm{N} . \mathrm{E}$. side of it, which he then caused to be laid out by the same engineer, by erecting a wall at the part most distant from the fort or habitation, running in a straight line from s. E. to N. w.; and on the opposite side, next the fort or habitation, by erecting another wall running also s. e. and N . w. The distance between the end of these two walls being 11 perches, and the depth of the lot running back from the line of 11 perches, 34 perches from the road that then went along the river St. Lawrence and thence running back into the country. This parcel is erroneously stated in the deed as containing 4 arpents 3 perches, because in describing the boundaries to be a square of 11 perches in front, between two parallel lines running back 34 perches, it will make the real contents only 3 arpents and 74 perches.

Kamounska，county，is bounded n．f．by the co．of Rimouski ；s．w．ly the n．e．boundary line of the $S$ ．of St．Roch des Aulnets，prolonged to the southern boundary of the province ；N．w．by the St．Lawrence，together with the islands in that river nearest to the county and in whole or in part fronting the same；s．e．by the southern boundary of the province．This county comprises the seigniories of Terrebois，Granville and La－ chenaye，l＇Islet du Portage，Granville，Kamou－ raska，St．Denis，Riviere Ouelle and its aug．and
ste. Anne ; also the townships of Bungay, Woodbridge and Ixworth. Its extreme length is 168 m . and its breadth 40 ; it contains 4320 square miles; its centre is in lat. $47^{\circ} 3^{\prime} \mathrm{N}$. long. $69^{\circ} 12 \mathrm{w}$.: it sends 9 members to the Provincial Parliament and the place of election is at Kamouraska.-The surface of this co. is uneven and mountainous, particularly in the s. e. section. The soil is in many places excellent and such as may be expected in a tract so much diversified with hills and dales. The principal mountains are the Machagos, the Esockominoc, the Bunjauohen, the Ootaquisquegamook, the Machios, the Upquedopscook and the Allagash. This county is exceedingly well watered by rivers and lakes; the chief rivers are the Kamouraska and the $\mathrm{S}_{\mathrm{t}}$. John, which traverses the centre of the county from s.w. to N. E., presenting excellent lands for new settlements: farther in the interior are the rivers Allagash and Aroostook with their various branches. The most remarkable lakes are the Chipitogmisis, the Pantaguongamis and part of Eagle Lakes.-The front of this co. along the $\mathrm{S}_{\mathrm{t}}$. Lawrence exhibits handsome and flourishing settlements. The roads in general are very good, and the seenery is highly diversified and interesting.-It contains 5 parishes and 2 extensive and beatiful villages.

Kamolraska, river, is formed by the junction of two considerable branches called the Grand Bras and the Petit Bras, the latter rising in the S . of Riviere Ouelle and the former in the waste lands in the rear of that seigniory : these arms run N. E. and meet in the 4th concession of Kamouraska. The united streams run through the centre of that
S. in a very circuitous course and fall into the St. Lawrence opposite to Kamouraska Islands. The seignorial mill is on this r. nearly 1 mile w . of the church of St. Pascal.
Kamouraska, seigniory, in the co. of Kamouraska, is bounded in front by the St. Lawrence; n. e. by Granville; s. w. by St. Denis; in the rear by Woodbridge and part of Bungay.- 3 leagues in depth by 2 in breadth. Granted, July 15, 1674, to Sieur de la Durantaie; now the property of Pascal Taché, Esq.-This very valuable and productive seigniory is remarkable for its salubrious climate, its population, the fertility of its soil and its delightful scenery. In the vicinity of the river the land is rather low, forming an extensive plain broken here and there by a few singular hillocks or rather rocks, crowned with a few dwarf pines and low underwood: it abounds with rich natural meadows and excellent pasturage that sufficiently account for the quantity and quality of the Kamouraska butter, so much esteemed in the Quebec market. The soil, in the front part generally, is excellent, being either a rich black mould, a yellow loam, or a mixture of clay and sand: towards the rear it gradually becomes less fertile and onefourth of the $S$. is occupied by ridges of rocks unfit for cultivation.-Four concessions and part of the 5 th are settled, and some of the redundant population occupy a portion of the waste lands towards the rear. The number of farms is 495 .There is not much timber except in the mountainous parts, which produce tine beech, birch, maple, basswood and pine.-This S. is watered by the r. Kamouraska, which runs from the rear through the centre to the St. Lawrence, and also by some small streams.-Several roads lead into the adjoining grants and many others open a communication with the different concessions, on which are numerous farm-houses in the midst of fields of most luxuriant fertility : the road leading from the church in the 3 rd concession is particularly fine and beautiful, skirted by houses and agricultural buildings kept in the best order.-About one half of the $S$. is under cultivation and agriculture has made great progress: wheat and all kinds of grain seldom fail of abundant harvests; but these are not the only dependence of the farmer, for here are some of the best dairies in the province.19,000 bushels of wheat are sold out of the $S$. in grain and flour. Poultry is scarce. There is one corn-mill that drives 4 sets of stones; it is built

## KAMOURASKA.

of stone, 2 stories high, and stands on the r . Kamouraska, in the 3rd range. The rent in ranges 1,2 and 3 is $1 \mathrm{s}$.$8 d . per front arpent, and 2: .6 d$. in the 4th range-The Parish of Kamouraska includes the whole of this $t$ and half of the $s$. of Granville. There is no place in the county where flax is more cultivated than in this and the adjacent parish-so much so that the inhabitants, above 20,000 , make sufficient linen cloth for their use. The site for the new church of St. Pascal is 10 arpents in superficial extent, of which 4 were liberally given for the purpose by Mr. Robertaille and 6 were sold by that gentleman for 160 , much under the value.-The Village of Kamouraska is in a pleasant situation on the main road near the St. Lawrence. It consists of a church, a presbytery and about (ii) houses, mostly of wood, but a few are built with stone in a style much superior to the others. Sume families of great respectability have fixed their residence here, also some very reputable shopkeepers and artisans; it can likewise boast of one or two inns, where travellers may be well entertained. During the summer this village is enlivened by numerous visitors, who come hither to recruit their health, as it has the reputation of being one of the healthiest spots in the province; it is also the watering-p/ace, where many people resort for the benefit of sea-bathing. The manorhouse, which is the residence of Mr. Taché, is eligibly situated near the river, at a short distance from the village.-There are only 2 schools at present in this rich and populous s.; one, supported by the Fabrique, is attended by about 30 scholars, including 10 girls; the other, under the auspices of the Royal Institution, has about 40 scholars, including 10 girls : in the latter the English language is taught. A petition for the crection of a college in this parish was recommended to the House of Assembly by one of its committees, but without success. Mr. Taché, with his usual liberality, offered to give a piece of land on which it might have been erected. - This seigniory is not without commercial advantages, besides its productive fisheries; and the Kamouraska schooners are well known at Quebec for the large quantities of provisions they are laden with, such as grain, live stock, poultry, butter, maple sugar, 太c., besides considerable freights of deal planks and other timber.-The Kamouraska Islands, in front of the seiguiory, not only embellish the landscape but are highly useful as the sites of the fisheries, which
are here carricd on to a considerable extent, particularly the herring fishery : they are appendages to the S . and are almost bare rocks, of great utility as they afford a sifce shelter to small vessels, of which wreat numbers are always passing to and from the numerous coves in the vicinity. The names of these small islands are Isle Brulee, on which stands a telegraph, Grosse Isle, I au Patin, I. de la Providence, I la Plaudre, I aux Comeilles There are 6 fisheries, viz.

Kesifal, river, falls into the St. Maurice above Mont au Chêne, about 300 m . above Three Rivers. The head of this $\mathbf{r}$. is connected by portages and lakes with the $\boldsymbol{r}$ Assuapmoussoin.

Ketrle Lake, © Chaudiere, e.
Kickandatci, river and lake. The n. runs through waste lands from the north into the head of the lake, which is the last of the chain of lakes that supply the first waters of the St. Maurice.

Kigcagoni, or Long Lake, called also Kenuagomi, Kèncangoni, Kinogumi, Chinouagomi, Tsiamagomi and Tshnuagami. This beautiful lake lies on the left of the Chicoutimi and 7 leagues up that river. Its length is variously represented by travellers as from 5 to 9 leagues long and from half a mile to two miles in width, with an average breadth of nearly a mile. It is navigable for vessels of 60 or 30 tons, and by some accounts for vessels of at least 100 tons. An explorer, who states its length as only 5 or 6 leagues, says that it is so narrow that it resembles a river more than a lake. It is separated from another lake called Kiguagomishish by a species of dividing ridge, about a mile or $1 \frac{1}{2}$ mile long and half a mile wide, which separates the waters flowing southward directly into the Saguenay from those which, by pursuing a northernly course, first enter Lake St. John, a topographical feature of rather unusual occurrence; but it is said that this is not, strictly speaking, the case, because a small stream falls from Lake Kiguagomishish into Lake Kiguagomi. Although unusual, this is not a physical impossibility, without, indeed, as has been asserted, the waters of the

K I G
latter are higher than those of the former.-Surrounded by high rocky hills, some of which have barren cliffs about 200 ft . high. The southern borders rise into hills of about 300 feet high, timbered with spruce, white birch and aspen ; the land is so rocky, and the cliffs appear in so many places, that this side of the lake is quite unfit for culture. The northern side, although not so mountainous, frequently rises in perpendicular cliffs of granite, whose base is bathed by the waters of the lake: their summits are clothed with cypress and a stinted description of pine, sometimes called Norway pine. The prevailing timber is white birch and there is neither ash nor elm.-Pointe au Sable, or Sandy Point, is a low bank of alluvial soil stretching into the lake from the northern shore. It lies at the entrance of a river and would be an excellent situation for a village. Opposite to it on the south side a small stream falls into the lake from between the high mountains which form its bed, and the cascade at its entrance affords a good site for a mill and similar establishments. About 4 miles from Pointe au Sable is a dry green bay, which appears to enter deep into the northern shore and to be free from mountains and rocky precipices for some distance. It is the only place between Portage de l'Enfant, on the r. Chicoutimi, and the portage of Kiguagomi, where land fit for farming might be expected to occur in any considerable extent.-Little can be said of Lake Kiguagomi in an agricultural point of view, but its sublime and beautiful scenery is highly extolled. Its length, its numerous rocky capes and bays, and its precipitous shores, cause it to resemble the Saguenay, hut its mountains are neither so high nor so barren.-The Portage Kiguagomi, also called Insula Formosa or Belle Isle, is 96 chains in length and lies on the height of land which separates Lake Wiqui from Lake Kiguagomishish.

Kiguagomishish, or Little Lake, called also Kenuagomishish, Kenvangomishish, Kinogumishish, Chinouagomisliche, Tsiamagomishish and Tshmurgamitshish. This lake, though 9 miles long if followed in its windings, is only 3 miles in a straight line, and varies in width from 220 yards to one mile. It is navigable for vessels of 30 or 40 tons. The narrow outlet that connects it with Belle Rivicre, by which its waters are conveyed to Lake St. John, winds through alders and is called Rivicre des Aulnais. This lake is about half a

## K I L

K I N
league from Lake Kiguagomi, with which it is supposed to be connected by the r. Baddely. Its shores are low, interspersed with elm and ash and fit for cultivation, particularly the northern side. Although the immediate shore on its s. side is low, on retiring back from it the lands become ultimately as elevated as those on the northern snore of Lake Kiguagomi, of which they are probably a continuation.

Kildare, township, in the co. of Berthier, lies in the rear of the atg. to La Yaltric and is bounded N. E. by D'Aillebout, D'Argenteuil and the aug. to Lanoraye and Dautraye; s. w. by Rawdon and St. Sulpice; in the rear by waste lands.This tract is less than the half of a full inland township and was divided into 12 ranges, each of which is subdivided into $12 \frac{1}{2}$ lots. 11.1000 acres were originally granted, under letters patent, to the late Mons. de la Valtric, and recently a tract of 3,600 acres was granted to the Pastorus' family, leaving consequently, after deducting from the whole extent of the township 2-7ths as the reservations for the crown and the clerey, which are laid out in blocks, but a small quantity of land for the military locations, still reduced by Major Colclough's grant of 1,800 acres, at present under letters patent. This т. is most eligibly situated and contains excellent lands, which are as far as the 9 th range generally level; beyond this it assumes an uneven and mountainous appearance. Most of the lands are susceptible of cultivation; there are some rocks, and the soil is a gray earth and clay covered with black mould; some parts are yellow and sandy but fit for agriculture. The portion granted to the late Mr. Vondenvelden has been about 20 years settled. The timber is chicfly hard wood, and the r. is watered by the rivers J'Assomption, Rouge, and Blanche.-The road traversing this $\pi$., between the 5 th and 6th rances, is in high order and well settled on both sides by Canadians ; it is the leading road into Rawdon. The Canadian settlements in the 4th, 5 th and 6 th ranges, particularly the 5 th and 6 th, are in a flourishing condition. The new emigrant settlements, placed under the care of Major Colclough in 1821, have mate much progress and contain a neat village built near the $\mathbf{N} . \mathrm{E}$. line; it is approached by a fine road that traverses the greater part of the r . betwren the 7 th and 8 th ranges, having good bridges and from the village it leads into Berthier. All the Canadian settlements are worthy of particular
notice, in consequence of the domestic happiness and rural comforts of the inhabitants and the good state of their roads and bridges.-The lands are conceded on terms similar to those of the seignio-ries.-In this $\mathbf{T}$. is a great natural curiosity, a cavern discovered by two young Canadian peasants while hunting the wild cat.--l'ngranted and unlocated, $: 374$ acres.

Kilkinny, township, in the co. of Lachenaye, is bounded $\mathrm{N} . \mathrm{e}$. by Rawdon; $\therefore . \mathrm{w}$ by Abercromby ; in front by the S . of Latchenaye and the aug. to Terrebonne; in the rear by waste lands. Although it has the usual breadth of an inland township, it contains a less than usual superficial extent in account of the obliquity of the rear lines of the seigniories in its front. The general feature of this $\boldsymbol{r}$. is mountainous and uneven; and in some places it rises in gradual swells, in other parts the surface is broken and rocky. The most mountainous part seems to traverse the ! $1 \mathrm{t}_{\mathrm{t}}$ and loth ranges; thence $\therefore$. the land descends by easy slopes beyond the rear outlineand forms a valley through which it is supposed North River Hows, fertilizing the lands on each side, which are reputed to be excellent. Notwithstanding the uncvenness and irregularity of the surface, the soil generally is by no means unfit for the plough, though inferior to that of Rawdon and Kildare.-This T . is abundantly watered by rivers and numerous lakes. The River Achigan rises here in a great number of small streams issuinar, chiefly, from the lakes on and near the rear boundary line; the w. branch of the r. Petit Esprit also rises in the N. E. part of this $\mathbf{~}$. The principal lakes ar called Killarney ; they lie in the $\mathrm{N} . \mathrm{w}$. angle ; the largest is studded with islands and extends 6 m . in length and its extreme width is $1 \frac{1}{2} \mathrm{~m}$.-There are no roads, not even one to the settlement of New Glasgow, lying less than $1 \frac{1}{2} \mathrm{~m}$. from the s. e . boundary.-The Rev. Mr. Burton, who resides in Rawdon, has the agency of this township, but from its having been only recently surveyed, little or no presress has been made in repect of settlements, except by a few Irish emigrants, who have without any legal authority settled, promiscuously in various parts of the $T$.

Kingham, river, rises in 2 small lakes in the Gth range of Grenville, and winds to the s. w. to its junction with the Ottawa at the basin, about 8 chains above the $w$. extremity of the canal. This river is not of great magnitude, but it is extremely rapid down to the 2 nd range.

## K I N

Kingsey, township, in the co. of Drummond, lies on the e. bank of the r. St. Francis and is bounded n. w. by Simpson; s. E. by Shipton and in the rear by Warwick. A line drawn from w. to e. would nearly separate the two qualities of land that compose this $\boldsymbol{r}$. The front and the side next to Shipton are of the best quality, and produce beech, birch, maple, butternut, basswood and oak timber. The parts adjoining Warwick and Simpson are low and swampy, covered with cedar, spruce fir and similar woods. -Several branches of the Nicolet water it advantageously enough; on the banks of these streams a few scttlers have established themselves, but the greatest :lppearance of cultivation is in front, on the St. Francis, where some industrious farmers have made great progress; their successful example will be likely to attract other settlers of similar habits, and in a few years, from the natural fertility of the soil, aided by their exertions, this in all probability will become a populous and thriving township. The principal proprietors are the heirs of the late Major Sam. Holland, late sur-veyor-general, and the heirs of the late Dr. Geo. Longmore: a small proportion is held by the family of Donald Maclean.-Cagranted and unlocated, 12,100 acres.

Kincis Posts.-The extensive tract of territory known by the name of the King's Posts commences at the calpe and river of Cormoran on the $\mathrm{N} . \mathrm{E}$. , and extending due N . strikes through the highlands and divides the Hudson's Bay territory from the province of Lower Canada; thence following the course of the highlands it strikes across Lake Mistassini, and thence following the division of the waters of the St. Maurice, Lake St. John and Batiscan to the $\mathrm{N} . \mathrm{w}$. angle of the S. of Batiscan ; then it runs E . along the rear of the seigniories to the Black River, or eastern limits of Mount Murray, and follows the course of that

## K I N

river to the St. Lawrence, and descending the northern shore of the gulf reaches to Cape Cormoran. The frontage of this immense tract on the St. Lawrence and the gulf is 140 leagues and the SS. of Portneuf and Mille Vaches, which lie in this extent of coast, are excepted.-The country of the King's Posts is leased to Mr. M‘Doual for £1200 per ann.-In the posts and fisheries 450 men are employed and 500 in the Indian trade. 300 tierces of salmon are annually sold ; and 2 schooners, 80 boats and 15 canoes are engaged in the fisheries. -The animals in the country commonly called the King's Posts are, caribou, beaver, bear, lynx, fox, wolverine, porcupine, otter, hare, ground-hog, polecat, and the elk which has nearly disappeared. -The timber is white, yellow and red pines; white, red and gray spruce; elm, white and black birch, maple, poplar, ash, linden and cedar.There are 7 trading posts, at each of which about 30 men are employed on an average.--The principal posts of the company are at the following places:

| Tadoussac | Necoubau | Muskapis |
| :--- | :--- | :--- |
| Chicoutimi | Mistcissinoe | Moise, R. |
| Lake St. John | Papinachois | Seven Islands. |

Lake Chamachouin is the last of the Saguenay Posts, where about 15 families live. It is 50 l . w. of Lake St. John.

The Post of Assuapmoussoin is on the $\mathbf{R}$. of that name. The land near the post is low and swampy.
The Metubetshuan Post is near the mouth of a R. of that name and situated on an alluvial bank at the most southwardly point of Lake St. John. The establishment consists of a dwelling-house for the resident clerh, a store, a bakehouse and stables or barn, with a spacious garden yielding abundance of vegetables, particularly potatoes. It is situated on the site where the Jesuits, in the 16th century, had an establishment. The furrows made by the plough are still seen in the lands near the garden: these lands, which at that period were entirely cleared, are now overgrown with spruce, aspin, fir, beech and pine; some part of it, however, produces timothy hay. The apple and plum-trees, which existed in the memory of persons now living, have disappeared. At this post the company of the King's Posts carry on the Indian trade. The soil and climate must be good, because not only corn and various vegetables, but cucumbers and melons grow to perfection.
The C'hicoutimi Establishment, about 58 m . from

## K I N

Tadoussac and 67 m .68 chains from L. St. John, is at the F . extremity of the peninsula at the confluence of the Rivers Chicoutimi and Sarguenay. It is a factory of the King's Posts' Company and the only trading post on the Saguenay. It consists of a dwelling-house for the clerk or agent, on a rising ground, commanding a view of the Saguenay and the harbour, a store judicionsly placed near the landing, a bakehouse, stables and barn: several pieces of tilled ground furnish various vegetables, particularly potatocs, and even some luxuries for the table. The chapel, crected by the jesuit Labrosse in 1797 , stands on a rising ground projecting into the basin at the foot of the fills: it is about $9,7 \mathrm{ft}$. long and lir wide: the altar, which is plain, as well as the pictures or engravings, evidently betray the hand of time: the tombstone with a long inscription, recording the death of Father C'ocar in the last century, is broken in several places and the Latin inscription can with difficulty be understood. A (atholic missionary visits the post twice a year and teathes the natives the first principles of the Catholic religion, of which the Jesuits framed a catechism in the Cree langrage and circulated it among them. The house at the post was built in $1791-\%$. At the distance of 150 ft . from the banks is a rock 11 ft . high and the tide rises 5 ft . above it; to leap upon it was a favourite amusement of the people of the post a few years since; this encroachment of the river has been made within the last 40 years.-Only 10 families live in the neighbourhood of the Chicoutimi post.-The hay consumed at the post is cut from considerable prairies bordering a leagues of the r. S:uglenay from Rocky Point to Terres Rompues; these prairies or meadows are 9 m . below the post. 'The tide rises here 16 ft . perpendicular at spring tides. - The climate is favourable to vegetation and it has been found by experiment that grain will ripen much sooner at Chicoutimi than at Quebec. Vegetables of all kinds and cucumbers succeed very well, and strawberries were eaten by Mr. de Salcs Laterriere, who visited this part of the country in 18:27, on the l7th of June. The frost regularly sets in at the latter end of October and continues till the end of April or beginning of May; it always freezes here 10 or 12 days sooner than at Lake St. John. The views round Chicoutimi are sufficiently pleasing and the land, with the exception of some rocks scattered here and there, is fit for cultivation. Chicoutimi is the only place on the Saguenay where the soil

## L A B

is fertile; it is a blue clay too little mixed with loam or sand and produces an abundance of timber of excellent growth. The greatest impediment to the population of this tract is its distance from an inhabited country, for, as soon as the navigation is closed by the frost, all intercourse with the rest of the world is entirely cut off. The distance to Malbay, in a straight line, is 60 m ., and the journey has been accomplished on snow shoes in two days. If the government, or rich proprictors, would be at the expense of forming a military route (in the manner of the Romans,) to Malbay, or Baie St. Paul, it is supposed that a numerous population would settle here in a few years: without this facility it is probable that all the advantages offered by the Saguenay country will remain for a long time unenjoyed.

Kiniepahiran, is part of the Belle Riviore, which runs into Lake St. John.

Kotachat, river, falls into the w, angle of a. St. John, near the mouth of the Assuapmoussoin. Kisifaifigan (R.) , ${ }^{\text {o }}$ Belle Riviene.
Kropahiganisil or Knoshpygish, river, runs into the s. side of lake St. John. On this small river is a grove of maple, where the sugar used at the Post of Chicoutimi is made. The Deputy Surveyor General ascended this R. about 7 miles, and found its banks composed of an alluvial clayey loam; and where the banks are at all clevated the clay lies beneath a stratum of light loam and the vegetable monld. The land is, in general, excellent, and is timbered with elm, ash, black birch, basswood, maple and fir: on the higher lands the timber is, chiefly, pine, spruce, fir, white birch, cedar and balsam: the white and red pine are of good quality.--The current is rapid, and its ascent obstructed by large trecs that fall across the river and prevent the traveller from proceeding more than 7 miles, where the river becomes very narrow and the passage completely impeded ly the fallen trees. The numbrous tracks of the beaver and otter prove that this river is but little frequented by the Indian hunters.
L.

Labadie, fief, in the S. of Ste. Marguerite, in the co. of St. Maurice, extends along the St. Lawrence $\frac{1}{1}$ league in front by $\frac{1}{2}$ league in depth, lying between the grant made to Mr. Severin Haincau and Boucherville fief.-Granted, Nov. 3, 1672, to Sieur Labadie.

Lac des Deux Montagnes (S.), $v$. Lake of Two Mountains.

Lachenaye, county, in the district of Montreal, is bounded N. E . by the co. of L'Assomption; s. w. by the co. of Terrebonne; in the rear by the province line; in front by the St. Lawrence. It comprehends the parishes of Lachenaye, St. Henry de Mascouche and St. Roch, and the townships of Kilkenny and Wexford. Its extreme length is 39 miles and its breadth 13 , containing 299 square miles; its centre is in lat. $45^{\circ} 43^{\prime} \mathrm{N}$. long. $73^{\circ} 30^{\prime} \mathrm{w}$. It sends two members to the Provincial Parliament and the place of election is at St Roch. The principal rivers are the Achigan, Mascouche and St. Esprit, and it contains the Killarney and several minor lakes. The surface, generally, is level, except in the township of Kilkenny, where there are a few rising grounds.

Lachenaye, seigniory, in the co. of Lachenaye, is bounded N. E. by L'Assomption ; s. w. by Terrebonne, Desplaines and the augmentation to Terrebonne; in the rear by the $T$ of Kiikenny; in front by the r. St. Jean or Jesus.-The original extent included the fief L'Assomption, and was granted April 16, 1647, to Pierre Legardeur, Sieur de Repentigny, and contained 4 leagues in front by 6 in depth: this tract was afterwards equally divided into the present seigniory and fief, and the former is the property of Peter Pangman, Esq.-The quality of the land is various, but tolerably good : the usual sorts of grain and other produce are cultivated here with much success; and many places are well suited to the growth of flax, which might be raised to a considerable ex-

## LA C

tent. On the borders of the St. Jean, Achigan, Mascouche, Ruisseau des Anges, St. Pierre and other streams, are nine ranges of concessions, containing together 456 lots, nearly equal to one half of the seigniory ; of this number rather more than 400 are cleared, well settled, and much improved. The rivers Achigan and Mascouche, with several smaller streams and rivulets branching from them, water the $S$. very favourably; and, although neither of these rivers is navigable for boats, timber is brought down them to the St. Lawrence: in spring and autumn their waters greatly increase, and in these seasons some rapids in them are very violent ; but even in the usual periods of drought there is seldom any want of a sufficient supply to keep the mills at work. On the Achigan is a cornmill, and on the Mascouche a corn and a saw-mill. Over the different rivers are good bridges, and from Lachenaye church are two ferries, one to the Rivière des Prairies, where $1 s .8 d$. is charged for each person, the other to Isle Jesus, where 10 d . is charged for each passenger. About 1 mile from the r. St. Jean is a fief of 18 acres in front, that runs into the S . of L'Assomption as far as the limits of St. Sulpice, which belongs to Mrs. Deviene.

The Parish of St. Henry de Mascouche extends from the church $N . E$. about 2 leagues; by the Grand Coteau s. one league ; w. and n. w. $1 \frac{1}{2}$ league; and E . $1 \frac{1}{2}$ league, comprehending the Cabanne Ronde. In this $P$. the lands conceded prior to 1759 are charged at the rate of one pint of wheat and 1 sol for each superficial arpent, and 3 sols, tournois, quit rent, on each concession, with other usual charges and reservations. The present rents are at the rate of $2 \frac{1}{4}$ bushels of wheat and 4 livres 10 sous, for each farm of 3 arpents by 30 , except in the Cite de Grasse, where the rent is $4 \frac{1}{2}$ bushels of wheat and one pistole. In this parish 6000 arpents fit for cultivation remain unconceded; these lands have no road, and have not been surveyed. There are a sufficient number of persons both willing and able to settle on these non-conceded lands, and the causes that retard their settling are supposed to be the high rates required by the seignior for each concession, and the preference given by him to strangers, particularly the Americans.

In the Parish of Lachenaye, which occupies the front of the $S$., all the lands are conceded and have been surveyed. The rents of the concessions granted before 1759 are the same as those charged at that time for the lands in the parish of St. Henry.

Statistics of the Parishes of St. Henry de Muscourlie and Lachenaye.

La Cinevrotiere, river, is formed by the junction of three streams, two of which rise in the $s$, of Deschambault, and being united receive the third in the $s$. of La Cherrotiore and rum into the st. Lawrence.-It is navigable for boats about 5 m . up to the scirnorial mill. Near it. mouth it turns a mill, below which it is about 10 or 12 ft . deep when the tide fows, where it admits boats and schooners to load and unload, and protects them from the ice during the winter.

La Chevromere or Chaydiny, seigniory, in the co. of Portneuf, is bounded n. e. by Deschambault; s. w. by La Tesseric; in the rear by waste lands of the crown ; in front by the st. Lawrence. -One league in front by 3 in depth: the date of the grant is uncertain, as the original title has never been found among the records of the province, or among the registers of fealty and homage; but, from the tenor of the grants of La Tesseriand Deschambault, it appears to have been conceded some time before the year 1652 , to M . Chavigny de la Chevrotiére: it is now possessed by M. de la Chevrotićre, a lineal descendant of the person who first received the grant.-The soil generally possesses considerable fertility, and is
well suited to the produce of wheat and other grain, though not more than one third of it is under tillage. The surface is uneven. The banks of the sit. Lawrence in this s. are high, the beach rocky and irregular, and the battures or shouls rum out to a considerable distance.-Beech, maple, and some excellent pine timber are found close to the river.-The $s$. is watered by many small streams besides the river ste. Anne, that crosses it near its rear limit, and the Chevroticre, that winds along the middle about " m . ; this little river rolls its slender stream between two banks of considerable elevation, and, after urnsime the ridere in front, desconds into the $\dot{S}$. Latwrene through a valley, in which by the side of the main road are a dwelling-honse, a conn and a saw-mill, most delightfully situated. On the wor bank of this river the road is rather difficult, from its steepness and circuitous course ; but, on the opposite side, the rise is gradual and casy of asocnt to the top of the eminence along which it pases onwards to Qucbec: besides this main rand, there are severall others rumning in different dircotions. On the summit of the clevation, and on cach side of the highway, are many handsome farms, in a good state of improvement. - Many of the inhabitants are either sailors or shipwrights, and 3 or 4 schooners, and sometimes a brig of 200 tems, are built within the year.

Titte.—"On n'a pu tronver le tite de celte cuarembon au Bureau du Sécretaire, ni dans h. Re. ithe des Fui et Hommage. Il paroit sculement par lem ronctesions risines de Dischambault et de la Tissori, qu'elle fut faite avant mil six cent cimquate-denx, a un Mr. Chadigy de la Chervieri, qui, ou ses ayant-culuses, la téta au proptric.
taire de Deschambault, à laquelle elle est restée réunie scus le nom de cette derniere. Suivant les arpentages que nous avons de cette partie, ces deux concessions réunies occupent deux lieues de front sur trois lieues de profondeur."

Lachine Canal, v. Cinals.
Lachine (V. and P.), v. Montreal, S.
Lac Mitis (S.), r. Mitis.
La Colle or Beaujeu, seigniory, in the co. of Acadie, is bounded s. by De Lery, s. by the state of Vermont, in the rear by Hemmingford, in front by the $\mathbf{R}$. Richelieu. - 2 leagues in breadth by 3 in depth. Granted March 22, 154:3, to Sieur de Beaujeu, and is now the property of General Christie Burton.- Towards the front the land is rather low, with some few swampy patches, which excepted, the soil is in general grood and very well timbered: in the rear the land is much higher, and, although partially intersected by strata of rocks and reins of stone, lying a little below the surface, the soil is rich and perhaps superior to the lower lands. On these upper grounds there is much beech, maple and elm timber; the wet phaces afford abundance of cedar, tamarack, spruce fir and hemlock. Although the greatest part of this $\because$. is very eligible for the purposes of cultivation, and would produce all sorts of grain abundantly, besides bcing peculiarly well suited to the growth of hemp and flax, there is not more than one third settled.-The river Lat Colle, winding a very sinuous course from west to east, intersects it and falls into the Richelieu.-A number of houses, situated on each side of the road that runs along the ridse from the state of New York, about $\underset{!}{2}$ miles towards La Colle, have obtained the name of Odell Tom from Captain Odell, who was one of the first and most active settlers in this part: he is an American by birth, and so are the greatest part of the other inhabitants, but they are now in allegiance to the English government. The effect of the activity and good husbandry, natural to American farmers, is much to be admired in this small but rising settlement: the fields are well tilled and judiciously cropped, the gardens planted with economy and the orchards in full bearing; above all, the good roads in almost every direction, but particularly towards the town of Champlain, attest their industry; and it is likely, from its vicinity to the thickly inhabited townships on the American side of the boundary, the small distance from Champlain, Plattsburgh and Burlington, the easy
access to the Richelieu for expeditious water carriage, and especially from the persevering labour of its population, that Odell Town will advance in agricultural improvement and become wealthy and flourishing.-This S. is divided into 9 concessions, which are all settled.-The village of Burtonville is one mile s.w. of the road leading from Montreal to Champlain.-Lacolle Parish includes all the seigniory only, and the church is on the Montreal road 2 miles from the province line.-Near the mouth of the river La Colle is Isle aux Tctes, or Ash Island, on which there is a redoubt commanding the whole breadth of the Richelieu. This little spot and the flotilla moored between it and La Colle, in July 1814, formed the anvanced naval position towards Lake Champlain, at which period the American flotilla was stationed at Pointe au Fer and Isle is la Mote, about ten miles distant.

Voyez Reg. d'Intend. No 9, folio 10."—Régistre d'Intendance, No. 7 , folio 16.

La Colne, river, in the S. of La Colle, winds a very sinuous course from $w$. to $E$. and falls into the r. Richelieu opposite to Ash island. It is not navigable even for canoes. Odell Town is built near its southern source, and La Colle mill is erected about one mile from its mouth. At the numerous rapids on this R . are many excellent situations for mills.

Lac Ouareau, v. Ouareau.
Lac Verts, near Lake St. John, is called by the Indians Kusushikémi, the " lake of clear water," a name very well applied, as the waters are so clear, that the bottom of the lake can be discovered at the depth of several fathoms; possessing, at the same time, a green tinge that has given it the French name: the waters of this $L$. contrast most singularly with those of Lake Tsimagomishish, which are of a whitish colour, not possessing any degree of transparency. Lac $J_{c} \downarrow$ is about $1 \frac{1}{2} \mathrm{~m}$. long and about $\underset{4}{3} \mathrm{~m}$. broad, exhibiting on its borders a boldness of scenery peculiarly attractive. A succession of high mountains ranges from the west along the south borders of the lake, leaving but a very narrow strip of culturable ground between it and the foot of the mountains, which are clothed with spruce, fir and pine. On the north side there is but a narrow tongue of land, which divides Lac Vert from $\mathbf{L}$. 'Tsiamagomishish, on which is some tolerably good red pine, some white pine, spruce and white birch. The west end of the lake i : low and level for some considerable distance, the land is of good quality and well timbered with spruce, birch, cedar, fir and some pine. In the chammel between the two lakes, during a late surver, a piese of bark folded, and set in a particular direction on a pole, was seen, on which was delincated by some Indian hunters the course that they had taken up some particular river, and which had most probably been left there as an information for some other Indian hunters who were about to join them. This is a mode of rendezvous used by the Abenaquis and Algonquin nations, who very likely had visited this place, and were then returning towards their own grounds, as appeared by the direction of the rivers.

La Durantaie, scigniory, and augmentation, in the co. of Bellechasse, front the St. Lawrence. Bounded s. w. by Beammont; s. e. by Berthier ; in the rear by the r. of Armagh and the $\mathbf{S}$. of St. Gervais.- 2 lengues in breadth by 2 in depth. Granted Oct. 29th, 1672, to Sieur de la Durantaie : the augmentation, of the same dimensions, was granted to Sieur de la Durantaic, May lst, 1693.-The grant and augmentation are now divided in equal proportions into the two seigniories of St. Michel and St. Vallier, to which the reader is referred.

Lake of Two Mountaiso, seigniory and antrmentation, are bounded $w$. by Argenteuil and Chatham Gore; e. by Rivire du Chane; in the rear by aug. to Milles Isles and waste lands; in the front by the lake of Two Mountains - This $s$. and its augmentations were granted at three separate periods ; the s. was eranted Oct. 17.1717. and contains, as by title, 3 : leaseds in front by 3 in depth. The lst augmentation was granted Sept. 26.1733 , and contains about 2 leagues in front of the lake. The 2nd augmentation was granted Mar. 1, 1735 , containing 3 leagres in depth and in the rear of the former grant. The entire property was granted to the ecrlesiastics of the seminary at Montreal, from whom it has never been alienated.-The soil is very favourahle, in

## LAKE OF TWO MOUNTAINS.

many parts consisting of a fine strong loam with a mixture of rich black earth. The surface is uneven but never varies into prejudicial extremes; bordering on the lake, in the vicinity of the Indian village, it is of a moderate elevation, thence w . to the Eboulis it gradually sinks into a flat, from which it rises again near the boundary of Argenteuil: E. of the village, nearly to the S. of Riviere du Chène, runs a low heath having a large bay on one side of it. At a short distance from the front are the two conspicuous mountains that give the name to both seigniory and lake ; one of them is called Mount Calvaire, on whose summit are the remains of some buildings which have long borne the appellation of the Seven Chapels. Towards the interior the ground declines below the level of the front; further to the rear are some ranges of heights that assume rather a mountainous character, but in the spaces between them are many excellent situations for settlements.This $S$. is very well watered by the Grande and Petite Rivière du Chene, the Riviere du Nord and the Rivière au Prince, which in their course work several corn and saw-mills.-The influence of the reverend proprietors in promoting industry and directing it towards useful labours is strongly exemplified in the flourishing state of their property, as upwards of three-fourths of it is divided into 601 lots or concessions, by much the greater number of them settled upon and well cultivated, producing grain of all sorts, pulse and other crops, with a sufficient quantity of good meadow and pasture land. About 400 farms are unconceded, of which about lio are on the mountains and are generally considered unfit for cultivation; there are no roads over these lands and they are not yet surveyed. No farms were conceded prior to 1759 , the first concession being made in 1783.-The rivers are small and are called La Grande Baie, which never wants water for the mill, Le Ruisseau Glaise and Le Ruisseau des Nigres, all well adapted for mills. The augmentation in the rear is traversed by the Rivière du Nord.-Some oak and pine timber are found in some places, but beech, maple, birch and other inferior kinds are plentiful in the woods.-In this $S$. are two Indian villages, one inhabited by the Algonquins, the other by the Iroquois. The former contains 76 houses, the latter $56 ; 3$ leagues are reserved for the use of the Indians and the whole is fit for culture, ex-
cept the summit of the mountains, which is in pinery and contains perhaps half a league square. Besides the grounds where they cut beech hay, the Indians have grazing land, extending $\frac{1}{4}$ a league in front by 15 arpents in depth, from the mission farms.-The Indian population amounts to 887, viz.:-

| Missionary establishments | 250 |
| :---: | :---: |
| Iroquois. | 282 |
| Algonquins | 355 |
|  | 887 |
| Chiefs of Troquois | 3 |
| Chicfs of Algonquins | 4 |
| Women | 38.3 |
| Boys | 144 |
| Girls | 123 |

The village of the Algonquins is a little lower down than that of the. Iroquois. Of the two tribes the Iroquois are the more agricultural and industrious ; but the Algonquins, though more indolent, are more addicted to hunting. They cultivate patches of land in different parts of the S., selecting other places for tillage after cultivating those for a few years. There are 132 constantly resident, each of whom may be said to cultivate 3 acres, which are cropped with Indian corn, peas and potatoes and a few oats. The priests are entitled to tithes of the Indian corn.This mission was originally placed on the mountains of Montreal, afterwards transferred to Sault les Recollets, and lastly to this place. The mission consists of 3 priests and 2 sisters of the congregation; the latter are occupied in imparting religious instruction to the Indian children: the priests are a superior and 2 missionary priests, one for each tribe. There is one chapel in each village, and 6 houses, including the seminary and nunnery, are built of stone. The Calvaire consists in 7 chapels placed on the summit of the mountains; they are built of stone, about 6 arpents from each other except the last three, which are together : the principal chapel, where the Calvaire is, may be about 25 ft . by 15 , the others about 12 ft . by 10 . There are 6 mission farms, which are very productive, all at the foot of the Calvaire, or Seven Chapels; some of them are 22 arpents in front by 30 in depth, others 3 arpents in front by 25 in depth. They are all in high cultivation, and $\frac{9}{3}$ rds of the total are under crops and $\frac{1}{3}$ rd in good meadows along the moun-

## LAK ES.

L. des Hurons, in the S . of St . Vallier, gives rise to the N . branch of a small stream that falls into the n. e. side of r. du Sud. - Indian Grate Lake, in the co. of st. Maurice, near the head waters of the R. Matawin.-L. Irion, nearly in the centre of the $r$. of Clarendon, divides the division line between the 8th and 9th ranges.-L. John, near the $s$. $w$. angle of the aug. to Monnoir, is the source of south-West River: on the front line of Chatham Gore it discharges its waters into Davis River.-L. Kajoualuang, v. North Bastonais, r. —L. Kasushikéomi, v. L. Verte - L. Kueashganish, near the s. w. bank of the St. Maurice, into which its waters run, a little below Rat River.- $L$. Krompt, a large lake with numerous islands, between the head waters of the $n$. aux Lievres and Matawin r. and lake.-L. Kenuagomi, $v$. Kı-guagomi.-L. Kenuagomishish, v. Kiguagomisilish. - Kettle Lake, v. Chaudiere, l.-L. Kilarney, v. Kilkenny, т.-L. of the Lieures, a chain of lakes running from $N$. to s., forming the commencement of the $\mathrm{N} . \mathrm{w}$. branch of the $\boldsymbol{R}$. aux Lievres.-Little Lake, in the S. of Madawaska, empties itself into Lake Temiscouata by a small stream that crosses the Portage.-Little L. Ste. Marie, towards the rear of the S . of Malbay; it empties itself by a stream into the r. Malbay.L. Lomond, in the s. w. part of the T. of Inverness, is fed by the waters of several streams and lakes descending from Halifax, and discharges itself into the r. Clyde.-Long Lake, s. w. of the S. of Madawaska, is about 16 m . long and its average width about a mile. It is the source of the r . Cabineau. u. Kiguagomi. i. Bastonais, r.-L. Macanamack, in the $\mathbf{~}$. of Wobirn, is of a very irregular shape; it discharges itself into m. Me-gantic.-L. Mantalagoose, near the head waters of Ribbon River: its shape is singularly irre-gular.-L. a Maria, in the S. of St. Vallier, discharges itself into the Rivière Noire.-L. Mutawin, between lakes Kempt and Shasawataisi, gives rise to a short river of the same name.-L. a Michel, in the rear part of the $S$. of Berthier; one of the sources of the Rivière Noire.-Middle Lake, v. Necsiwackita.-L. Mistake, an expansion of the r . aux Lièvres just below Long Island L. Morin, in the concession St. Louis, in the S. of St. Vallier, discharges its waters into the n. e. side of the r. du Sud.-L. Nairne, of a circular form, cuts the rear of the $S$. of Murray Bay: it receives the waters of $\mathbf{L}$. Anthony and
empties itself by a stream that runs into the r . Malbay.-L. Necouta, v. Assuapmoussonn, l.L. Necsivackihu or Middle L., one of the sources of the r. Toledo. - L. des Neiges, the source of the r. Montmorenci.-L. Nekoaba, v. Askatiche, r. -L.Nemicurhinqué, a long lake extending N . and s . containing several small islets, between lakes Cu lotte and Goldfinch, forms part of the chain of lakes at the n. E. source of the R. aux Lievres.-- Nesse Lake, in Chatham Gore.-L. Nixon, 30 chains from the $\boldsymbol{r}$. Baddely on the same side of L. Kiguagomishish; 36 chains long and 10 wide: its banks do not exceed 25 ft . in height; the land is of a strong and superior quality. $-L$. Noh-oui-loo, $v$. Peribonea, r.-L. O'Cananshing, in the T . of Caxton ; its $\mathrm{N} . \mathrm{w}$. end penetrates the county division-line separating Champlain from St. Maurice. It empties itself into the r. Sha-wenegan.-L. Ontaritzi or St. Joseph, in the S. of Fausembault, receives the little $k$. aux Pins and discharges itself into the r. Jacques Cartier. —L. Orsale W'tllayamuch, v. Abawsisquash.L. Oskelanaio, the source of the r. St. Maurice, is 27 m . long from n. E. to s. E. and 4 m . wide.L. Papineau, is a large lake lying partly in the aug. to Grenville and partly in the S. of La Petite Nation. It gives rise to the main branch of the r. Petite Nation.-L. Patitaouaganiche, v. Askatiche, r.-L. Peakquagomi or Peakuagami, the Indian name for Lake St. John.-L. des Perchaudes forms the s. w. corner of the $\boldsymbol{r}$. of Caxton; it is about 1 m . nearly square.-L. Pitt, in the $\mathbf{r}$. of Halifax, about 5 m . long and $\frac{1}{2} \mathrm{~m}$. wide, extends nearly from the 6 th to the 10 th range and communicates by a small channel with $L$. William, whence the waters discharge into the r . Clyde.-L. Pothier, one of the lakes that supply the n. e. branch of the r. aux Lièvres.-L. Prevost is near the $\mathbf{N}$. .. angle of the S . of Eboulemens; its waters supply a small stream that runs into the Little r. Malbay.-Pyke's Lake is a small lake on Pyke's Settlement, in the r. of Frampton.-L. Quaquagamack and L. Quaquagamacksis, v. Ouintchouan, r.-Red Pine Lake, one of the sources of the middle branches of the $\mathbf{R}$. aux Lièvres. - L. Rocheblanc lies between lakes Pothier and la Roque, both of which are among the first sources of R. aux Lièvres.-L. des Roches, in the S . of Beauport.-L. la Roque, the head of one of the smaller branches that supply the first waters of the R. aux Lièvres.-Round Pond, near the s.

## LAM

boundary of Emberton, empties itself into Connecticut $\mathrm{L},-L$. des Sables, an expansion of the R. aux Lièvres; near its lower end the Hudson's Bay Company have a post.-L. st. Eustuche, in the т. of Blandford, is about 100 acres in superficial extent and discharges itself into the r. aux Originaux.-L. St. Joachim or Grand Lar, in the S. of Côte de Beaupré, discharges itself into the r. Ste. Anne. r. Ontaritzi.-L.. St. Louis, in the r. of Blandford, about 100 acres in superficial extent, forms one of the sources of the re. Gintilly.
-L. St. Pierre, a narrow lake about 11 m. in the S. of Riviere Ouelle.—L. Scotsminimis, in Orford and Hatley, is a large expansion of the 1 c . Magog, about $5^{5} \mathrm{~m}$. long and from $\frac{1}{2}$ m. to a anile broad.L. Schestiun, in the S. of Notre Dame dos Anses, is an expansion of a small stream that juins with the r. Jeaune in its way to the r. St. Charles.-L. Segamite, in the S. of Notre Dame des Anges, is an expansion of the r. Jeaune, which runs into the r. St. Charles.-L. des seft Isles, in the $s$. of Fausembault.-I. shapeaigan, in the highlands above the source of the st. Maurice- 1 . shationuataisi, of a long and very irregular shape, collects the waters of the Matawin and other lakes and discharges them by a conuceting stream to the St. Maurice near the mouth of Ribson River.L. Squatteck or Last L., one of the sources of the r. Toledo.-L. Temiscaming, the source of the r. Ottawa-L. a la Torlue, in the concession ite. Catherine in the $s$ of $S$. Vallier, discharges itself into the Rivire Nuire.-Trout Latie, in the 4th range of the r. of Ireland, receives the waters of Black Stream and many other rivulets in that r . Its waters are conducted through Halifax and Inverness by several lakes and connecting channels into the r. Clyde- - I. Timymi, e. Kigua-gomı-L. Tsiagomishish, $r$. KımatominhivirL. Wayagamack, G. and L., i. Bastonais, r.WThite Tish Lake, N. w. of the n. :ux Lievres, empties itself into that r . by a small stream falling into it a little below e. des sillles.--L. William, in the r . of Halifas, discharges itself through L. Lomond into the r. C'lyde. Another in Chatham Gore, discharges itself by a sm:all stream into Lake St. John.-L. Youm, in the co. of Saguenay, near the r. Baddeley, is a small lake about 660 yards long and about 229 wide.

Lamantiniere, fief, in the co. of Bellechasse, is bounded s.w. by Lauzon ; N.e. by Montapeine; in the rear by the $\boldsymbol{T}$. of Buckland; in front by the

## LA N

St. Lawrence.-In breadth only 32 arpents, but 6 leagues in depth. Granted, Aug. 5, 1692, to Sieur de la Martinière and is now the property of

Reid, Esq. of Montreal.-The soil is nearly similar to that of Lauzon and is in a forward state ${ }^{\text {c }}$ cultivation, two-thirds of it being scttled upon. It is well watered liy the river Beyer and some inferior runs of water. On the Boyer is a cornmill.
 Lomis ale bumbl;, fobucmeur, et Jom Budant, Intendant, an Sicur de la Mfarlinière, de leapane de terte qui - poura trouver, si allowa il $y$ a molicomiodi. entre la

 dIntondunco, No. 4 , folto 7 .

Lavonaye and Dauthe with their ammentation. These two ficfs form only one stiguinery, which lies in the co. of Berthicr, and is bounded N. e. hy the S. of Berthier ; s. w. by Lavaltrie: in the rear by D'Aillebout and De Ramzay ; in front by the St. Lawrence.-Lanoraye is $\supseteq \mathrm{l}$. broud and 9 decp and was granted, $A$ pril $7,163 \%$, to Sifur de la Noraye. Dautré was grimeded in two portions; the w. part, ${ }^{1}$ league broad by two leagues deep, to Sieur Jean Bourdon, Dec. lst, 16:7; the es. part, of the same size, Apr. Jif, 1647, to Sieur Jean Bourdon also. The alugmentation, under the title of Derritre Dautre and Lammaye, being the breadth of the two former (three leagues) and extendies to the Ri vière L'Assomption, about 4 leagues, was granted, 4th July, 1730, to Sieur Jean Baptiste Neven. The whole is now the property of the Hon. Row Cuthbert.-The extensive tract included in these grants contains a vast quantity of excellent arable land, that lies in general pretty lewel. The soil is various, in the front a light redlinh earth with some clay, and towards the rear it grows stronger ly the mixture of different loams and becomes a strong, rich, black earth.-The timber embraces almost every varicty, with much of a superior quality and some very good oak and pine.-It is conveniently watered on the s. w. side by the rivers $\mathrm{s}_{\mathrm{t}}$. Josiph, St. John, and the little Lake Cromer; a little westward of the St. John is another small lake comected with that river by a short canal that always ensures to it a permanent stream. The rivers La Chaloupe and Bayonne cross the N. E. side into Berthier, and turn several

## LA P

good corn and saw mills.-In the rear, towards the r. L'Assomption, is an eminence called Castle Hill, commanding a diversified and beautiful prospect over the surrounding country.-In this $\mathbf{S}$. cultivation is in a very advanced state, about twothirds being thickly settled, of which the parish of St. Elizabeth in the rear, the banks of the St. Lawrence, the côteau St. Martin and that of Ste. Emily are perhaps the most flourishing. There is no village; but good houses, with substantial and extensive farm-buildings, are dispersed over it in all

LA P
parts.-Some of the concessions were granted prior to 1759 , on the usual seignorial terms.-Some of the unconceded lands are good, but the greater part are of bad quality, and there is no road leading to them.-In this $S$. are many persons desirous of making new settlements.-In the Parish of Ste. Elizabeth the extent of ungranted lands is supposed to be equal to 50 farms, without a road and unsurveyed. The lands granted under French tenure are held at 4 livres per arpent.

Statistics of the parishes of St. Joseph and Ste. Elizabeth.

Seigneurie de Lavaltric, et du côté du Nord-Est par une Seigneurie de Lavaltric, et du côté du Nord-Est par une
ligne parallele, tenant aux prolongations de la Seigneurie d'Antaja; lequel terrein ne fera avec chacun des dits fiefs de La Noraye et Dautré qu'une seule et même Seigneurie." —Régistre d'Intendance, No. 8, fulio 29.

Laprairie, county, in the district of Montreal, is bounded N. w. by the St. Lawrence; s. e. by
the township of Sherrington, and part of the barony of Longueuil ; n. e. by the co. of Chambly; and s. w. by the S. of Beauharnois; and comprehends the seigniories of Laprairie de la Magdeleine, Sault Saint Louis, La Salle and Chateauguay, and the isles in the St. Lawrence, nearest to the county, and either wholly or in part opposite. Its length is $18 \frac{1}{4}$ miles and its breadth $1: 31$, containing 238 sq. miles; its centre is in lat. $45^{\circ} 19^{\prime \prime} 36^{\prime} \mathrm{N}$., long. $73^{\circ} 36^{\prime} 30^{\prime} \mathrm{w}$. This county sends two members to the provincial parliament, and the place of election is at St. Constant.-'The soil is equal, if not superior, to any in the province, as is sufficiently proved by its population and produce. The surface, generally, is low and level, exhibiting a great extent of pasture and meadow land. It is watered by numerous rivers and streams, whose borders present lands calculated to support flourishing settlements; the chief rivers are the Chateauguay, La Tortue, St. Regis, St. Cloud, St. Lambert and part of the Montreal.-It contains 5 parishes and the villages of Coghnawaga, Laprairie, and others of minor extent ; all of which add to th.e beauty and prosperity of the county. -Of the numerous roads which traverse this county the main route or stage road from the v. of Laprairie to St. John's is the most deserving of notice.

Laprairie me la Mapleine, seigniory, in the co. of Laprairie, is lounded N . e. by Lomgueuil ; s. w. by sault St. Louis; in the rear ly the barony of Longueuil; in front by the St. Lamenas - 2 leagues in breadth $\mathrm{b}_{\mathrm{y}} 4$ in depth. Granted, lst April, 1647, to the order of Jesuits, whose prosessions were once so large and valuable in this province. On the demise of the last of the order settled in Canada, it devolved to the crown, to whom it now belongs.-This grant is a fine level of rich sinil, with some of the best pasture and meadow lands in the whole district, always yielding most abundant crops of good hay. The arable part is alvo of a superior clans, upon which the harvests, gencrally speaking, cxceed a medium produce. In Cite St. Catherine there is an extensive bed of limestone. The ranges of concessions contain about 300 lots of the usual dimensions, in gencral settled and in a very favourable state of cultivation, almost catiredy cleared of wood, and posswsing very little timber of good dimensions. Numcrous rivulets cross thiss. in every direction, and it is watered by the three rivers La Tortue, st Lambert ant La Divige du Portage, all of which traverse it diagomally from s. w. to N. E., and have bridges over them; neither of them is navisable for boats to a sreater distance than half a league from its mouth, and that only during the spring freshes; they afford, however, always sufficient water to work several corn and saw mills. There is a bridge at Mouillepied which separates the parishes of Laprairie and Longueuil.
The position of this S. is extremely favourable on account of the numerous roads that pass through it in several directions, and particularly from
being the point where an established ferry from Montreal communicates with the main road leading to s't John's, and thence by Laike Champlain into the Ameriman states: the gencral route for travellers between the capital of Lower Canada and the city of New York. In the pinint of view lefore alluded to, viz. encouraging the transit of produce from the countries bordering on the fronticrs to the perts of the sit. Lawrence, the saigni,rices adjoining this line of communication are most eligibly situated; and if measures having that object in contemplation should be cucouraged, they would indubitably attain some cminence in commercial importance. These oljects have attracted the attention of the colonial legislature, and during the last year commissioncrs were appointed to manage and superintend the expenditure of two thousand pounds currency, appopriated by a prowincial att of the 10th (iurrge IV. to be employed in repairing and improving the road Letween St. John's and Laiprairie; but convidering the imadennacy of that sum to repair the road in its whole cxtent, it ought to be applied in repairing the parts in the worst state and those that are at the charge of the pullic, called ly-roads fetrimins de montée et is diserentr), which are not front roads. The sum so voted is notoriously insufficient to make that roud solid, hard and of permanent utility. The length of the road from Laprairic to St. John's is six learges; and about 160 arpents are by-roads at the charge of inhabitants residing in a distance of one to five latrucs; these byroads ate no more than 15 to 2.5 ft . wide, not being front roads.-There is another part of about 80 arpents, called chemin de la Suctume, which, though a front road, is not more than $1 ;$ to 24 ft . in width, and is edged on cach side by watercourses of 7 to 8 ft . in width hy 4 to. 5 ft . in depth, which renders it dangerous to travellers, especially in very dark nights; and it is almost imprasille, or at least it would be very expensive, to widen it, on account of those water-courses on each side, unless such ditches were filled up, and new ones opened at a greater distance from the road, for the water-courscs undermine the road every year, and make it narrower. The sum of 2000l. currency will scarcely suffice to make partial repairs in the parts that are in the worst state, and which repairs cannot loe of any durability on account of the remoteness of the residence

## LAPRAIRIEDELA MADELEINE.

of the persons bound to keep them in good order, the great traffic on the road, and the quality of the soil. To render the road of permanent utility and durability, it should be macadamized from end to end, widened at some places and turned in its direction at other places, which would cost at least 15,0001 . ; or it should be converted into a turnpike road, either at the expense of the province, or by granting that privilege to private individuals; otherwise it will ever be bad and dangerous; for there is not in the province a road more frequented by carriages and travellers, and at the same time more necessary. As long as this road is to be kept up by the inhabitants, it will be bad and dangerous.-The N . and E. parts of the parish of St. Phillip are in this S., the w. part is in La Salle, the s. part is in the r. of Sherrington. The lands or farms in this parish, conceded prior to 1750 , were each 3 arpents in front by 30 in depth, and at first were charged with the payment of twothirds of a quart of wheat and a sol toterois per arpent, or $1 \frac{1}{2}$ bushel of wheat and 4 livres 10 sols, old currency, for a farm of 90 superficial arpents: afterwards the rates were a quart of wheat and 1 sol tournois per arpent, or 21 bushels of wheat and 4 livres 10 sols tournois for a farm of 90 arpents. The quit rent was in proportion to the extent of the farms. In Laprairie, 30 sols were exacted for the privilege of turning cattle on the common called the Commune de Laprairie de la Madeleine. There are two roads, St. Phillip and St. Barthelemy, which communicate with the townships. Many persons in this parish are desirous and able to form new settlements, but the parts of the parish that lie in the seigniories are already conceded, and these persons object to settle in the townships. In the Parish of Laprairie, or La Pinitre, all the lands were conceded prior to 1750 , with the exception of two concessions, one of which, La Pinière, forms part of the line s.s. w. of the $\boldsymbol{B}$. of Longueuil, and the other, l'Ange Gardien, belonging to the S . of Laprairie. The usual size of the farms was 3 arpents by 30 , with the exception of some continuations whose depths were irregular ; the usual rent was a capon, valued at 20 sols, for each front arpent by 30 , and $2 \frac{1}{4}$ bushels of wheat for every 90 square arpents. Many persons in this $\mathbf{P}$. would make new settlements if there were any non-conceded lands very
near them, but a few only leave the parish to settle in the townships.-In this parish and in front of the seigniory is the Village of La Nativite de Notre Dame, or Laprairie, formerly called Fort de la Prairie, from having once had a rude defence, honoured with that name, thrown up to protect its few inhabitants from the surprises or open attacks of the five native tribes of Iroquois, who possessed the country in its vicinity. Such posts were established at many places in the early periods of the colony, while the Indians remained sufficiently powerful to resist and often repel the encroachments of the settlers, although at present none of them retain a vestige of their ancient form, and very few even the name by which they were originally known. Laprairie is now a flourishing handsome village of 200 well-built houses; some of them are two stories high and built with stone, in a very good style and covered with tin, giving an air of neatness and respectability to the whole. This village has the advantage of any other in the province in trade and population; its streets are more defined and its buildings more contiguous. Tradesmen of every order, mechanics and shopkeepers are to be seen in cvery direction, and all appear to be thriving. The constant arrival and departure of steam-boats and stages contribute to enliven the place and produce an almost ceaseless bustle and novelty of scene. Here is a catholic church and also a convent of the sisters of Notre Dame, missionaries from the community formerly founded at Montreal by Madame Bourgeois, where all the necessary and some ornamental branches of female education are conducted upon a very good system with a success highly .creditable. This village is the principal thoroughfare between Montreal and St. John's and the landing-place for the northern trade of Lake Champlain. Its population is about 1800, including about 30 artisans, 2 notaries, 4 merchants and 4 justices of peace. This $v$, is distant from

-Isles Fouquet and Bouquet with Islettes aux Jones, lying in the St. Lawrence opposite, were given to the Jesuits along with this seigniory, April 1, 1647.

Statistics.

Title-" ('omession du ler Aril, 1617 , faite par le sienu de Inaz=, aux revirouls pires hisultes, de deux lieues de terre le long du theuve St. Lamont, du coti du Sud, à commencer depuis lisle sili. Míhme jusqu'a un

 fondeur dans len terres tirant vers le Sud."-Riso. d'Intcudance, No. 2 a 9 , folio 12.5 .

Large, Isle du (F.), in the St. Lawrence, off the $S$ of site. Anne in the co. of Champlain. These isles lying at the mouth of the r. Ste. Anne were granted, Apr. 6, 1697, to the widow of Sieur de Lanaudière.

Tith.-" Concession du Gue Avril, 1697, faite par Louis de Buate, Commi de Frominm, Gouverneur, et $J_{\text {fith }}$ Lombat, Intendant, à la veuve du sinur de Iamumbir', Bochmot, Intentant, a la veuse du se troument devint sa terre de Sic. Anme, et a lentre de la riviare et entr' autres celle où est son moulin,
 folio $1 ?$.

La sadee, scigniory, in the co. of Laprairic, consists of two portions of land adjoining the rear boundaries of Chateauguay and Sault St. Louis, enclosed between the lateral lines of Beauharnois or Villechauve and Laprairie de la Madeleine; both pieces extend 112 lugue in depth, bounded in the rear by the т. of Sherrington-Granted, Apr. 20th, 17.50 , to Jean Baptiste Le Ber de Sunneville, and is now the property of Ambroise Sanguinet, esq.-Very little difference is perceptible between this S. and that of Chateauguay and the lower part of Sault St. Louis, with respect to the quality of the land. The river La Tortue, La Petite Rivière and Ruisseau St. Jacques run through both divisions of the S.-The road called
the Black Cattle Road is only a winter road for timber-carriages, and it is impossible for any wheel carriage to pass on it in the spring, not even over that part which lies in thin S . If this road was put into proper repair, it would not only materially benefit the adjacent farms, but prove gencrally useful.-The church of the Parish of St. Cunetunt is near the r. La Tortue in the N. E. division of this $S$. At least one-half of the lands of this parish were conceded before 1759 on the following terms, viz. each farm, measuring 3 apents by 30 or thereabouts, was rented at 1 , $1 \frac{1}{4}$ or at most 2 bushels of wheat, with 40,50 . (ii), or 86 sols tournois, according to the length, breadth or even the situation of the conceded lands. Many inhabitants of the parish are desirous and able to erect new settlements, provided they could obtain lands near their relatives and friends or not far distant from them; the greater part of these young persons, instead of travelling in the spring to other countries, and living during the winter like vagabonds, spending the produce of their travels at public-houses in default of better occupation, would prefer taking farms in the seigniories and would zealously attach themsclves to the cultivation of their lands; and there are certainly excellent lands fit for the purpose in the vicinity, for the s . of Bcauharnois and the townships of Godmanchester, Hinchinbrooke, Hemmingford and Sherrington do not yield in quality of soil to any other places in the district.
More than 100 families belonging to this parish have settled in the r. of Sherrington,

## L' A S

No. 9 , folio 58.

LAssomption, county, in the district of Montreal, is bounded n. e. by the co. of Berthicr; s. w. by the co. of Lachenaye; in the rear by the province line; in front by the $S$ t. Lawrence. It comprehends the parishes of saint Sulpice, comprising Isle Bouchard, Repentigny, LiAssomption, and St. Jacques and the townships of Rawdon and Chertsey. Its extreme length is 39 miles and its breadth 11, containing 208 square miles; its centre on the St. Lawrence is in lat. $4 \overline{5}^{\prime \prime} 47 \mathrm{~N}$. long. $73^{\circ} 23 \mathrm{w}$. It sends two members to the provincial parliament and the place of election is at St. Pierre de L'Assomption. This county is abundantly watered by the River L'Assomption and its numerous branches. The surface is level except in the township of Rawdon.

L'Assomption, river, is supposed to rise in a large lake in the unconceded lands far beyond any actual settlement and 200 miles from its mouth; it may be called a large river, and after bounding the augmentation to Lanoraye and intersecting the augmentation to Lavaltrie, where it is broad and shallow, it traverses the parish of St . Pierre in the $S$. of St. Sulpice in a serpentine direction nearly from $N$. to s ., and after severing
an angle of the S . of L'Assomption, discharges itself into the St. Lawrence above the village of Repentigny, and where the united waters of the rivers Jesus and Des Prairies enter the St. Lawrence. The R. L'Assomption runs through much rough and mountainous country, and is navigable for bateaux to a considerable distance, and much timber is sent down it to the Quebec market in the spring. Its breadth at the village of L'Assomption is about 500 ft . and it is so far navigable for crafts at certain periods; but as its current is obstructed by many battures, the navigation is difficult. This R. abounds with fish.
L'Assomption, seigniory, in the co, of Lachenaye, is bounded n. e. by St. Sulpice; s. w. by the S. of Jachenage ; in the rear by Kilkenny and Rawdon ; in front by the St. Lawrence. It formerly formed part of the land granted, 16 th April, 1647, to Pierre Legardcur (cide the Title of Lachenaye); it now belongs to the heirs of the late P. R. de St. Ours, Esq., except a small portion which is the property of General Christie Burton. This ficf possesses many local advantages, and a variety of soil favourable to cultivation. In the rear the land is higher than in the front, consisting chiefly of a yellow loam, mixed in some places with sand, which when tilled is very fertile, but still perhaps something inferior to the lower parts, where there are many exceedingly fine tracts. Very few grants exceed this property in the proportion of cultivated land, four-fifths being cleared and well settled; the number of farms conceded is 929 , equal to 4173 arpents; 300 lots are in woodland. The most improved settlements are those situated on the banks of the two large rivers. On the uplands, birch, beech and maple are found in great perfection, with some pine of a good growth; but in the valleys the wood is inferior-The principal rivers by which this $\mathbf{S}$. is abundantly watered are the L'Assomption, the Achigan and the St. Esprit; the upper part is intersected by some smaller streams that contribute greatly to its fertility, and are no less ornamental. The L'Assomption and Achigan may be called large rivers, but neither of them is navigable, although both are made use of to convey the timber felled in the upper parts of the adjacent seigniories and townships. The Achigan turns 2 corn-mills and 1 saw-mill.-The Parish of St. Esprit is in the rear of the fief. The first settlement is on the N . branch of the R. St. Esprit

LA
and encroaches on the patented lands in the neighbouring township; it is about one league N . of the church, with which it communicates by an excellent road. The second settlement is on the n. w. branch of the same river and also encroaches upon the r. of Rawdon, particularly on the crown reserve, No. 2 in the lst range : the settlers are Canadians who have possessed this tract for many years.-The Parish of st. Roch occupies the centre of the fief; its handsome church and a few wellbuilt houses round it are seated on a beautiful and well-chosen spot in a bend of the r. Achigan; this small village contains a good public school, for the establishment of which M. Raizenne, the cure, expended $500 \%$ in the space of 10 years, endeavouring, not without success, to prove to his parishioners the advantages of education. Narly half the lands in this $\mathbf{P}$. are of indifferent quality. There is a mineral water, on the farm of Livy Martel, which has been known for more than
half a century as only a saline spring; the salt extracted from it is as pure as that of Liverpool; it is said to be medicinal, and many respectable persons, who pretend to have tasted the waters of Garatoga and who have also drank of this spring, declare that there is no difficence in the taste: it still increases in reputation.-The larish of Repentigung or Xotre Dame de I.Assomplion is nearly in the shape of a Presq' Isle in the front of the fief; it extends to the s. w. limit of St. Sulpiee, and is otherwise bounded by the rivers L'Assomption and $\mathrm{s}_{\mathrm{t}}$. Latwrence, including the settlers on the s . bank of the former river and $\mathrm{I}, \mathrm{l}$ Bourdon at its mouth. All the lands in this P . are conceded; those granted before 1759 are charged with the payment of a pint of wheat and 1 sol argent tourmisis per superifial arpent; the front lands are also charged with the payment of a capon for every 20 arpents

Stutistics.

La Tesserie, fief, in the co. of Portncuf, is bounded s.w. by Grondines; x. e. ly La Chevrotière or Chavigny ; in front by the St. Law-rence.-Half a league in breadth by 3 leagues in depth. Granted, ̌ov. 3, 1672, to Demoiselle de la Tesserie.-The land greatly resembles that of Grondines, although, perhaps, a little better in quality. Three concessions are settled and a fourth conceded.- The rear part is traversed by the
r. Ste. Amne, and on the r. Chevrotiore or Tesseric is a corn-mill, 2 stories high, built of stone. having 3 sets of stones; but one puir only can work when the water is slack: the mill is prettily situated in a picturesque valley formed by the conrse of the river. Captain Carispi lives on the w. bunk below the mill and schooners come up nearly to his door.-This fief is in the parish of Deschambault.

## LA V

Titte.-"Concession du 3me Novembre, 1672 , faite par Jean Talon, Intendaut, à D'́moiselle de la Tesserie, de la quantité de terre qui se trouvera entre la concession faite aux paurtes de l'Hôpital de Québec, jusquàa celle de Chavigny, sur pareille profondeur que celle du dit Cha-vigny."- Résistre dintendance, No. 1, folio 3ゴ.—Régistre

La Teque (Post), v. St. Maurice, r.
La Valliere, v. Yamaska, S.
Lavaltrie and its augmentation, seigniory, in the co. of Berthier, is bounded $\mathbf{N}, \mathrm{e}$. by Lanoraye and its augmentation ; s. w. by Sit. Sulpice ; in the rear by the $T$. of Kildare; in front by the St. Lawrence.-The original grant consisted of $1 \frac{1}{2}$ league in breadth and depth, and was made, Oct. $29,16 \%$, to Sieur de Lavaltrie : the augnentation, of the same breadth and $2 \frac{1}{2}$ leagues in depth, was granted to Sieur Marganne de Lavaltrie, April 21,1734 . Both grants remain in the possession of the heirs of the original grantee. -This is a very valuable property; the land is generally level from the rear to the St. Lawrence, whose banks here are rather low. The quality of the soil varies a little, but the major part is good and productive, and is either a light-grayish earth, a yellowish loam, or clay mixed with sand; nearly the whole is under culture, and yiclds ample crops under a system of husbandry in several respects creditable to the farmers. Wheat and grain form the chief part of the disposable produce of this tract, and good hay in great abundance is made from some very extensive and excellent ranges of meadow land. The n . L'Assomption winds its broad but shallow stream through the upper part of the seigniory, and the lower portion is watered by the rivulets Point du Jour and St. Antoine and the little river St. John, which turns. a corn and saw mill near the St. Lawrence into which it falls.-The original grant forms the parish of St. Antoine de Lavaltrie. The 2nd grant or augmentation forms the parish of St . Paul de Lavaltrie, and the church and the chapel are in the concession s. of the rivulet St. Pierre, over which is a bridge, near the church, communicating with a little village, from which a good road leads to the Village of Industry. This seigniory contains 16 ranges of concessions, divided into 746 lots, and about 32,000 acres are under

LA V
good cultivation. Houses are spread among the concessions, and thickly placed by the sides of the roads that lead along the St. Lawrence; the presbyterian church, the parsonage, a chapel, the manor-house, with a few others, are situated a little E . of the r. St. John, and at no great distance from the wood of Lavaltrie; which, even in Canada, is worthy of notice for its fine, lofty and well-grown timber-trees of various kinds.-The main road from Quebec to Montreal passes through this wood and along the St. Lawrence, presenting for several miles a succession of beautiful and romantic scenery. Besides the main road, there are several that lead into the populous seigniories on each side, which are intersected by others running at right angles into Kildare, and opening a most convenient and easy intercourse with the neighbouring townships. The rear boundary line of this seigniory had not, until the year 1811, been accurately measured; when it was discovered, that in addition to its proper depth of four leagues, there was still a space of about a mile in breadth between it and Kildare, which had always been supposed to form part of the grant, and many persons had settled thereon with titles from the seignior of Lavaltrie ; this extra space is very well cultivated and has a church with a great many houses, which were built under the belief which all the parties entertained that they were within the just limits of the grant : under these circumstances a compromise was made, and an order passed the governor and council, in 1812, to grant the cultivated part to the present proprietors of the seigniory, and to reserve the remainder for the use of the protestant clergy and future disposal of the government.-The Village of Lavaltrie is in the P. of St. Antoine, and is seated at the foot of a small declivity on the verge of the bank of the St. Lawrence, which is at that place very low.From the appearance of the settlements in the vicinity the inhabitants appear to be in easy cir-cumstances.-In the Parish of St. Paul all he lands are conceded and surveyed, but none of them were conceded prior to 1759 . The roads in this parish are very indifferent.-The Village of Industry, about 3 m . from the church and village of St. Paul, is prettily seated on the right bank of the r. L'Assomption and near a waterfall, many feet in height, the noise of which is heard at a considerable distance. Only a few years ago the site of this $v$., before the mills were built, was

LA U
covered with forest：there is now much land in cultivation，and 40 houses have been built，besides two fine mansions inhabited by Messrs．Joliette and Leodle，who are the joint proprietors with their brother－in－law，M．de Lanaudiure，the seignior of Lavaltric．It is to the spirit of enter－ prise evinced by these gentlemen that all the im－ provements in this place must be attributed；the most curious and the most worthy of the traveller＇s attention is the mill，which was begun by the proprietors June 1，l：923：it is solidly built with stone，three stories high， 120 ft ．long and 4.5 ft ． wide；it contains 3 sets of stones for grinding

## LA U

wheat，besides others for grinding barley；also conveniences for carding，fulling and sawing，and machinery for raising timber into the mill．The river L＇Assomption supplies the mill with water， and，near the mill－head，it is of immense depth；and at the distance of a few feet is a chain of pebbles， scarcely covered with water，forming the fall of the mill，which is thereby most advantagcously situated：the mill－dam is remarkable for its size． construction and solidity．－In front of the S．are the two Isles de Lavaltrie，appendages to the grant．

Lauzon，seigniory，forming the co．of Dorches－ ter，is bounded n．e．by La Martinire；s．w．by Tilly，Gaspé and St．Giles；in the rear by st． Etienne and Jolliet．－61．in breadth by 6 in depth．

Granted Jan．15th，1633，to M．Simon Lemaitre． －The soil throughout this extensive property． which contains the whole co．of Dorchester，is senerally of a superior deseription；it includes almost every variety，but a rich lightish loam pre－ dominates，and，in situations lying rather low，it fine dark mould．In the front but little timber remains；in the interior and towards the rear some oak and loceh，maple，birch and pinc in sreat plenty；of the inferior sorts，cedar，hemlock and spruce are vory abundant．－It is watered by the rivers Chaticre，Beamivare，Etchemin，Boyer， and by several other inferior rivers and streans． The Chaudiere and Etchemin traverse the S．s．e． and the Beamrivares．w．Neither is navigable for boats or even canocs to any distance，on accomit of the great number of falls and rapids：their banks， but most particularly those of the Chamdiare，are lofty and steep，presenting in many places alnost

## L A C Z O N.

perpendicular rocky cliffs. The banks of the St. Lawrence are also high and steep, covered with trees of small growth in some places, but cleared and cultivated in others: the beach is sandy, considerably encumbered by rocks, with almost a regular reef stretching along the low water line; from the top of the bank the land rises ly ridges and small hillocks (many of which are rocky) gradually to the rear.-There are two extensive domains, several small fiefs, and four churches dedicated to St. Joseph, St. Nicolas, St. Henry and St. Anselme. The cultivated land, which amounts to one third of the whole, is divided into numerous ranges of concessions, besides five ranges of concessions in wood-lands towards the rear. The most thickly settled and best cultivated parts of this valuable property are situated along the front and towards the interior, throughout which may be seen a succession of fine arable land under a very good system of husbandry, rich meadows, arood gardens and orchards; but the produce of the latter is not of a very superior kind; the farm and other houses are neat and substantially built. In the other concessions agriculture is not so far advanced; on the Chaudire the best lands lie at some distance from the banks, nearly the same is the case with those on the Etchemin, the margins of both being generally flat rock with only a shallow covering of soil. Almost all the ranges are intersected by roads, and the main roads are very good and kept in excellent repair. Nearly opposite to Quebec, and on a little river which discharges itself into the St. Lawrence, are the extensive and valuable premises called the Pointe fect; $M / I_{s}$, and farther w., at the mouth of the Etchemin, the no less important establishment calied the Etchemin Mills, from both of which large exportations of flour are annually made. From Pointe des Percs to the r. Chaudiere, the beach is almost wholly occupied as timber grounds. From Pointc des Peres and other places, in front of the S., are ferries to Quebec.-This S. is very populous: its quota of militia is large, and well disciplined.

In the Parish of St. Henry de Lauzon the lands granted before 1759 were 3 arpents in front, by 30 and some by 40 arpents in depth : 20 sols per arpent were paid, with one sol quit rent, and a reservation of sufficient timber was made for the purposes of building mills, churches and other public edifices.-The unconceded lands in this
parish are considerable, and all fit for cultivation ; but there is no road across them, and the greater part has been surveyed. Many young parishioners are both willing and able to make new settlements if they could obtain lands near home, or at a little distance, and there are more lands than could be required to satisfy this demand, and those lands are in general of good quality.

The Parish of St. Joseph de la Pointe Lévi, by the regulation of Sept. 20, 1721, confirmed by an order in council, Mar. 3,1729 , extends $3 \frac{1}{2}$ leagues and 4 arpents; viz. 21 arpents in Mont-a-peine, beginning at the house of Joseph Turgeon, fief de Vitr: 10 arpents, Martinière 15 arpents, and 3 leagues of Lauzon to the r. Chaudicre. At least one half of the lands in this $\mathbf{P}$. were conceded before 1759 , each containing from 4 to 12 arpents in front by 30 or 40 in depth. These lands were granted on the conditions of paying to the seignior annually one sol for each superficial arpent, and to give for each land of 3 arpents in front, two days de corvées and some capons, with a reserve of oak timber for the luilding of ships and mills. A considerable number of persons are desirous and able to make new settlements if they could obtain lands in the vicinity of their parish, or at a little distance from their parents or friends; and there are, near the limits of the parish, a certain extent of lands that are considered to be of good quality.-No one goes hence to settle in the townships.-Some of the youths who leave this parish settle in the neighbouring parishes, and others leave their homes to undertake long voyages, from which few return.

The Town of Aubigny, near Pointe Lévi, was so called in honour of the late Duke of Richmond, and was laid out by Sir $\mathrm{J}_{\text {ohn }}$ Caldwell in 1818. It is built opposite the city of Quebec, to which steam and other boats ply almost every minute. It contains from 40 to 50 houses and a Protestant church; some of the houses are built with sufficient taste to entitle them to the appellation of elegant cottages. The streets and building-lots are regularly laid out and of sufficient size ; but the place has not increased in buildings and population so much as might have been expected, on account, chiefly, of the high price demanded for building-ground. The site of this little town is very elevated, the bank of the St. Lawrence being there very high. Below the town is a row of handsome cottages with an hotel, carried on by Mr. M•Kenzie in a very elegant and superior

## LE E

style: here the citizens of Quebec have their country-houses, to which they retire not only for recreation but convenience, as the river is crossed in 15 minutes. In the rear of Aubigny are the heights of Pointe Léri, where batteries were erected by the Americans. A little below Mr. M‘Kenzie’s hotel and between it and Pointe aux Peres is the place where the Indians chiefly encamp cery summer when they repair to Quchec for the purpose of receiving their annual presents, and, the weather being fine, a concourse of visitors from Quebec is attracted to view the Indian camps and to enjoy the country. Aubigny may be considered almost a suburb of Quebec. The episcopal church is remarkable for its commanding position and is a neat edifice of wood. A great number of ferry-boats ply to and from Quebec at a fixed moderate price. The watermen, in all seasons, are ready with their canoes, which are large, very strong and made out

L E E
of a single trunk of a tree and often out of two trunks strongly united together; they are managed with much dexterity and sometimes carry as many as 8 passengers cach, besides 3 or 4 men employed as rowers.
 of Lept. 21,1721 , confirmed by an order in council of Mar. 3, 1722, extends 3 leagues and 17 arpents in front from the $r$. Chaudire to fief Baudouin in the S. of Tilly; and by the same order the church, cemetery, presbytery and garden for the cure were directed to be placed, pursuant to the wishes of the inhabitants, on two superficial arpents, wiven for the purpose by Jacques Beaufort ; besides which Sieur Charest voluntarily gave 4 arpents in front $\mathrm{l}, 40$ in depth. - In this $s$ are several fiefs abutting on the st. Lawrence, amons which are those called C'rsuline, Jesuits, Vilmai and Maramion.

Statistics of the Parishes of St. Henry, St. Lasclme, St. Joseyh and St. Nicolas.

Leech Ponds, $i$. Bastonais (R.)
Leeches Pond and Stream, in the T . of Hereford. This small stream rises in Walls Pond and is obstructed by falls, making good sites for
mills ; its only advantage of transport is the running of logs. The pond, in the s. W. angle of the $r$, adjoins the province line; it is nearly 2 miles long. and above half a mile broad.

Lefds, township, in the co. of Megantic, is bounded N. e. by Sit. Giles; s. w. by Ireland ; N. w. by Inverness, Nelson, and Ste. Croix ; s. e. by 'Thetford and Broughton.-Except in the n.w. quarter, where the land is poor and very stony,

## LE P

the soil is generally of excellent quality, fit for the growth of all kinds of grain, flax, hemp, \&c.This $\mathbf{T}$. is well stocked with various timber, as beech, birch, maple, basswood, elm, ash, ironwood, spruce fir and hemlock.-It is very well watered by the Becancour, which divides itself into several branches, and by many small streams.-In the last few years cultivation has made considerable progress, and the settlements have increased, particularly along Craig's Road and in its vicinity. One quarter of the $r$. was originally granted to Mr. Isaac Todd, but at present that tract belongs to the heirs of Joseph Frohisher, Esq. Several individuals have obtained grants, and George Hamilton, Esq., of Quebec, holds 8000 acres by purchase from government, as lands were sold for the purpose of defraying some of the expenses incurred in constructing Craig's Road-Ungranted and unlocated 5,205 acres.

Le Gouffre (S), $v$. Gouffre.
Lennoxvilie (V.), v. Ascot, t.
Lepage and Tibierge, seigniory, in the co. of Rimouski, is bounded n.e. by Pachot; s.w. by Lessard; in front by the St. Lawrence.-This S. and its augmentation appear to have been granted at two different times, with an interval of a few months only: the S. was granted Nov. 14, 1696, and the augmentation on the 7th of May following. The grantees were the same in both instances, viz. the Sieurs Louis Lepage and Gabriel Tibierge. The title to the first grant represents it to extend from Pachot to Lessard, with a depth of one league; the grant of augmentation was for 2 leagues in depth, adjoining the rear of the first grant and extending, on one side, to the grant of Sieur Pachot and on the other to the grant of Sieur Lessard, comprising the breadth of both, with the isles and islets, in that extent. As there can be no isles and islets in the augmentation, pro-

## L E P

bably it was granted in lieu of the original concession, particularly as the dates are so nearly coeval. If this idea be correct, the ambiguity will cease and the depth of the $S$. be easily proved to be 2 leagues from the St. Lawrence and not from the original grant, and its width, in front, from Pa chot to Lessard, and in the rear from the N. E. line of the former to the s.w. line of the latter. Thus the rear line will run as far back as the first lake in the $\boldsymbol{r}$. Mitis.

Title.—" Concession du 14me Novembre, 1696, faite aux Sicurs Louis Lepage it Gabriel Tilicrere, d'un terrein qui se troure entre la coneresion du Sieur Pachot, et celle qui se troure entre a conersion du sieur Pachot, et celle du Sicur Lcssurd, situce au lieu dit Rimousky, sur le fleuve

L'Epinay, seigniory, in the co. of L'Islet, lies in the rear of St. Thomas; 3 leagues in breadth by $1 \frac{1}{2}$ in depth on an average. Granted, Apr. 7th, 1701, to Sieur de L'Epinay.-The soil is good, being a yellowish loam, or a good black earth; in front the surface is sather irregular, and towards the rear it becomes mountainous. The part adjoining St. Thomas is thickly settled and there cultivation has made considerable advances; but this portion is small compared to the extent of the $S$. The timber consists of maple, birch and beech in profusion, with some very good pine, besides a great plenty of inferior sorts.-Watered by a few small streams descending from the mountains and running into the Rivière du Sud.- In the rear of this S . are some fine valleys, particularly at the distance of about 8 leagues.

Title.-_"Concession du 7me Avril, 1701, faite par Hector de Calliere, Gouverneur, et Jean Bochart, Intendant, au Sieur de l'Efinay, du peu de terrein qui se trouve entre la Seigneurie de Jean de Paris et celle de la riviere du $S u d$, près de Québec, lequel terrein se termine en triangle au fleuve St. Laurent, et tient d'un bout aux terres non-concédées, et de l'autre par la pointe aut dit fleuve; ensemble que le dit terrein sera borné à la hauteur de la ensemble du dit Jcan de Paris, par une ligne parar de la concession Nord-est et Sud-ouest jusqu'à celle paral.ele qui sera tirée Sud."-Rigistre d'Intendance, No. 5, folio 32.

L'Epinay or St. Joseph, seigniory, in the co.
of Quebec, joins St. Ignace and is bounded by the r. St. Charles in front and the $T$. of Stoneham in the rear. Eleven arpents in breadth by four leagres in depth. Granted, on the last day of Februatry, 1626, to Louis Hebert.-The soil is light and sandy, intermixed with clay about the front ; proceeding inwards it changes to a black mould and near the mountains is a good yellow loam. Near the river St. Charles are fine meadows and pastures.

Tith.-" Conec-wion du dernier jour de Fevrier, IG:2h. faite par Mr. le Due de Vontadoar, à Lonios Hebcit, d'une lieue de terre de tront, pris de la ville de Quateo, sar lat riviere St. Charles; sur tutitre lieues de profondeur."-

Lievres, aux, river, rises in numerous lakes lying far in the waste lands in the rear of Buckingham and Portland. It is a large, wild and rapid stream, remarkable for the peculiar singularity of its bends and the varieties of its width. Its source is near that of the Gatineau, with which it runs parallel for a considerable space. It traverses Buckingham in a general course from N . to s., winding variously and forming, at intervals, several bays and spacious basins, until it reaches the middle of the first range, where it divides into two principal channels, that of the s. E. running towards the Ottawa, while the other running s. w. disembogues into an extensive pond lying parallel to the Ottawa and extending from lot No. 15 to 22. This pond communicates with the Ottawa through the entrance of the Lievres, whose width at its juncture with the former is about 5 chains. About 2 miles up the river, and upon the division line between the list and 2 nd ranges, is a basin nearly circular perfectly accessible by the steam-boat, which plies between Grenville and Hull: for about 4 m . above the basin the rapids impede all navigation, after which, for 30 m. , it is navigable for bateaux and the water is very smooth : about 90 m . up this r . is Lake des Sables, at the head of which this $R$. is still navigable for a great distance to other lakes. The Indians who trade in the back country ascend this r. in canoes. Along the first thirty miles of the aux Lièvres, as far as the Falls de Montagne, there appear to be considerable tracts fit for settlement, but after ascending the ridge which occasions these falls and following the northern waters of the r . upwards of 150 miles, or perhaps about 80 miles in a direct line, it appears to be almost entirely what is called a good hunting country, which may be interpreted a very bad settling country, being rocky, swampy and hilly, with but little good soil which is confined to the valleys here and there. The hills frequently rise abruptly to a height of

400 or 500 feet above the general level, and there are abundance of small lakes well stocked with the finest trout.-The banks of this . are elevated and afford many very excellent mill-sites, besides those in the 4th range of Buckingham, where the mills of Mr. Beaumont and Mr. Bigalow are erected.-This R . is well stocked with fish.

Lingwick, township, in the co. of Megantic, is bounded N. E. and in front by the unsurveyed townships of Stratford and Hampden; s. w. and in the rear by Bury and Weedon:-This tract is very similar in quality to the level district of Dudswell : the timber is also of nearly the same de-scription.-Watered by several streams of tolerable size that run into the St . Francis. The w. half has been surveyed and granted to divers individuals.

Linctot (F.), v. Dutord, F.
L'Isle, de, river, rises in the т. of Roxborough, in Upper Canada, and, traversing the $\mathbf{T}$. of Kenyon, enters the lower province at the s.w. angle of the $\mathbf{T}$. of Newton, and running for some distance near its $s$. boundary traverses the location of Lt.col. de Longueuil; then intersecting the s. angle of New Longueuil it enters the S. of Soulange and falls into the St. Lawrence at Côteau du Lac a little below Lake St. Peter.

L'Isle de la Fourche, v. Nicolet, S.
L'Islet, county, in the district of Quebec, is bounded N.E. by the co. of Kamouraska; s.w. by a line parallel thereto running from the w. angle of the $S$. of the river du Sud, prolonged to the s . boundary of the province; $\mathrm{N} . \mathrm{w}$. by the St . Lawrence, together with all the islands in the St. Lawrence nearest to the county, and in the whole or in part fronting it ; and s. e. by the s. boundary of the province.-It comprises the seigniories of St. Roch des Aulnets, Reaume, St. Jean Port Joli, Islet, Lessard, Bonsecours, Vincelot and its aug., Cap St. Ignace, Gagnier, Ste. Claire, Rivière du Sud and Lepinay.-Its extreme length is 82 miles and its breadth $37 \frac{1}{2}$, containing 3034 square miles ; its centre is in lat. $46^{\circ} 40^{\prime} 30^{\prime \prime} \mathrm{N}$. long. $69^{\circ} 52^{\prime} \mathrm{w}$. It sends two members to the provincial parliament and the place of election is at L'Islet.-The surface of this county is uneven and mountainous, being traversed by detached rocky ridges which appear from the St. Lawrence like a continued range of mountains, presenting a background to handsome and flourishing settlements. The scenery in many places is varied and inte-

## LIS

resting. The county is abundantly watered by rivers and several beautiful lakes; the principal rivers are the Rivière du Sud and its various branches, the Trois Saumons, Port Joli and Rivière Ferré, all of which descend to the St. Lawrence. In the rear it is most beautifully watered by the $\boldsymbol{r}$. St. John and its large and wide spreading branches: this river runs an average course of about 50 miles from the $S_{t}$. Lawrence in a parallel direction towards the $\mathrm{N} . \mathrm{E} . ;$ the land on its borders and in its vicinity is of good quality and fit for settlement. Although this county appears mountainous it presents many tracts of good arable land. The houses and cultivated farms in the front grants, particularly on the shore of the St. Lawrence, are remarkable for handsome villages and churches, which considerably heighten the beauty of the scenery: the most conspicuous is the village of S t. Thomas in the $S$. of Rivière du Sud, which, from its size, the elegance and magnitude of its conspicuously situated church, its handsome houses and edifices, and the bridges, called the Regent and the Prevost, over the du Sud and the Bras St. Nicolas, deserves the particular admiration of the traveller. The population consists of French Canadians.

Statistics.

L'Islet, seigniory, in the co. of L'Islet, is bounded by the St. Lawrence in front ; by Lessard in the rear, and lies between Bonsecours and St. Jean Port Joli.-One league in breadth by two in depth; granted May 17th, 1677, to Demoiselie Genevieve Couillard.-The front is low, but receding from the river towards the mountains the land rises gradually ; the soil in general is good, producing grain of all kinds; in the rear it is a

## LIV

light-coloured loam that continues up to the high lands. About one-third is under orcupation and is tolerably managed and thickly inhabited.-Watered by a continuation of the Bras s . Nicholas and by several small runs of water.-Beech, birch and maple are the prevailing kinds of timber, but there is likewise some pine of very good growth. -The church and parsonage-house are close to the st. Lawrence, near a point of land on which is placed the telegraph station, No 7. At high water this point is completely insulated, from which circumstance it derives its name of Islet de st. Jean. -This S. is divided into 4 ranges of concessions; the 1 st and 2 nd are settled, and the 3rd and part of the 4th are fit for settlement. Almost all the land in the 3rd and 4th ranges belongs to proprietors of land along the St. Lawrence, who thence derive their fire-wood, which circumstance in some degree prevents the settlement of those ranges. In consequence of there being no other lands to concede, many of the youths desirous of settling quit the seigniory.

Little Village, $c$. Notre Dame des Anges, $\mathrm{S}_{\text {. }}$.
Livaudere or Descheriux, in the co. of Bellechasse, is bounded in front by V'incennes; N. e. by the augmentation to Beaumont; s. w. by Alont-i-Pcine; in the rear ly St Gervais.-

About 3 of a league in front by 3 leagues in depth. Granted, Sept. 20, 1\%i)4, to Sieur Pean de Livaudiere.- Cpwards of one-third of this tract is in a very high state of cultivation. The soil, rich and fertile, produces large crops of grain, \&c.; the surface is somewhat uneven, but not to such a degree as to cause serious impediments to agriculture, except near the rear boundaries where the elevation is abrupt. There is a great quantity of beech, birch and maple; from the latter, considerable quantities of sugrar are made every year.-All the lands are conceded and the farms are 4 arpents in front, but the grantees pay for only 3 because they are not 40 arpents in depth, and the rent is 40 sols per front arpent and 1 sol for quit-rent. This S. is well watered by theriver Boyer, each side of which presents some of the best cultivated land in the different concessions: towards Vincennes are also many specimens of very good husbandry. Roads, gencrally kept in thorough repair, pass through the $S$. to the main road on the river Etchemin.-The Parish of $\mathrm{S}_{\mathrm{t}}$. Charles is bounded by the 2nd concession of Beaumont; s. E. by an arm of the r.du Sud; n. e.by St. Michel; s.w. by Lauzon. All the lands are under cultivation, and those parts that lie in Beaumont, Livaudiére and Martiniére are supposed to have been conceded, at least the greater part, before 1759. The extent of each farm is 3 arpents in front by 40 in depth, paying 1 sol quit-rent and the annual rent of 2 or 3 livres, argent tournois, for each arpent, with an obligation of grinding their corn at the seignorial mill, and a reservation of timber materials for works of public utility, such as churches, presbyteries, and manor-house, also the right of retraite and the obligation de tenir feu et lieu dans l'an et jour; a breach of covenant occasions the forfeiture of the land. The church and parsonage are on the $n$. w. bank of the Boyer.

profondeur; bornée par devant au bout de la profondeur de la Seigneurie de Vincemncs, d’un côte au Nord-est à la ligne de la Signeuric de Beaumont, d'autre cisté au Sudouest a la sejgaturie de Mont-á-peine, et par derrière aux terres non concédécs, pour la présente concession ne faire néanmoius qu'une seule et même seigneurie avec la moitié de celle de la Durantaie dont le dit Sieur Pean est pro-prietaire."-Résistre d'Iutenduncr, No. 9, folio $2 \mathbf{2 5}$.

Lochaber and Gore or augmentation, sometimes called Suffolk, in the co. of Ottawa, is bounded N. E. by La Petite Nation; s. w. by Buckingham; in the rear by waste lands; in front by the r. Ottawa.-This r . is equal if not superior in fertility of soil to Hull, Templeton, or Buckingham, and is well timbered. 13,261 acres were granted in 1807, to Archibald M Millan and others, emigrants from Scotland; of this portion very little has been cultivated. Along the front, the river forms several deep bays, in which direction the land is so low that it is frequently overflowed; but if the settlements should become more numerous, embankments might be raised to repress the incursion of the waters; this part would then become good meadow, and, at a short distance towards the interior, much of it would be good arable. Proceeding to the rear, the land is broken and rugged up to the ridge of mountains, beyond which there is no part improvable, at least in their vicinity. Much of the timber, both oak and pine, is fit for naval purposes. Several rivers and streams wind through the township, but neither of them is navigable for boats, though timber may be floated down them to the Ottawa, which here expands greatly in breadth, and has several islands all well covered with wood; the largest is a mile long, and about a quarter of a mile broad. The Blanche, which is the principal river, spreads into 3 branches, rather more than a mile from its junction with the Ottawa into which it falls near the centre of the front of the т.—Black Bay which lies in front of Lochaber Gore is about $4!\mathrm{m}$. long and its extreme width is $1 \frac{1}{4}$ mile.-Cingranted and unlocated in the $т$. 17,600 , in the Gore 3,388 acres.

## L 0 N

Lombrettre, river, in Côte de Beaupré, rises in the s. w. extremity of the parish of La Petite Rivicire, and traversing the p. of it. Joachim, crosses the road to St. Paul's Bay and joins the $\mathbf{r}$. Ste. Anne.
Longuevil, seigniory and barony, in the co. of Chambly.-The seigniory, is bounded N. e. by Tremblay and Montarville; s. w. by Lai Prairie; in front by the st. Lawrence; in the rear by the barony and West (hambly.-O leagues in breadth by 3 in depth. Granted, January 26, 1700, to Sicur Lemoine de Longuenil and is now the property of Mathame Grant, baroness of Longucuil.-This tract from front to rear is quite level, the soil generally a fine black mould, very congenial to the growth of grain and most other agricultural produce ; towards the middle is a swampy patch, called La Grande Sircomue, and at a little distance from the front is another, called La Pelite Sarame; but a good system of drainage hats proved so beneficial, that they are both nearly converted into arod fertile land. Almost the whole of the $\mathbf{S}$. is culuceded, and full two-thirds are in a grood state of cultivation; it is more sparingly watered than, perhaps, any other seigniory on the banks of the Sit. Lawrence, as the little rivulet S . Antoine near its front, and another equally insignificant that crosses the lower corner into the r. Montreal, are the only streams. Many good roads cross it nearly in all directions; but the most public are, one leading from the village of Longueuil to Fort Chambly and Fort St. John's; the middle road of Cite Noir to Longueuil ferry ; and the upper road from Laprairie to the same place. One-third of the annual produce, except peas and potatoes, is'gencrally sold. The $s$. is divided into seven concessions, which are settled as follows:

| 1. Rang du Fleuve |  | 1.an |
| :---: | :---: | :---: |
| 2. Coteau Rimpe and Ruisseau | St. 6 hathe | - 31 |
| 3. Tremblee and Savanne | . . | - : ${ }^{4}$ |
| 4. Gentilly | $\cdots$ | 20 |
| 5. Grand Linny, or Cite Nuir | . . | 61 |
| 6. Chemin de ( lambly | - | I 11. |
| 7. Inle Ste. Margumite | . . | 3 |

The $I$;llnge of Longueuil is on the shore of the St. Lawrence and near the rivulet St. Antoine; it contains 65 houses including a parsonage and 2 schools, at cach of which 16 scholars are instructed. Near the village was the ancient fort

L O N
of Longueuil, one of the many formerly raised as barriers against the Iroquois nation ; but its site is now covered by a very handsome well-built church, 130 ft . by , which stands on the west side of the road to Chambly. The situation of this little place and its vicinity is so pleasant, that many persons of the first respectability reside hereabout; it was long the favourite retreat of the late catholic bishop of Queber, M. Deneaux, who when raised to that dignity would not forsake the spot he so much admired. The Isle Ste. Hiline which belongs to government, lying nearly in front of Montreal, Isle Ronde with several of smaller size, and Isle au Heron, are appendages to this s . St. Helene, being rather high, commands a view of the city of Quebec in its most favourable point; it is very fertile, exceedingly well cultivated and embellished by some very fine timber. On this island are the extensive mills called Grant's Mills.

The Betrom! of Longumil is bounded N. E. by Chambly; s. w. by Laprairic and De Léry ; in front. by the Richelieu; in the rear ley the spigniony3 leagues in front. Granted July 8, 1710, to the Baron de Longueuil and is now the property of Madame Grant, baroncss of Longueuil.-This is a very level and excedingly fertile tract, well settled and cultivated ; it is traversed by the great southern road and by several other rouls.-The concessions made prior to 1759 were granted on the terms which the grantees now pay, viz., 4 livres 10 sols and $2{ }^{1}$ bushels of wheat for each farm of 3 arpents in front $b y 30$ in depth.-This barony is watered by the Richelieu, and is convenicutly situated for water-carriage. It contains the town of Dorchester and Fort St. John. Doichester scarcely merits the name of a town, but will probably in a few years rise to some importance, from being so favourably situated as to become an entrepot for merchandise in its transit, either by land or water, between this province and America, both in summer and winter: during the latter season a very brisk intercourse taken place by means of sleighs travelling upon the frozen surface of the lakes and rivers. Before the last war the timber trade was caried on here to a great extent. . I large proportion of the inhabitants are American emigrants, who have sworn allegiance to the British government; some of them keep the best imms in the place, and are proprietors of the stage coaches that travel regularly

LON
to Laprairie and to the states of Vermont and New York．－Fort St．John，on the w．bank of the Richelieu，is of an irregular figure，and is an old frontier post ；but little can be said in favour of its construction，or of the defences that surround $i t$ ，as they are merely field works strengthened by palisades and picketings；within the fort are 20

L O N
houses，including public storehouses，magazines， \＆c．The British naval force employed on Lake Champlain has its principal station and arsenal here，where vessels mounting from 20 to 32 guns have been built．－The seigniory and barony are within the limits of the parishes of St．Antoine， St．Luc and Blairfindie．

Longeeuil，New，seigniory，in the co．of Vaudreuil，is separated from Upper Canada by the province line which forms its $s$ ．w．boundary；ex－ tending along the N．shore of Lake St．Francis it is bounded n．E．by Soulange，and is separated on the N ．from the r ．of Newton by the location of 1000 acres granted to the late Lieut．Col．de Longueuil．－2 leagues in front by 3 in depth．

Granted to the Chevalier de Longueuil，April 12， 1734，and now belongs to Saveuse de Beaujeu， Esq．－This tract lies rather low；on the N．f． side part of a great swamp spreads over a large space covered with cedar，spruce，fir and hemlock， the usual tenants of such a soil，but which re－ quires only draining to become good and profit－ able land．To the s．w．the ground rises much above the level of the opposite side，and abounds with many spots suitable to the production of grain，hemp and flax．－The woods afford abund－ ance of fine trees，but beech and maple most pre－ dominate．－The rivers Delisle and Baudet，on which are 2 bridges，a corn－mill and two saw－mills， water this $S$ ．very conveniently：the first crosses it diagonally from Upper Canada，where it has its source，into，the $\mathbf{S}$ ．of Soulange ；and the latter，at the s．w．angle，descends from the upper part of the T．of Lancaster to Pointe au Baudet：neither is navigable，though on the latter，whose banks are much higher and current stronger，large quan－ tities of staves and timber felled in its vicinity are

## LO N

floated down to the St . Lawrence in the spring, when the stream is swelled by the melted snow and ice; they both turn some good corn and saw-mills.-The front of the seigniory, along the St. Lawrence, between Anse aux Bateaux and Pointe au Baudet, is very low, and overflowed so frequently as to make it impracticable to maintain a proper road; but in winter, the route upon the ice along this part, and on the north side of the lake into Upper Canada is preferred, as being shorter than the road leading ly the side of the river Delisle: this road is, however, called the principal one between the two provinces, but it will require much amendment to render it so convenient as it ought to be for the increasing intercourse between these parts.- The greatest part of the concessions are near Anse aux Bateaux and Pointe au Baudet; on each side of the river Delisle; and still further to the rear in the Ciites St. George and Sit. André, where a number of Scotch families are settled whose industry has so far benefited their lands, that they are now among the best parts of the scigniory, although the other conceded lots are in a very fair state of agricultural improvement. The male inhabitants are mostly vayageurs, a name given to the persons employed in the $\mathrm{N}, \mathrm{w}$. fur trade, whose wandering mode of life, toilsome and laborious in the extreme, has more charms for them than the more regular and profitable pursuits of husbandry.All this $s$ is fit for cultivation, and it is supposed there are about 2101 farms unconceded which would be soon taken if they were surveyed and the terms not too severe; these non-conceded lands, which for the most part are behind at the ends of the farms of 20 arpents, would be preferred by the inhalitants provided their lands were thereby increased to 40 arpents. There is no road across the non-conceded lands, and all the lands on the Citit north of the r. Delisle have been conceded, which extead only 20 arpents, but at the end of these 20 arpents the lands have neither been conceded nor surveyed; these lands the grantces ardently desire to have in concession, in order to lengthen their farms, although all the wood has been cut down and removed.-No lands were conceded previous to 1759.-The Parish of St. Polycarp is co-extensive with the S., and contains a chapel and about 500 families; although there is no village, this p. contains blacksmiths, joiners, carpenters and

## LoT

tanners.-There are 5 small isles in front which are appendages to the $s$.

Lessaumiere, seigniory, in the co. of lamaska, is bounded n. e. by Baie st. Antoine; s. w. by St. Françuis; in the rear by Pierreville; in front by the St. Lawrence.- One league square. Conceded Oct. 29, 16:2, to Sieur de la Lussaudiere, and after it had lapsed to the French crown it was granted, July 26, 16is; to Sicur de Lamotte de Lucio re.-The land is generally of a better quality than that in the adjoining seigniory of Yamaska, with less of a sandy description: the front is so low as to le overflowed in the spring by Lake it. Peter, and consists of very fine meadow and grod pasturage: towards the rear the ground rises gradually, with some patches of fair arable land. The timber is not of the best kinds, particularly in front. About one-third of the seigniory is cultivated, and the most improved settlements are contiguous to the main road on either side, where some of the lots and farms denote a favourable state of husbandry.

7'ith--' Concession du 26 me Juillet, 1683 , faite par Mesur. Lifidre de la Burre, Gouvernetr, et de Míulles, Intendant, au Liew de Lamoth' de Lariór, de la terre et sijnumbic de la Lussumit, concédée par Mr. Taten, In-

Machiche, rivers, in the co. of St. Manarice. The firande Rivière Machiche, or Rivière a Marcin, rises in a large lake near the N. W. extremity of the rear boundary line of caxton, and running s. through that r. traverses the rear part of Gatineau and enters Dumontier; where, meandering on the boundary line of those seigniories, it penetrates the N. e. angle of (irosbois or Machiche, and in that $s$. taking a sudden turn to the $s$. falls into Lake St. Peter.-The Petite Rivitre Machiche rises in several small lakes in the $r$. of Caxton also, and, running st through the lands belonging to the Forges of Sit. Maurice and part of ficf sit. Etienne, intersects the N. w. angle of Pointe du Lac and traverses the front of Gatineau; it then enters Grosbois and soon after falls into Lake St. Peter one mile $s$ of the church.--These two small rivers are about 18 m . from the $\mathrm{n} . \mathrm{sit}_{\mathrm{t}}$. Maurice and are of sufficient force to drive mills but are not navigable, the Greater $M_{\text {ath }}$ biche being capable of carrying butcaux only as far up as the mill, half a mile from its mouth; down this r . however lumber has been floated.

Machiche (S.), v. Grosbois, $s$.
Madame Drapeau, fief, in the S. of Eboulemens, fronts the St. Lawrence, opposite Isle aux Coudres.

## MAD

Madame Drapeau, fief, in the Island of Orleans near the s. w. end.

Madame Reid, fief, in the S. of Livaudiére.
Madawaska and Temiscovata, fiefs and settlements, in the co. of Rimouski, extend along Lake Temiscouata and the r. Madawaska, and are likely to become of considerable importance on account of their situation on the only land-route of communication between Quebec and Halifax in Nova Scotia; they must therefore become the medium of intercourse between the sister provinces. The soil of these tracts is considered to be generally good and is timbered chiefly with maple, birch, beech, and the several species of pine, of which the white and yellow predominate. Numerous small rivers present advantageous sites for mills, and both the rivers and lakes are well stocked with superior fish of various kinds. Limestone and iron ore have been found in abundance. The scenery in that part lying near the lake is bold and beautiful; the gentle slope of the land verging to the water's edge, the broad expanding lake bounded on the opposite shore by abrupt cliffs and stupendous hills, at the base of which several streams discharge themselves into the lake, form a tout ensemble in the highest degree interesting This large portion of these extensive settlements has made some progress since Alex. Fraser, Esq., a gentleman of known wealth and the chief proprietor of these fiefs, has established his residence at the village of Kent and Strathern, which is at the s. F. extremity of the portage on the borders of the lake. The inhabitants of this settlement are not numerous, and almost all of French extraction and Catholics. Near the Little Falls of the r. St. John the Madawarka settlement begins and continues, by intervals, on each side of the $r$. St. John for about 2.5 miles; it consists of about 200 familics of Acadians and Canadians. The cottages are for the most part neatly built, and both fields and gardens well cultirated. On the east side of the $n$. at the berginning of the settlement are a church and parsonage-house; there are also 2 corn-mills. From the termination of this little colony to the Great Falls of the r. St. John the distance is 15 miles, where there is a military post, or more properly speaking a few old houses occupied by a non-commissioned officer and a few privates, detached by some of the corps serving within the province of New Brunswick. From this post down to Presqu' Isle is 52 miles,

## MAD

where there is a similar establishment.-The present proprietors of these extensive properties are Col. Alex. Fraser, Dan. Sutherland, Esq. and Fr. Languedoc, Esq.

Madawaska, river, in the rear part of the co. of Rimouski, rises in Lake Temiscouata, and running $s$ falls into the r. St. John at the head of the Madawaska settlement. The land on both sides of this r ., from its source to its confluence with the r. St. John, 10 leagues, is of excellent quality. This R. is navigable for canoes and flatbottomed boats, excepting where there are falls which occasion portages. Above the Little Falls to Lake Temiscouata the current is gentle and the navigation easy and periodically fit for steamboats. The banks are generally low and the lands fit for settlements; some indeed are now in progress near the Trout and Birch rivers, and the settlers are composed of disbanded veteran soldiers. In this $\boldsymbol{R}$. the waters rise considerably in spring and autumn, and there are shallow places but no rapids. Its breadth varies from 90 to 150 yards, and in many parts is so very shallow during the summer that it is not navigable for any thing larger than a cance ; it is, however, possible that it might be navigated by very flatly constructed boats even during that scason, but the strength of

## M A D

the current would make it difficult to get them up again ; in the spring, it is said, large rafts of timber descend this river. The Little Falls, which are near its junction with the it. John, render a portage from 50 to 100 yards necessary even with a canoe.-There is a great abundance of the usual varieties of tish in this river, as well as in the Bouleau, Perche and Trout rivers, all of which mingle their waters with the Madawaska.-The lands on the banks of this river and its tributary streams are considered to be, in most places, of a superior quality.- $A$ road from Long's, at the end of the portage to Degele, passing near the edge of the lake, is very much wanted; the distance is about 15 miles: it would connect the portage with a road opened a few rears past liy the province of New Brunswick. which cost $300 \%$. and extends 23 miles and is 12 ft . wide.-Every part of both sides of this r . would be without doubt soon settled if good roads were made.
Mandington, township, in the co. of Nicolet, is bounded ‥ e. by Blandford ; N. and x. w. by the seigniories of Gentilly, Cournover, Dutort and Becancour ; it fronts s. and s. $w$. on the r . Becancour, which sparates it from the townships of Bulstrode and Aston.- The land is level in the interior and towards the s., but more elevated towards the $w$. and $s . w$. in the direction of the $r$. Becancour. There are many savannas and the soil in general is tolerably good; in some places of a superior quality, in others rocky and very inferior. some parts would produce hemp and flax. In the surveyed parts, lying contiguous to the river, the land is of the same nature and quality as that of Aston, and equally capable of being turned to good account in the hands of able farmers. On the higher grounds some excellent timber may be found, but on the lower parts only the indifferent assortment of cedar, hemlock, and similar kinds. This $r$. is watered by the Gentilly and the Becancour, and the latter, which winds in a circular direction from the $\therefore$. $E$. to the $N$. $w$. angle, presents several very eligible situations for the erection of mills.-The principal proprictors are Mr. Allsop and the heirs of the Hon. Jenkin Williams.-A winter road traverses this T . and communicates from the village St. Antoine, in Becancour, to the river of that name, about 12 m . in length.-There is only one settlement near the river Becancour, on the side of Blandford, on which are 12 persons.

Maydalen Islamd (n. e. point) is in lat. 473737 N . and in lon. $61^{\prime \prime} 2631^{\prime \prime} \mathrm{W}$, the variation of the compass being $22^{\circ} 25 \mathrm{w}$. This island, which is also called Isle Royale and Coffin's Island, is in general barren and mountainous. It contains some seftlements and is 17 leagues in length; in some places it is about 1 league wide, while in other places it is only one arpent wide. In the lower parts the land is sandy and soft, comprising a number of quicksinds, occasioned by several small channels that originally had a communication with the sea, but which have since been filled up by the violence of the winds. It is uni-

## MAGDALENISLANDS.

versally declared by the old inhabitants that into the largest lake, which is near the e. point, they have seen ships of $\mathbf{3}$ masts and tolerable burthen $g^{\circ} 0$ in and out with safety, though the entrance is at present dry at low water.

Brion Island, containing about 60 or 70 square arpents, bears N . by the compass and is about 10 miles from Magdalen Island. It is nearly surrounded with high capes, and on the $N$. side is some clear land of tolerably good quality. Its lat. (N. E. point) is $47^{\circ} 48^{\prime} 8^{\prime} \mathrm{w}$.

Bird Islonds, northernmost, in lat. $47^{\circ} 50^{\prime} 28^{\prime \prime}$ and in lon. $61^{\circ} 12^{\prime}, 33^{\prime \prime}$. , are two in number and contain about 4 square arpents each and consist of two rocks, elevated above the water upwards of 100 feet ; their flattened summits, each not exceeding in circumference 300 paces, exhibit a resplendent whiteness produced by the quantities of ordure with which they are covered from immense Hocks of birds, which, in summer, take possession of the apertures in the perpendicular cliffs, where they form their nests and produce their young; when alarmed they hover above the rocks and overshadow their tops by their numbers. The abundance of their egrgs affords to the inhabitants of the neighbouring coast a material supply of food.

Entry Isle contains nearly 100 square arpents. -The population of these islands, although it does not exceed 1000 , has considerably inereased since 1763 , when, it is said, there were only 10 families. In 1791 there were 13 heads of families; in 1797 the population amounted to 500 ; in 1708, when Sir Isaac Coffin took possession of these islands by virtue of a grant from the British crown, there were 100 families, the descendants of Acadians or Canadians; in 1821 the number of families had increased to 133, and now amounts to 153 , the present population being about 1000 , chiefly French Acadians, among whom there are 5 Irish families and 11 English women. They are all catholics, except 4 or 5 families. The inhabitants, who derive their subsistence chiefly from the fisheries, are in general remarkably hale and healthy, with light complexions and flaxen hair. They are cheerful in character, and the females remarkably modest and ingenuous. The inhabitants suffer great inconvenience from the shipwrecks which frequently happen on these islands, when each family is sometimes obliged to support 3 or 4 persons, who would perish without such
succour; this indispensable charity, added to their remoteness from any provision market, frequently creates a scarcity of provisions, more especially as, for 6 or 7 months in the winter, their communication with every other part of the world is cut off. So frequent have shipwrecks been on these islands that Capt. Fougire, for 10 successive years, brought off these islands annually about 200 shipwrecked persons, who, without the charitable assistance of the poor native inhabitants, would have perished.-The houses are built with timber only, and are in size from 26 to 30 ft . by 18 to 20 feet wide; the chimneys are built of clay or earth of a reddish colour.-There are but few roads in these islands, and to pass through the woods on the high capes is very difficult.-The quality of the wood is very inferior and chiefly consists of sapin, red and white epinette, and birch. -There are no minerals of any consequence in these islands, although in some places are found plaster of Paris and ochre of various colours, red, yellow, white and some bordering on sky-blue, and Entry Isle produces fine red.-These islands are totally unfit for the general purposes of agriculture, or, at least, that means of subsistence is wholly neglected, the inhabitants relying entirely on the profits of their fisheries; potatoes, which however generally fail, are the only produce of the soil, with the exception of forage grown on the natural meadows and pastures, with which a tolerable proportion of live stock are sustained. Some fowls are bred but no geese, and bustards are to be met with in spring and autumn. That agriculture ought not to be so entirely neglected may be reasonably inferred from the fact, that every season produces a great quantity of juniper berries, strawberries, raspberries, \&c.-No reptiles of any kind are to be found in these islands, and the only wild animals are rabbits and a great number of foxes of a silver or gray colour.There are two churches and a presbytery for the resident missionary ; one church is 50 ft . by 30 , the other 55 ft . by 33 ; the presbytery, which is built of wood, is 36 feet by 26 and has the convenience of a stable and garden. The tithes payable to the missionary consist in half a quintal of fish from each family, which is generally sold at $10 s$. per quintal.-The fisheries constitute the only wealth of these islands and the sole means of subsistence for the inhabitants. The fisheries are chiefly for seal, herring and cod; eels are caught
with the harpoon, fine trouts are also harpooned in the rivers at the flambeau; and flattans, a fish measuring about $3 \frac{1}{2} \mathrm{ft}$. Jong by 7 or 8 inches, are caught and also macrow lobsters, which are consumed by the inhabitants. Codfish, valued at $14 s$. per quintal, is exchanged for pork valued at 7 . per barrel, and when it is sold for cash it brings 10 s. per quintal. 300 quintals of codfish and 3000 seals are caught annually, and each seal generally produces 7 gallons of oil. Some of the fisheries are conducted on shares, which are divided among 5, 6 or 7 men, who are employed in one vessel; the fish caught are divided among them equally after reserving one share for the owner of the vessel. The fisheries were described, in 1821 , to have been reduced to one-third of what they were 15 or 16 years before that period. The inhabitants earn their living chiefly by the cod fishery, and in the spring some of them go in pursuit of seals. Formerly the sea-cow abounded here and a considerable trade was carried on in the sale of that animail; but it is no longer found and the trade has ceased for nearly il $^{10}$ years. The sea-cow is an unwichly amphibious animal, resembling in figure and colour the toad, with a head bearing some resemblance to that of the ox. The sea-cow fishery has ceased to be practised in the Magdalen Islands, very probably on account of their being frightened away by unskilful fishermen, the too frequent approach of boats, or an indiscreet use of fire-arms in shooting them in their echouages or strands, where they were formerly taken by 300 or 400 together. The sea-cow fishing was an object of considerable interest from its immense produce, and it is much to be lamented that so valuable a branch of the St. Lawrence fisheries should have been thus discontinued. In order to protect the fisheries, French vessels are not permitted to approach these islands nearer than 3 leagues. The Americans, however, fish there and anchor in the harbours, and about 20 vessels come every year and sometimes all of them arrive in the space of 8 days, viz. between the 8 th and 16 th of May.-There are about four harbours on the Magdalens, viz. that of Jupiter, Amherst, Basque and Haywood. The harbour of Jupiter has most water upon the bar. At Amherst harbour, which is esteemed the second best, the proprietors have their house and carry on the cod fishery; the harbour of Haywood has only 6 feet at low water upon the bar. Three of
these are very safe for such vessels as can enter them. Basque harbour was formerly very good, having had three channels into it and a great depth of water ; but at present it is so choked up with sand, which the sea has thrown up, that there is not above 3 or 4 feet of water at the entrance, and it is, consequently, impracticable for any thing but shallops or boats.-The Magdalen Islands were granted to Sir Isaac Coffin as a reward for his naval services.-The inhabitants are very dissatisfied and have required ly putition the repossession of their fishing-grounds; and say, that, instead of being discouraged by annual rents, they ought rather to receive encouragement to remain, and that stores ought to be entablished in the islands on account of the shipwrecks which annually occur, these islands producing absolutely nothing.-There are no crown reservations in these islands, although there are clergy reservations.

Fishing-boats . 1 (14.
Magog, river, in the cos. of Stanstead and Sherbrooke, rises in Lake Memphramagog, from the N . e. extremity of which in the r. of Hatley it issues, and running through Lake scaswaninepus forms the boundary line between Ascot and Orford, and falls into the r. St. Francis at the village of Sherbrooke, where it comstitute the Forks of Ascot commonly calle:l the Lower Locks.-It runs about 14 miles from the Lake Scaswanincpus.
Mambe, river, rises near the centre of the island of Orleans, and rumning s. falls into the St. Lawrence. It drives a mill near its mouth.
Malleous, river, in the S of Murray Bay, rises in the concession of Lisle, and rumning s. e. traverses the concession of st. Charles, and falls into the st. Lawrence. It drives a salw and a corn-mill near its mouth.
Malbay, river, rises in the Montagnes des Roches in the co. of Saguenay. It runs s. to the St . Lawrence between the seigniories of Murray Bay and Mount Murray.
Malbay (今.), $v$. Murray Bay.

## M A R

Mal Bay, in the co. of Gaspé, lies s.w. of Gaspé Bay. It is about 6 miles deep and 6 miles wide at its entrance. Very near its southwardly point is a remarkable rock rising about 200 feet out of the water and of about 1200 feet in length, in which there are three arches completely wrought by nature; the centre one is sufficiently large to admit a boat under sail to pass through it with ease: from this rock, round Malbay to Point Peter, there is an excellent beach for fishing, part of which is named La Belle Anse, or Lobster Beach : close to this place is the house of the late Governor Coxe - Mal Bay River empties itself at the head of the bay; its estuary, with the exception of the bed of the river, is almost dry at low water and affords a convenient strand for river craft and boats.

Manicouagan or Black River, rises in the territory of Labrador and entering into the N. E. part of the co. of Saguenay falls into the St. Lawrence. It is a considerable stream. The Mrnicoungan Shoal advances from the N. shore of the St. Lawrence upwards of $₫$ leagues, and derives its name from the river.

Manigorsito (R.), $v$. Shawenegan.
Mansfield, a projected township fronting the N . channel of the Ottawa, which divides the $\mathbf{r}$. from the Island of Grand Callumet. Midway of the frontage of this $\mathbf{~}$. are the Little Falls of the Grand Callumet. The N. w. angle is watered by the r. Coulonge.

Marals, des, a small river running into the r . Saguenay.

Maranda, fief, in the co. of Lotbinière, fronts the St. Lawrence for three quarters of a league, lying between the seigniories of Tilly and Bonsecours. It was granted in equal moieties to the Sieurs Duquet, father and son, Nov. 3rd, 1672.This fief is watered by the $\mathbf{r}$. Vilieu.

Tiall.—Partic nord-est.—" Conctssion faite au Sieur Duqurt, Pére, Je 3me Novembre, 1672, par Jíu Talon, Intendant, de trente arpens de terre de front sur cinquante de profondeur, à prendre sur le tleuve $S t$. Marie Anne (F.), v. Carufel, S.
Marienequatacook, or " The beautiful land turtle," river, in the co. of Rimouski, rises in two lakes, one N. E. and the other s. of Long Lake, with which they are connected by portages. It runs s. e. into the R. St. John.

Marigean, river, in fief Lepinay in the co. of Quebec.

Marlow, township, in the co. of Beauce, extends N. E. and s. W. from the r. du Loup to the r. Chaudière, and is bounded on the other sides by Jersey and Risborough.

Marsolet, fief, in the S. of Cap de la Madeleine, is half a league in front on the St. Lawrence and 2 leagues in depth.

Marsolette, river, in the p. of St. Joachim in Cute de Beaupré, falls into the St. Lawrence opposite the n. E. point of the Island of Orleans.

Marston, township, in the co. of Sherbrooke, is bounded s. by Clinton and Chesham, N . by Hampden, and fronts ihe w. side of Lake Megantic. The whole of this $\mathbf{T}$. has been surveyed, but only one quarter of it granted and no part settled. The land is irregular, hilly and frequently very stony, but mostly of a moderately good soil, and many spots present eligible situations for the culture of hemp and flax. The
timber forms but an indifferent mixture of maple, fir, hemlock, cedar and spruce.-Watered by several streams and small lakes, besides Lake Mcgantic, near which are some very excellent meadows. The scenery in the vicinity of the lake is beautifully picturespue as the land rises gradually from its borders clothed with a rich verdure, and embellished by large groups of stately trees ranging above each other until they crest the summit and exhibit a most enchanting varicty of foliage. The waters abound with excellent fish, and the country around this serpucstered and romantic spot is the resort of almost every species of game. Lagrated and unlocuted, 13.994 acres.

Martel, fief, is in the s. of LiAssomption; its centre is about 4 m . from the r . L'Assomption. In this small fief rises the Ruisscau de la Cabamne Ronde, which runs into the r. Mascouche.

Marystown, $v$. Beauharnois, S.
Mancolite (R.), r. Me. Anese, r. in the $s$. of Lachenaye.

Mascoliane Lake is connected with Lake Wiscoumatele by a short portage. It is 1 m. wide and about 4 m . long; it is very deep and abounds with excellent fish. There are several islands in this lake on the east side, and on that side the mountains rise to an extraordinary height.

Maskinovie, river and lake.-The river rises in the lake which lies in the angle of the $\boldsymbol{r}$. of Brandon. It runs through much rough and mountainous country, and 200 miles from its source falls into the St. Lawrence. After leaving the lake, this r. directs its course s.e and then : passing through the S. of Lanaudicre, then through fief Carufel, and lastly through the S . of Maskinongi, where it falls into the bay of that name and loses its waters in the St. Lawrence. About 8 miles from its mouth it is navigable for lwats and canoes as far as the Great R:apids, where there is a great fall of more than 300 ft . The banks of this n . are from 10 to $1: 3 \mathrm{ft}$. high, and over it a new bridge has been crected ncar a small village that contains a church, a few taverns and some shopkeepers.-Along this n. are many mill-sites, particularly at its mouth, where there are, for about 12 arpents, cascades and rapids which offer successively the most advantagcous situations for the erection of mills. In the vicinity of its fall is a number of iron mines, where forges might be established at little expense.-Maskinongé Lake is about 4 miles long, $1 \frac{1}{2} \mathrm{~m}$. broad

## MAs

and 9 m . in circumference. It is well stocked with various kinds of excellent fish, particularly that called Maskinongé, and around it is a considerable extent of marshy ground producing wild hay. The surrounding scenery possesses many natural beauties of a wild and sublime description, presenting an amphitheatre of rising grounds and lofty hills, backed ly the magnificent ridge of mountains runaing westwardly from Quebec, and many other bold features of a romantic country.
Maskinonge or Lavacdere, seigniory, in the co of $\mathrm{i}_{\mathrm{t}}$. Maurice, lies in the rear of (Garufel. It is $\searrow$ leagues in front and extends in depth so far as to comprehend Lake Maskinonge. Granted, Mar. 1, lन.0, to C. F. T. de Lanaudicre, and is now the property of the Hon. T. Pothier.--This seigniory includes Lake Maskinemge, by which it is watered as well as by some small lakes, but principally by the river Markinomse-No part of this S., except the fief Maric-Ame, is conceded, and there is no road across the non-conceded lands, which were partly surveyed in 1?:(1). The number of concessions is, therefore, small in proportion to the extent of the S .

Tifa--- $\{$ abcesion du jremier Mats, 17.on), faite par

 de deus beucs en ensiron de front, à prendre au bout du
 Aashinomes, le dit lac compris dans toute som trombe, avec les iskes, islets et batures qui se trouveront en icelui." - Résindi drIntendenct, No. !, folio 48.

Maskinomife, seigniory, in the co. of st. Maurice, is bounded N. e. by the s. of Riviire du Loup ; s.w. by Berthier; in the rear by Dusable and Carufel; in front ly Lake st. Peter. It contains two separate grants: that of the N. $\boldsymbol{E}$ part, $1 \frac{1}{2}$ league in front by the same depth, was made, Nor. 1692, to Peter and John Baptiste Legardeur, Sicurs de St. Michel; and the s. w. part, a league in front by a league in depth, on the same day to Sicur John Baptiste Legardeur. The soil is rich, and in some places would be ex-
cellent for hemp and flax. The land in general is rather flat, and towards the front is so low as to be sometimes overflowed in the spring; but this only serves to enrich the fine meadows and good pasture-grounds that border the river. The timber has been very much thinned. This $\mathbf{S}$. is very well watered by some small streams and the large river Maskinongé, which winds through the centre and is navigable for boats and canoes for several miles up.-About two-thirds are in cultivation. The bestsettlements are on the borders of Chenaildu Nord, on both sides of the road leading to Quebec, and on the east bank of the Maskinongé, over which there is a bridge. There is no village in the seigniory, but it has a church and parsonagehouse, one corn-mill and one saw-mill. At the entrance of the Maskinonge there are two or three large islands, forming different channels into it; they are all flat and low, but covered with various sorts of inferior wood. Timber from Carufel, 太e. and the townships in the rear, is brought down the Maskinonge into the St . Law-rence.-The fief Petit Bruno lies at the s. w. angle of this S.; it is nearly square, and fronts the North Channel, which separates it from Isle Dupas. —The Parish of Miskinonge, by an Order in Council, dated Mar. 3, 1720, extends $2 t$ leagues in front, viz. $1 \frac{1}{2}$ league square N. E. and 1 league square s. w., including Carufel. Many farms in this $p$. near the river Maskinongé were conceded before 17.9 and measured 4 arpents by about 90 in breadth, each paying to the scignior an annual rent of one pistole.

gardear de St. Mi, hrl, sur trois audessus de la riviice de Maskinongé."-Régistre d'Intendance, No. 1 , folio 34.

Massiwippi, lake, in the co. of Stanstead. Commissioners were appointed in 1829 by the House of Assembly to superintend the making and repairing the road from Lake Massiwippi to Yamaska Mountain in the S. of St. Hyacinthe, and the sum of $£ 1,500$ was voted to carry the necessary measures into effect. As this road is the grand thoroughfare to Montreal for the townships of Hatley, Barnston, Stanstead, Ascott, Orford, Eaton, Newport, Compton, Hereford and the country east of Lake Memphramagog, it must be regretted that the sum appropriated is not adequate, according to the report of the commissioners, to meet the expense any farther than Stukeley line, which leaves Shefford and Stukeley without any assistance, a distance of more than 20 miles. The mode in which this sum of $£ 1,500$ has been expended is as follows:

|  | $f$ s. d. |  |  |
| :---: | :---: | :---: | :---: |
| Masmiwippi to the outlet of Lake Memphramagog | 693 |  |  |
| Ss rods w. of Orford Mupuntain . | 2.5 | 0 | 0 |
| 90 rods round the base of Orford Mountain | 187 | 10 |  |
| 600 rods in the $\mathbf{T}$. of Granly | 175 | 0 | 0 |
|  | 1,081 | 0 | 0 |
| $\left.\begin{array}{c}\text { Expended in day labour on the road from } \\ \text { the outlet of L. Memphramagog to } \\ \text { Stukeley line }\end{array}\right\}$ |  | 0 | 0 |
|  | 1,3011 | 0 | 0 |

The sum already granted appears to be very inadequate to the end proposed, especially as more than usual difficulties occur in Shefford on account of the disproportionate extent of crown and clergy reservations in that township. The commissioners report that an additional sum of at least $£ 2,000$ will be required to effect the object in view.

Massiwippi, river, rises in Lake Tomefobi in the $T$. of Hatley, and after traversing the 1st, 2nd and 3 rd ranges runs through the N. w. angle of Compton to Ascot, where it joins the Coaticook at the s . extremity of the 7 th and 8 th ranges. The junction of these rivers is remarkable for
having been the site of the first settlements formed by Mr. Myatt.

Matane, river, rises in the rear of the Paps of Matane in the $\mathbf{r}$. of St . Dennis, and taking a circuitous course enters the $S$. of Matane at thes $w$. corner, and in the middle of the front of that $s$. falls into the st. Lawrence.- id sand-bar across the mouth of the river obstructs its navigation at low water, but schooners ascend about 40 or 50 yards up to the manor-house at high tide. Farther up are the rapids, which offer a propitious situation for a mill, and also contribute to the embellishment of the scenery, which is liv no means uninteresting. These rapids are statel by Indians to be the only impediment to the navigation of the river, for above them the course of the R. is uninterrupted.

Matane, scigniory, in the co. of Rimouski, is bounded $N$. $E$. and in the rear by the $T$. of Nt. Dennis; s.w. by the r. of Matane; in front by the St. Lawrence.-This $s$, with its augmentation is, according to title, 21 leagucs square; and was originally granted to *ieur Damonr, June $\mathfrak{L}_{6}$, 1677.-The soil is excellent and consists, wemerally, of a thin stratum of sand on a rich substratum of marl. The principal settlements occupy both banks of the R. Mitane, and exteme about a mile above its mouth ; they cover a superficial extent not exceeding 600 acres of cultivated land, and their population is about 300 . A church built of wood stands a few perches s. of the manor-house, and, at some distance below it, is built the seignorial mill on a little creck too small to work it effectually. These settlements are but partially seen from the St. Lawrence, being inland and, in some degrec, concealed by the bluff point or mound, that rises singularly abrupt and isolated $w$ : of the mouth of the r. Matane.-The $P^{\prime}$ arish of Mutame lies about 30 miles below Mitis. The intermediate distance being a total wilderness, without a road of communication traversing it ; the intercourse between these places is kept up by water, and, sometimes, with difficulty, by the beach; which, being a beautiful firm sand, is used as the high way at low water; the accumulation of drifted timber and rubbish above high water mark rendering the communication by land impracticable at any other time.-A few wretched habitations arc scattcred along the beach to the eastern extremity of the seigniory. The fisheries in this $S$. and its.
$M A T$
vicinity are worthy of encouragement, and might produce very considerable advantages to the inhabitants. The cod fishery, which is the principal, may be said to commence at Matane. The seasons vary considerably in their productiveness, ond it is not at all times that the fishing boats can be sent out on account of stormy weather, and ceen in a productive season the result is but casual. The produce of the Matame cod fishery is salted and dried, and dispused of on the spot to the inhabitants of the neighbouring parishes and settlements, and for home consumption. No fish is taken to Quebee, though much might be sent, owing t/1 the want of encouragement in the $\mathrm{Q}_{\mathrm{Q}}$ ueter markets. From $9 s$. to $10 s$. is the price offered for it there, per cwt., which does not reward the curer for his labour and expense. He would not be satisfied under 12s. 6d. to $15 s$. The fisheries of Cape Chat and Ste Anne, particularly that of Cithe Chat, are considerably more productive in cod fish than the Matane fishery.-The produce of those fisheries, like that of Matane, is generally sold in parishes above them, after being bartered for dry goods and liquors. There are salmon finherics at all these plites, which, with encouragement, might be rendered much more productive than they are: only about 6 to 8 tierces ate taken to marliet from ite. Anne's, and as many from Cape Chat; from Matame about 10 tierces. The average price of salmon per ticres is $4 l$. The river Matane abounds with trout of from 4 to 7 lhs. weight, which is an excellent fish when properly cured, but it is an article not much attended to from the little sale it meets with. With judicious encouragement all these fisheries might be made much more productive, and prove : source of advantage both to the seller and buyer.

deur, savoir, une demi lieue au deça et une demi lieue au delì de la rivière Matanc, et par augmentation une autre lieue de terre de front, aussi sur une lieue et demie de profondeur, y joiswant, a prendre du cute de la riviere Mitis."-Insinuations du Conscil Supcricur, Lct. B. folio 9.

Matane, township, in the co. of Rimouski, is bounded n. E. by the S. of Matane ; s. w. and in the rear by waste lands; in front by the St. Lawrence. It is about 9 m . in breadth, 11 miles in depth, and is well watered. The principal rivers are the Grande Rivière Blanche and the Matane. At the mouth of the Blanche is an excellent mill site.-Ungranted and unlocated $\mathbf{5 5 , 5 5 0}$ acres.

Matapediac Lake lies in the co. of Rimouski, and in the rear of the crown lands between the $т$. of Matane and the $\mathbf{S}$. of Mitis. This spacious lake is in the high lands that separate the waters running into the St. Lawrence from those that run to the bay of Chaleurs.-A grant of this lake, and one league of land round it, was made May 26, 1694, to Sieur N J. Damour: it now belongs to -_ Grant, Esq. and others.-'The lake is from 15 to 16 miles long, and not above one league in its greatest breadth; it is about 21 m . from the St. Lawrence, and lies s.s. E. of the S. of Mitis. The surrounding lands form a valuable tract of country, and would doubtless become by due encouragement to settlers a flourishing part of Canada, as the lake, with other advantages, possesses abundance of salmon, trout and white fish, and is navigable for rafts of all kinds of timber, with which the banks of the noble river Matapediac are in various parts thickly covered. -Lake Matapediac presents a charming combination of scenery; the face of the country is clevated and bold, composed of a succession of hills, rising from the waters and terminating in distant ridges to the northward: the centre of the lake is diversified by a cluster of islands, which, with the extensive surface of water, the projecting points of the lake, and the grandeur of the surrounding scenery, attracts the attention of the traveller. The land on both sides of the lake is covered with pine, birch, beech, maple and a variety of other trees. The western shore appears rather more level as the mountains recede from the lake to the s. w. Besides the cluster of islands, there are 3 or 4 other islands mostly dispersed along the eastern shore ; on which side a few small streams, particularly the Wagansis, fall into the lake, and on the other side one or two streams enter it

## MAT

from the interior of the country.-The portage, or Indian path, which communicates from the head of the lake to the St. Lawrence, is traversed by one or two prominent ridges of mountains; the one near to the lake called Les Montagnes de Notre Dame, commands a view of the whole country to the southward, which appears to extend tolerably level for many miles. The other is situated about half way across the portage, between the rivers Tuctigno and Tuctigooshiche; but the most remarkable highlands are those which bound the St. Lawrence. The land throughout the portage is commonly good for cultivation, with the exception of a few spots of swamp and a few steep mountains, which, however, could be easily obviated by making a circuit of the mountains, or causewaying the swampy portions. The portage is at present merely an irregular Indian path. A road along this tract has for many years been thought an object of the first importance, not only to the improvement of the country, but to the immediate interest of government, as promising great advantages in the safe conveyance of the mails from Quebec to Halifax, and as the means of conveying troops from the $R$. Ristigouche to the settlement of Rimouski, which would be an eligible route of five or six days' march. A projected road has been traced from Mitis to the lake, at the expense of Mr. M ${ }^{\text {© Niders, the }}$ seignior of Mitis; it takes an eastwardly course, winding occasionally, until it reaches the lake.The land, except immediately passing the highlands, is reported generally level and fit for cultivation, and requiring very few bridges or causeways; the distance is twenty-seven miles from the St. Lawrence to the lake. More than eight townships might be laid out on this communication ; at least, the front of townships might be marked in laying out the road. The report of the exploring party, appointed under an act of the provincial legislature, states that it will require the sum of $3260 l$. to form a good road along this portage, and extending to the New Mission Point at Ristigouche, about 18 miles from the head of Chaleur Bay. To this point from the St. Lawrence is about 98 miles.

Title._" Concession du 26me Mai, 1694, faite par Jean Bochart, Intendant, au Sieur Nicholas Joseph Damour, du lac appelé Matapodiach, avec une lieue de terre tout autour d'icelui."-Résistre d'Intendance, No. 4, folio 17.

Matapediac, river, in the cos. of Rimouski and Bonaventure.-The river rises in the lake of
the same name, whence it traverses in a s. s. F. course through a valuable country till it disembogues into the r Ristigouche, about 3 leagues above the Indian village called New Mission Point. The numerous and extensive tributary streams falling into this r., particularly the $I$ 'isromincou, the Cassimaquagan, the 1 cas; secull and the $H$ umquin rivers, water and enrich a lares tract of excellent country. From the mouth of the Matapediac to a small creek on the east side, the land rises sradually into steep and lofty mountains; about a mile and a half above this creek at a sudden bend the range of hills, which commences at Mr. Adam's and rums thence in a $\mathrm{N} . \mathrm{e}$. course, bears a prominent appearance, the principal mountain, called Pecticnook, rising from the river about $30 \%$ feet.-The western shore also bears a bold aspect and gives to the waters an apparent tinge of obseu-rity.-This mountainous appearance, however, is not so prevalent on the eastem shore, towards the r. liscominatu. From this river on both sides of the Matapediac the land, with little exception, although mountainous, is fit for agriculture to the river Cussimaquagan, which is navigable and abounds with valuable pineries; within 4 miles above this river are two handsome and navigable streams, also lined with extensive pineries. The banks of the Matapediac, from the river Cassimaduagan upwards, rise boldly, timbered with maple, birch, and pine; and though the river is frequently interrupted by rapids and strong currents, its navisation is not obstructed. -The islands are numerous, and some of them are of handsome extent. The soil in general, from the quality of the timber, is of a dark yellow loam, sometimes consisting of a subordinate bed or stratum of clay, which seems to predominate only in the valleys and intervals. From the Cassimaquagan to the river Casupscull, the largest river that flows into the Matapediac, the general surface of the land seems to present also excellent spots for cultivation, as the land c.mmonly descends by gradual swells $t 9$ the banks, which are clothed with almost all the varieties of timber peculiar to the growth of that part of the district of Gaspé. From the Casupscull the land is level, appearing to be in some parts swampy and low, until approaching the lake Obstchquosquam, where it rises in gentle slopes to the mountains. The surrounding scenery of this lake is beautiful, and forms

MEG
a happy relief to the sameness of the river. Alwut one mile higher up is a handsome stream, on the western side, about 20 yards wide, said to be navigable. About half a mile higher the Matapediac is interrupted by a great rapid, called the Casipscull Rapid.-From the Obstchuzas, ${ }^{\prime \prime \prime \prime \prime \prime \prime}$ lake to the chain of the obsmomed lakes, alont 4 miles, the Matapediac is constantly winding in : very irrewular manner, and is more frequently impeded by rapids. Leaving these small lakes, the Matapediac is found to issue from a beantiful lake to which it gires name. The rapils in some places of the river, although of magnitude, will cause no injury or impediment to rafts going down to the Ristigroche, while camoes can ply for more than 7 months of the year between the Putturd and the Indian Village. The country is in the greatest part wild and barren ; the soil and timber are, however, of the best quality. The secnes which present themselves along the shore of the Matapediac are in some places of a romantic deseription, and in others beautifully picturesque. The river is in many places diversified with numerous islands and hambome windings; sometimes its waters are contracted between stupendous mountains, and at wher times expanded to a great extent between a fine open country. This $R$. in spring and autumn is navigable for small vessels, of 10 to 20 tons, with the greatest safety and facility.

Matawis, river, rises in a lake in the co. of St Maurice, and running $s$. and then $s$ e. joins the r. St. Maurice in the S. of Cap de la Mandleine, in the co. of Champlain.

Matrocin, river, runs from w. to e and falls into the $w$. side of the sit. Maurice about 23 learges ahove Threc Rivers. It is of considerable lener hand about one quarter of the size of the St. Maurice. It is navigalle for cames.

Mecrinis Ismes, in the Gulf of St. Lawrence, are two small islands lying off the coast of $\mathrm{s}_{\mathrm{i}}$ guenay.

Megantick, comnty, in the District of Queber. is bounded $\mathrm{N} . \mathrm{w}$. be the s.e. boundary lines of the augmentation of Lothinime and part of st. Jean d'Eschaillons to the River Becameorer, being the s. a. boundary lines of the co. of Lothinitre ; N. e. in part by the west lateral lines and rear lines of the seigniorics of Ste. Croix and St. Giles; $w$. by the east bounds of the township of Stanford,
then easternly along the N. W. bounds of the township of Arthabaska to its intersection with the N. W. outline of the township of Halifax, thence s.w. along the N. w. bounds of Halifax to the N . angle of Chester, thence s. E. along the N. E. bounds of the townships of Chester to the most easternly angle of that township thence N . E. along the N. w. outline of the township of Wolfstown to the most northernly angle of the said township, thence s. E. along the N. E. boundary line of that township to its easternly angle, thence s. E. to the river Chaudicre or Lake Megantick. This co. comprehends the townships of Somerset, Nelson, Halifax, Inverness, Ireland, Wolfstown, Leeds, Thetford, Broughton, Coleraine, Tring, Shenley, Oulney, Winslow, Dorset, and Gayhurst. Its extreme length is 6.1 miles and its breadth 28 , containing 1465 sq miles. Its centre is in lat. $46^{\circ} 5: 30^{\prime \prime}$ north; long. 71"12'5' west. It sends one member to the provincial parliament, and the place of clection is at Leeds. The surface of this co. is mountainous and broken, presenting, however, large swells of excellent land and meadows, and, notwithstanding the irregularity of its surface, it possesses considerable advantages in its soil and timber. It is most conveniently watered by numerous rivers, streams and lakes. The r. Becancour spreads its large and numerous branches over the N . w. section of the county; and the s. E. section is traversed by a number of rivers that wind from the interior in various directions, and fall into the Chaudiere, the chief of which are the Bras Grand Coude, Mactavish, Eugene, \&c. There are also many lakes, and those in Thetford, Coleraine and Dorset, are most worthy of notice. Lake Megantick, by part of which this co. is bounded, is remarkable for its size and its beautiful scenery, and for its giving name to the county. It is traversed by Craig's Road, on which, and in its vicinity, are the chief settlements, and which are principally in Leeds, Inverness and Ireland, where the timber is unexceptionable. The township of Broughton, which is well settled, communicates by roads leading to St. Joseph on the Chaudière and to Leeds. There are no seignorial grants in this co., and the population is therefore English, Irish, Scotch and American, without any native Canadians.

MEL
Statistics.

Megantick Lake, separates the townships of Woburn and Ditchfield from Marston, in the cos. of Beauce and Sherbrooke. It is 9 miles long and averages 2 miles in breadth and forms several bays in the $\mathbf{T}$. of Marston. Around it, generally, are excellent meadows.-This lake still retains its Indian name.

Melbourne, township, in the co. of Sherbrooke, is bounded n. e. by.the r. St. Francis; n.w. by Durham; s.w. by Ely and part of Brompton; s. by Brompton. This r. is well furnished with good maple, beech, elm, pine and oak timber. Several rivers and streams spread over it in every direction and fall into the St. Francis. Large settlements have been made, and considering them as lands but newly redeemed from a state of nature, great advances in cultivation are perceptible. The soil is so good that it requires but little aid to become uncommonly fertile, and in several parts flax and hemp could be raised in great quantities. Pot and pearl-ash are made here, and with wheat form a principal part of the traffic carried on ; there are, however, several saw-mills in almost constant work. A communication by roads in various directions has been opened with the adjacent townships. In the $r$. St. Francis there are several small islands along the front of this tract, and, although they are rather obstructive to the navigation, their beauty and the picturesque variety, exhibited by the foliage of the different species of trees with which they are covered to the water's edge, almost atone for that inconvenience. A large extent of this valuable land is the property of the Hon. John Caldwell. Considerable progress has been made in forming that part of the Drummondville and Brompton Road which lies in this $\mathbf{~}$. The

## M ET

entire line, with the exception of one britgre, is now passed with sleighs, although there is but one mile as yet completed of the requisite width. Ditches on both sides of the road have for short distances been made, but generally only on one side. Seven bridges have been crected, two of which are eleven perches each, with about 70 or 80 rods of causeway. The land bordering on the road is favourable for settlement, and, with the esception of four or five lots, is actually settled. Many of the rear lots in the north half of the township are also actually occupied. Nearly all the south half, originally granted to the late Hon. Henry Caldwell, is in a state of wilderness; but, being susceptible of extensive settlements, they would, if this road should be properly finished, be immediately settled. In order to complete the road throughout the entire bradtil of this township, 10 miles, and to render it such a road as the castern townships require along the River it. Francis to William Henry and Three Rivers, a further sum of at least $t+10$ currency will be required to be judiciously expended.

Meltallabetine, river, near the source of the St. Maurice.

Memphramagog, lake, is in the co. of Stanstead, stretching its southern extremity into the state of Vermont. It seprates the townships of Stanstcad and Hatley from those of Potton and Bolton. It is of a semicircular shape, 20 miles long and very narrow. It empties itself into the n. St. Francis by means of the 1:. Magog, which runs through Lake Scaswaninepus.-In this lake are several kinds of fish, particularly salmon-trout.

Metabetshuane Post, $v$. Kingis Posts.
Metabetchovan or Metabtrsulan, river, enters the s. side of Lake St. John near the King's Post. The Metabetchouan or "The plate where the course of the water ends," is in lat. $48^{\prime \prime} 23^{\prime} 12^{\prime \prime}$ and is a fine broad stream, deep at its mouth as

## M I L

far as a large basin, spreading to the foot of the rapids, where the surveyors who explored this part of the Saguenay country landed and ascended the summit of the hills that lie about 3 miles from the post. The land was found to be of a tolerably good quality, being chiefly a red loan mixed with very small gravel, and clay not far from the surface. The prevalent timber is spruce, black and yellow birch, bassword, fir, pine, poplar and some maple. On the bank of this $R$. at the post are at varicty of marine shells and other organic remains, many valuable specimens of which were collected ly Mr. Davis and Mr. Baddeley, the companions of the deputy surveyor-general who explored Lake St. John, \&c. Mr. Baddeley, an officer of the Royal Engineers, volunteered his services on that occasion in pursuit of his favourite science, geoleng. -The e. bank, as far as the rapids, forms an alluvial ridge from 50 to 80 ft . high; the w . sideof the n . is low.-This R . is navigable for many leagues for batcaux and farther up for bark canoes. Metapiomidan, o. Merabetshoran.
Metgehmette, river, rises in the Metgermette mountains, on the boundary line, in the co. of Beauce: after it receives its $N$. w. branch it crosses the Kennebee road and joins the $\mathbf{R}$. du Loup, ly which its waters are carried to the 1 . Chaudiore.

Metinar, river, runs into the e. bank of the St. Maurice, about 11 miles from the Grand Pilles. It communicates loy portages and lako, with the post of La Tuque.

Metis, $r$ Mims.
Mickinack, river, falls into the St. Maurice on the east side, about 19 lewtes from Threc Rivers-It is navigable for canoes.
Migeon: river, runs through Quebec suburbs near the $\mathbf{~}$. of Montreal into the St. Lawrence.
Mainem Kidook, river, rises in waste lands and runs n. e. into the n. Matapediac above the Falls.

Mint Brook runs into the s. side of Lake Kiguagomi, nearly opmosite Pte. an sable.

Mifle Inges and Augmentation, in the co. uf Two Mountains and Terrebonne, lie on the N . side of the river St . Jean or Jesus. The originai grant was 4 leagues in front by 3 in depth. Bounded s.w. by the $S$. of the Lake of Two Mountains; n. e. by Terretomme and in the real by the r. of Abercromby : granted, May 5, 17J4 to Sieurs Langloiserie and Petit.

## MILLE ISLES.

The Augmentation is bounded in front by the original grant; in the rear by the $T$. of Abercromby ; w. by the augmentation to Lake of Two Mountains; n.e by Terrebonne. Granted, Jan. 20, 1752, to Eustache Lambert, Sieur Dumont, and is now the property of Eustache Nicolas Lambert Dumont, Esq. and the heirs of Antoine Lefebvre de Bellefeuille, Esq., represented by Eustache Antoine Lefebvre de Bellefeuille, Esq., both of them descendants in a direct line from the grantec.-The title of concession gives the same extent of front to the augmentation as to the original grant, viz. 42.2 leagues in front by 3 leagues in depth; but, as the grant of M. M. de St. Sulpice of their augmentation to the Lake of Two Mountains was anterior to this grant, they, in taking their grant, cut through this seigniory diagonally and reduced its front nearly $\varrho$ leagues. Messrs. Bcllefeuille and Dumont pretend that they ought not to be restricted by the precise words of the title of concession as to the extents of front and depth, but to the superficial extent which the King intended to grant, and this principle has been frequently recognised by the courts of justice in this province; consequently they demand an indemnity in depth for their loss in front. This question is now pending in the superior court of King's Bench for the district of Montreal.These grants are well watered by an innumerable number of rivulets and springs, and especially by the river Du Nord or Ste. Marie: the rivers Gauthier and Gagnon also contribute to the success of the establishments. The surface in general is much intersected by mountains, hills and ravines; the soil, being always kept in a certain degree of humidity by the numerous springs that descend from the little mountains, is very fertile, and this property cannot fail to become very important. It is covered with every description of wood that grows in the province, especially cedar and pine; it also abounds with natural meadows, first made by the beavers, that have left marks of industry worthy of the imitation of those who settle on uncleared lands. The lakes, particularly those in the rear of the seigniory, contain superb salmontrouts from 6 to 20 ft . in length, and other kinds of fish; there are also bustards, wild ducks and luards in abundance, and the gray eagle inhabits the mountains in the vicinity of the lakes, on whose surface are seen some beautiful swans, These mountains are pregnant with mines and
minerals. The proprietors possess, on the river du Nord, an excellent corn-mill with 3 sets of French stones and a good saw-mill. Mr. de Bellefeuille, who has for a great number of years rented the part belonging to Mr. Dumont, has built a carding and fulling-mill and has also established a stocking-manufactory. Besides the very extensive domain belonging to the proprietors, on which a church and a presbytery have been built, Mr. de Bellefeuille possesses, opposite the mills, some valuable lands, on which may be seen beautiful deserts and meadows as well as the best kinds of cattle. The money he has expended on this establishment, which he has had in his possession only a few years, and the roads which he has opened at his own cost, have been very beneficial to the industrious poor and to the neighbouring establishments, while the example which he has given, by following the most approved systems of husbandry, cannot fail to be extensively useful to agriculture, the knowledge of which is so universally useful and necessary. The original grant and augmentation are now divided into 2 distinct seigniories, which lie in the 3 parishes of St. Eustache de la Rivic̀re du Chêne, Ste. Therese de Blainville and Ste. Anne de Mascouche.
$J_{u}$ Cliaf, the first division, is in the co. of Two Mountains and belongs to Eustache Nicolas Lambert Dumont, Esq. and to the heirs of the late Antoine Lcfebvre de Bellefeuille, Esq. This seigniory joins the $S$. of the Lake of Two Mountains and is $2 \frac{1}{2}$ leagues in front by 3 in depth. The land is good and in general fertile, and the soil being of a various nature is proper for the cultivation of all kinds of grain, flax and hemp, and for artificial meadows. It is extremely well watered by the rivers Du Chêne and Chicot and by an infinity of smaller streams and rivulets that in fertilizing the lands and favouring the farmer, in a thousand ways enrich the proprietors. These rivers and streams turn 6 corn-mills with 11 sets of stones, 5 saw-mills, a carding-mill and a fullingmill, which belong to the proprietors, who are the lineal descendants of the original grantee, Mr. Petit. This property, all of which is conceded, supplies the inhabitants with beech, spruce, pine, ash, elm, oak, maple and the wild cherry-tree. It is divided into 23 ranges or concessions and contains a population of about 5,000 souls, equivalent to one soul to every 10 arpents. Threefourths of the proprietors and farmers are in easy

## 

circumstances and pay a considerable amount of tithes to the cure. At the mouth of the river $\mathrm{D}_{\mathrm{u}}$ Chene is the village of sit. Eustacne, one of the handsomest and most populous in the province, as well as one of the most salubrious. It contains a large, handsome church, a spacious preslyterian chapel and about 1.00 houses, some of which are remarkable for situation, size and elegance. This village, seated on an clevated spot fronting the grand domains of the seigneurs, presents a thousand charming prospects: the fine, wellstocked settlements on Isle Jesus, the superb basin terminated by the rapid $s_{f}$ ennerd at the discharge of the Lake of Two Mountains, the numerous and well-diversified isles with which the river is studded and the magnifieent curtain of the distant forests, present altogether one of the haypiest specimens of the picturesque. At each extremity of the villige is a bridge over the river Du Chene that does honour to the inhabitants of the parish. The population of the village amounts to about 1 , ore: souls, among whom are many merchants carrying on a lucrative commerce, a brewery, a potash-work, a pottery, two tameries, a mamufactory for cigars and tubateo in great repute, one for hats and another for chairs, all enjoying considerable reputation. Joiners, turners, Macksmiths and other artisans, amounting in number to 2.5 , enjoy an easy and honest livelihood. Mr. Dunont. having obtained the consent of the Assombly, is now building a superb bridge with 4 arches, tio ft. each, over the river Jesus in front of the village, to which it will prove an ornament and of sreat utility to persons travelling to the settlemeats on the Ottawa and who do not wish to gel water.

Blainville, the 2nd division of Mille Istes, extends 21 leagues in front by 3 in depth and is subdivided into two equal parts, belonging to Dontequil Lacroix, Esq. and to the heirs of the late IIon. William Claus. This seigniory differs much from that of Du Chine in soil, local varietics and in timber; it contains more hills and less low land than the S. Du Chine; it is less covered with bois frouc, but produces a larger quantity of pine and red "/ i, ette, which are of grcat utility to the inhalitants for building. Nearly all this seigniory is comeceled in lots of the usual extent, 3 arpents by 20 or 30 , in 10 ranges or concessions; and all the land is under cultivation, except one-third which is retained in woodland, and which is of too bad a quality for cultivation and
is under water nearly all the year. Although in many parts of this s. the land is light and sandy, it can be rendered very fertile ly means of the marl which is found in many places. In this s. is ste. Thrcese, 21 miles from Montrial; it is a considerable village of !o houses and enjoys an extensive commerce. A whisky distillery, a strong heer brewery on a large scale hedoning to James Porteus, Esq., and a little distillery established I!. Dr. Buchanan, bring hither a sreat number of farmers from the adjacent scigniomies, where they find an excellent market for the sale of their barley and rye, and can purchase various articles necessary for the use of thcir families. This village also contains 4 stores, an extensive potash work, a pretty church 120 ft . by 48 , a handsome presbytery advantiageously situated on an eminence, and a large school-house, all built with stone ; the resident curé, the Rev. Mr. Ducharure, has in a great degrec contributed to the ercetion of the last two edifices; he supports the sclool at his own expense, and shows for the advancerient of education and the amelioration of the manners of his parishioners a yeal which does him much honour, and which must be productive of the greatest grod. Besides the edifies built for the Roman catholic worship there is a pretty chapel for protestants, which is attended by a minister of the Scotch church. The protestants, who are almost all cultivators, cannot but be advantageous to the improvement of , ericultire, for the system they practise is so growd that their Camadian neighbours cannot lung delay io adopt it, at least in part. There are also in this village two potash works, tanneries, and good artisans whose industry is recompenscel by an easy and honest subsistence. At some distance from the villarge and seated on a well-chosen spot is the country-house of Mr. Lactuix, one of the proprictors, who, frequently during the year, resides there with his family. The gardens, the inclosures and the plantations, which surround this pretty residence, are so many specimens of the good taste of the owner, while the moncy he expends in improvements proves a strong incentive to industry and is of great assistance to the labourers and artisans.-This sedgnimery is watered ly branches of the river Mascouchc, the river aux Chiens, and also by the small stream Nite. Maric or r. Cachée, which drive one corn-mill and 6 saw-mills belonging to the proprietors and other individuals.

MILLE ISLES.
-This seigniory contains 400 families, amounting to 2800 souls, and two schools under the superintendence of the priest.-Buckwheat is grown and also potatoes in great abundance, and the soil is adapted for flax and hemp.-The cattle, chiefly of the Canadian breed, average 3 horses, 4 oxen, 12 sheep and 3 pigs to each farmer and one person has 100 sheep.-A considerable quantity of cloth, both woollen and linen, is made for market besides what is consumed in the seigniory. -A road leads from Terrebonne to Ste. Therese and thence to the Belle Rivière; and there is a ferry over the River Jesus in front of the seigniory. -Much the largest proportion of Blainville is conceded in lots of the usual extent; the greatest number of these are settled, and appear to be under a very beneficial system of management. On the banks of Rivière St. Jean, from Terrebonne to Du Chene, the whole of the ground is occupied, besides some large ranges of settlements along the banks of the Mascouche, forming together a valuable and highly improved property.

The Parish of St. Eustache de la Riviere du (Hîue was erected in 1769 and 1750 . All the lands are supposed to be conceded and generally in farms of 3 arpents in extent by 30 in depth, on conditions similar to those in other seigniories. All the young men would be desirous of forming new settlements if there were lands for them; the greater part of them wait for the assistance of their parents, being too poor to acquire property in any other way.-For an account of the Village of St. Eustache, r. vol. 1, p. 210.

In the i'arish of Ste. Therese de Blainville about $2 \frac{1}{2}$ leagues of land are non-conceded and unfit for cultivation, having, for the most part, a substratum of barren sand. They have not, in
general, been surveyed, but there is a road across them. Some concessions were granted previously to 1759 , measuring 3 arpents by 20 , and paying 2 sols each arpent, or 6 francs for every 60 arpents and 5 sols quit rent. It is supposed that if new lands could be obtained on terms similar to those granted in the ancient seigniories, that many of the inhabitants of this parish would gladly avail themselves of the opportunity. Although the lands that remain unconceded in this $\mathbf{p}$. are but little fit for cultivation, they would soon be taken (at least those which could be turned to any utility) if the seignior would concede them on the ancient terms; but it is said, that he demands double and more than double the price stated in the ancient contracts of concession.

The Parish of Ste. Anne Desplaines, or Ste. Anne de Mascouche, covers a part of this S. and fronts the $N$. side of the r. Mascouche. The curé emphatically says, in his report to the special committee of the House of Assembly-"Four seigniors divide among them my desert." The non-conceded lands, fit for cultivation, are not of a greater extent than is required by the population of the parish; and the parishioners were surprised to see, in 1820, from 60 to 30 Scotch families who came to settle on the unconceded lands of this parish. There is no road across these unconceded lands, and it will be impossible to make one in some places on account of the high mountains; these lands have not been surveyed. No farms were conceded previously to 1759 . By far the greater part of the youths in this parish are desirous of making new settlements in the neighbouring seigniories, where there still remain lands to be conceded although most of them are of inferior quality.

Mill River, runs into the r. Suguemay between Ha Ma Bay and Chicoutimi. It forms a good harbour and the timber on its banks is of various kinds.

Milton, township, in the co. of Shefford, is bounded n. e. by Roxton; s. w. by st. Hyacinthe ; in front by Granby ; in the rear by Upton. The soil is not so good as that of Granby, as it
lies lower and in many places runs into swamps, which would require much perseverance in a good system of draining to be rendered of any utility ; but while there remain so many thousands of acres to be granted, not needing this operation, it is not probuble that it will be undertaken. There is however abundance of very fine grass-land. The timber is a mixture of beech, pine, cedar and tamarack. The parts laid out were granted, in 1785 , to officers and privates of the British militia, who served during the blockade of Quebec by the Americans, in 1775-6.
Mingian or Terra Firma de Mingan, seigniory, extends from Cape Cornorant, along the northern shore of the Labrador channel, to the r . Goynish. Grauted Feb. 25th, 1661, to Sieur Francois Bissot. FromCape Cormorant to Anse Sablon is the only part now contained in the province of Lower Canada and is in the co. of Saguenay. The land is very indifferent and wholly uncultivated, indeed unfit for agriculture. The group of islands lying off the shore, called the Mingan Islands, are advantageously situated for carrying on the fisheries and were conceded, Mar. 10, 1677, to Messrs. Lalande, jun. and Louis Jolliet.-This is one of the king's posts, and is let for 500 l . per annum.

Miskanouska, lake and river, discharge their waters into Lake Assuapmoussoin.

Missiqionipi, 'Perres Rompues or River of Broken Lands, is in the co. of Saguenay. The lake of that name empties itself by an outlet into the Grande Décharge. The R . rises in a lake in the interior and runs into the Saguenay nearly opposite Chicoutimi and is of inconsiderable extent, being similar to the St. Charles near Quebec.

Missisiour $\mathrm{Bay}_{\Delta y}$, between the seigniories of St. Armand and Foucault, is at the extremities of the cos. of Rouville and Missiskoui, on the pro-
vince line. It is an arm of Lake Champlain and bounds Foucault on the e.; it is 15 miles long and on an average 3 m . broad. It is navigable in every part for vessels that sail the lake, and abounds with fish of delicious flavour, viz. pike, pickerel, Maskinongć, bass, white fish, perch and various kinds of the sucker.-In this bay, or near it, some mineral waters have been discovered, which have been highly extolled.
Missiskout, Missisquoi or Missisqui, county, in the district of Montreal, is bounded N . and N. e. by the co. of Shefford; s. e. by Stanstead; $s \mathrm{w}$. by Rouville; s. by the boundary line. It contains the townships of Sutton, the seigniory of Saint Armand, and the townships of Dunham and Stanbridge, together with all the gores and augmentations of those townships.-Its extreme length is 30 miles and its breadth $14!$, containing 360 sq. miles. Its centre is in lat. $45^{\circ} 6^{\prime} 30^{\prime \prime} \mathrm{N}$., long. $72^{\prime} 43^{\prime} 15^{\prime \prime} \mathrm{w}$. It sends two members to the provincial parliament, and the places of election are at Dunham and Frelitzburg. The principal rivers are the Pyke and Missisqui. The surface of this county towards the province line is broken and mountainous, and the most conspicuous mountain is the Pinnacle Mountain in the S . of St. Armand: towards the N. w. it becomes more level and the soil is very luxuriant, being generally composed of a rich black mould with here and there a mixture of sand. This county yields all sorts of grain in abundance. The prevailing timber is maple, beech, bireh, elm, butternut, iron-wood, white and black ash, also good oak and pine. It contains 7 villages, the chief of which are the villages of Phillipsburg, Dunham and Frelitzburg. It is traversed by many roads presenting numerous and very flourishing settlements.

Statistics.

Missiskoul or Missisqui, river, rises in the T. of Bolton, and traversing through the centre of the $\boldsymbol{T}$. of Potton receives innumerable small streams; then it enters the $\mathbf{r}$. of Sutton, intersecting its s . E . angle; after which it crosses the boundary line into the Inited States in a s. w. direction; then turning suddenly it empties itself into Missiskoui Bay.

Misilequif, i. Missiskoui.
Mismisuvoi, $v$. Missiskoui.
Mistanis, river, runs into Lake St. John. It is navigable for large boats for many leagues, and farther on for bark canoes.

Mintanific, Mintissinnes or Mistamein, lake, is on the highlands between Iludson's Bay and Lakest. John. It empties itself intolludson:s Bay by means of the r. Rupert and another outlet. The extent of the lake is but very imperfectly known; the Indians say that it takes three days to cross the narrowest part of it from island to island; between which and the main shore the distance is supposed to be not less than 30 miles, the lake, therefore, would appear to be about 90 miles wide in that place; they also state that it takes the whole of the summer season and part of the spring and fall in voyaging from the mouth to the head of the lake : hence it is supposed that its dimensions are not inferior to Lake Ontario. Pike, white-fish and picherel of considerable size and excellent quality are taken in this lake, which is very deep; also a lind of trout, called by the Aborigines mingoache, which wiohs as much as two large salmon. The mode of transport practised by the Hudson's Bay Company, in conveying their goods to Mistassini, is generally in barges conducted by regularly disciplined men, most of whom are half bred: the barges are drawn across the portages on rollers. Cudar-bark canoes are used in ascending small rivers, when in search of the Indians who sell furs, for birch-bark fit for canoes cannot be found in that country.

Mistassini, river, runs into the n. $w$. side of Lake St. John about 3 miles from the n. Assuapmoussoin. The Mistassini, or "The Latre Rock;" has also been deservedly called the Rimiar de simhe, or Sand River, on account of its sandy banks, and the sand-shoals at its mouth which extend considerably into the lake. This river has been explored as far as 10 miles from its mouth, and the same sandy appearance continued on each side, and sand-banks in several places were found to
cross its channel. It is about 3 miles wide at its mouth, including a group of islets, between which are a number of channels calculated to mislead the voyager; above and below these little islets the channel leading up the mouth of the $r$. is not less than $1 \frac{1}{2}$ mile in width. The sands which are brought down by the $\boldsymbol{a}$. into Lake $S$. John render the lake so shallow that there is scarcely 3 ft . of water for 3 miles from the shore opposite its mouth, which is in lat. $H H^{\prime}$. - This $n$. is extremely shallow, which, with the wretched soil on each side, seems to be in some degree compensated for by the beauty of its width, its islands and its woods, which have induced a traveller to call the Mistassini "a magnificent river." The timber close to its banks consists of spruce, crpress, white birch and a few elms.- From the testimony of Mr. Verrault, it would appear that the tract of land between the course of this $i n$. and that of the Assuapmoussoin is unfit for cultivation; but the deputy surveyor-general of the province has since visited this R., and thinks, from the proximity of those rivers, and from the general aspect of the country, that there is, nevertheless, a considerable proportion of land in that tract susceptible of cul-tivation.-The Mistarsini is formed by the junction of two rivers, the Washieamiscou and the Kakissagan, and receives the Patshikamistick river.

Mifis Lake or Lac Mitre, seigniory, in the co. of Rimouski, lies neat the N . angle of the co. of Bonaventure and is bounded on all sides by waste lands. The lake, which is an expansion of the r. Mitis, ! leagues from the it. Lenrence, is 5 miles long and nearly 3 miles in its greatest width. The seignimy extends one lague round it. This grant was made, Feb. 10, 1693, to Gicur Louis Ruuer.

Mitis, river.-Two rivers of this name fall into the St. Lawrence in the S. of Mitis.-Wh greater river, called the (irmmis Mitis, rises ne:ar the $\mathrm{N} . \mathrm{w}$. angle of the county of Bonaventure, and penetrating the county of Rimouski soon conters Lake Mitis, which is an expansion of the river, and running N . forms another considerable expansion a fuw miles distant from the former ; when continuing its N . direction it passes through

## II I T

M I T
waste lands into the s.e. section of the S . of Lepage, and thence into the S . of Mitis, where it discharges itself into an expansive estuary called Anse aux sinclles, which is very easily forded at low watter.-This river is navigable for boats up to the falls, and will admit of timber being floated down from the interior of the country.-Mr. L'Arrive's dwelling-house and establishment stand at the mouth of the river, across which booms are extended to receive the deals from the saw-mills which are about $2!$ miles up the river on a most advantageous site.-The Little Mitis river rises in waste lands in the rear of the S. of Mitis, and, after traversing the seigniory to its front, falls into a small bay called Little Mitis Harbour.

Mithe or De Peiras, seigniory, in the co. of Rimouski, is bounded N. E . and in the rear by waste lands; s. w. by Pachot; in front by the St. Lawrence: 2 leagues in breadth by 2 in depth: granted, May 6 th, 1675 , to the Sicur de Peiras. The surface is gencrally mountainous and broken along the front, affording but little good soil for the purposes of agriculture. In the interior, and by the sides of the rivers, are a few patches of tolerable land with some meadows and pastures. The front is settled, and there are some tolerably grod farms. Mr. Mi Nider has erected mills and stores, and dwelling-houses intended for the reception of travellers. He has built a schooner to ply to Quebec; and one or two square-rigged vessels have been also built. The chief settlements are at Little Mitis, on a point formed by the st. Lawrence and a deep bay to the s. E ., which receives the waters of the n . Little Mitis. -The lands in the vicinity of this bay, although of a rather light soil, are rendered extremely fertile by the genial moisture of the sea air, and the efficacy of the sea weed which abounds on the shores and is used as manure. This S. abounds in timber of good quality.-The road from Quebec to this S . is perfectly practicable all the way for carts and calashes, and settlements have been made throughout. From Grand Mitis to Little Mitis, 5 or 6 miles, the road on the beach is passable; from Little Mitis to Matane the route is very difficult, no road having been traced. The seignorial mills are about 1 mile below Grande Mitis. The corn-mill is of the best description, and in excellent order, but it is little worked as yet, and the saw-mill, which stands near it, has been of late much neglected.-Mr. L'Arrivé's mill lies
at the base of a hill of from 80 to 90 ft . elevation, about mid-height of the fall which supplies the mill with water. Below the mill the river forms, at the foot of the falls, an expansive basin, bounded by a perpendicular rock of 150 to 200 feet in height, and high woody ground to the E. , the side the mill stands upon. The dams appear to be solidly and judiciously constructed; the deals are thrown into an aqueduct, which conveys them over the point to the gentle current below the rapids, along which they are conveyed to the booms at the mouth of the river, where about 10 or 12 men receive them, saw their ends and pile them up ready for loading. The wages average from $3 s$. to $4 s$. per day, besides board and lodging. -40 families were settled here in 1823, consisting of English, Scotch and Canadians, but principally Scotch ; the settlement commenced in 1818. The first settlers were without capital, and were provided with provisions, \&c., for the first two years by Mr. M'Nider, the proprietor; after which the produce of the soil fully supported them, and the more industrious produced a surplus for sale; many of these settlers (the most industrious) refused assistance after the first year. The assistance rendered by Mr. M•Nider was as follows:-Each family of five persons had $1 \frac{1}{2}$ barrel of pork, 6 quintals of flour, 2 quintals of biscuit, 10 bushels of potatoes, 10 lbs . of butter, 1 lb . of green tea, 6 lbs . of sugar, 1 cwt . of dried cod-fish, and 1 carron stove and pipe; also each man had one axe, one hoe and one spade, and one grindstone was allowed to each four families; also 3 pair of blankets, one counterpane and 2 pair of mocassins to each family : necessary coarse clothing was provided, and paid for in labour. The expenses of each family, including the clothing, were from 15l. to 20l.; and a number of Canadians were willing, in 1823, to settle in this seigniory, provided the proprietor would advance $10 \%$. per annum to each for two years. The first two years the settlers pay no rent, after which a money rent of 12s. 6 d . for each lot of 140 to 200 acres. In 1823 Mr. M•Nider gave the following account of his improvements :-" I held two farms in my own hands, of which I cleared aboit $7{ }^{0}$ acres: I built 2 dwelling-houses, 2 barns, 2 stables, a cooperage, a salt-house, a large cooking-house for the fisheries, a corn-mill, and a saw-mill. The labourers employed in these works were paid half in money and half in goods, at the rate of $3 s$. a day. Cutting
and burning cost 3 dollars per acre, and rootine and preparing the land for the plough 12 dollare per acre. The buildings cost about 120101 , at the rate of $300 l$. per amum. The goods were furnished to the settlers at $\overline{5}$ per cent. commission upon selling-prices, provisions at first cost and without commission."-Many of the pilots remain in Mitis Bay to watch the vessels coming up the River sit. Lawrence, and it sometimes occurs that tempestuous weather prevents their venturing out to the ressel putting out signals for a pilut, Whates if the versel were to come in the way the pilots would easily get on board, and many a vessel might thus be sarad from shipwreck. The N. eastermmost point of the Mitis recf of rocks presents an important and convenient post for a lighthouse; and another leaton being lighted on the Ball. an island so called towards the depth of the bay, the outlines of the harbour would be so distinctly marked out that at all hours vessels might put into it. The anchoring-ground is a mixture of sand and clay, uniformly uninterrupted by reck. It is the opinion of experienced pilots that any ship may ride with safety in this bay, and they would fearlessly pilot them if authorized by the Trinity Housc.-At Anse aux Snelles, although much exposed, the anchoring-ground is very good, and vessels may ride there with iolcrable safety. From the distance, however, that vessels must lie out from the shore, much inconvenience is suffered in loading, which is effected by means of a flat-bottomed schooner built for that purpor. Anse des Murts is a decp cove about 4 m . in circuit. There is a fishing-ground about a mile from the shore for cod, halibut and ling; and an extensive salmon and herring fishery is set up in the bay, on the s. e. side of the point, which at proper ceasons yields abundance of both articles, which are cured, salted or pickled after the Scotch manner, and brought to Quctece, where they are generally preferred as being more saleable in the West India market. It is stated by Mr. Hay, that with a sufficient number of men to cure the herring taken in his fishery, loon barrels could be packed in one season; but it frequently occurs that large quantities are damaged and lost on the beach from the inadequacy of the establishment to take advantage of the immense produce of the fishery: halibut and cod-fish are also taken off and in the bay, where seals are to be seen in great
quantities at ebb tide, basking on rocks in all directions.

The following statement will show the importance of the fishing-establishment at this place, conducted by Mr. May ; it was drawn up for the year lide: and the profit is rather underrated. -

Some interesting information relative to the waste lands in the vicinity of this scigniory has been derived from a surveyor employed to trices. 1 road from it to Lake Matapediac. He traced a road from the bay of Little Mitis on a s.s. E . course to Craig's Mountain 3 miles, and found fine land and timber, and continued on that comrse 4 miles more through hard wood land, and thenee directed his course s. two miles, then s. four miles through fine timber and excellent land; thence s.s. e. two miles to the r. Tartigo; thenw. for two miles to a small beaver lake, the apparent source of the Tartigo, at the head of which discharges a little stream; thence s. by e. over a fine country covered with oak timber; thence e.s.e. four

## M I T

miles near the River Blanche;-here from the top of several mountains a few scattered hills of no material consequence were seen on each side of the River Blanche, and also an abundance of black and yellow birch in the vicinity ;-then two miles s.s. E. over the river, where a mountain, called Blue Mountain, is on the right, from which the country appears to be favourable for the opening of a good road, and the lands in every respect fit for settlement. The surveyor then returned to his camp, and afterwards set out on a s. e. course 6 miles, and met with fine land and a level country ; thence he continued $\mathbf{E}$. by N . six miles, and came to the borders of Lake Matapediac, at the head of which is a swamp producing cedar of an extraorlinary large size; its southern bank presents the fincst place for settlement, and on the N. w. are some hills, between which and the R. Blanche are extensive valleys of fine land: he found all the country lying between these mountains and the st Lawrence in every respect fit for cultivation ; and this tract, and even as far as the r. Ristigouche, consists of grod and valuable lands, well watered ly numerous lakes and rivers, and fit for settlements. The timber is, generally, sapin, cedar, poplar and bastard maple in the front up to the mills; then the timber is found to be elm, ash, maple, black birch, yellow birch, and pine; and this fine hard timbered land is intermixed here and there with small swamps, which are, however, of little consequence : this description of land and timber extends to the Tartigo River, 2 leagues west of River Blanche. The third concession of the S . of Mitis affords, generally, a correct specimen of the land and timber of this tract.-The quality of the land and timber between Mitis and the S. of Matane is generally like that of Mitis, and both, especially in Sandy Bay, may be said to be rather superior, and the whole fit for settlement. From Mitis line, in Sandy Bay, to Tartigo river, 5 leagues, the lands are fit for settlement; farther in the interior the lands are even better, and are all maple land; 3 miles still farther is a ridge of hardwood lind, that extends from Grand Mitis all the way down to Tartigo R., and still more in the interior there is supposed to be better land. All the rivers and brooks in this tract afford fish; small trout and considerable quantities of salmon are in the rivers Tartigo and Blanche.

Morsi or Moose, river, in the co. of Saguenay, runs into the St. Lawrence nearly opposite the Seven Islands.

Monvorr, seigniory, and its augmentation, in the co. of Rouville, are bounded N. E. by Rouville and St. Hyacinthe; s.w. by Bleurie; in the front and rear by East Chambly and the т. of Farnham.Two leagues in front by 3 in depth. Granted, Mar. 25, 1708, to Sieur de Ramzay: the augmentation, equal in extent to the seigniory, was granted, June 12, 1739, to Sieur J. B N. Roc de Ramzay: the whole is now the property of judge Jean Roche Roland, Esq.-Throughout this tract the land, though various in its nature, is of a moderately good quality, and where it is under management produces very good crops of grain; many parts, not yet broken up, would prove very favourable to the growth of flax: the upper division, adjoining Chambly, is nearly all cultivated, as well as an extensive range on the left bank of the Yamaska and on both sides of a rivulet near the $\mathbf{~}$. of Farnham ; towards the $w$. boundary it is somewhat low and rather inclining to swamp: the land in the interior is generally level and superior to that in the front. The upper part is watered by several streams descending from the interior of the S . to the r. des Hurons. On the uncleared land is a tolerable abundance of wood, mostly of the inferior sorts, with here and there some good timber of large dimensions.

The Parish of Ste. Marie is at present the only

## MONNOIR.

one in this S., but it is necessary to divide it into two, and the most proper site for a new church would be the Mountain of Ste. Therese, lately called Mount Johnson, for the accommodation of the southern side of the scigniory, whose inhabitants are too distant from the present church, which is on the rivulet St. Louis, nearly a leagne from Cordon de Rouville. A new church on the south of the mountain, at the plate above described, would be at a similar distance from (ordon de Sabrevois, and that part to the s.w. is already inhabited, with the exception of a small number of lands, which will also, without doubt, be inhabited in a few years. On the Rivicre du Sud-Ouest, or South-West River, there is a considerable settlement, consisting, chicfly, of Irish catholics, who could be for many years under the care of the cure of this new parish; and all the southern part of the stigniory, comprising the Rivicre du Sud-Ouest, would be at present capable of providing for a curc, whose parish would extend $1_{i}$ league along the Cordon du Chambly to the rear of the scigniory. The climate of the southern side of the mountain is delightful, and a village would in a little time be built there, for it is the way by which the inhabitants of the townships pass, and a mill is already erected.

In the first range of concessions, in the western half of the seigniory, are 518 lots conceded, known by as many numbers; the other half of the seigniory comprehends $4!11$ lots, of which two-thirds are inhabited, and the remainder are conceded and the clearing procceds rapidly. There is a lake called Lake John, surrounded by a savanna or low ground, which admitting of an easy dramage has been lately conceded. It is of an oval shape and is supposed to cover at least 800 arpents, being not less than a mile across in its narrowest part. The lake supplies a considerable current of water that forms the Riviire du Sud-Ouest.-The number of farms or inhabited lands may be computed at two-thirds of the whole, that is to say, between 6 and 700. The finest ranges are on the rivulets Ruisseau Barré, Ruisseau St. Louis, la Branche du Pin Rouge, la Branche du Rapide, le Rang double du Grand Bois, without omitting the two sides of the Riviere du Sud-Ouest, which, in the sequel, will be one of the finest places in the country. The lands are fertile and, generally speaking, there is but little sterile land in the whole
seigniory. From the Cordon du Chambly to the north of the mountain there is a strip of strong land, about a league broad, extending from cast to west across the seigniory, which is not excelled in any part of the province for the growth of corn. Threceeighths of the seigniory are supposed to $h e$ under cultivation, and the remainder in wood, which is, in seneral, pine. spruce, birch, ash and cedar.-The Rivicre des Hurous runs across the $\mathrm{N} \cdot \mathrm{W}$. part of the seiduiory, and in consequence of receiving a great number of runs of water that isste from the Lac de la Montagne de Rouville and from their natural springs, it is well supplied with water, especially in the spring and during rains. On this river is a corn-mill which, if rebuilt, would be highly useful. The n. des Hurons runs at this place, and even to its mouth in the basin of Chambly, over a rocky bed with many falls and a sufficient degree of rapidity ; it is never dry, even in the greatest drought, and swells considerably after every fall of rain. On the Riviere du Sud-Ouest, not far from the (ordon du Debartzach, is a tine saw-mill, which, by means of a dam made to keep up the water, is capable of being worked all the year round. A corn-mill might be built here with advantage, especially by conducting, by means of a drain 15 or $\mathfrak{Q}_{0}$ arpents lone, the water of a considerable rivalet known by the name of la Petite Riviere du Sud-()ucst, which runs from the east; the site of this mill being in the midst of roads that traverse it would give rise to an estallishment as important as a village, and a spot of land is already reserved for the purpose.- In this seigniory there is only one fief called firf wh Josf, containing 3 concessions, each 3 arpents by 40 and in the posesesion of farmers.-The number of houses is supposed to be about 1000, including the settlements. At present there are mly 3 :chools, one of which is a royal foundation, but many other are in contemplation. There is only one village, which is rather considerable; it is near the chureh and contains only one inn, but five others are scattered about the seigniory. There is only one church, one water corn-mill and one windmill, newly built, for grinding corn. The water-mill is on the Riviere des Hurons. The wind-mill is near Mount Johnson. There are potash works in different parts of the reigniory.-The roads throughout may be said to be in a good state; even those that cross the lands lately cleared are
generally good. The road that extends from the mountain Ste. Therese, in an angular direction, to the line of road that divides the seigniory into two parts and thence for 2 leagues in a straight line to the $т$. of Farnham, crossing a savanna, is much frequented and promises to be of considerable utility.-The mountain called Mount Johuson covers about 500 arpents; it is not much wooded at the summit, which is nearly all rock, but it is surrounded with a wood of lofty forest-trees, and the land in its environs is fertile: it is high enough to be conspicuous for many miles round; it is however not so remarkable as several others of the same isolated nature in some of the adjoining seigniories. - Monnoir contains 84,000 superficial arpents, of which 65,000 are conceded ; the remainder, over which there is one road, is fit for cultivation, but not surveyed.-No concessions were granted prior to 1759 .-There are persons in this $S$. willing and able to make new settlements on lands of good quality and susceptible of cultivation.

Titlc.-" Concession du 25 me Mars, 1708 , faite par Messieurs de Rigaud, Gouverneur, ct Raudot, Intendant, au sieur de Rumzay, de deux lieues de front sur trois lieues de profondeur de terres non-concédées, le long de la riviere des Hurons, joignant d'un côté la Seigneurie de Chambly, et de l'autre cóté aux terres non-concédées, courant du Nord-est au Sud-ouest, avec les isles et islets qui pourroient se trouver dans la dite rivière, vis-à-vis la dite concession, la dite concession portant le nom de Monconcession, la dite concession portant le nom de
noir."-Régistre d'Intendance, No. 2 á 9 , folio 355.

Hocquart, Intendant, au Sieur Jean Baptiste Nicolas Roc de Ramzay, de deux lieues de front sur trois lieues de profondeur, au bout de la Seigneurie de Monnoir, concédée le 25me Mars, 1708, situće près Chambly le long de la riviere des Hurons, en courant Nord-est et Sud-ouest le long de la continuation de la Seigneurie de Rouville, joignant la dite Seigneurie au Nord-est et celle de Sabrevois au Sud-ouest."-Régistre d'Intendance, No. 8, folio 20.

Mont-a-Peine, fief, in the co. of Bellechasse, is bounded n.e. by Vincennes and Livaudière; s. w. by La Martinière ; in the rear by Buckland ; in front by the St. Lawrence.-Granted in two parts; the first, 10 arpents broad by 40 deep, to Mr. C. Dennis, Sieur de Vitré, on the 24th Sep., 1683 ; the augmentation, of the same breadth, and completing the depth of the whole to 6 leagues, was granted, June 18th, 1749, to Claude Antoine de Berment, Seigneur de la Martinière ; it is now the property of Féréol Roy, Esq. This fief possesses a soil nearly similar to the $S$. of Lauzon and is in a forward state of cultivation, two-thirds being occupied. The most flourishing settlements are near the St . Lawrence and on each side of the river Boyer. The timber is various, but that of an inferior kind is most prevalent. It is well watered by the Boyer and some inferior runs of water.

Title.-" Concession du 24me Septembre, 1683, faite à Mr. Charles Dcnis, Sieur de Vitré, de dix arpens de terre de front, sur quarante de profondeur, pour en jouir, lui ses hoirs et ayans-cause à titre de fief et seigneurie à ses hoirs et ayans-cause a titre de fito et ciglement la

Augmentation.-" Concession du 18me Juin, 1749, faite
Augmentation.-" Concession du 18me Juin, 1749 , faite
par Roland Michel Barrin, Gouverneur, et Frangois Bigot, Intendant, à Claude Antoine de Berment, Seigneur de la Martinière, d'un restant de terre qui se trouve an bout de la profondeur du ficf de Vitré, et qui est enclavé entre les fiefs de l'incennes et de Livaudière au Nord-est, et celui du dit Berment de la Martiniere au Sud-ouest, jusqua l'égale profondeur de six lieues que contient le fief du dit Sieur Berment de la Martinière."-Régistre d'Intendance, No. 9, folio 41.

Montarville, seigniory, in the co. of Chambly, lies between Boucherville and West Chambly and is bounded N. E. by the augmentation to Be lœil and s. w. by Longueuil.-One league and 30 arpents in front by $l_{1}$ league in depth. Granted, Oct. 17, 1710, to Sieur Boucher, and is now the property of Réné Labruere and X. Beaubien, Esqrs. The land is good, producing grain and vegetables of all the sorts common to the country in great abundance; about two-thirds are under a very favourable system of husbandry. The wood that remains is chiefly of the inferior sort used for fuel, with but very little timber. Towards the n. e. angle is the Boucherville Mountain, on whose summit are two small lakes, whence descends the only rivulet that waters the $S$., which, in its course down the declivity, turns two corn-mills; the first is agreeably and singularly enoughsituated

## MON

on the brow of the mountain.-One roadleadsfrom the St. Lawrence to the Richelieu and several others in a transverse direction.-A portion of this $\mathbf{S}$. is included in the $\mathbf{P}$. of Boucherville and was partly conceded before 1759 ; the concessions made since that period are more heavily rented than those of an older date. Part of the conceded lands are capable of affording good settlements, though still covered with standing wood, which the proprietors retain in this state in order to supply themselves with the necessary wood for fuel, enclosing and building; and this appears a wise precaution, because wood in general is daily becoming more scarce in the neighbouring seignories.

Title.-" Concession du 17 me Octobre, 1 illo, faite par Messrs. de Vuadrcuil, Gouverneur, et Raudut, Intendant, au Sieur Bouchicr, d'une lieue et trente arpens de terre de front sur une licue et demie de protondeur, ì prondre dans les profondeurs entre le-Scigneuries de Bualliraille et de Chambly; joignant au Nord-est la Scigneurie de I'archnes, et au Sud-outest la Scigneurie de Tromblay."—Régistre d'Intendance, No 2 a 9 , jutio 169 .

Mont Louis, river, in the co. of Gaspé, runs into the St. Lawrence about 8 miles w. of fief Magdeleine.

Montmorfnct, county, in the district of Quebec, is bounded s. $w$. by the co. of Quebec ; N. E. by a line run from (ap de l'Abatis on the $S t$. Lawrence on a course $\mathbf{N} . \boldsymbol{w}$. parallel to the boundary line of Beauport to the N . boundary of the province; N. W. by the N. boundary of the province; s. e. by the St. Lawrence.-It comprehends the parishes of St. Féréol, St. Joachim, Ste. Anne, Château Richer and l'Ange Gardien.Its extreme length is 240 miles and its breadth $32 \frac{1}{2}$, containing 7,396 square milus. Its centre on the St. Lawrence is in lat. $47^{\circ} 10^{\prime} \mathrm{N}$. , lon. $70^{\circ} 53^{\prime} 10^{\prime \prime} \mathrm{w}$. It sends one member to the provincial parliament and the place of election is at Ste. Anne. The principal rivers are the Ste. Anne and Lombrette. The surface of this co. is extremely mountainous and rocky, particularly along the coast of the St. Lawrence. The most settled parts extend from St. Joachim, westward,

## MON

exhibiting a range of thick and flourishing settlements, and along the banks of the St. Lawrence is a good front road. - For a farther description of this co. vide Cite de Beaupré.

Montmonenct river, in the co. of Montmorenci, rises in Lac des Neiges and, traversing the $s . w$. side of the S. of Côte de Beaupré, cnters the $S$. of Beauport and falls into the St. Lawrence, 8 miles N. E. of the city of Qucbec. This river was named after a marechal of that name, who was a viceroy of New France previous to the conquest. Its course from the $\mathbf{N} . \mathrm{E}$. is of considerable extent, and the first settlement through which it passes is called La Motte, situated on the northern extremity of a sloping ground, which gradually descends from the mountains to the northern shore of the $S_{t}$. Lawrence. This river is said to be a torrent from its source to its mouth, and is ascertained to be so for many miles from the St. Lawrence. In its carlier course through an almost continued forest its strean is of triflings consequence, unless when swelled by melting snow in spring or by autumnal rains; it runs over an irregularly broken rocky bed until it arrives at the celcbrated cataract called the Falls of Montmorenci, where its breadth is from 16 to 20 yards. A little declination of the bed before it reaches this point gives a great velocity to the stream, which, being impelled over the brink of a perpendicular rock, falls in an extended sheet of water, of a whiteness and fleecy appearance nearly resembling snow, into a chasm among the rocks. An immense spray rises from the bottom in curling volumes, which when the sunshine displays its bright prismatic colours produce an effect inconceivably beautiful. At the bottom of the fall the water is restrained within a basin formed by

## MON

the rocks, whence, after its impetuosity is subdued, it flows in a gentle stream into the St. Lawrence, a distance of about 300 yards. These justly celebrated Falls are visited by all travellers, who arrive at Quebec with the means and the leisure to gratify their inclination for the beauties of nature. When the.St. Lawrence is at full tide, these Falls constitute the most magnificent object in the province. Close to the falls stands a house which was the residence of his late Royal Highness the Duke of Kent, but now in the possession of $J$. Patterson, Esq., who is the proprietor of the extensive saw-mills at the foot of the Falls; it was near this place that General Wolfe made his first attempt and was repulsed with the loss of 700 Iessians. From the opposite bank of this gentleman's house is the best view of the Falls, as it embraces the village of Beauport and the City of Quebec. The road to it is over a wooden bridge thrown across the river Montmorenci, which here rushes down with considerable impetuosity; on the opposite side of this bridge, and at the foot of a hill, stands in a romantic situation a house for the reception of travellers. Another good view of the Falls may be taken from the top of the aqueduct. These celebrated Falls are nearly 950 ft . high, being 100 ft . higher than the Falls of Ningara. The next place worthy of attention is the extraordinary appearance of the bed of the $\mathbf{r}$. Montmorenci, which is there formed on a considerable angle of depression, having on either side banks of stratum presenting the form of natural steps and surmounted by woods.

Montreal. District, v. Distriets.
Montreal, island, seigniory and county.For a description of the city, soil, climate, \&c. \&.c., vicie Vol. I. p. 212.-Montreal is the most considerable island in the province, and its superior fertility has acquired for it the distinguished appellation of the Garden of Canada. This island is divided into 9 parishes besides that of the town of Montreal. Its extreme length is 32 miles and its breadth $10 \frac{1}{2}$, containing 194 square miles. Its centre is in lat. $4531^{\prime} \mathrm{N}$. , long. $73^{\circ} 40^{\prime} \mathrm{w}$.-The county comprises the whole of the Island of Montreal, together with all the nearest islands which, in the whole or in part, lie in front of it. It is divided into several seigniories which are in the following parishes: Montreal, Ste. Anne, Ste. Génévieve, Pointe Claire, Lachine, Sault des Recollets, St. Laurent, Rivière des Prairies, Pointe

## MON

au Trembles and Longue Pointe. It sends 6 members to the provincial parliament, and the places of election are, at St. Laurent for the county which sends 2 members, and at Montreal which sends 4 members for the city.
The Parish of the Town of Montreal, by a regulation made Sept. 20, 1721, confirmed by an Order in Council, Mar. 3, 1722, comprehends the following côtes: de la Visitation, St. Joseph, Notre Dame des Neiges and St. Pierre; also parts of St. Paul and Ste. Catherine, together with Isle St. Paul, at the mouth of the r. St. Picrre, and Isle au Heron lying off Cote des Argoulets.-The road through Cîte des Neiges is well settled, and many of the buildings present the appearance of an American village: a chapel is erected N . of the road.
The Parish of St. Laurent by a regulation made Sept. 20, 1721, confirmed by an Order in Council, Mar. 3, 1722, contains the côtes St. Michel and St. Laurent, with one half of two ranges of Notre Dame des Vertus. At some distance from Côte des Neiges is the pretty village of St. Laurent, containing a neat parish church with two spires, and seated on the east side of the road.

The Parish of Ste. Gencuiève is situated at the n. w. extremity of the island, opposite to Isle Bizard. All the lands were conceded prior to 1759 , and the farms measured 3 arpents by 30 to 40 , and pay annually 21 bushels of wheat and 2 livres 5 sols, ancient currency. No land remains to be conceded unless it be the domain of the seignior of Isle Bizard, which is 60 superficial arpents in extent.

The Parish of Sault au Recollet is handsomely situated on the borders of the Rivière des Prairies; it contains a small village, a fine church and presbytery, and valuable corn and saw-mills. In front of the village of Sault au Recollet are several small islands which add to its picturesque seenery. -There are no unconceded lands in this p. and the domain is of very small extent. The greater part of the lands was conceded previously to 1759, and the farms measure 3 arpents in front by 30 or 40 and some 20 in depth, each paying one bushel of wheat and a livre for every 20 arpents: the greatest extent held by any one tenant is 281 arpents.

The Parish of Pointe Claire, by a regulation made Sept. 20, 1721, confirmed by an Order in

## MONTREAL.

Council, Mar. 3, 1,29, extends from Ciite de Ste. Anne to Côte St. Remi, and includes the lower part of Isle Perrot. The greatest extent of land possessed by any one person is $: 323$ arpents. All the lands are conceded and on terms similar to those in the $P$. of Ste. Anne.

The Purish of Laitine, by a regulation made Sept. 20, 152!, confirmed by an Order in Council, Mar. 3, 1220, comprises 9 lemues along the st. Lawrence from Chite des Argoulets to Pointe Claire, part of Cite ist. Paul, and half of two ranges in Cinte de Notre Dame des Vertus. All the lands are conceded, and some previously to $17-9!$. The rent of each farm is 10 . and half a bushel of wheat for every 20 arpents. The greatest extent held by any one tenant is 9.5 arpents.-The Lachine canal is of vast utility in connecting the navigation above Sault sit. Louis with the port of Montreal; it is an ornament to the island and attracts numerous visitors. For an account of it, vide (cuatls.

The Prish of Pointe aux Trombles, by a regulation made sept. 20, 1,21 , confirmed ly an Order in Council, Mar. 3, 1722 , extends along the sit. Lawrence, from the upper end of Isle Therese to the boundary of the parish of Longue Point, including the Cote de la Pointe aux Trembles and part of Ciste de St. Leonard. Pointe aux Trembles is a small village containing 30 or 40 houses; there are several taverns for the reception of strangers, being on the main route between Montreal and Quebec. This village is also frequented as a place of recreation by the citizens oi Montreal.

The Parish of Longue P'ointe, by a regulation made Supt. 20, 1721, confirmed by an Order in Council, Mar. 3, 1720, includes part of Cote St. Martin N. e., and extends N . to the king's highway which runs through the centre of the island, containing about one league and 17 arpents.

The I'mis, of Riciare des I'mition, by a regulation made Scpt. 20, 17:1, contirmed by an Order in Council, Mar. 3, 1723, contains only the Cute de St. Joseph, and extends two leagues along the Riviere des Prairics from the lower part
of the island. All the lands in this $\mathbf{P}$. were conceded previous to 1759 , and consist of 8226 superficial arpents. In 1891 there were 106 houses, of which 92 were inhalited by farmers and 16 by occupiers of small plots of ground, called emplacemens. The greatest extent occupied by any one person is : $\%=0$ superficial arpents.

The Itarish af ste. Amm, by a regulation made Feb. 20, 1721, contirmed by an Order in Council, Mar. 3, 172.2, was erected at the upper end of the island, and contains the extent between the r. de l'Orme N . and the Cöte de Pointe Claire s., and also the upper part of Iske Perrot. The ereatest extent of land possesised by one person is 360 arpents. All the $\mathbf{P}$. is conceded, and the greater part previous to 1759 , and the portion conceded since, in farms of 3 arpents by 30 , pay the same rent, viz. one sol per front arpent and half a bushel of wheat for every $\Omega_{i}$ superficial arpents.

With the exception of the mountain, which rises to the north-went on the slirts of the city, the general surface of the island is level, notwithstanding the existence of gentle ridges called wata, by which the complete unitomity of the level is not unfrequently and arceably varied. The mountain itself in a very conspinuous object, independently of its altitude above the surrounding country. It consists of two distinct hills, one of which to the castward is called the greater and the other the lesser mountain, between both of which passes one of the leading avenues into the city, which communicates with roads by which the circuit of either mountain may be made, and this, indeed, from the many charms of its secnery, is a very favourite drive. The slopes of the mountain are wooded nearly from their base to the summit, but towarts the base the forest-trees have been succeded by orchards that produce apples, pars. peaches and plums of the chnicest flavour; and it is worthy of remark, that although thic fruit of the island is universally excellent, still all parts of it yich to the vicinity of the mountain in the luxuriance of the orchards and the deliciousness of the fruits they produce.

Titlr. - " Lettres patentes, en forme d'Edit, données par sa Majesté très Chretienne, en Juillet, 1714, qui confirment la concession de la Seigneurie de l'isle de Mont real, isles Courcelles et dépendances, à titres onéreux d'amortissement des dites terres, accordées à Messieurs du Séminaire de St. Sulpice, par lettres patentes du mois de Mai, 1677, avec les droits d'échange."-Régistre des Foi ef Hommage, No. 17, folio 81, le 3me Ferricr, 1781.Cahiers dIntend. No. 10 à 17 , folio 5.35.

Montreal, river, rises near the boundary line in the $\mathbf{r}$. of Hemmingford, and striking through the s. angle of Sherrington enters the S. of De Léry which it traverses N. E., and watering the $w$. angle of the $\mathbf{B}$ of Longueuil and the $\mathbf{e}$. angle of Laprairie, runs to West Chambly and falls into the Richelieu a little below Chambly Basin.
Moose River, rises in the n. e. section of Barford, and traversing the т. of Compton, joins the r. Coaticook above Pennoyer's mills.
Moulin, au, river, runs into the r. Saguenay about 2 miles below Chicoutimi Posts.

Moulin, du, river, a small stream that rises in the rear part of the $S$. of Matane, and running to the front falls into the St. Lawrence.

Moulin, du, rivulet, in the S. of Eboulemens, runs through Côte $\mathbf{S t}$. Joseph into the St. Lawrence, opposite the n. E. end of Isle aux Coudres. It forms a beautiful cascade near the manor and is seen as the traveller descends towards the St . Lawrence; it falls into a basin extending across the lands and rocks, and is in some places from 4 to 500 ft . deep. It turns a corn-mill and two sawmills, besides the seignorial or banal mill.
Moulin Baude, in the co. of Saguenay, is a little river at the bottom of a small bay, and enters the St. Lawrence about 4 miles below the post of Tadoussac. This place is remarkable for a quarry of statuary marble of excellent quality and in considerable quantity ; it is said not to be inferior to the marble extracted from the mines on the Hudson and Lake Champlain. The marble is in a rent of about six to eight feet in breadth; the rent rises almost vertically to the top of the bank, 150 feet high. The marble is therefore abundant. It is, generally speaking, solid, and masses sufficiently large to form the pillars of a fine public

## MO U

building might be quarried at a trifling expense. The parts which have not been exposed to the action of the air will probably take a good polish, and as chimney-pieces, tables, \&c. would make beautiful ornaments. The rent is washed by the tide, and a vessel of sixty tons might strike it with her keel. The rivulet that runs over the bed of this quarry is sufficiently copious to turn a mill for sawing and cutting the marble in the quarry itself. The marble is of the purest white, and Mr. P. Chasseur has a lamp made of it, which may be seen in his museum at Quebec. The muddy bay, into which this small river runs from the quarry, is dry at low water, and, affording a protected harbour, admits at high water vessels drawing six or eight feet. A vessel of the former dranght might indeed touch the bed itself with its lieel. The entrance from the St . Lawrence is not difficult ; and it is not more than 48 hours' sail from Quebec with a light fair wind.

Moulin, du, river, runs through Cite du Moulin in the $S$ of Cite de Beaupre into the st. Lawrence, a little above the r. du Gouffre. It turns a corn-mill near its mouth.

Moulin, du, river, in the S. of le Gouffre, runs into the r . du Gouffre and turns a corn-mill near its mouth.

Moulin, du, river, waters the n. e. section of the S. of Lotbinicre and runs into the St. Lawrence.

Mount Johnson, $v$. Monnoir, S.
Mount Murray, is a British grant en fief et seigneurie, in the co. of Saguenay; it reaches from the north side of the r. Malbay, along the bank of the St. Lawrence, as far as the River Noire or Black River, and is 3 leagues in depth. Granted Apr. 27th, 1762, to Lieut. Malcoln Fraser, and is now the property of Malcolm Fraser, Esq. This seigniory is separated from Murray Bay by Malbay river, and contains only a very small proportion of cultivated land in comparison to its size. The general surface is mountainous, but in some places the soil is moderately good: timber of all kinds is plentiful and very fine, particularly pine. The lands under the best state of improvement are those along the R. Malbay for about six miles. A tolerably good road passes through these settlements, on which are many farm-houses and neat dwellings. The manor-house, belonging to Colonel Fraser, called Mount Murray, is well situated at the entrance of the bay on the east side, and

## M U R

is surrounded by a large tract of well-cultivated lands. This grant is watered by several streams, whose waters are not more than sufficient to work the mills.-From the River Noire, along the borders of the St. Lawrence, and as far into the interior as the country has been explored, are only mountains of stone almost without the slightest vegetation.-Limestone is abundant in this $S$. The chief articles of trade are deals, boards, fire-wood and some wheat: the salmon caught between the River Noire and Malbay are sold at Quebec.

Statistics.

Title.-" (irant of the :7th of April, 1762, by the Honourable James Murnity, Ear. Giovermer of Qurhec, to Licutenant Malcolm Fruscr, of His Miajesty's 78th Regiment of Foot, of all that extent of land lying on the North shore of the river St. Lasocner, from the North adde of the River of Malluy to the River Noire, and for three leagues back, to le known hereafter, at the special request of the said Licutenant Aalcolnh Frasio, by the name of Monnt Murray, together with the woods and rivers or other appurtenances within the sidid extent, right of fishing or fowling, within the same, included. All kind of traffic with the Indians of the back country herely kind of traffic with the Indians of the back country herelly
specially excepted."-English Registor, Lettor E, filis, 709.

Merray Bay or Malbay, seigniory, in the co. of Saguenay, is one of the threc grants (" fief et seigncurie, which have been made by the British government; it extends from the $S$, of Eboulemens, along the int. Lawrence, as far as the river Malbay that divides it from Menent Murray.-4 leagues in front by 3 in depth. Granted Ap 27th, 1762 to Captain John Nairn, and now belongs to Mrs. Nairn. This seigniory contains but a very small portion of cultivated land in comparison to its size. The best settlements range along Malbay river for about 6 miles. It contains a church, parsonage-house, corn and saw-mills, and a well-built manor-house belonging to the proprietor of the seigniory.-The rivers are only sufficient to work the mills. The principal lakes are called Nairn, Anthony and Ste. Marie,
and are in the rear of the $S$. Lake Nairn is on the rear boundary line, and Lake Anthony, which is much smaller and discharges itself into it, is near its n. E. side. Little Lake or Lake Ste. Marie is S . E. of the others about $1 \frac{1}{2}$ mile.-No lands were conceded previous to 1759 , and the non-conceded lands are not surveyed, and have no road through them. $9 \frac{1}{2}$ arpents is the largest quantity of land possessed by one individual, and 12 persons hold lands of the seignior of 6 arpents and above: 98 possess lands of less than 3 arpents, an exact classification of which would be very difficult; these lands being very high, are for the most part dry and of middling quality.-The valleys in this S . on account of the north winds that rush down them carly in the autumn, are exposed to injurious frosts.-The Bay enters deep into the north shore, and the greater proportion becomes dry at low water. The land which encloses the bay is rather elevated and rocky, but, between it and the high water-mark on the western side, there is a flat or gently undulated alluvial soil, most of which is sandy.-This $S$. and its neighbourhood have long been remarkable for the frequency of earthquakes. Shocks are most frequent in January and February ; their direction appears to be n. w.; the duration of the movement is about one minute, and notice of the coming motion is generally given by a noise like a chimney on fire, sometimes accompanied by two distinct blows. The weather is sometimes sultry, previously at other times cold; in the former case, the weather becomes cold after the shock, and in the latter, mild: in short, a shock is always accompanied by a change of weather. Shocks occur about nine or ten times a year, and are more generally observed in the night than in the day. When they happen in foggy weather it clears up subsequently. About 37 years ago the shocks were much more violent.

hereby specially excepted."-English Register, Letter $\mathbf{E}$, page 700.

Musk Rat, river, is a branch of the m . Peribonea which runs into Lake St. John. It derives its name from the number of musk rats with which it abounds. It is said to form a good harbour for small vessels.

## N.

Namjamscutcook, or Namgamskutesck, river, in the co. of Rimouski, runs out of Long Lake into $\mathbf{L}$. Temiscouata and is about two chains wide; its current is gentle, and said to be navigable for boats and canoes.-This $\mathbf{F}$. is the same as the Cabineau, which vide.

Namgamskutesck, $v$. Namjamscutcook.
Nativite de la Ste. Vierge and De St. Pierre (P), v. Becancour, S.

Nekoaba (R.), v. Askatiche, l.
Nelson's Bay, in the front of the t. of Grenville. This bay, with the exception of a shoal about 1 mile long and a $\frac{1}{4}$ mile in average breadth, part of which is dry in summer, offers a safe harbour and good anchorage for the steam-boat or other vessels. These vessels when in the bay are sheltered by the high lands that extend N . and N . $\mathbf{w}$. of the basin and descend almost to the margin of the river Ottawa, except near the river Calumet, where the hills rise from a small but beautiful meadow.

Nelson Rivfr, rises in a small lake on the s. w. boundary line of St. Ignace, and, winding in the S . of St. Gabriel in nearly a semi-circular course, joins the r. St. Charles about 1 mile above the $\mathbf{V}$. of Jeune Lorette.

Nelson, township, in the co. of Megantick, is bounded n. e. by Ste. Croix; s. w. by Somerset; in the rear by Inverness and Leeds; in front by the augmentation to Lotbiniére. It was granted in April, 1804, to officers and privates of the Canadian militia.-The land is rather low, but of

## NE UVILLE.

tolerably good quality and fit for the production of most kinds of grain. Towards the s. E. end are some rising grounds, much superior to the part which adjoins Lotbiniére. The timber is chiefly beech, maple, birch and pine; on the low and moist ground, basswood, cedar, spruce and hemlock abound.-This $T$. is well watered by the rivers Becancour and Du Chene, and by many small streams falling into those rivers.-No part is under cultivation.

Nefinlle, or Ponnte aux Thembles, seigniory, in the co of Portneuf, is bounded in front by the sit. Lawrence; s. w. by Belair and its augmentation ; N. e. by Desmaure and Fausembault; in the rear by Bourglouis.- $-2 \frac{3}{4}$ leagues in front by 4 leagues in depth. Granted Dec. 16, 1653, to Jean Bourdon, and is now the property of the Rev. Mr. Descheneaux, Grand Vicar.-This seigniory is of great value. The lands are all conceded, and many were granted previous to 1750 , and those granted since are held on the same terms. Above two-thirds of the $\stackrel{S}{ }$. are under cultivation and very productive. The surface, as is the case almost invariably within several leagues of euebec, is very uneven, rising from the St. Lawrence in a series of irregular ridges to the elevated banks of the Jacques Cartier: beyond which it is mountainous and abrupt. The soil in front is a lightish mixture of sand and black friable earth, but towards the N. W. it becomes much stronger, and soon changes to a fine loam, in some places rather thickly strewed with stones: large masses of granite lie about in different directions as if rolled down from the heights, although there is scarcely any trace of rock south of the r. Jacques Cartier. The timber is, generally, very good; but between the rivers Jacques Cartier and Aux Pommes not in great plenty, as the whole of that space is laid out in fruitful settlements; farther back, beech, maple, pine, ash and birch are found in abundance.-This $S$. is watered by several branches of the r. Portncuf, by the Riviere aux Pommes in a beautiful, meandering course, and by the impetuous Jacques Carticr, besides many rivulets descending from the sides of the different ridges, the whole amply providing for the irrigation, particularly of the settled parts. -Of the many roads that intersect the $s$., the one in front of the St. Lawrence, one in the direct line from Quebec by the village of Capça to Jacques Cartier bridge, and another striking
from the $S$. Lawrence, about midway between the village of Pointe aux Trembles and Belair, to the same place, are the principal ; the others open a convenient communication between the different concessions.-The commissioners, acting under the authority of the provincial parliament, during last year (1830) made two roads from this S. to Bourg Louis. One commences at the free bridge over the r. Jacques Carticr, (commonly called Graves' Bridge), and ending at the commencement of the seigniory of Bourg Louis, of which about 50 acres arc finished. This part of the road passes through the Grand Brulc, and finishes as the law directs. The remaining part of this road, being about 116 acres, has been rendered passable for loaded carts. The latter part of this road is only half the breadth required by law, and is only drained by ditches where it was found absolutely necessary, and where they could not be dispensed with. About 18 acres of the road nearest to Bourg Louis remains unfinished, the wood only beinis cleared on the line of the road. In the line of this road a long bridge, 70 ft . in length by 20 ft . wide, has heen thrown over an arm of the R. Portneuf; it is covered with 3 inch plank, and has a strong hand rail on each side substantially drawn together with ties. The other road commences at Route des Commissaires, leading to the concession ist. Jacyutes to the River Portneuf, about 70 acres of which is completed according to law, having in this distance six bridges placed over ditches for draining the road. At this point of the road is a very steep hill of about three acres long, at the bottom of which is the River Portneuf, over which is erected a bridge 60 feet long, built with cedar and covered with three inch plank, having a strong hand-rail on either side, the whole very substantially built, and drawn together with sufficient tics. After passing this bridge the road ascends by a hill two acres long, and is only half made for about 55 acres, with ditches whenever they were positively required; but the whole of this distance is passable for loaded carts, leaving a space of about 38 acres to be made nearest to and adjoining Bourg Louis, which could not be performed for the want of means. Near the $\boldsymbol{n}$. Jacques Cartier is a deep ravine about 14 feet wide, over which a bridge is constructed. The distance between the rivers Portneuf and the Jacques Cartier is about 32 acres; the latter E E

## N E U

is approached by a hill about three acres long; the breadth of the river is about 10 feet, over which is constructed a bridge. The road then ascends a hill of about 2 acres, and from the river Portneuf to the end of the road, which is about half finished, 9 small bridges have been constructed over rivers and brooks. The land on this road is generally good; the latter part of it which remains to be commenced, will be more expensive and more difficult to finish than the part that has already been done, in consequence of there being several hills to pass, and a small river which meanders through the intended line of the road 3 or 4 times, over which bridges must be thrown, and to finish this road properly from the river Portneuf to Bourg Louis will require at least $150 l$. On the line of these two roads partial settlements were formerly made; but now the lots are nearly all taken up since the roads have been made, and several of the settlers are now getting materials and building houses, now that the means of communication are afforded; building materials are very easy to be obtained, there being good building stone in the vicinity, also a corn and sawmill about 3 miles from the concessions St. Jean and Ste. Marie, and about 4 miles from that of St. Charles. These two roads form the communication to the church, mills and town, for the few settlers now in Bourg Louis. By the accounts rendered to the inspector-general of public accounts, the sum voted for the service was 2001 ., out of which no balance remains. With this sum the commissioners have made 9 miles and 4 acres of new road through a new country, bridges, \&c., and paid $25 l$. to the grand voyer, and ten pounds for the commissioners' fees. On the east side of the concession St. Charles, separated by the River Portneuf, there is a fine tract of land, commonly called Ste. Madaleine, which is of the best quality ; timbered with every description of wood, with fine sugaries: a road to it is highly recommended by the commissioners ; it would cost about 100l. -The distance from the end of the two above-mentioned roads to waste lands of the crown is exactly nine miles, through a very good country for settling. The lands on the boundaries of the river Ste. Ann are also good. The north branch of the river Ste. Ann descends from the crown lands into the main river at the point where the two roads would reach that river. If the road from the free bridge should be continued to the
river Ste. Ann, for the purpose of reaching the waste lands of the crown, it would be of great utility to new settlements; this road would cost 3501 ., and it would be a great encouragement to the settling of the waste lands of the crown. -The Village of Pointe aux Trembles is exceedingly well seated on a projecting point of the same name, rising but a few yards above the level of the St . Lawrence; it is backed by an amphitheatre of gently rising hills, cultivated to their very summits and embellished with farm-houses, mostly built with stone, which are surrounded by gardens and extensive orchards, affording in every direction, but from the St. Lawrence particularly, a rich, variegated and pleasing coup d'ail. This village contains thirty-seven houses, a neat church, 100 ft . by 50, a chapel, a parsonage house, and what is called a convent, where from 40 to 50 scholars are instructed; also a French school, supported by the inhabitants. Many of the houses are of stone, and their inhabitants are industrious and wealthy, which is also the case with most of the habitans of this seigniory. The convent is an establishment for female education, conducted by two sisters of the congregation of Quebec, who reside in it as missionaries for disseminating religious and useful knowledge.-Oxen are generally used in agricultural labour, and English carts by many. The inhabitants are clothed in stuffs of home manufacture.-From the point, reaching nearly down to the S . of Desmaure, runs a shoal, called La Batture de la Pointe aux Trembles, thickly beset with rocks, that are uncovered at low water.

New Bristol River rises in the t . of St .

## N E W

Dennis, and, traversing through the centre of the S. of Matane, runs into the St. Lawrence.

New Glasgow, about 1 mile from the s.w. corner of the т. of Kilkenny. This settlement was established in 1820; and, considering the numerous impediments, deficiency of mills, want of practicable roads, \&c., much progress has been made by the industry and perseverance of this little colony.

Newporr, township, in the co. of Sherbrouke, is between Eaton and Ditton, and is bounded in the rear by Auckland, in front by Bury. Although the land in many parts is uneven, the general tendency of the soil is good, and the swampy land is fit for culture. Beech, maple, birch, spruce, basswood and fir are the prevalent sorts of timber. The North River runs nearly through the middle of the $r$., and the land rises gradually from it in a series of gentle swells to the N . and s. Numerous small streams, after traversing this т., find their way to the North River and Newport River in the s.w. corner. The extreme parts of the s. w. and s. E. corners are more hilly, particularly in the s. $E$., where the hills attain a considerable altitude. None of the rivers are navigable. Several roads, generally in a bad state, passing to the adjacent settlements intersect it, as does the intended new one from Craig's road.From 900 to 1000 acres cleared, and this т. resembles Eaton in its agricultural produce, the state of the mechanics, price of labour and description of cattle.-Good flax is produced for domestic use, but as yet no hemp.-Black lead ore has been found in this $\mathbf{r}$., and slate for roofing is produced in abundance.-Ungranted and umlocated, 15,000 acres.

Newton, township, in the co. of Vaudreuil, and its augmentation, between the seigniories of Rigaud, Soulange, and New Longueuil, is of an irregular figure and very advantageously situated,

## N I C

contiguous to the settlements in the Upper Province. On the $w$. side the land is of a very superior quality, and will produce all sorts of grain; many parts also might be employed to great advantage in growing hemp and flax. The b. side is much lower, inclining here and there, for short distances, to be marshy : there is, however, no actual swamp; and if the low grounds, that are rather wet, were carefully ditched and drained, they would prove most excellent land, and furnish luxuriant meadow and pasture as well as good arable land. On the most elevated parts, the principal timber is maple, beech and birch; on other parts, cedar, red spruce, alder, and hemlock. As the grants are all recent, only a few of the lots are yet cultivated, but the goodness of the situation and other local advantages are likely soon to induce settlers in much greater numbers. In that part which is in the $P$. of St. Polycarpe are 48 souls. The greatest landholders are the heirs of the late Hon. A. C. de Lotbiniére, Saveuse de Beaujeu, Esq., Mr. John M'Nider, and others.

Nixon Lakf, in the peninsula near Lake St. John, is a small lake N . of L . Kiguagomishish, with which it is connected by a small channel of about three chains in length, and about one chain in width. There is deep black land covered with alder all around this lake, and upon the banks, about 25 ft . above the water, to the distance of at least a mile, the land is unbroken and level, and the soil an excellent loam; the timber is sapin, black birch, spruce and some white birch. The lake is 36 chains long. lying s. w. and N. E., and about ten chains wide.-Named after Mr. Nixon, a late explorer of Lake St. John.

Nicolet, county, in the district of Three Rivers, is bounded s. by the co. of Lotbiniere ; w. by the seignorial line between the seigniory of Nicolet and the seigniories La Baie du Febvre and Courval; towards the N. by the River St. Lawrence; s. by the River Becancour, being the boundary of the S. of Blandford and Maddington, by the rear line of the seigniory of Becancour; w. of that river by the division lines between the township of Aston and its augmentation, and the seigniory of Godefroy, Roquetaillade and the augmentation of Nicolet; and lastly by the rear line of the augmentation of Nicolet. It comprehends the seigniories of Nicolet and its augmentation, Roquetaillade, Godefroy, Becancour, Cour-

## N I COLET.

noyer, Gentilly, Livrard, Fief Dutard, and the townships of Maddington and Blandford. It contains five parishes, viz-Nicolet, St. Gregoire, Becancour, Gentilly and St. Pierre; and also the villages of Nicolet and St. Gregoire.-Its breadth, or front, on the St. Lawrence is $32 \frac{1}{2}$ miles, and its depth 20 , containing 475 square miles; its centre is in lat. $46^{\circ} 20^{\prime} \mathrm{N}$., long. $72^{\circ} 1730^{\prime \prime} \mathrm{w}$. It sends two members to the provincial parliament, and the places of election are Gentilly and St. Gregoire -The surface of this co. is level and composed of light soil, sandy in many places, especially along the banks of the rivers, but in the interior the soil is stronger and more productive. It is tolerably well watered by rivers and streams, and by Lake St. Paul. The chief rivers are the Nicolet, Becancour and Gentilly, with their branches. The flourishing state of the settlements is evinced by its population and produce : the chief settlements are to be seen along the rivers St. Lawrence, Nicolet, Becancour and Gentilly.-It is traversed by a number of concession roads, besides those along the borders of the chief rivers. Two roads pass through this co., leading from the ferry opposite to Three Rivers to the southern townships, the Aston road, and that through Nicolet to Baie St. Antoine : new roads are also opened leading from Gentilly and St. Pierre to Blandford, and up to the new settlements on the Becancour.In many parts there are highly cultivated farms and good dwelling-houses.

Statistics.

Nicolet, lake and river, in the cos. of Drummond and Nicolet. The Lake is in the s. E . corner of the r. of Ham and gives rise to the river. This beautiful sheet of water, about $2 \frac{1}{2} \mathrm{~m}$. long and one broad, contains several small islands,
which are the resort of vast numbers of wild-fowl. The surrounding country possesses every trait of wild romantic beauty. The lake is environed by rising grounds clothed with trees, in some places thickly clustered together, and in others irregularly dispersed over the acclivities; beyond the first heights are seen in the distance the softened and fantastic forms of a much more elevated chain.The River, which rises in the lake, consists of two principal branches, distinguished by the names of eastern and western. The distance in a straight line, from the source to the mouth, seems to be about 60 miles; and the breadth of the space which it waters about 12. It collects therefore the waters of about 720 square miles. It traverses the townships of Ham, Chester, Arthabaska, Warwick and Horton, where it meets its eastern branch that rises in Wolfstown and descends through parts of Chester, Halifax, Stansfold and Bulstrode; their united waters divide Wendover from Aston, and traversing the aug. to Nicolet enters that seigniory, and a little above the village receives the waters of the western branch which rises in Weedon; this branch, traversing through the centre of Wotton, partially watersTingwick and Shipton, then running through Kingsey, Simpson and Wendover, it enters the S. of Courval, whence it hastens through the s . w . section of the S. of Nicolet and joins the main branch at what is called the second forks. The Nicolet having thus received its accumulated waters runs near the s . w . side of the village and soon after empties itself into Lake St. Peter, where, at its mouth, it divides into two streams and forms Isle Moran. The banks, in the interior townships, are high and generally covered with woods down to the water ; but in the lower part of its course the banks diminish very much and are less woody: from the village downward are several small islands covered with trees that form very pleasing groups. In the upper part of the river there are rapids with frequent intervals of gentle current; these rapids the Indians frequently ascend and descend in canoes. In the spring, when the stream is increased by the freshes, small decked vessels can sometimes get up from the St. Lawrence as high as the village; but this cannot be depended upon, as the entrance is obstructed by a sand-bar, upon which craft drawing 2 ft . water frequently strike in the summer or dry season: this bar is called the Batture aux Sables. The scenery on both

## N I C OLET.

banks of the main river is varied and beautiful in many places, but on the N. E. side it is particularly interesting. In the $\mathbf{S}$. of Nicolet this river adds considerably to the beauty of the scenery and the fertility of the lands. The banks of the main branch are cut by frequent ravines of considerable size. Both sides of this river for about 4 leagues from its mouth are embellished by settlements.

Nicolet, seigniory and augmentation, in the co. of Nicolet, is bounded N. E. by Roquetaillade; s. w. by Baie St. Antoine; in the rear by the r. of Wendover ; in front by Lake St. Peter.-The original grant is 2 leagues in front by 2 in depth. Granted Oct. 29th, 1672 , to Nicur de Laubia: the augmentation, 2 leagues in breadth by 3 in depth, with Isle de la Fourche, was granted Nov. 4th, 1680, to Sieur de Cresse. Both are now the property of Kenelm Connor Chandler, Esq.The soil is not remarkably good, but industry has in some degree counteracted its natural defects. Towards the lake the land is poor, of a light sandy nature, but more in the interior it is stronger and better; it lies rather low and in general level; near the village the soil, though not of the best description, is calculated to repay its industrious occupants; more towards the rear it improves greatly and in some places, particularly on the banks of the rivers, it is equal in fertility to any in the province. Three-fifths of the $S$. are under cultivation and the remainder in woodland and unconceded, of which not more than 300 farms could be formed on account of the large circuits made by the r. Nicolet and its s. w. branch, the main river traversing the entire seigniory lengthwise; these circuits form excavations and enormous ravines, which deprive the farmer of much land. There are 11 ranges of concessions containing 850 farms, 400 of which are well peopled. Some of the concessions were granted as far back as 1716 , and were in the front range; each farm measuring 12 to 15 arpents by 30 in depth, was conceded at a moderate rent. The subsequent concessions, prior to 1759 , were rented, for 3 arpents in front by 25,30 or 40 in depth, at 1 or 2 sols tournois per arpent and 1 or 2 capons for each farm. The concessions opened during the 30 years previous to 1821 , were rented at a quart of wheat and 2 sols per arpent.-It appears that the want of roads, the augmentation of rents, and the expenses of drainage necessary to make the non-
conceded lands convertible, have been the principal obstacles to the establishment of new settlements; and in this S . the settlements were retarded, previous to 1821 , by unfortunate speculations in wood, which were disastrous to many of the inhalitants by draining them of their ready money, and to others they proved utter ruin.-The timber is not remarkable for superior quality or growth ; on the borders of the lake it is generally bris franc and on the banks of the $s$. w. branch of the n . Nicolet it is spruce and sapin with many considerable pineries.-The roads are very good, with the exception of that which rums along the main branch of the river into the interior ; the main road to William Henry passes through the village and crosses the river at a ferry where the toll is $3 d$. for each person, $9 d$. for a horse, and $1 s: 3 /$ for a horse and carriage ; several other roads intersect the $S$ in different directions. There is no road over the unconceded lands although they have been surveyed.-This $S$ is well watered by the r. Nicolet and its s.w. branch; on both are built corn and saw-mills. The corn-mills have three sets of stones each, abundantly supplied with water all the year round, and are of great advantage, not only to the inhabitants of this $s$. but to those of the neighbouring parishes. A carding-mill is attached to the corn-mill on the $\mathrm{N} . \mathrm{E}$. or main branch of the river, and :llsn another to the corn-mill on the s. w. branch. Salmon abounds in the river and large quantities of fish in the lake.-One-third of the grain produced is generally sold, and the wheat is of such excellent quality that it is generally sold for seed to other parishes. The time of sowing is later than at Montreal, but rather sooner than at Quebec. An abundance of hay is grown on the borders of the lake and the St. Lawrence. The breed of horses is Canadian, and though small they are good.-The inhabitants are chiefly catholics, for out of a population of 4000 only 500 are pro-testants.-The Village of Nïolet is pleasantly situated on the banks of the river, about a mile from its mouth ; its appearance, whether approached by theriver or by either of the roads, is calculated to attract the notice of a traveller, and offersinducements. for visiting it sufficient to repay an ordinary journey to the admirers of nature's favoured spots.-This village, containing about 90 houses with a church in the centre, is remarkable for its beautiful situation on the side of a gentle acclivity, covered

## N I C

with some majestic oaks (the best timber in the seigniory) and crested with a tuft of lofty pines. Besides the Roman catholic church, 140 ft . by 50 ft ., decorated with some valuable paintings, there is a neat well-built protestant episcopal chapel, 50 ft . by 25 to 30 ft . In this village, about the beginning of the present century, a college for the education of youth was founded under the auspices of the then catholic bishop of Quebec. It stands on a spot well calculated by the natural beauties of its situation to assist the views of so excellent an establishment. The building is on a simple, unostentatious, but convenient plan, possessing all requisite accommodation for the director, masters, and seventy pensioners. The success and reputation of this institution obtained for it a royal charter in the reign of George the Third. The original building having been found inadequate to the accommodation of the increased number of students, a new edifice of considerably enlarged dimensions was commenced in 1827 and is now far advanced towards completion. It is calculated to accommodate 200 students. In the beauty and salubrity of its situation the College of Nicolet cannot be surpassed and is perhaps altogether unequalled. The establishment is endowed with lands and is managed by a body corporate. The scholars wear an appropriate dress and the terms are made suitable to its general utility, being about $20 l$. per annum for board and instruction in the usual branches of education. This village has also the advantage of a market twice a week.-Mr. Chandler the seignior has made valuable improvements in this seigniory, particularly in mills, in opening new roads, in the importation of improved breeds of animals and in the introduction of agricultural implements. There is perhaps no place where an English emigrant of moderate capital or income might fix his residence with more advantage and comfort than in the S. of Nicolet, for many of the old settlers will sell their farms on moderate terms in order to make new clearances, which they of course can do with less difficulty and expense than a foreigner. Thus would the emigrant avoid the real difficulties of forming a settlement in distant uncleared woodland and be surrounded by at least a portion of his countrymen and accommodated with house and outbuildings suited to the climate.-From Lake St. Peter and its entrance into the St. Lawrence the front of the seigniory presents a prospect
peculiarly pleasing, for bordering on that river the wood is tolerably thick, with several clear intervals through which the settlements and the village are seen in different points of view to the greatest advantage. The views in the $\mathbf{S}$. are in general truly pleasing and beautiful and impressively convey a sense of the peace and happiness of an industrious rural life.-Isle a la Fourche forms a part of this $S$.

gistre $d^{\prime}$ Intendance, No. 2, folio 21 .

Noh-oui-loo, Na-d'haoui-lo or D'abaouilo, lake, forms part of the r. Peribonea which runs into Lake St. John. It is about 4 miles long and 1 wide. There are many islands at its entrance and beautiful points of flat land on the s. E. side. It is about 19 miles from the mouth of the river.

Noire, two rivers in the co. of L'Islet. The Grande Rivière Noire is commonly called Lake Ktacasy River or outlet. It is about 25 yards wide and about 13 inches deep. It runs rather rapidly over a fine smooth bed of black stones. The banks are level and unbroken and the river contains several small islands. It runs near five small mountains called the Sugar Loaves.-The Petite Rivière Noire. Mr. Gamache, who in 1829 surveyed part of the waste lands in the rear of the S. of L'Islet, towards the R. St. John, struck

## N O R

upon this river and found its north bank to be about 20 ft . perpendicular and formed of sandy earth and level on its south side: the bed of the r. is strewed with black stones. Ascending a tree on the N . bank, he discovered nothing but a flat country covered with mixed timber.

Noire, river, in the co. of Saguenay, is the boundary line between the $\mathbf{S}$. of Mount Murray and the King's Posts. It is supposed that on the bank of this r., lying within the King's Posts domains, there is a very considerable extent of good land, and that a tract equally good extends across the country to Chicoutimi, a distance of two days' journey, or 40 to 50 miles. The timber on this R . is very well adapted for sawing into deals, and a powerful saw-mill has lately been erected near the outlet of the river at Port au Persil by Messieurs M‘Leod and Duberges. There is a footpath from Malbay across the country, but it would be difficult to make a road for carriages.

Noire, la Rivière, rises in the rear part of the S. of Gaspé, in the co. of Lotbinière, and passing through the s.w. boundary line of the S. of Lauzon it is joined by the Ruisseau Gosselin and soon after falls into the s. w. branch of the r. Chaudiere.

Noire, la Riviere, v. Prevost, r.
Nord-Ouest, bras du, river, in the $S$. of Cite de Beaupré. This stream is thus named because it is the N. w. branch of the r. du Gouffre. It rises in a small lake in the $P$. of La Petite Riviere and taking a N. E. course enters the P. of Baie de St. Paul, where it joins the R. du Gouffre about one mile from its mouth.

North Channel, one of the connecting branches of the St. Lawrence that conducts its waters into Lake St. Peter. It extends from Isle au Foin, opposite Fief Dorvillier to Isle a l'Aigle, near Maskinongé Bay.

Nonth River, in the co. of Sherbrooke, rises in various springs in the townships of Ditton and Emberton and traversing Newport it enters Eaton where it joins Eaton River.

North River or Riviere du Nord, in the cos. of Terrebonne and Two Mountains, rises in waste lands $\mathrm{N} . \mathrm{W}$. of Abercromby, and entering that T. at lot 6 in the 11 th range, traverses it and enters the aug. to Mille Isles, where turning to the s.w. it crosses the aug. of Lac des Deux Montagnes and Argenteuil to the forks at Chute Mills, where it receives the West River, and after

## NOT

watering the lower part of the N.E. section of Chatham it winds over the s. w. angle of Argenteuil, where it turns a paper-mill near the village and soon after falls into the Ottawa at the head of the Lake of Two Mountains. Its mouth is divided by an islet into two channels and the width of the river up to the bridge at the village of St. Andrews may be from 6 to 8 chains. Boats and river craft ascend to the village notwithstanding the rapids and rocks that impede its navigation, which might be improved so as to admit of the ascent of steam-boats calculated to draw but little water. Above the bridge there is a rapid near which stands the old mill: thence to the chute (or falls) the river averages from 5 to 6 chains wide and is in that interval obstructed by 6 or 7 rapids, including the waterfall of La Chinte, where Major Johnson's seignorial corn and sawmills are situated. From this place this beautiful river is navigable for boats and craft almost to Abercromby, a distance of twenty-five or thirty miles, and may be found to admit of being navigated much farther, thereby presenting as it were a second navigable front, offering important facilities to the internal settlements of that section of the country. Ascending this river and viewing on cither side the neat habitations of the farmer, his extensive improvements and well cultivated fields, a stranger might easily fancy himself travelling in the old settled parts of the province.The farms and estates entitled to particular notice are those of Captain Barron, J. M. Perkins, Esq., Mr. Gatton and Mr. Hutchinson, who have considerably forwarded these settlements.-The course of this $R$. is about 100 miles over an unequal bed, making many beautiful falls. It is well stocked with fish and the water is of a very yellow colour, indicative of the soil through which it runs.
Notre Dame (R.), v. Cap St. Michel, S.
Notre Dame de Liesse (P.), v. Riviere Ouelle, S.

Notre Dame ie Misericorde (P.), v. Beauport, S.

Notre Dame des Anges, seigniory, in the co. of Quebec, is between D'Orsanville and Beauport, bounded in front by the rivers Nt. Charles and St. Lawrence and in the rear by the $r$. of Stoneham.-One league broad and four deep. Granted, 10th Mar., 1626, to the Order of Jesuits, and, like their other properties, now reverted to

## NOTRE DAMEDESANGES.

the crown.-The land is generally extremely fertile and in the front is a good rich earth mixed with clay or sand; more in the interior a fine black mould, much drier and more friable than the former; in the rear a good loam prevails. The surface is uneven, and, from a fine flat near the river, rises into ridges by easy gradations to the rear boundary, and there becomes broken, rough, and mountainous. About two-thirds of the whole are in the best state of cultivation and exceedingly well inhabited. The flat space near the St. Lawrence is called la Canardiére, and is wholly in meadow and pasture and produces abundant crops of hay of superior quality. The arable lands are very fruitful in grain of all kinds and a considerable extent is in garden ground, where vegetables of every description and of great excellence are raised for the supply of the capital. The most cultivated parts are sparingly timbered, presenting only occasionally reserves of wood, where the trees are of inferior dimension and of little value, but they embellish the country agreeably enough; in the rear wood is abundant and the land is conceded to the inhabitants in small portions for the purposes of fuel and other domestic uses, of which, exclusive of their own consumption, they continually supply large quantities for the use of Quebec. The beach of the St. Lawrence in front of the seigniory is occupied as tim-ber-ground and furnished with extensive booms and every necessary means of securing the timber. The Village of Charlesbourg is pleasantly and conspicuously situated on a rising ground of considerable eminence about 4 miles n. of Quebec, and consists of about $7^{0}$ houses, well built and mostly of a respectable appearance, to each of which a good garden and small orchard are attached. This village is one of the oldest and most interesting settlements in Canada. It has two churches, one lately built, the other, though smaller and less commodious, is far more interesting, having become the centre of the surrounding farms, whence they all radiate.-The reason of this singular character in the surrounding allotments arose from the absolute necessity to create a neighbourhood, for which purpose each farm was permitted to occupy only a space of three acres in front by thirty in depth. This contiguous and continuous neighbourhood had its peculiar advantages. Population was scanty and labour difficult to be procured; by this arrangement the facility to keep
up a road in front of each farm (which it was the duty of every proprietor to preserve) was rendered more easy. - The other advantage and not the least which this singular position afforded, was the proximity to the church, which became the signal of alarm whenever hostile attempts were made by the Indians, and was the centre of defence around which the inhabitants all rallied whenever the bell sounded the alarm to defend their possessions. Here the elections of the members of parliament for the county are always held. -A little below the village of Charlesbourg, on the skirts of a small rising ground on the north side of a concession or cross-road, stands a small group of handsome houses, usually called the Little Village, which does not yield in beauty of situation to Charlesbourg.-Of two roads leading from Dorchester-bridge, one on the left is called Le Chemin de Charlesbourg and the other La Canardiére or Le Chemin de Beauport; on the latter is a succession of good houses, excellent gardens and farms in a high state of cultivation. Two houses of superior elegance, one belonging to the heirs of the late Doctor Stewart and the other to the heirs of the late John Jones, Esq., usually attract notice for their good style of architecture, excellence of situation, beautiful gardens, and surrounding shrubberies and plantations. There is also a very spacious house belonging to the ecclesiastics of the seminary of Quebec, generally distinguished by the appellation of La Maison des Prêtres; it is retained in their own hands as a farm and also serves as a place of recreation for all the members of the establishment once a week. ---Part of this seigniory is in the parish of Notre Dame des Anges and part in that of Charlesbourg. The Parish of Notre Dame des Anges is very small and contains from 50 to 55 houses and an hospital with very few inhabitants, who are all artisans or labourers.-The Parish of Charlesbourg or St. Charles Boromée, by a regulation confirmed by a royal decree, Mar. 3, 1722 , extends 3 leagues and 18 arpents in front and comprises the Little Village, the Gros Pin, St. Jerome called Lavergne, Bourg Royal, Bourg la Reine, Charlesbourg, St. Claude, St. Pierre, St. Joseph, St. Bonaventure, St. Bernard, St. Romain, St. Gabriel, St. Jacques, Pincourt, le Petit St. Antoine, and le Grand St. Antoine. In this parish are the highlands called the Charlesbourg Mountains, situated in the rear of the villages of Charlesbourg and Bourg Royal.

Notre Dame des Neiges, river, in the Istand of Montreal, rises near the centre of the island and passing near the church of St. Laurent in a N. course falls into the r. des Prairies about one mile s. w. of the church of siult au Recollet.

Nurfale, cust, river, rises in the t. of Maria and ruming $s . w$. over the s. E. angle of Carleton falls into the upper part of Chaleurs Bay.

Nocvelife, west, river, rises in waste lands s. w. of Carleton and running s. e. into that T . falls into Chateurs Bay about 3 miles from the $\mathbf{n}$. Little Nouvelle.

Noutelle York, c. Disable, S.
Nover, river, in Laprairic, s.
Noyan, scigniory, in the co. of Rouville, is bounded N . by Sabrevois; e. by Stanbridge; s. by Foucault; w. ly the r. Richelieu or Chambly. --2 leagues in front on the river, and 3 leagues in depth. Granted July $8,174 \%$, to Sieur Chat voye de Noyan, and is now the property of Gen. C. Burton, in honour of whom it is sometimes called Christic Manor.-Islc aux Tetes, or Ash Island, in the Richelieu, near the contluence of the r. La Colle, is included in the grant.-The face of this scigniory, the quality of its soil, the variecties of timber, the price of wages, and the kinds of grain, cattle and sheep, are similar to those of Foucault, to which seigniory the reader is referred for those particulars. The soil is low and swampy, but the parts that are cultivated, or susceptible of cultivation, are of a rich and fertile quality,
abounding with fine timber of various kinds, particularly pine. Near the s.w. corner of the scigniory, and from Georgeville to Henryville, and on the Montreal road, are the best settlements, though most of the lands are conceded, which will som give nearly an cqual settlement over the whole.-There are no latge landowners, as the land is held by Gen. Christic Burton in seignorial tenure. Population about lnoto.-The principal stream is the Petite Riviome du Sud, or Little South River, which falls into the Richelieu a little below Isle aux Nuix; it waters the S. very conveniently, and is navigable for lomts and canoes for about is miles; it here divides into two branches, one of which is called Wolf erreck, and each turns a saw-mill. Wire a camal to be cut to connect Missiskoui Bay and the r. du Sud (about $\xlongequal[1]{1}$ or $: 3$ miles), it would be most eminently serviccable, not only to the settlers of the neighbourhood, but to the new townships on the Canadian frontier. The principal bridges are three; one orer South River on the road from Georgeville to Henryville, and one ower each branch of Gonth River on cither side of Henryville on the Montreal road ; another is to be immediately built over south River on the road from (icorgeville to Joncs' Tavern. There is a ferry acruss the Richelieu to the Isle aux Noin, where the charge for a foot passenger is $3 /$, and another at Capt. Vauchan's, three miles above, across the same stream to La Colle, where a wagom with one horse is charged $1 s .8 d$. The principal highways leading through this seigniory are two; the first, leading from Missiskoui Bay to Sit. Juhn's, in a $N$. $w$. course, is a crand thoroughfare from the eantern townships bordering on the province line, and from the N . part of Vermont to Montreal; and the second, leading from Gewseville directly north, intersecting the former at Jones Tavern, salerevis, recives the principal travel from Noyan. Foucault, and Girand Isle County in Vermont. The Montreal road is also intersected near Henryville by one from like River lower falls, one from Gcorgeville, and one from the mouth of South River: there are also three roads which lead to the Isle aux Noix, and one along the western shore of Missiskoui Bay. By the road from Missinkui Bay to R . du sud, produce, after being brought from Phillipsburg by the ferry, is conveyed in waggons to be embarked and sent down the Richelieu to St. John's and other places.-The
annual consumption of grain is:-wheat, 6800 bushels; Indian corn, 3400 bushels; rye and buckwheat, 3400 bushels;-for feeding neat cattle, hogs and horses, 10,000 bushels of Indian corn, peas and oats.-The average produce per acre is the same as that of Foucault.-The Village of Gicorgeville is $\mathbf{W}$. of Wolf's Creek, and about a mile from Taylor's mill, erected on that stream ; it contains a church, a school-house, 2 small stores, a tavern, 20 dwelling-houses and 160 souls.The principal articles of traffic are potashes, and the various kinds of agricultural produce. - Henry $;$ ville, at the N . part of the seigniory, contains? stores, 3 taverns, 1 school-house, 2 saw-mills, 30 dwelling-houses and 240 souls.-Articles of traffic are the same as at Georgeville, with the addition of lumber. A part of this seigniory, and a part of Foucault, constitute the parish of St. George. At Georgeville, near the south line of this seigniory, and at an equal distance from Missiskoui Bay on the e. and the Richelieu on the w., there is a neat and commodious protestant episcopal church, 40 ly 50 ft ., with a steeple and good bell. There is no parsonage house.-The two parishes, St. George and St. Thomas, are at present united in one cure.-There are no public schools in the S., but there are nine private ones, and the average number of scholars to each may be twenty-five.

## 0.

Obstchquosquam Lake, near the r. Matapediac. The surrounding scenery is delightful and symmetrical, and the land has every appearance of being fit for cultivation. This lake contains salmon, trout, pike, eels and white fish of a large description. It is about 3 miles in length, nearly one mile in breadth, and very deep.
Obswantrl Lakes, in the district of Gaspé. This chain of small lakes, some of which are one mile long and $\frac{1}{2}$ mile broad, affords many delightful seats for cultivation, and besides excellent soil and timber possesses peculiar advantages.
Odell Town, v. La Colle, S.
Old Pienrish, river, rises in waste lands and runs s . w. into the r. St. Maurice below the r. Windigo.
Oliveira, lake, in the eighth range of the r . of Dorset, is environed with beautiful and picturesque scenery ; its surrounding lands are rich, and when cultivated prove generous; its waters clear, pure and salubrious, abound with fish of various kinds.
Onslow, township, in the co. of Ottawa, is bounded e. by Eardley; w. by Bristol; in the rear by waste lands; in front by Lake Chaudiére, an expansion of the Ottawa. The whole has been surveyed, and, in 1802 and 1803, the first five ranges were subdivided, and granted to Boswell Minor and his associates, with the exception of 1200 acres, embracing the Hudson's Bay trading post at Point Mondion, on lot No. 7 in the 2nd range, which were patented to the Hon. John Richardson and John Forsyth, Esq., jointly. From lot No. 9, in the lst range, the shore of the lake runs nearly due north to the 4th range, which it bounds in front. The 1st, 2nd, and 3rd ranges, are traversed by ridges of massive rock, amidst which are several small lakes, one of which is distinguished by the appellation of Long Lake, and is used as a reservoir for timber, through which, also, boats and canoes pass, and are carried over from its western extremity into Lac des Chats. This r. is traversed by many streams, and well watered by small lakes; but the generality of the lands are not, as far as the surveys have extended, esteemed of a quality likely to induce emigration in that quarter. This $\mathbf{r}$. has no regular

## OR F

roads, and is but thinly settled in front. There was on! $y$ one settler in 1820.-At the w. end or corner is Black biy, and also one of the many rapids of the Ottawa, called Rapide des Chats.Cngranted and unlucated 31,400 acres.

Ontarietsi Lake or Lac St. Joseph, in the $S$. of Fausembault, is about is miles long. It receives the little river Aux Pins, and discharges itself into the r. Jaques Cattier.
Orford, township, in the co. of Sherbrooke, is bounded e. by Ascot and the r. Magog; s. by Hatley ; w. by Stukeley ; N. by Brompton.But little can be said of this township, and that little not very favourable. It is mountainous, rough, and almost unfit for tillage, but it contains some good timber and some large lakes, one of which, about 4 miles long and $\frac{3}{4}$ of a mile broad, stretches into Brompton. Part of the village of Sherbrooke stands on the 8 th lot of the first range of this T.-North of Orford Mountain, where a road is now being made, there is a high chain of mountains, stretching to the N . for ten miles; thence almost to the river St . Francis, it is interspersed with small lakes and swamps and unfit for cultivation: on the s. and s. E . of this chain lie other mountains and the whole body of Lake Memphramagog, which is impassable for two to three wecks every spring and fall. The road, which the commissioners are empowered to make near this mountain, must ever be the grand thoroughfare for the settlements east of Lake Memphramagog.-Ungranted and unlocated $9!$, 41,3 acres.

## o R L

Orleans Island or Infe str. Laurent, about 4 miles n. e. of Quebec, divides the River St Lawrence into two chanmels.- 19 miles long and $5 \frac{1}{2}$ broad, containing 69 sq. miles; its centre is in
 members to the provincial parliament, and the place of clection is at ist. Jean.-Giranted as a seigniory 15th Jan., 1636, to the Sicur Castellom.-It is at present divided into three distinct properties, beIonging to Madame Drapeau, Monrs. Poulain, and Monsr. Le Comte Duprí. It is also a county of itself, and lies in the district of Queleer, and comprehends all the islands nearest to it, and which in whole or in part front it. It contains the parishes of Saint Pierre, Saint Jeant, sainte Famille, Saint Laurent, and suint Framerois, and the Islands of Madame and Reaux-This island is next in size to that of Montreal, and approaches it in fertility and richness of soil more nearly than any other part of the district of Quebee: its Western extremity is only 4 miles from Cape Diamond. The shores incline gradually to the beach, and in some places are a few rocky cliffs, but not of great extent or elevation : from the foot of the slopes are large spaces of low meadow, sometimes intersected by patches of excellent arable land. Bordering the North Channel the beach is flat and muddy, with reefs of rocks running along it ; but on the southern side it is a fine sand, with only a few pointed rocks sticking up here and there. The highest part of the island is by the church of s t. Pierre, about four miles from the western extremity, and almost fronting the falls of Montmorenci ; and also just above Patrick's Hole, nearly abreast of $\mathrm{s}_{\mathrm{t}}$. Pierre, on the south side, on which is placed the second telegraph of the chain from Quebec to Green Island. The centre part is thickly wooded, but without producing any timber of superior growth. The soil is highly fertile in almost every part ; on the high lands it is generally a light good earth, either mixed with sand, or sand and clay; in less elevated situations there is a fine black mould, which, as it nears the shores, is likewise blended with sand. This delightful spot is but scantily watered by the little river Dauphin, the rivulet Maheu, and a few other trifting streams, all of which in summer-time fail of a sufficient supply to work the only two mills that are built upon them. The parishes of St . Pierre and Ste. Famille on the north, St. Laurent, St. Jean, and St. François on the south, each of

ORLEANSISLAND.
which has its church and parsonage-house, embrace the whole circuit of the island: St. Jean and Ste. Famille are more populous than the others, and their inhabitants are wealthy and substantial farmers. Four curates perform the clerical duties of the five parishes, the incumbent of Ste. Famille serving St. François. A good road encompasses the whole island, and several others cross it. The churches of St. Laurent and St. Jean are situated close upon the southern shore: the distance between them is six miles over excellent and well cultivated lands, richly diversified with nrchards and gardens; the ground rising with an easy slope from the road displays the industry of the farmers to very great advantage. Along the road side are houses at short intervals from each other throughout the whole distance. Patrick's Hole, a little westward of St. Laurent, is a safe and well-sheltered cove, where vessels outwardbound usually anchor, and wait their final instructions for sailing. At Anse au Marand was launched the immense ship called the Columbus of 3700 tons register admeasurement, $30 l_{1}^{1} \mathrm{ft}$. in length, 50 ft .7 in breadth, and 29 ft .4 in . in depth; she was built at the expense of a Scotch company by a Mr. Wood from Glasgow, and carried four masts. On the western point is a group of very neat houses; at several of which the inhabitants furnish accommodations to the numerous persons who visit the island for amusement or curiosity, both in summer and winter. The fertility of this spot is so great, and the habitans such good cultivators, that large quantities of grain, and most sorts of provisions, are continually furnished for the consumption of Quebec; among the fruits, apples and plums attain a much greater degree of perfection than in any other place in the lower district ; but they do not equal the productions of Montreal. In Ste. Famille there is a large stone building, where several nuns reside and keep a seminary for the education of females.-This island contains 5 parishes.

The parish of Ste. Famille, by a regulation of Sept. 20,1721, contirmed by an order in council, March 3, 1720, extends $2:$ leagues along the North Channel, from the house of Louis Guerard, which separates it from the parish of St. Pierre, to the rivulet named Pot du Beurre. The farms range along the north channel of the St . Lawrence, and extend in depth one league to the
middle of the island, and abut on the farms of the parish of St. Jean. One farm, only, belongs to the nuns, including which there are 67 farms in this $\mathbf{P}$., and all are under tenure and inhabited, besides which there are 12 emplacements. The size of all the farms, excepting four, is from 2 to $2 \frac{1}{2}$ front arpents; one is 7 front arpents, and three others are 6 arpents in front. The quality of the soil is but middling. There are more of the maple and cherry than of other trees. Here is a convent but no other school, for, the girls who are instructed in the convent, amounting sometimes to 60, are generally employed when at home in instructing others of the family, by which means all are educated without the necessity of erecting schools. In this $\mathbf{P}$. there is neither village, inn, nor house, deserving of much notice, although almost all the houses are built with stone. Besides wheat, oats and peas, very little grain is grown. The breed of swine is worthy of remark, but that of other animals is much the same as in other parts of the province where no particular attention has been paid to it. There is only one road, but that is a very good one. About 50 ells of linen, and the same quantity of étoffes du paijs, are made annually on an average by each family. Oxen as well as horses are used in agricultural labour.-All the farms have been conceded, for more than a century, on the terms usual at the time, and all of them have been frequently surveyed. When there are too many individuals in a family, some of them leave the parish for the purpose of learning trades or taking farms.

The Parish af St. François de Salles, by a regulation of Sept. 20, 1721, confirmed by an Order in Council, Mar. 3, 1722, situated in fief Argentenay, is 3 leagues in extent, $1_{2}^{1}$ league along the South Channel, beginning at and including the house of Louis Gaulin descending to the lower end of the island, and $1 \frac{1}{2}$ league along the North Channel ascending from the $N$. $E$. end of the island to the house of Charles Guirard, including all the intervening lands.-This parish is the property of Mr. Dupré. The size of the farms is nearly the same with two exceptions; one individual possesses a farm of 10 front arpents, that of another is about 6 arpents, all the others amounting to 52 are between 2 and 3 arpents. All the farms have been conceded long ago; they are all susceptible of cultivation and have been accurately surveyed. The inhabitants who quit

## O R L

the parish, leave it for the purpose of following some trade, which appears to be their only wish.

The Parish of St. Jean Baptiste, by a regulation of Scpt. 20, 1721, confirmed by an Order in Council, Mur. 3, 1722, is 2 leagues along the South Channel, extending from and including the house of André Terrein to Riviere Mahelo, comprehending all the lands in this space to the middle of the island.-In this parish are farms of various sizes, from 3 front arpents down to half an arpent, but none so large as six front arpents by 30 in depth. All the lands were conceded before 17.59 , and there being none unoccupied, many persons, who are desirous of making new settlements, are prevented from doing so near their relatives and friends, and would therefore settle elsewhere if they had the means. Not a single parishioner has migrated to the townships, for the mode of concession there practised is not agrecable to them. The old farms are too much divided, and the number of small emplactmens on barren soils are continually increasing; and their occupiers carry on trades without a knowledge of scarcely the first elements; they loring up families of wretched beings destined to increase the number of mendicants.

The Parish of St. Laurem, by a regulation, Sept. 20, 1741, confirmed by an Order in Council, Mar. 3, 1222 , is $2 \frac{1}{4}$ leagues from the river Maheu, along the South Channel to the house of Pierre Gusselin, including all the lands within these limits to the centre of the island.-The observations made relative to the parish of st . Jean apply equally to the parish of St. Laurent.

The Parish of St. Piow and St. Panl, by a regulation, Supt. 20,1721 . confirmed by an Order in Council, Mar. 3, 172:, is 2! leagues along the North Channel, from the river Pot du Beurre to the $s . w$. extremity of the island, including all the lands within those limits as described in the contracts of concession; but should any of the inhabitants, whose grants extend entirely across the island, choose to reside on the opposite or south side, then they are to become parishioners of St. Laurent, and pay tithes to the cure of that parish accordingly.-All the lands were conceded prior to $175!$, and are now, as much as possible, under cultivation. About half the farms extend rather more than two arpents in front, the others are of less extent.

Orme-town, e. Bealifarions, S.
Oroquors, river, runs into the r. Madawaska near the Madawaska settlement.

Ossaoom, river, rises in the t . of Thetford, whence it runs N. W. into the $\mathbf{T}$. of Leds, where it joins Sunday River and soon after falls into the R. Bécancour.

Ottafa, county, in the district of Montreal, is boundeds. s. by the s. e. boundary line of the S. of La Petite Nation, running $N$. along that line, from the Ottawa lliver, to the depth of the seigniory, and thence the same course continucd to the N. boundary of the province; on the west ly the N . and w . bounds and limits of the province; and on the south-west by the Grand or Ottawa River, in its whole extent to Lake Temiscaming, and from the head of that lake, ly a line due north to the boundary line of the Iudson Bay territory. It includes all the islands in the Grand or Ottiwa River and in Lake Temiscaming, nearest to the county and in the whole or in part fronting it. This county so bounded comprises the seigniory of La Pctite Nation, and the following townships on the r. Ottawa: Lochaber and its augmentation, Buckingham, Templcton, Hull, Eardly, Onslow, and all the townships in the above-described limits, on the north of the Ottawa River.-This extensive county is situated between the parallels of lat. $4.5^{\prime \prime} 34^{\prime} 30^{\prime \prime}$ and $47^{\prime \prime}: 54 \mathrm{~N}$, and between the degrees of longitude $74^{\prime \prime} 47^{\prime} 30^{\prime \prime}$ and "a $0^{\prime \prime} 6^{\prime \prime} 10^{\prime \prime}$ w., from the meridian of Greenwich. Its length is 299 miles and breadth 129 , containing 34,669 square miles. In soil, surface, climate, and local

## OTY

situation, it presents numerous advantages. It is only separated from the eastern section of Upper Canada by the Grand or Ottawa River, and communicates therewith by the conspicuous line of bridges at Hull and By Town; for the description of which and of this entire section of country, vide 1st vol. page 187.

Ottawa or Grand River.- This magnificent and important river is so amply described in the first volume, that a reference to the pages that contain a description of its more remarkable features is all that is necessary in this place. These places are annexed in alphabetical order as follow :

Chenaux, les, p. 189.
Coulange Fort, p. 188.
Girand Calumet, p. 188.
Lac des Chats, p. 189-201.
Lake ('haudicre, p. 191.
Long Sault, p. 193.
Mondion's Point, p. 190.
Ottauct, p. 187, et seq.
Point Fortune, p. 197.
Portage du Fort, p. 188.
Rapide du Fort, p. 189.
Luion Bridyes, p. 192.
Otter, river, runs into the r. Saguenay half a league above the Prairies, that produce the hay consumed at Chicoutimi Post.

Oty, fief, in the co. of Rimouski, is thinly settled and mountainous, and the soil is very light and sandy ; the first and second ranges are, however, well settled. The road along the shore of the St. Lawrence is very good to Anse au Coq, the distance of $\overline{5}$ leagues; it then becomes heavy until it reaches Mitis.

0 UI
Ouareau or Lac Ouareau, river, rises in waste lands in the rear of the $т$. of Rawdon, through the centre of which it traverses to Manchester Mills on the front line; it then intersects the $\mathbf{N}$. angle of the $\mathbf{S}$. of St. Sulpice, and entering the aug. to Lavaltrie joins the r. L'Assomption about 3 m . below the church of St . Paul.-On this r . are 9 falls, 4 of them in Rawdon and the others above 6 miles higher up the stream and not far from each other; the first and second falls are the highest. In Lavaltrie this R. is broad and shallow, and much timber is sent down it to the Quebec market. The navigation of this R . between its falls in Kildare is perfectly safe for boats of the largest size; and its borders are fit for settlement.

Ouatshouan, $v$. Ouiatchouan.
Ouelle, river, in the cos. of L'Islet and Kamouraska. The Rivière Ouelle rises in the range of mountains in the $\mathbf{T}$. of Ashford, and taking a N. E. course winds down to the St. Lawrence through part of Ixworth and the $S$. of Rivière Ouelle. This r.feels the effect of the tide for some distance up, and is so far navigable for vessels of 25 tons burden, many of which are constantly employed in transporting to Quebec the produce of the seigniory, consisting of grain, butter, poultry, live stock, and a coarse species of woollen cloth.

Ouelee (S.), v. Rivière Ouelle.
Ouiatchouan,Ouiguatshouan, Ouatshouan or Wiatshuan, which mean in the Cree languages "Do you see the falls there," is a river that rises 7 miles above Lake Quaquagamacke and empties itself into the $s$. w. corner of Lake St. John, after running a course of $59_{2}^{1}$ miles.-The deputy sur-veyor-general had lately the good fortune to explore this river with great success. Endeavouring to discover the first waters of the Ouiatchouan, after having explored Lake Quaquagamacksis and the adjacent parts, he ascended a high rocky mountain called Mount Discovery, the foot of which is bathed by a river which falls in a succession of cascades. From the summit of the hill he discovered to the s. $w$. an extensive low country, resembling a sea in its great expanse. From this mountain he descended into a tamarack swamp to a dead-water stream, apparently the effect of unusual rains; this stream led him to the river Ouiatchouan, which there traverses an ex-

## OUIATCHOUAN.

tensive alluvial tract susceptible of agricultural improvements. Here rushes grow to a considerable height, some of which were pulled and brought up black earth of a clayey nature with the roots. A few mountains were observed on approaching the great Lake ('ommissioners, which is about $2 \frac{1}{2}$ miles below the portage of the mountain. The lake at the entrance of the n. , which is half a league broad, lies in a course $\mathrm{N} .30^{\circ} \mathrm{E}$, which was followed, taking the centre of the lake; the land on its borders is bold and mountainous, timbered with fir, pine, spruce and white birch in several places; the shores are steep and rocky, and their aspect unfavourable for settlements, although the valleys might be found good. After passings a small bar of alders which choked up the passage between an island and the shore, and veering northward round Pointe ill'Aviron, he beheld a continuation of Commissioners Lake. The landscape here exhibited in boldness and grandeur the masterly touch of the great designer Nature. The shores rise cragey and steep and to considerable elevation, above which tower two considerable eapes, 3511 to 400 feet high, on the eastern borders. Having reached the foot of the southern cape and landed on the rocks, he ascended their abrupt face, and crossed over with much difficulty to the northern cape, the woods having many years past been burnt on their summits, leaving the rocks to discover their barren nature and nakedness of vegetable mould. From the cape was discovered, for 20 or 30 miles to the westward, a hilly, broken and mountainous country, showing in a few places the white summits of hills similar to that on which he stood, coutrasting with the universal character of the country, which is wooded with fir, spruce, tamarack and pine. A stream of some magnitude appeared to enter $s$. w., with an alluvial flat at its mouth; this r . descends from the breaks of the hills which form its bed. Looking n. up the lake, which is diversified by several islands, he noticed a large bay to the N . f . He then descended the capes to the canoes and continued his survey of the lake, passing the islands which are rocky but well timbered with birch, fir and spruce. He then got under the lee of Sandy Point and encamped for the night. The next day he passed several barren craggy hills exhibiting a wild and wretched aspect of country, particularly on the eastern side; the opposite side has not been ravaged by fire, and the rocks are
clothed with fir, spruce, birch, \&c. growing on a thin layer of vegetable mould. He then reached the Blueberry Hills, which are a succession of barren capes similar to those below Sandy Point, but possessing yet greater height and a peculiar wildness of aspeet, and are remarkable for several perpendicular cliff; which face the lake : these hills are destitute of trees and the bottom of the cliffs is covered with blue berries of very large size, from which the Hills derive their name. Having talien a transient view of the country from a neighbouring cliff, he resumed his course and reached a deep bay into which enters a considerable stream. Having landed on a barren rock or island, he observed the sun's meridian altitude, lat. $4817, \mathrm{~N}$. and thence procecded to the head of the lake, which he found to be near 7 leagues long, and its average breadth from Pointe a l Aviron about a mile. Finding no outlet, he determined to return to Hail Bay, the first large bay he had observed from the cape, which proved to be the entrance of the Ouiatchouan River. He immediately came to the head of a small cascade, where he effected a portage of 440 yards in length; and half a mile below, another portage on the s. E. bank of 923 yards, whence he reached a small lake which opens upon bouchette Lake. The general direction from Hail Bay to Lake Bouchette is about E. N. E. $2 \frac{1}{2}$ miles through broken and hilly land, the difference of level between that lake and Lake Commissioners being between 50 and 60 feet. Bouchette lake is about 4 miles long, and roumd it the land rises, discovering a very sandy light soil. He then entered Lake (ainatchouan, about $1 \frac{3}{4}$ mile long and 1 mile broad. Searching for the outlet, he made the tour of the island that lies at the end of it, where the land appears of beiter quality and continues so for some distance along the Ouiatchouan River, which runs with a very swift current to the head of a rapid which occasions a portage of her yards on the western bank. Here the elm, black birch, pins, fir and spruce are found intermixed, and growing on an argillaccous loam beneath a rich vegetable mould. Leaving this portage, the river acquires considerable magnitude, being about (io yards wide, and the land offers great susceptilility for settlement; the timber growing on its banks is ash, black birch, elm, spruce, fir, balsam, and some white pinc. The gencral course of the river is about $N$. N. w. to another portage below a few

## OUIATCHOUAN.

small rapids, which he shot down; here a little stream that rises in a small lake, which is seen from the river, enters the e. bank. This portage is on the eastern bank, and is 660 yards in length, a furlong below which is a rapid divided into two channels by an island. The river then takes a v . course and runs down with great swiftness, frequently interrupted by rapids, which were generally shot down by the voyagers, his companions, on which occasions they exhibited such dexterity and adroitness in the management of the canoe as always excited his astonishment. On arriving at a rapid, Vivier, the bowman of his canoe, would generally land and examine the state of the rapid before venturing down: if his decision was for landing, a portage was effected; if for shooting the rapids, the deputy surveyor could always rely upon his experience, for he had undergone many trials in the service of the celebrated traveller and navigator, Captain Franklin, in his last expedition for a north-west passage. The motions of the helmsman are entircly regulated by those of the bowman, who watches the course of the water, or, as it is called, "fll d'ctu." On coming to high surges (bouillons), the paddles are suspended, and the canoe in its passage frequently takes in a sea; when the channel is to be resained, the bow and helmsman draw with their paddles on the same side, which is termed "rembarrer."- A peculiar display of native coolness and dexterity was exhibited by the guide in the descent of a rapid; the facility and at the same time the degree of indifference, accompanied with a knowing smile, with which he managed the paddle at the helm was truly characteristic; the wildness of the surrounding objects, his flowing black lank hair playing in the wind, and the general stillness and silence of the remaining hands, who anxiously watched the countenances of the two active characters in the scene, excited a degree of interest that cannot be described.-Another portage was afterwards effected on the eastern bank, 440 yards in length, where the river is divided into two channels by a large island. Thence he came to a portage where a small carrying-place of 20 yards is crossed upon the island, on which an abundance of berries of various descriptions are found, wild currants, blue berries, \&c. The land now ceases to offer that favourable appearance for settlement, being in many places rocky and hilly, and
in others low and swampy; here the prevalent timber is spruce, tamarack, fir and some white birch. About half a mile below the last portage he came to the Great Fall, where a carrying-place is crossed on the western bank of 600 yards to the lower landing and basin. The rocks are all granite and of irregular inclination, and the land is, very poor and rocky, producing chiefly only the tamarack and fir. Having launched the canoes below the fall, about 50 feet in height, he left this portage, and about 3 furlongs below it came to another on the s. e. bank. On leaving the landing he ascended a high mountain, from which a similar one was obscrved on the opposite side of the river ; after which he again returned to the river, which there runs as usual very rapidly. The portage proved $\frac{3}{1}$ of a mile long and traversed a very rocky rugged country, in which he frequently lost the path which was but little beaten. The river here is about 250 ft . under the level of Lake Ouiatchouan. The rapids follow each other in quick succession, rendering the navigation for canoes almost impracticable in ascending the river, but many of them can be shot in descending. Having encamped for the night, at break of day he again embarked his canoes at the foot of the rapids, where the river is interspersed with several islands, and came to a portage on the N . bank, which avoids a considerable rapid, but which, however, was shot by the canoes without loading, each being manned with the bow and helmsman. The portage, half a mile long, is partly at the foot of high hills and partly over them, whence the river runs N . to some rapids which were shot down as far as the Long Rapids of the falls, so called on account of a small stream falling from the summit down the abrupt face of the hills which form the banks of the river. About a mile below these rapids he effected another portage, where, reaching the summit of a hill, to his inexpressible joy he beheld a prospect of Lake St . John, which appeared much like a sea in the distance or a cloud resting on the horizon. In descending the river the land for some distance gradually assumes quite a different character, being timbered with black birch, spruce, pine and some maple. The clay makes its appearance upon the surface, which is irrigated by several streams intersecting the path, that here appears well beaten and daily frequented. Having descended about 250 feet into the alluvial land at the foot of the hills, he found the soil of an ex-

## O U I

cellent quality, being what is frequently called terre grise, producing maple, fir, ash, pine, spruce and some cedar. He then passed a larae stream, $\frac{3}{4}$ of a mile beyond which he came to a superior growth of cedar on the borders of Lake St. John, and soon viewed with peculiar delight the expansive sheet of water presented by that hatiful lake. All was calm at the moment save the breeze that rippled upon the surface of the lake. The islands in the distance and the boundless view beyond them enhanced the interest and admiration the lake excited, and displayed, as it were, a new atmosphere before the voyagers, who had been so much confined by the comparatively limited sphere of rivers, swimps, lills, ponds and inferior lakes.-l!avins made choice of an encampment, bencath pendent cedars, on the sandy beach or allavion of the lake, the deputy surveyor-general divided the remaming store of spirits among his companions and men: the health of the king was given, in honour of the success that thus attended the first expedition fitted out under the auspices of the provincial legislature to explore this hitherto little known portion of the province.-The (i, at Falls of the Ouiatchouan are about a mile from its mouth, and descend $23 i f \mathrm{ft}$. From Lake St. John to these magnificent falls no smooth water is met with, the river being one continued rapid. These falls rival those of Montmorenci in height, and far sumpsiss them in the distribution of the water as it discends over the pendent rocks. These beautiful and splendid falls can be seen from the opposite side of the lake, and have given to this river its name.-The fishing-season for white fish in the Ouiatchouan commences at its mouth about the 15 th of October ; in one day in 1827 the fishermen caught 300 , and in the whole season above 1700 , which, being preserved by freezing, subsisted the people of the Post and Indians till spring, each fish on an average weighing from $1 \frac{1}{2}$ to 2 lbs. The season for the fish called arrmomish is from the 15th May to about the 20 th or latter end of June; they are chiefly taken with the hook and weigh from two to three pounds each.

Ouiatchouanitch or Litthe Ofintchorin, river, falls into Lake St. John about $3 \frac{1}{4}$ miles from the Ouiatchouan. It descends to the lake at the bottom of a bay whose shores as well as the bed of the river are composed of limestone. The

PAC
land near its mouth, as seen from the lake, into which it descends as a rapid, appears to be good and level.

Oumemphouan, $v$. Ouhatchmin.

Oulnisy, a projected township in the co. of Mesantic, stretches from the $N$. $w$. corner of Dorset to the s. angle of Tring.

Ours, à l', river, runs into the r. Chuamoushuane. It produces salmon.

Ormanom, lake, in the $\mathcal{S}$. of Beancour, connects with Lake int. Paul and participates in the general amenity of the situation ; it derives its name from the immense quantiase of lirds of that species (bustards) that formerly frequented its borders, although now one of them is rarely seen, the increase of settlements having lomg since driven them to more solitary situations.

Oumaribes, livi re aux, falls into the Sagueney about midway between $\mathrm{Ha}_{\mathrm{a}} \mathrm{H} \mathrm{Ha}_{\mathrm{a}}$ Bay and Chicoutimi, on the opposite side. Its banks are in meadow for 15 arpents upwards and perhaps farther. It is an inconsiderable stream and nearly similar to the St. Churles near Quebec.
P.

Pabos, at the entrance of the Bay of Chaleurs, and in the co of Gasp: The lous of Girc:et and Little Pabus, about 5 miles from each other, lie about midway between Cap D'Espoir and Point Macquereau. On the $w$. side of Great $\mathrm{P}_{\mathrm{a}} \mathrm{l}$ os Bay is a small village, and on the E . side, on a projecting point, stand the summer habitations of the fishermen, as they are usually termed: several streams descend into this bay from a numerous chain of small lakes to the north-westward.

Pachot, seigniory, in the co. of Rimouski, is between Mitis and Le Parre, and bounded in front by the st. Lawrence. It is, by the title, one league in breadth and one league in depth, and extends half a lague on each side of the $n$. Mitis. Granted, Jan. 7, 1603, to Sieur Pachot. -The surface of this small tract is senerally mountainous and broken along the front, and affords but little good land for agricultural purposes.

Title._"Concenion du 7ine Janvier. liss, faite par Jacques de Brisuy, Gouverneur, et Jcan Bedhul, Intend-

## P E L

ant, au Sieur Pachot, de la rivière de Mitis, dans sa devanture, sur le fleuve st. Laurent, jusqu'à une lieue de profondeur et une lieue de terre sur le fleuve St. Laurent, moitié audessus et moitié audessous de la dite riviére sur semblable profondeur d'une lieue."-Régistre d' Intendance, No. 3, folio $¥ 1$.

Paspebiac, $v$. Cox, t.
Pastagoutsie, civer, rises in Lake Kiguagomi near sable Point, and is one of the outlets of that lake by which it discharges its waters into the Sa guenay about 11 miles N . W. of Chicoutimi. It is said that it passes under a mountain in its course, but that circumstance has not been satisfactorily proved. It runs through a series of beautiful lakes, one of them of considerable extent, to which Mr. Hamel's name has been given. -On this r . is a hill 400 ft . above the level of the water, whence the traveller perceives a fall, the sound of which he hears for some time in descending. He then reaches six succeeding falls, each on an average ten feet high; at the highest of them the rock is so perpendicular that any person can walk without receiving much damage. From these he ascends to the great falls, about 240 feet, which in spring, when the waters are high, are magnificent. It is supposed that these falls, being heard at a very great distance in spring and being very near the Saguenay, are what gave rise to the famed fills of the Saguenay which every one has heard of but no one seen, particularly as the Indians affirm that there are no great falls in that river but a succession of great rapids. The ground is rocky, but where there is soil it is a fine mould: the timber consists of black and gray birch, a few white pines, epinette, fine cedars, white spruce, and in one place a considerable-sized sugary of small maple. It is said, on the authority of Indians, that there are higher falls than those above-mentioned, which they also call rapids. This r . retains its name through its entire course from Lake Kiguagomi to the Saguenay; on it are 6 portages, 4 short and 2 very long, one of which is longer than the other. At the rate of a white man's travelling, it would take six days to walk from Lake Kiguagomi alongside of the river to its junction with the Saguenay.

Peiras (S.), v. Mitis.
Pflletier or Peltier, river, runs from the N. e. into the river Saguenay nearly opposite HaHa Bay and below Pointe aux Roches. The Ruisseau Peltier descends rapidly between the

PER
craggy high hills that form its bed. At its mouth is a bay called Peltier's Cove, a good harbour for vessels, where this stream is 80 links wide.

Peltier (R.) v. Pelletier.
Peninsula, v. Lake St. John.
Pepin, river, in the $S$. of Champlain. On the Ruisseau Pepin is one saw-mill.

Pepsiaquack, river, in the co. of Bonaventure, runs into the n. E. side of the R. Matapediac about 6 miles from its mouth.

Pepsiaquasis, river, in the co. of Bonaventure, runs into the $s$. w. side of the $\boldsymbol{R}$. Matapediac about 8 miles from its confluence with the Ristigouche.

Perce, in the co. of Gaspé. This remarkable place is situated on the extremity of the s. shore of Malbay. The village is seated on a rising ground and contains about 70 houses, principally inhabited by fishermen; and, like New Carlisle the chief town, has a court-house and a gaol: the beach in front is very convenient for the curing of fish, and some of the best banks for catching them in Malbay lie off this part of its shore. The appearance of the land behind Percé and its immediate neighbourhood, approached by sea from the N.E. or s.w., is that of the enormous ruins of some ancient fortress of more than human construction. The Table Roulante, a rock of frightful height placed on the summit and leaning over the side, seems to totter and threaten in its fall the village which lies beneath near the promontory of Mont Joli and Percé rock. This singular fragment is pierced (whence is derived the name of Percé) by two arches, which resemble at a distance the portals of fortifications in ruins, and appears like the remains of some enormous wall which have survived the disaster that destroyed the adjacent works. The spectator may approach it at low water from Mount Joli without wetting his feet. The distance between the mount and the rock is about 50 ft . When the rock is approached for the first time, the spectator trembles lest it should fall upon him ; its height is at least 300 ft . and it is about 30 yards in its widest part, but its breadth above the arches is not more than 20 ft . Besides the two great arches, there is a lateral arch on the N. E. side scarcely perceptible from the water. However high this rock may be, it is low in comparison with the adjacent capes N. w. of the village of Perce, which rise one above the other as if mountains piled on moun-

## P ER

tains had been cut through the middle and one part had fallen into the seat, while the other part remained a naked and frightful chain of precipices of unequal height. The Island of Bonaventure, rather more than a mile from the main land, terminates this picturesque scene, not to be exceeded by any other on the American continent. The great number of mountains and precipices in this place renders it very subject to sudden storms and violent gusts of wind, which has induced some to call it Terre des Tempetts, the Land of Tempests. In fact it is an astonishing place, and the fertile fancy of romance would choose it above all others for the scenc of marvellous histories and supernatural adventures, visions, spirits and enchantments. Until within a few years this steep rock was considered inaccessible and its only inhabitants were the sea-gull and the cormorant ; here they laid their eggs and reared their young in perfect security. A young man of Perce, full of mirth during a holiday, undertook to ascend this rock by means of the lateral arch: his first attempt was unsuceessful-his heart failed him and he descended; but after a minute or two he made a second attempt and to the great astonishment of all the spectators he succeeded, apparently with much ease. He placed a little flag on both extremities of the summit and, by means of ropes and ladders, many others were induced to ascend, partly out of curiosity and partly for the cergs and hay which were there found. The sea-birds being disturbed in their retreat abandoned it, and their departure was considered a public loss, for the fishermen returning from sea in dark and stormy weather were always, if out of their course, guided safely home by the cries of the birds heard from their rocky dwelling; the bold feat of this young man deprived the fishermen of this advantage and the poor of the food which these birds afforded. A police regulation, thercfore, with the consent of all the inhabitants, has prohibited any one from ascending this rock during a certain part of the year ; this has had the beneficial effect of inducing the birds to return to their ancient habitation, where they now live and multiply under the protection of the law.-Two miles $N$. it is said that two men-of-war belonging to the squadron that attempted to take Quebec in 1721 were wrecked.-The settlement of Percé derives its name from the rock which the French Canadians call Roc Percé.

Perchaca, river, runs into Lake St. John and is navigable for large bateaux for many learues and hisher up for burk canoes.

Pirnhe, à la, river, in the $S$. of Madawastia, runs into the r . Madawaska near the head of Lake Temiscouata. It is from 20 to 30 ft . wide and greatly abounds in fish of the usual varicties.

Peribaidoraicife, river, that falls into the $w$. bank of the Peribonea, is now called Inatil Ricer. in memory of David Stuart, Esq. The land on each side, as far as the first portage, which is about 6 chains long and about 91 miles from the mouth, is generally low, and, though light, being a mixture of sand and clay, is tolerably susceptible of cultivation. The timber is white bireh, spruce, pine, sapin, with a little elm, ash and willow. Tide David River.

Peribonea, river. "The 大ingular or C'urious River."-The mouth of this river is on the northernmost point of Lake St. John, viz. in latitude $48^{\circ}+2^{\prime} 47^{\prime \prime}$, and its course is from the e. N. e.; it is about 4.5 chains wide and the current is moderate as far as the falls, which are about nine miles from its mouth. These falls are three in number and above them is the Lake D'Ahaouilon or Na-d'haoui-lo, about 4 miles long and one wide.-This river may be said to be the most beautiful, and that which offers the most advantarecous site for a settlement, of all the rivers in that part of the country. Its banks are level and wooded with a mixture of aspen, white birch, red and white spruce, sapins and scattered red and white pine, with cypress. The higher this R . is ascended, the better the land appears to be.

Perrot, island and seigniory, lies off the s. w. end of the Island of Montreal and is included in the co. of Vaudreuil. It was named after the first governor of Montreal, to whom it was granted Oct. 99 , 1672.-The seigniory of Isle Perrot G g 2
also includes the Isles de la Paix, that lie in front of Chateauguay and Beauharnois.-Granted to Sieur Perrot Oct. 29, 1672, and is now the property of Amable Dézéry, Esq.-Isle Perrot is about 7 m . in length and nearly 3 in breadth at its widest part: it contains 143 farms, of which rather more than one half are settled and tolerably well cultivated; the soil is generally light and sandy; in some places an uneven surface of rock. The wood is not yet entirely cleared, and of what remains beech and maple constitute the chief part. The houses are scattered near the roads, but there is no village; there is one church and only one windmill. Two fiefs are in this S.: one, called Ficf Brucy, 10 acres in front by 30 in depth, is the property of the representatives of Ignace Chenier; the other, named La Framboise, is of an irregular figure, containing 1:0 superficial acres, and belongs to François Freinch. There are four ferrics from Isle Perrot: the first to Ste. Anne, in the Island of Montreal, for which the charge is two shillings; one to the main land above the rapid of Vaudreuil, and arother to the foot of the same, one shilling and eightpence each ; the fourth is to the canal at Pointe des Cascades, for which the demand is three shillings and fourpence each person. The Isles de la Paix serve for pasturage only. (1 itie vol. I. p. 212.)

Perthuis, seigmiory, in the co. of Portneuf, is

## PET

bounded in front by the barony of Portneuf and on the other sides by waste lands. $-1 \frac{1}{2}$ league in breadth and nine leagues in depth.-Granted, Oct. 11, 1753, to Sieur Perthuis. From the boundary of Portneuf the land rises in a broken and irregular series of heights towards the rear, where it falls in with the $\mathrm{N} . \mathrm{w}$. ridge of mountains : the suil for a league or two in the interior is a light loam or clay, sometimes covered with a thick layer of fine black mould; these spots, if brought under cultivation, would no doubt prove very productive: of the quality more to the rear nothing has yct been ascertained. No part of the grant is appropriated to agriculture. The timber is in general very good and abundant, consisting of the best kinds found upon a dry good soil, as maple, beech, ash, birch and pine. The lower portion of the $\mathbf{S}$. is watered by the r. Ste. Anne, which runs across it, but in the other parts there are only a few small streams that break from the sides of the mountains.

Peshifaouinamishushihi (R.), v. r. Des Aulnais.

Pesquiaman, river, in the co. of Bonaventure, rums into the $s$. $w$. side of the $R$. Matapediac about 9 miles from its mouth.

Petite Ferme, river, in the parish of St. Joachim, in the S. of Ciite de Beaupré, runs through the Domaine into the St . Lawrence.

## Petite Isle, v. l. St. John.

Petite Nation, river, winds through and traverses the S . of the same name from N. E . to s. w. and running through a mountainous country finally discharges its waters into the Ottawa w. of the neck of land that unites the peninsula with the main land near the head of an arm of the Ottawa. It is about 3 chains wide and is navigable for bateaux nearly the whole year as far as the mills, 5 miles from its mouth; above this the $R$. is rough and rapid. It issues from a number of lakes about 100 miles in the interior well stocked with fish, one of which is named Lake Papineau.

Petite Nation, seigniory, in the co. of Ottawa, is bounded N. e. by Grenville; s. w. by

## PET

PET

Lochaber Gore ; in the rear by waste lands; in front by the r. Ottawa.- 5 leagues in front by 5 in depth. Granted, May l6th, l(i)4, to Messire Frauçois de Laval, Bishop of Pistree, the first Bishop of Quebec. It is now the property of the Hon. L. I. Papineau, the Speaker of the House of Assembly. The Ottawa indents the front with several lays and large ponds, towards which the land is low but of excellent quality. The land, to a great distance in the interior, is fit for the cultivation of every species of grain, hemp, flax and grasses of all descriptions. On the margin of the rivers large tracts of fine natural meadows and pastures at present enrich only the earth with their exuberant plenty. The inlets and ponds abound with fish in great variety and the neighbouring grounds with game, duck, teal and other wild fowl in great quantities. Penetrating deeper into the seigniory, the land has a gradual ascent and is clothed with timber of the best kinds; the oak is of superior quality and of the largest dimensions fit for ship-building. The main ridge of mountains, that takes a westeruly course from Quebec until it falls upon the Ottawa, crosses La Petite Nation about the middle; beyond this intersection the remainder of the grant has been only partially explored and the quality appears to be much inferior to that of the south, although the various sorts of timber seem to retain their superiority, or are at any rate but very little inferior. From the range of heights and the upper lands several small streams have their sources, whence in various directions they water the valleys in their way to the Ottawa, but they are too inconsiderable for other purposes than irrigation and working of mills.-About one-tenth of the scigniory is conceled, and the first contracts of concession, 8 or !!, were made in 1810. All the lands in the front are conceded, and 3 new concessions, called St. François, St. Charles and ist. Amedée, extending backward to the r. La Petite Nation, are made, and only onc-tenth part of each is as yet under occupation. The farms are unusually large for French grants, being 5 arpents by 40 , each of which pays 4 bushels of what and 2 French crowns annually.-The road opened by the commissioners for internal communications runs across the front of the $S$., having settlers on each side who keep it in constant repair. The sum of $3,000 \mathrm{l}$. was voted by the provincial legislature in 1827 for the improvement of this important
route, which connects the now settlements on the Ottawa with the more settled parts of the district of Montreal.-A small river runs through the middle of the first front concession and drives a corn-mill with 2 sets of stones and also a sawmill having only 4 saws. These are sufficient for the wants of the scigniory. At the falls of the r. La Petite Nation is a saw-nill which :mmally cuts for exportation from 45 to 50,000 thick planks and deals, besides which a great quantity of shingles are made. The sawn timber, as soon as cut, is put into a canal made of wood extending $2,400 \mathrm{ft}$. from the mill to the bottom of the falls, where it is immediately rafted for the Quebec market.-'The population now amounts to 800 , which constitute alove 140 families, of which more than 80 are catholic: almost all the inhabitants reside on the first concession in front. Although the improvements are progressive and will thecone more rapid from year to year, the settlers are as yct too poor to cftict much without the assistance of the scignior, who, encouraged by the last act of the legislature in favour of education, intended last year to build a school-house with stone; and about 9 years ago a church, 90 ft . long, was built with wood.

Pierreville, seigniory, in the co. of Yamaska, is in the rear of St. François and is bounded s. and s.w. by De Guir.-l $1 \frac{1}{2}$ league in front by one league in depth. Granted, Aug. 3, 1683, to Sieur Laurent Phillippe and is now the property of Mr. de Montenac.-A tolerably grod soil is the general characteristic of the grant, which in some parts lies low, but there are no swamps. The best land is on each side of the St. Francis, where are the principal settlements and the best cultivation; the quantity under hand amounts to one-third of the whole or a little more. The river st. Francis runs through the S., dividing it nearly into two parts, and affords the advantages of easy and expeditious conveyance, as its current hereabouts and towards the $S_{t}$. Lawrence is very rapid. An inferior description of timber prevails; enough, however, of the better sorts is found to supply the wants of the inhabitants. The river turns a corn and a salw mill, and forms two or three small islands covered with trees of no real value, although exceedingly decorative.

Port Joli, river, rises near the rear line of st. Roch des Annais, and running N. W. traverses the S . of Reaume, and through the S . of St. Jean Port Joli it reaches the St. Lawrence.

Portland, township, in the co. of Ottawa, and in the rear of Templeton and Buckingham. The eastern quarter was surveyed and subdivided in 1805 . It is watered by the River Blanche, and is reported to be mountainous and rocky, but perhaps a more accurate survey would lead to a more favourable report.

Portneuf, barony, in the co. of Portncuf, is bounded N. e. by the S. of Jacques Carticr; s.w. by Deschambault; in the rear by Perthuis; in front by the St. Lawrence.-l $1 \frac{1}{2}$ league in breadth by 3 in depth. Granted, April 16th, 1647, to Sieur de Croisille; it now belongs to the convent of the Hotel-Dieu at Quebec, but is let on a long lease to Messrs. Coltman and Co.-This is a fine and valuable estate, the land fertile, and the part under
$P O R$
tillage in a good state of cultivation : the soil is a light sandy earth mixed with clay, and in many places a good black mould upon a bed of clay.The timber in the rear is a mixture of the middling sorts, but along the banks of the River Portneuf some very good pine may be collected. This river and several small streams water the property. At a small distance up the r. Portncuf, on the $w$. side, are the valuable corn and saw mills of Edward IIale, Esq., most conveniently and agrecably seated near the main road, whence the ground rises almost in the form of an amphitheatre; on the gentle acclivities are several fine settlements and many good housise, which greatly enliven a prospect naturally beautiful. From the mills the exportation of flour is wery sreat, and, with the almost constant shipments of timber, create a bustling scene of business. So much trade in these articles is here carried on l,y the proprietors, that almost a small fleet of ressels is sometimes seen lying at anchor off the month of the r . receiving their freights on board, besides those that usually anchor here in their passase un or down the river, on account of the Richclicu rapid. Proceeding castward from the mills, the bank of the St. Lawrence takes a gradual rise as far as the church at Cap Santr, and thence it almost immediatcly rises to more than 150 feet above the level of the river by a very stecp aseent up what is called the Cite du Cip sinti. From the front to the rear of this tract there are many rising grounds, generally of a very good soil, between which the hollows are in some plates swampy and covered with cedar and hemlock. The lands within of a league of the River ste. Anne are remarkably fine, and considered by Edward Hale, Esq., to be superior to any of the old conceded lands in the barony.-The Parish of Cap sume comprehends the $S$. of Portneuf, the $S$. of D'Iuteuil, and parts of Jacques Cartier and Neuville. In this parish are 10 ranges of concessions in different directions. With the exception of Anse de Portneuf, the land of which is excellent, the soil of this parish is of indifferent quality. The road are in general good. Horses chicily are used in agriculture. There are 3 schools, 2 public and 1 private, each having from 20 to 30 children.The small Village of ('ay) Santé is built at the foot of a hill on the shore of the St. Lawrence; it containsabout 2 : houses, and the church, standing nearly on the point of the cape, is a handsome

## POR

POR
building, usually attracting a stranger's notice by its exterior ornaments as well as interior decoration. To vessels coming down the river the clump of trees on Point Deschambault and this church serve as sailing-marks; the latter, by its three spires, is distinguishable at a great distance. Near the church is the parsonage-house and a group of other houses surrounding it, forming almost a tolerablysized village. Along each side of the Quebec road the houses are numerous, and being surrounded by neat gardens and extensive orchards afford, particularly during the spring, a most enchanting appearance.-In this parish there is no want of young persons who would be proper for making new settlements, but some have not the means and others have not the inclination. To facilitate the settlement of the ungranted lands, through which there is no road, it would be requisite for the seigniors to give as many facilities as possible for the new settlements, and that roads should be opened in the new concessions; and, moreover, the lands should be conceded according to ancient usage, paying a moderate seignorial rent.-From Cip, Santé the large shoal called Batture du Cap Santé stretches almost down to the entrance of Jacques Cartier River; it is thickly beset with rocks that are uncovered at low water.

Titlc.—" Concession du 16 me Avril, 1647, faite par la Compagnie au Sieur de Conisille, située au bord du la Compagnie au sieur ae Cowisille, situee au bord du
fleuve St. Laurent, du cité du Nord, contenant une lieue fieuve St . Laurent, du cioté du Nord, contenant une lieue
et demie de front sur trois lieues de profondeur; le front et demie de front sur trois lieues de profondeur; le front
joignant au Nord-Est au fief de Monceau, et du cité du Sud-Ouest au fief Dcschambault, dans laquelle se trouvent comprises les rivières de Jacques Cartier et de Portueuf." Résistre d'Intendance, No. 2 à 9 , fotio 215 .

Portneuf, county, in the district of Quebec, is bounded N. E. by the s.w. boundary line of the
seigniories of Sillery and St. Gabriel, and by a prolongation of that line; on the $s$. $w$. by the n. m. boundary line of the seigniory of Ste. Anne and its augmentation, and by a prolongation of the same line; on the $\mathrm{N} . \mathrm{w}$. by the northern boundary of the province; on the s. e. by the St. Lawrence. This county comprises the seigniories of Gaudarville; Fausembault ; Desmaure or St. Augustin; Guillaume Bonhomme; Neuville or Pointe aux Trembles; Bourg-Louis; Belair and its augmentation; D'Auteuil ; Jacques Cartier ; barony of Portneuf; Perthuis; Deschambault; Lachevrotière; La Tessérie; Francheville; Grondines, reste des Grondines, and their augmentations Its length is 240 miles and its breadth $35 \frac{1}{2}$, and it contains 8,640 square miles; its centre on the st. Lawrence is in lat. $46^{\circ} 41^{\prime}$ n., long. $71^{\circ} 30^{\prime}$ w. It sends 2 members to the provincial parliament, and the places of election are Deschambault and St. Augustin. The surface of this county is mountainous and uneven and is traversed by several ridges of highlands. The land on the bank of the St. Lawrence and receding therefrom is high and bold, but the soil is rich and fertile, being composed of a light sandy earth mixed with clay. It is abundantly watered by numerous rivers, streams and lakes. The chief rivers are as followthe Jacques Cartier, conspicuous for the rapidity of its stream and the elevation and boldness of its banks, and otherwise remarkable in the history of Canada, having been named after the enterprising Jacques Cartier; the Portneuf, La Chevrotière, and the Ste. Anne and their several branches; also the Batiscan sprealing its numerous branches in the interior, the Bastonais or Riviere Croche, and farther in the interior the St. Maurice and its various eastern branches. The chief lakes are the Wayagamack, Edward, and several other large lakes near the Height of Land. The whole front of this county, to the depth of 7 or 8 miles from the St. Lawrence, exhibits well-cultivated farms and flourishing settlements, especially along the St. Lawrence and on the borders of the chief rivers, along which are good roads, besides numerous concession roads. The post route from Quebec passes by the Jacques Cartier bridge, and thence along the St. Lawrence.-This county contains the parishes of St. Augustin, Pointe aux Trembles, Les Ecureuils, Cap Santé, Deschambault, and Grondines, and includes the new Irish settlement of St. Patrick.

Poritneyf and Milles Vaches, in the co. of Saguenay, lie 10 leagues below Tadoussac. These two contiguous seigniories front the St. Lawrence, and form together 6 leagues in front by 4 in depth. The $s$. of Portneuf belongs to the heirs of Messrs. Dunn, Stuart and Blackwood.In both these seigniories the lands are excellent ; and hay might be cut in Milles Vaches for at least 1,000 heads of cattle, which would be very advantageous to settlers as fodder, particularly at their first commencement: the land, in fact, is cleared naturally all around the bay and the timber is of good growth, consisting of white pine and spruce. The country on the east side of the bay is level for a considerable distance, at least 9 leagues, and there is a stream of water in the bottom of the bay that will admit of building a mill of 6 saws and also a corn-mill. The bay is very accessible to small craft. Portneuf Post has an excellent harbour, but it is only to be entered at high water by small craft. The soil is as good as that of Milles Vaches, but it is on higher ground and the timber inferior. There is a river running close by the house forming the harbour, and it is sheltered to the southward by a high bank of sand which is not covered at high water. The small settlement at Portneuf consists of a church, 70 feet by 30 , a wood-built chapel, the agent's house, stores, \&c. and 2 or 3 other habitations. Its aspect from the n . is extremely pleasing in bright weather as contrasted with the deserted state of the adjacent country. Potatocs and oats are the chief products of the land; wheat, on account of the coldness of the climate, will not arrive at perfection.

Portneuf, river, rises in a small lake in the

## POT

S. of Fausembault, and passing through BourgLouis, Neuville, the aug. to Belair, and Jacques Cartier, falls into the $\mathrm{S}_{\mathrm{t}}$. Lawrence near the s. w . corner of the $\mathbf{S}$. of Portneuf. This river is not navigable for cither boats or canoes. The banks on each side are high and very well wooded; its stream is precipitated through so many rapids and along a broken rocky bed with such violence as to render it impassable for any sort of boat, however light. At the mouth of this river the land, for a short space, is low, and extremely well cultivated on each side ; and schooners or river-craft ascend as far as the main road.
Pot al Beurre, river. There are 3 of this name in the S . of Sorel and all fall into the s. shore of Yamaska Bay.
Pot au Beurre, river, in the Island of Orleans, rises about the centre of the island, and runs into the north channel of the St. Lawrence.
Potron, township, in the co. of Stanstead, joins the eastern boundary of Sutton, and extends along the province line as far as Lake Memphramagog. Though the surface is mostly hilly and uneven and the land in general indifferent, there are good situations for raising all sorts of grain, as well as most other productions.-Watered by the river Missiskoui, and a great number of tributary streams running from the hills in almost every direction, and by many others that fall into the lake.-The timber consists of clm, beech and maple, with all the common sorts.-There are some thriving settlements on the banks of the r. Missiskoui and the margin of the lake, where the land is particularly good. In this t. log and mountain iron ores are found. A few roads lead into the ncighbouring townships, but they are not very good.

## Statistics.

## PR O

Poulain (S.), $r$. Orleans Island.
Prade, river. Ruisseau la Prade rises in the S. of Contrecœur, and running N. E. into the S. of St. Ours falls into the r. Richelieu opposite Isle Deschaillons.
Pratrie, grande, river, in the Island of Montreal, rises in Citeaust. Louis and traversing Cóte Ste. Marie falls into the St. Lawrence.
Prairies, des, river, divides Isle Jesus from the Island of Montreal. It is improperly called a river, for it is one of the channels of the St. Lawrence, extending from Isle Bizard to the n. e. extremity of the Island of Montreal. Over this river are several ferries.

Pratries, des, river, in the $s$. of St. Sulpice. Ruisseau des Grandes Prairies runs s. w. into the R. Mascouche.

Prairies, les, $v$. Saguenay r. and Chicoutimi Post.

Prendergast River, rises in the t. of Clarendon and runs s . into L . des Chats.

Presentation (V.), in Montreal Island.
Prevest River, or Riviere Noire, traverses the r . of Wickham in the 8 th range and then runs down through the $\mathbf{T}$. of Grantham, and emptics itself into the St. Francis near the r . of Drummondville more than 3 miles above the ferry. Over this river is a bridge near its mouth, which, though partially repaired, is not safe for heavy teams; a new one would cost about $£ 100$.

Prince, au, river, in the $S$. of Lake of Two Mountains, runs n. e. and joins the Petite Riviere du Chene.

Propre, river, one of the early tributaries of the r. Batiscan.

Province of Lower Canada, lies between the parallels of the 45 th and 52 nd degrees of north latitude, and the meridians of $577^{\prime \prime} 50^{\circ}$ and $80^{\circ} 6^{\prime}$ west longitude from Greenwich. It is bounded N. by the territory of the Hudson's Bay Company or East Maine ; e. by the Gulf of St. Lawrence and a line drawn from Anse au Sablon, on the Labrador coast, due north to the $52^{\circ}$ of latitude ; s. by New Brunswick and part of the territorics of the Cnited States; w. by a line which separates it from Upper Canada, commencing at a stone boundary on the north bank of Lake St. Francis, at the cove west of Pointe au Baudet, and running first between the т. of Lancaster and the S . of New Longueuil, and then between the townships of Lochiel and Hawkesbury on the

PRO
N. w. and the т. of Newton and the S. of Rigaud on the s.e., until it strikes the Ottawa river; the boundary line then ascends that river into Lake Temiscaming, and from the head of that lake it extends due north until it strikes the boundary line of Hudson's Bay, including all the territory to the westward and southward of the said line to the utmost extent of the country commonly called or known by the name of CanadaLower Canada is not only the most important of the British North American provinces, from its situation and extent, but the most populous, its inhabitants being to those of the sister provinces of Upper Canada, Nova Scotia, and New Brunswick, in the respective ratio of 8.11 and 19 to 3 , or, in other terms, nearly in the proportion of the numbers $32,11,8,5$; therefore the population of Lower Canada alone constitutes about 4 - 7 ths of the total population of the four provinces, and about 2-5ths of that of the whole of the dominions of Great Britain in North America.-In salubrity no climate can perhaps be found to excel that of Canada; although the atmosphere is impregnated with a considerable degree of cold in winter, and its frigidity is of much longer prevalence than would naturally be inferred from the geographical position of the country. The summers are warmer and the winters colder than in European countries in the same latitude. Proceeding up the St . Lawrence, the climate becomes considerably milder and adapted, by degrees, to the growth of fruits that thrive only in warm atmospheres. Wheat, barley, rye, maize, oats, and in fact almost every species of grain, are cultivated with every possible success, the climate being well calculated to bring them to maturity. -The prevailing winds are the north-east, northwest, and south-west. The s. w. wind is the most prevalent, but it is generally moderate and accompanied by clear skies; the N. e. and e. winds usually bring with them continued rain in summer and snow in winter; and the $\mathrm{N} . \mathrm{w}$. is remarkable for its coldness, dryness, and elasticity. Winds from due north, south, or west are not frequent. The azure of Canadian skies is beautifully transparent and pure, and the starry constellations are remarkably luminous and bright. Fogs are almost unknown in Canada, but the morning dew sometimes rises in a light vapoury cloud, which is almost suddenly dispelled by the first solar rays that gild the horizon. In winter,

PROVINCE OF LOWER CANADA.
however, when the cold is intense, a thick vapour is frequently seen on the unfrozen surface of the St. Lawrence, driving heavily before the wind amidst masses of floating ice. The winter commences about the 25 th of Nov. in the regions about Quebec, and lasts until about the 25th of April, when agricultural operations are resumed. In the district of Montreal the permanent cold sets in generally 2 or 3 weeks later, and the spring is probably as much carlier, although these advantages are subject to frequent vicissitudes. In summer the electric phenomena of the atmosphere, as displayed in the vividness of lightning and the burst of loud thunders, are sometimes appalling in the extreme and have, in numerous instances, been attended with very serious consequences.Lower Camada is divided into 5 districts, which are subdivided into 44 counties, 2 of which are confined to cities and 2 to towns, viz.

The counties consist of feudal grants called seigniories and of modern grants called townships which are held by free and common soccage tenure. The scigniories contain about $10,000,000$ acres, abeut hallf of which are in a state of nature and not conceded. In the townships are about $6,301,010$ acres.- Of the total quantity of lands held by both specic: of tenure about $3,000,000$ of acres are under actual cultivation; to whith amount may be added about $900,(100)$ acres which are in that progressive state provincially termed on ubatie, having merely undergone the preliminaries of agricultural improvement. Of the lands in culture it may be said that one-third, on an average, yield grain crops for consumption and export, the other twothirds buing either in fallow or in pasture and meadow. Those pruts of this bealtiful province that are yet in a primitive state of nature are diversified by hill, plain and valley, though, in some sections, mountainous and bold, and the land is in general richly covered with a sturdy growth of valuable forest-trees. Two-thirds at least of these wilds :are likely, in process of time, to be brought under cultivation; the remaining third may he considered as unsusceptible of tillasge, being in :t great measure composed of rugged stecps, barren hills, sterile morasses and swamps.-For other particulars vide Vol. I.

Pscudy, river, rises in the s. side of the co. of Rimouski and traverses the $s$. w. angle of the co. of Bonaventure, and is one of the early tributaries of the $\boldsymbol{r}$. Ristigouche.

Pyke River, rises in several small streams that meet near the $v$. of Frelightsburg, in the $S$. of $S t$. Armand; hence it runs to a village nearly in the centre of Stanbridge and, keeping its very irregular course southwardly, to Bedford village, where it soon regains its N . W. direction, in which it continues till it reaches the 9 th range, where it receives a considerable branch from Farnham and turning suddenly southward again it keeps near the w. boundary line till it falls into Missiskoui Bay. At the breaking up of the ice in the spring great numbers of fish are taken
in the mouth of this R . viz., doré, maskinongé, mullet, pike, perch and suckers.--Pyke river turns 5 corn-mills and 6 or 8 saw-mills.

Pyke's River, in the t. of Frampton, rises in Pyke's Lake, and running n. e. through Pyke's Settlement falls into the r. Etchemin.

## Q.

Quamquerticook (R.), v. Green River.
Quaquagamack, lake, one of the first waters of the $\boldsymbol{r}$. Ouiatchouan.

Quaquagamacksis, lake, a few miles s. of Lake fuaquagamack; the land around it is in every respect wild and desolate, as the timber has been destroyed by fire and is succeeded by a

## Q UEBEC.

growth of aspen, poplar, small fir and white birch, and the soil is very rocky and sandy.

Quebec, county, is bounded N. e. by the s. w. bounds of the seigniory of Cote de Beaupre until it meets the s. e. boundary line of the r. of Tewkesbury, thence N . E. along that boundary line to the s. E. angle of the township, thence N . along the N. E. boundary or lateral line of that township to its depth, and thence by the prolongation of the said line s. w. by the county of Portneuf ; N. w. by the northern boundary of the province; and s. E. by the river St. Lawrence.-It comprises the seigniories of Beauport, Notre Dame des Anges, D'Orsainville, Lepinay, Fief St. Ignace, Fief Hubert, the seigniories of Sillery and St. Gabriel, the townships of Stoneham and Tewkesbury, the parishes of Beauport, Charlesbourg, St. Ambroise, Jeunc Lorette, part of Ancienne Lorette and Ste. Foi, and the parish, city and suburbs of Quebec, and all other parishes in the whole or in part comprehended within the above-described limits.-Its breadth in front is $11 \frac{1}{5}$ miles, in the rear 100 , and its depth is about 240 , containing about $13,200 \mathrm{sq}$. miles. Its southern extremity is in latitude $46^{\circ} 46^{\prime} 30^{\prime \prime} \mathrm{N}$., longitude $71^{\circ} 1 \mathrm{~s}^{\prime} \mathrm{w}$. Although its surface is mountainous and broken and traversed by several ridges of high land, yet many parts are fit for cultivation, and large patches uf rich natural meadows are found on the borders of the numerous rivers, streams and lakes, which most abundantly water the co.-The chief rivers are the Sit. Charles, Jacques Cartier, Ste. Anne, Batiscan, Bastonais, Schecoubish and a part of the Montmorenci, with their various branches. The principal lakes are called Commissioners, Kajoualwang, Bouchette, Quaquagamack, Schecoubish, Assuapmoussoin, St. Charles: there are also many others not distinguished by names. The scenery about several of these lakes is beautiful and picturesque.-This co., in population, ranks the 2 nd in the province and comprehends within its limits the City of Quebec, the capital of Lower Canada, from which it takes its name. It contains a population of about 36,000 souls, 28,000 of whom may be said to compose the City and Banlieus of Quebec. It is singular that this dense population is contained in a space not cxceeding 180 square miles, and of the cultivated parts only 150. Beyond Lake St. Charles (noted for its beautiful scenery and as a place of recrea-
tion and resort for the inhabitants of the city), there are only a few scattered settlements. The great valley of the St. Charles and the C'anardiere present a most luxuriant field of cultivated lands and meatows, and thence to the $\mathrm{N} . \mathrm{w}$. the land rises gradually presenting a well settled and cultivated country with villages, which attract notice and are relieved by a handsome background presented by the Charlesbourg Mountains and the more distant heights. From Dorchester Bridge over the St. Charles to Montmorenei, is seen a thick range of settlements and well cultivated farms, several gentlemen's country-scats, neat and handsomely constructed: on one side of the road are seen the village and settlements of Bcauport and the celebrated falls of Montmorenci, adding to the highly interesting panoramic view of the Basin of Quebec; the villages of Charlesbourg and Jeune Lorette tend to enhance the beauty of the scenery, whether vicwed from the Basin or the (ity of Quebec.-This co. sends two members to the provincial parliament, and the place of election is at Charlesbours.

Ramzay，Louise de，in the county of Riche－ lieu，is a small piece of land，about $1 \frac{1}{2}$ league superficial，lying in the rear of the $S$ ．of Sorel and between those of St．Ours，Bourchemin，and Bonsecours．Granted，June 18，1739，to the Dé－ moiselles Angelique，Louise，and Elizabeth de Ramzay．

Randin，fief，in the S．of Berthier，in the co． of Berthier，extends from Antaya or Dorvillier fief，one league in front of the seigniory by half
a league in depth. Granted, Nov. 3, 10,2, to Sieur Randin. This grant includes Isle Randin, which lies opposite to it, and it seems, by the title, to have been increased by a grant made, Apr. 27,1 1 774 , to Sieur Berthier, which is half a league in front by one league in depth and lies adjoining the rear of the original grant.

Titlc.—" Concession faite au Sieur Randin, Ie 3me Novembre, llije, par Jcan Tahnn, Intendint, d'une licue de front sur le fleuve st. Lument, sur une demi lieue de profondeur, à prendre depui, le Sieur dc Cominté, ju*quaux terres non-concilyes; avec lishe nownme de son nom de Rumlin.-N. B. Dian le Régistre du sicrétariat le mot unc a áti sustitue a la place du mot domi qui a itti rayé."-Rísistre d' Imt'mltur', No. 1, folio 21.
Al"Ementutin"-"Comemion faite au Sicur Berthicr, le Säne Avil, laitl, d'une demi lieue de terre de fromt sur une lipue de profondeur, à prendre derricre et jomant, la concession du Sieur Randin, du 3me Novembre, lG才?."
 17ヶ).

Rapide, du, river, in the S. of Monnoir, joins the Ruisseau Barre and runs into the R . des Hurons.

Raquette, à la, river, rises in the e. side of the S. of Rigaud, and, after making a short détour into the $S$. of Vaudreuil, returns through the fief Choisy ; and, passing through Nouvelle Lothinicre at the N . $\mathbf{E}$. angle of Rigaud, falls into the Lake of Two Mountains. This stream is not navigatle.

Rats, aux, or $R_{A T} R_{1 v e r, ~ f a l l s ~ i n t o ~ t h e ~ w . ~ s i d e ~}^{\text {a }}$ of the Sit. Maurice about 81 miles above Three Rivers. It is a broad stream, between which and the Little Rat River, on an alluvial flat formed by those rivers at the foot of the high mountains, is situated a trading post of the Hudson's Bay Company; it consists of a store, two dwching-houses and a very good garden which furmisles the Post with the necessary vegetables: a dwelling-house is building for the resident agent.

Rawdon, township, in the co. of L'Assomption, is bounded N. e. by Kildare; s. w. by Kilkenny; in the rear by waste lands; in front by the scisniories of $\mathrm{S}_{\mathrm{t}}$. Sulpice and L'Assomption. It is singular that, notwithstanding the limits between these seigniories and Rawdon have been established and marked in the field by actual survey, the seignior of L'Assomption has considerably encroached upon the first range of Rawdon, where he has placed censitaires under seignorial titles: these encroachments extend to the crown and clergy reservations in that range, as well as to the

## $R A \mathrm{~V}$

tract granted under letters patent to the Bru-vires.-This t. has ben divided into 11 ramges, and each range into 20 lots of 200 ateres. The new system of laying out the crown and clergy reserves in blocks has been extended to this r., excep in the first mase and a part of the second, which were previously granted under patent and the reserves appropriated. The face of this township is uncven, and in many parts mountainous, from the 4th ramge northward. The suil generally is fit for the cultivation of grain, and in various places for the growth of hemp and flax. The population is chiefly composed of emigrants from Ircland, and the settlements are in a state of tolerable advancement. The inhabitants derive much advantage from Mr. Dugas's excellent corm and saw-mills in lot 24 in the first ranse, whence the road winds into and traverses the interior of the township up to the $\delta$ th range. From the Nianchester mills one mile s. of itusen's mills, the road leading to Kildare is circuitous and to the emigrant settlement 20 miles loms. while, by traversine that township and part of Rawdon, the distinne is about $\mathbf{8}$ miles, of which one-third is a fooppoth.-Few townships are so well watered as this, which has no less than 4 rivers besides smaller streams. The rivers are the (matreau, the Rouge, the Blanche, and a branch of the sit. Esprit. In all these rivers there is good trout-fishing, but they are so obstructed by falls and rapids that they are not navigable ior craft of any kind. The lakes are as numerom as the streans, and vast quantities of ront are taken in them by Canadians from St. Jacques and St. Esprit during the winter, and some of them weigh upwards of 20 lhs. cach. Every river is crossed lis one or more bridges, all free from toll: the larsest, over the Ouarean, cost !s. $6 d$. on every 1011 acres. There are is bridges in all, which wore built by the settlers. There is a strong chalybeate spring in the N . E. side of the 4 th range near the $R$. Blanche, which is resnete? to for almost all kinds of disease; there is also a spring of a different kind near the Onaman bridge on the property of Mir. Jefleries, being a cure for bowel complaints.-On the uplands, the greater part of the timber is maple, beech and birch; in the lower parts, cedar and spruce fir abound.-The Grand Voyer has laid out serena roads from the front to the rear of the township,

## R I C

all of which are at present passable for carts; the line roads are likewise cleared of timber, but from the nature of the country it will take some time before they are all made passable. A road is opened from this T . to Berthier, through the Grand Rousseau Kildare: it passes through the second range to lot 24 ; thence through the same number of the first range to the parish of St. Jacques: from the level nature of the country through which this road leads, and the advantage it gives to persons travelling to the west, there is no doubt of its soon becoming a general road to the Ottawa section of Upper Canada: persons going to that quarter will at least save 30 to 40 miles by it, and the country through which it passes is as thickly inhabited as any other part of Lower Canada.-Considerable quantities of maple sugar are produced in this T . and flax has been cultivated with some success. The neat cattle are, generally, of the small Canadian breed. Agricultural wages, without board, $2 s .6 d$. per day. There are several corn and saw-mills, at intervals of one and two leagues, on the road to the Emigrant Settlement in Kildare.-Lead ore is found in the 3rd range.-In this $\mathbf{T}$. is one public school, and a village has been laid out. The best mode of effecting connected settlements in this $\mathbf{T}$. would be the establishment of settlers on the borders of the river Lac Ouareau, which presents many advantages; viz. the excellent quality of the soil ; many natural meadows which are of primary necessity in new settlements; the navigation between its falls, which is perfectly suitable for boats of the largest dimensions; and the vicinity of Manchester Road, which is practicable for carts and waggons. Lots, 100 acres each, should be laid out fronting the river and proper allowances made for its sinuosities.-The principal proprietors are Dr. Selby, Rev. J. E. Burton, and Mr. John Jefferies. -Ungranted and unlocated, 10,400 acres.

Ray, la, a little river crossing the road to Charlesbourg from Quebec. In 1829 a new bridge was built over this stream and cost 273 l .16 s .3 d . currency, of which sum $20 l$. was raised by subscription and $40 l$. received from the magistrates.

Reaume, fief, in the co. of Li'slet, is a small
strip of land between St. Jean Port Joli and St. Roch des Aulnais.-Half a league broad by two leagues deep. Granted, March 16th, 1677, to Démoiselle de Lacombe.-The soil and timber are similar to those of St. Jean Port Joli, and about one-third of the fief is well cultivated and thickly inhabited. A few trifling rivulets supply a very scanty irrigation. The main road crosses it, besides which there are some concession roads.

7itlc:-"Concession du 16me Mars, 1677, faite par Jacques Duchesncau, Intendant, a DÉmoiselle de Lacombe, d'une demi lieue de terre de front le long du fleuve St. Laurent, à prendre depuis celles qui appartiennent au Sieur de St. Dcnis, son pere, en remontanit le dit fleuve, avec deux lieues de profondeur."-Insinuations du Conscil Supéritur, lettre B, folio 16.

Recollets, aux, a village in the Island of Montreal.

Red Carp (R.), v. Ashratsi, l.
Red Piver, runs into Commissioners Laken. of Blueberry Hills.

Remie, river, in Côte de Beaupré, runs through the concessions St. Jerome and St. Lazare. It turns several mills in its way to the r. du Gouffre.

Repentigny, v. L'Assomption, S.
Ribbon River, runs into the r. St. Maurice.
Richard Rioux, seigniory, in the co. of Rimouski, is bounded n.e. by Bic; s.w. by Trois Pistoles; in front by the St. Lawrence; in the rear by waste lands.- 3 leagues in front by 4 in depth. Granted, Apr. 6, 1751, to Sieur Nicholas Rioux. The great north-easternly ridge here ranges so close to the St. Lawrence as to leave only a narrow slip between it and the shore. This space possesses a moderately good soil, upon which there are a few settlements under a respectable state of husbandry ; there are also several patches of good land more in the interior, lying in the hollows between the ridges. Close by the river side is a very good road. This $S$. is very scantily watered, but very well covered with timber of various kinds and good growth.-Rimouski or Nine Leagues Portage was so called from its being but partially settled, and the rugged aspect of the rocky ridge to the north and south of it, which forms a valley whose breadth at its western entrance may be nearly 2 miles and at its eastern extremity not more than about 3 furlongs. It is 27 miles in length and runs over the bold and broken mountains of Bic, where it is excessively hilly, the view presenting few other objects besides abrupt cliffs
and craggy hills, well calculated to inspire awe but not pleasure.

Riche, river. The Bras Riche is in Bomsecours, in the co. of L'Islet.

Richeifiet, county, in the district of Muntreal, is bounded by the $N . E$. line of the $S$ of Contrecœur as far as the r. Richelieu or Chambly, thence by that river to the $\therefore \mathrm{s} . \mathrm{w}$. line of the S . of $S_{t}$. Charles, thence by that $s . w$. line as far as the line of the depth of that scigniory, thence by the said depth line as far as the $\mathrm{N} . \mathrm{E}$. line of the said $s$. of N t. Charles, thence by the said $\mathrm{N} . \mathrm{E}$. line as far as the depth line of the S . of N t. Denis, thence by the said depth line as far as the line between the seigniories of St. Hyacinthe and St. Ours, thence by the aforesaid line as far as the river Yamaska, thence by that river as far as the place where the continuation of the rear line of the S. of St. Charles d'Yamaska would terminate at the said river, thence by the said depth line as far as the $\mathrm{N} . \mathrm{e}$. line of the said S . of s . Charles, thence by the said $\mathrm{N} . \mathrm{E}$. line of Nt . Chathes as far as the river Yamaska, thence by part of that river which is between the said $N$. e. line of St. Charles and the N. E. line of the S . of Bonsecours, thence by the said N. E. line of the $\therefore$. of Bonsccours as far as the Baie de la Vallicre, thence by a line through the middle of the said bay as far as its outlet into the river ist. Lawrence, and thence up that river as far as the n.e. line of the S. of Con-trecour.-It comprehends the seigniories of st. Ours and its augmentation, St. Denis, St. Charles on the river Richelieu, Sorel, Bourchemin and Bourgmarie west of the river Yamaska, and

Bonsecours and St. Charles on the same river; comprehending also the following isles in the St. Lawrence, viz. Cochon, Madame, Ronde, De Grace, Aux Ours, the isles commonly called Batturesa la Carpe, also isles du Sitble, du Moine, and du Basque, and also the isles in the r. Richelion or Chambly nearest the county, and being in the whole or in part fronting it. - Its catreme lemgth is 25 miles and its breadth 20 , containing 307 spuare miles. Its centre is in lat. $45^{\circ} 20$ or $15^{\prime \prime} \mathrm{N}$., long. 72" $8: 1$. It sends two members to the provincial parliament, and the place of election is at it. Ours. The principal rivers are the Yamaskit and the Richelieu.-The surfiace of this county is invariably level and the soil in many parts is of an inferior quality. The timber is very abundant, but little can be said of its superiority. The roads, which are very numerous, are principally along the borders of the rivers, and concession-roads also communicate with the adjoining seigniories. Along thene roads are dispersed numerous well cultivated farms, and dwell-ing-houses, which are generally neat and commodious. Within the limits of this county are five parishes and the borough of Willi:m II nry ; the principal parish is that of $\mathrm{S}_{\mathrm{t}}$. Ours which has a handsome village.

Richelies, river, also called (hambly, si. Louis, and St. John, rises in the United States and enters the province between the scigniories of La Colle and Foucault, and descending to the St. Lawrence divides the counties of Acadie, Chambly and Vercheres from those of Rouville

## RICHELIEU.

and Richelieu, where it falls into the St. Lawrence at the town of William Henry in the seigniory of Sorel.-Of all the rivers that fall into the south side of the St. Lawrence within the bounds of Lower Canada, the largest, in respect of quantity of water, is the Richelielt, and it is also the best known. The principal origin of its waters is in the United States; and if we estimate the whole length of country from which it collects them, from the south point of Lake George to the termination of the river at Sorel, it cannot be less than 160 miles. The breadth of the same tract varies from 10 to 60 miles; taking it at the medium of 30 miles, the extent of country from which its waters are collected must be at least 4800 square miles. Only a small portion of this, however, lies within the province. From the province line to the mouth of the river the distance appears to be about 70 miles, and therefore the space, from which it collects the waters within the province, being a triangle of 30 miles base, will be 1050 square miles in extent, or onefourth of the whole expanse which it drains. Its capabilities and defects as a water communication are well known. The improvement of the navigation of this river was considered by the legislature a matter of so much importance, that of the sum of $£ 2,800$ which the act directed should be laid out in the county of Richelieu, it was by the act specially provided that the sum of $£ 1,500$ should be applied "for the improvement of the river Richelieu between Sorel and Chambly." This sum seems to have been found insufficient for the purposes which the legislature had in view, for we find that in 1826 an act was passed ( 6 Geo. IV. c. 33) " to facilitate the execution of the act of the 57th Geo. III. c. 13, inasmuch as it relates to the appointment of commissioners for the improvement of the navigation of the river Richelieu, and to appropriate a sum of money therein mentioned for that purpose." By the last-mentioned act it is provided that the before-mentioned sum of $£ 1,500$, " or such part of the said sum as may remain unexpended, shall be applied for the aforesaid purpose, and as provided for by the said act, under the superintendence of the commissioners," \&c. And the act then goes on to say "s that it shall be lawful for the governor, lieut.-governor, or person administering the government, for the time being, to advance and pay for the purpose herein above mentioned, by a warrant or warrants
under his hand, from such of the unappropriated moneys in the hands of the receiver-general of the province, a further sum not exceeding two thousand four hundred pounds currency, which said sum shall be applied by, and accounted for, as and in the same manner and by the same persons as provided and enacted with respect to the aforesaid sum of money remaining unexpended." It is much to be lamented that this law has not yet been carried into effect. It is of a nature to have the most beneficial consequences. Why it has hitherto been allowed to remain as a dead letter in the statute-book we have no means of conjecturing; it is to be hoped, indeed to be expected, that it will not continue to be so. The Richelieu, affording a quick and easy water communication from the American territory into the very centre of the province, is entitled to consideration in more than one point of view. As a medium of commerce between the fertile districts of each country it merits attention, and it has a forcible claim to consideration from being a main inlet into the British territory, through which hostile operations might be directed with an alarming rapidity and perhaps for some time with serious consequences before they could be repelled or checked. Its banks are generally between eight and twelve feet high, diversified on each side by many farms and extensive settlements in a very high state of improvement; on or near it are some neat, populous and flourishing villages, handsome churches, numerous mills of various kinds, good roads in all directions, and every other characteristic of a country inhabited by an industrious population. The navigation is carried on by boats, canoes and other craft of large dimension and burden, and by rafts. From its junction with the St. Lawrence, decked vessels of one hundred and fifty tons may ascend from twelve to fourteen miles. This river is remarkable for being much narrower at its discharge than at the lake whence it flows, and for the gradual diminution of the breadth of its bed. At its mouth it is about two hundred and fifty yards wide, which it preserves, with the exception of one or two expansions occasioned by some small islands which greatly increase the beauty of its scenery, up to the Basin of Chambly; hence to the Isle du Portage the breadth is five hundred yards; beyond this it spreads to double that distance, and continues to widen still more up to St. John's, whence there is a ship navigation to

## R I C

the towns on Lake Champlain. From the basin down to the St . Lawrence the current is regular and gentle, and although there are some shoals and flats, they do not disturb the smoothness of its course ; but from Lake Champlain the stram is hurried, in some places rather violent and in others broken by rapids. The passage downwards for loaded boats, \&ce is in general quick and unattended with the smallest difficulty, except what is occasioned by the rapids. Ipuarda to Chambly nothing more than ordinary care is repuired to avoid the shallows, but thence to St. John's the ascent is attended with more labour. The number of river-craft, canoes, \&e. with their various ladings, and the immense quantities of timber composing the numerous rafts that are continually descending, and upon which many hundred tons of pot and pearl ashes and large cargoes of flour are brought down every summer, exclusive of what is conveyed by the boats, unequivocally point out the value and importance of this communication. The Richelieu between La Colle and Foucault is about 1 mile broad and abounds with fish of delicious flavour, viz, pike, pickerel, maskinongi, bass, white fish, perch, and various sorts of the sucker.-The principal islands in this e. are $A s / h$ Island, at the mouth of the r. La Colle; Isle aur Noir, at the mouth of Johnson's Creek in the S. of De Liry; Ste. Therese Islund, between the b. of Longueuil and Monnoir; Grande Isle, at the lower part of Chambly Basin; Isles an (cot between Belneil and st. Charles; and Istr theschuillons, in the S . of St. Ours.

Richmond, township, in the co. of Bonaventure, is bounded e. by Hamilton; w. loy Maria; in the rear by waste lands; in the front hy the Bay of Chaleurs. It is well watered by the two rivers Cascapediac.-Isle du Basque lies off this т.

Richmond (V.), v. Shipton, t.

R I G
Rigavd, seigniory, in the co. of Yaudreuil, is bounded e. by the S. of Yaudreuil ; w. by the province line; in the rear ly the $\mathbf{T}$. of Newton; in front loy the Ottawa and the Lake of Two Mountains.- 3 lagrues in front by 3 in depth. Granten, Oct. 29, 1732, to Sieurs de Cavagnal and Rigaud: the present proprietor is W. Bingham, Esif- - very fertile soil runs through the whole of this grant, and where cultivated is found well adiupted to grain and pulse of all sorts. Twothirds of the $s$. are settled, and the remainder is in standing wood. There are 9 concessions, containing 066 farms ; 5 concessions are in the upper end of the S., 3 in the lower end, and one in the intervening space: there are also 35 cmplaromeris. The farms are $\mathbf{3}$ and 4 arpents by 16 and 20 . Thie unconceded lands are not surveyed, and have no roads across them. This $s$. is watered ly the rivers alatirase and Raquette; the former is ut all times navigable from the Ottawa up to the fill, which greatly contributes to the advantage of the settlers on each side of it; the latter is not navigable. - The timber is maple in the front, and on the Rigaud Mountain beech, birch and poplar, on its summit pine and hemlock; in the rear of the S.., maple, ash, clm and poplar, with some white ouk and white pine.-On Rigaud Momurcin, supposed to be about 300 ft . high, is a singular cohlection of stones and rocks, generally called loy the inhabitants Le" Pièce des Guturels, from its ricsemblance to ploughed land; its extent is about 12 acres ly 6. The stones are not similar in quality to the rocks, and are heaped together without the least admixture of earth.-The read from the village of Rigaud over the mountain to Cöte double de la Mudeleine, is extremely rough and bad; after which for about 2 leagues it is tolerably good and level; it then branches off into the f. of Newton.-The traverse, or ferry, from St. Andrew's, in Argenteuil, is one league ahove the village of Rigaud.-Rigaud Parish is of late erection, and is already very extensive, but capable of great augmentation; it extends to Schniders, 11 league in the S. of Vaudreuil. It contains 8 houses built of stone. The village consists of 17 houses, a church and a spacious presbytery. The men are chiefly voyageurs, active, resolute and enterprising: those who follow agricultural pursuits are comparatively few. One-third of the produce of the $S$. is consumed by the inhalitants, the other parts are sold.

T:ilh.-" Concession du 29me Octobre, 1732, faite par Charles, Marquis de Brauharnois, Gouvemeur, et Gilles Hocquart, Intendant, aux Sieurs de Cavagnal et Rigaud, freres, diun terrein le long du fleuve appele La Grande Biaicw, en tirant vers le Long-sault, de trois lieues de front sur trois lieues de profondeur, avec les isles, islets et battures adjacentes: le dit terrein, joignant la Seigneurie fui leur est febue par succession de feu le Marguic de
 gistre d'Mutudamci, No. 7, folio 3.

Rimouski, county, in the district of Quebec, is bounded $\mathbf{E}$. by the inferior district of Gaspé ; s. by the s. w. boundary line of the seigniory of Rivicre du Loup prolonged to the s. bounds of the province; N.w. by the Saint Lawrence, including all the islands in that river in front of the county and in whole or in part nearest it. This co. comprises the seigniories of Rivière du Loup, Isle Verte, d'Artigny, Trois Pistoles, Rioux des Trois Pistoles, Bic, Rimouski, Burnabé, Lepage, Tivierge, Mitis, and Matane, and all other seigniories and lands comprised within the above limits. - Its extreme length is 152 miles, and its breadth 116 , containing 8,840 square miles. Its lat. at the $\mathrm{N} . \mathrm{w}$. angle of the co. of Bonaventure is $48^{\circ} 1^{\prime} \mathrm{N}$. , long. $15^{\circ} 31^{\prime} 30^{\prime \prime} \mathrm{w}$. It sends two members to the provincial parliament, and the places of election are at Rimouski and Isle Verte. The principal rivers are the Matapediac, the Madawaska and the St. John. There are numerous lakes, the chief of which are the Temiscouata, Matapediac, Long Lake, and Eagle Lakes. The general character of this co. is mountainous and abrupt, being traversed by a succession of mountains, rising grounds and rocky ridges, notwithstanding which the soil is, in many parts, tolerably good and productive. The prevailing timber is maple, beech, birch and pine.-This co. contains the great Temiscouata Communication and that from Mitis to the River Ristigouche, called the Kempt Road Communication. The roads are chiefly in front along the borders of the St. Law-
rence, which are but partially settled: this county contains five parishes.

Rimouski, river, rises in two considerable branches descending from the waste lands in the rear of the S. of Rimouski and St. Barnabé. It runs through Rimouski, and falls into the St. Lawrence in Fief Pachot.-Navigable for small craft as far as Mr. Trudel's; and at its mouth, which is 30 arpents wide, it can carry vessels of 80 to 100 tons, and craft of 30 and 40 daily go in and out.

Rimouski, seigniory, in the co. of Rimouski, is bounded n.e. by St. Barnabé; s.w. by Bic; in the rear by waste lands; in front by the St. Lawrence.- 2 leagues in front by 2 in depth. Granted, April 24, 1688, to Sieur de la Cordonière. -The settlements, well dispersed, are effectually sheltered from N . winds by the extensive island St. Barnabé, which is in front, opposite the r . Rimouski, and is included in the grant of this seigniory.—There are 8 fisheries in this S.-The salt marshes extend from the church to Pointe aux Peres, where many of the farmers manure their potatoe-fields with sea-weed.

isles et islets qui se pourront rencontrer entre les dites terres et la dite isle."—Régistre d"Intomemor, $\mathbf{N}_{0}, 2_{2}, \mathrm{~B}$, folio 24 .

Ripron, a projected township in the co. of Ottawa, is bounded n.e. by Ponsonby ; e. and s. e. by La Petite Nation; s. by Lochaber; w. by Derry ; n. and N. w. ly waste lands.

Risborovah, a projected township in the co. of Beauce, between Marlow and Spalding.

Ristionctie, river, divides about half the co. of Bonaventure from the province of New Brunswick. It rises in many sources in the co. of Rimouski, and falls into the Bay of Chatcurs, forming at its mouth a considerable expansion called Ristigouche Bay. The Indian village, called New Mission Point, is about 5 leagues up this river, at the head of the ship navigation, to which schooners and even larger vessels can ascend. From the Indian village the river is much interrupted by shoals during the dry season of the year to Mr. Adams's, a neat establishment and the last settlement in the district. The river forms between those two points a deep bay, along which are settled from six to eight families, much on the same system as that of the Canadian farmers. At Mr. Adams's the river is divided into numerous channels by islands, some of which are one to three miles long; the southern channel is however the most navigable at all seasons. On the Nicw Brunswick side flourishing settlements are to be seen, which, with the small church of the Mission in the distant perspective, and the prominent mountains to the south-east, combine to enhance the beauty of the landscape. Procceding upwards in a west by south course from Mr. Adams's between several islands, which contract the channel about the distance of one mile and a quarter, the river is interrupted by a considerable rapid, which is however easily surmounted by the surprising skill of the Indian in the management of his canoe, so peculiar to the Micnac tribe which inhabits this part of the country. At this place, on the south shore, there is a good road that runs along the Bay of Ristigouche, on which are settled, upon lots of two hundred acres each, about forty families.

The land, which assumes a highland appearance, descends in a gentle slope to the river, and is thus rendered more practicable for a road and eligible for settlurs. From this place the river takes a western course to the mouth of the Matapediac, interspersed with several small islands: its banks are clothed with mixed timber, amongst which, however, quantitics of pine may be clearly distinguished. The country on this R . is generally mountainous, from the Indian village to near the portage on the Wigansis, and with little exception the hills advance to the cdge of the water, appearing for the most part unfit for the purposes of agriculture, being in suctaral stupendously high and steep, and in some places almost precipitous: there are, however, small intervals of alluvial land in some places; but they are not very frequent, nor sufficiently extensive for any considerable settlements. The face of the country near the r. W:agamsis, and on the Ristigouche for some distance below it, is more level than in the lower parts of the latter river; but a settlement hereabout would labour under many disadvantares, arising from the distance of other settlements and the difficulty al approaching it. The borders of the river kistigouche are covered with very fine timber for building, a great deal of which is taken for purposes of commerce. This river is remarkable for its salmon fishery, which formerly amounted to 3000 larrels; at present the whole amonnt of the salmon fishery in the district of Gaspec in estimatell at only 2000 barrels per amum : the salmon is exported to Quebec, Halifax and the West Iudies. This majestic river and its numerous tributaric: branch over more than $2 .(10 \%$ sq. miles of New Brunswick and Canada. The inhabiiants at what may be considered the harbour of Kistigouche, and those at the thinly inhabited settlements at Nouvelle Tracaligash and Caseapediac, consist of a mixed population of English, Scotch, Irish, American and Acadian French, who employ themselves in the diflerent occupations of fishing, hewing timber, and farming on a very humble scale. Eight miles up the Ristigouche is an Indian chapel, where the Indians occasionally form a small village of wigw:ms, which, after a few wecks, they soon displace, and packing up these portable habitations with all their stock, embark with them in their canocs for some other part of the country. The trees, particularly the fir tribes, grow to an immense height and size, and a great

## R I V

timber country may be opened on this river. The quality is in great repute among the timber dealers in England, especially in the port of Liverpool, and considered equal to that imported from Miramichi. The best timber groves are in the valleys behind the mountainous ridges which, in most places, follow the winding of the streams. The indefatigable lumberers overcome natural obstacles that would stagger the resolution of other people; they cut the timber and hand it, in winter, to places where there is often no water in summer or winter, but which they well know will be overflown when the spring thaws dissolve the snow on the mountains and in the woods.

Statistics of the r. Ristigouche and its environs.

River Oty (S.), v. Oty, S.
Riviere de Sable (R.), v. Mistassini, r.
Riviere des Pritries (P.), v. Montreal.
Riviere des Savannes, $v$. Yamaska, R.
Riviere du Chene (S.), v. Mille Isles.
Riviere du Loup (R.), rises in the rear of Hunter's Town, through which it descends into Dumontier and thence into Grosbois, then, taking a sudden turn to the s. w., it winds through the seigniory of Rivière du Loup and falls into Lake St. Peter. The Great Fall, in the parish of St. Leon, is from 80 to 100 ft . This R . is navigable for a few miles for boats, and early in the spring for river-craft.

Riviere du Loup (R.), in Kamouraska and Rimouski (v. Du Loup, R.). This is the largest river which crosses the Temiscouata Portage. Its breadth at the bridge is about 80 or 90 yards, and it is so very shallow that it is scarcely navigable for a bark canoe; the bridge is flat and built with wood, and is apparently well constructed and in good repair. The banks on both sides of this river are high and steep until within about $\frac{3}{4}$ of a mile
of its mouth, where they become low and flat. Vessels of 25 tons may ascend it a little more than half a mile. Fraser Lodge, the residence of the seignior, is situated on the N . side of its mouth. -The little Rivière du Loup runs in a southerly direction and is about 12 or 14 feet wide; it is very shallow and is merely a branch of the great Rivière du Loup into which it falls above a bridge.

Riviere du Loup, seigniory, in the co. of Rimouski, is bounded in front by the St. Lawrence; s. w. by Granville ; N. e. by the S. of Isle Verte ; in the rear by waste lands of the crown. Nearly 5 leagues in breadth by 2 in depth. Granted April 5th, 1689, to the Sieur Villerai for Sieurs d'Artigny and Lachenaye : Alexander Fraser, Esq. is now the proprietor.-The general appearance of this S . is uneven and mountainous, but it contains some extensive patches of good arable and very fine meadow land, which are divided into several ranges of concessions, bearing the names of St. André Rivière du Loup, St. Patrick Rivière du Loup, Fraserville, Nouvelle Ecosse, St. George or Cacona, St. Anthony, St. Andrew, and St. Jacques : the first, a great part of the second, and a little of the third, are in a very good state of cultivation and well inhabited.-The whole seigniory is abundantly timbered with beech, maple, birch, and large quantities of pine.-It is watered by several streams, but the principal is Riviere du Loup.--The roads are level and are all fine winter roads. The main road passes close to the River St. Lawrence, except near the church of St. Patrick, where it makes a detour by a risingground, up to the bridge over Rivière du Loup, and afterwards descends again to the bank of the St. Lawrence, and so continues through the remainder of the grant. By the side of this road are many ranges of well cultivated fields, that yield abundant crops of all kinds of grain, numerous farm-houses with large and substantial outbuildings, also a great many dwelling-houses. Every farmer, on an average, makes 300 lbs . of butter, two-thirds of which are sent to market.-Through the whole of this extensive property there is but one church : in the concession of St. George, near Cacona, is a chapel for those to whom distance denies a regular attendance at the church. Cacona is almost an island, being separated from the main land by a salt marsh, which in the spring always presents a luxuriant pasturage : on the point of

## RIVIEREDULOUP.

Cacona are several inhabitants.-The timber concern established at Riviére du Loup is worthy of note, from the extent to which it is carried on, as well as for the sums that appear to have been laid out in the establishment. The saw-mill is built on the r. du Loup, about $1 \frac{1}{2}$ mile from its estuary, whither the deals are conveyed from the mill by means of a dalle, remarkable for its length and solidity, and it is in some places at an elevation from the ground exceeding 30 feet. Several vessels have been loaded there with timber for the British market, but the loading is attended with much inconvenience, and the vessels are not in a very secure anchorage. The vicinity of the bridge is very picturesque, and exhibits that busy life which attends on commerce and particularly the timber trade.-All the lands fit for cultivation are conceded and surveyed and have the advantage of roads of communication. Part of the concessions were granted prior to $175 \%$, and generally at the rent of 1 sol per superficial arpent, and occusionally a capon on each concession.-The inhabitants of this S . are wealthy.

Title of Riviere du Luup and Isle I'crtc._-" Concession du 5 me Avri), 1689, faite par Jutcques de Brisay, ( fouver neur, et Jean Bochart, Intendant, au sieur Villcrai, pour le Sieur d'Ahtigny, et au Sieur Lachenuir, de l'etendue de terre qui peut se rencontrer entre leurs conecssions, avec terre qui peut se rencontrer entre leurs conecsions, ance
deux lieues de profondeur ; de laquelle ils joniront moitie deux heues de profondeur; de laquelle ins, et des isles et batures qui se peuvent rencontrer vis-à-vis la dite etendue, à cause de la grande quantite de terres inhabitables qui se rencontrent sur les concensions à eux ci-devant faites, savoir, au Sieur de I'illcrai pour le dit Sieur d'Artigny, depuis la riviire $V_{c}$ te jusqu'à deux lieues en descendant le fleuve St. Laurent; et au Sieur de Lachenuic, savoir trois lieues et demie, savoir, une heue au dessus de la riviere du Loup, et deux licues au dessous
de la dite rivière."-Régistre d'Iutendance, No. 3 , folio 27 .

Riviere du Loup, seigniory, in the co. of St. Maurice, is bounded s. w. by Fief St. Jean and in front by Lake St . Peter.-One league in front, viz.
half a lcague above and below the river Du Loup, by 4 leagues in depth. Granted, April 20, 1633, to Sieur Lechasseur. It now belongs to the Ursuline Nuns, at Threc Rivers.-This seigniory surpasses in value, perhaps, every property of similar extent in the province; its soil is generally a light reddish earth, a little sandy, sometimes mixed with clay; and in many places it is a fine yellow fertile loam, producing abundant crops of grain, and some parts are particularly eligible for raising hemp and Hax. It is generally level, but towards the margin of Lake St. Peter it is flat and low, consisting chiefly of excellent meadow and grazing land. About the front there is no timber of superior growth remaining, and indeed not much of any other; but towards the rear are many spots where some pine and oak of the largest size are to be found.-The Grande and Petite Rivieres du Loup, on which are 3 corn-mills and 2 saw-mills, and some inferior streams water this S. extremely well ; the fromer crosses it diagonally and by its serpentine course greatly heightens the other natural attractions of the place.-A varicty of good roads lead in every direction. The Quelee road is embellished on each side by many good houses and farms in a very improved state. Numerous settlements and roads extend on cach side of the two Rivieres du Loup, whose banks for several miles upwards are lofty and agreeably varied with woodland and landscape scenery. which, combining with the luxuriance of the well cultivated fields, leaves very little to te desired with respect to prospect. On the w. side of the greater river is the Filluge du Loup, containing about 40 houses only, but the settlements on each side of the road are so thickly inhabited that they may almost be considered an extension of it to a great distance. In the village, fronting the road, is a new church, 130 ft . by 62 , remarkable for its size and the good taste of its interior decoration ; of 3 stecples that surmount it, the 2 in front are covered with tin, which renders them conspicuous objects at a considerable distance ; it also contains 4 inns and 2 schools, one English and the other French, supported by the parish. Near the village the Grande Rivicre du Loup is crossed by a very fine bridge, handsomely and solidly constructed of timber. The population and wealth of this place are considerable; many trades are carried on, and many shops kept open for the sale of all kinds of manufactured goods and produce; large quantities

## R I V

of grain are collected here for exportation, and deposited in store-houses bept for that purpose. The whole of the seigniory and part of the augmentation are cultivated. On the rivers are some corn and saw mills.-The Parish of St. Antoine, in this $S$., by a regulation of Sep. 20, 1721, confirmed by a decree of the Council of State, March 3, 1722 , extends 231. including the space between Grosbois and Maskinongé.

Riviere du Nord, $v$. North River.
Riviere du Sud (R.), v. Sud.
Riviere du Sud, seigniory, in the co. of l'Islet, is bounded n. e. by Fournier; s.w. by Berthier ; in front by the $S$. Lawrence.- $1 \frac{1}{2}$ league in breadth, viz. one league above the mouth of the r. du Sud and half a league below it, by 4 leagues in depth. Granted, May 5, 1646, to Sieur de Montmagny.-The original dimensions of this seigniory have been the subject of much litigation and were, at length, fixed by an order from the Court of King's Bench of the province, according to the line of boundary traced upon the topographical map, giving an average depth of about a league and a half: it is now the property of Monsr. Couillard.-In proportion to its extent, this is one of the most valuable possessions in the whole province; it lies generally low, with the exception of a small ridge or two that separate the settlements on the St. Lawrence from those on the $n$. du Sud. The soil is so rich and highly productive,

## R I V

particularly in grain, as to obtain for it the distinguishing epithet of the granary of the Lower District. No part of it is neglected, and the whole is in a state of excellent cultivation. Very little timber remains. It is advantageously watered by the r. du Sud, its large branch called Bras St . Nicholas, the Rivière à la Caille and by many rivulets. In every part of the S., particularly near the St . Lawrence and on each side of the r . du Sud, are many good honses, in the midst of fertile well-stocked farms, surrounded by fine gardens and good orchards, which convey an imposing idea of the affluent circumstances of their owners.-Commissioners have been appointed by the provincial legislature to open and form a road from the neighbourhood of Rocher de la Chapelle, in the parish of St. Thomas, to the waste lands of the crown. The St. Thomas Road begins at a line dividing the lands of the first concession from those of the second, s. of the r. du Sud, and extends with a few windings as far as the south bank of that river, where it is generally believed that the waste lands of the crown beging it is 11 miles and 18 acres in length. In that extent are 15 hills of a remarkable height, of which seven only are to be ascended or descended. There are also eight bridges to be constructed, viz. :-two of thirty-six feet, three of twenty-five feet, one of fifteen and two of ten feet or thereabouts. There is also a small bog, of 135 to 145 ft , which it will be necessary to pave with logs. The lands, on each side to a considerable distance, are generally destitute of soil. Of this road, 3 miles and about 7 acres are completed, with the exception of a few large rocks and some small chains of rock which still remain to be undermined and levelled. The first eight hills, which are the most elevated, are also finished, and can be ascended with the heaviest loads. Two of the bridges of 25 feet and one of 10 feet are also completed and solidly constructed. The bog is also solidly paved. The St. Pierre Road, which begins about 24 acres from the division line between the lands of the first and second concessions, to the south of the r. du Sud, also extends as far as that river, where it is believed that the waste lands of the crown begin, and is 11 miles and about 7 acres in length. There are in that extent 12 hills; the first is of considerable height and length, the others are small hills with a gentle acclivity. There are ten bridges to be constructed, one of eighty feet,

## RIVER D U S U D.

two of fifty feet, and the other 7 to 15 feet. The greater part of a bog of about three acres requires a causeway. The lands adjacent to, as well as those at a great distance from each side of this road, are generally destitute of soil; and fine wood and lands fit to be cleared are to be found only by advancing through the crown lands. Of this road five acres only are completed, but at one of the most rugged parts, called Les (iites, where there was a great deal of undermining to be done, are 35 acres on which the trees are rooted out and the stones broken. The frames of the bridge of 80 feet are also begun, and the timber is squared and carried to the spot. Both roads run almost in their whole length over ground very uneven, paved with rocks and large stones, which in great part require to be undermined, broken and levelled. The sum of 10001 . was voted for the forming of these roads, and it is stated that an additional grant of $3.3 / 1 /$ will be required. -The seigniory contains two parishes, it Thomas and St. Pierre. The Parish of it. Thomas is 3 leagues in front, and is bounded s. w. by Berthier; n. e. by Lepinay ; s. by the depth of the first range for about one league, being $E$. of St. Pierre church half a league below it ; the rear of the $\mathbf{p}$. is only 2 leagues broad. Almost the whole of this $p$. is settled, particularly 3 ranges of concessions, and the soil is generally stony. As there is no corn-mill in the $P$. the inhabitants go to $S t$. François mill in Berthier. The Village of St . Thomas contains about 90 houses, exclusive of store-houses and granaries; it is most delightfully situated at the confluence of the n. du Sud with the St. Lawrence. The houses are
nearly all built of wood, generally whitewashed, and disposed into strects with something like regularity ; most of them have gardens and orchards attached, and in many instances form desirable residences. There are several shopkeepers and artisans, with some inns as they are called, though they have no great claim to distinction for the good accommodation they afford to travellers. A few highly respectable families have fixed their habitations here, and form among themselves a select and pleasant society. When viewed from Chapel Hill, which lies about 3 miles to the s. w., this village has very much the appearance of a small town, and gives additional interest to a prospect in every respect beautiful. The church is 175 ft . by 78 , and the wall 40 ft . high. It was built in 14 months, ending Oct. 1822. It is superior in magnitude and elegance to any in the province, excepting the cathedral churches of Quebee and Montreal ; its lengrth is 178 feet, its width 78 feet, and its height of wall 40 feet; the steeple and spire, 116 feet.-Crune Island and Goose Islund were originally appendiges to the seigniory of Rivière du Síth, being granted with it on the 5th May, Jitti; but they have since been dismembered from it and are now the property of Mr. M•Pherson. They are connected with each other by a marsh, and altogether make four leagues in length : they are inhabited by about forty families, and well cultivated, producing wheat much beyond their own consumption. The marshes are peculiar for the abundance of fine hay they produce, and their pastures are sufficient for three thousand head of cattle.

Stutistics of the Parishes of St. Pierre and St. Thomas.

## RIVEROUELLE.

Riviere Ouelle or Bouteillerie and augmentation, seigniory, in the co. of Kamouraska, is bounded n.e. by St. Denis; s.w. by Ste. Anne; in the rear by Ixworth; in front by the St. Law-rence.-2 leagues in breadth by $1 \frac{1}{2}$ in depth. Granted, Oct. 29th, 1672, to Sieur de la Bouteillerie. The augmentation, 2 leagues in front by 2 in depth, was granted, Oct. 20th, 1750 , to Dame Génévieve de Ramzay, widow of Sieur de Boishebert : they are now the property of Casgrin, Esq.- $\frac{8}{5}$ of this S. are under cultivation and $\frac{3}{5}$ in a state of nature; $\frac{1}{4}$ is rendered unfit for cultivation by mountains and ridges of rocks. The soil, s. of the river Ouelle, is in general a yellowish loam mixed with sand, and in the front it is alluvial except the ridges which are sandy: most of the lands under cultivation are of a superior quality. The lands in the rear are traversed by a small ridge and in the 5 th range is a large cedar swamp; the soil and timber, however, improve towards the fief St. Denis.-There are 7 ranges of concessions in the $S$. and the whole as far as the ith range is conceded and nearly the s. w. half of the 6th. The chief settlements are on both sides of the river Ouelle, as far as the 4th range inclusive, and along the main road near the St. Lawrence. The rents are, for the lst range and the greater part of the 2 nd, $1 s .3 d$. per arpent, for the 3 rd range about $1 s .6 d$. per arpent, the 4 th range $3 s, 4 d$., and $5 s$. per arpent for the new concessions. The greater part of the land bespeaks a superior state of husbandry ; the arable yields grain of good quality in abundance, the meadow and pasture lands are very luxuriant, and the produce of the dairies forms no inconsiderable portion of the farmer's wealth. The farmhouses and other dwellings are generally accompanied by well stocked gardens and good orchards, their inhabitants enjoying, from all appearance, every comfort that industry can procure among a people wholly cultivators. In the front part of the seigniory there is but little timber; in the rear, however, there is a profuse variety of the best kinds, but chiefly white pine, some black birch, maple, spruce, hemlock, \&c. and cedar in the swamps.-This $S$. is admirably watered by the R. Ouelle, many small streams, and by Lake St. Pierre. The tide flows up this R . three leagues over a muddy bar at its mouth, where the water is 10 to 12 ft . deep at high tide, 4 to 5 ft . at low tide, and during spring tides from 14 to 16 ft .

Schooners might ascend 2 miles above the bridge In this R . salmon and bass are rather plentiful.In this S . there are two fisheries in the St. Law. rence, one for porpoises, the other for herrings The porpoise fishery is deserving of a short description, on account of the facility with which that unwieldy inhabitant of the deep is taken. It consists in a line of boughs and small poplar trees, stuck in the mud at low water 2 or 3 ft . asunder and extending several hundreds of yards into the stream, forming at its farthest extremity a $\frac{1}{4}$ circular crescent. The porpoises descending the river with ebb-tide, alarmed at the agitation of the boughs and trees, which are shaken by the current or the wind, dare not venture through the line they might so easily destroy, and therefore unwarily remain within the crescent, where they are harpooned and brought to shore. They often measure 10 ft . in length and 6 ft . in circumference and many of larger size are taken. -The Parish of Notre Dame de Liesse, by an Order of Council, Mar. 3, 1722, extends $2 \frac{1}{2}$ l. along the St. Lawrence, including the fief St. Denis one league to fief la Pocataire called la Grande Anse, $1 \frac{1}{2}$ league. In this parish 261 heads of families, landowners, derive their subsistence chiefly from their farms; 142 heads of families possess small portions of land; others hold building plots under the tenants, from which they raise a little corn; others live by trade or daily labour, and many by mendicity, particularly in winter. The number of hired agricultural labourers residing with the farmers scarcely amounts to 60 or 70 ; the holders of lands having, for the most part, numerous families, make use of their children from the age of 9 or 10 in various employments on the farm. They nevertheless employ those who have only building plots or portions of land, too small to support them, in all the more laborious duties and in harvest-time.-In 1792 there were 25,896 superficial arpents in concession, and many proprietors possessed from 350 to 500 superficial arpents half cleared and half covered with standing wood. Since that period the lands have been divided among children and part of them sold, so that there are now about 60 persons only who possess farms of 4 arpents in front by 30 in depth, or 3 arpents by 40 ; the others do not possess more than 2 arpents or $l_{\frac{1}{2}}$ by 30,35 , or 40 in depth. There remain but very few lands to concede in this parish, which

## RIVER OUELLE.

is composed of Bouteillerie and St. Denis ; but the lands last conceded have not been turned to a profitable account, the rocks and mountains and an indifferent soil rendering them unfavourable to cultivation; they, however, supply wool for fuel, which in a few years the inhahitants will have to seek for in the townships, and those of the first range are now obliged to seek for it as far as the 5th and even to the 6th range, which is the most distant. There is nevertheless between the first and second ranges of Bouteilleric, on the seignorial line and to the N. e., a plain of about one square league, which, with much labour, might in the sequel become culturable; but it seems that the seignior has no desire to concede these lands. A road has been opened by the mountains to extend to the 5th and 6th ranges of Boutcilleric, which have been conceded liy Pierre Casgrain, Esq. since he became the seignior, but this road is not yet finished as far as the end of the 6th range. No road has yet leew opened to the last concession of st. Denis. The few lands which remain to be conceded are, for the most part, surveyed. The ranges $1,2,3$, and 4 in both seigniories were granted before 1759 , and since that time there have been but few lands to concede, except those which had been before conceded and reunited to the seignior's domain, with the exception of the 5 th and 6 th ranges in both seigniories, which were granted some years past. In ist. Denis the farms in the first range are from 2 to 3 arpents by 40 in depth. In the 2 nd, 3 rd, 4th, \&c. only 30 arpents in depth. In Boutcillerie the first concession is partly 30 and partly 35 in depth, the irregularity being caused ly the course of the river Ouelle that bounds it; the 2nd is still more irregular, on account of the continual windings of the river; and the 3 rd, 4 th, 5th, and 6th concessions are generally from 2 or 3 arpents in front by 40 and 42 in depth. Before 1759 the ordinary rate at which the lands were conceded did not exceed one sol tournois for every superficial arpent, a quit-rent of a sol and a capon for every front arpent, the fincs on alienation, retrait and bannalité. Since the conquest of the country by the English the rates, at which new concessions have been granted in this $\mathbf{p}$, have increased to a crown tournois, and even to 19 francs per front arpent by 40 and even 30 in depth. In St. Denis the seignior has obliged those who take new concessions to pay, moreover, the 10th
pound of sugar out of the quantity they may make. It would not be difficult to find in this parish 150 to 200 young persons of 18 years and upwards who would, by their own means or by the assistance of their relations, take lands in concession, provided farms fit for cultivation could be found near or even at the distance of a few leagues. A great many fathers in this parish, capable of providing their children with live stock and provisions, have settled them from 20 to 30 leagues hente, at Rivière du Loup, at Cacona, at Trois Pistoles and even at Rimouski. During the last 30 years a great number have been settled on lands favourable to agricultural purposes. Those, who were unable to furmish their children with the means of settling so far off, have divided their farms with them. Others have been settled on building plots, and have increased the number of poor families. None of the inhabitants take lands in the townships erected in the rear of the seigniories that compose this parish, because the rear lands are not yet cultivated, and, there being no good road, the inhabitants have not applied for any of those lands, but they must, in a few years, resort to them for fuel.

## ROADS.

Roads and Internal Communications.The following statistical account of the public money, voted by the legislature of Lower Canada for the formation and repair of roads and canals from 1813 to the present time, will prove how desirous the provincial government is of advancing the increasing prosperity of the colony.

From 1814 to $15 \cdot 3$, both inclusive, 14 years, in-
cluding 25,0001 for the Welland Canal in $294,17 ?$ Upper Canada .
From 18:7 to 1831 , both exclusive, 3 years, $\} 100,000$
$\overline{4.384 .172}$
In 1829 the sum of $35,270 l$. was voted by the legislature for these purposes, and, as a summary of the appropriations and a brief abstract of the act may be generally useful, the author here inserts them.

Appropriation of $35,270 l$. for Internal Communications, voted 1829.
470l.-To open a road from the Seigniory of Gentilly to the River Becancour.
4001.-Do. from Yamachiche to the Township of Caxton. 4701.-To assist in opening the road from St. François Nouvelle Beauce, to the West Arm, and from thence to open a road to the middle unconceded Crown Lands at the head of Lake St. Francis to the Dudswell road.
5001. - To open two roads, one from the last settlement to Lake Etchemin to the eastward of the River Cbaudiere, and the other from the last settlements to the east of the River Etchemin.
30001.-Above the sum already granted to open a road from Mitis to the Mission of Ristigouche
8001.-To repair the Témiscouata Road and Bridges thereon.
500l.-To open a road between the parish of Kamouraska and River Ouelle.
500..-To open a front road from the third range in the Seigniory of Bonsecours to the west of IIslet Church.
5001.-To open a road from Rocher de la Chapelle to the unconceded Crown Lands.
$\mathbf{5 0 0}$.-To open a road between the last settlements at St. Pierre, Rivière du Sud, across the High Lands.
15001._To repair and complete the road from the head of Lake Massiwipie to Stukely and Granby, lead. ing to Yamaska Mountain.
1600l.-To complete the road from Shipton to Leeds
900 . -To improve the road already commenced from Drummondville to the Seigniory of Deguire.
$500 \%$ - To improve the road from Drummondville to Brompton.
10001._For a road between Shipton and St. Grégoire.
5001.-Above the sum already granted to open the Kennebec Road.
10001.-To open a road from Dudswell in the District of Three Rivers, to meet the road already opened on the line in the District of Quebec
300l.-To open a road from Tring to Leeds, through Broughton.
30001.-For a road from Hull to Grenville.

500l.-To explore the country between the rivers St . Maurice and Ottawa
2002.-To open a road from Belceil to Varennes.

300 - To open a road from the last settlements of Berthier, in the District of Montreal, to Brandon. or the road between St. John and Laprairie.
0001.-For the road between sc. Jom and road between Beaubarnois and St. Regis.
200t. - To open two roads from the new free bridge on open two roads from the new free bridge on
the river Jacques Cartier, across the lands in the river Jaeques Cartier, across the laind two
Neuville to Bourglouis, and to buid bridges over the river Portneuf.
000l.-To improve the road from l'Anse des Mères, in the Lower-Town to Sillery.
3000t.-For the Ste. Foi, Lorette, Charlesbourg and Beauport roads.
10002.-To improve the roads which lead from the village of Longueuil to Chambly.
2001.-To assist in opening a water course in the Boucherville swamp across the Seigniory of Montarville, in the Parish of Boucherville only.
20002.-For the roads in the vicinity of Montreal
20000.- For the roads in the vicinity of water of the little assist in draining off the water of the hitle
river which divides the town of Montreal from the St. Lawrence suburbs.
6001.-To improve the road from Three Rivers to Pointe du Lac.
5001.-'To open a road from Stoneham to Charlesbourg. 250l.-To open a road from Valcartier to Lake St. Charles.
3000.-To improve the St. Claire and Misère roads, in the Parish of Cbarlesbourg and St. Ambroise.
2001.-To indemnify A. G. Douglass for advances made by him on the road from St. Gregoire to Long Point.
2501.-To assist the inhabitants of Frampton to build a public bridge over the river Etchemin, in the said township.
12001.-To complete the St. Paul's Bay road.

350l.- To open a road from Douglas Town to Point St. Peter (Gaspé).
150l. - To assist in improving the road from the bead of the Basin of Gaspé to Douglas Town, through the Basimand.
330l.-To open a road between New Port and Port Damiel in the Bay of Chaleurs.
150l.-To improve the road between Port Daniel and o improve the road between Port Daniel and
La Riviere Nouvelle in the Bay of Chaleurs.
150l._To assist in improving the road between Bona venture and New Richmond in the Bay of Chaleurs.
500.- To complete the exploring of the lands between the rivers Saguenay and St. Maurice, and to pay the balance due on what has already been explored.
$£ 35,270$
Abstract of "An Act to make more effectual provision for the improvement of the Internal Communications," passed in 1829.
I.-The Governor to appoint Commissioners.
II.-CCommissioners to require the Grand Voyers to examine places where the voluntary consent of proprietors cannot be obtained for laying out
III.-Commissioners to report to the Governor their proceedings and to have his approbation before proceeing the money.
IV.-After approbation of the Governor is ohtained, Commissioners to proceed.
V.-Governor to adyance the money necessary to pay labourers, and superintendents their wages.

## R OADS.

VI. - Commissioners to render an account of the money expended.
VII._Commissionersallowed a certain sum for managing and superintending the work.
VIII.-Two years after the passing of this Act no rontract for work to be entered into.
IX.-Commissioners to report to the Legislature the improvements made under this Art.
XII. - Application of the moncy to be arcounted for to His Majesty.

No account of the following roads being inserted in any of the seigniories or townships through which they pass, a description of them is here given. The roads of minor extent are described in the respective seigniories, \&e. to which they belong.

Craig's Road extends from the bank of the St. Lawrence, through the $\mathcal{S}$. of St. Giles, to the T . of Shipton, whence a road had previously been made to the river St . Francis, and thence to the boundary line. This road completed would open a flourishing country to its natural market, and cause a large influx of settlers on good lands which are now lying waste. The lands are good along this road, and it is perhaps the most favourable place for settlement of any in British America, but the inhabitants and settlers must labour under many difficulties until an effectual road law is made, and enforced; for the present road laws as they affect the townships are easily avoided, and the difficulty of enforcing them prevents their beins obeyed. This road was originally devised to open a direct communication between Quclec, the townships on the frontiers, and the adjatent American States; but its completion has been retarded by many difficulties, more apparently originating in a want of determined enterprise, than in any natural impediments. It was originally traced out by Mr. Joseph Kilborne, Dep. Prov. Surveyor, in 1800, at the expense of Joseph Frobisher, Esq., and other landholders in the townships through which it passes. In 1805, Mr. Wm. Hall, of Quebec, advanced 130l. to assist in opening this road. In 1809, Sir James ('raig made a farther opening as far as the river St. Frincis; afterwards the commissioners for internal communications for the district of Three Rivers spent a considerable sum on this road, and opened it as far as the back part of Shipton. The commissioners for the county of Dorchester made this road to the district line of Three Rivers on two points, got the same verbalized by the grand voyer, and requested the commissioners for the district of Three Rivers to meet
that road on one or both points, so that the people in the eastern townships might have a direct communication with Quebec. During the administration of Sir James Crais, detachments of troops were employed in clearing and making the road, and in erecting bridges of timber over the rivers wherever they were found necessary. The oljeet in view was so far obtained as to emable a stage to travel with tolerable despatch, though not without inconvenience to the passengers from the want of proper places to stop at, and houses for refreshment; as there is no atcommodation of that kind from the last settlement on the r. Buarivate to Shipton, about 60 miles. At Kempt's Bridere, Palmer's inn was at one time epencd; but it neither answered the expectations of the public. nor produced benefit to the proprictor. Notwithstanding inducements were held out to encourase settlers, by granting them a patent for any lots they might occupy, on condition of cleming a certain portion of land, and buildingr a house wof timber) of given dimensions contiguous to the road; these terms were acepted only in two ar three instances, and even these were of no utility in advancing the work, or of advantage to the individuals who undertook them. At the commencement of the late war very little progress had been made, but considerable improvements have been since effected. The several bridges over the rivers are named after the military offecers who commanded the detachments cmployed on this service, and these officers obtained lands adjacent to the road ; but military men have seldom the leisure or the means of becoming permanent cultivators. Kempt Bridge, about 150 ft ; the Grenadier's Bridge, about 100 ft ; Miller's Bridge, also about 160 ft , and 40 other bridges of inferior sizes, and causeways, built about loor, had never been repaired up to 1823 , except some little temporary repairs which the few inhabitants performed; their bad state was therefore complained of to the Honse of Assembly, in a memorial from the landholders of Ireland, Inverness and Leceis. The legislature two or three years since voted $40 \% /$ for completing this road, but the smallness of the sum, and the impediments which are thrown in the way by the act itself, have prevented that sum from being laid out. As the road is to be ditched for 30 miles, and as fourteen bridges, each above 20 feet long, and three bridges above 80 feet long, besides causew:ys, are to be erected, 2000 l. at least will be necessar;

## R O A D S.

to make that 30 miles a passable carriage road; and as the road from the township of Ireland to Mrs. Stocking's, a distance of 30 miles, would require $1000 l$. more; it will be seen that to complete Craig's road to Shipton would require at least 3000 l. On Craig's Road, Ireland, Leeds and Inverness are the most populous and improved townships; and on the St. Francis Road, Shipton, Melbourne, Wickham, Grantham and Upton. The main and only roads leading from the heart of these townships to the older settlements are, Craig's Road, which, from its intersection of the St. Francis in Shipton, is open to the settlements of St. Giles; and the East and West River Roads of the St. Francis, leading from Sherbrooke to the Baie St. Antoine on Lake St. Peter: the road through Hatley, Stanstead, Bolton, Sutton, St. Armand, Dunham and Stanbridge, to the settlements of the r. Richelieu has previously opened several entries into the State of Vermont, with which constant intercourse is kept. Craig's Road is very little frequented on account of the obstacles which numerous swamps and windfalls throw in the way of travellers, particularly in the distance between the settlements of Leeds and Shipton. Of the road along the $\mathrm{S}_{\mathrm{t}}$. Francis, that on the eastern bank is best and most generally used in summer, the other is practised preferably in winter. The worst parts of the summer road are between Courval and Spicers, 6 miles. Of these, four are called the savanne, which in the wet seasons is dangerous, and frequently impracticable. The bogs in the southern quarter of Simpson are another impediment to the traveller's progress for about half a league, but it is ascertained not to be perilous from the firmness of the substratum of the swamp; of the last road, that part traversing Potton and Sutton is the most rugged, broken and bad. The minor public roads, connecting the settlements of the townships circumjacent to Ascot, are numerous and generally much better, having the advantage of receiving more frequent repairs from the settlers to be found in greater numbers in this quarter of the tract than in any of the lands in Shipton.

Temiscouata Portage Road.-A bout $4 \frac{3}{4}$ miles e. of the Rivière des Caps this important communication commences, which, being the only route by land from Quebec to Halifax, 627 miles, is of great importance. It was first opened, in the year 1783, by General Haldimand, at that time governor of the province: the British mail is
always conveyed by it, when landed from the packet at Halifax. From the main road of the St. Lawrence, where the portage road branches off, to Long's Farm on the bank of Lake Temiscouata, the distance is 36 miles 16 acres: the direction of the road is generally eastward, but it has numerous turns and windings to avoid several very lofty and rugged hills, or deep swamps; as it is, about 24 miles of the distance is over a succession of mountains, many of them rough and very steep: this road might be rendered as good and convenient for travelling as can be reasonably expected in a wild and unsettled country. From the bank of the St. Lawrence, up to Cote's Ferry, on the r. du Loup, about five miles, the road is as good as can be desired, and by which carriages of burthen may proceed to the ferry, or to Ballentine's Mills, a little to the left: the remainder of the way to Lake Temiscouata has been much improved: several soldiers, with their families, were settled in 1814 upon lands allotted to them at convenient intervals, under the personal direction of the sur. veyor-general of the province. These few settlers are not, however, sufficient wholly to answer the intended purpose, and most probably others will hereafter be placed on proper places, of which many may be found, where there are large portions of good land and some extensive brulés, which might very speedily be brought into a state of moderate fertility. This portage abounds with the necessary materials fit for the making of roads, either upon the old plan of the country or according to the system of M•Adam, and has now been much improved by the grant of money made by the Legislature. The usual mode of passing the road in summer was by shafts only. The present improvements have enabled nine wheel carriages to pass the whole length; and although a hilly road, a box of window glass in one of the carts was found without one single pane broken. There is no doubt, however, that the permanent repair of the Temiscouata portage, and the opening of the continuation of the post route to Fredericton and St. John's, must in a great measure depend on the progressive advancement of the settlements at the lake extremity of the 12 leagues portage, by which the thoroughfare would be increased, the communication familiarized, and the roads kept in better repair. At this end of the portage road, on the w. bank of Lake Temiscouata, is situated the Village of Kent and Strathern, so called in honour

## R O A D S.

of the late Duke of Kent. On a small stream, called Little River, corn and saw mills have been erected by Col. Fraser which afford many advan-tages.-Capability of Settlement : about $\mathbf{1 0 0 , 0 0 0}$ acres of culturable land could be found contiguous and along the whole extent of the portage road from the s. of Riviere du Loup to fief Temiscouata. The land is generally good, but there is one tract near the River it. Francis where it will be utterly impossible to place settlers; it extends 3 or 4 miles on each side of the portage, and is one entire bed of shivered stone. It is said that, although the vegetable productions appear to be the same as those in the neighbourhood of Qucbec, the country is more subject to frosts in autumn, which sometimes destroy the potatoes; perhaps when a greater space is cleared this evil will be in a great measure removed. On the right and left of the portage, as far as 3 leagues, the general appearance of the country is very uneven, being a continued succession of mountains, separated by cedar swamps, extending in many instances from 1 to 2 leagues. Those swamps, when cleared and drained, would prove valuable as meadow lands, the soil being in many places very deep; the mountainous parts, with little exception, are very rocky and gravelly, and therefore little suited to the purposes of agriculture ; there are, however, occasionally spots of some extent covered with sugar maple and other hard wood, well worthy of attention. The timber is, chiefly, cedar, sapin, pine, hemlock and bass, interspersed with a few groves of maple and a sprinkling of beech or birch. The trees are of an unusual size, particularly the cedars and a few pines and hemlock.-The principal Rivers on the portage are the $\boldsymbol{r}$. du Loup, Rivicre Verte or Green River, and Trois Pistoles, which fall into the St. Lawrence, and the St. François, that falls into the $\mathbf{m}$. it. John. Besides these there are the Great and Little Fourche, the Riviere des Sangues, Little River, and many smaller streams varying from 10 to 15 ft . in width, all very shallow, and in general supplied with trout and other small fish.-The principal Lakes near the portage are, a small lake north of the road, about 3 miles in circumference, and averaging about ${ }_{4}^{1}$ of a mile in breadth; 2 lakes on the south side, one about 3 miles, the other from 5 to 6 miles in circumference; these 3 nameless lakes are said to abound with fish, and the land about them appears in many places fit for cultivation. There are also 2 lakes
on the north side of larger dimensions, about 3 leagues from L. Temiscouata, and ne:rrly the same distance from the portage road.-The principal Mountains over which the road runs are, the St. François, Cote de la Grande Fourche, Sit. Jean Paradis, la Montague de la Riviere Verte, and du Buard.--The -tainals, formerly numerous in this region, viz. bears, deer, rablits, beaver, martin, otter and musquash, are not now very abundant and are evidently decreasing in number.-The following account of the repairs done on the Temiscouata road, in 1830, under the superintendence of Mr. Wolf, is abstracted from his Report. -The bridge over the R . du Loup, 30.; ft. by 30 , was repaired, as well as the bridge over the $\mathbf{R}$. Little du Loup; the former, when first built, cost about $1,800 l .$, a third part of which was expended needlessly. Much labour was expended in repairing the road between r. du Loup and r. Verte, 5 miles. The bridge over r. Verte, 70 feet in length, and the causeway, were repaired. The road between Riviore Verte and Inivisseall Morneau, being in a very bad condition, was repaired; the causeways were decayed, broken down, and in some places carricd away by the waters which caused deep ruts in the road. Several harse rocks that obstructed the road were removed by making fires upon them and breakins them to pieces (water thrown on the heated rocks would have saved this labour) ; in other places, where the position of the rocks required it, the ground was levelled up around them with earth and fragments of rocks. The bridge over Ruisseau Morneatu and la Livane des Roches being also in bad condition was repaired. On the Savane des Roches the repairs made in 1826 were extended by making fires upon the rocks, and breaking them in pieces, levelling the road with their fragments and covering it (to the width of a cart) with earth and gravel. The bridge beyond la Savane des Roches, over the Ruisseau des savanes, being decayed, it was repaired with tamarac, no cedar being to be had in that neighbourhood. There was a bad causeway close to the bridge over the r. St. Francis, which was also repaired. The bridge over the r. St. Francis, being very weak and decayed, was repaired, and a new Garde-de-Corps on each side of the bridge constructed. On the N. w. side of the St. Francis Mountain the water, having worn a deep channel, was running down the middle of the road; here ditches on each side were made,

## ROADS.

and an outlet cut into the woods 2 acres in length, the chamnel which the water had made being filled up. In 2 places a new road was made on one side to the extent of 2 acres; several large rocks were removed. The causeways also between the St. Francis and Grande Fourche, being in the same bad state as the others, were repaired, ditches and outlets made and the earth thrown upon the causcways. The $n . w$. end of the Grande Fourche Bridge having given way, it was raised and repaired; thence to the foot of the mountain, new causeways were laid and ditches and outlets made to draw off the water from the road; and as the whole of that part appeared to be constantly inundated, gravel with earth was used to raise the centre, and this labour was required throughout the whole part of the road thence to la Petite Fourche. As the bridge over La Petite Fourche was in a very dangerous situation it was repaired ; the roadat the n. e.end of the bridge, which was very deep with mud, was also repaired. The part of the road commencing about $\frac{1}{2}$ mile beyond La Petite Fourche, being very bad on account of the great number of springs and the nature of the land not admitting water to pass, was thoroughly repaired by laying causeways and digging ditches and outlets.-The bridge over Mare Sungsuc having been destroyed by the spring flood was repaired; between this place and the foot of the Buade Mountain is a causeway $\frac{1}{2}$ mile in length, part of which was floating ; here drains were opened, outlets made and the causeways covered with earth, and the road was widened to 12 feet. The bridge at the bottom of Buade Mountain was repaired.-Mr. Wolf, at the end of his report, observes, "That this road is so long and the nature of the ground so very unfavourable, that, although a few hundred pounds be laid out to the greatest advantage in repairing it, there still remains ample scope for further improvements; moreover, as long as there are no persons living on the road to clear the ditches and attend to other necessary particulars, the most judicious repairs most rapidly fall into a state of decay. Colonel Fraser was informed that a better road could be found out, in which scarcely any hill would be met with and which would require but one bridge ; consequently, if this road was undertaken it would prove, in every respect, preferable to the present, for only six leagues bush would be traversed, and if it were once opened it would re-
quire but a small annual expense for maintenance and improvements, whereas the present, without an immense sum being expended thereon, will never prove a good road." In consequence of these observations, Mr. Wolf was instructed to explore the proposed line of road. He entered it at the $\mathrm{Ha}-\mathrm{Ha}$, one league distant from Lake Temiscouata, proceeded in a N.E. course for one league, leaving the $\mathrm{Ha}-\mathrm{Ha}$ Mountain on the left, then changed his course and proceeded N. N. e. for about two miles through a tine valley, good land, wood, elm, cedar and spruce; arrived at a small river about 15 feet wide and 3 deep, after crossing which he changed his course to the north and proceeded for about 3 miles; good land, hard wood, a small stream about 2 feet deep and 10 in breadth, level land with hard timber. The whole of the distance above referred to is surrounded by small mountains; this course he followed for two miles farther and found a small lake, about half a mile on his left, 18 acres in length and 2 broad. The second day he continued his course north (to avoid falling on the Grande Fourche Lake, which is about $2 \frac{1}{2}$ leagues in length and 15 acres broad), when, having proceeded about six miles, he found another small lake at the distance of four acres on his left, which lake is about six acres long and one broad; he then reached a rising ground with a gradual ascent and descent, about $1 \frac{1}{2}$ mile in length; thence he arrived at the r. Little Fourche, in breadth at that place 12 ft . and 3 deep; the land all that distance generally covered with hard timber ; he then changed course to the N. N. W. and came to another rising ground covered with a fine sugary, ascent and descent gradual; thence he arrived at the discharge of La Grande Fourche, which forms here a rapid river 20 ft . broad and 6 deep. The third day he changed course to the $\mathrm{N} . \mathrm{w}$. in a direct line to the
 on the Green River. (Two or three small lakes and some high mountains were seen between the r. Grande Fourche and this place, all at some distance from the line on the left, none of which interfere with the proposed line of road.) He then came to a circular mountain covered with a sugary and desired his guide to ascend a high tree, to ascertain whether it might not be avoided; the guide said that he observed a valley round it, and that it was not of such a nature but that the road might be laid over it in a aig-zag way, and it would

## R O A D S.

have an easy ascent and descent. After leaving this mountain he found a lake on the left, about $\frac{1}{2}$ mile (called Lake Ibert), of the same size as that of Grande Fourche ; at a farther distance of about two miles he found another called Pouillac, six acres in length and two broad, on the same side; he then met a swamp of about one acre in length which would require paving. The land in general is good and fit for cultivation; there are a few inconsiderable hills, but so situated as to prove no obstacle to the road should it be undertaken. The fourth day he proceeded the same course ( $\mathrm{N} . \mathrm{w}$. ) and found the land level and the timber grod ; at five o'clock p. m. he arrived at the St. Lawrence, in front of the Village de la Plaine, in the fourth concession of Cacona, to which place from the point he sct out from is reckoned 9 leagues, and in that distance only 4 bridges would be required. After having made this survey, Mr. Wolf arrived at the following conclusion: That a good road could be made, in every respect preferable to the present one, at the expense of about $\$ 3,000$ currency, and that the country through which it would pass is of good quality and fit for settlement. The present Portage Road is 36 miles, and the intended road, from Cacona to the lake, 30 miles, but following the main road from st. Andrew to the Village de la Plaine, about 12 miles more, it would be six miles longer from Quebee to the lake; but the advantages which the intended road would possess over the present would far outweigh this consideration. In Mr. Wolf's opinion the advantages of this road over the present would be very great, as from the nature of its soil and timber it is certain that it would be soon settled, and would not require so much labour and expense to keep it in repair. Mr. Wolf seems to be decidedly of opinion that the proposed road would be more advantagcous in every respect than the present; and after enumerating the difficulties and inconveniences of the latter, he concludes by saying that " it may be fairly divided as follows; one-thiri mountains, another bridges and causeways, and the last consisting of nothing but rocks of different dimensions, which occupy such a breadth as to render it impossible to avoid them."

Kennebec Road.-In 1830 the extent of this road to be made was 28 miles from the seignorial line of St. Charles Belle Alliance to the province line. Of this road 8 miles and 7 acres were in
that year made a good wheel-carriage road, 18 feet wide, with ditches at the sides of sufficient depth and breadth. The country through which that part of the road passe's is rather hilly, but fit for cultivation and settled in different places; there are ninc steep hills which were cut in those places where the road was necessarily carried. The country through which the remainder of the road, then unmade, was carried and opened as a path road to the province line, is more level and in general of a better soil, on which five consideralle bridges were made, 6 steep hills cut and 3 miles of it cleared of windfalls. The lands on each side of the road were surveyed and are of a description to encourage a quick settlement: \& (bion would be required to make this part of the road, being 19 miles and 21 acres. The commissioners were convinced that, if the Kemebee Road was perfectly opened as well as it is now made on the American side up to the lines, a line of diligence or post might be established from Pointe-Levi to Portland, the nearest sa-port from Quebec, or to Boston. The Quebec market would be provided with cheaper provisions; the public revenue raised considerably, especially if duties were drawn from live stork; and the American settlers near the lines would take produce in exchange instead of specie. The Kemnebec Road is now opened, owing to the indefatisable excrions of Charles Taschereau, Esy., one of the commissioners. Scveral American gentlemen from Boston and different parts of Maine have come through with their waggons and gigs on a pleasure excursion to the s. of ste. Marie, where they remained a few days, delighted with the romantic appearance of that part of the country. For several years American produce has been sent through Kennebec, viz. cattle of every description, fish, poultry, honey, \&c. The distance from Pointe-Levi to the province line by this road is 31 kagues. The mail ought to be sent through this route to the United itates, being the most direct communication.

Kempt Road is a new communication recently surveyed and opened. It commences from the St. Lawrence, near the mouth of the river Grand Mitis, and is carried s. e. to the head of Lake Matapediac, about 30 miles; it then runs along the $\mathbf{e}$. bank of that lake and follows the river Matapediac to its confluence with the river Ristigouche, more than 50 miles; at this place it

## R O A

## R O U

meets the Ristigouche Road that leads to the Indian mission at the head of Ristigouche Bay. This important line of communication is productive of two great advantages. lst. It connects the settlements on Chaleurs Bay with those on the s. shore of the St. Lawrence, and forms a useful means of communication with the county of Gaspé and the province of New Brunswick. 2nd. It presents a large field for emigrant settlements, as it passes through extensive tracts of land generally susceptible of cultivation, although in many places uneven and mountainous. The sum of $£ 3,000$ has been voted by the provincial legislature for the purpose of opening this road.The following information relative to the best and cheapest mode of opening a road through wild lands is supported by the testimony of John Neilson, Esq.-Employ 3 trusty Indians, or others accustomed to the woods and country work, by the day, to explore and mark out the easiest and nearest place for a road, avoiding steep hills and morasses, by which a common horse and cart might transport a burthen of 5 cwts . without unloading. The road should be cut 12 French feet wide and the whole width cleared off; the stumps taken out and cut below the level of the road and the black earth, or six inches below the general surface ; the high places to be levelled down and the hollows filled up, so that a common horse could travel it in the wettest seasons with a cart loaded with five cwts., at least, without unloading. Logging, paving with logs, and draining where necessary, are of course included in the contract ; the price to be so much per arpent, advance of one-third on furnishing two good securities and commencing the work, one-third when completed, and one-third on report of approval by experts; the time at which the work will be ready for delivery to be stated. It might be proper, perhaps, to divide the whole into numbered lots of 30 arpents, each commencing from the opening of the road, receiving proposals for either of the numbers. The manner in which the road is to be made to be carefully expressed in the advertisements to contractors, for the price depends upon the manner in which the work is to be done as well as the decision of the experts. Unless a legal road is made at once 36 French feet wide, and the trees cut down half an arpent on both sides, it is not necessary to make a first cart road in the woods wider or better than above described,
for 20 or even 60 feet wide would not prevent it being encumbered with falling trees; indeed, when the road is wide they are more apt to fall, and, the sun getting in, the brush grows up sooner and snow-drifts form in winter. If a cart road is made, immediately after it is done there ought to be a procès verbal of it by the grand voyer, determining the manner and by whom it is to be made and kept up in future.
Roche Coupe, v. Twashega, r.
Roches, des, river, in the S. of Côte de Beaupré. This little ar. joins the Ste. Anne

Roches, Portage des, $v$. Chicoutimi, R.
Roce River, in the t. of St. Armand, runs into Missiskoui Bay, where its mouth forms a part of the province line. It turns a corn-mill and a saw-mill.

Roquetalllade, seigniory, in the co. of Nicolet, is bounded N. e. by Godefroi; s. w. by Nicolet ; in the rear by Aston ; in front by the St. Lawrence. -About half a league in front by 3 leagues in depth. Granted, Apr. 22, 1675, to Sieur Pierre Godefroi de Roquetaillade.

Title..." Concession en date du 22me Avril, 1675, faite au Sieur Pierre Godefroi de Roquetuillude, par Louis de au Sieur Picrre Godefroi de Roquetaillude, par Louis de
Buade Conte de Frontenac, des terres qui sont le long du Buade Comte de Frontenac, des terres qui sont le long du
fleuve St. Laurent, contenant une demi lieue ou environ fleuve St. Laurent, contenant une demí lieue ou environ
de front, à prendre depuis ce qui est concédé au Sieur de de front, à prendre depuis ce qui est concédé aut Sieur de
Godefroi son pére, au dessons des. Trois Rivierres, en montant, jusqu'aux terres de la Seigneurie de Nicolet, avec trois lieues de profondeur."-Cahiers d'Intendance, No. 2 à 9 , folio 152.

Rose, à la, in the S . of Côte de Beaupré. This little r. joins the Ste. Anne.

Rouert, river, in the S . of Lauzon. Riviere Rouert is formed by the junction of Ruisseau des Prairies with several small streams, and running through the $\mathrm{N} . \mathrm{w}$. angle of the S . it falls into the St . Lawrence in the front of the first range

Rougemont, mountain, $v$. St. Hyacinthe, S.
Rouge River, in the co. of Ottawa, rises in some lakes north of the т. of Grenville, about 40 or 50 miles from its mouth. It traverses Grenville to its front range, where, at lot 22 , it falls into the $\mathbf{r}$. Ottawa about 11 mile above the r . Calumet. Its bed lies amidst abrupt mountains and rocky cliffs, and its waters consequently rush down with tumultuous rapidity. It is about 4 chains wide and not navigable except for the canoes of the Indians, who go into the back country for the purposes of trade. It is well stocked with fish.

## $R O$ U

Rouge, river, in the S. of Lauzon, rises in the S. of Gaspé, and runs into Lauzon, where it enters the Beaurivage in the concession called stc. Elizabeth.

Rouge or Red River, rises in the rear part of Rawdon, and in the front of that T . is joined by the r. Blanche descending from the r. of Kildare; it then turns Dugat's mills; after which it takes a small circuit in Kildare and enters the aug. to Lavaltrie, where it falls into the r. L'Assomption a little above the r. Lac Ouarcau, from which it is not separated above one mile for 18 miles above its mouth. On this r. is a place called Les Dalles, from a singular contraction of the river, whose banks, for some distance on each side, are perpendicular rock 30 to 40 ft . in height. The current necessarily glides through these narrows with unusual rapidity and is much increased, in the spring and fall of the year, by the additional volume of water which passes down, with the precipitancy of a cataract, until it bursts from its fetters at the foot of the Dalles and meanders along its more natural bed.

Rouville, county, in the district of Montreal, is bounded n. w. by the river Richelieu or Chambly, together with all the islands in that river nearest to the county; E. and N.E. by the counties of Missiskoui and Richelieu; and s. by the s. boundary of the province. It comprises the seigniories of Rouville, Chambly East, Monnoir and its augmentation, Bleury, Sabrevois, Noyan and Foucault.-Its extreme length is 42 miles and its breadth 9 , containing 384 square miles. Its lat. on the river Richelieu is $45^{\circ} 18^{\prime} 30^{\prime \prime} \mathrm{N}$. lon. $73^{\circ} 15^{\prime} \mathrm{w}$. It sends 2 members to the provincial parliament and the place of election is at Ste. Marie de Monnoir.-This county, in soil and surface, resembles the county of Chambly and is generally level, with the exception of the two conspicuous mountains of Rouville or Mount Beloeil and Mount Johnson.-This co. is chicfly watered by the r. Chambly, which forms its $w$. boundary, and by the Rivière des IIurons, Ruisseau Barre, Rivière du Rapide, and South River.-It is traversed by numerous roads presenting handsome and flourishing settlements, especially along the banks of the rivers. The most worthy of notice are Kempt Road, leading from St. John's to St. Armand, and another road that leads through Philipsburg into the United States.-This co. has

## R O U

many corn and saw-mill establishments and is highly productive in grain of every kind. The northern section is peopled by Canadians and its southern is chiefly inhabited by Americans, Scotch and Irish. It contains the parishes of $s_{t}$. Hilaire, Pointe Olivier, St. Jean Baptiste, Henryville. Georgeville, and St. Thomas.

## Statistics.

Rouville, seigniory, in the co. of Rouville, is bounded N. E. and E. by St. Charles and St. Hyacinthe; s.w. by East Chambly; in front by the R. Richelicu.- 2 leagues in front by $1 \frac{1}{2}$ in depth. Granted, Jan. 18th, 1694, to Jean Baptiste Hertel, Sieur de Rouville and is now the property of J. B. M. H. de Rouville, Esif.-This tract contains land of so good a quality that nearly the whole of it is in a very advanced state of improvement, principally in tillage. The concessions are divided into 8 ranges, all running nearly parallel to the $\mathbf{k}$.: they are watered by several small streams, besides the Rivière des Hurons, which is one of considerable magnitude: these ranges are subdivided into 380 farms. Some parts of the $S$. are favourable to the growth of hemp. All the lands are conceded with the exception of certain pieces situated in the rear of the conceded lands, and of sufficient extent to increase the depth of those lands 30 arpents, and the proprietors have the liberty of purchasing them, but they are not calculated for new settlements. No concession was granted previous to 1759 .-The principal rivers are the Richelieu, the Riviere des Hurons and the Ruisseau de la Montagne, on which the
mills are built ；there are also many small streams， one of which is so rapid as never to be frozen in winter．Col．de Rouville＇s mills on the slope of the Rouville Mountain are of much use to several of the neighbouring parishes．There are 3 ferry－ boats over the Richelieu and 8 sols are charged for every description of carriage．－The roads along the bank of the Richelieu and on both sides of the r．des Hurons are good；there are also two that take a southernly direction and open a direct communication with the river Yamaska． The cattle is of the Canadian breed，and agri－ cultural labour is performed with oxen as well as horses．－Mount Rouville，sometimes called St．Hi－ laire，Chambly or Beloeil Mountain，is between the 2 nd and 3 rd ranges and is well worthy of re－ mark on account of its height，its form，its extent， and the points of view afforded from its summit． It is composed of seven mountains and extends over nearly $2 \frac{1}{2}$ leagues square．On the south side the acclivity is gentle，but in the opposite direction it is very steep and abrupt．On the summit of this mountain there is a beautiful little lake of fine clear water about one league in cir－ cumference，from which a rivulet flows in a pretty winding stream into the Rivic̀re des Hurons． The slopes of the Mount are in many places broken by woods that greatly increase its picturesque beauty．The table rock at the summit of the
cone has been ascertained to be 1,100 feet above the level of the river．Its access is extremely tedious and difficult，but none will look back to their fatigues with regret when they behold，from this exalted point，the most extensive scope of country that can be embraced at one view from any spot in Lower Canada；soaring as it were above the magnificent valley，from which the mountain rises，the tourist catches at a glance all its numerous beauties，traces the Richelieu from its outlet from Lake Champlain to its confluence with the St．Lawrence，which is also discerned at various points，till its surface is distinctly seen before Montreal．The city and the mountain could almost be sketched，so clearly are they vi－ sible from the cone．To the eastward the pro－ spect is partially intercepted by one of the hills forming the group．It is said that in very clear weather，with the aid of a telescope，the town of Three Rivers can be discovered to the n．E．， and to the s ．the settlements of Burlington，on Lake Champlain，in the State of Vermont．－ This S．is divided into two parishes；the Parish of St．Hilaire belongs to Mr．Rouville，and the church stands in front of Mount Rouville．－The Parish of St．Jean de Baptiste is s．of the Mount and its church is nearly in the rear of it．It has a village containing 25 houses．This parish is more numerously settled than that of St ．Hilaire．

Title.-" Concession du 18me Janvier, 1694, faite par Louis de Buade, Gouverneur, et Jian Bochart, Intendant, au Sieur Jean Baptistc IIcrtel, Siew de Rourill', de deux lieues de terre de front avec une lieue et demie de profondeur, joignant d'un côté la terre de la scixncuric de Chambly, en descendant la rivicre Richelin: de hatre cité les terres non-concédées du cité du Fiud de la dite rivière Richeliew."-Régistre d'Intendonce, No. +, fotio li..

Rover's Water, a stream in the t. of Standon. It runs into M'Carthy's River.

Roxton, township, in the co. of Shefford, lies between Milton and Ely and is bounded in the rear by Acton and in front by Shefford.-The southern moiety has been surveyed and granted. The land is good and if cultivated would prove fertile. The low land is rather wet, but not unfit for tillage, as it produces some of the best species of hard, black wood. Branches of the Yiamaska and several other streams water this township, which contains only a very few settlers.Lingranted and unlocated, 12,000 acres.

Rum River, near Lake S't. John, is a pretty little stream, that empties itself n.w. into Lake Noh-oui-loo, an expansion of the $\mathbf{r}$. Peribonea. The timber on the banks of Rum River is white birch, red and white spruce, and a few pines. The banks are low and covered with wild hay in great abundance.

Rupert River empties itself into Hudson's Bay, carrying the waters of the great $\mathbf{L}$. Mistassin or Mistissynis. This river is considerably larger than the Saguenay.

Ressell-Tuwn, i. Beauharnois, S .
Rynbat Lake, lies in the s.w. corner of the T. of Stoneham; its waters are discharged into Lake $\mathrm{S}_{\mathrm{t}}$. Charles by a connecting stream.

## S.

Sable Lake, or Lac des Sables, is about 90 miles up the r. aux Lievres. Here a private fur-trading post is established, and at the outlet the Hudson's Bay Company have also a post. From the outlet of the lake to the entrance of the au Lievres, 25 miles, several clearances and settlements have been made, and mills have been erected by Mr. Bowman. Here a Mr. Fisher has a farm and is doing well: he purchased of Mr. Wright, about the year 1818, a bull, a cow and a heifer, which he drove from the $\mathbf{T}$. of Hull to his farm on the borders of this lake which is large, navigable, and in much repute for fishing.

## SAG

Sable, au, river, in the S. of Pointe du Lac, runs in a very devious course into the St. Lawrence after watering the village of Pointe du Lae.

Sables, au, river, runs into the N . side of the Saguenay.

Sabrevols, scigniory, in the co. of Rouville, is bounded e. by Stanbridge; w. by the r. Richelieu ; N. by Bleuric ; s. by Noyan.-2 leagues in front by 3 deep. Granted, Nov. 1, 1750, to Sieur Sibrevois, and is now the property of Gen. Christic Burton. Between this S . and that of Bleurie there is a great resemblance in situation and quality of land; the swamps are perhaps rather more extensive in Sabrevois than in Bleurie, but here and there some patches of fertile good soil are met with, and many of greater extent might be added by draining, which could in several places be performed with little labour or expense. -The Fillage of IIenryville contains about 20 houses, 10 of which are two stories high ; there is also a saw-mill.

## S A G

Saguenay, river, called by the Indians Pitchitauichetz, is formed by two outlets of Lake St. John, the Grande Decharge and the Petite Decharge, which are separated by Dalhousie Isles and Grande Isle, which lie at the eastern extremity of the Lake. The junction of these outlets, 3 leagues from L. St. John, supplies the first waters of the important r. Saguenay, which runs eastwardly to the St. Lawrence, into which it falls at Pointe aux Allouettes, about 5 miles below Tadoussac and 35 leagues below Quebec, after a course of between 50 and 60 leagues. The $\mathrm{Sa}-$ guenay is interrupted in its course by abrupt precipices, over which it dashes its foaming current, and being bounded by banks of great elevation, is remarkable for the depth and impetuosity of its flood, which runs through a section of rocks from 200 to 1000 ft . in height.-The width of the Saguenay is always considerable, though, like other rivers, it varies; for 10 leagues above $\mathrm{Ha}-\mathrm{Ha}$ Bay it is a quarter of a league wide, below HaHa Bay to Tadoussac it averages half a league, and at its mouth it is from 60 to 70 chains.The depth of the Saguenay at its mouth in midchannel has not been ascertained; Capt. Martin could not find bottom with 330 fathoms of line. At the distance of one hundred fathoms from the shore vessels anchor in twelve or fourteen fathoms, and the bottom is good. About two miles higher up it has been repeatedly sounded from 130 to 140 fathoms; and from 60 to 70 miles from the St . Lawrence its depth is found from 50 to 60 fa-thoms.-The impetuous torrent of the Saguenay when the tide is low is sensibly felt in the $\mathbf{S t}$. Lawrence, which for a distance of many miles is obliged to yield to its impulse, and vessels, apparently going their course, have thereby been carried sidelong in a different direction.-Above 30 rivers pour their tributary waters into the Sa guenay, twelve of which at least are navigable for canoes and some of them for large boats.-The navigation of the Saguenay is a subject of great importance to the future settlement of the extensive section of country watered by it and its numerous tributary streams. Its course, notwithstanding its magnitude, is rendered very sinuous by the many points that project from the shores. In winter the river is frozen from Chicoutimi to the Isles St. Louis from Dec. 10 to the 10th or 20th of May, and the navigation closes about the end of Oct.: the port of Tadoussac is open

## SAGUENAY.

2 or 3 weeks earlier than that of Quebec and closes as much later. The general bearing of the Saguenay from its mouth is w.n.w. On leaving the harbour of Tadoussac to enter the Siaguenay the most common course is N. N. W.; above the islands of $\mathrm{S}_{\mathrm{t}}$. Lewis a w. N.w. course is to be followed. From the harbour of St. John to reach Cap al l'Est to the river Caribou the course is north, thence to La Rivière du Moulin which is half a league from Chicoutimi the course is w.s.w.; leaving this place for Chicoutimi the course is N . The saguenay is navigathe for vessels of any size for a distance of about twenty-two or twenty-three leagues to Ha-Ha Bay, which is a good harbour ; and thence for five or six leagues to Chicontimi the river is navigable at high water for vessels of large dimensions. Relative to the navigation of the Saguenay Mr. Nixun says, "That not more than ten sail can ride in safety in the harbour of Tadoussac; at low water a ship can be brought close in shore, for it descends at once. At spring tides the bank is quite dry; the water rises at the highest eighteen feet in spring and fall tides, but commonly twelve in the summer. In l'Ance a Catharine there is a distance of three quarters of a learue formed by the point or Battures aux Allouettes and the point of the Saguenay ; this forms st. Catharine's Cove which is from two to thirty fathoms deep. Thirty sail can ride in safety from the westernly winds: one-third of the tide out, there runs in a pretty tolcrable swell with in south-east wind. Ships of the line can sail up as far as Rocky Point, which is four leagues from Chicoutimi ; at low water they can beat up, although the wind may be contrary, having the flood in their favour; but there are only two places of anchorage for them, between St. Catharine and Rocky Point, and between St. John's Bay and Ste. Marguerite ; the former six, the latter five leagues from Tadoussac. There are many harbours for schooners from sixty to eighty tons, and they can carry their fastenings ashore should they not find anchorage. Vessels of eighty tons can sail up at high water and anchor close to the Big Rock at Chicoutimi: they must tide it up from Point aux Roches, owing to the rapids and shoals of that part of the river. The harbour for vessels at Chicoutimi is to the westward of the Big Rock, opposite to the landing-place: they can drop their anchors and haul the vessels dry ashore. From Ste. Marguerite upwardsthe current is hardly
perceptible in high waters in spring and fall. The tide runs up to the foot of the falls of Terres Rompues, which is about two leagues farther than Chicoutimi : it rises about fifteen feet. The Big Rock is at least twelve feet high, and the waters have been seen to be three fect above it."
-The Grande Decharge, on the eastern side, is a rapid stream navigable only for canocs, and cvon in these dangerous to all but the most experienced canocmen--The prevailing winds on the Sagucmay are the N.E. and N. W.; and the most common is the $\mathbf{N} . \mathrm{w}$. , which sometimes blows with frightful violence. The $\mathrm{N} . \mathrm{w}$. is the l ,st wind for coming down the river ; to ascend it a N. e. wind is wanted. It is said that other winds are imperceptible.

Soil, climate, and capability of settlement.-The desire of the provincial government to effect settlements in the Saguenay country has been cvinced by the late explorations of the river Saguchay and Lake St. John, and by the evidence which was called for by the committees appointed by the legislature for that purpose. The result of all these inquiries has produced a knowledge of the capabilities of the country and of its probability of settlement, hitherto unattainable. It is now nearly three centurics since the first exploring survey of the riversugucnay took place. The expedition consisted of eight barks and 70 men, under the command of Mons. Roberval, at that time the French king's licutenant-general in the countries of Canada, tagucnay, and Hochelaga; they sailed from Quebec 7th June, 1543. All that is known of this voyage is, that eight men and one bark were lost. The reecent surveys have been made, fortunately, with complete success and in perfect safety. The marvellous and astonishing tales related of the Saguenay have been disproved; its connavigable current, its immeasurable depths, its tempestuous hurricanes, its inaccessible and dangerous rocks, its destructive eddies and whirlpools, have been clearly proved to be falbulous. The whole trat of the Sigumaty country has been sufficiently explored to warrant the assertion that it is, in numerous places, susceptible of settlement and offers a wide and promising field for agricultural speculation, particularly if undertaken on a large scale, for the immediate settlement of the $\mathrm{Na}_{\mathrm{a}}$ guenay can be undertaken only by government or by individuals of colossal furtunes, for, without considerable advances, such persons as those by whom

SAGUENAY.
new settlements are generally formed could not plant themselves there, notwithstanding the advantages which the territory offers. The eventual settlement of this section of the province will, however, be effected, even without the aid of government or companies, although its progress must be very gradual and slow, for since rival trading companies have got to be neighbours, the trade is of little value to any one except the Indian, perhaps, who in consequence receives less harsh treatment and often a higher price for his furs from the party most anxious to traffic with him. The whole Indian population will soon be extinct, and the trader finding no occupation will be forced to take to the plough in order to raise corn enough for his support, a change which is already visible at several of the posts.--The climate of the Saguenay is good and similar, if not better, than that of Quebec, although the autumnal frosts are felt there earlier: the climate is, however, inferior to that of Lake St. John, where the frost is said to commence from 15 to 20 days later. At Chicoutimi the land is fit for tillage in May, and strawberries have been eaten there on the 17 th of June.-The soil in the immediate vicinity of the Saguenay is various, and the banks, which rise in many places perpendicular with the surface of the river, are frequently very rocky and immensely high, being from 170 to 340 yards above the stream. From Tadoussac to Ha-Ha Bay a continuous chain of high mountains incloses the river on both sides, occasionally presenting capes and promontories projecting into the river. The N . shore of the Saguenay seems to afford but little land susceptible of culture. From Tadoussac to la Boule, about 2 leagues, the land is high, rocky, barren, and the banks nearly perpendicular. From Halfway Bay to 4 leagues above C'ap à l'Est is an iron-bound shore embanked by a succession of rocky barren hills, exhibiting fractures seldom equalled for boldness and effect, which create constant apprehension of danger, even in a calm. The lands decline in height and are level and of the best quality from Rocky Point, three leagues below Chicoutimi, as far as the Point of Broken Lands about two leagues higher up. The lands in the rear are level for the distance of 6 leagues. From the Point of Broken Lands as far as lake St. John, 25 leagues, the land is level and of the best quality. From Rocky Point as far as
the Point of Broken Lands there are five leagues of beach bordered by considerable meadows called Les Prairies, where the inhabitants of Chicoutimi cut their hay : here the soil is chiefly clay, but on approaching the hills, which are rocky and unfit for settlement, there is a rich vegetable mould. The extent occupied by the inhabitants of the Post is about 15 or 1600 acres, on which there is very little timber, and at least 20,000 bundles of hay might be annually made.-The southern shore is more fit for agricultural purposes than the northern side. From Trinity Bay to the Petite Saguenay, 15 miles, and thence to $\mathrm{Ha}-\mathrm{Ha}$ Bay, the hills are abrupt and barren, but not so elevated as those on the opposite shore. The two most promising places of settlement, however, are Chicoutimi, which is described in its proper place, and $\mathrm{Ha}-\mathrm{Ha} \mathrm{Bay}$ : the latter appears to be destined by nature as the principal seat of the commerce, trade and agriculture of all the Saguenay country, for the following reasons: 1st. For the extensive tract of level land, that lies about it and extends to Lake Kiguagomi and Chicoutimi. 2dly. For the harbour it affords for the largest vessels of the line, which can sail directly into the bay with nearly the same wind by which they ascend the Saguenay, and anchor in the second bay, which is in the shape of a basin and which would be a fit site for a mart of trade. 3dly. The facility that is afforded of opening a road to Chicoutimi or direct to the head of $\mathbf{L}$. Kiguagomi ; and the easy practicability of a water-communication between it and that lake, which would render unnecessary the intricate and circuitous route of the Chicoutimi River, the difference of level not exceeding 250 feet in a distance of 42 to 5 leagues through the level tract that lies between these places. It is protected by Cap à l'Est and the prominent hills that form its entrance, while the former, rising to about 500 feet in height, commands a view of about 12 miles down the river, and guards, with West Cape, the entrance into the upper part of the Saguenay. The environs of $\mathrm{Ha}-\mathrm{Ha}$ Bay are lower and more level than the coast downwards to Trinity Bay and are capable of receiving a certain degree of population: the highest land does not exceed 150 feet above the river, and its acclivity is scarcely perceptible. The soil is composed of blue and gray marl.From Pointe Brulée to Chicoutimi, 15 miles, the land is good and level and is watered by 3

## SAGUENAY.

beautiful little rivers, called à l'Hette, au Moulin, and aux Rats Musquis. At Chicoutimi the land is good and fit for cultivation, and for 2 leagues upwards the shore, to the depth of half a mile, exhibits an horizontal surface and land of excellent quality. At the mouth of some of the small rivers which fall into the sugumaty and in some of the bays are desirable spots for good farms; also for a short distance above and below the month of the sumumay, on the st. Lawrence, under the high lands there is good soil for about 150 farms, with the advantige of salt, wild hay, fish, wild fowl and other game.

Timfer.-All the old timber on the northern shore was destroved lo, fire of years since, and the new vegetable colony has not yet attained to full growth. The timber on that side as far as Pointe aux Roches, and on the south side as far as $\mathrm{Ha}_{\mathrm{a}}-\mathrm{Ha}$ Bay, is only small, stunted red pine, growing here and there, of which no use can be made. At Hat-Ha bay the timber is maple, cherry, ash, clrit, poplar, pine, spruce, \&c. On the marly shore of the Gagucmay, in the vicinity of Chicoutimi, no timber is to be seen, although a better soil is not easily met with. For 2 leagues above Chicoutimi the timber grows on a claycy, loamy soil, and consists of spruce, black birch, pine, fir, cedar, ash, and elm.

Minrruls.-Moulin Baude is remarkable for its statuary marble. In the small eminence on which Tadoussac stands are layers of iron-sand, and at the mouth of the Rivicre des Vases some fine specimens of red marble have been found.
Animals.-The quadrupeds are exceedingly rare, much more so than in the settled parts of the country. The Indians, having long hunted for the fur instead of the carcass, have destroyed almost every living animal. The porcupine and the white fox are the only quadrupeds not commonly met with about Quebec. Several years have elapsed since the carcass of a beaver has been brought to Tadoussac. For many years after the discovery of this country the walrus was common about the Saguenay, but it is not now to be seen in the gulf or river: from this animal the Pointe aux Vaches, about a mile from Tadoussac, takes its name.
Birds.-The land birds are rare; a variety or two, not common at Quebec, have been seen. The perdrix blanche (the ptarmigan), which changes its colour like the Canadian hare, is oc-
casionally met with on the hills. Water-fowls are extremely numerous, particularly those of the diver kinds; among them is the Petit Bonhomme, a beautifully shajed duck not much harger than the suipe. The bature aux Allmettes is the resort of larse flocks of the different species of on lides.

Bw, - The fivh in the sagucnay are the gibard, prorpise, sturgeon, seal. salmon, salmon-troni, pike, white fish, pickerel, trout, coul, several kinds of herring, smelt, \&c. The gibard or bot-the-nosed whale of a small size never ascends above (ap a l'Mst it incmeally swims within a few rods of the Prisi of Tadunssace, and some of the larger specics are somecimes harpmed opposite, but the occupation of taking them is nearly abundonet, and only two or three schooners have visited the river for the purpose in as many yeros. A considerable number of porpoises ascend the river as high up as Pointe aux Rowhes. The seal is still frequently seen, but it has much diminished in numbers and has become wild; about 200 were killed by the Indians of the l'ont of Tallonssac in the winter of 18226 : there are six or steven varictics of these amphibia on the coast ; one is said to grow to the enormous length of if lect. The number of salmon taken is much less than formerly; only 3 ,ow are amnually caught in the whole extent of the King's Powts, including the Saguenay and its tributaries as far as Chicoutimi. June and July are the months for the salmonfisheries, which are estalished at the mouths of the rivers in the bays of IIa-Ha, ste. Marguerite, St. John, and st. Stephen. The codfish, once so common, is now seldom caught and then only at Tadoussac. The trout taken in deep water are very small.
Binys, (ines and Hurbours.-Anchoring Ground is a fine bay, about $\boldsymbol{f}_{\mathrm{m}}^{\mathrm{m}}$. below the r. Belle Fleur and affords shelter from the w. and s. w. winds. The depth of water varies from 2.5 to 40 fathoms. The bottom is supposed to le sandy.-Aluse a la Barryue, on the side of the river, about 2 miles from its mouth, is a growd harbour for boats.Ansir des Fimmes. The river is here about half a league broad and its shores are formed of high abrupt rocky hills; ncar the Ruisscau des Femmes they rise in conical shapes to near 400 to .500 feet elevation, thinly clothed with the stinted spruce, white birch and red pine.-Baie à l'trirm is a good harbour,' opposite La Trinité--iaie a la Grosse Roche is a good harbour for shipping.-

## SAGUENAY.

Baie des Cascades. The river has been measured at this place and found to be about 50 chains wide.-Baie des Echaffauds or Basques, near Pointe $a u x$ Bouleaux, is about a mile deep and surrounded by hills. At its entrance are two rocky islands, the largest thinly timbered with fir and white birch.-Baie des Foins, a little below the Post of Tadoussac, is a natural meadow of several acres, lying at the base of the mountains which here retede for a short distance from the river. The soil is a clayey alluvium and, as its name indicates, wild hay grows upon it, which is annually cut.-Baie des Ruchers. A considerable shoal and reef of rocks render its entrance dangerous at low tide; a small stream enters it from between the mountains.Buie du Rude, a very good harbour.-Big Rock Cove, opposite St. Stephen's Cove, is a good harbour for vessels, \&c.-Descente des Femmes is a bay on the $\mathbf{N} . \mathrm{E}$. side of the river, at the head of which is a small rivulet. It forms a good harbour for ships and lies about 42 miles from Tadoussac. It derives its name from the melancholy adventure of some Indian hunters, who, being reduced to the last extremity by hunger, sent their squaws in search of assistance and the women issued from the woods at this place. It lies in lat. $48^{\circ} 29^{\prime} 9^{\prime \prime}$ and lon. $70^{\prime} 11^{\prime}$, and the tide rises about 17 feet. -Ha-Ha Bay or Baie des Has, called by the Indians ITeskurterka, is on the s. side of the river and so perfect in its resemblance to the main channel of the Saguenay, that voyagers are often misled by its appearance. There are various opinions as to the origin of its name, but the most prevalent opinion is, that it is thus called on account of the sudden bend here formed by the river; this unexpected detour induces the voyager to exclaim $\mathrm{Ha}-\mathrm{Ha}$ ! being struck with surprise at seeing the opening of a new prospect. This bay, the point being doubled, is about 7 leagues from Chicoutimi, from which it is separated by a tongue of land 15 miles in breadth; it is 19 leagues from the mouth of the river. The outlines of this bay form a basin $2 \frac{1}{2}$ leagues in width and about 7 , or as some assert 9 , miles inland. The anchorage, which is very good, varies from 15 to 35 fathoms, and the bay forms a harbour in which vessels of any size would find complete shelter from all winds. The land in its vicinity is good and fit for cultivation, and the bay is bordered by prairies of considerable extent. Into the head of the bay the rivers Wipuscool and Vasigamenké run from the
north. In the middle of the bay is a small rock which forms a little promontory on the north side. $\mathrm{Ha}-\mathrm{Ha}$ Bay is supposed to be destined to become, in course of time, the entrepot of the Saguenay. -Hay Cove, or Anse aux Foins, a little above Ottapeminche Cove, is a good harbour for schooners. -Ottapeminche Cove, a little above Big Rock Cove, is a good harbour for boats.-Paddle Cove, on the s . side of the river, lies opposite the Trinity and is a good harbour. A league higher up on the same side is Little Paddle Cove, a good harbour for canoes.-Passé Pierre, about 3 leagues from Tadoussac, is a good harbour for schooners, sheltered from the $\mathrm{N} . \mathrm{w}$. and s . $\mathbf{w}$. and is a good fishing station ; nearly opposite are some small islands. —Pelletier's Bay, at a place called The Portage, the Saguenay is here 2 miles wide. In the w. part of this bay are 2 small islands, and on the $\mathbf{N}$. $\mathbf{E}$. side is the mouth of the r . Pelletier. It is a good harbour for vessels.-Ste. Cathcrine's Cove, in the mouth of the river and on the $s$. shore, would hold 50 vessels, which would be sheltered from all winds except the west.-St. John's Bay, on the s. side of the river, is 9 miles from the r. Ste. Marguerite and 21 from Tadoussac. It is about 3 miles wide at its mouth and extends 2 miles inland; its width at its head is very little less than one mile. In the $w$. part of it is a small island, and in the $w$. part of the head of this bay the anchorage is very good and there is good shelter from all winds; there are also several battures on which 6 or 700 bundles of hay might be cut. The land here appears susceptible of some cultivation, and the environs produce hay. There may, on its banks, be about a league in depth of culturable land (the slope of which is sufficiently gradual) lying between the bay and the highest part of the mountains. The soil consists in great part of blue and gray marl. About 16 or 18 miles in the interior there are considerable tracts of maple land, and the land appears very fit for cultivation and sufficiently level. A river from 2 to 3 chains wide falls into the w. side of this Bay; it is very rapid and runs in a rocky channel, winding through a valley of about one mile wide, lying between two rocky banks, nearly parallel to each other. The soil in this valley is very good. The general course of this small river is from the s.w. In this bay is a fishing station.-Ste. Marguerite Bay is on the N. side of the river; a reef of rocks is seen to stretch across its mouth at low water:

SAGUENAY.
at high water it is a safe harbour for schooners. There is but a small space of culturable land on the N . side of the bay, part of which crumbles down upon the beach and forms long battures of sand. Leaving the bay the river contracts to less than a mile.-St. Sto hen's Cove, about 2 lugucs from La Boule and 3 from Tadoussac, is a good harbour, sheltered from the N . w . It is about $1!$ mile wide. The lessee of the posts has established a salmon fishery here. About 20 families might find means of subsistence in the neighbourhood of the cove. The sun-shine glistens on the surface of the rocks which surround it. - Tuloussac Harbour is on the N. $\mathbf{E}$. side of the mouth of the river; it is sheltered from almost every wind and is very deep. It is situated in lon. $69^{\circ} 13^{\prime} \mathrm{w}$. and lat. $43^{\prime \prime} 644^{\prime \prime}$ The capaciousness of this harbour is variously represented; some persons think that it could not contain above 5 or $i f$ vessels and even these would be under the necessity of carrying anchors ashore; while others assert that it is capable of affording shelter and anchorage for a number of vessels of a large size, and that 95 ships of war might ride in safety. The highest tide rises 21 feet. The company holding the King's Posts have a post here for carrying on their trade with the Indians; it comprehends nine buildings employed as stores, shops, \&c. besides the post-house, which is 60 feet by 20 , and a chapel of 25 feet by 20 . A missionary visits this post every year and passes some time. The only place of residence here is erected on a bank of sandy alluvium, elevated about 50 feet above the river, forming a flat terrace at the base of the mountain which suddenly emerges at a short distance behind. This residence is a neat one-story building of commodious size, having a very tolerable garden, which, with other cultivated spots about the place, produces the vegetables for the inhabitants of the post. The scenery of the post, as viewed from the river in coming up the harbour or doubling the point of L'Islet, is particularly pleasing. The traveller beholds with pleasure the red roof and spire of the chapel with the surrounding buildings, and the range of small field-pieces on the edge of the plain which extends to the foot of the mountains that rise to a considerable height, in many places discovering the naked rocks, or exhibiting the destructive effects of the fire that has thinned the woods which clothed their summits, leaving occasionally the tall pine clipped of its branches soaring above the
divarf growth of spruce and birch that has suc. ceeded to the loftier timber. He likewise sees the beautiful growth of fir trees rising in as many cones upon the terrace, which was once the seat of the fortifications of the French, situated on the west side of the creck which runs down from the hills, whose craggy summits contrast with peculiar effect with the firs below. The harbour is formed loy the peninsula or L'Islet, which separates it from the Saguenay on the $s$. $w$. and the main shore on the N . s ., about a third of a mile across and near half a mile in depth at low water, which rises 21 feet perpendicular in $5!$ hours tide. The beach, on which there are extensive salmon fisheries, extends out a considerable distance, materially contracting the dimensions of the harbour ; it is, however, secure and under shelter by the surrounding hills from most winds generally prevalent in the St. Lawrence, except the southernly gales which may affect vessels at flood tide, as the small White Island and Batture-aux-Allouettes are then covered and which shelter them at ebb tide. The entrance of the channel to the harbour of Tadoussac, or to the Sisumay, is intricate at the ebbing tide and for vessels descending the St. Lawrence, which must come almost abreast of the light-house on Green Island, bearing s. E. from the harbour, and then pass to the north of White Island at the extremity of the Shoal-auxAllonettes and clear at the same time the shoal which sets out some distance from the N. e. point of the harbour: it is far less intricate for vessels coming up from below. A light-house placed upon Red Island would very essentially facilitate the entrance into the harbour of Tadoussac, and would at the same time indicate the course to make the north channel of the St. Lawrence. The harbour is open for vessels and free from ice from May until the middle of December. At Tadoussac there is nothing calculated to arrest the eye of the agriculturist. Previous to the establishment of a colony in Canada, this place was frequented for the purpose of carrying on the fur trade. The ice forms here much later than at Quebee and disappears much earlier, which is occasioned by the extreme depth of the waters which are much more salt than to the southwards, and by the prevalence of N . $w$. winds in spring and fall, which drive to the southwards all the broken ice which is formed at the mouths of the fresh water rivers. Fide Vol. 1.p. 991.—Trinity

## SAGUENAY.

Bay, 14 miles below Cap à l'Est, extends $1 \frac{1}{2}$ mile inland and is about one mile wide at its mouth and 1 mile wide at its head; it is bounded w. by very high rocks and e. by rocks of less elevation. This bay is a safe harbour in all winds and the anchorage is very good; the depth of water varies from 10 to 30 fathoms. Near it is some culturable land, the hills sloping gradually to its maresin. At its entrance Cap la Trinite rises to an elevation of not less than 800 feet, and part of it is cut perpendicularly with the surface of the Saguenay and its summit juts considerably over its base. Here the tide rises 21 feet perpendicular.

C'apes.-C'ap a l'jest or East ('ite, is about 18 miles Lelow Chicoutimi. Its base in some places presents the abrupt face of the cliff, and at others the broken masses of granite rock that crumble from the summit and are irregulaty heaped together, among which a fiw dwarf spruce and white birch attain a stunted growth-Cap à $l$ Ouest or $W_{\text {est }}$ Care, is opposite C'up al l'Est ; here the width of the river is contracted to 48 chains. -Cap de la Trinité, 3 miles above sit. John's Bay, is so called from 3 small peaks on its summit. It is at least 700, and Mr. Lateriére suys 1:00, feet high and its top very much overhangs its base, and few travellers can pass under its impending dome without feeling the insignificance of man when compared with such enormous masses poised on a just equilibrium by a power that forcibly awakens the idea of a divinity. Between this cape and another to the $s$. is a pretty little bay, into which runs a river one arpent wide, where the proprietor of the Posts has a salmon fishery, but where the culturable land is not sufficiently extensive to induce the laborious agriculturist to settle.-Cap Diament or Diamond Cape, is nearly opposite St. John's Bay.-Cap St. Freisçois is a good harbour $1 \frac{1}{2}$ mile from the mouth of the r. Caribou.- (ap St. Joseph is $2 \frac{1}{2}$ miles from Cap St. François and is a good harbour.

Islunds.-Barthelemy Isle, also called Cocquert Isle, in honour of the missionary whose tombstone is still in the church at Chicoutimi, is half a league above the mouth of the Little Saguenay river and forms a good harbour.-Isle St. Louis, half a league above the $\mathbf{r}$. Ste Narguerite and about 7 leagues from Tadoussac, is on the s. side of the river. It is a large oblong mountain with no traces of vegetation, except moss and small
trees that grow in the crevices. It is aboat one league long and about a quarter of a $a$ league wide. It is said to be the first place that affords anchorage from Tadoussac, affording a safe harbour under shelter of the hill, where vessels may be moored in perfect security. Half a league to the $\mathrm{N} . \mathrm{w}$. is another circular rock surrounded by the waters of the Saguenay, also called Isle St. Louis, on which there is not a single tree. Some persons assert that there are $\mathbf{3}$ islands of this name, all lying together, and say that the one nearest to the mouth of the Saguenay is the largest and is about half a mile in length, on the $s$. side of the river, and that its s. e. end is about $13 \frac{1}{2}$ miles from the mouth of the river; and that the two others are much smaller and lie near the N . shore. The Saguenay is here about $1 \frac{3}{4}$ mile wide.

Points.-Pointe aux Bouleaux or White Birch Point, lies on the s. $w$. side of the river, about 4 or 5 miles from Tadoussac. It is a piece of low, level and exceedingly rich land, forming the w. bank of the Saguenay at its junction with the St. Lawrence. It is bounded N . w. by the little river aux Canards or Duck River, on which mills might easily be erected, and a brook empties itself n. e. into St. Catherine's Cove ; this tract is otherwise well watered, and a small lake fed by a spring lies a few arpents from the St. Lawrence. The point forms an irregular square, extending $\frac{3}{7}$ of a league in front by one in depth, where it is bounded by the most desolate and arid mountains. The interior of this point is marshy and the timber, with the exception of its borders, is nothing but small gray spruce ; on the borders are white birch, from which the point derives its name, also sapin, cedar and ash of tolerable size. This spot certainly offers very strong inducements to the settler, such as would instantly secure its occupation if granted. The principal plot of culturable ground may be said to be about 9 miles in superficies, on which 60 or 70 families or 40 souls might find subsistence and comfort. In its present condition an Indian family of 4 or 5 persons forced to stay upon it for three months successively, at any season of the year, would most certainly starve. The soil overlies a bed of clay and is composed of the usual vegetable mould, a rich loam and sometimes of a bed of sand, which together give an average depth of soil of 12 or 15 inches. This place is remarkable for the quality of its clay and its iron ore, chiefly magnetic iron
ore. The clay at Pointe aux Boulcaux and Pointe aux Vaches, the two outermost tongues of the banks of the Saguenay at its mouth, occurs in immense beds, of which that at the first place is about 30 or 40 feet in thickness above ground, and that at the last place probably 200 feet ; both torether extending in superficies apparently 10 or 12 miles. This clay is extremely fine in its texture, and contains a good deal of lime and some irom. It has the property of crumbling when water is thrown upon it, as unslacked lime does, and might, by merely being spread out and exposed to the falls of rain, hecome an excellent manure for a soil having an excess of acids, such as that of swamps, \&c. Sc. It is very probable that this cliy will be successifully used in the manufacture of crockery and carthenware, and the abundance of it, the vicinity of fuel, and the advantages of good harbours for export at the door of the manufacturer, would makce it extremely valuable. The reef of rechs that projecte from Pointe aux Bouleau runs about two miles out and forms a kind of half moon open to the eastward. In surias tides these rocks are entirely covered, but there is always a surf about them. At the end of these rocks there is a small sandy island never covered by water; this and the rocks are called Prime et Fatters aun . Mloucttes. The Battures are the resort of large flocks of the different varicties of ©-birds. Fish abounds, particularly salmon.-Fromh Point is a good harbour for boats, \&c. an 1 is sheltered from the $\mathrm{N} . \mathrm{w}$. - Cirme Point is a good harbour. -Lany loint is a little below Rocly Point.- Iri; te wax Rochrs is 3 leagues below Chicoutimi-linchy lount is a good harbour for canoes.

Rocti-LI: Boite or The Joll, a large rock or mountain, is so called from its shape and remarkable for is height and fora. It is $\mathbf{3}$ miles N . f . of the mouth of the Suguenay and about $\mathbf{i}$ miles from Talonssac. It forms a nood harbour for vessels aguinst the $\therefore$. w. winds, and projecting much into the river its gigemtic lase straitens it and causes, when the tice ebbs, a strong current and counter eldy. The tide rises 18 feet perpendicular and the lowest waters never leave the foot of these natural ramparts, where the depth of the water is so great that there is no anchorase. The banks of the river are here stecp, and Mir. Laterríre says from 15 to 1800 ft . high and are of primitive granite - Pictures, 4 leagues below Ha-Ma Bay, are so called because the sur-
face of the rocks is smooth and, at a distance, these rocks look like pictures. From the mouth of the Siaguenaty to $1!$ mile above Barthelemy or Cocquert Isk, the banks of the Susuenay are formed of high and steep rocks, almost all of which are of a round shape. Vide Vol.I.
saguevay, Petite, river, empties itself into the $s$. side of the Saguenar, about 4 miles below St. John's Bay. 'Though the Petite Siguenay is an inconsiderable stream, similar to the St. Charles near Quchece, it forms a good harbour at its mouth, well shelterel from all winds; the anchorase. however, is very dangerous on account of large stones scattered here and there. In the western part of the bay or harbour are two small islands, and a river which runs between two high rocks and falls into the bottom of the bay. Here is a fishiate station.

ST. Ambroise (V. and P.) , c. St. Gibhiel, S.
Nr. Anine (V. and 1'), o. Riviene du Loep, s.

St. Andrews, a village in the seigniory of Argenteuil (vide Argenteuil, S.), is allowed by all travellers to be beautifully situated and requiring only a few touches from the hand of art to render it truly deliẹhtful. It is seated on the North River that flows throush it and is navigable for steam-linats as far as the village, which is alreaty become extensive and contains 2 churches, and the erection of another for Roman catholies is in contemplation. There are several schools, a commissioner's court, numerous tradesmen and mechanies of every description, sevaral well-stocked stores and commodious inns. The natural advantages which this village posscsses, with the beauty of its situation, conspire to make it a plate of great promise ; and as the country in gencral increases in prosperity it will, without doubt, rise in riches and consequence. Sine public roads centre in this village, four of which lead direct to Montrcal, viz, the Si. Sonit, the liuier Rouge, the (ours. I'ierre, the Risurd, and irown's I alley; two roads lead to the Ottawa; and the jertch liatys and thate roads communicate with the settlements on the North liver. All these roads point to the village of St. Andrews as the most central place of that part of the county. This village is also remarkable for possessing the first paper mill built in the British provinces of North America; it was commenced hy a joint-stock company in 1804, and in the following ycar busi-
ness was commenced with very little prospect of success: a few years afterwards the present proprietor, James Brown, Esq. of Montreal, took the concern upon himself and with difficulty maintained it. The principal building is about 80 ft . long and is beautifully situated on a platform opposite the bridge which joins the two parts of the village and the mail road leading to the settlements on the Ottawa.

Ste. Anne (P.), v. Montreal.
Ste. Anne (P.), v. Varennes, S.
Ste. Anne Desplaines (P.) v. Mitle Isles.
Ste. Anne de Yabachiche (P.), v. Grosbois, S .

Ste. Anne, river, in the counties of Portneuf and Champlain, rises in the rear of Stoneham, in the co. of Quebec, and forms in the first part of its course the river Talayorle. It descends s. across the rear part of the S. of Fausembault; it then traverses Bourglouis, receiving there a considerable increase from a stream that descends in a parallel direction from fief Hubert ; it then traverses across D'Auteuil and Jacques Cartier and, cutting off the s. e. angle of Perthuis, it waters the rear portions of Deschambault and La Chevrotiére to La Tesserie, where it receives the Rivière Noire, which descends from a lake abounding with fish called Long Lake. The Ste. Anne then runs diagonally across Grondines and enters the S. of Ste. Anne, where it falls into the St. Lawrence, forming several islands at its mouth. Its course being about 70 miles and the extension of its branches about 25 miles, the river Ste. Anne may be said to drain about 1750 square miles. The course of this river is rapid and through a very mountainous country. The land near the banks of the river, following its windings and not in a straight line, is susceptible of culture for about 7 or 8 leagues; but the timber is not very good, except at some points of the river where there are some elms.-In a little isle, on which is the boundary of the fief Gorgendiére in the S . of Deschambault, and at the foot of a cataract about 28 or 30 ft . high a prodigious number of trout, of astonishing voracity, are caught with the hook and sometimes with the dart. Salmon fishing in the Ste. Anne is also very considerable and might be improved to great profit:
this fish is caught with a dart by the light of a torch placed on the prow of the boat, but as it is principally found above the rapids the fishing is dangerous.-At the mouth of this river, in flood tide, the water is about 400 yards wide and 10 or 12 ft . deep and easily admits boats and schooners to load and unload ; these craft are there protected from the ice during winter. Higher up, this r. is interrupted by many falls and rapids, by which and the shallowness of the water it is rendered unnavigable. The banks are low near its mouth, but farther up they are much higher and in some places rocky, but generally covered with fine timber.

Ste. Inne, river, in the co. of Kamouraska, rises in the $\mathbf{T}$. of Ashford and intersecting the $\mathbf{E}$. angle of St. Roch des Aulnais enters Ste. Anne; then running to the middle of the rear line it traverses the centre of that seigniory circuitously and falls into the St. Lawrence.

Ste. Anne, river, in Côte de Beaupré, rises and runs through unexplored waste lands into that seigniory, where being joined by the r. Lombrette it divides the parishes of St. Joachim and St. Fereol and falls into the St. Lawrence at the E. corner of the parish of Ste. Anne. A bridge has lately been erected over this river. The Rapids of Ste. Aune are swift and shallow, and offer serious impediments in ascending the river. There are several falls in the river, but the most celebrated are 2 miles above the village of Ste. Anne. As the traveller proceeds to visit these interesting falls, and as the road ascends a part of the way up the mountain, there are seen splendid prospects of Quebec and the adjacent country ; but without a glass, from the distance, the scenery in the back ground is rather indistinct. Having attained the level, a rough path for nearly $1 \frac{1}{2}$ mile conducts the visitor, after a sudden descent, into a most solitary vale of rocks and trees, almost a natural grotto, through the centre of which the stream rushes until it escapes by a narrow channel between the rocks, and continues roaring and tumbling with augmenting velocity. From below there is a striking view of the cataract, which combined with the natural wildness and extraordinary features of the scenery defies description; the painter alone could convey to the mind the representation with effect.

Ste. Anne or Mascouche, river, in the cos. of Terrebonne and Lachenaye, rises near the par-
tition line of Blainville and Riviere du Chenc. It runs through a part of Desplaines and Terrebonne and traverses the $S$. of Lachenaye to L'Assomption, where it makes an immediate and sharp turning backwards and re-enters Lachenaye, where it waters the village of $S t$. Hemry, and after a very meandering course in that is. falls into the R. St. Jean, or Jesus, at the N. E. corner of the S. of Terrebonne.

Ste. Anne, seigniory, in the co. of Champlain, with its 3 augmentations, is bounded N. E. by Les Grondines; s. w. by Ste. Marie and Batiscan ; in the rear by waste lands and in front by the it. Lawrence.-This property was granted as follows:

The original grant extends in front from Les Grondines to the mouth of the river ste. Amme; the augmentations extend in breadth from Less Grondines to Batiscan, equal to the breadth of the original grant and that of the $S$. of Ste. Marie. This property now belongs to the Hon. John Hall. The front of this scigniory is so low as to be inundated in the spring by the rising of the St. Lawrence, but this temporary inconvenience contributes greatly to the luxuriance of the fine meadows that border the river. The soil is sufficiently fertile, and consists of a light sandy earth on a reddish clay about the front, but towards the rear it is a mixture of yellow loam and black mould; altogether it is very productive in grain of all kinds, and most other articles of seneral growth. The quantity of land under cultivation amounts to nearly 300 lots or farms, somewhat irregularly dispersed almos the r. Ste. Ame and at the descent of a small ridge, that stretches across the $S$. a short distance from the front. V'ery little of the augmentations is cultivated; they are almost entirely in woodland, producing timber of all kinds and some of excellent growth and great value: the quality of the land, as indicated by the various kinds of wood growing upon it, is very good. Watered by the rivers Batiscan and Ste. Anne, with a few other streams of not much consequence; both these rivers are large but scarcely at all navigable. On the east side of the r. Ste. Anne and near the St. Lawrence is the Village "f Ste. Alme, containing about 40 houses, a neat church 140 ft . by 60, a parsonage-house and a
chapel; here are also a few shopkepers and an inn with good accommodations, where the stagecoaches put up, and also a post-house. At the village is a ferry, where canoes and scows are always to be had for transporting travellers, carriages, \&e. the river is here so shallow that large boats are shoved across with poles: the charge for each person is three-pence and one shilling for a horse and carriage. The property of this ferry was granted in perpetuity by letters patent to the late Hon. C. de Lanaudicre, his heirs, \&c. Owines to the inundation during the spring, the main road from Quebec is farther retired from the lank of the St. Lawrence at this plate than at most others; it passes along the ridge or eminence until it arrives near the village, where it resumes its usual direction. On both sides of the river Ste. Anne there are roads that follow its course through several seigniories to the north-east. The manorhouse, agreeably situated near the point formed by the Ste. Anne and the St. Lawrence, is surroundal by excellent gardens and many fine groups of beautiful trees.-There is one stone-built cornmill which drives 2 sets of stones.-The l'arish of Str. Anne, by an order in council of Mar 3, 172. which confirms the resulations of Feb. $20,172 \mathrm{l}$, extends $2 \frac{1}{-}$ leagues fronting the it. Lawrence, including the $S$. of Ste. Anne, $1 \frac{1}{2}$ leagte, and ${ }_{4}^{3}$ league of the $S$. of Ste. Marie, from which it extends in a straight line to the S. of Batiscan.-There is no road across the non-conceded lands in this S., nor are they surveyed. The concessions granted before 1759 were generally rented in corn and money,

## S T E

and the amounts varied.-At the mouth of the Ste. Anne lie the isles, St. Ignace, Ste. Marguerite, du Large, and du Sable, which belong to the S. ; they are low but yield fine pasture and some good meadow land ; being well clothed with wood they afford several very pleasing prospects.

Anue, situṕe aux monts Notre Dame, dans le Heuve St. Luurcut, avec une demi lieue de front sur le dit fleuve, moitie audessus et l'autre moitié audessous de la dite rivière, icelle non comprise dans la dite ftendue, sur une lieue de profondeur dans les terres."-Régistre d'Iutendance, No. 3, folio 19.

Ste. Anne de la Grande Anse or La Pocadifre, seigniory, in the co. of Kamouraska, is bounded n. e. by the S. of Riviere Ouelle; s. w. by St. Roch des Aulnais; in the rear by Ixworth; in front by the St. Lawrence.-This seigniory is one of the least in extent and wealth on the south side of the St . Lawrence. It is about $1 \frac{1}{2}$ league in breadth, and 11 league in depth. It was granted, Oct. 29, $16 \% 2$, to Demoiselle Lacombe, and is now the property of Monsr. Schmidt. It is divided into 3 ranges of concessions, and all the lands susceptible of cultivation are conceded. All or the greater part of the first range of concessions was granted before 1759 . The ordinary extent appears to have been from $\simeq$ to 4 arpents by 42 in depth, at the rate of a shilling and 8 deniers per arpent, with the usual fines on alienation, of which it is customary to remit a part when the purchaser pays in ready money. The soil is very fertile and produces grain of all sorts; most of the concessions are under a good system of agricultural management, and thickly inhabited: the land approaching the mountains is of good quality, but none of it is under tillage. Among a variety of fine timber, abundance of capital red pine is produced, also white pine, maple, black birch, epinette, and sapin.-This $S$. is watered by the rivers Ste. Anne and St. Jean, and by several minor streams. Rivière Ste. Anne turns 4 saw-mills, one cornmill with 3 sets of stones, and one fulling-mill. The Rivière St. Jean turns one corn-mill with 2 sets of stones, which can only work in spring and autumn.-Besides the main road, there are some others branching off in different directions into the seigniories of Rivière Ouelle and St. Roch, all of which are in good order.-In this S. geese
and turkies are in abundance, although they are scarce in Kamouraska, and not very numerous in Rivière Ouelle: the inhabitants sell their poultry at Quebec.-The church, which is 120 ft . by 50 , is surrounded by several houses, pleasantly situated; and there are two schools, each having 89 scholars, in which the Latin, French and English languages are taught, also accompts, \&c. The college of sie. Anne is about $\mathrm{O}_{2}$ I leagues from Quebec, and is well situated in regard to the northern parishes of Lower Canada. It is built one arpent from the church, in a romantic solitude, in the midst of a grove in the vicinity of : tine mountain; and, perhaps it is no exargeration to say, that there is not in all C'anala a place more halthy nor more convenient, in every respect, for the purpuses of such an cstablishment. The building is 100 ft . by 43 , three stories high, and built with stmac. Of the ese: families in this S. 121 live solely on the produce of their farms, and 100 are desirous and capable of cultivating landx if iny were provided for them, and not too far off. Nuerthcless none of the inhabitants emigrate to the townships concelded in free and common soccage, although the town of Ixworth is so near and there is a very convenient road to it ; and although it is separated from the seigniory by the last line of houses only, no one will leave home to settle there-In this S . six fisherics are carried on, principally by companies. They extend far into the St . Lawrence and produce bass, sturgem, herrings, some salmon, and a large quantity of cels are taken on the mud. This $s$. is the last eastward on the south shore where herrings are catght. - When the author was in this f., the inhabitants had killed ? lears during the week: these bears had destroyed 10 sheep in that ycar.

$S_{\text {t. }}$ Antolne, parish, in the S. of Contreceur, extends 2 leagues in front and 100 arpents in depth. It contains 3 concessions entirely settled. The village consists of 22 houses, including an inn ; and there is one school, which is supported by thie inhabitants. The church is 100 ft . by 40 . All the mills arc turned by wind, and there are 6 fir grinding corn, 4 of them in the front conecession and 9 in the second ; there ate also two saw-mills. The cattle is of the Camadim breet, and agricultural labour is chicfly performed with horses, and the English cant is used. Onc thirid of the grain produced is sold, and also some manufactured stuffs, the inhalitants making more than sufficient for their use. The land and the roads are gencrally gemel.

St. Amande seimiory, in the co. of Minskomi. is bounded e. ly Sutton; w. ly Missiskmi Bay; N. by stantridge and Durhan; s. by the province line.-(iranted, Scpt., 1748, to Sicur Nicolas Rime Levasseur, and is now the property of the heirs of the late Hon. Thomas Dum. Aceurding to the terms of the original grant, this seigniory ought to have an extent of 6 leagues in front ly 3 in depth; but as the lenumary line of the United states intersects it, there is mot now mure than $1 \frac{1}{2}$ league of it in that direction within the British territory. The greater part of the land is of a superior quallity, affording good situations and choice of soil for every species of cultivation; the surface is irregular, and in some places, particularly towards

## ST. ARMAND.

Sutton, ridges rise to a considerable height and many large swells approach almost to mountains, covered with beech, birch, maple and pine timber. The shores of the bay south of the village are rather high, with a gentle slope down to the water's edge ; but they subside to the general level on advancing towards the head of the bay. As the soil near the bay is generally considered better adapted to corn than pasture, wheat is there particularly cultivated. Here are several fine apple orchards from which cider is made, and it may le useful to remark, that young apple-trees are planted on the farms in general in the eastern townships.-This property is well situated for improvement, as it adjoins the state of Vermont, with good roads in every direction, besides the main road that runs through Philipsburg to Albany by Burlington and Vergennes, and which is the most dircet line of communication with New York. The high rads leading to the United States, and even the cross-roads, are all good: on the county-road, leading from Frelightsburg to St. John's, called Kempt Road, (2000 have been expended by the commissioners; 10 miles of it leads over a bad swamp, and on the road various bridges are erected. -The first settlement was made in 1785 by some Dutch loyalists.This seigniory is not well timbered with pine and oak, but other kinds are plentiful.-The principal stream is Pyke River, on which and other minor streams are many corn and saw-mills.-There are 4 villages in St. Armand, Frelightsburg, Philipsburg, Huntsburg, and Martin Village. Frelightsburg stands in the 13th range, on the s. side of Pyke River, delightfully situated at a short distance w. from the base of St. Armand's Mountain, in a picturesque valley. It consists of a church and 50 dwelling-houses, one quarter of which are brick, and as many two stories high. The village and the mountain embellish each other reciprocally, the view from the pinnacle borrowing much interest from the gay settlements below it, and this village is beautifully set off by the lofty hill that rises magnificently from
it. From the summit of Pinnacle Mountain the prospect s . is peculiarly remarkable, whence the Vermont Hills and settlements are traced to their union with the mountains and settlements of Lower Canada, with which they are blended, as $\rightarrow$ it were, under the eye of the observer, being merely divided by an imaginary line of latitude that defines the dominions of the respective powers. The situation of this village, being the centrical point from which no less than 6 important public roads diverge, marks it out as the proper place where a court-house and gaol should be erected. Frelightsburg being so near the province line is much resorted to by insolvent debtors. Its name is derived from its original founder, Mr. Frelight, who established it in 1800, and whose family hold the corn and saw-mills and also the carding and fulling machine, which are situated in the centre of the village, on Pyke River. Two annual fairs are beld in this village, one on the first Wednesday in March and the other on the last Wednesday in September.-The rillaye of Philipsburg is conveniently situated on the edge of the bay, about one mile from the province line; it is a handsome place, containing about 30 houses exceedingly well built with wood, many of them in the peculiar style of neatness common to the Dutch and the others more in the fashion of the American than the Canadian villages: some regard has been paid to regularity in the formation of the principal street, which has a lively and agreeable appearance ; between this street and the bay are many storehouses, with wharfs for landing goods at a short distance from them. Many of the inhabitants are employed in trade and mercantile pursuits, besides artisans, and perhaps more than a due proportion of tavern-keepers. On the south side of the road, leading from the village to the eastern part of the seigniory, is a handsome church built with wood and a good parsonage-house; there are also two baptist meeting-houses, a public free-school, and several private schools; from the wharfs there is a ferry to the opposite side of the bay, about 4 miles.

Statistical account of the Villages of Frelightsburg and Philipsburg.

Martin 「"illage is 7 miles cast of Philipsburg, and Huntsburg is almost on the province line. -The Pinnacle Mountain covers about tion acres and rises in a conical shape to a considerable height; it is seen at a great distance in the surrounding country. Between Philipsburg and the boundary line is a high ridge of land, on which Gencral Macombe encamped in March, 1813, when he made an incursion into the province and held possession of the village for some time.-Among the inconveniences, under which this prosperous part of the province labours, may be enumerated the want of courts of justice, the want of a direct road to Montreal, its vicinity to the province line, with no means of bringing offenders to immediate justice, and, lastly, the inadequate remuneration allowed to those who endearour to convey offenders to Montreal, in consequence of which many escape.

St. Charles Brook, in the S. of Lanoraye, is a small stream that rises in Lavaltrie and running N. F. joins the Little Chaloupe.

Sr. Chanles, river, in the $S$. of Pointe du Jat, is a small stram running into Lake it. Bere

Sr. (inamas (R. and L ) The river, called by the Indians írivir (ominai on account of its windings and meanderings, is formed by the union of several streans that rise in the s. section of the $\mathbf{T}$. of Stonehamin, in the co of Quebec. It then descends into the fief $\mathrm{si}_{\mathrm{i}}$ I gnace, where it expands into a beautiful lake, to which it lends its name. Soon after it has issused from this lake it receives the united waters of two small streams that run from lakes Seramite and Schastian, with this addition it bends suddenly to the $s$. and takes in the tributary stream of Nelson River. It then passes the Indian Village and rolls over a steep and irregular rock j 0 ft . high, forming a beautiful and romantic cataract. In passing a mill which is under the fall the current becomes extremely narrow, and for the spate of 3 miles is bounded by woody banks, on which are frequent openings cut through the trecs, disclosing the rushing waters. The rapility of the stream opposed by rocks produces a quantity of white foam upon its gloomy surface, accompanied by murmuring sounds. The waterfall with the smaller cascades above it, the mill, the bridge, the village and the distant hills form an agreeable landscape. From this cataract the river descends in numerous and graceful curvatures to the St Lawrence, into which it falls a little above the City of Quebee, forming an estuary which is almost dry at low water, with the exception of the bed of the river, and offers a convenient strand for river craft and boats.-Lake St. (harlis, about 13 miles from the City of Quebec,
and nearly 6 miles from Lorette, is a sweetly retired spot and an enchanting picture, and, though lying in a low flat country, is surrounded by mountainous forests highly picturesque and romantic; as it abounds in fish it is doubly inviting. Its outline is very irregular ; its length rather more than 4 miles and its greatest bre with does not exceed one mile: a narrow strait projects nearly across, dividing its waters into almost equal parts. This lake affords one of the most exquisitely picturesque scenes in the province. The margin presents an appearance at once wild, romantic, and delightful; the devious course of the low banks forms numerous little bays and headlands, where the trees to the water's edge complete, by the variety of their foliage and gradation of size as they rise upon the different slopes, one of the richest views that can delight an admirer who prefers a prospect adorned only ly the hand of nature. This charming panorama, during the spring and summer, is frequently visited on account of its arcadian beauty: the road leading to it from Quebec passes all the way by the side of the river St. Charles, and by its embellishments greatly heightens the satisfaction of those who make the excursion, and whence no one returns without ample gratification.

St. Charles, seigniory, in the co. of Richelieu, is bounded n. e. by St. Denis; s.w. by Rouville; in the rear by St. Hyacinthe; in front by the river Richelieu. It contains 2 square leagues and was granted, Mar. 1, l695, to Sieur Hertel de la Fresnicire; it is now the property of the Hon. P. D. Debartzch.-The land, generally, is not surpassed in fertility by any that surrounds it: the soil most prevalent is a fine strong loam; in some places there is a rich vegetable mould upon a stratum of clay, and in others a mixture of clay and sand: an inconsiderable proportion remains uncultivated. The mode of husbandry is very fair, and is generally rewarded with abundant harvests. The population of the settled parts is somewhat above the numerical ratio in proportion to their extent.-The lower part of the scigniory is watered by the Riviire des Hurons, and the north-east or upper angle is crossed by the little river Miot.-The houses are scattered about the concessions, but there is no village, although there are a few houses round the church, which is dedicated to St. Charles, which, with the parsonagehouse, stand on the bank of the Richelieu, about
midway between the lateral boundaries; and near the same spot is a handsome manor-house, where the proprietor resides. At the western extremity of the front the Richelieu, by a sudden turn, spreads to a breadth of more than half a mile, in which expansion there are two small islands, calles les Isles aux Corfs, which form part of the scignorial property. All the lands are disposed of except 5 concessions, of which two extend 3 arpents by fore each, two, 3 arpents by 30 each, and the ith measures from 10 to 12 arpents in depth; each of these concessions has its road excepting the end of the 5th. The rent of the old-conceded lands is 1 sol per superficial arpent, and the rent of the more recent concessions is one quart of wheat per superficial arpent. The obstackes that retard the settlement of non-conceded lands in this $S$. are stated to be the expensive process necessary to make water-courses, the difficulty of comvering the necessary materials on account of the badness of the roads, and the want of money.

St. Charleg d'Yamaska, scigniory, in the co. of Richelieu, is bounded n. b. by Bourgmarie East ; s.w. by St. Ours ; in the rear by De Ramzay; in front by the Yamaska, comprising the isles, islets and battures in front of the $S$. in that river. Granted, Aug. 14, 1\%01, to Sieur Rini Fézéret, and is now the property of Mrs. Barrow. The best and only cultivated part lies along the bank of the river, and extends only a short
distance from it, producing grain in moderate abundance. With the exception of this tract the $S$ is nearly all woodland, in some places bearing the appearance of a soil that might be made profitable if cultivated with industry and a little skill.

St. Coond, river, is a small strem that rise in the s. w. part of the $s$. of Laprairic, and running N . crosses the road from St . Joln and som after joins the R. St. Lembert.
st. Consman (P.) , $r$ La suble, s.
Sre Chorx, river, in the S. of Cinuffer, rises in the concession Sit. Cruix and runs into the r. du Gouffre. It turns a saw-mill.

Ste, Croix, seigniory, in the co. of Lotbiniere, is bounded N. E. ly Bonsecours, Desplaines, and St. Giles; s. w. by the s. of Lotbiniere and its aug. and the r. of Nelson; in the rar by the r. of Leeds ; in front by the $\mathrm{S}_{\mathrm{t}}$. Lawrence. - The original title of this concession has not been found; but it appears, from the registers of fealty and homage, that a declaration, exhibited by a notary, proved that the Dames Religieuses Ursulines possessed
the seigniory of Ste. Croix, containing one league in front by ten in depth, which was granted to them 16th Jan., 1637, and confirmed by M. Lauzon, the governor, 6th Mar., 1652 : it still remains the property of the convent.-On the high and steep bank of the St. Lawrence the soil is a light-coloured loam, greatly improved by a very superior style of cultivation. Receding thence, the land decreases in height and the soil changes to a rich dark mould, which continues for some miles .nd then declines into extensive swamps, covere. with cedar, hemlock, black ash and spruce fir: w in the exception of the wet lands, the whole seigniory is abundantly clothed with fine timber of all sorts. No stream of magnitude is to be met with throughout the whole tract. The extent of nonconceded lands susceptible of cultivation is 2 leagues by $7 \frac{1}{2}$. There is no road across these lands, nor have they been surveyed. The farms granted before 1759 were 2 or 3 arpents in front by 30 or 40 in depth, paying one sol for quit-rent, with fines on alienation, according to the custom of Paris, besides 20 sols and a capon for each front arpent.-A considerable number of persons are in a state to make new settlements in this $S$., and the quality of the lands is in general excellent. It is thought that the lumber trade retards the settlement of land in this S . No one goes to settle in the townships, there being at present an abundance of unconceded lands in the $\mathbf{S}$.

Title._"Le titre de cette concession n'a pas été trouvé au Serritariat: il paroit seulement par le Régistre des Foi et Hommage une déclaration faite par Pirrie Duquet, Notaire Royal, au nom des Dames Religieuses Ursulines de Quthr', proprietaires de la Seigneurie de Ste. Croix et autres lieux, devant Mr. Duchesncau, Intendant, qui dit, que les dites Dames possédent un fief et seigneurie au lieu nommé Platon Stc. Croix, contenant une lieue de front sur le fleuve St. Laureut sur dix lieues de pro fondeur, borné d'un côté au Sieur de Lotbinière et d'autre
aux terres non encore habities, aux dites Dames Religieuses appartenant par titre de l'ancienne Compagnie en date du l6me Janvier, 1637, et confirmé par Mr. de Lauson, Gouverneur, le 6me Mars, 1652 ."-Régistre des Lauson, Gouverneur, e 6me Mars, le 24 me Avili, 1781 .

St. Cuthbert (P. and V.), v. Berthier, S. in Berthier, co.

St. Cuthbert, river, in the co. of Berthier, rises in small lakes behind the seigniories of Berthier and Dusablé. It is deep and navigable for loaded boats for 4 or 5 miles, higher up it breaks into rapids and falls.

St. Damas (P.), v. St. Hyacinthe, S.
St. David, river, in the co. of Yamaska, rises in the $\boldsymbol{T}$. of Upton, and running $w$. through the s. angle of the $S$. of De Guir is joined by the Ruisseau des Chênes; it then enters Bourgmarie East, where it turns the corn-mill of J. Wurtell, Esq, and running into the S. of Yamaska falls into the r . Yamaska about one mile above Isle Joseph.

St. Denis, seigniory, in the co. of Kamouraska, is bounded $\mathrm{N} . \mathrm{E}$. by the S. of Kamouraska; s. w. by the S . of Rivicre Ouelle; in the rear by the unsurveyed $T$. of Woodbridge; in front by the St. Lawrence.-About 1 league in breadth by 4 in depth. Granted May 12th, 1679, to Sieur de St. Denis, for, and in the name of Joseph Juchereau, his son, and now belongs to the heirs of Dr. Blanchette.-The soil is not much inferior to that of Riviere Ouelle, but the surface is more overspread with small detached ridges, and it is crossed by the high chain of mountains near the middle of its depth. About a quarter of the grant is under culture and produces good wheat and other grain. The timber is excellent and plentiful, among which is pine of fine growth. -The principal streams are the Discharge of Lac St. Pierre and two arms of the R. Kamouraska.The best cultivated lands are by the sides of the roads that cross the seigniory. On a rising ground, close by a little inlet called St. Denis Cove, is the telegraph station No. 10.-In the 9th year of Geo. IV. the provincial legislature enacted that $£ 500$ currency should be applied to the making of a road between Kamouraska and Rivière Ouelle to the waste lands of the crown. This road was commenced in 1830, at the uncultivated lands in the fourth range of St . Denis, at about 24 arpents from the road of La Côte de Beaubien, and continued through the waste lands of the

ST. DENIS.
crown beyond St. Denis, upwards of 4 miles. This road is opened in length 16 miles from north to south, its width 15 feet; it is passable for wheel carriages, and is cleared 15 feet on each side ; it crosses several brooks and five rivers of a good size. On each of those rivers good and substantial bridges have been constructed, the lengths of which are as follow:-

1. Discharge of Lake st. Peter $\quad 26$ feet 2. Petit Bras (with a pillar in the middle) $\quad 104$
2. Grand Bras
3. River du Loup * . . . $\quad 70$
4. Discharge of a lake whose name is unknown 11 .

Ditches have been dug in several parts of the road, on a width and depth adequate to the draining off the water, making altogether a length of $16_{2_{2}^{\prime}}^{\frac{1}{4}}$ arpents. The ground crossed by this road in the S. of St. Denis is wenerally wood; beyond that $S$. on the waste lands of the crown, it appears to be of a better quality still; the whole is proper to encourage industrious and ent crprising young men to settle there, those lands being in no way inferior to several of the best country parts in the district. Thure being in St. Denis 7 mountains, the road has been turned, but without much increasing its length; and the hills ofier no obstacle worth mentioning to the passing of wheel-carriages. There are but few hills on the crown lands s. of St. Denis, and the few there are offer no difficultics. It appears, that, from the farthest extremity of the road opened to the river S t. John, there is a very rich soil, generally level and capable of making fine settlements. Between the road of La Ciote de Beaubien and the spot where the above-mentioned road was begun are about 24 arpents, where a road is yet to be made; the ground being swampy, it will require paving and ditching. The probable expense of making this piece of road, including compensation to the proprietor and the charges of the Grand Voyer, is in the opinion of the commissioners $\ell^{95}$, making altogether 505 ; and, if it were the intention of the legislature to continue that road as far as the river St. John, a farther sum of $£ 1,000$ currency should be added. -This S. forms part of the parish of Notre Dame de Liesse.

Titlc.-" Concession du 12 me Mai, l679, faite par le Comte de Fromtrint, Gouverneur, au Sieur de St. Dinis pour et au nom de Juscith Juchrrau, sons fils, des terres qui sont du côtá du Sulul, entres celles du Sieur dr Ladurantaie et du Sieur de la Boutcilleric, le long du fleuve S/. Laurent, contenant une licue de front ou environ, sur quatre licues dans la profondeur de la dite lieue."-Insinuations du Conscil Supérieur, Lettre B. folio 36.

St. Denis, seigniory, in the co. of Richclieu, is bounded N. E. by the aug. to St. Ours; s. w. by St. Charles and Cournoyer ; in the rear by St. Iyacinthe ; in front by Contrecour.-It is 2 leagues in breadth and depth, and it includes the ivles and islets in the r . Richelieu as far as the S . extends up that river. Granted $S_{c} p^{t}$. 20,1694 , to Leuis de Ganne, Sieur de Falaise. It now belongs to Madame Fleury Deschambault- -The lands are fertile and the whole of the $S$. is conceded and peopled. There are 5 ranges of concessiuns, containing 250 farms, all under cultivation. Flax is raised generally and the soil is in many places fit for hemp. The lands for many leagues in this neighbourhood are considered the most in ? undive in the district of Montreal. The sterile lands in this $s$. have been left covered with standing wood, and the parts that have been cleared have been abandoned. Timber has beenreserved on goot lands, but not in sufficient quantitics, which has obligud many to procure lands in the adjoining parisher of La Presentation, St. Ours, 太心. which they leeep covered with standing wood. Ill the limds are conceded en roture. The two ranges of concessions nearest the river were granted prior to 17.9 , at 6 livres and 1 sol quit rent for each 90 arpents; the rents of the concessions subsequently grancel are from 15 to 20 livres. It is said that none of the proprietors ever saw their contracts of con-cession.-On the s. bank of the Richelicu is the Tillage of St. Denis, containing from 90 to 100 houses and a very fine church, 130 ft . by 50 , the whole tolerably well built in an agrecable and pleasant situation, which, when seen from the opposite side of the river, where some of the bee: houses and the church, with its three handsome spires, present a front view, eshibit a favourahl specimen of picturesque beauty: between the main street and the river are some capacious storehouses, chiefly used as granaries, in which large quantities of corn are collected from the adjacent seigniories for exportation. Many of the housc: are built with stone, and the largest is the residence of II. de Sit. Gemain. At is school, conducted by two sisters of the congregation, 25 scholars are instructed; and there is one French school itir boys supported by the curc, where there are 40 scholars. There is also another school. In the river, nearly fronting the village, is the Isle de Madere and a smaller one; from this place there is a scignorial ferry to the opposite seigniury of

Contrecceur ; 15 sols are charged for a carriage. It is remarkable that there are neither saw nor corn-mills on either of the streams; there are, however, .9 wind-mills for grinding corn, 5 of which are in the front range, $l$ in the second and 3 in the third.-The cattle are of the Canadian breed and though small are strong. - Much poultry is reared.-The timber is chiefly maple, cherry and epinette.-In propartion to the superficies of this seigniory it is very well inhabited. The public roads in all directions are numerous and generally good; the principal are those by which the communication between the rivers $S$. Lawrence and Yamaska is kept up.-This S. is watered by the Richelieu, which runs across the front, and by the little river, or rather rivulet, named Le Miot or L'Amiot, which rises in the 4th concession and, running diagonally across the 2nd and 3rd, discharges itself into the Richelieu in the $\mathbf{S}$. of St. Charles.-There is a considerable number of persons willing and able to form new settlements, even at some distance from their relatives; and there is, beyond the S . of St . Hyacinthe, a large extent of fertile land, at least fertilc in appearance, on which these persons would settle with alacrity and joy, if it was conceded on terms similar to those of this seigniory. Scarcely any one leaves this $\mathbf{r}$. to settle in the townships. -Fief concerrintte is in the lower part of the S.; it is 16 arpents in brcadth and extends the whole depth of the S .; it now belongs to the seignior.

Title.-" Concession du 20me Septembre, 1694, faite ar Louis du Buade, Gouverneur, et Jcan Bochart, Intendant, à Louis de Guturc, Sieur de Falaise, de deux lieves de terre de profondeur derriere la terre et Seigneurie de Contmour. sur toute la largeur d'icelle, qui est de deux lieues, laquelle profondeur passera en partie au delà de la rivière Chambly, et courra les mèmes rumbs de vent que
la dite terre de Contreccur ; avec les isles et islets qui se trouveront dans la dite riviére Chambly par le travers de la dite profondeur."-Régistrc d'Intendance, No. 4, folio 17. - Régistre d'Intendance, 9 , fulio 61 .

St. Dennis, township, in the co. of Rimouski, is bounded N. e. and s. E. by waste lands; s. w. by the t. of Matane; n. and N. w. partly by the St. Lawrence and partly by the S. of Matane. The hills, called the Paps of Matane, are in this township, which is well watered in front by various small streams, and in the rear by the r . Matane--Ungranted and unlocatcd, 40,000 acres.

Ste. Elizabeth (P.), v. Lanoraye, S.
Str. Esprit (P.), v. L'Assomption, S.
St. Esprit, river, is formed by two branches that rise in Rawdon and Kilkenny and meet a little within the rear line of L'Assomption, which S. the Rivière St. Esprit partly traverses in its course to the S . of St . Sulpice, where it joins the r. L'Assomption.

St. Etienne (P.), v. Beaumont, S.
St. Etienne, river, discharges itself into the Saguenay on the w. side, about a mile below the Ruisseau des Grosses Roches.

St. Etienne, seigniory, in the co. of Beauce, joins the s. angle of the rear line of Lauzon and is bounded n. E. by the r. Chaudiére; s. w. by St. Giles; s. and e. by Ste. Marie. It is 3 leagues by 2. Granted, Oct. 7, 1737, to François Etienne Cugnet, and is now the property of Pozer, Esq.-In soil and timber this seigniory is very similar to the rear part of Lauzon.-At a little distance from the Chaudiere are some ranges of settlements tolerably fertile and apparently well managed.
 le Marquis de Bcanhtrrnis, Gouverncur, et Gilles Hocquart, Intendant, au Sieur Fraņois Etienne Cugnet, d'w terrain restant à conctder vis-à-vis la Seigneurie apprattenante aux beritiers Jollict, sur la riviere du Sault de ha Chaudière, du côtre du Sud-onest, depuis le bout de la profondeur de la Seigneurie de Lauzon jusqu'à celle nouvellement concedie au Sicur Taschicrcau, contemant environ trois lieues de front sur la dite riviere du Sault do la Chaudierre, au Sud-ouest de la dite rivière, sur deux lieues de profondeur, ensemble les isles et i.lets qui se trouveront dans la dite rivière dans l'espace du dit terrein du rôte du Sud-ouest, suivant qu'elles se trouveront situres au devant du dit terrein, et les lacs qui se trouveront
 siturs
folio 20.

St. Etiente, fief, in the co. of St. Maurice. Granted, Apr. 13, 1840, to the Company of the Forges at St. Maurice. 3 leagues deep by 2 broad. It belongs to the crown, and is let, with other pro-
perty, to Messrs. Munro and Bell. It is but little cultivated, although it has a mixture of marl and in many places a rich black vegetable earth; the ground is irregular, as in the S. of St. Maurice, but rising into stronger ridges on the north-west. This fief has several divisions or cite's called Rouge, de Grand Pont, Croche, Turcotte, de 14 Arpens, and St. Jean. The upper lands are well covered with maple, birch, beech, and ash ; but on the low grounds, which are wet in some places, there are only the usual inferior kinds, but these in great abundance. In this grant are several pinerics which produce trees of a superior growth, particularly the one a little below and on Pigepn Island.-Iron ore, which at one time was found plentifully in several parts of this fief, is now only met with in the rear. Quarries of limestone, a good gray stone, and some other hard species fit for building are opened on the banks of the St. Maurice, near the falls of Gros and those of Gabelle a little below.-Wood for the purposes of the forges is produced in abundance; great quantities of it are felled and carried by sleighs every winter to the furnaces, where it is made into charcoal for the use of the smeltinghouses: it was in consequence of the great demand, from the continual consumption of this article, that the additional tract of crown land was granted on the renewal of the lease.-The foundery of St. Maurice is situated in this fief, in a beautiful valley, at the confluence of a small stream with the St. Maurice, about eight miles above the town of Three Rivers; here the high banks of the river, embellished with every variety of fine trees in groups on each side, the dark hue of the large pineries and immense surrounding forests, and the more distant and softened shades of the lofty mountains that bound the view, form together a bold and magnificent prospect when viewed from the place where the road ascends the brow of the ridge that overlooks the valley. The foundery itself is replete with conveniences for carrying on an extensive concern ; furnaces, forges, casting-houses, workshops, \&c. with the dwelling-houses and other buildings, have altogether the appearance of a tolerably large village. The articles manufactured here consist of stoves of all descriptions that are used throughout the provinces, large caldrons or kettles for making potashes, machinery for mills,
with cast and wrought iron work of all denominations; large quantities of pig and bar iron are exported: the number of men employed is from 250 to 300 ; the principal foremen and persons engaged in making models, \&c. are cither English or Scotch ; the workmen are generally Canadians. In the early establishment of this foundery, about 17:37, the ore was found in great abundance near the surface, of a quality not inferior to many of the best mines of Europe for pliability. At first the mode of working the different veins was managed with very little skill, but in 1739 an artisan was brought from France who combined a knowledgeof the different branches of manufacturing wrought and cast iron with a competent skill in working the mines; from this acquisition great improvements took place, which have progressively increased, and the establishment is now carried on with almost as much ability, and on the same principle, as similar concerns in England and scotland. It is singular that neither of the provinces produces sand proper for the purposes of casting iron; the proprietors of these works, therefore, import from England all they use in that operation. Since the vear lioni Messrs. Munro and Bell have occupied these valuable premises; previous to that period the annual rent was 1800 : on the termination of their former lease they were very reasonably entitled to the consideration of the government in reletting them, and therefore their rent was reduced 50 per cent.

St. Eustache, lake, in the t. of Blandford, discharges itself into the r. Origuaux. It is about 100 acres in superficial extent and contains fish.

St. Eustache (P. and V.), v. Riviere du Chine in Mille Isles.

Ste. Famille (P.), er Orieans Island.
St Fereol (P.), $v$. Cote de Beaupre, S.
St. Francis, Inferior District of, e. Dintifints.
Sr. Francis, lake, in the townships of Garthby and Coleraine, is of considerable size, and being divided into two parts forms two sheets of water, which are connected by a short river or channel. One of these parts is 12 or 14 miles in length and very irregular in breadth; the other is about half that length. The lake is surrounded in every direction by lofty wood-covered mountains, approaching each other so close on either side of the little river as almost to cut off the communication of the
waters between the two parts of the lake: these mountains contain iron ore in many places.

Sr. Francis, river, in the co. of Beauce, is a small stream in the $S$. of Vaudreuil; it turns a corn-mill and runs into the r. Chaudière near the church.

St. Francis, river, in the cos. of Rimouski and Kamouraska, rises in a small $L$. of the same name in the highlands and falls into the r. St. John in a s.e. direction. This is the only river on the Temiscounta Portage that runs constantly in a south direction.

St. Francis, river, in the cos. of Sherbrooke, Drummond, and Yamaska, rises in L. St. Francis and in several streams descending from the southern townships. From Lake St. Francis in Garthby and Coleraine this river runs about 30 miles in a s. w. direction to the $\boldsymbol{T}$. of Ascot, and then taking a course nearly $\mathrm{N} . \mathrm{w}$. it runs about 70 miles and discharges itself into Lake St. Peter. The whole length of this river cannot be less than 100 miles. The country from which it collects its waters is of a triangular shape, each side being about 60 miles, the vertex being at the embouchure into Lake Sit. Peter, and the base a line extending from the south point of Memphramagog to the easterly point of Lake St. Francis. The area will therefore be about 1500 square miles, or equal to 15 ordinary townships. In the north its shape is very narrow. From Lake St. Francis it traverses the $\boldsymbol{T}$. of Weedon, where it makes an expansion called Lake Weedon; it then waters the s. angle of Dudswell and the w. angle of Bury, after which it divides the triangular T . of Westbury into two nearly equal parts and enters the r . of Ascot, where it takes a sudden turn to the N . W., and passes the villages of Lennoxville and Sherbrooke, at each of which places it receives a great accession of waters that originally come from the United States, descending by the rivers Coaticook and Magog. The confluence of the united waters of the rivers Massiwippi, Coaticook, and Salmon River, with the r. St. Francis, near Lennoxville, is called the $L_{p p e r}$ Locks; and the junction of the r. Magog with the St. Francis at Sherbrooke Village is called the Lower Locks. A little below Hyatt's Mills there is a very singular high rock in the river, on the pinnacle of which stands one solitary pine-tree of large dimensions; the rock and the tree form an object extraordinarily unique.

From Ascot the r. St. Francis becomes the boundary line of 12 townships, separating Brompton, Melbourne, Durham, Wickham, and Grantham, on the west bank, from Stoke, Windsor, Shipton, Kingsey, Simpson, and Wendover, on the east bank: after this it divides Upton from the $S$. of Courval and becomes the N. E. boundary of De Guir; it then divides Pierreville into two parts and enters the S. of St. François, where it washes the Indian Village, and dividing into several branches, which form various islands, loses itself in the waters of Lake St. Peter.-The River St. Francis is one of the communications by which a considerable and increasing traffic is carried on between the S. of St. François and the southern townships, and also the United States. The navigation is difficult and exceedingly laborious, owing to the great number of rapids and falls; but as the river presents a direct route for sending the produce of these districts to a certain market, these obstacles are resolutely overcome by the industrious settlers on each side of the boundaries, and large quantities of pot and pearl ashes, and various other commodities, are every summer brought down by it into the St. Lawrence for Quebec. Great quantities of British manufactured goods are also sent upwards to the United States. The navigation from Lake Memphramagog to the St. Lawrence is opposed by many and powerful natural obstructions. From the outlet of the lake to the place where the stream joins the St. Francis is about 19 miles, in which distance there is a singular alternation of violent rapids and still water where the current is most tediously slow; about $\frac{3}{4}$ of a mile before it enters the river there is what is termed a fallnot indeed from a perpendicular height, but the bed of the river being very much contracted, and the current broken by high ledges of rock, it is impossible for boats to pass it ; even single sticks of timber are seldom sent down it, as experience has proved that they never escape without being much bruised, if not absolutely shivered to pieces: in this short distance the whole descent is from 170 to 180 feet. At this place the scows and boats are unloaded, their contents carried to the end of the fall, and there re-embarked in other craft ready to receive them ; hence they are borne down by a gentle current about six miles to the Great Brompton Falls, about two miles in length :
as empty boats can run down them on the west side only, the cargoes are again taken out and conveyed to the foot of the falls, where the boats are reladen and proceed about seven miles farther to the Little Brompton Falls; a repetition of the former labours must again take place, as they can be passed by nothing but light craft : at this point the portage is no more than 2.0 yards. A mile or two farther on is Dutchman's Shoot, where the river is narrowed by a ledge of rocks and two small islands forming a rapid, through which, with much care and some difficulty, loaded boats can pass. After this a current, rapid and slow in succession, continues, without impediment, for 15 miles to Kingsey Portage; this is a confined part of the river, with a large rock in the middle of it, which is covered when the water is very high, and at which time only the loaded boats are able to pass it ; the current rushes through the chamel with great impetuosity and retains its violence for more than a mile beyond it. Hence no material olstacles present themselves until arriving at Menue Fills, about 20 miles; these are $\%$ of a mile long and only practicable for empty boats. Lord's Falls, about 2 miles farther down, and about the same length as those of Menue, are subject to the same inconvenience or even greater, for unless the water be very high they cannot be passed by the light boats. At 6 miles below this fall is the commencement of a very rapid current that continues for 15 milcs, and when passed all difficulties are overcome and the river is free into Lake St. Pcter. From the upper part to the lower part of the $\boldsymbol{n}$. it varies in breadth from 100 yards to nearly a mile, and about 16 miles from its mouth it is only about 30 ft . wide and very shallow. Notwithstanding this troublesome medley of land and water carriage, the trade now carried on is very considerable, as more than 1500 barrels of ashes only have been brought down in one summer.- In Wickham and Grantham the St. Francis abounds with bass, salmon, pielierel, sturgeon, and pike.

St. Francois (P.), v. Batiacan, S.
St. Fhancois (P.) , r. Berthier, S., in Bellechasse, co.

St. Francois (S.), $v$. Orleans Island.
St. Francols, seigniory, in the co. of Yamaska, is bounded N. E. by Lussaudière ; s. w. by Yamaska; in the rear by De Guir ; in front by

Lake St. Peter.-l $1 \underset{\sim}{1}$ league in front by nearly 2 in depth. Granted, Oct. 8, 1678, to Sieur ('revier, and is now the property of M. Le Gendre and some families of the Abenaqui Indians. This S. is low towards Lake St. Peter. The Bay of St. François and some others indent it rather decply and occasion large tracts of marsh land along their shores; at a short distance from them are some very fine meadows, and farther to the interior the soil is good, in most parts rather light and sandy. The timber is but of indifferent quality, and chicily consists of spruce fir, hemlock, and cedar ; on the driest land there is a little maple and beeth. The river St. Francis, with a few smaller streams, water it very well.-About one half of this grant is in a state of cultivation ; the best settled and most improved parts lie on each side of the St. Francis. At the deseent of this river into the ist. Lawrence are several islands attached to the grant ; the largest is nearly four miles long, and is partly cultivated and very well settled; the church and parsonage-house belongins to the seigniory stand on this island, where canoes are alwars in readiness to convey travellers to William Henry at the rate of five shillings cach person, although there is not an established firry: this passatge is generally preferred in summer to the post roads. The other islands are low, some affording a little meadow land. but they are principally covered with wood. -There are several roads; the main road, from the castward to William Henry, crosses the river at a ferry near the $A$ benaqui village, where $3 d$. is paid for each person and $1 s$. for a horse and carriage. By the river St. Francis a considerable and increasing traffic is carried on with the southern townships, and also with the United
 the regulation of sept. 20,1721 , confirmed by an Order in Council, Mar. 3, 1722, extends from Baie St. Antoine to Yamaska, and includes Kussodicte or Lussaudiirc, Pierreville, and st. Francois, with the exception of that part which belongs to the Indian Mission.-All the lands in this parish are conceded, and many of the concessions were granted before 1750 at a very low price, viz. at half a sol or one sol per arpent, each land or farm extending from 2 to 3 arpents in front to 30 or 40 in depth; the concessions made subsequently to 1759 were granted on nearly the 002
same conditions.-For an account of the Abenaqui Village, \&c. vide Indinns.

St. Francois des Salles (P.), v. Orleans Island.

St. Francois Zavier (P.), v. St. Francois, in Yamaska, co.

St. Gabriel, seigniory, in the co. of Quebec, is bounded N. e. by St. Ignace ; s. w. by Gaudarville, Faussembault and waste lands; in front by Sillery; in the rear by fief Hubert and waste lands.- 2 leagues in front, but as the lateral boundaries do not run parallel, its breadth in the rear is more than four leagues; its depth is ten leagues. Granted, Apr. 16th, 1647, to Sieur (iiffard, and is now the property of the crown.Of this tract, 2 leagues were granted, Mar. 13th, 1651, to the Hurons inhabiting the village of La Jeune Lorette, and the remainder transferred by donation, Nov. 2, 1667, to the Order of Jesuits, by Sieur Giffard.-The lower part of this seigniory is good fertile land, the soil in general a fine black mould; near the first mountains, and in the vicinity of Lake St. Charles, it is a light loam; the remainder, and much the largest portion of the grant, is so extremely rough and mountainous, as to be wholly unfit for agricultural purposes. The lands on the farther side of the R. Jacq. Cartier, in this S., are mountainous;
some settlements might nevertheless be made in the neighbourhood of Lake Tsonnontonan, where there is good hard wood.-Timber about the front is rather scarce, of inferior size and little value; but on the sides of the rising grounds, and in the interior, beech, maple, and birch are abundant and there is some pine, and in some places a little good oak may be found.-The river St. Charles bends a most picturesque course from N. W. to s. E. for nearly two leagues along the lower part of the seigniory, and receives the waters of several small tributary streams that completely answer the purposes of irrigation. The rivers Jacques Cartier, St. Anne, and Batiscan cross it at different points between the mountains.-As far as about six miles from the front, all the land is in a flourishing state of cultivation, every where interspersed with well-built houses, good gardens and well-stocked farms: beyond this, a wilderness spreads on every side, dreary and untrodden by human beings, except by the Indians in their hunting-excur-sions.-The church and parsonage of St. Ambroise, the church of La Vielle Lorette, the church and village of La Jeune Lorette, are all within this grant. Roads in every direction communicate with Quebec and the surrounding seigniories. A road might be made through the gorges of Mount Tsonnontonan, to the river Aux Pins, but it would be necessary to remove a large quantity of stone.-The church of La Vielle Lorette is pleasantly situated on the w. side of a little branch of the river St. Charles, on a rising ground, and nearly surrounded by a grove of small but handsome pine trees. The parsonagehouse is the residence of Mr. Deschenaux, the grand vicar and curé of the parish: this gentleman, who is well known and highly esteemed, has exerted his good taste to great advantage upon the gardens and other embellishments of the place.

The mountain called Tsounonthouan is on the N. bank of the r. Jacques Cartier, and is about 24 miles N . W. of Quebec. It forms the most southern angle of the vast body of granitic mountains, which extends from the coasts of Labrador along the north shore of the river St . Lawrence to Quebec, and thence to the Ottawa, the northern banks of Lakes Huron and Superior, and cover nearly the whole country to the north, with the exception of the valley of the Saguenay, to Hudson's Bay. Its elevation is about 2,000 feet

## ST. GABRIEL

above the level of the St. Lawrence. It is divided into two parts forming two distinct summits, and is remarkable for presenting, on all sides, an appearance nearly similar, and for the extent of space which it covers, which has entitled it to the name given to it ly the Indians, and which means the "Great Mountain."-Although the distance from Quebec is so inconsiderable, it is only within the last eight years that there have been any settlements nearer to this mountain than twelve miles; the whole valley of the river Jatques Cartier, above the bridge for about 30 miles in length, and varying in breadth from 10 to 20 miles, having remained entirely unsettled, owing to the expensiveness of forming roads over the swampy grounds in the rear of the old settlements and the difficulty of obtaining grants. This mountain until lately was perhaps never ascended by any persons except Indians. In 1826; five inhabitants of Valcartier risited the summit of this mountain for the first time. After leaving the settlement on Dr. Blanchet's grant, and after ascending for some tine, they arrived at a level along the bank of the torrent which divides the mountain on the s. f. side, and in half an hour they reached an old Indian cabin on the western lank of the same torrent. Quebec and the surrounding country were occasionally visible through the trees, of high growth, which cover the mountain. On leaving the torrent the ascent became very rugged and steep; in about ten minutes the party reached a beautiful spring issuing from under a rock, which they denominated the Holy Well; in fifteen minutes they were stupped ly immense masses of granite forming insurmountable walls, but found to the left a narrow regular passage between two perpendicular masses, which they called Hope Gate; at a quarter past eleven, after passing several caverns and rents in the rock of great apparent extent and depth, they reached the summit of the south-eastern angle of the w. top of the mountain, and selected, for a station at this point, a large mass of granite elevated about five fect from the general level of the gromnd, with an even and nearly circular surface of between 20 and 30 feet in diameter. On the N . of this rock they erected a British flag, on the top of a high spruce tree, and deposited in the ground, in a glass bottle, a piece of the copper coin of his late Majesty. Some trees were felled at this station to open
the view of the country to the s. E. of the mountain. The party then proceeded to explore the $s$ s. side of the summit of the mountain. It is level and of great extent, covered with a deep soil of light loam, over which there are several inches of the white soft sand, so frequently met with throughout the country in virgin ground beneath the black mould of decomposed leaves. The timber is white birch of large growth, of the sort of which the bark is used by the Indians for bark works. In the centre of this point of the mountain is a hollow, partaking something of the nature of a swamp. Generally, the earth and vegetalle growth indicate a more moist atmosphere than on the low grounds. To the south of the station there is a vast squarc block of granite, under which there is a well of living water. More to the $w$., the top of the mountain offers the most interesting appearance. At the summit the descent commences ly a semicircular wall of granite, of great extent, about 30 feet in height; below this there is an extensive semicircular and level terrace, about 150 feet wide, at the outer edge of which the descent continues ly a perpendicular wall of solid granite, of about 100 fect in height. To these parts of the mountain, paths were marked out. The view from this top of the mountain is extensive and grand beyond conception, no other country perhaps affording equal advantages in this respect to the valley of the st. Lawrence at this particular part of it, where it begins to open out into the level country on both banls, which is included within the ranges of the northern mountains, and the southern chains, extending from the mouth of the st. Lawrence to the White mountains in s. Hampshire, and the Green mountains in Vermont. The obljects comprised in the view from the s. $\mathbf{e}$. angle of the w. summit of Tsounonthouan, extend over a space of about 3,600 superficial milcs, of which the surface of the st. Lawrence alone occupies about 200 miles, it being visible in its length, at intervals, upwards of 90 miles. Looking towards the es the most distant view includes about 40 miles in depth of the mountains in the rear of Cape Torment, and extends to the sources of the Jacques Cartier and the mountains on the w. waters of the Saguenay; over the Charlesbourg Mountains, the mountains on the s. shore behind the river Ouelle are distinctly visible, and are followed by the eye without interruption to the

Highlands, between the sources of the rivers St. John, Penobscot, Kennebec, Connecticut, Etchemin, Chaudic̀re, Becancour, and Nicolet: on the N . shore the southern edges of the northern mountains begin to be visible at the St. Maurice, and thence rise gradually to the mountains of the Lake of the Seven Islands and the sources of the Portneuf; in the middle ground the St. Lawrence is visible from St. Vallier to the Point of Champlain, although occasionally conceuled by the high grounds of Quebec, St. Augustin, Jacques Cartier, and Grondines, close to the northern bank. Quebec, and the whole of the open and settled country on both banks, from Beaumont to Grondines, are distinctly seen. In the foreground, and as it were under the feet of the spectator, lies the whole valley of the Cartier, from the Nuns' Hill to the bridge, with its lakes, swamps and patches of opening settlements, the river, its islands and falls, at intervals, opening from behind the natural forest, which yet covers nearly the whole of its banks; to the left, Lake N t. Charles is visible, and to the right, Onturietsi, or Lake St. Joseph, shows its broad expanse partially concealed by the skirt of the Great Mountain. Time did not admit of a view from the northern side of the mountain, over the valley of Pine River and Lake Tantaré. It is known to be one uninterrupted continuation of mountains, to the valley of the Saguenay. From the general clearness of the atmosphere in North America, and the facility of perceiving objects relieved by the sky, it is probable that, with the aid of good glasses, signals at this mountain would communicate with Chambly Mountain by only one intervening station on the s. shore; one or two intervening stations would also communicate with the White Mountains, which are visible from the Atlantic ; four or five intervening stations from Chambly would probably communicate with New York, making only six or seven stations between Quebec and New York, through which intelligence might be communicated in a few minutes, and at a very small expense.

The settlement of Valcartier was commenced in August, 1816; the first clearings were two leagues from the last Canadian settlements. Previous to the commencement of this settlement there was no road passable for a cart, or even for a single horse, in the interval between the last Canadian settlements and the new establishment. This tract, two leagues wide, was rendered impassable in summer by morasses and small streams, which, however, being frozen in winter, the Canadian settlers were enabled to go a distance of $1 \frac{1}{2}$ league for the purpose of procuring wood.-A road, two-thirds of a league, was made by the grantees.-All the persons settled in the 5 th concession, excepting one Canadian, are emigrants from Scotland and Ireland, 5 of them are Irish and 4 Scotch; most of them arrived in 1818. With industry and honesty they have a fair prospect of becoming landholders and capable of supporting their families with the produce of their farms.-The following table will show the progressive increase of this settlement.

|  | 1821 | 1824 | 1828 |
| :---: | :---: | :---: | :---: |
| Population | 182 | 312 | 338 |

In the Parish of St. Ambroise, all the lands fit for culture are conceded, and even those not fit for agricultural purposes are conceded but not surveyed. The want of means prevents the youths of this P. from making new settlements; if they were furnished for one or two years with provisions, utensils, and the necessary live stock, there would not be so many living on emplacemens where they exist miserably.-For an account of the Hurons, \&c. vide Indians.

St. Giles, seigniory, in the co. of Lotbiniére, is bounded n. e. by Lauzon, St. Etienne, and Ste. Marie ; s. w. by Ste. Croix and the r. of Leeds; in the rear by Leeds and the N . angle of Broughton; in front by the seigniories of Gaspé and Desplaines.-2 $\frac{3}{7}$ leagues broad by 6 deep. Granted Apr. 1, 1738, to Rageot de - ; the present proprietors are the heirs of the late Judge Davison.-This seigniory is of very irregular form, the greatest length being about 18 miles and breadth 8. It contains about 160,000 acres, and is watered through its whole length by the Beaurivage, which is swelled by the accession of numerous smaller streams. Craig's road runs along
the banks of this river for 12 miles. The number of concessions is 22 , containing 524 lots.-No parish has been formed in this seigniory. It is considered as a part of St . Nicholas, the curé of which occasionally says mass within the limits of St. Giles.-The most populous and best settled parts are those which lie upon Craig's road, and that which leads from this road to Ste. Marie. The other parts are but partially settled, but fresh lots are in daily demand.-Two of the most northernly concessions lying on the river Noire and west of the Beaurivage are low, flat land, with some swamps and some patches of hard wood consisting of birch and maple. The other kinds of timber are chiefly cedar, ash, elm, spruce and red epinette-The next four concessions lying along the river Beaurivage, principally on the east side but partly on the west, are in general sandy; with the exception of the points, as they are called, of alluvial soil lying next to the river and on a lower level than the rest of the land. Each lot has some point land, more or less, from 2 to 30 arpents. The timber on the points consists of elm, ash, maple and butternut. The remainder of these concessions contain spruce, red epinette and black birch, with some pine and a little maple and cedar; in some places there are considerable swamps.-The south-eastern part, lying between the Beaurivage and the branch called the Fourchet, is named the Mountains. There are 12 or 14 concessions in this part. The soil is here much better than in the low parts of the seigniory. Almost all the new settlers prefer it; and many of the inhabitants of the lower parts, finding the lands there poor, have left them and gone to the mountains. The soil here is sandy; but produces very good crops. The wood on the hills consists of maple, beech, hemlock, basswood, elm and spruce ; and in the hollows between the hills it consists of spruce, sapin, hemlock, cedar and some ash. The banks of the rivers are in general steep, with little point land. The land is for the most part stony.-The cleared land in the whole seigniory may be estimated about 10,000 acres, the uncleared about 150,000 . Perhaps one-eighth of the whole consists of swamps, one-half of flat land, and the remainder hilly and rocky.-The timber, both of the hard and soft kinds, is very good: there is, however, but little good pine. Mr. Caldwell has, for the last 6 or 7 years, bought annually about 20,000 spruce saw logs for his
mills at St. Nicholas. The trees in general are not very large, but the wood is of excellent quality. There has been a good deal of very fine red epinette, and there yet remains some hard wood, of which the birch and maple are the best.-With respect to the waters of this seigniory, every brook is believed to run cither into the Dearivise or into some branch of it. Except this river, there is none of any importance, and its source as well as that of the Fourchet is unknown. The general minion among the inhabitants is, that they are outets of lakes in the township of Broughton. Whe branch called Le Bras is believed to have its rise in a small lake in Lauzon. The Black River runs out of a large swamp in the rear of the most northernly concession. The Beaurivage is nowhere navisable; the rapidity of its descent is very considerable, and in the spring and fall the stream is very powerful. In the heat of summer the waters are very low, and sometimes insufficnt to turn a grist-mill of one pair of stones. In the upper part of the seigniory the bed of the river is principally solid rock and the descent rapici.-Wieh regard to the population, it appears there are about 12 men above 60 years of age, 270 betwecn Iti and 00, 170 women and 280 children. Three persons have received licences to keep taverns.-Elucation here is in a very low state, there being no shionl of any kind in the seigniory. There is one schoolhouse, however, nearly finished, and another partly sulseribed for; but the people, though very anxious to have schools, are as yet too poor to be capable of supporting them. In so great an extent $i \in s s$ than three schools would be insufficient, and thet number could not at present be maintained without assistance.-There is at present one church or chapel, and another is to be commenced on the St. Mary's road.-Of cattle there are some fine oxen and the Americans have good cows, but much attention does not appear to be yet paid to the choice of cattle for breeding. There are many horses, but few of them are good. Of domestic animals hornced cattle are the most numerous and thriving. At present there are very few sheep, yet the mountain lands are well adapted for fecding that animal, and in a few years may be expected to be well stocked with it. There are some good pigs, and the inhabitants begin to find out the value of the different breeds.-All the grain raised in the settlement has hitherto
been consumed within it, the constant arrival of new settlers creating a demand for the surplus raised by the old ones. A great quantity of potatocs are raised on the mountains; these and wheat form the principal crops, though grain of every kind is grown.-Most of the Canadian farmers raise a little flax for their own use; but neither the European settlers, nor the from the United States, attempt it; it seems to answer very well on moist lands, but only a very small proportion of the land in this neighbourhood is fit for it.-The only roads that deserve to be mentioned here are (rain!s Road and that of $S_{t}$. Mary's; the former is goo? throug the whole settlement, the latter for one-half. The other roads in the seigniory are barely passahle.-Ther are no lakes nor waterfalls, nor any mountains that deserve the manc. Limestone is found, but not in great quantities. No mines have yet been diseovered, nor any indications of tiem olwerved. -Salt is made in this S.-There is only one fer called Befluriotge, which was rescerved at the time the A. wats sold, and is still possessed by one of the family of the orisinal proprietor.

St. Hilaire (P.), v. Rouville, S.
St. Hyacinthe, county, in the district of Montreal, is bounded by the depth line of the $\mathbf{S}$. of St . Charles on the river Yamaska, beginning at the eastern angle of that $\mathbf{S}$. prolonged until it reaches the river Yamaska, thence by that river as far as the s . $\boldsymbol{w}$. line of the aug. of the S . of St . Ours, thence by the said line as far as the depth line of the S. of St. Denis, thence by the said depth line as far as the $\mathbf{N}$. $\mathbf{E}$. line of the $\mathbf{S}$. of St. Charles on the river Richelieu, thence by the said $\mathrm{N} . \mathrm{e}$. line of $\mathrm{S}_{\mathrm{t}}$. Charles as far as the depth line of the said seigniory, thence by the said depth line as far as the $\mathbf{N} . \mathrm{e}$. line of the $\mathbf{S}$. of Rouville, thence by the said $\mathrm{N} . \mathrm{e}$. line as far as the depth line of that seigniory, thence by the said depth line as far as the line between St. Hyacinthe and the aug. of the S . of Monnoir, thence by the aforesaid line as far as the s. angle of the $\mathbf{S}$. of St. Hyacinthe, thence by the western line of part of the т. of Farnham to the s. angle of the S. of St. Hyacinthe, thence casternly by the w. outlines of part of Farnham and then by the towns of Gramby and Milton, as far as the N.w. angle of Milton, thence by the N . line of Milton as far as the $w$. line of the $\boldsymbol{r}$. of Upton, thence by the said $w$. line of $\mathrm{C}_{\mathrm{pton}}$ as far as the $\mathrm{s} . \mathrm{w}$. line of part of Upton, and thence by the said s. w. line of Upton as far as the eastern angle of the S. of St. Charles on the river Yamaska. It comprehends the seigniories of De Ramsay, Bourchemin east of the river Yamaska, and St. Hyacinthe.-Its extreme length is 41 miles and its breadth 19, containing $47^{\circ}$ square miles. Its centre is in lat. $45^{\circ} 32^{\prime} 45^{\prime \prime} \mathrm{n}$. lon. $72^{2 \prime} 54^{\prime}$ w.-It sends two members to the provincial parliament and the place of election is at St. Hyacinthe.-The principal river is the Ya-maskia.-With the exception of two large and conspicuous mountains, Rougemont and lamaska, the face of this county throughout is level. It is traversed by numerous roads, and well settled. It ranks the 17 th in population and the 9 th in agricultural produce. As the seigniory of St. Hyacinthe comprises by far the greater part of this interesting county, the reader is referred to the description given of that seigniory, from which he may infer the general character of the county, the principal features of the other parts of the county being similar to those of that seigniory.

St. Hyacinthe, seigniory, in the co. of St. Hyacinthe, is bounded n. e. by St. Ours, Bourchemin and De Ramsay; s. w. by the aug. to Monnoir and the т. of Farnham; n. w. by Rouville, St. Charles, and St. Denis; s. e. by Milton and Granby.- 6 leagues in front by 6 in depth, being 3 leagucs on each side of the r. Yamaska. Granted Sept. 23, 1748, to Sieur F. Rigaud, seigneur de Vaudreuil, and now belongs to Mons. Desolles and the Hon. P. D. Debartzch.-The local situation of this extensive grant renders it a most valuable and highly improvable property. So great an extent naturally embraces many varieties of soil, but the best kinds predominate, and the proportion below mediocrity is very trifling. The least improvable is towards the N. and N. E. . sides, where the land is low and in some places swampy; approaching Granby it rises and presents a valuable tract of rich dry soil. In many parts are lands admirably well adapted to the production of hemp and flax in large quantities ; and to the growth of all the grains peculiar to the country no part of the district is more congenial. The banks of the Yamaska and other streams afford plenty of good meadow land; in fact, the different classes of arable, meadow and pasture are nearly all of first-rate quality.-There is much fine beech, maple and basswood timber; cedar and spruce-fir are abundant on the low wet lands; oak and pine are found in tolerable quantities and of large scantling towards Granby and Farnham. The part on the n. w. side of the Yamaska is nearly all employed in agriculture; the opposite bank and the parts towards the s. E. extremity also present many wide ranges of cultivated

## ST．HYACINTHE．

grounds．－The Yamaska running along the middle of this spacious property，being navigable for large boats and rafts，affords ample means of speedy conveyance for the produce of the field and the growths of the forests．A branch of this river， diverging to the eastward into the new townships， and which receives several minor streams，plen－ tifully waters that division；while the river Sal－ vayle，that has its rise near the boundary of St ． Charles，with some of less note，completely an－ swer the purpose of irrigation for the western part．－The roads are well kept and are in almost every direction ；those on cach side of the Ya－ maska are the principal，by which the communi－ cation between Three Rivers，Qucbee and the state of Vermont is directly maintained；and，in consequence of the importance of this route，every attention is paid loy the proper officers of the dif－ ferent districts to preserve it in the best possible state．From these roads others of no less general utility strike off into the new townships，and thence in several ramifications to the state of New Hampshire，\＆e．；altogether forming the means of intercourse invaluable to this part of the province．－There are 5 parishes，St．Hy／a－ ci，the，St． 1 csuire，St．Damas，La Presentation and st．Pic．Although these parishes are tole－ rably well inhabited，there is only one village， called st ．Hyacinthe，which is most conveniently situated on an angle，formed in the N．E．part by
a large bend of the Yamaska；it contains nearly 200 houses，many of them built with stone or brick in a superior style，a large handsome church， a good parsonage－house，and a college or rather public school．Bing in the main road，there is a continual influx of strangers travelling to and from the fronticrs，for whose reception there are one or two respectable inns．The environs are most agrecably diversified with flourishing or－ chards，gardens，meadows，pastures and inclo－ sures．A market is held twice a week．－5 miles from the v ．are the corn，satw and carding－mills of Mons．St．Ours．- N car the boundary line of Rou－ ville is a mountain called Rougemont，which is si－ milar to that of Belocil though inferior in elevation and extent；it is adorned nearly to the summit with beautiful woods containing some fine timber． On the other side of the river，near the boundary line of Miltom and Granby，is the Yamaska moun－ tain，almost of the same form and magnitude， clothed with woods，in which there is some cx－ cellent timber．－The increase of settlements in this $S$ is retarded by the poverty of the gremtees and the diEiculty of making water－courscs．Some of the inhabitants settle in the townships，although the neightouring seigniories are not entirely con－ celcd．－No lands were conceded prior to 17.59 ， and the last concessions were granted on higher conditions than the jrecedins．

Title.-"Concession du 23me Septembre, 1748, fuite par Rolland Michel Burrin, Gouverneur, et François Bigot, Intendant, au Sicur Françis Rigaud, Seigneur de Iaudreuil, de six lieues de front, le long de la rivière Y'amaska, sur trois lieues de profondeur de chaque côté d'icelle; les dites six lieues de front, à prendre à sept lieues de l'embouchure de la dite rivièe, qui sunt les dernières terres concédécs."—Régistrc d'Intendance, No. 9 , folio 36 .

St. Ignace Isle, in the St. Lawrence, at the head of Lake St. Peter, lies a little s. of Isle Dupas. This and other isles near it consist principally of meadows and grazing land. Isle St. Ignace, Isle Madame, Isle aux Oies, Isle Ronde, and Isle de Grace belong to government. These and some other isles to the eastward are very low, with marshy strands, but clothed with good timber. They abound with all sorts of wild fowl, as do the intervals between them with excellent fish of various kinds. Isle Madame is one league in length and half a league in width.
St. Ignace (P. and S.), v. Cap St. Ignace.
St. Ifinace, seigniory, in the co. of Quebee, is bounded n.e. by L'Epiuay and the т. of Stoneham; s. w. by Sillery and by St. Gabriel of which it formerly formed a part; in the rear by Fief Hubert; in front by the r. St. Charles. It is half a league in front by ten leagues in depth. Granted, Aug. 20th, 1652 , to the community of the Hotel Dieu to whom it still belongs.-In the quality of the land and the peculiarities of the soil there is a strong affinity between this and the S. of St. Gabriel; the lower part is rich, fertile, and well cultivated for more than two leagues towards Lake St. Charles, in which tract many farms are extremely productive in grain of all kinds. On some of the farms flax is cultivated with great success, and on the r. St. Charles the pastures and meadows are so fine as scarcely to be rivalled by any in the province: beyond the lake the country assumes a mountainous and barren character, affording no land upon which agricultural industry could be exerted with any hopes of success. On the lower part of the $S$. the little timber that remains is of inferior dimensions and confined to small woods and patches here and there; but in the vicinity of Lake St. Charles and farther rearward a great abundance of the finest sort is produced. The rivers Jacques Cartier, Ste. Anme, and Batiscan cross it in the intervals between the different ranges of mountains, while the cultivated part is exceedingly well
watered by the river St. Charles and Lake St. Charles aided by many small streams.

Title.-" Concession du 20 me Aout. 1652, faite par Monsieur de Lauzon, Gouverneur, aux Dames de l'Hôtel Dieu, d'une demi lieue de terre de front sur la rivière St. Charles, sur dix lienes de profondeur; démembrée du fief St. Gabicl, par donation du Sieur Robert Giffard, Seigneur de Beauport, aux dites Dames; à prendre d'un côté aux terres concédées sur la rivière St. Charles, au Sieur GuiL laume Couillard, d'autre part à la ligne qui fait la sépara tion des terres depuis peu accordees aux Sauvages, d'autre bout par derrière aux terres non-concédées, et par devant à la riviere St. Charles."-Papicr Tcrrier, No. 64, folio 296, à la riviere St. Char
19me Mars, 1781.

St. Jacques, river, in the S. of St. Gabriel. This small stream runs into the r. St. Charles about 2 miles below Jeune Lorette.

St. Jacques, (R.), v. St. Lambert, r.
Si. Jacques (V.), v. Isle Verte, S.
St. Jean, fief, in the co. of St. Maurice, lies between the seigniories of Rivière du Loup, Maskinongé, and Carufel. It is $\frac{3}{4}$ of a league in front by 2 leagues in depth. Granted, Oct. 13, 1701, to the Ursuline nuns of Three Rivers. A confirmation of the grant with its augmentation, Mar. 27,1733 , gives it one league more in depth. The Ursulines still retain the property. The land is good and productive, and nearly the whole of the fief is cultivated, but very little of the augmentation. It has some fine timber.

Tille.--" Concession du 13me Octobre, 1701, faite par Hector de Cullicre, Gouverneur, et Jcan Bochart, Intendant, aux Dames Rctigicuses Ursulines, des Trois Rivières, de l'espace de terre concédee, qui se trouve dans le lac St. Picrrc au tleuve St. Laurent, du côté du Nord; consistant d'environ trois quarts de lieues de front entre le Sieur Jonseph Petit dit Bruno, Seigneur de Maskinongé, et le Joseph Petit dit Bruno, Seigneur de Maskinongé, et le
Sieur Trutier de Beaulien, Seigneur de la Rivière du Loup, Sieur Troticr de Beaulien, Seigneur de la Rivière du Loup,
sur la profondeur de deux lieues."-Régistre d'Intendance, sur la profondeu
N ©. 5 , folio 34.

Augmentution.-" Confirmation du 27 me Mars, 1733, par sa Majesté, d'une concession faite le lome Décembre, 1727 , aux Lames Ursulines des Trois Rivières, d’un terrein joignant du côté du Nord. Est au fief de la Rivière du Loup, appartenant aux dites Religieuses, et du côté du sud-Ouest au fief du Sieur Sicard, ayant environ trois quarts de lieue de front sur trois lieues de profondeur."Insinuations du Conseil Supéricur, Régistre G, folio 42.

St. Jean, river, runs from the $w$. into a bay opposite Cap Dimond on the R. Saguenay.

St. Jean, river, in the S. of Ste. Anne, in the co. of Kamouraska. This small stream rises s.w. of Mount St. Barbe, and running N.w. joins the r. Ste. Anne near the line that divides the 1 st and 2 nd ranges of the $S$.

St. Jean de Baptiste (V. and P.), v. Orleans Island.

St. Jean de Baptiste (P.), v. Ecuriuile, S. St. Jean de Baptiste (P.), v. Rouville, S. St. Jean de Baptiste (V.), v. St. Michel, S. St. Jean Deschaillons or Riviere du Chene, seigniory, in the co. of Lotbiniere. This S. with its augmentation is bounded N. E. by the S. of Lotbiniere and its augmentation; s. w. by Levrard and the $\mathbf{T}$. of Blandford; in the rear by a small triangular piece of waste land that separates it from the townships of Stanfold and Somerset; in front by the St. Lawrence.-The original grant is 2 leagues square and was made, Apr. 25,1674 , to Sieur St. Ours; the angmentiltion is 2 leagues fronting the rear of the $S$. and $4 \frac{1}{2}$ leagues in depth, and was granted, Jan. $2: 5$, 1752 , to Roc de sit. Ours, Sicur Deschaillons: they are now the property of Charles de St. Ours, Esid. - The soil in general is of a favourable quality, being either a good yellow loam or a fine black mould; but, notwithstanding these advantages, cultivation has made but an indifferent prugress. On the bank of the St. Lawrence there are two ranges of concessions containing about 150 farm lots, the majority of which appear to be under respectable management. Both the original grant and the augmentation are thickly clothed with wood of various species, better calculated for firewood than for any other purpose, and great quantities are supplied to the garrison and city of Quebec.-The Petite Rivic̀re du Chéne, which crosses the original grant diagonally and falls into the St. Lawrence a little below Cap à la Roche, is the only stream that waters this tract ; and it is not navigable at an", season for any thing larger than a canoe: about half a mile above its mouth there is a good corn-mill. On each side of this river are settlements with roads, which triturse the seigniory and communicate with those of St. Pierre les Bequets, and finally reach the road, recently opened, leading into the T . of Blandford up to the Canadian settlement of Messrs. Lagueu, Langevin, and others, situated on the r. Bécancour. The aug. has scarcely any means of irrigation.-A little distance upwards from Cap à la Roche a very neat church is seated on the bank of the St. Lawrence, which, along the whole front, is a good deal elevated. The houses of the tenantry are dispersed among the concessions by the side of the main road that passes close to the river; they are mostly built with wood and have a very neat appearance.

Statistics.

Tith.-" Concesion du wime Auril, l6it, an Sieur de St. Ours, de deux lieuss de terre de front le long du touve St. Laucut, à commencer quatre arpents aulescous de la Rivicre du Chine en montant le dit fleuve, aver deux lieues de profondeur dans les dites terres, nommée la Sidgneurie Deschaillons."-Risistre des Fui it Hommase', foliv $13 \%$ Cuhicrs d Intendance, 2 a 4 , fala $2+3$.

Onrs, Bieur binchaillons, datus la profondeur de la riviere du Clíme: sur I meme front de la Solsneurie de la rivicre $d n$ Chenc a lui déja connéler, avec quatre lienes et demie de profondeur a prendre au bout hes deux lieves que conticnt sa dite
 By this conmesom of atarmentation, and by the ratitialion of it, the fist concersich is said to contain only one
 league and a half, as per the Re'
Ins. Coun. Sup. Letter Li, tuluo 7.

St. Jexn Port Joli, seigniory, in the co. of L'Islet, is bounded N. e. by Reaume; s.w. by the S. of L'Islet ; in the rear by the augmentation to the T . of Ashford; in front by the St. Lawrence. - 2 leagues in front and depth. Granted, May $2.5,1677$, to Noel L'Anglois, and now belongs to - Gaspí, Esq.- The land in front is rather low, but the uniformity is varied by a trifling ridge and a few rising grounds: towards the rear it is mountainous and rugged. The soil is a mixture of light sandy carth and chay; about the high lands it is poor and indifferent. About onethird of the tract is in a moderate state of cultivation, and ihe settlements, generally spaking, have been brought by industry into a very respictable condition.-All the lands are conceded and surveyed. Many farms were conceded betore 1759, at the rate of 40 suls for each front arpent by 40 in depth; the farms conceded since that period were granted on the same terms, with the exception of some, the rent of which does not exceed 3 livres per arpent. There are 4 ranges of concessions: $\unrhd^{2}$ are settled, and 25 inhabitants are in the 3rd. The 1st is most settled and the soil is dry and sandy, except in the higher and lower parts, where the
soil is strong with a clay bottom. The 2nd concession is all strong soil upon clay. On the 3rd are maple and other hard wood, epinette, spruce, and black birch, but not much cedar. The 4th range is traversed by the mountain. The church, 120 ft . by 40 , has two steeples and is surrounded by 15 houses, including the parsonage-house; it is close to the St. Lawrence, near which the main road passes; there are also several other roads to the adjacent grants on each side. At the mouth of the r. Trois Saumons the valuable mills and distillery belonging to Mr. Harrower are very eligibly placed : the latter is an establishment of considerable magnitude, with every convenience for carrying on an extensive business; at high water decked vessels of twenty tons may come up to the premises. Over the river there is a good bridge. The beach at the mouth of the Trois Saumons is flat and thickly covered with detached rocks that run a good way out. From the St. Lawrence the view of the mills and surrounding objects, heightened by the pleasing natural scenery of the environs, is very agreeable.-At the mouth of the r. Port Joli vessels of 60 tons burden can enter, although the port is not so advantageous as that at the mouth of the Salmon River.Beech, birch, maple, and pine timber are in great plenty, as well as most of the inferior kinds. The rivers Trois Saumons and Port Joli have their sources in the mountains at the back of the seigniory, and, descending in a westernly direction, water the $\mathbf{S}$. very well: there are a few other streams of inconsiderable note.-A great number of persons in this parish have the means and are willing to make new settlements in the place of their birth and near their relatives, but there is no land for them, all being already occupied.

St. Joachim (P.), v. Cote de Beaupre.
St. Joun, lake, in the co. of Saguenay, lies in an immense valley, and is the reservoir or basin into which numerous large rivers and streams empty themselves, many of which rise in the high lands that separate the Hudson's Bay territory from Lower Canada. It is situated in lat. $48^{\circ}$ $32^{\prime} 37^{\prime \prime}$ n. and between long. $71^{\circ} 29^{\prime}$ and $72^{\circ}$ $9^{\prime} \mathrm{w}$. It is $57^{\frac{1}{2}}$ miles from Chicoutimi, about 35 leagues N. of Quebec and 60 leagues w. N. w. of Tadoussac. It covers about 510 square miles and is 90 miles in circumference; in the widest part, from the mouth of the Metabetshuan to that of the Peribonea, it is about 30 miles, and in the narrowest part, from St. David's Point to Pointe Bleu, about 18 miles. Lake St. John, called by the Indians Peaquagomi which means Flat Lake, is nearly circular and is remarkably shallow. This lake has two outlets, called the Graude Décharge and the Petite Décharge, which issue from the $n . E$. side of the lake, about 2 miles from which they form a confluence and take the name of Saguenay River. Besides the communication with the St. Lawrence by means of the r. Saguenay, from Lake St. John a water communication, with portages, may be had through Lake Mistassinis and Rupert's River with James' Bay. A communication with the St. Lawrence may also be had through the Batiscan River, and another through the river St. Maurice or the Black River. A water communication with the Ottawa or Great River is also had through various streams and lakes emptying themselves into Lake St. John and the Saguenay, until the sources of the Gatineau are reached, which is navigable for canoes a distance of 300 miles. Such are the astonishing facilities of internal water communication afforded by the streams emptying themselves into Lake St. John, that there is no portion of Lower or Upper Canada to the successful defence or attack of which the possession of that lake might not be conducive: and this part of the province seems to be most important in a military point of view, for the

## ST. J O H N.

great valley of Lake St. John could not be attacked by land, for no enemy could march over the mountains by which it is on every side surrounded.
The Navigation of Lake St. John is subject to some difficulties; schooners of 30 or 40 tons may sail on the lake, but not very near its borders, which can only be approached by flat-bottomed boats or bark canoes on account of shoals, particularly near the entrance of the rivers; its depth varies from 6 to 40 fathoms from one to two miles from the shore it is generally only 3 ft . deep, and this extreme shallowness is common to the lake (the depth of which in no part bears any proportion to its extent), and is the cause of the sea-like turbulence its surface assumes after the least wind, occasioning a violent ground swell and lofty breakers, to which, at a distance from the shore, the hardiest voyageur is frequently unwilling to expose himself. Upon placing the hand in the water on these occasions it feels very decidedly tepid. This shallowness and unusual temperature, by occasioning a more rapid craporation, may account for a fact which might otherwise be difficult, viz. six tolcrably large rivers and several smaller ones fall into Lake st. John, while only one of moderate dimensions runs out of it. With the least wind from the north-west the waves run prodigiously high, which renders canoc navigation very dangerous here. The waters also rise very rapidly in time of rain and fall almost as suddenly, particularly when the wind is $\mathrm{N} . \mathrm{w}$. , to which and the s.w. winds the lake is much exposed when a heavy swell runs to the opposite shore. In the autumn it is sometimes almost impossible to cross it on account of the hroken swells. Inder the lee of the land there is no sca for some distance off the shore, but it has been seen to be one sheet of form. The ice of the lake is not passable in safety before the 10th of January ; the first appearance of its forming on the lake is about the loth of November, and it begins to form all over about the beginning of January, but in consequence of the prevalent winds it is not passable at that time. The lake is navigable all round but not in the centre about the latter end of April, and all over by the 8th or 12th of Mily.
The Climete of Lake St. John is as mild or milder than that of Montreal. There is a difference of 15 or 20 days between the vegetation at the Post and Chicoutimi, for at the latter place potatoe stocks, cabbages, and onions have been
frost-bitten about the 23rd of Sept., while the potatoes at the Post on the lake remained in flower and uninjured till about the 12th of Oct. when they were dug up. This great difference in so small a distance is supposed hy Mr. Nixm to arise from the low situation of the ground and the vicinity to salt water at Chicoutimi. Every thing that grows in the neighbourhood of Queber and even melons can be produced on the borders of the lake, and the nights are less cold than in the surrounding country. In 1828, when, on account of mildew, the crops almost entirely failed in the district of Montreal, and generally throughout Epprer Canada, the little corn that was grown at Lake St. John was of yery wood quality. The lake is frozen over about the middle of November and is clear of ice by the cnd of Any; the interval of vegetation is therefore short but is proportionably more rapid. The ground will be in a state fit for cultivation before the lake is clear from ice, and will be frece from frost, at least one foot deep, on or lefore the lst of May. at which period 10 gallons of peas have been sown which produced more than 10 bushels, although from the wetness of the scason about one third of the crop was losi. These peas were harvested on the 1 st of $\mathrm{sep}_{\mathrm{p}} \mathrm{t}$. and among them were found nearly hallf a ${ }_{1}$ int of wheat, which, as an experiment, were sexn about the ih of May, and when harvested on the Sith of S'pt. produced full half of a Winchester bushel; two of the ears, without seltetion, were examined and found to contain, one 41 , the other 46 grains of corn: the straw :rew about 4 ft . in height. On the 3 rd or thl of May half a bushel of larley was stown, and produced, Aug. 5. from 5 to 6 bushels. A pint of Indian corn, sown May lOth, produced at least 10 sallons, although much was destroyed liy worms. Not quite 9 bushels of potatoes, planted in heaps, produced 300 bushels. These experiments were made without manure.
Soil.--The shores of $t$. . St. John abound with inexhaustible quarries of limestome and extensivelieds of tine marl. The s. shore, from Pointe Dlewe to within about a league from the $\mathbf{r}$. Metrabetshouan, is composed of clay, slate, and carboniferous limestonc. The n . shore, from the Assuapmoissoin to the $\mathbf{P}$ uritumea, is a sandy alluvium on a marly clay; from the Peribonea to the Kacouatimi it is a sandy swamp, and from the Kacouatimi to the Grande Décharge it is formed of sycuite composed almost entirely of a brilliant felspar. The

## ST. J O H N.

shores of the lake are in many places very sandy, and where no rock appears fine shining yellow sand is found, and where rocks and sand appear intermixed the former rise through the latter, assuming an isolated appearance. This sandy girdle is not confined to the margin of the lake, but passes a short distance into the interior, bestowing upon the land forming the borders of the lake an infertility of aspect which vanishes upon passing these sandy limits. Between Chicoutimi and the country immediately in its rear, on one side, and $\mathrm{Ha}-\mathrm{Ha}$ Bay and the waters emptying into it, on the other, there is said to be 300,000 acres of culturable land. Proceeding from Chicoutimi to Lake St. John by the western route, it seems probable that the country is not susceptible of culture to the westward of the river Chicoutimi as far as the lower extremity of Lake Kiguagomi. From Lake Kiguagomi to Lake St. John there is, according to the report of traders and Indians, a deep tract of level and fertile country. The peiinsula lying between Kiguagomi and the grand outlet of Lake St. John is said to contain 250,000 acres of level and fertile land. On the s. w. side of Lake St. John the mountains approach near to the lake, and beyond them the whole country, lying to the westward, as far as the river St. Maurice, is altogether unsusceptible of culture, with the exception of a few patches too inconsiderable to be particularised. The n.e. side of Lake St. John contains much good land.Eight large rivers, besides minor streams, fall into Lake St. John; these rivers are nearly all of the first class and are navigable for large bateaux for many leagues, and farther on for bark canoes; their names are the Pcribonea, Mistassini, Assuapmoussoin, Ouiatchouan, Ouiatchouanitch, Metabetshouan, Kuspahiganish, and Kuspahigan. The following is a table of the distances to which the rivers which run into the lake have been ascended.

|  | Miles. | Chains. |

Islands, \&c.-Pointe Bleue, about $6 \frac{1}{2}$ miles N. by
E. from the r. Ouiatchouan, is a point of rock covered with moss and a small growth of cedar, from which the lake borders run w.N.w., describing a very wide bay around which the land appears of good quality, being timbered with ash, fir, balsam, spruce and cedar, and it is level to a considerable extent. Numerous small alder islands lie in the bay.-Isle aux Couleuvres or Snake Island, called by the Indians Manitou-Ministouki, "the Evil Spirit's Island," lies nearly opposite the mouth of the Ouiatchouanish. Some voyagers have had the greatest disinclination to visit this island on account of the number of snakes which were reported to exist there, and many wonderful stories of their forming festoons, knots, and lying together like a string of sausages, were told; but after traversing the whole island one shrivelled skin only has been seen. Pears too (probably under the guardianship of the snakes) were said to be abundant with equal foundation.-Grosse Isle is $l_{\frac{1}{2}}$ mile from Pointe à la Traverse; it is about three-fourths of a league long and about 550 ft . wide, and is said to belong to the Ursulines. It is almost entirely a barren rock, but there is one farm on it of 90 acres which is under cultivation and the land is good ; the timber consists of spruce, elm, pine and ash. On this isle are blocks of granite.-Petite $I_{s l e}$ lies at a little distance n. w. of Grosse Isle.-Dalhousie Islands lie opposite the outlets called Grande and Petite De-charge.-Presq'ile or The Peninsula is formed by the grand outlet on one side, and by the river Chicoutimi, and lakes Kiguagomi, Kiguagomishish, Alder River, Belle Rivière, the Kushpahigan and part of Lake St. John, on the other sides; it lies between $70^{\circ} 34^{\prime}$ and $71^{\circ} 29^{\prime}$ west longitude from Greenwich, and $48^{\circ} 14^{\prime} 38^{\prime \prime}$ and $48^{\circ} 34^{\prime}$ north latitude. The soil, which is a loam, is in general well adapted for settlement. The timber is red pine, cypress, white birch, sapin, white spruce, black birch, \&c., all of moderate size, except the pines, which are scattered here and there and are very large, but appear to be generally of bad quality. The land beyond the bank is level; and if settlements were formed here, beginning at Chicoutimi, which should always be the central point, a road might by degrees be opened, communicating with Lake St. John; this would be the more easy to make, as there is but one river to cross, and which (except during floods) may be forded. The Peninsula con-

## S T. J O H N.

tains about 245,000 acres, and would consequently hold 2,450 inhabitants, allowing 100 acres to each. The climate is at least as mild as that of the neighbourhood of Quebec, but the spring is about 15 days later than at the post at the River Metabetshouan, on Lake St. John. This beautiful

Peninsula is joined to the continent by an isthmus or portage of only one mile in length. Through the lakes and rivers, that bound the s. side of the Peninsula, a communication is kept up between Lake St. John and Chicoutimi, which is more particularly explained by the following table.

Table of Distances from Lake St. John to Chicoutimi, begiming at the Mouth of Kushpahigan
or Belle Riviेre.

Making a total distance of $55^{1}$ miles from Lake St. John to Chicoutimi, exclusive of minor portages amounting to 2 miles.

Fish.-Lake St. John abounds with many kinds of fish, particularly pike, carp, doré, white-fish, awenanish, chub, and a fish called la munie which resembles the eel in colour, the dog-fish in shape, and the cod-fish in the head but much flatter; its average length is $2 \frac{1}{2} \mathrm{ft}$.: the Indians are very fond of it boiled, but the white people make no use of it except the liver, which is considered a delicacy; it is also used for bait during the winter season. The awenanish is said to be the most delicious fresh water fish in the world. Great quantities of fish are taken at the mouth of the Ouiatchouan, which appears the most favourable place for setting the nets, and where the fish is found more abundant than in any other part of the lake; it is salted and put into barrels for the use of the traders. The fish abounding between Chicoutimi and the Kushpahigan are red trout, watouche or chub-pike, carp and dore ; the last
two are to be found only as far as the falls of the Belle Riviere: the red trout is only to be met with in Lake Kiguagomi and at the Portage de l'Islet, except a few in lakes Ouiqui and Kiguagomishish, in which there are chub and carp in great abundance. There are smelts in Lac Vert. -For other particulars relative to Lake st. John and the Peninsula, vide Vol. I., pp. 285-289, and also King's Posts.

St. John (r.), v. Richelieu, R.
St. John, river, in the southern parts of the cos. of Bellechasse, L'Islet, Kamouraska, and Rimouski, rises in three large branches called the South Branch, the Main Branch, and the West Branch which is also called the River Daaquam. The South Branch rises in a lake near one of the sources of the American river Penobscot; the Main Branch issues from a small lake called the AhpmoojeeneGamook, in an extensive swamp near the province line, and on waste lands in the rear of the $r$. of Watford; the West Branch or Daaquam has its head waters from the boundary line between

Standon and Ware, and within one mile of Lake Etchemin. The country watered by the Southern and Main Branches has not been sufficiently explored, and, therefore, no description of those branches can be here given. The Western Branch has been visited by experienced surveyors, and its source is found to be separated from the rivers Etchemin and du Sud by high lands which appear to take a n. e. direction. This branch of the e . St. John, after leaving the т. of Ware, takes a N. E. course, and, after receiving on its left bank another branch called the r. Eseganetsgook, soon forms a junction with the Main Branch which had previously received the waters of the South Branch. From the confluence of these streams the St. Joln becomes an important river, and after receiving the r. St. Francis, which rises near Temiscouata portage and descends through a part of the counties of Rimouski and Kamouraska, it hastens to its confluence with the river Madawaska, whence it directs its course s. e. to the Great Falls, receiving in its way the Grande Rivière and other tributary streams. Having entered the province of New Brunswick, it runs for many miles southwardly; after which it turns to the south-east, and ultimately loses itself in the Bay of Fundy.-The West Branch at its head is 55 links wide and runs rapidly over stones through indifferent land that produces spruce and sapin. The first part of its course is very crooked and runs between e. n. e. and e. and generally through alders and meadows; its banks are here from 2 to 4 ft . high, and the land on each side for half a mile from the banks flat and low; the depth of the water varies from one or two feet, to six or seven feet, and it runs in a gentle stream over gravel or sand where the water is shallow, and where it is deep over mud; the width varies from 00 to 80 links during the first seven or eight miles, and it is navigable for rafts without any impediment. In this distance trout and other fish have been caught in tolerable abundance.-The Main Branch deserves particular notice on account of its great extent and the various advantages it offers in an agricultural and military point of view : it runs nearly in a parallel direction with the St. Lawrence to its confluence with the Madawaska, and at some places is only from 12 to 14 leagues therefrom, and about 22 to 25 from Quebec; it traverses the middle of this portion of territory N. E. from its source to its junction with
the Madawaska, about 132 miles: it offers an interesting field for a new line of settlements of at least 36 townships in connexion with the most flourishing and inhabited parts of the province, and presents at no very distant period a new and shorter line of communication to New Brunswick by nearly 60 miles.-This river is said to be navigable nearly from its source to its confluence with the Madawaska, 25 to 30 leagues, and its average breadth is from 10 to 20 chains until it reaches Presqu' Isle, below which it widens considerably, and at its confluence with the Madawaska it is from 15 to 20 chains wide. Its water, which rises considerably in the spring and fall of the year, is tolerably deep, but at a short distance below the Forks, there is a rapid where the water is very shallow. The current in some places is very rapid and in others gentle, and is navigable for canoes and large flat boats with the exception of those parts of the river which are obstructed by falls or rapids, where there are short portages, the principal of which are at the Great Falls of 75 feet, and at the Little Falls near the confluence of this river with the Madawaska. From the rapid, a little below the Forks, to the Great Falls the navigation is easy and fit for steam-boats; from the Green River, below the falls of St. John, to Presqu' Isle are a few interruptions by rapids, but they are not of much consequence ; from Presqu' Isle to Frederickton, long intervals are to be found where steam-boats may ply ; and at Frederickton, vessels from 50 to 100 tons ascend from the sea. A steam-boat navigation might be effected from the source of the river St. John, 50 or $\mathbf{6 0}$ miles from Quebec, at least with few interruptions. The Indians ascend this river in canoes at times and reach the river Etchemin: by a portage in their way to Quebec, and some Americans have gone down in canoes, by making some portages, from the state of Maine.The advantages afforded by the river St . John have been always admitted, for Charlevoix described its borders to be covered, in his time, with fine oak and other trees, particularly beech; and vines were found there which produced very large grapes with a thick and hard skin, but of a delicious flavour. This river may be said to be generally deep, smooth and navigable from its remotest sources, and running through a country possessing every advantage of soil, climate and water-communication. The fine and extensive
valley of the St. John is every where worthy of attention. In this fine river, nature has provided a grand canal, traversing the richest portion of the province and affording an inland water-communication of several hundred miles in extent.-The country on this R., above the Madawaskia settlement, is rich and in every way suited to agriculture. From the entrance of the Madawaska the river St. John is settled on both sides down to the Great Falls, about 40 miles, and exhibits flourishing settlements. For the first 4 miles of the Madawaska settlement on this river, there is every appearance of comfort, and the lands bordering on the river are remarkably fine, and in the highest state of cultivation ; and the farms join each other the same as those on the old settlements on the banks of the st. Lawrence. The whole way on both sides as far as the Great Fall is well settled by a colony of Acadians, who appear to be in good circumstances, and the land is a rich loamy soil in general. The river in the spring overflows its banks and leaves a deposit which fertilizes the ground to an astonishing degree. On either side of the river, the platins or flat grounds extending inland for some distance, produce abundance of hay and pasturage, and enable the inhabitants to keep numerous flocks and herds, and these would, if they had any means of getting them to market, be a source of great wealth to the settlement; but they have unfortunately no main road, and use the river as such by means of pirogues or small wooden canoes, and this even from house to house. Their communication with the St. Lawrence is extremely difficult, and has never been attempted with any produce or stock; and the people feel the disadvantages under which in this respect they are placed. They have, in going to the St. Lawrence, ifteen leagues of water-carriage to perform up the River Madaraske and Lake Temiscouata, before they get to the portage, which is twelve leagues and entirely impracticable for carriages. They are distant from Frederickton in New Brunswick upwards of fifty leagues, and the interruption of the Great Falls as well as a want of roads in that direction also precludes them from that market.-The only description of commerce hitherto attempted on this river is the lumber trade to the Bay of Fundy, and this trade might be carried on most extensively.
St. John, river, in the co. of Saguenay, runs into the s. w. side of the r. Saguenay. It is said
that there is good anchorage at its mouth for all sorts of vessels. On its banks and near its mouth, is about a square mile of culturable land, which is in lon. $65^{\circ} 42^{\prime \prime}$, lat. $43^{\prime \prime} 13^{\prime} 15^{\prime \prime}$.
$\mathrm{S}_{\mathrm{t}}$. Joneph (F.), v. Monnoir, S.
St. Josefil (L.), v. Ontarietsi.
St. Joseph (P.), r. Lanoraye, s.
St. Josefh, seigniory, in the co. of Beauce, i. bounded n. e. by Frampton ; s. w. by Broughton; in the rear ly Vaudreuil; in front by Ste. Marie. -3 leagues in breadth by 4 in depth. Granted, Sept. 23, 1736, to Sicur Rigaud de Vaudreuil; and is now the property of the Hon. P. E. Taschereau. The w. section belongs to Fleury Delagorgondicre and the widow of the Hon. A. L. Duchesnaye. The surface is uneven and rocky in several places; yct the land is tolerathy good, and in general very prodective where it is under culture. Timber of almost every deseription is found in great plenty. The River Chaudiere passes through the centre, dividing the $S$. nearly in equal proportions. On each side the $\mathbf{r}$. are settlements at a little distance from the bank, where agriculture has been carried on with good success. Besides these tracts, there are, in different parts of the interior, a few concessions that have also made considerable progress. The farmhouses by the road side, on each bank of the river, are numerous, neat and substantial, denoting the ease and comfort of their occupants. Here is scarcely any stream except the main river. -The s. has a church and parsonage-house, and at the lower part are valuable corn and saw-mills.

St. Joseph (V.), v. Lauzon, $\mathbf{S}$.
St. Joseph (V.), v. St. Michei, S.
St. Joseph (V.), v. Soulange, S.
St. Lambert, river, is a continuation of the Ruisseau St. Jacques, which rises in the N. $E$. extremity of the $\mathbf{T}$. of Sherrington and runs N . near to the church of St. Philip in the $S$. of Laprairie, where it takes the name of St. Lambert; it then descends towards the v. of Laprairie, 20 arpents below which it falls into the St. Lawrence, after having received the waters of the little river St. Cloud. It traverses the common s . of the village and within $\frac{3}{4}$ of a league of it crosses the road from St . John. It is navigable about half a league from its mouth, but only in the spring.

St. Lawrence (I.), v. Orleans, I.
St. Lawrfnce, river, also called the Iroquois and the Cataraqui. This noble river has been so amply described in the first volume (vide page 156 et seq.), that it is only necessary to insert here some interesting information relative to its navigation, which, although highly useful to those who navigate it, was thought of too dry a nature to interest the general reader, and was therefore omitted in the first volume.

## Abstract of the "Report and Evidence on the Channels of the St. Lawrence, printed by order of the House of Assembly, 18:29.'

Picrre Bonneau. -1 am a licensed pilot; there is a passage between the south shore of the Ile aux Coudres and Seal Shoal which large vessels may ascend at high tide; the bottom of the channel is sandy, and over it a few stones are cattered; it must be well known to proceed that way; few pilots are acquainted with it, and seven vessels having run foul of each other in a fog, the inhabitants of Ile aux Coudres conducted them to Quebec by the north; two of them ran aground, and if the weather had been worse and a calm had not come on, they would have been shipwrecked.-Among not come on, they would have been shipwrecked.- Among
the shipwrecks which have occurred in that passage, I recolhe shipwrecks which have occurred in that passage, I recol lect that of a large vessel conducted by one Godebout; that
shipwreck would not bave taken place had he been acquainted with that passage, and every pilot ought to be acquainted with it, as notwithstanding their skill they may get into it; the north channel is deeper than the south channel and the traserse opponite Cap Tourmente is a safe one, sufficient for the passage of the largest vessels; from Cap Maillard to Cap Tourmente the anchorages are very good; that called La Prairie at the Ile aux Coudres is the best between Bic and Quebec. A vessel may be hauled up there to be careened; the brig Hen, which was cast on shore on Ile Rouge and had sustained much injury, was conducted under my direction to sustained much injury, was conducted under my direction to
the Ile aux Coudres to be careened. A vessel sustaining the Ile aux Coudres to be careened. A vessel sustaining
damage on descending might be repaired at Ile aux Coudras damage on descending might be repaired at Ile aux Coudras
and pursue her voyage, whereas if obliged to go back to and pursue her voyage, whereas if obliged to go back to
Quebec she would be forced to winter there; vessels which do not sail until late in the autumn make much better pass-
ages by the north channel, for by that course they avoid the ice which collects in larger quantities in the south channel ; and were 1 free to choose for myself between those two channels, having a vessel to conduct in the autumn, I should prefer the north channel ; from the Brandy Pots to Crane Island there is no securer harbour, sheltered against strong winds, than La Prairie at Ile aux Coudres, and all pilots ought to know it.

Licut-Col. Bouchette, surveyor-general.-From observations of the north channel, made in the sumamer of 1827, I am of opinion that this channel is not only practicable, but of the greatest service to the navigation of that part of the river, and this opinion agrees perfectly with that of Capt. Bayfield of the royal navy. I cannot account for this channel being abandoned and neglected after it had been practised by the French previous to 1759, and at that period also adopted by the British fleet. I am fully of opinion that a perfect knowledge acquired of that channel would be of great utility for the purpose of navigation.-As far as relates to the soundthe purpose of navigation- Ahols and general course of the ings, bearings, position of shoals and general course of the
south channel, I believe the maritime chart of Mr. John south channel, I believe the maritime chart of Mr. John Lambly to be correct, but not as to the configuration of
the land on both sides of the St. Lawrence and shape of the the land

Francois Cloutier, of the parish of Ste. Anne, innkeeper. -I know the channel'between the 'oite de Beaupré and the Island of Orleans; I believe some benefit would result from its being better known to the pilots, particularly with respect to the ice in the autumn ; I know of no other reason why it should not be generally frequented than that it is comparashould not be generamy places, and that there are shoals which
tivel tively narrow in some places, alow the upper end of the Island cross each other. A little below the upper end of the Island
of Orleans there is a sand bank, which runs about half a of Orleans there is a sand bank, which runs about half a
league from Beaupre, leaving only a channel of about 15 acres league from Beaupré, leaving only a channel of about 15 acres
wide; there is another shoal, which runs from the Island of wide; there is another shoal, which runs from the Island of
Orleans and stretches about half a league immediately below the river Montmorenci; these two shoals cross each other about 12 or 15 acres; at the end of this shoal, , which is generally called the Batture du Pavillon, the channel is only about 5 acres wide for about 10 or 12 acres; thence the channel is pretty regular as far as the Islets du Chateau Riché. These islets divide the channel into two; that on the north is almost impassable, that on the south is good and is about 12 acres impassable, that on the south is good and is about is acres wide; the least depth of water when the tide is out is about
5 fathoms. -The sainte Famille shoal stretches about a quarter of a league from the shore, whence the channel is good as far down as the church of Sainte Anne, where there is a shoal which runs about 36 arpents, leaving also a good channel on the north; thence as far as the river ste. Anne there is only about five fathoms of water, and afterwards below the lower end of the island the currents form a sand bank, which stretches about a league and a quarter, leaving in the north channel about six or eight fathoms of water: this channel can only be occasionally used, for in some parts it is so narrow that it would be impossible to tack a ship in it. Last spring I took up a ship drawing 15 feet water by this channel, and having a leading wind I experienced no difficulty; the anhaving a leading wind I expe
chorage is every where good.

Heury Bayfield, Esq., commander in his Majesty's navy. -During last summer I surveyed and sounded that part of the river which is included between the city of Quebec and Ile aux Coudres. The north and south channels of the st. Lawrence have each their advantages and disadvantages. The principal advantage which the south channel possesses is that the tides are not strong as in the north channel, excepting in and near the traverse, so that a vessel can anchor immediately wherever she may happen to be (excepting in the traverse), in the event of a calm or change of tide rendering that mea ne sure necessary. But there is not so great a difference between the two channels in this respect as has been generally sup-
posed, for vessels may also anchor in most parts of the north posed, for vessels may also anchor in most parts of the north
channel, and the tides are in a few parts of it stronger than in some parts of the south channel near the traverse, where vessels frequently anchor to wait for a change of tide. The south channel possesses a valuable anchorage at Crane Island;

## ST. LAW RENCE.

its disadvantages are the dangerous pass of the traverse and the shoalness of the water to the southward of Beanjeu's Bank, off Crane Island. Here a large ship could not pans at certain times of the tide.-I am aware that there is a deeper channel between this shoal and Crane Island, but it is to narrow for a vessel to beat through. The Ivignon Rock, to the sonthward of the Stone Pillar, is very dangerous to a vessel beating in a dark night. The advantages of the north channel are as follows :-its entrance between of the north channel are as follows :-its entrance between lle aux ( drou-
dres and the main land is not nearly so dangerous as the traverse, and there is a good roadsted at Laprairic, on the north side of Ile aun Coulres, at its commencoment, where a vessel may safely ride in all wints. There is also good shicl ter from the north-east gales to the westward of the island. This channel is perfectly straight, requiring no change of course, and entirely free from detached shoals all the way from Ile aux Coudres to the old traverse off ('ap) Tourmente. 'This old traverse pases tetween sands which dry at nente. the traverse of the south channel now is. The tide in this the traverse of the south channel now is. The tide in this
old traverse is not very strong, the ground is good, and consequently a vessel might anchor if becalmed in the channel itself, wich is impossible in the traverse of the south channel, both on account of the nature of the bottom and the strength of the tide. This traverse would be unquestionably less dangerous in every respect than the traverse of the south channel if it were buoyed in the same manner. The prin. cipal disadvantage in the north channel is the great depth of water in the channel immediately between lle aux fou. dres and the main land, and the great rapidity of the tides in dres and the main land, and the great rapidity of the tides in
the same part. The former circumstance would render it the same part. The former circumstance would rethder it
extremely difficult for a vessel to be held by her anchors if extremely difficult for a vessel to be held by her anchors if
suddenly becalmed; and if she were becalmed in a certain suddenly becalmed; and if she were becalmed in a certain
position just about St . Paul:s Bay, with the ebb tide runhing, she would run great risk of being set ashore, but an expericnced pilot would be aware of this circumstance, and would never attempt to run through between Ile aux ('oudres and the main land with the ebb tide running, when there appeared any chance of its falling calm : I may here remark that there is the same danger of being becalmed near the traverse of the south channel as in the part just before mentioned, so that the channels are not far from equal in this respect. Having thus stated the advantages and disadvantages of each channel, I shall give it as my opinion that these two channels are equally good; the one will be preferred by a navigator equally acquainted with both under some circumstances, and the other under contrary circumstances of winds, weather, season of the year, dc.; consecuently there must be a great advantage in having two channels instead of one, and therefore there cannot be a doubt that it would terd to inprove the navigation of the river if the pilots were by law bound to make themselves equally acquainted with both chanbound to make themselves equally acquainted with both channels, and indeed with every part of the river, as is the case in other countries.-In the course of our researches last summer
we discovered a third channel which has never been before we discovered a third channel which has never been before
noticed. It is not so good as either of the others, but ought noticed. It is not so good as either of the others, but ought to be well known. 'The western entrances of this channel principal entrance being between Ile aux Reaux and Grosse Ile, the whole of which have been represented as impassable from shoal water in the most recently published chart of the river ; passing to the northward of Crane and fimowi Islands, river ; passing to the northward of erane and rome shands,
\&c. this channel is divided into two branches by seal shats, \&c. this channel is divided into two branches by seal shats,
the one brarch passing to the southward of those shoals, and the one brarch passing to the southward of those shoals, and
between them and the l'illars, $j$ oins the south channcl, passing, like it, through and out between the buoys of the tra-verse.-This channel, between the Pillars and Seal shoals, is narrow and dangerous, but the other branch, which patses to the northward of Seal shoals, and between them and lle aux Coudres, is a wide channel, and has the advantage of avoid. ing the traverse entirely; but, on the other hand, I do not think that it has more than three fathoms of water at low water during spring tides; in one part, and for a short distance between the Seal Shoals (la Batture aux Loups Marins) and Ile aux Coudres, the bottom in this channel is
good for anchoring and the tides not so strong as in the other channels, but it possesses no good roadsted, and there are many shoals. As the north and south channels are superior to this middle channel, I do not recommend it for seneral use, but as vessels have, in north-easterly gales and thick use, but as vessels have, in north-easterly gales and thick
weather, been frequently driven up between the Seal Shoals weather, been freguently driven up between the Seal Shoals
and the Pillars, and also between the Seal Shoals and couand the Pillars, and also between the Scal Shoals and $\mathbf{t o u}$
dres, and in all probability will frequently be so again, 1 am dres, and in all probability will frequently be so again, 1 am
ducidedly of opinion that the pilots should become acquainted with this channel also, in order that they may be able to extricate a vessel so situated. - I think the dangers of the north and south channels about equal. The anchorage at Ile aux Coudres is a great advantage to the north channel. - The short distance to which the shoal water extends off the north coast is alno an advantage, and so may be also the height of coant is also an advantage, and so may be also the height of
that coast in some respects, but on the other hand its mounthat coast in some respects, but on the other hand its moun-
tainous character causcs heavy squalls in north-west winds, tainous character causcs heavy squalls in north-west winds,
which however occur very seldom during the months of s. which however occur wery seldom during the months of Si p-
tember and October, in which we were therc, and in which tember and October, in which we were therc, and in which
also that wind is most frequent: the wind, in nine days out of ten, is neither directly up or down the river.-In the channel between Ile aux Coudres and the north coast the water is too decp and the tide too rapid for versels conveniently to anchor, but there is a small bay at Laprairie, on the north side of lle aux Coudres, where vessels may safely anchor in all winds, out of the strength of the tide and in a moderate depth of water. They must anchor near the shore, but the ground is excellent, and thers is seldom or never any sea ground is excellent, and there is seldom or never any sea
which can affect a vessel. I am of opinion, if a pier were which can affect a vessel. I am of opinion, if a pier were
constructed here, that this place would form an excellent constructed here, that this place would form an excellent
situation as a depit for caulking, repairing, and loaling vessels, particularly late in the autumn, and that vesschs might sail with greater safety and latcr in the season from this place than from Quebec, as they would by so doing have fifty miles less of the most dangerous part of the river to pass through than those from the latter place. -Laprairic lias, on the north side of Courlres, is the best sheltered of any roadsted between Quebue and Hare Island, but the space in which large vessels can anchor is small; I think that not more than ten large vesocls could ride at anchor there at the same time, but until our charts are constructed I cannot speak positively as to the our charts are constructed I cannot speak positively as to the
exact number.-I am of opinion that vessels might in general exact number.-I am of opinion that vessels might in general
sail later in this season by taking the north channel instead of the south, because the testimony of many of the inhabitants, whom I have questioned, went to assure me that the north channel remains for weclis in the autumn clear of ice after the south channel has been completely filled by it. That this report of the inhabitants is correct I have no doubt, as the shoals, on which ice is first formed, are less extensive in the north than in the south channel, and at the season of ice northerly winds prevail much more than those from the upposite dirction, so that the ice is driven to the southward. - I think the best means to render the pilots acquainted with the north and middle channels would be, to cause a certain number of them at a time to sound completely the channels in question in a small schooner, and select the necessary leadinor mark, dc.; as soon as this certain number have become completely acquainted, they should be succe ded by others until the whole shall have become sufticiently qualifiod. I think twomonths well employed, and in the finest season of the year, would answer for each party of pilots so employed; but the river will never be safely navigated until accurate charts are made of it. To ensure that the future pilots should be duly qualified, I think that no apprentice pilot siould obtain a branch, who, upon eximmation, whall not he found qualified to take a ship through every practicable channel in the river. $-\mathrm{Mr}_{\mathrm{r}}$. Lambly's charts are incorrect in every respect, escepting the soundings of the south channel and leating marks to avoid the dangers therein. His directions are good as far as they ${ }^{\prime}{ }^{\prime \prime}$. and I am of opinion that he deserves great credit for having done so much as he has, when I consider that he has never possessed the necmary instruments. The north channel was always used by the Frunch; and Admiral saunders' Heet, in which were line of battle ships, pasced up by the north channel and through the old traverse at the foot of the I sland of

## ST. LAWRENCE.

Orleans. I do not know for what reason this channel has been abandoned. I have not yet examined the river below the Ile aux Coudres.

Observations relative to the navigation of the St. Lawrence between the seigniories of Soulange and Beauharnois, and between Montreal and the south shore.
A short distance from the Pointe des Cascades lies Isle des Cascades, which, with 2 or 3 smaller isles, break the current of the Si . Lawrence at its entrance into Lake St. Louis. A sudden declivity in the bed of the river, obstructed by rocks in some places and scooped into cavities in others, produces a most singular commotion called the Cascades; it is an extraordinary agitation of the waters precipitated with great velocity between the islands, which being repelled by the rocks and hollows underneath, the waves are thrown up in spherical figures much above the surface and driven with the utmost violence back again upon the current, exhibiting nearly the same effect as would be produced by the most furious tempest.-At a place near Longueuil's Mill the bateaux, ascending the St. Lawrence, are unloaded and their cargoes transported in carts to the village in order that they may be towed up light through the Grande Batture or Rapide du Coteau des Cedres: the Rapide de Bouleau on the opposite shore is deeper but not less difficult to pass; their combined effects make this the most intricate and hazardous place between Montreal and Lake Ontario.-At Coteau du Lac, just above the river Delisle, boats again enter locks to avoid a very strong rapid between Prison Island and the point abreast of it, where a duty is collected upon wines, spirits, and many other articles carried into Upper Canada. This place has been always esteemed a military post of some consequence, and works are erected and kept in good repair which command the passage on the north side of the river ; and if another was thrown up on Prison Island it would render the pass so difficult as to make it very improbable that any enemy, however enterprising, would venture through the outer channel between Prison Island and Grande Isle. The stream is interrupted hereabout by several islands, between which it rushes with great impetuosity, and is so much agitated that boats and rafts encounter great inconvenience in descending; and to descend in safety they must keep close under the shores of Prison Island.-The current from Coteau du Lac to the Cedars is in
most situations so powerful that the bateaux-men are necessitated to make use of their setting-poles, which are about 7 feet in length and shod with iron. As the current impels the vessel towards the shore, the men place themselves upon that side which is inwards and push it forward by the pressure of each upon his pole at the same instant ; the bateaux by these united efforts is forced up the stream, and the impulsive movement is continued by thus setting the poles in the bed of the waters and by a reiteration of the same exertions. This operation, although fatiguing and laborious in the extreme, they will prolong for the space of several hours. When the current is too powerful for the use of poles, the bateau is dragged by a long rope, the men engaged in this office walking along the banks of the river. In the less rapid streams the oars are used, and when the wind is favourable and the current not so strong recourse is had to the sail.-The course of the St. Lawrence from La Chine to Montreal forms a considerable curve. The navigation is very difficult, owing to the rapidity of the water and the shallowness of particular parts. The current is strong for some distance above Lachine. The first rapid commences near the windmill, on the high point of land between the upper and lower village, and extends to the government depôt; it is so rough that the boats take a long time to haul up it; hence to the mill the water is smooth but runs with a strong current. At the mill Sault St. Louis commences, which is extremely rough : the rapid extends to about a mile below the mill. There are a number of large beds of rock which render the navigation very difficult during the dry seasons. The boats generally pass up unloaded and take in their cargo at Upper Lachine. After this to Montreal the water is smooth and swift, with the same inconveniences of rocks and shallows. A strong current, called St. Mary's, extends to 2 miles below the town, at the foot of which vessels are detained, frequently for weeks, till they get a strong rough wind sufficient to enable them to stem the current.-Between the island of Montreal and the south shore, near Coghnawaga village, the breadth of the St. Lawrence is contracted to about half a mile; from this spot to the lower extremity of Rapide St. Louis, nearly four miles, there is a gradual shelving descent of its rocky bed. In passing through this channel the stream ac-

## ST. LAWRENCE.

quires an irresistible impetus, and towards the lower part moves with a velocity of 18 miles an hour, until it is separated by some small islands below into several channels. The incessant roar of the torrent, the inconceivable rapidity with which unwieldy bodies are hurried on, as it were, to inevitable ruin, and the agitated surface of the water, present a seene at once extraordinary, appalling and terrific. Boats and rafts coming down the river are compelled to run through this tremendous pass, which is never free from difficulty and imminent hazari, although the boats are guided by experienced pilots, who are constrained to keep as close as possible to the southern shore, and should any mismanagement or error in stecrage unhappily take place, certain destruction would ensue : accidents, however, very rarely occur.

## Observations relative to the navigation of the st. Laurence off the county of Rimouski, and Giasje Bay in the Gulf: <br> Gaspé.-On proceeding to Gaspé to report or

 clear, it is not necessary to farther up than Douglas Town, about 6 miles below Gaspé, there to anchor in 8 or 9 fathoms and go up in the boat. At Gaspe there are almost regular sea and land breezes: the sea breeze sets in about 10 o'clock in the morning and continues till about sunset, and about 10 o'clock at night the land breeze springs up. This knowledge may frequently save a day, as Mr. M'Connell, the collector, is exceedingly desirous to spare captains any detention. The rocks called the Seal Rocks, and laid down in the charts about the centre of the bay, do not extend above half a mile from the s. shore.Mifis.-In proceeding up the St. Lawrence for Great Mitis, after passing Cape Chat, the first place of remark is Matane River, known by a large square white house, \&c. level at the top and without a chimney. Ten leagues farther up is Little Mitis, on a long, low, flat rocky point, with several white houses extending about a cable's length to the N . E . This is a guide for the anchorage at Great Mitis, which is 6 miles farther up to the $w$ On opening the bay close on shore a square house is first seen, which is a corn-mill near the water side. A mile farther up to the $w$., in the $s . w$. corner of the bay, at the same view is seen the upper part only of a house, which is the establishment. The ship will
then close in with Little Mitis Point, into 6 or 7 fathoms water, and run for Great Mitis by the lead in from 5 to 8 fathoms. If turning up on the N . shore, or in the mid channel, Mount Camille will be seen, which must be brought to bear s. w. by s., which will lead from the seat to the bay.

The following directions" are useful for riding "t Grert Milis, and also for entering the basin within the rock.

With :a ship of great draught of water it will be advisable to lic at 6 fathoms at low water, with the house at the $\mathbf{e}$. side of the $\mathbf{n}$. Mitis open to the eastward of the island which is in the bay, so that the r. may be seen between them. The high land of Bic will then be just clear of Point Osnell, on which there is a fishery; some of the houses at Little Mitis will then be seen and Mount Camille will bear s.s. w. ly compass. In such a mooring the swell is broken before it comes in by the shore, and ressels may be seen lying to while the ship is quite snug at anchor.-A vessel of easy draught of water may ride in wafety in : fathoms with the house and island the same as before laid down; but the high land of Bic will then be shut in and also all the houses at Little Mitis: with these marks the ground will be found excellent for holding, being clay. By laying one anchor to the $E$. and another to the w. the ship will ride safely. By riding thus it will also be found that the quickest despatch will be insured by the bateaux and schooners, for with a westernly wind they can always reach the harbour after leaving the ship, which is the most difficult part in loading a vessel. The tide flows exactly at one o'clock at full and rises from 12 to 14 feet. Vessels in the roads and bound for the basin at Great Mitis, within the rock, must be guided by the wind sea and the tide as to what time to wergh. There are 5 buoys laid down: a red buoy for fair way, 2 back buoys on the starboard and $\mathscr{2}$ white buoys on the larboard side.-From the anchorage steer directly for the fair way red booy, which lies at 14 feet in half-flood spring tides, with the house at Point Osmell w. by s., Little Mitis Point e.; also with the house on Great Mitis Point a ship's length open to the castward and (ircat Mitis Rock, bearing s. by w. and n. by e., distant from the rock about $\frac{1}{\gtrless}$ mile. The ground is all clear
from the anchorage to the buoy and 3 or 4 cables length E . and w. of it. From the fair way buoy steer s. s. w. about 7 or 800 yards, which will bring the ship equidistant between the 2 outer buoys, then steer in a fair way between the 2 inner buoys (the tide is always setting out and no tide sets in the channel). Having passed these buoys, the westward of which lies 136 yards n . by w. from the $E$. end of the island, not more than 100 feet distant from the rock, and keep close in to the s . side of the island as prudence dictates; the ground is all soft and clean. It may be preferable to moor the ship's head to the eastward, as the vessel is more easily swung when light, and her head would then be in a proper position for coming out again. There is plenty of room for 2 vessels to moor head and stern of each other in the basin.-No ballast must be hove out in the basin under any pretence; it should be put into bateaux and carried to the westward.

Ships bound to the anchorage at Rimouski should endeavour to close in with the land about Father Point (Point au Père), 6 or 7 fathoms water, and steer thence duc $w$. about 3 miles for the body of Barnaby Island until the extreme easterly point, which is a large round stone, bears by compass w. N. w. about $\frac{3}{4}$ of a mile, in $4 \frac{1}{2}$ fathoms at low water. Rimouski church will then bear about s. s. w., and a round bluff island between St. Barnaby and the main w. s. w., and Father Point e. a little northernly.-As the water shoals gradually towards Barnaby Island, ships of light draught of water may go nearer to it, taking care to allow for 3 or 4 feet scud in the event of a N. E. gale; with westernly gales, which generally prevail, ships may ride quite smooth and secure there. Ships intending to load there should moor N . w. and s. E. with not less than 60 fathoms each way, so as to have an open hawse to the N. E.-Off the w. point of Barnaby Island is an excellent secure anchorage from e. N. E. winds, in 4 fathoms at low water, Barnaby Island bearing n. E. by n. $\frac{1}{2}$ a mile, and a small island within Barnaby Island about $\frac{1}{2}$ a mile E., the point of land from Bic at w. by s., and the e. end of Bic Island at $w$. by n. -(For the navigation of the river at its entrance, vide Anticosti.)

Ste. Marguerite, isles, in the St. Lawrence, lie w. of Goose Island and near Isle de Grace. These isles, with 3 of smaller size, were granted Nov. $\mathbf{5}, 1698$, to Sieur de Grandville.

Title-" Concession du 5me Novembre, 1698, faite par Louis de Buade, Gouverneur, et Jean Bochart, Intendant, au Sieur de Grandville, d'une terre située près des isles aux Oies, appelee les isles Ste. Marguerite, consistant en quarante arpens de front sur cinq de protondeur, avec trois petites isles du côté du Sud, et la batture joignant les dites isles."-Registre d'Intendance, No. 5, folio 25.

Ste. Marguerite, river, runs into the n. shore of the Saguenay, nearly 9 miles N. E. of La Boule and about 6 leagues from Tadoussac. Although it is the largest of the rivers that run into the Saguenay between Tadoussac and Chicoutimi, it is but an inconsiderable stream; it rises in a chain of mountains that abound in lakes, near those of the $\mathbf{r}$. Terres Rompues. The course of this river is very rapid and lies deeply buried in abrupt mountains, which render its banks unfit for the purposes of agriculture. There is only a small space of culturable ground on the N . side of the little bay which is formed at its mouth, and part of it crumbles down upon the beach and forms long shoals of sand on which the fishermen stretch their salmon nets. It is navigable for canoes about 20 leagues, there being throughout that distance only 3 or 4 portages of little extent; by this route it is possible to reach Portneuf on the St. Lawrence. At its mouth, opposite to Anse aux Foins, it is two arpents wide and forms a safe harbour against all winds. Salmon go up it about 20 leagues, and then meet with falls that prevent their penetrating farther.
Ste. Marguerite, river, in the co. of Nicolet, rises in the augmentation to the S. of Nicolet,
near the boundary line of Roquetaillade. It runs a very mazy course through the greater part of this line, and then striking from it to the N . it continues wholly in Roquetaillade, where it runs into the St. Lawrence.

Ste. Marguerite, scigniory, in the co. of St. Maurice, is bounded n. F. by the R. St. Maurice; s. w. by Pointe du Lac; N. w. by the S. of St. Maurice; in front by the small grants made to the late order of Jesuits, Sicur de sit. Paul and others. About $\frac{3}{4}$ of a league in front by one league in depth. Granted July 27 , 1691, to Sieur J. Dubois de Boguinet.-Several fiefs lie in the immediate neighbourhood of this S. viz., Boucherville, Labadie, Vieupont, grants made to the Jesuits, Nieur st. Paul, \&c.-The seigniory of Ste. Marguerite is of a light sandy soil, mixed in some places with clay, in others with loam; it has some good timber and is watered by several small streams, and the greatest part of it is well cultivated.-The Parish of Three Rivers contains the town of Three Rivers and several fiefs. The town derives its name from the separation of the mouth of the $\mathbf{r}$. St. Maurice into three channels by two islands; in point of antiquity it is the second settlement in the province, and is situated nearly midway between Quebec and Montreal. It covers an area of nearly 400 acres and forms a front above 1300 yds. along the St. Lawrence, and it stands on an exceedingly light, sandy soil. To the bank of the St. Maurice the ground rises very considerably, but in the opposite direction it sinks almost to a level with the St. Lawrence. This place ranks as the third town in the province, but compared with either of the others it is small indeed, containing only about 5 万0 0 houses, with a population not much exceeding 3500 souls. It sends two members to the provincial parliament. In the year 1618 some French colonists began to build this place, with a view of making it a depôt whence the fur trade might be carried on with the Indians to the northward; their plan experienced at first many flattering indications of success, but after Montreal was founded and had so increased as to be able to defend itself against the attacks of the natives of the country, it was supposed to be a situation better suited to this improving traffic and was consequently preferred; from that period Three Rivers, being greatly neglected, did not much enlarge either its extent or population. About the beginning of last cen-
tury, however, it appeared about to rise into some consequence by the opening of the iron mines at St. Maurice ; but up to the present time its improvement has been upon a very moderate scale. The trade carried on here is chiefly in British manufactured groods, which are plentifully distributed throughout the middle district. The exports consist of wheat, timber and the produce of its iron foundery added to that of the mines of $s t$. Maurice. Peltry in small quantities still continues to be brought hither by the Indians from the northward, and is received by the agents of the H. B. Company. Several pot and pearlash factories, 2 or 3 lireweries and an extensive brick manufactory considerably increase the general trade of the place. Many of the bark canoes used in the N. $w$. voyages are built here; and a variety of ingenious and ornamental works and toys are made. As a shipping port it is conveniently situated, there leing a sufficient depth of water for ships of large tonnage to lie close to the wharfs and reccive or discharge their cargoes by a temporary stage from their gangwars. The town itself possesses little to attract a stranger's notice, and the streets are narrow and unpaved. The shops and store-houses are numerous, where may be had British goods of all denominations; several inns afford to travellers very respectable accommodations. s.w. of the town are the remains of some military works thrown up for its defence by the English army, during the first American war, which are now honourcd by the inhabitants with the high-somanging title of $A n-$ ciennes Fortifications. On the outside of these works is an extensive tract of common land. The principal public buildings in the town are the Ursuline convent, the protestant and catholic churches, the court-house, gaol and barracks. The major part of the private dwelling-houses, \&c. are built with wood, the oldest mily one story high, and small gardens are attached to them; those of a more recent date are in a much better style, many of them higher than the old ones, and have rather a handsome appearance. The Ursuline convent was founded in 1637, ly Mons. de $\mathrm{S}_{\mathrm{t}}$. Vallier, bishop of Quebec, for the education of youth, chictly females, and as an asylum for the sick and infirm poor. The establishment is for a superior and 24 nuns, and includes a parochial church and hospital. The old monastery of the Recollets, a stone building, is now dilapidated;
near it is a powder magazine. The protestant and catholic churches are good plain buildings. The court-house and gaol are handsome modern stone edifices. The building now occupied as barracks is solidly constructed of stone. On the eastern side of the town are several small fiefs and separate lots of ground belonging to different proprietors, most of them in a good state of cul-tivation.-This town has not essentially been affected by the general prosperity and increase of the settlements and population of the province. Its advancement must materially depend on the settling of the circumjacent lands, particularly the vast waste tracts in its rear, together with certain commercial advantages it might be made to enjoy in common with Quebec and Montreal as warehousing ports.-(Vide Vol. I. p. 206.)

mitits ou leurs représentans."

Ste. Marie (P.), v. Monnoir, S.
Ste. Marie, river, is a small stream in the S . of Blainville.
Ste. Marie, river, in the S. of Ste. Marie, in the co. of Beauce, is formed by two branches that
rise in the $\mathbf{N} . \mathbf{E}$. section of the S. It runs s. w. into the r. Chaudière.
Ste. Marie, seigniory, in the co. of Beauce, is bounded $\mathbf{N}$. $\mathbf{E}$. by the $\mathbf{T}$. of Frampton and the $\mathbf{S}$. of Jolliet ; s. w. by St. Giles ; in the rear by St. Joseph ; in front by St. Etienne.-3 leagues broad and 2 deep, according to the title. Granted Sept. 23, 1736, to Sieur Taschereau. The principal proprietors now are O. Perrault, Chas. Taschereau, E. Taschereau, Geo. Taschereau, and Fortier, Esqrs.-The land is uneven and rocky in some parts; an irregular ridge of broken heights passes in a s.w. direction over the rear part of the S., but the soil is generally good and productive. The cultivated tracts and numerous intervals of gentle acclivities are very fertile, although in general the soil is light and in some instances rather stony.-In this seigniory are 10 concessions, 5 of which are on each side of the $\boldsymbol{r}$. Chaudière; the first 3 on each side are the most numerously inhabited. Nearly two-thirds of the S. are under good cultivation. The concessions, made before 1759, extended 3 arpents in front by 40 in depth, at the moderate rent of 9 livres 18 sols and subject to all the usual seignorial rights and dues.-The timber is abundant and consists of maple, wild cherry, beech, whitewood, fir, cedar, sapin and spruce.-This $\mathbf{S}$. is watered by the Chaudière, du Domaine, Le Bras, Noire, Durbois, Belaire, Labbee and Lessard.-A road extends 2 leagues on each side of the Chaudière, and there is a road in front of each concession.In the parish of Ste. Marie are 43,020 arpents of land unconceded and fit for cultivation; over this extent roads have been marked out and opened, and a great part has been surveyed and allotted as is usual in the seigniories.-The Village of Ste. Marie is the largest and most flourishing on the Chaudière; it consists of 39 houses, including the manor-house, two seignorial houses, a cus-tom-house and two good inns; there is also a church with a parsonage-house. At the convent, a well-built stone edifice of 2 stories, 20 to 25 girls are instructed. There are two annual fairs, one held in March and the other in Sept.-In this S . there are nearly 900 families. The number of persons both willing and able to make new settlements is not considerable, as may be inferred from the fact, that all those young persons who have lately taken lands have not as yet erected any buildings; the lands taken and those not
taken are all of good quality. This S. is situated on the public road from Quebec to Boston, by the Kennebec road.

 par le Marquis di Bcautarmin., Gouverneur, et Gilles Hor'quart, Intendant, au Sieur Taschercau, de trois lieues de terre de front sur deux lieues de profondeur, des cites de la riviere dite Suntt de ha Chaudère, en remomtant, en commencant à l'endroit l'Islet au Sapin, icelui compris, ensemble les lacs isles et islets se qui trouveront dans la dite rivicre dans la dite étendue de trois lieues."-Régistre d'Intendunce, Nos $\boldsymbol{*}$, folm 6 .
Ste. Marie, seigniory, in the co. of Champlain, is bounded n.e. by the r. Ste. Anne; s. w. by the S. of Batiscan; in the rear by the first aug. to the S. of Ste. Anne; in front by the St. Lawrence.- ${ }^{3}$ league broad and $\frac{1}{2}$ league deep. Granted Nov. 3, 1672, to Sieur Lemoine and is now the property of M. Boisvert. The front is inundated by the s . Lawrence in the spring. Nearly two-thirds are under cultivation on the river Ste. Anne. This grant is watered by the rivers Batiscan and Ste. Anne, and possesses a corn and a saw-mill.-The manor-house is agreeably situated near the mouth of the river Ste. Anne.

Titte.-"Concession du 3me Novembre, 1672, faite par Jean Tadon, Intendant, au Sieur Lemoin, de trois quats de lieue de terre sur demi licue de profondeur, à premitre sur le fleuve st. Laurnt, depuis lhabitation dee pires Josuites, jusqu'à, la rivière Stc. Amue, supposé que cette quantitá y soit."-Registre d'Intendance, No. 1, folio $3 ; 2$.

St. Martin (P.), r. Isle Jesus.
St. Maurice, county, in the district of Three
Rivers, is bounded N. e. by the co. of Champlain ; s. w. by the N. e. boundary of the fief Dusable or York, to the depth of that fief, and thence by a line on the same course prolonged to the N . boundary of the province ; N. $w$. by the N . boundary of the province; s.e. by the St. Lawrence, together with
all the islands in that river nearest to the county, and in the whole or in part fronting the same. It comprises the Seigniories of Ste. Marguerite, St. Maurice, Point du Lac, Gatineau, Grosbois or Yamachiche, Riviere du Loup, Grand Pré, Fief St. Jean and its augmentation, Maskinongé, Carufel, and part of Lanaudiere. Its extreme length is 240 miles and its breadth 201 , containing 9810 square miles. Its latitude on Lake St. Peter is $46^{\circ} 17^{\prime} 30^{\prime \prime}$ n. long. $72^{\circ} 42^{\prime} 30^{\prime \prime} \mathrm{w}$. It sends two members to the provincial parliament and the place of election is at Yamachiche. The principal rivers are the $\mathrm{S}_{\mathrm{t}}$. Maurice, Maskinongi, du Loup, Grande Machiche and Petite Machiche; the principal lakes are the Kempt, Matawin, and Shasawataisi. The face of the country, along the St. Lawrence and for several leagues in depth, is generally level, and is composed of a light sandy soil and clay; in the interior the land is uneven, and traversed by ridges of high lands. The principal settlements are chiefly along and in the vicinity of the St. Lawrence; and on each side of the several rivers above named, ranges of fine cultivated farms and handsome houses are to be seen almost all along the whole route or post road, from Three Rivers westward, leading through several flourishing villages, the chief of which are Rivière du Loup, Mathiche, and Point du Lac; in these villases are handsome churches, schools, taverns, \&c. The r. of Three Rivers is situated within this co. at the entrance of the St. Maurice, and there is a good road leading from it to the forges of St. Maurice, about 9 miles N . w. of the town. Of the numerous roads that traverse this co. in every direction, many require considerable improvement.

## ST. MAURICERIVER.

St. Matrice River, in the counties of Portncuf, Champlain, and St. Maurice, is one of the largest rivers that pour their waters into the St . Lawrence, although its depth is inconsiderable; it is inferior only to the Ottawa and the Saguenay. It drains an extent of country more than 140) miles in length and from 20 to 100 miles in breadth, equivalent to about 8400 square miles. It rises far in the interior of the country, near the skirts of the N.W. ridge of mountains, in a large lake called Oskelanaio. Its course is, generally, from N . to s . inclining a little to the E . Its tributary lakes and streams are very numerous, besides rivers of a large size capable of carrying canoes. Among the latter may be enumerated the

| Kasikan | North Bastonais |

| Vermilion | Shawenegan. |

After passing the Falls of Shawenegan, the St. Maurice turns again to the s., having run for some distance w., and becomes the boundary line between the S. of Cap de la Madeleine and the lands belonging to the Forges of St. Maurice. It soon after forms the N. E. boundary of the S. of Ste. Marguerite, and falls into the $\mathbf{S t}$. Lawrence below the town of Three Rivers, forming several islands at its mouth.-The navigation of the St. Maurice, whose banks are generally high and covered with large groups of fine majestic trees, is practicable for boats as far as La Tuque, with the exception of 7 portages at the following places, the shortest of which extends about two acres and the longest about nine.

|  | 38 |

From Grand Pille to La Tuque the current of the river is gentle and navigable for bateaux, with the exception of a few small rapids. Above the Post of La Tuque the r. is about half a mile broad, and in the spring the waters rise near the post to an extraordinary height, as evinced by the roots of trees found on the top branches of large trees in the meadows, \&c. Near the mouth of the
n. Vermilion the St . Maurice becomes very much interrupted by rapids, so much so that it is usual with the traders to ascend the Vermilion and then through a chain of small lakes with portages to re-enter the St. Maurice. At Wemontichinque the St. Maurice is divided into three branches: at this place, situated in $47^{\circ} 88^{\prime}$ n., the Hudson's Bay and King's Post Company have trading stations. Up one of these branches which runs from the $w$. is a most extraordinary chain of lakes and navigable waters which probably has not its parallel in Canada or any other country. The number of these lakes is stated at 23, varying in size and depth, the greatest of which is called Kempt Lake, after his excellency the late administrator. In many places here the water is found upwards of 40 fathoms.

Soil.-From the mouth of the river the soil, particularly on the west bank, is very sandy and clothed with white pine, spruce, and white birch, and occasionally the sameness is diversified with a few spots of rich foliage. Nearer the Forges, which are about 9 miles above Three Rivers, the banks rise more boldly and to a considerable height. From Pointe à la Hache to the Falls of Gabelle, about 6 miles, the land varies much in its quality; where the sandy loam prevails it is timbered with pine, fir, aspin, spruce, and white birch; where it is clayey the maple, beech, basswood, and yellow or black birch is generally interspersed. In one place there is a white spruce or tamarac swamp, a description of bog shaking earth, in which are generally found the ores used at the Forges. The Falls of La Gabelle are interesting to the geologist, for besides the limestone that abounds there, much sandstone and other minerals are to be found in the vicinity ; the land about the falls is of arable quality, containing, however, much gravel intermixed with the loam beneath the vegetable mould. At the Falls of La Grais the land exhibits very favourable appearances for settlement to a considerable extent. Beyond the Grais the land improves and the banks of the r . present an excellent tract of country as is evinced by the rich verdure of the foliage, particularly on approaching Pigeon Island which partakes of the alluvial ; the elm, basswood, beech and birch are intermixed with the spruce, balsam, pine and cedar. From the R. Shawenegan to Snake Point, nearly 4 m . from Portage des Hëtres, the banks slope gently to the river and present eligible seats for settle-

## ST. MAURICERIVER.

ment: the soil is gencrally a loam with a clay bottom and is timbered with spruce, tir, cedar, birch and pine, with occasionally some clm. In the Portage des Hetres the land, which is in some places indifferent and somewhat stony, is timbered with beech, fir, maple, pine, and hemlock, with some birch and cedar. From this portage the banks assume a bolder aspect and the right bank is much broken and the soil is a light sandy loam generally timbered with spruce, pine, bireh, some cedar, and balsam. The soil over the portage at the Falls of Grande Mere is of indifferent quality and is timbered with spruce, fir, white birch, and pine. At the Petites Pilles the soil and timber are similar to those below the Forges. At the Grosses Pilles, about $4!$ miles higher up, the land becomes quite rugged and broken and the soil sandy and unfit for the purposes of agriculture, producing only, particularly on the $E$. side, a stinted growth of birch and fir. From Isle aux Fraises the land on each side assumes a mountainous aspect and ofiers no fitness for agricultural purposes or for settlement. From the r. Metinac to the Rivieres des Cings the banks of the ist. Maurice, with few exceptions, are broken and mountainous and unfit for settlement; the only timber is white birch, spruce, tamarac, small red pine, some cedar and hemlock. In many places the shores are iron-bound and the stream very rapid. Opposite the mouth of the r. Batiscan the western bank is particularly bold and abrupt and rises into prominent capes about 200 feet high. About a mile beyond the Trading Post of the Hudson's Bay Company, which is between the two rivers aux Rats, the hills rise to 300 feet, discovering frequent cliffs which dip generally to the $N$. The land below the mouth of the Bastonais is of a better description, although the opposite bank is still hilly and unculturable; from the Bastonais to La Tuque the banks, although hilly, are not so broken and rugged as they are below that river: the Portage of La Tuque is over a very sandy soil, producing abundance of blue berrics, and the timber is red pine, spruce, and cypress. Above the Post of La Tuque the land in the distance preserves the same mountainous character as below La Tuque, and appears in every respect unfit for settlement.-By the preceding account of the soil in different places on the St . Maurice, abstracted from the Report of the Deputy Surveyor-General, the following general description of the soil is sup-
ported. The lands, from the Forges of St. Maturice for 15 leagues on each side of the R , are considered susceptible of cultivation; thence the country becomes rough and mountainous. Highce $u_{i}$. beyond the 15 leagues, there are many spots susceptible of cultivation, but are too small to admit of any considerable settlement. In the first 15 leagues the timber is maple, beech, elm, ash, butternut, red pine, white pine, spruce, balsam, white and black bircl. The timber above this part of the river and on the more rough and mountainous parts consists, on the mountains, principally of white birch and small red pinc; on the more even parts the timber is nuch the same as on the first-mentioned 15 leagues. For the first 1.5 1. the soil is various. On the smoothest and best part of the country it is loam with a thin small coat of black soil, and much the same as that in the eastern townships. The hills are more rocky than the lower lands. Above these lis leagues the soil, on the small culturable spots, is much the same as below, but the mountains are rocky and hardly culturable. From the river Mattonin upwards rocky mountains in many places extend to the very shore of the St. Maurice, and some of them are lofty. From the appearance of the soil on both sides of the river for ly leagues above Three Rivers, it may be presumed that there is an extent of land on both sides capable of admitting large settlements.

Mountains.-On the eastern bank of the St. Maurice are two mountains which are spoken of by travellers. The rimbou Mommin rises near 200 feet, showing the face of an abrupt granite cliff, ly the foot of which rums a very swift current. About three miles above it is Liait Monntuin or $L^{\prime}$ Oiseau, as it is called, nearly 2.5 feet high, and the rocks of which the clift is composed recede about $40^{\circ}$ from the vertical towards the N. . .-The moose decr, beaver, otter and rabbits are so numerous, that Mr. Brownson's party had not the least difficulty in taking as many as they wanted for 20 men. There are ducks also, but they are not numerous.

Is $/$ /om $/ \mathrm{s}$.- In the n. St. Maurice are at least 14 small islands from one to 50 acres in extent; about one half of them consist of grood land, and the sail in the larger islands is better than that of the smaller. Among the principal islands may $b$ numbered Bird Island, Isle du Cinq, la Peche, and Pigeon Island.

## ST. MAURICERIVER.

Fish.-The St. Maurice abounds with fish, particularly bass, pike, pickerel, trout, and white fish similar to that caught in Lake Ontario, and which is not found in the St. Lawrence; a species called Ouatassa or Whahatoosee, weighing from 1 to 2 lbs., is peculiar to the part of the river near the Falls of Grande Mere: most of the fish, particularly the pickerel, are of superior quality and flavour. Fish is so plentiful that Mr. Brownson's party found no difficulty in catching what they wanted for supper while the men removed their effects from the canoes and lighted a fire. The Post of La Tuque is amply supplied with very fine doré, pike, and other fish at the mouth of the r. Bastonais and at the island La Peche.

The Falls on the St. Maurice which have more particularly attracted the notice of travellers are chiefly in the lower part of its course. The Fall of the Grais is about $\frac{1}{2}$ a league above the Fall of Gabelle, and can only be considered as a cascade whose waters are separated into several channels by a few islets clothed with rich foliage, and presenting effect from the lower end of the portage. The Falls of Gabelle are about 25 ft . high and descend through a partial contraction of the river, possessing little of the picturesque. -The Fall of the Grosses Pilles is merely a cascade of 15 or 20 ft ., although it renders a portage necessary of about 30 yards, from which the right bank of the r . is seen to rise into high perpendicular cliffs of 250 to 300 feet, one in particular much resembling Cape Diamond. The rock of which the cliff is composed is chiefly primeval granite, dipping about $45^{\circ}$ N.E. A few shrubs grow in the crevices of the rock, and its summit is thinly clothed with fir, spruce, and small white birch.-'The Fall of the Petites Pilles can only be considered as a rapid too dangerous for the passage of canoes, although some voyagers have ventured down at great risk. -The Falls of Grande Mère are about 2 leagues above the Hètres. Nature, without giving to this fall the sublimity or the height of the Shawenegan, has collected a pleasing continuation of objects to reward the traveller. Two islands occasion three separate falls in the whole width of the river, which is here about 15 chains broad, each varying from the other. The eastern fall, and the most considerable for the body of water which falls perpendicularly about 30 feet, lies between the eastern shore and the large island which is covered with spruce and fir, and is a
pretty curtain fall. The centre fall is the most insignificant of the three, and falls down an inclined plane receding about $20^{\circ}$ from the vertical, which together with the western fall or cataract is undermining the second and small island, which is a large mass of rock whose summit is partly covered with spruce, fir and white birch.The Fall of les Hétres is more of a rapid than a cascade, being frequently descended in large canoes by expert bowmen, who are well acquainted with the course of the channel, which the voyageurs term fil d'eau.-The stupendous Falls of the Shawenegan are about $6 \frac{1}{2}$ miles lower than the Hêtres. Few falls or places indicate the marks of some extraordinary catastrophe or convulsion of nature so much as the Shawenegan: for that its present channel is the effect of some former event, or fracture in the vertical strata, may appear almost certain. Above the falls the general course of the St . Maurice is from the east towards the upper landing, and the distance between this and the lower landing is but 341 yards, forming a peninsula composed of calcareous strata, with a thick surface of clay and loam that could have been easily penetrated; the river thence suddenly bends its course towards the south-east, and, being divided into two channels, precipitates itself near 150 feet perpendicular, and rushes with terrific violence against the face of the cliff below, where the two channels are again united, and thus this great body of water forces its way through a narrow passage not more than 30 yards wide. It is probable that in the course of time the small peninsula will form an island, and that the St. Maurice will pour down its waters near the mouth of the river Shawenegan. Art could effect a canal, at an expense which would be trifling in comparison with the advantages to be derived from it, in the event of an extensive settlement being made upon the St . Maurice.-The most remarkable place on the $\mathbf{S t}$. Maurice is the Post of La Tuque, about 100 miles from the town of Three Rivers; it is separated from the falls by a conical hill principally composed of granite rock containing quartz, mica, and feldspar. The post is in $47^{\circ} 18^{\prime} 30^{\prime \prime} \mathrm{n}$. lat. by observation, and longitude $73^{\circ} \mathrm{w}$. by account, variation of the compass $11^{\circ} \mathrm{w}$. It is a place of trade for the King's Post Company and the Hudson's Bay Company, who have respectively an establishment here, which consequently excite a spirit of opposition injurious, perhaps, to one or
other of the parties, and ultimately so to the natives. The King's Post Company's establishment consists of two dwelling-houses, a store, \&cc.; the Hudson's Bay of a dwelling-house only, which is however the best at the post. The winter commences here about the end of October and the snow disappears and the river is free from ice about the end of May. The winter is exceedingly cold, and in summer, which is excessively hot, the sand-flies and Musquitoes are more nu-
merous here than in other places on the St . Maurice, which is occasioned, perhaps, by the extensive low ground and marshes about the post and the extensive meadows on the islands near it.
The following table of the distances of the remarkable places on the St. Maurice, between Three Rivers and the Post of La Tuque, is extracted from the Report of the deputy surveyorgeneral, who lately made an exploring survey of this tract and ascertained the extent of the portages.

For other particulars relative to the river St. Maurice, see vol. I. p. 284.
St. Maurice, seigniory, in the co. of St. Maurice, is bounded s. w. by Pointe du Lac; s. E. by Ste. Marguerite ; N. w. by St. Etienne; in front by the r. St. Maurice.-One league in breadth by $1 \frac{1}{2}$ league in depth: the original grant was 2 leagues in depth, but as the grant of Pointe du Lac was of a prior date, so great an extent could not be taken. St. Maurice was reunited to the king's domain, 6th April, 1740, and on the 13th of the same month granted to the Company of the Forges, with an additional piece of land, 3 leagues in depth by 2 in breadth, called fief St. Etienne; n. w. of St. Etienne is another tract of the same dimensions annexed to the above grants, as part of the lands belonging to the Forges. The whole is the property of the crown, but let on lease for 21 years, together with the forges, $\& \mathrm{c}$.
to Messrs. Munro and Bell, for the sum of 5001 . per annum only.-The soil is light and sandy, generally on clay or good marl; the surface is : continual alternation of gradual rise and fall; in the low parts are a few swamps, bearing much hemlock and cedar; the acclivities are mostly clothed with a general misture of timber, but the chief sort is pine of a middling growth. A very small part only of this grant is cultivated. A tine road from Three Rivers crosses it, leading mostly through woods to the foundery.-The Forges of St. Maurice are in St. Etienne at the confluence of a small river with the r. St. Maurice, about 8 miles above the town of Three Rivers. The elevated banks of the river embelished with a variety of beautiful trees on all sides, the deep tints of vast forests of fir, and the more distant and softened shades of the lofty mountains that bound the view, form a bold and magnificent per-
spective, as seen from the road that ascends the summit of the hilly chain that commands the valley. The establishment is furnished with every convenience necessary to an extensive concern; the furnaces, the forges, the founderies, workshops, \&c. with houses and other buildings, present the appearance of a tolerably sized village. The principal articles manufactured are stoves of all kinds used in the province, large potash kettles, machines for mills, and various kinds of cast and wrought iron; also a great quantity of pig and bar iron for exportation. The number of men employed is from 250 to 300 ; the overseers and persons employed in the construction of models are English and Scotch, and the workmen are generally Canadians. When this establishment was first formed, about 1737 , the mineral was found in great abundance near the surface, and for flexibility was not inferior to any in Europe. At first, the veins were worked with very little skill; but in 1739 a French artisan was employed who made great improvements, which have progressively increased, so that now the establishment is conducted on the same principles as those of England and Scotland, and almost with equal ability. It is singular, that neither of the provinces of Upper and Lower Canada supplies sand fit to be used in casting, therefore, what is used here is imported from England --The following summary of the speech of Mr. Dumoulin, the representative of the town of Three Rivers in the provincial parliament, clearly describes the present inutility of the lands under lease to the lessee of the Forges. "Here is an extent of land, from three to four leagues broad and five leagues in depth, containing with its dependencies from 60 to 80 square leagues, which is wholly useless for the purposes of cultivation, and by which the settlement and town of Three Rivers is hemmed in at the back, - not a single part of it has been conceded to a cultivator, and those persons in the small tract that adjoins Three Rivers, who wish to establish their children in new settlements in their own neighbourhood, are prevented from doing any thing, by this unprofitable exclusive privilege granted to the Forges. The whole of this produces only, to the crown, the trifling sum of $500 l$. rent per annum. He was ready to acknowledge the great utility of the forges, but they had no manner of occasion for this extensive territory, which, if it were granted out in lots to cultivators,
would be ten times more valuable. If it be supposed that the whole of this extent contained mines of iron, and that these ought to belong to the company who undertook the forges, all that need be done was to reserve, as he believed was usual in most grants, the mines that might be found for the crown or the company, and no grantee would regret a mine being opened on his lot, since it would double or treble the value of his produce, by the increase of population and consumption it would bring. It might be said, that granting lands for cultivation would destroy the supply of wood for fuel for the forges ; but, in the first instance, it would increase it, for the settlers would fell all the wood they could, and convey it themselves to the forges, where they would get it, under those circumstances, at a cheaper rate than they do now by sending their own workmen or contractors into the woods to get it. The evils of this monopoly were further illustrated by a proclamation the lessees induced Lord Dalhousie to issue, prohibiting even the making of maple-sugar on the land in question. This had been an immemorial source of advantage to the inhabitants around, and, in the season, men were seen in all directions with their axes, proceeding to the forests about 7 leagues beyond Three Rivers, to make sugar, of which they made from 3 to 500,000 lbs. a year. Even the pretence of destruction to the fuel could not be made for this, as tapping the trees did not destroy them as wood.The lease would be out in March 1831."-For other particulars relative to the Forges, vide $\mathbf{S}_{\mathbf{T}}$. Etienne, f.

## St. Michel D'Yamaska (P.), $v$. Yamaska, $^{\text {S }}$.

 St. Michel, seigniory, in the co. of Bellechasse, is bounded n. E. by La Valliére; s.w. by Beaumont ; in the rear by St . Gervais; in front by the South Channel of the St. Lawrence.This seigniory and that of St. Vallière have been formed out of the seigniory of Durantaye and its
## ST. MICHEL.

augmentation. About one half of the seigniory of St. Michel, extending along the river, forms the parish of St. Michel; the other half, being the $n$. end of the seigniory, forms a part of the parish of St. Gervais.-This seigniory is divided into 6 ranges of concessions, each of which, almost without exception, is 40 arpents, or nearly half a league in depth; they extend entirely across the S.; 5 of them in a rectangular direction, and one, which is the $2 d$, heing bounded on the s. by the $R$. Boyer, is of a triangular shape, and consequently is in extent, as compared with the others, only half a concession. In 5 of these ranges are 19.j lots of land inhabited and cultivated; the Gth range, at the northern extremity of the seigniory, being sterile and unproductive, is inhalited by 13 indigent families only, who can sarcely be considered cultivators. The first, or river range, possesses the greatest number of inhabitants, on account of the village near the church and many emplacemens. In one part of the 4 th range, about $\mathbf{l}_{\frac{1}{2}}^{1}$ mile in extent, there are but few habitations because the land is of bad quality and marshy. The other ranges, with the exception of the 6 th above described, are nearly equally inhabited. The soil in the lst and 2 d ranges is, with little exception, light and sandy and, consequently, indifferently productive. The soil in the 3 rd and 4 th ranges is alluvial and rich with generally a clayey substratum. The soil in the jth range varies in quality, but is generally sufficiently fertile. The 6 th range is covered partly with sand, very fine and deep, and partly by an extensive chain of enormous rocks. The $\mathrm{J}_{\text {st }}$, 2nd and 3rd ranges of concessions produce maple, the small cherry-tree, beech, fir and other soft wood, but the quantity is inconsiderable and only conough for fuel. The same kinds of wood are abundant in the other ranges, but the pine, so much sought after, is scarcely to be seen in any part of the seigniory. About four-ifths of the lands in the concessions, generally, are under cultivation, and the other one-fifth is covered with forest. Two small rivers run across this seigniory in almost a parallel course; one, called le Bras, divides the 5 th and 6 th ranges of concessions; the other, called la Rivière Bo;er, runs between the 2nd and 3rd concessions. The population of this seigniory, in Jan. 1827, amounted to 2,002 souls. 1,026 were males, including 490 between the
ages of 16 and 60 ; the females amounted to 976 . Here is neither college, convent, nor public school; for 20 years the curate supported private schools almost solely at his own expense, but five consecutive years of bad harvests forced him at last to withdraw his support, and the schools went to decay. There is only one village situated near the church, in which are two inns; it consists of 30 houses; all built of wood except one belonging to Dr. Mignire, which is two stories high, built of stone, and is far from being an inelegant building. There is one church only with two chapels of ease; there are four saw-mills, worked only in spring and autumn when the waters are more frecly supplicd by springs and rain, but no other manufacturing establishment. The only corn-mill used by the copyholders of this seimiory is in the neighbouring parish of Beaumont.-The agricultural produce, of course, depends much upon the seasons; the following account of the annual produce is about the average of 5 consecutive bad harvests letween $12: 21$ and $182 \%$; before 1821 , the averase growth of wheat was much greater and that of oats much less.

A very small number of individuals in this seigniory apply themselves to the improvement of the different breeds of cattle; and, in fact, few have the neccssary means. The catile in general are ill fed in the winter, which is the chief reason of their inferiority. The introduction of American horses into the province, is estecmed in this seigniory an injury to agriculture.-The corn produce is entirely consumed within the scigniory, execpt, perhaps, 2 or 3,000 bushels of oats sold in the markets; and between 4 and .ith hogs, each weighing about 200 lb . are consumed by the inhabitants. - Four great roads, almost parallel, traverse the entire breadth of this seigniory, and one only half its breadtl ; these are cut at right angles by another road, extending from the St. Lawrence to the southern extremity of the seigniory. These roads are, generally, in indifferent repair.There are two bridges built of wood and without tolls, one over Rivièrc Boyer, the other over le Bras.-Between the 4 th and 5 th ranges is a
muddy lake, extending into the seigniory of La Valliere, through which the water runs diagonally, and, intersecting the western angle of the S . of Berthier, discharges itself into the St. Lawrence. -The two chains of rocks in this seigniory are of considerable height and might be called mountains; one chain runs across the extremity of the 4th range, and the other is in the 6th range.-There are no mines, and the soil does not apparently present any natural phenomena; but the seigniory has not perhaps been sufficiently explored by geologists. -The Parish of st. Michel extends over the half of the seigniory fronting the St . Lawrence ; it is $1 \frac{1}{2}$ league in width, and 2 leagues in depth. The farms in this parish are generally 3 arpents in front ly $: 10$ in depth. Correctly speaking, there are no large proprietors, for the individuals, who sometimes acquire the property of their neighbours or other properties in the parish, purchase them for the sake of settling their children and not with a view of farming on a larger scale ; these acquisitions, there-
fore, are never permanent. All the lands are conceded, and about seven-ninths of the parish previously to 1759 . These concessions, with few exceptions, were granted on the condition of paying a quit-rent of 2 or 3 sols, fines on alienation, and a perpetual annual rent of one sol for each superficial arpent, and also with a clause compelling the grantees to grind at the seignior's mill the corn required for his family and for farming purposes ; the seignior, moreover, reserved to himself, in the event of a change of property, the right of retraite and that of taking as much timber off the conceded lands as might be required, hereafter, for the building of the mill, the seignorial manor-house and the parochial church, and also for their perpetual maintenance and repair: there is also a farther stipulation for the annual payment of some capons and a certain tax on all fish caught in the St. Lawrence ; but the two last conditions are commuted for a moderate rent in money.-The Parish of St. Joseph is in the aug-mentation.-

For title, vide La Durantaie.
St. Nicolas, bras, river, $c$. du Sud, r.
St. Nicolas (P.), v. Lauzon, s.
St. Ours, seigniory, and its augmentation, in the co. of Richelieu, are bounded $\mathrm{x} . \mathrm{E}$. by Sorel and Bourchemin; s. w. by Contrecœur, St. Denis, and St. Hyacinthe; in the rear by the r. Yamaska; in front by the St. Lawrence.-2
leagues in breadth by 6 in depth. Granted, 29th Oct. 1672, to Sieur de St. Ours, and is now in the possession of the Hon. Charles de St. Ours. The land in this extensive grant is every where of a good quality, and variously adapted to almost every species of agriculture.-Some concessions were granted prior to 1759 , and they measured 3 arpents by 30 ; the rent was 1 sol per arpent, and

## ST. OURS.

half a bushel of wheat for each 2() arpents. Down to the year 1821, all persons desirous of taking lands in the seigniory procured them on the original conditions.-Nearly 700 farms are conceded, and the concessions on the Richelieu are the most populous and the best. Four-fifths of the $S$. are under cultivation, and one-fifth is in standing wood near the it. Lawrence; the soil is sandy half way to the Richelieu and the rest is strongr land; approaching the Yamaska the soil is lighter but very fertile.-Every part is susceptible of cultivation and the scigniory is remarkable for its evenness of surface. There are two fiefs, each about 14 arpents in front and extending the whole depth of the s. ; one belongs to the heirs of Laperricre,
 rivers are the $\mathrm{S}_{\mathrm{t}}$. Lawrence in front, the Richelien, the salvayle, and the Yamaska which forms the rear boundary line; the principal rivers of smaller size are the Ruissiau la Plante and Ruisseau la Prade. The Richelieu, which traverses the upper part diagmally, is navigalle from the st. Latwrence for craft of 150 tons burthen ; the Yamaska, at the rear of the aug., is also navigalle, by both of which this $s$. possesses the advantages of expeditious water converance in an eminent degrec: the other rivers are not navigable. There is a large bridge orer the Salvayle at Rochrille.-The roads are generally good, and the principal are, the post road along the Richelieu that leads from Sorel to Chambly, and another leadin:: from worel to Montreal. The road w. e. of the re, valvayle, leading to the r . of Grand Maska, dows not appear to be much used; as it approaches the r. Yamanka it becomes excessively bad, scarcely meriting the name of road, running very circuitously through the woods, and barely wide enough for a summer vehicle; and, in the driest season, it is so wet that horses wade through an average depth of 14 inches of mud and water--some timber of the best kind and latrest dimensions still remains, and also some of the inferior sorts. Aloms the r. Yamaska and the Rousseau salvayle the timber is maple, cherry, beech, \&c. at other places, pine, spruce. epinette, \&e.-Two-thirds of the grain grown is consumed in the s., the other third is sold, and chiefly without being ground. Hemp is not grown. but every farmer sows about half a bushel of flax seed. In this S . are 3 corn-mills, 2 on the N . bank of the Richelieu, which are turned by the
rivulets that there discharge themselves, the 3 rd is on the Yamaska; each mill works 2 sets of stones. There are also 3 wind-mills for grinding corn, one on the bauk of the St. Lawrence, the others on the Richelieu. There are 2 saw-mills, one on the Yamaska, the other turned by the salvayle. The farmers in general work with horses and use the English plough. The horses atre of the Canadian breed and though small are strong and grood- A great number of hired labourers, ly saving their wages, have been able to take lands and open them by degrees. and are now become excellent inbabitants.-This scigniory contains 2 parishes and part of a Brd, viz. St. Ours, St. Jude and part of Contrccreur--The Porish of st. Jute is lately crected and the church, 25 ft . by 40 , is centrically situated on the s. bank of the r. Salvayle, and near it is the $r$. of Rochsille having about :3: houses. All the lands in this parish are conceded, and all the concessions have been made since 1759, and are charged $2!$ bushels of wheat and. livess 4 sols whole currency for 3 arpents by 30.-In the Parish of st. Ours and in the part of the parish of Contreceur lying in this s., all the lands are comeded, and most of them prior to 1759, and were granted on the royal terms.-()n the right bank of the Richelicu is the village of it . Ours, consisting of about 90 houses, many of them substantially and well constructed with stone; in the ceutre are a handsome church, 120 ft. by 00 , and a parsonage-house, and at a little distance the manor-house: besides traders and artisms, many persons of considerable property reside here, who are corn-dealers and make large purchases of grain of all kinds, produced in abundance in this and the adjoining seigniories, which is put on howed large river craft in the Richelieu and Yamaska and sent to Quelec for exportation. Thure are 2 ferries at the $\mathbf{r}$. St. Ours ower the Richelicu, where from ; to i: wols are charged for a carriage-The Island Deschuilluns, a short distance from the village is full a mile long and balf a mile wide. In fromt of the seigniory there is a group of islands belonging to it; the largest of them is called Isle Commune which has some good pasture.-In population, extent, situation, local advantages, quantity of land in cultivation, and state of husbandry, there are few properties in the province superior to this seigniory.

St．Ours du Grand St．Esprit（P．），$\because$ Lissomption，S．

St．Paul＇s Bay（P．），e．Cote de Bead－ PRE，S．

Sr．Pacl＇s Bay，in the r．St．Lawrence，lies at the entrance of the r．du Gouffre，which divides the S ．of Cote de Beaupre from the S．le Gouffre． It runs about 3 miles into the land，and at its entrance is about 2 miles wide，extending from C＇ily de la Baie on the west side to Cap a Cabeau on the east．These capes are of considerable height and of nearly perpendicular ascent．The bay is of an amphitheatrical form，and with lofty circuitous hills to the $N$ ．unfolds a very romantic and agreeable scene．The church is a prominent object，and the thickly clustered houses at the head of the bay are in a semicircular form．The hills behind are very precipitous，and their sum－ mits present a grand variety of appearance in round bluffs and sharp cones，which terminate at the capes at the bead of the bay．The capes， which are very similar，are partially covered with
stumpy evergreens，dwarfish pines，and shrubs of the hardier kinds．

St．Paul＇s Lake，is in the S．of Becancour， and almost divides it into two parts，extending N．E．and s．w．It is nearly 5 m ．long and $\frac{1}{z} \mathrm{~m}$ ． wide．It is not very deep，but abounds in fish of many kinds ：its waters pass by the channel of the river Godefroi into the St ．Lawrence．The mar－ gin is a perfect landscape set off by almost every description of charming scenery；well cultivated farms，with their neat and good houses，are seen in all directions round it；and，in many places， groups of fine trees，as decorative as they can be conceived to be in a well preserved park，give to the whole an appearance most beautifully pic－ turesque．－It receives the waters of Lake Out－ ardes，which lies between it and the St．Lawrence．

St．Peter，lake，between the counties of St． Maurice and Yamaska．Lake St．Peter is formed by an expansion of the waters of the St．Law－ rence，and extends from 15 to 20 miles in breadth and 21 miles in length．It is，generally，of small depth，many parts of the channel being not more than 10 or 11 feet deep，and it sometimes occurs that large vessels here run aground．The tide scarcely extends as far up as the town of Three Rivers which is nearly 2 leagues farther down than the lake，and the current in the latter is ex－ tremely faint．Several small rivers here discharge their waters，among which are the Machiche，Du Loup and Masquinonge on the N．，and the Nico－ let and St．Francis on the s．On the south side
of the lake commencing at the mouth of the r . Nicolet are Batture au Sable, Isle Moran, Baie du Febre, Batture à la Carpe, Baie ist. François and the Bay of Yamaska ; on the north side, beginning at Pointe du Lac, are the Batture de la Pointe du Lac, Flats of r. du Loup and Maskinongé Bay. At the head of the lake are many islands described in this work under their different names including the Isles and Islets, granted, Oct. 19, 169.1, to Sieur Redison, and which are more particularly mentioned in the title.-Lake St. Peter abounds in tish, particularly maskinongé, doré, achigan, eels and sturgeon

St. Pieriee (P. and V.), r. Orleans, I.
st. Pierre, river, or Little River, in the Island of Montreal, rises in the pirish of Lachine and running $N . \quad \mathrm{F} . \mathrm{fall}_{\mathrm{s}}$ into the Sit. Liwrence opposite Isle tit. Charles. With the assistance of this stream the Lachine canal is formed.

St. Pierreq les Becquets, v. Levrard, S.
St. Recis, river, falls into the sit. Lawrence above Lake Ait. Fruncis, at the s. W. extremity of the co. of Beauharnois. A very small part of this river is in the province of Lower Canada. The Indian village of St. Regis is situated near its confluence with the St Lawrence, where it is about $\because$ chains wide. It is navigable for boats to a considerable distance.

St. Rears, river, in Sault St. Louis, rises in two branches, descending from the S. of (hat teauguay. It runs $n$. to the sit. Lawrence, and near its mouth is increased by a small river that runs past the church of Sit Pierre.
st. Regis (V.), v. Indian Laniss.

Sr. Rocil des Aulnais, seimiory, in the co. of LIslet, is bounded $\times$ E. by Ste. Anne; s. w. by Reatume; in the rear by the r of Ashiord; in front by the St. Lawrence.- 3 leagues in breadth by 2 in depth. Granted, April $1,16 . \%$, to Ni cholas Juchereau de St Denis, and is now the property of Lieutenant-Col. Duchesnay.-In the vicinity of the river the land is low and intersected by some broken ridges of no great elevation, but
about the rear boundaries the mountains form a close chain of considerable height. Near the front the soil is excellent, consisting of a fine light earth with a good deal of marl in various parts: on the higher lands a yellow loam is prevalent. - No lands fit for cultivation remain unconceded, and one-fourth part is unfit for the purposes of agriculture.-The entire range of concessions, along the sit. Lawrence, was conceded before 1759; their usual extent was from 9 to $\&$ front arpents by 42 in depth, paying : $: 0$ sols tournusiv for each arpent in depth with the usual fines on alienation, of which a part is remitted provided the fines are paid immediately. There are 4 ranges of concessions; and the farms in the first are generally cleared; ths in the 2 nd , and the 3 rd is commenced. - Several small rivers water this S . sufficiently, and work 2 or 3 mills; the principal rivers are the $\mathrm{S}_{\mathrm{t}}$. Jean and the Furie. On the land under culture very little timber is left, but the other parts are well stocked with the best kinds, and among them is some pine of a valuable size.Many roads branch off in almost every direction through the scigniory, bat the one passing close to the river is the main 1 nsit road: they are kept in grod order as well as the different brilges.Some orchards are rising into perfection, and although the apples are of a very inferior quality, the plums are superior. 467 im , bundles of hay including gorse are amnually stawa, and the islend hay is considered the lest for cattle. There are 7 or 8 sugaries. -The fisherics are not considerable; and 3 schooners from 30 to 40 tons each, and 5 keel-boats are employed.-The rillagr of A.t. Rach is handsome and well situated at the entrance of the r. Ferice, about half a league cast of the Point of Sit. Roch, from which stretch extensive shoals that considerably narrow the deep water ch:mel, and form a traverse dificult to be navigated. In the village, which consists of about :3) neat and comfortable houses, is one schood where 3.5 scholars are instructed in French, English, and Latin, supported l,y the funds left by Mr. Verraux, late curr of this prirish, who bequeathed his property in equal proportions in favour of his relations, charity and ceducation, viz. one-third to his family, one-third to the poor, and one-third to the school. 1 little westward of the church is the telegraph station, No. 8, and river-craft and boats come up to the village.-This $s$ contains 390 families, of which, 186 only are supposed to live
entirely on the produce of their farms, and 130 families have the means and would willingly cultivate new lands if they had the opportunity, particularly if they were not too far distant.

St. Steven's Cove, or. Saguenay, R.
St. Sulpice, seigniory, in the co. of L'Assomption, is bounded $N . E$ by Lavaltrie with its augmentation and the $\mathbf{T}$. of Kildare ; s. w. by the $S$. of L'Assomption; in the rear by the $r$. of Rawdon; in front by the St. Lawrence.-Two leagues in front by six in depth. Granted, 17 th Dec., 1640, to Sieurs Cherrier and Leroyer, and is now the property of the seminary of St. Sulpice at Montreal.-More than three-fourths of this seigniory is well cultivated, and for the goodness of its soil, the quality of the timber and state of improvement it is not surpassed by any that surround it. The whole seigniory is conceded and contains 750 lots of different extents, generally from 3 to 30 or 40 arpents each; these lots are divided into eleven ranges or côtes. More than three-fourths of the lots are built upon and settled. The best ranges are those of St. Sulpice, St. Esprit, Bas de la Grande, and a part of Bas du Ruisseau. There is also much good land in Point du Jour, in L'Assomption, and in the continuations. The other ranges are of middling quality and generally sandy; the inhabitants, nevertheless, live pretty well, because they cul-
tivate potatoes to a great extent, also Indian corn and rye, which grow abundantly on these sandy soils. There is scarcely a single lot that can be called entirely unproductive.-This $\mathbf{S}$. is particularly well watered by the r. L'Assomption, the Achigan, St. Esprit, Ruisseau St. George, Ruisseau Vacher, Rivière Rouge, Ruisseau Point de Jour, and the River of Lake Ouareau, most of them running into the $\mathbf{r}$. L'Assomption after a mazy course that in some parts, where the ground is high and clothed with wood, present points of view truly picturesque and beautiful. There are 3 corn-mills; two on the river Achigan, near the line of L'Assomption, and the third at St. Jacques, on the river Lac Ouareau, two leagues from the church of St. Jacques. At these mills about 40,000 bushels of corn are ground annually. There are also a great number of saw-mills, in consequence of there having formerly been a fine forest of pines towards the middle of the seigniory; but the great trade carried on in converting the timber into planks, \&c. has entirely consumed the timber and left only inferior trees. As this seigniory produces much rye and barley, many distilleries have been established. There are two mills for carding wool and milling cloth ; one on the Achigan, the other on the St. Esprit. A third is lately established on the river of Lac Ouareau, at a place called les Dales, because the bed of the river is there confined between two rocks, whence the water escapes as if it flowed through a spout.-Scarcely any timber remains, and even firewood is becoming scarce.-This seigniory contains 3 parishes; St. Sulpice, St. Pierre du Portage and St. Jacques, in which are 3 parochial churches and 3 presbyteries.-The Parish of 'St. Jacques includes all the rear parts of the $\mathbf{S}$. and contains the Acadian settlement, the most considerable in the $\mathbf{S}$. The Village of St. Jacques is nearly in the centre of the parish, and is two leagues s. from the $\boldsymbol{T}$. of Rawdon and four N . from the St . Lawrence. A continuation of the public road from its termination at the line of Rawdon to the second range has been opened by Mr. Marshall, but it is, as yet, impassable for any kind of vehicle. Nine arpents of land only are unconceded, which will not repay the expense of cultivation. This parish has been settled within the last 50 years, and no concession was granted previously to 1759 . Besides more than 100 families who have no lands there are 600 youths, above

## ST. S U L P I C E.

and under 21, who are desirous of settling but cannot obtain lands, even in the neighbouring townships which would well answer their purpose, on account of the number of strangers who settle there. The church is large and handsome. -The Parish of St. P'ierre du Portage or L. 1 s somption, is centrically situated and contains 6 concession ranges, viz.

> | Le bas de L'Asomption | L'Achigan |
| :--- | :--- |
| Le Point du Jour | La Presipu'ile |
| Le Haut de L'Asomption | Le St. Esprit. |

The soil is proper for the grow th of hemp, and the greatest part of the parish lowing under culture, there is very little wood and that litile only fit for fuel. The river Lidsemption traverses the parish, in a serpentine direction, nearly from N . to $s$ and other less considerable streams run into it in this purish, viz. the Achigm, the st. Esprit, the Point du Jour, the Ruisseau St. George and the Ruisseau Vacher, neither of which is navigable. There are 3 toll-bridges near the village on the R. L'Assomption, 4 on the Achigan, of which two are free, and there is one free bridge over the $\mathrm{s}_{\mathrm{t}}$. Esprit; there are also 2 ferries over the L'Assomption above the village. In this parish are 3 corn-mills, 2 saw-mills one of which is worked by wind, 2 carding machines, one whiskey distillery, one brewery, and many potall works of which 4 are in the village. The cattle are numerous, but generally of an inferior quality. The Iillage of LAssomption is built on almost an island formed by the beautiful river of that name; it is also called the Portage of LAssomption, because, by travelling over the little isthmus at the entrance of the village about 2 or 3 arpents across, a long circuit of about a league is avoided. This village is in a beautiful situation, washed on all sides by the river. It contains about 170 houses, including 12 inns, many of them built with stone two stories high and roofed with tin. The church is quite new, elegant and very large, and as it is built on the most elevated spot in the village, which it commands, the prospect from it is very extensive. The population is between 1000 and 1100 souls. The church is one of the finest in the province. There are 4 schools, 2 for boys and 2 for girls, besides masters for private tuition; the schools for girls are well attended and the children are instructed in French grammar, geography,
history, embroidery, \&c. All the roads of the neighlouring parishes centre in this village, and there is no other way to Montreal. The road from it. Jacques passes the church of L'Assompltion to that of St. Roch and 30 arpents farther. This concentration of roads causes the village to be the entrepot of all the parishes behind it, and the only place of entrance and exit for the whole county. This v . has a considerable trade.-The Parish of st. sultice occupies the front part of the S from the $\mathbf{P}$. of $\mathrm{S}_{\mathrm{t}}$. Pisure to the St . Lawrence, extending 2 luyues aiong the river from Lavaltrie to Rupatigny. It was erected by virtue of the Regulation of $\mathrm{S}_{\mathrm{e}} \mathrm{P} .2(1), 1721$, confirmed by an Oader in Cotacit, Mar. 3, 1,22. All the farms are conceded and cultivated, with the exception of the portions left for the growth of firewood, and the settlcments in the lst concession range are skirted with words All the farms are conceded on permanent conditions and in no case redeemable, paying quit rent, scignorial rent, with all other seignorial rights, according to the custom of Paris; each concession is charged with the payment of 10 sols and half a bushcl of wheat for every 20 superficial arpents. All the concessions, or nearly so, were granted lxfore 1759. The timber consists of maple, cherry, elm, \&c. There are 3 windmills; one for errinding corn is built with stone, the others are for sawing and are built with wood A gricultural hatsour is generally performed with horses and oxen. One half of the grain grown in this $\mathbf{P}$., on an average, is sold at Moutreal. The roads are good-The rillaye if st Sulpice is built on the road leading to Lavaltric and running along the verge of the bank of the $s_{\mathrm{t}}$. Lawrence ; it includes about 100 dwelling-houses besides numerous stores for the produce of the country, considerable quantities of which are here deposited. One half of the houses are built with stone, and the church, which is very ancient, is ! 9 ft lyy 45 . There are two chapels and one is built with stone ; one stands above and the other below the church. There is one school in which 20 bors and girls are instructed, and the Frcneh language taught.-Is/es Bouchards, which belong to Mr. Pierre Baudez, are included in this P.; their soil is strong and fertile, and the higher lands only are inhabited, the lower are not on account of the reflux of the waters in the spring. There are 18 families containing 150 souls.

Ste．Therese（P．and V．），v．Blainville， S．in Mille Isles．

St．Therese，river，is a small stream that
rises in the S ．of Blainville，and empties itself into the Rivicre Jesus，in front of the seigniory．

St．Thomas（L．），v．Stoneham，T．
St．Thomas（P．），v．Rivifiee du Sud，S．
Ste．Trinite（P．），v．Contreceur，S．
St．Urbain（P．），v．Cote de Beaupre，S．
St．Vallier，seigniory，in the co．of Belle－ chasse，is bounded n．E．by Berthier ；s．w．by St． Michel ；in the rear by the т．of Armagh．－About $1 \frac{1}{4}$ league in breadth and about 4 leagues in depth， including the augmentation．It is the property of＿－de Lanaudière，Esq．－This seigniory is nearly as possible a counterpart of the adjoining S．of St．Michel，the quality of the soil and the va－ rieties of the timber differing only in a very slight degree；but the bank of the river St．Lawrence is much lower，and the rear part somewhat broken and rugged．There are 10 concession ranges laid out， 6 of which are settled，and 5 entirely，also $\frac{1}{4}$ of the 7th．The whole is under cultivation ex－ cept the domain and patches here and there；and between the 5 th and 6 th ranges is a rocky place called the Grand Côté unconceded．－The soil in the settled ranges is as follows：－

| 1st Concession． | White strong clay． |
| :--- | :--- |
| 2nd \＆3rd do． | Strong soil on clay． |
| 4th do． | White clay． |
| 5th do． | Yellow and black soil． |
| 6th do． | Strong yellow loam． |

All the lands were conceded prior to 1759．The timber is hard－wood，spruce，and epinette inter－
mixed, and the roads are good and numerous. There is one iron mine. The fisheries produce eels, salmon, and shad. Frichette's fishery at the mouth of the $\boldsymbol{r}$. du Sud prevents the salmon from ascending that river; he used to take, 8 years ago, 440 per ann. but at present he takes none. -This $s$. is well watered by the rivers du Sud, le Bras, and the Noire, which are supplied by numerous small streams and lakes.-At rille Horke are 4 mills, viz. one corn-mill with one set of stones, and 3 saw-mills. At Boissoneau's saw-mill on the $n$. du Sud 13 saws are always at work and 9 men daily employed. The site of the mill is highly favourable, and near it are one store and 3 or 4 houses for labourers, $\varrho$ barns, $\mathbb{S c}$. Mr. Boissoneau has the toll-bridge, where a calash pays 41. , a cart $31 d$. and a man and horse $1!d$. The village stands near the shore of the ist. Lawrence.The parish of st. Yallier is co-extensive with the seigniory.-At Four Corners are a church, 120 feet by 30, a chapel, and a preslytery built with stone; near the church is a school, where 25 children are instructed.

St. Vincent de Paul (P.), r. Isif Jesus.
Salmon or au tiaumon River, in the co. of Saguenay, runs from the $w$. s. $w$. into the $R$. Assuapmoussoin, forming in the basin or bay at its mouth a well timbered island $\frac{1}{2}$ a mile long. The average width of this R . is above $\frac{1}{4}$ of a mile, and it descends with a swift current. For 6 or 7 leagues upwards its banks present excellent land and the greatest inducement to make settlements; the soil is principally a thick covering of argillaceous loam over layers of whitc clay, producing timber of fine growth, viz. elm, ash, spruce and red pine. In several places, however, particularly on its $E$.
bank, the loam is mixed with much sand where the timber is chiefly spruce fir, white birch, aspen and cypress. Higher up, the land ceases to be culturable and becomes swampy, presuting extensive plains that produce only the white spruce, and is the proper country for the hunting of the carrbou. The Dep. Sur. Gen., during his exploring survey of this part of the Sugumay country, aread his net at the entrance of this r . and enught a pike, a few carp and a doré, all of fine quality.
Salmon River, in the s. of La Petite Nation. There are two rivers of this name in the same seigniory, and both are about 2 chains wide and fall into the Ottawa. The Great Silmon River runs about 50 miles. and is navigatle for bateaux in the spring. The course of the Little Salmon River is about 40 miles, and is navigable for canoes only for a short distance. Both rivers are well stocked with fish.
Samon River, in the co. of Sherbrooke, runs through the $\mathbf{~}$. of Clifton into the $\mathbf{r}$. of Ascot, where it passes Lennoxville ; and, alnout half a mile below that village, it falls into the r. st. Francis. This river forms good sites for mills, but it is so much obstructed ly falls, that its only navigable advantage is the running of logs to sawmills.
Salmon River, in the co. of Beauharnois. descends from the United states across the province line, and, watering the Iudian lands, discharges itself into the $s$. w. extremity of Lake st. Francis. Its course in the province is abruct 4 or 5 miles. For about $l_{\ddagger}^{1}$ mile from its mouth it runs through low meadows and forms sar!? a semicircle. Its depth at its mouth is $!9 \mathrm{ft}$. :und it gradually decreases ats far as the town of Covington, where it is only 4 ft . This river is of great importance on account of its immediate communication with the Cuited States-The town of Covington, in the state of New York (more commonly known by the name of Fremh Jiills), being so immediately contiguous to the province line, may be considered as worthy of notice, altbengin seemingly unconnected with this work. It is most pleasantly situated on the gradual slopec o: desecnt of a high and commanding eminence on the cast side of Salmon River, at the first Forks, and is intended to cover a surface of 400 acres. including the ground between the two branches of that river from their junction to the Chatciu-

## $\mathbf{S A N}$

guay road. It is divided into streets of about 60 feet in breadth, laid out at right angles, several of which are named after the American officers who served during the late war. The two bridges over this R. are substantial and well constructed; the largest over the east branch (situated a short distance above the mills) is 185 feet in length, and the other over the west branch 135 ft . The chief part of the town is on the east side of the R. and contains a handsome church, a courthouse, a gaol and 2 or 3 taverns, forming altogether about 40 edifices, chiefly of wood, tastefully built, and generally painted white. The large corn-mill from which this place was originally named is situated on the west side of the $R$., and opposite to it is a saw-mill. The bank of the $\mathbf{r}$. in front of the town is rather steep, and from 15 to 20 feet high; the depth of water just below the mills is from $2 \frac{1}{2}$ to $3 \frac{1}{2}$ feet, at which place General Wilkinson's gun-boats were sunk in 1813. The population of this town is computed at 200 souls, and it is only $\frac{3}{4}$ of a mile south of the small village of Dundee, which is within the province line, communicating with it by a most excellent road. Covington perfectly commands that village by means of its high grounds and military reserves. To the Americans this town is of the more importance, as it communicates by good roads, on which there are some flourishing settlements, with the town of Malone, the Four Corners, Champlain Town, Plattsburg, St. Regis and Massina.

Salvayle, river, rises in the parish of la Presentation, in the S . of St. Hyacinthe, and, traversing through the centre of the augmentation to St. Ours, falls into the r. Yamaska. In the p. of St. Jude a bridge is thrown over this small river, at the base of two steep hills, between which the stream runs.

Samagon, river, runs into the n. e. side of the river Matapedia, about 4 miles from its confluence with the Ristigouche.

Sand River, v. Mistassini, r.
Sangues, des, river, rises in a small lake on the E. side of Temiscouata portage, and communicates, by means of a small lake and the r. Petite Fourche, with the s. w. branch of the r. Trois Pistolles.

## SA U

Sault a la Puce, river, is a small stream descending from the high lands in the rear of the parish of Chateau Richer, in the $S$. of Côte de Beaupré. It winds through a mountainous and woody country, and is entitled to notice for its very romantic falls, where its stream is precipitated from 3 declivities in succession; and for the beautiful and truly sylvan scenery that decorates its banks, especially when the autumnal foliage displays its multiplied variety of beauteous tints. It waters the p. of Chateau Richer, and falls into the St. Lawrence about $\frac{1}{4}$ of a league E . from the church, and at a little distance $N$. $w$. from the public road.

Sault au Recollet (P.), v. Montreal.
Sault St. Louis, seigniory, in the co. of Laprairie, is bounded N. E. by the S. of Laprairie; s. w. by Chateauguay and La Salle; in the rear by the $\boldsymbol{r}$. of Sherrington; in front by Lake St. Louis.-2 leagues in front by 2 in depth. Granted with the isles, islets and shoals lying in front of this S. and that of Laprairie, May 29, 1680, to the Jesuits.-An augmentation consisting of $1 \frac{1}{2}$ league lies towards Chateauguay.-This S. is now the property of the tribe of domiciliated Indians who inhabit the Coghnawaga village. The situation of this tract, between the seigniories mentioned as its boundaries, will convey a sufficient idea of it without farther description, as there is not much variety through the whole of the level country, from Laprairie to St. Regis. The rivers La Tortue, St. Regis and du Portage, intersect it so as to water it very completely. Nearly all the half of the S. which lies towards La Salle is well settled and cultivated by Canadian families; from the r. St. Regis towards the St. Lawrence, the uncultivated parts are covered with wood of all the common kinds, except a small portion reserved by the proprietors for their own use.-The r. Chateauguay disembogues itself into Lake St. Louis at the $N$. W. corner of the $S$. Its navigation is in many places interrupted by rocky shoals and small rapids, particularly in the summer, when it will hardly admit of the navigation of canoes, but in spring and autumn it is perfectly convenient for rafting down timber.-For an account of the village of Coghnawaga, vide $I_{\mathbf{N}}-$ dian Lands.

Smminal，river，is a small stream that runs into the N．w．side of Ristigouche bay．

Settlements．The following information is derived from the evidence given by John Neilson，Esq．to a committee of the House of Assembly，and is likely to prove beneficial to land companies，and even to individuals who are desirous of knowing the most advantageous mode of exploring tracts of wild lands，with a vicw of ascertaining the practicalility of forming new settlements．－New settlements can only be suc－ cessfully formed where there is a certain degree of facility in communicating with the old－the wants of an agricultural population are so exten－ sive and the means and support that they require from external sources，before they can derive them from the soil which they occupy，are so consider－ able，that no successful agricultural settlement has ever been made in America without such facility of communication．The ocean and navi－
gable rivers at first afforded this facility，the settlements made on the sea shore or on the banks of navigable rivers having subsequently furnished the external support to the new settlements in the interior，by means of roads of communication opened in the rear of successive settlements．These are only practicable as a means of communication to a certain distance，and where natural circum－ stances are favourable．For the purpose of form－ ing agricultural settlements，it was not necessary then to explore a country to any great distance from existing settlements or navigable waters． No new settlement can support itself far from the beforementioned aids；to attempt them is a dis－ advantageous waste of means which ought to be more usefully employed．－It is necessary now to explore a country to a considerable extent be－ yond the immediate site of an intended settlement， in order to ascertain whether it pussesses those prospects of future prosperity，which in no small degree depend upon its situation in respect to ad－ jacent traets of land．－The inhabitants of a small tract of the most fertile soil are never so thriving as those even of an inferior soil，when surrounded by extensive tracts of fertile land，particularly if the roads of communication of the latter to their markets lie through the lesser tract．－The general geographical knowledge of Lower Canada，show－ ing the existing settlements and the courses of the rivers towards their mouths，is sufficient to point
out where exploring parties ought to be employed with a view to the forming of new settlements. The surveys of the townships have given much information, and the topography of the country is well known to its inhabitants, although much of it is in the way of being lost. The Indians, whose knowledge of this sort exceeds that of any other description of people, are disappearing ; and the $V^{-}$ojageurs and Coureurs de bois, persons formerly employed in trading with the Indians and who traversed the country in every direction, are nearly extinct. There are, however, in every parish many persons employed in agriculture, who make long excursions into the rear of the settlements at certain periods of the year for the purpose of hunting and fishing, from whom much information might be had of the nature of the country in different directions, which is of great utility in forming a judicious choice of places, and ought to prevent useless exploring parties and fruitless at-tempts.-An exploring party should consist of 6 persons, viz. one intelligent person, well acquainted with the inhabitants and the soil and climate of Lower Canada and able to keep a journal, to act as manager; three Indians who have frequented the tract to be explored, and who are active and sober, and of good character ; one Canadian farmer who has made excursions into the country to be explored; one American farmer who has been accustomed to open new settlements, would be sufficient for exploring any tract adjoining the existing settlements in Lower Canada, that might be thought worth the trouble and expense. The entire cost, provisions included, would be 40 s . per diem: viz.

One month would be sufficient for exploring any tract that it would be desirable to explore at present with a view of opening new settlements, and the expense would be about 860 .-The manager ought to be able to ascertain pretty correctly the latitude and longitude of the places where he may happen to be ; and he ought to keep a journal in which he should insert daily his course and distance, with his observations on

1. The weather and temperature.
2. The timber and other productions of the soil.
3. The face of the country, whether level, broken, or gullied; the streams, swamps and mountains; extending the daily excursions of his men to a breadth of several leagues, and taking a daily view (if practicable) from the tops of trees and in high situations, in order to form a judgment of the adjacent country, particularly noticing the sorts of timber beyond the excursions of his assistants.
4. The nature of the soil, mentioning particularly the nature of the ledges of stone or rock which may be discovered, and also the kinds of stone brought down by the rivers and the nature of the substrata along their banks.
5. On the most advantageous route for a road, which ought as much as practicable to be his own track. This track be ought to lay down on a plan or sketch of the face of the country, showing every day's march with the distances, the direction and apparent course of all streams he may have crossed, their breadth, current, and the character of their waters, and the composition of the soil through which they pass. It would not be amiss for him to blaze or mark on the trees his general course. -A great many other things necessary to be done, occasionally, will strike any experienced and intelligent manager who may be employed.

Settringron, township, in the co. of Saguenay, is an angular tract lying between the portions of the seigniories of Murray Bay, Eboulemens, and le Gouffre. Above 12,000 acres are settled by native Canadians, as well as the village of St . George, which is in the s. w. angle, the approach to which is rocky and mountainous.-Ungranted and unlocated, 20,000 acres.
Seven Islands, near the Saguenay coast in the Gulf of St. Lawrence, lie at the entrance of a bay of the same name. They are included in the territory of the King's Posts.

Shasawataisi, river, runs into the channel that connects the lake of that name with ther. St. Maurice.

Shawenegan, river, or Manigousito, i. e. the foot of a rapid, rises in the $\mathbf{t}$. of Caxton and running s. $\mathbf{e}$. waters a small portion of the rear of Cap de la Madeleine, when suddenly turning s. w. it intersects an eastern angle of the lands belonging to the forges of St. Maurice, and joins the river
of that name at the celebrated Falls of Shawenegan, for an account of which vide St. Maurice. The land on both sides of this $\mathbf{r}$. is of excellent quality. The timber is mixed, including maple, beech, fir, pine, black birch, \&c.
Shecoubish, river, rises in l. Shecoubish in the co. of Saguenay, lying in lat. $4!^{\prime \prime}-7 \mathrm{~N}$., long. $73^{\circ}$ 5.in. It receives the wates of the Riviere du Grand which rises in a small lake near L . Kickandatch. The Shecoubish, after passing several rapids, joins the Assuapmoussoin at the Falls of Chaudiew.
Sleen, a projected township, fronting the r. Ottawa and lying between Esher and Chichester. In this $\mathbf{r}$. are the falls of Petit Allumet.
Shifford, county, in the district of Montreal, is bounded e. by Sherbrooke ; w. by St. Hyacinthe and a small part by Rouville ; n. ly Drummond; s. by Missiskoui. It contains the townships of Ely, Stukely, Brome, Shefford, Roxton, Milton, Granby, and Farnham, with the gores and augmentations of those townships. Its extreme length is 30 miles and its breadth 30 , containing 749 square miles. Its centre is in lat. $45^{\prime \prime} 22^{\prime} 16^{\prime \prime}$ s., long. $72^{\circ} 32^{\prime} \mathrm{w}$. It sends one member to the provincial legislature, and the place of election is at Frost Village. The principal rivers are the branches of the Yamaska.

Shefford, township, in the co. of Shefford, is bounded e. by Stukely; w. by Granby ; n. by Roxton; s. by Brome. The surface is uneven, and towards the west mountainous; the soil in most places is exceedingly rich, but the uplands and high ridges are too stony to be of much value. The timber is almost universally of the best spe-

## S H E

cies.-It is watered by several branches of the $\mathbf{Y a}$ maska and by other streams, and it is intersected by many roads communicating with the neighbouring townships.-The s. e. part is the best and most populous, where some fine settlements present themselves, that are, to the extent of their cultivation, in a very flourishing state. The banks of the rivers display many good breadths of meadow and grazing land. This township is particularly unfurtunate in having one-seventh more than any other township laid out in crown and clergy reserves, and also in having three large bridges to support across different branches of the Yamaska: the difficulty, and indeed the impossibility, of getting roads made across the reserves, and the lands owned by non-resident proprietors, must be obvious.-Shefford contains two churches and one resident minister. The village, containing about 25 houses and 12() souls, is situated in the e. part of the $\mathbf{T}$. and is called Frost Villare, being built on ground belonging to Mr. Frost, to whose exertions the advancement and prosperity of the settlement is chiefly owing.-In the $\boldsymbol{T}$. are several corn and saw-mills-Ungranted and unlocated, a few hundreds of acres only.

Statistics.

Lize Storl:

Sherutimish, $v$. Chicoutimit, r.
Shenley, in the co. of Megantic, an irregular tract lying between Dorset and Tring, is bounded n. f. by the S. of Aubert Gallion and the river Chaudiere, and s.w. by the т. of Oulney. The surface is irregular, in some places low and swampy, but in others it is a moderately good soil, that would doubtless be sufficiently fertile if brought under the plough. On the dry lands the timber consists principally of beech, maple and birch; in other parts there is scarcely any

## S H E

timber except cedar and spruce fir.-It is not very well watered.-One quarter of the township was granted to the late Mr. James Glenny, but no part of that grant is cultivated.-Unyranted and unlocated, 33,000 acres.

Sherbrooke, county, in the district of Three Rivers, is bounded e. by Megantic; w. by Stanstead and Shefford; n. by Drummond ; s. by the province line. It contains the townships of Garthby, Stafford, Whitton, Marston, Clinton, Chesham, Lingwick, Weedon, Dudswell, Bury, Hampden, Ditton, Emberton, Drayton, Auckland, Newport, Westbury, Stoke, Ascot, Eaton, Hereford, Compton, Clifton, Windsor, Brompton, Shipton, Melbourne, and Orford, together with all gores or augmentations of those townships. Its extreme length is 68 miles and its breadth $57 \frac{1}{2}$, containing 2,786 square miles. Its latitude on the St. Francis at Westbury township, is $45^{\circ} 30^{\prime}$ $15^{\prime \prime}$ к., long. $71^{\circ} 35^{\prime} 15^{\prime \prime}$. It sends two members to the provincial parliament, and the places of election are Sherbrooke and Richmond. Sherbrooke presents a more extensive surface of township lands than any other county in the province, and it will ultimately be divided into several counties as the population increases: it is abundantly watered by numerous streams and lakes. The principal rivers are the St. Francis, the Magog, the Coaticook, the Salmon, the Connecticut, the Perry, the Indian, Hull, and Leech stream. Besides these, there are several other similar rivers that wind through the county and fall into the St. Francis. The principal lakes are, the Weedon lakes, the Orford lakes which are part of Lake Connecticut, the Megantic, and the Scaswaninipus. The face of the country in the vicinity of Eaton and eastward is generally level to the ridge of highlands towards the head of the Connecticut; to the west, in the vicinity of Orford, the land is uneven and broken and presents ridges of highlands. The soil and timber, generally, are of good quality, and the county in every respect possesses considerable advantages from its locality and numerous roads, along which are fine and flourishing new settlements; the chief route from the $S t$. Lawrence to the United States passes through the village of Sherbrooke, leading through Stanstead. This village may properly be called the county town, and is the seat of the District Court of St. Francis.

Sherbrooke (V.), v. Ascot, t.
Sherrington, township, in the co. of Acadie, is an irregular tract, bounded E. by De Léry; s. by Hemmingford and part of Beauharnois; w. and N. w. by Chateanguay and Sault St. Louis. The soil and timber of this $\mathbf{T}$ are much diversified; the lands s . $w$. rise gently in many places into considerable eminences and consist of several sorts of soil, but almost the whole is unexceptionable and plentifully covered with beech, elm, maple, basswood and white ash. To the N. E. there are many swamps, some of which are overgrown with black ash, and others with cedar, \&c.; those covered with ash might soon be rendered fit for culture and would, by ditching, become very good meadow land. The river La Tortue winds through the township and, with many smaller streams, conveniently waters it ; it is not navigable for boats, but rafts are brought down to La Tortue mills. The ranges 11, 12, 13, and 14, are settled by Canadians who had their titles originally from Mr. Sanguinet, proprietor of the S. of La Salle, under an erroneous belief that those lands were within his boundary. About the eighth and ninth ranges is a small settlement of English families, who have made great progress and have got their farms into a very thriving state. The road from La Tortue into Hemmingford passes through Sherrington, and there is also another road leading by the Douglas settlement. -The principal land-owners are Fs. Languedoc, Esq., holding 11,000 acres from the heirs of the late Hon. H. Finlay; the heirs of the late Bishop Mountain; and the heirs of Mr. M‘Callum and
those of the late Hon. F. Baby.-The settlements in this F . are rapidly advancing, and Mr. Languedoc, who has commenced the cultivation of hemp on a liberal scale, has erected a henp-mill.

Shifgasi, c. Troublesome Rifer.
Shikutimishe, a name of the e . Chicoutimi.
Shipton, township, in the co. of Sherbronke, is bounded N.e. ly Tingwick; s. w. by Melbourne and part of Durham; s. e. by Windsor and $\mathrm{N} . \mathrm{w}$. by Kingsey. There are no extensive landholders and the T . is therefore divided, chiefly, between owners of detached lots: Elmer Cushing and Wm . Bernard are considered to be the principal proprietors.-The $\boldsymbol{T}$. is generally designated as the Back and Front of Shipton as terms of division. The front contains the space between the R. St. Francis and the 8th range; the back contains the first 8 ranges.-This township, equally good in nearly all its parts, is of a very superior quality and is decidedly the best of all the townships within the district: cultivation of every description may be carried on with the greatest success. Hemp has not yet been cultivated and flax only for private use; the wheat is scarcely surpassed in goodness in any part of the province. Numerous gradual rises are peculiarly fit for such productions as require a rich dry soil. In this r. is good stone for lime, and in the N. f. corner a low picce of land contains a white soft earth that makes excellent lime.-The timber is beech, oak, maple, birch and pine, intermixed with a great abundance of inferior kinds.-This r . is exceedingly well watered by a large branch of the Nicolut, which receives its waters chiefly from the 3rd and 4th ranges, and by several small rivulets which rise in the uplands and, after winding very sinuous courses, descend into the St. Francis. The Nicolet is navigable for boats and scows hence to the St. Lawrence and, with the St. Francis, furnishes water conveyance from nearly every part of the township; by which large quantities of pot and pearl ash, made here, are transported to Quebec.

## SHI

Flat-bottomed boats and scows, loaded from this r., descend both these rivers to Three Rivers, but as they are occasionally rapid several portages are made. A small lake in the l0th range empties into the s . Francis, and another in the 2ud range into the Nicolet; each, about one mile in extent, abounds with white fish, trout, pike, pickerel, \&e. A strong free bridge has been built over the Ni colet, about 150 feet wide. There is an octasional ferry to Melbourn over the St. Francis, where the rates are, for a passenger 3d., a horse 7 d., a carriage 10d.-Agriculture is pursued here with great attention and over a liuge extent of land : the farms are dispersed on the banks of the St. Francis, the Nicolct and the rivulets, many of them displaying an advanced state of improvement. The average produce per acre, under fair cultivation, is,

| Wheat | 15 to 2 ) bush |
| :---: | :---: |
| Oat- | 40 |
| Indian com | 40 to 310 |
| Darley | 41 |

The cattle are chiefly of the English and American breeds and which, particularly the sheep and the Canadian cattle, thrive well. Here is a good breed of English horses, which are rapidly increasins in number, because the farmers find them protitalhe as an article of trade. The wages of grood agricultural labourers are, in summer, from $3 s$. $4 d$. to 5 s. a day, from 10 to 12 dollars a month and from 100 to 130 dollars per annum ; tradesmen are paid from $5 s$. to 7. . $6 d$. a diy.-The roads have recently received considerable improvements. On the road from the parish of st. (irergire to the village of Richmond, 48 miles, the sum of 7600.5 s .5 m. has been expended in such a manner as to make it easy and fit for travellers. 30 miles of it have been completed in the following manner: most of the causeways and all the small bridges are made, more than half is ditched and the road opened from 40 to 50 feet in width, and the hills are dug down so as to make the passing casy. This part of the road commences at the parish of St. Gregoire and extends to Long Point on the river st. Francis. From Long Point to Richmond village, estimated at 18 miles, the road is open to the same width ; stumps and roots are cleared out, and about oncthird of the ditches, causeways and bridges are finished. The tract of country from Richmond village to Long Point consists altog cther of excellent land for cultivation, and is already inhabited to some extent. From Long Point to St. Gregoire
dark timber prevails, and the country is very level and the soil is such as is in repute among old Canadian farmers. The whole of this distance will admit of an excellent road and must always command, without any comparison, the greatest conveniences for a general line of communication from the $\mathrm{S}_{\mathrm{t}}$. Lawrence through the townships to the province line ; on this route there is but one hill, and the distance is at least 18 miles nearer than by any other route which is or can be obtained from Three Rivers to Richmond. It will require, above the sum already granted, 700l. currency to complete a good carriage road from the parish of St . Gregoire to the village of Richmond, exclusive of the expense of two bridges over the two Nicolet rivers, which will require a further sum of $1,500 \mathrm{l}$. currency, one of the rivers requiring a bridge of 235 feet in length, and the other a bridge of 324 feet in length. From the rear part of Shipton to Ireland, through Cruig's Road, is 27 miles and is a forest of large timber, through which there is no road, although one is absolutely necessary for the people of the eastern townships to bring their produce to market, inasmuch as it saves a distance of about 70 miles. There has been a grant of 4001 . to open that road, but nothing has been done from the insufficiency of the grant; it would require, at least, in addition to this grant, 10001 . to make the road passable for carriages; within these 27 miles the rivers Nicolet and Becancour pass, and make the road much more expensive; if bridges were built they would cost 500 l . The lands are excellent and might be easily settled, being one of the finest parts of the country. A road leads from the rear, intersecting the St. Gregoire road, and also another to Kingsey.-This r. contains two villages, and an episcopal church has been erected in the village of Richmond, and the erection of another free church is resolved upon, which is to be built in the back part, 10 miles from the former. A suall Roman Catholic church, near the centre of the r ., is being built and is already roofed -Richmond Village is on the river St. Francis, at the intersection of Craig's Road; it contains about 12 houses and 80 inhabitants and is rapidly inproving; it has 3 stores, 2 good taverns, 2 tanneries, a saw and grist-mill, and a pearlash factory which is its chief article of traffic.-The other village, called Interior Village, is in progress in the back part, about 11 miles from Richmond, on Craig's Road, in which there are a store, a tavern, a tannery, pearlash works, a saw and grist-
mill, \&c.; it consists of 8 or 10 houses and contains 50 inhabitants. -In each settlement there is a school, appropriated in summer to the instruction of girls and in winter to that of boys; at one school in the back part, under the Royal Institution, about 200 scholars are instructed in winter, and about 130 in summer.-Ungranted and unlocated, 1,800 acres.

Shoolbred, seigniory, in the co. of Bonaventure. Part of this S. extends from Megoacha Point, about 16 miles in length and about $1 \frac{1}{2}$ mile in breadth, and was granted in fief and seiniory, 4th July, 1788, to John Shoolbred, Esq.Although several parts of it claim notice as being well adapted for settling upon, it yet remains without a single individual, because the object of the proprietor is not any partial concession, but the disposal of the whole and probably only at a future period.

Title.-" Grant in Fief and Seigniory to John Shoolbred, Esquire, made on the 4th July, 1788, by Lord Dorchester, Governor General, of the following tracts and parcels of land in the Bay of Chaleurs, videlicet:-A certain lot or tract of land lying at Bonaventure, beginning at the south extremity of the public road which leads from the harbour extremity of the public road which leads from the harbour
of Bonaventure to the settlement on the north bank, of Bonaventure to the settlement on the north bank,
thence running nearly north-east to the extreme point of thence rumning nearly north-east to the extreme point of
the said bank, and bounded by the course of the harbour, thence still bounded by the course of the said barbour, nearly north-west 264 feet, thence south-west parallel to the first course to the public road, thence suuth-east 264 feet to the first station: also a lot of land and a space of ground whereon was built a storehouse, situate $+1+$ feet from the north-east point of the said bank, and east of the public road, also an allowance of 15 feet on each side and behind the space whereon the said store stood containing 5,035 square links. Also the lots of land and space of ground whereon were built two other storehouses, space of ground whereon were built two other storebouses,
with 15 feet on each side, and behind each of the spaces With 1.3 teet on each side, and behind each of the spaces
of ground whereon the said storehouses stood, the one situate 240 feet from the south end of the bank and 160 feet west of the public road, containing 3,822 square links, and the other situate 20 feet distant from the north-west corner of the last-mentioned ground whereon the said store formerly stood, containing 5,035 square links, the
said several lots or parcels of land above mentioned containing in the whole 1 acre, $I$ rood and 21 perches. Also a certain other tract of land lying at Pcrcé, between the Bays of Chalcurs and Gaspé, adjacent to the Island of Bonaventure, being the list fishing-post at prement settled and established on the north bench, leadimg to Mount. Johi, at established on the north bench, leadimg to Mownt Jofi, at
Percé aforesaid, bounded on the wint by a deep aréc' or Percé aforesaid, bounded on the wint by a deep grére or
ditch adjoining to a fresh water brook, thence ruming ditch adjoining to a fresh water brook, thence running
east 7 chains of $6 i$ feet each along the bank, thence south 10 chains, thence west 7 chains, thence north parallel to the second course unto the first station, containimg 7 acres. Also a certain other tract of land situate on the western. most extremity of Chalears Bay, ruming up the river Ristigonche, about l.j miles to the first pront of land below Battry $P_{\text {aint }}$ berinning at a boundary line ! jo chains east of the bottom of the eastermmost bay of Nomed Busum, running north, $\because \circ$ degrees east to the mountains, thence running north, $\because \because$ degres east to the mountains, thence
boumhen by their courn at an average depth of whains bommen by their cour-r at an average depth of 10 chains
from ligh water mark to their base, round Nomiry Buson from high water mark to their base, round Nomirt Buson
westward to a smatl cove, 310 chainswest of the said firstwestward to a small cove, 3010 chains west of the said first-
mentioned bay, bearing from the northernmost extremity of Misiacha Point, being a sand bank, south it desrees north, +1 degrees west, the superficial content of the said last described lands is ? (1s) acres. Also a tract of land, beginning at the aforesaid rove, and rumning the sevoral courses of Point Migoacha, to the western extremity of a salt marsh, distant from a point where the inarcesuble coast begins, about an chains, thence to the said point, coast begins, about an chains, thence to the said point,
containing 1,600 acres. Also a certain tract begiming at contaning 1 , 600 awres. Also a certann tract begiming at
the first-mentioned pint, below Batfary Point, north 19 degrees and a half east, hi) chains, thence south So degrees east, s! chains, thenwe north 33 degrees atat, sil chans, thence north sis desrees eant, 69 chains, thence north $j i$ degrees cast, lut chains, thence south on defrees ea-t, $2: 3$ chains, thence south in degrees east, ist chains, thence south 6it derrees east, 49 chams, thence north ive derrem east, 86 chains, thence south 66 degrees cant, 57 chains, thence nouth 6 degrees cant, 8t chains, thence south 73 degrees east, liji chains, thence south 39 degrees east, (3.) rhains, thence south 12 dorrees mat, 175 chains, thence Chams, thence south 12 derrees dat, 175 chans, thence wouth 11 derrese cust, 35 chains, thence south 56 degrees
west, 10 chains to $\begin{aligned} & \text { racta Point, contanivg } 6,501 \\ & \text { acres. }\end{aligned}$ more or les."-Book of Putents for Lands, Vol. I. page 1 .

Shorn, a projected township in the co. of Ottawa, is bounded in front by Aldfield and Huddersticld; w. by Cawood, and N. and e. by waste lands of the crown.
Sillery, seiguiory, in the co. of Quebec, is bounded N. E. by part of St. Ignace and several small grants; s. w. by Gaudarville; in the rear by St. Gabriel ; in front by the $\mathrm{S}_{\mathrm{t}}$. Lawrence. One leaguc broad by $1 \frac{1}{2}$ league in depth. This grant, originally forming part of the concession of St. Gabricl, was ceded to the King in 1664 and granted, October 23rd, 1699, to the order of Je suits: it is now the property of the crown.-The bank of the St. Lawrence here is very high, and is the most elevated part of the seigniory, from which lies a plain, varied with a few rising grounds, reaching to the road of Ste. Foi, northward of which for a short distance is an easy declivity, terminated by a steep descent into a valley that spreads nearly to the boundary of St. Gabriel, where there is another gradual elevation. The soil is very good
near the St. Lawrence, consisting of a light reddish sandy earth intermixed with clay, in some places lying upon a bed of clay ; in the vicinity of ste. Foi there are many ledges of flat rock covered with a coat of excellent mould, but of no great depth ; from the latter place, on the slope already mentioned, is a rich mould mixed with sand, with large quantities of loose stones strewed over the surface, and many massy fragments of granite lying about in various directions. In the valley and on the rising ground towards Vielle Lorette there is some excellent meadow land; nearly the whole of the seigniory is cultivated, and extremely fertile in almost every variety of the productions of the country.-Very little timber of a superior quality is now remaining, or indeed much wood of any description, except what is found in Sillery Wood, and a few other patchec that appear to have been left in various parts as much for ornament as for use.- Part of the river St. Charles passes through the S., and it is also watered by several small streams that wind alons the valley in a vory pleasing manner. At the place called sillery Cove there is a plantation of hops, in a situation finely sheltered from every injurious wind, where the climate is propitious and the soil adnirably adapted to their culture, which has been carried on for some years with great success; the produce is not inferior to what is imported from England. Cluse by the plantation stand a malt-house, a brewery and a dwelling-lususe, besides many other appendages, the property of Mr. Hullett, to whom the hop-grounds belong; the malt-house and brewery are entitled to some respect as bing the venerable remains of an ancient chapel and some other buildings, crected in $16: 3$ by the Jesuits, for the residence of a mission employed in converting the natives to Christianity. Not far from this spot the nation of the Algonquins had a village and in Sillery Wood there yet remain some of the tumuli belonging to their burying-place, and some of their rude mementes carved on the trees are still visible. In a hollow a little to the westward of Sillery Cove, on : gentle eminence nearly overgrown with brushwood and creeping shrubbery, are the remains of a stone building, once the dwelling of a few devotees, who, in imitation of the Jesuits, applied their religious enthusiasm to convert and instruct the female savages. On the high bank to the $w$. bounding this cove is an elegant well-built store-
house, the property of Mr. M'Nider, of Quebec ; the situation is commanding and agreeable, and the style of the residence both in the exterior and interior deserves notice.-Many roads, in almost every direction, form an easy communication with Quebec and all the surrounding seigniories; of these the one leading by the river side, one by the church of Ste. Foi and another by the $v$. of Vielle Lorette are the principal. On both sides of these roads are many well-built houses, with various plantations and farms in a very advanced state of improvement and strongly indicating the good circumstances of the proprietors. The road from L'Anse-des-Mires to the extremity of Sillery Cove, about 4 miles, was last year (1830) improved. The whole extent has been made passable for carriages; the breadth 20 feet, except the distance between L'Anse-des-Merres and the middle of Cape Cove, or L'Anse-des-Morts, 15 acres, the breadth of which is about 15 feet only, in consequence of the heavy expense that would have been incurred in removing a number of houses at Cape Blanc and in cutting down the bank at Cape Cove; ditches have been made at the sides of the road, embankments raised and drains cut across where required; two bridges have been built, one in Wolfe's Cove, the other over the brook that divides Woodfield Beach from Spencer Cove. To obtain the necessary breadth several houses were removed and allowances made to the proprietors to remove others. The road leads along the river St. Lawrence, and has already been found of great service to those concerned in the lumber trade. Besides the $1,000 \%$. appropriated by the legislature, $124 l .18 s$. $5 d$. have been expended. Although the road has been made passable, a further sum of 500 l . will be required to finish it properly by Macadamizing it, and in keeping it in repair for one year.-The front of the seigniory is indented by several coves, where, between the high bank of the $\mathbf{r}$. and the high-water mark, there are level flats that afford most convenient situations for depositing, squaring and sorting timber and staves of all descriptions, when prepared for exportation; and there are also beaches for receiving the rafts as they are brought down the r., which are called Timber Grounds; the principal of them is Sillery or, as it is now called, Hullett's Cove, that gentleman having obtained from government a lease of the beach from Pointe à Ruisseaux up to his present establishment. At a considerable distance from
the high-water mark, a long reef of rocks forms a very convenient break water and prevents the strong set of the current from reaching the logs, which are otherwise prevented from drifting away by means of booms secured at different places, either by anchors and grapnels, or by being fastened to ringbolts fixed in the rocks, as most convenient. Westward of this place is another inlet called Ritchie's Cove, and, to the eastward, is another spacious timber-ground called Atkinson's, in each of which are convenient booms and other securities: the former has the appearance of a small village, from the numerous huts erected for the workmen, \&c. To these timber-grounds the rafts are floated in at high-water through openings in the reef of rocks and secured within the booms; they are then broken up and the timber is sorted and drawn ashore to proper spots either for seasoning, squaring or reducing to standard dimensions for exportation.-In Sillery, 40,000 eels were taken in 1647, from Aug. to Nov., and sold in the market for one farthing per hundred.

Title.-" Concession du 23me Octobre, 1699, faite par Hector de Calliere, Gouverneur, et Jean Bochart, Intendant, aux révérends peres Jésuites, de la Seigneurie de Sillery, d'une lieue de large sur le fleuve St. Laurent, et d'une lieue et demie ou environ de profondeur, jusqu'à la Seigneurie de St. Gabriel qui la termine par derrière, commençant du côté du Nord-Est à la pointe de Puiseaux, et du côté du Sud-Ouest à une ligne qui la sépare du fief de Gaudarville, lesquelles lignes ont été tirées l'une il y a environ vingt-cinq ans, et l'autre il y a quarante ans."-Régistre d'Intendance, No. 5, folio 26.

Simpson, in the co. of Drummond, between Wendover and Kingsey, is on the east side of the river St. Francis, and is bounded in the rear by Warwick and Horton. The whole has been surveyed and granted to officers and privates of the Canadian militia, who served during the blockade of Queber, 1775-6. The land is low and level, with

## S O R

very few swamps, and is of a grod quality, and if brought undercultivation would produce grain of all sorts; it is in many places favourable to the growth of hemp and flax. Good timber, principally beech and maple, is partially found, but timber of little value is in abundance. It is watered ly several branches of the Nicolet, and low some small streams that fall into the St. Francis; the former present many excellent situations for the crection of mills. A few lots, situated by the road side, contiguous to the river, are settled upon, where agriculture has already made some progress.Population 35.

Sinctivee, river, traverses Lockaber Gore, and runs into the r. Petite Nation, a little above intcphen's Mills.

Sobegolch, river, is a small stream that runs into the s. w. side of the r. Matapedia, near the lake of that name.

Sole, a la, river, rises in several branches in the n. section of the $S$. of Lauzon, and runs into the St. Lawrence in fief Crouline, where it turns a corn-mill at its mouth.

Somerset, township, in the co. of Megantic, lies in the rear of the augmentations to Deschaillons and Lotbiniere, and is bounded $\times$. e. by Nelsom; w. by Stanfold ; s. and s. e. by Halifax and Inverness. This tract was granted April, 1804, to officers and privates of the Canadian militia. The land lies rather low, but it is of a tolerally good quality, and is fit for the production of most kinds of grain : in many parts it is well suited for the growth of hemp and flax. The timber is chiefly beech, maple, birch and pine ; on the low and moist grounds. basswood, cedar, spruce and hemlock are prevalent.-WCll watered by the r. Becancour and numerous small streams.

Sorel (R.), v. Richelief, r.
Sorfl or saurfle, seigniory, in the co. of Richelieu, is bounded N. and N. E. by the South Channel of the St. Lawrence and the Bay of Yamaska; s.w. by St. Ours; s. and s. e. by Bourchemin, Bourgmaric West, and Bonsecours ; n.w. by the St. Lawrence. $-2 \frac{1}{2}$ leagues in front, viz. $1 \frac{1}{2}$ league above the r . Richelicu by $\varphi$ leagues in depth, and one league below the Richelieu by one league in depth. This seigniory, with isle St. Ignace, isle Ronde and isle de Grace, was granted, Oct. 21 , 1672, to Sieur de Saurel.-The town of IItliam Henry or Sorel is agreeably situated at the confluence of the Richelieu with the St. Lawrence,

## SOU

and contains a Protestant and a Roman Catholic church. On the site of this town, a fort was constructed in 1665 by 11 . de Tracy, viceroy of New France, as a defence against the irruption of the Irofuois. M. de S:urel, a captain, superintended its execution ; and from him this part of the r. Richelieu received the name of Sorel or Saurel. Before the $T$. the bank of the Richelieu is from 10 to le feet high, having near the point two small wharfs or landing-places; the river is here $\mathbf{0 5 0}$ yards broad, with from 2 to fathoms of water. On the opposite shore are convenient places for building vesscls, where some of large tonnage have been constructed; but latterly this branch of trade has not been so much attended to here as it used to be, notwithstanding the accommodations for carrying it on.

Stutistics of the Parish of Surel, including the Town of William Henry.

 demie de terre de front sur le teuve St. Lamrm, sinom. une lieve et demie an dela de la rivisu de Redrolion an dems iienes de profondeur, c't une liene en dacat sur me

sochavie, scigniary, in the co of Vaudreuil. is bounded se E. hy the st. Lawrence ; s. ly New Longucuil ; s.w. by Newton and Rigand ; N. by the s. of Vaudreuil.-This seigniory with that of Vaudreuil occupies the tongue of land formed by the confluence of the Ottawa and the $\mathrm{S}_{\text {t }}$. Lawrence, at the upper extremity of lake $\mathrm{S}_{\mathrm{t}}$. Louis. Soulange is 4 leagues in front, and was granted Oct. 12th, 1702 , to the Chevalier de Soulange. and is now the property of Saveuse de Beaujeu, Esil.-'The soil is generally clay of gowd quality though in some parts it is sandy, and it is so advantageously varied as to be fit for all the productions natural to the country. In the s. $w$. corner, the extensive swamp that runs into New

## SOULANGE.

Longueuil spreads over a considerable space.-This seigniory is entirely conceded, except a lot of land which is not enclosed and is sufficiently extensive to form a range of 28 farms, each measuring 3 arpents in front by 20 to 25 in depth; there is no road across this lot, and the soil is of middling quality and would be difficult to drain.- About 60 farms were conceded prior to 1759 , on the condition of paying a rent of 40 sous, and 5 sous for quit rent, argent tournois, for each front arpent by 20 in depth ; continuations to a similar extent having been since given, the grantees continue to pay 14 francs of the present currency for each farm of 3 arpents by 40 , without any other charge or service.-The whole extent of this property, in front of the Nt . Lawrence, is very thickly settled, and were the inhabitants as strongly attached to husbandry as they are to the occupation of voyageurs, it might be improved into a most excellent and productive tract; but even now it is far above mediocrity - This seigniory contains one village, and the following concessions are inhabited, Cote St. Louis, St. Dominique, St. Hyacinthe, St. Jacques, and Côte Emmanuel, also the Cote de la Rivicre Rouge and that of St. Gregoire. Côte Double de St. Jacques is not settled.-This seigniory is conveniently intersected by the rivers à la Graisse, Rouge, and Delisle; the last is the largest, though no use can at present be made of it for conveyance ; it might, however, become navigable for boats to the distance of several miles, merely by clearing its bed from the trunks of trees, which, with gradual decay, have for ages continued to fall into and obstruct it.-On the r . are 2 bridges, 2 corn-mills and a small carding-mill.-Formerly there were much pine timber, oak, maple, elm, ash and fir ; but now such timber is very rare or small. The main road and those between the concessions, as well as 3 good bridges over the rivers, are all kept in excellent repair.-Agriculture is so much neglected here, that it may be said to be in a deplorable state; consequently, the heads of families are, generally, incapable of settling their children near them, much less of sending them to a great distance unprovided with provisions and agricultural implements. There are certainly many young persons in this $S$. of a proper age, who are willing to make new settlements, but the want of means, and the high, and in some instances exorbitant, rents required for new concessions interpose ob-
stacles difficult to be surmounted, for none of the inhabitants will settle in the townships. Onefourth of the grain is sold at Montreal, but during the winter the sales are confined to the seigniory. Three-fourths of the farmers use English ploughs. But little sugar is made and few persons make their own cloth or linen.-The parish and seigniory are co-extensive, and there is only one church which is dedicated to St. Joseph. Twothirds of the population are catholics.-The Village of the Cedars is charmingly seated on the bank of the St. Lawrence, 5 miles from Pointe des Cascades, being the point of rendezvous for all boats passing up or down the river, and, having an established ferry to the opposite seigniory of Beauharnois, it is a place of great resort both for travellers and traders.-This pleasant village contains a well built church and about 150 houses, of which 6 are built with stone, and there are a school and two corn-mills; the mill, called Longueuil's Mill, has ground 6,500 bushels of grain in 4 months.-The appearance of the waters and of the rich and verdant islands around which they wind their course, exhibits an assemblage uncommonly interesting, and the glistening rapids of the Coteau du Lac give a lively termination to the scene.-At Pointe des Cascades, where the steamboat lands passengers, are a few houses and stores and a convenient corn-mill. The canal traverses the point through which boats pass to avoid the Cascade Rapids. Here stages are daily in readiness to receive the passengers from the steamers to convey them to the Village of the Cedars. The view from the top of the hill is interesting; the eye beholds a succession of foaming rapids, the settlements of Isle Perrott, and those of Beauharnois on the opposite shore of the St. Lawrence. A corn-mill is situated on the point projecting over the Cascade Rapid. Singular as it may appear, here is the traverse over the Cascade Island and to Beauharnois. The road leading to the Cedars is generally very indifferent, being thick clay and mud. The banks of the St. Lawrence are here about 18 or 20 feet in height.-Isle des Cascades and ten other isles and islets, which lie in front, belong to this S., and there are islands and a succession of rapids all along the front of Soulange to Coteau des Cedres.-For an account of this difficult part of the navigation of the St . Lawrence, vide that river.

Titli:-" Concession du 12me Octobre, $17 \% 2$, faite par Hector de Cillieri, Gowerneur, et Jean Bochart, Intendant, à Picre Jucques Maric de Joybert, Chevalier de Soulange, de la moitié d'une langue de terre sion au licu dit les Cascadcs, de quatre lieues de terre de front sur une lieue et demie de profondeur au plas large de da dite heue et demie de profondeur au plas large de la dite
langue de terre, et une demi lieue au plus éroit; à comlangue de terre, et une demi lieue au plus étroit; à com-
mencer à la Pointe des cuacudes, en montant; joignant Ja dite terre celle accordee aux entans de Mr. de Foudrenil." -Rigintridutcudance, Nu. $\overline{0}$, folio:3i.

South River, the principal stream in Noyan, rises in the extensive swamps of that seigniory and Sabrevois; its general direction is from east to west, and through a very serpentine course it discharges its waters into the Richelieu, one mile below the Isle aux Noix; it is rather deep and sluggish, and is unobstructed by rapias six miles from its mouth to Henryville, to which place it is navigable in the spring for batteaux and cribs of timber, and for canoes during most of the season. It there divides into two branches, on each of which is erected a saw-mill. Its principal tributary streams below Henryville are Wolf Creek and Mud Creek, which have their sources in Foucault. The principal fish are pike, pickerel, and cat-fish.

South West River, v. Sud-Ouest, r.
Spalding, a projected township, in the co. of Beauce, is bounded n. by Bisborough ; s. by Ditchfield ; w. by the r. Chaudiére; $\mathbf{E}$. by the province line.

Squibisk, river, rises near the w. boundary of the co. of Bonaventure, and running s. passes near the Quamquerticook mountains in its way to the R. Madawaska into which it falls.

Stanbridge, township, in the co. of Missiskoui, lies between the $r$. of Durham and the S. of Sabrevois and Royan and is bounded n. by Farrhhm and s. by St. Armand. This т. presents a great variety of land and timber; the w. part

## STA

is low and rather marshy with much cedar, hemlock, tamarack and some white oak. Near Missiskoui Bay and Pyke River the soil is chiefly clay mixed with sand; to the E. it is higher and better, and composed of rich black and yellow loam with a little sand; the timber is beech, elm, maple and some fine oak, bearing only a small proportion to the other sorts. The Pyke River and its numerous branches water it very conveniently, and work several saw and corn-mills. It is intersected by many roads; the principal are those that lead s. through it. Armand into the state of Vermont, and n . through Farnham and St. John's on the Richelieu to Montreal ; whither the inhabitants of these parts convey the greatest portion of their disposable produce. A large tract of this T. is settled, especially on the N. E. side, where, on the elevated ridges, are many farms exceedingly well situated, and in a state of cultivation that denotes much practical knowledge of agriculture, for the houses are well built, the gardens and orchards are well laid out, and the general arrangements not unworthy of being imitated in many of the townships more recently settled.L'ngranted and unlocated, 152 acres.

Stanbringe, township, in the co. of Missiskoui, is bounded e. by Durham; s. by Sit. Armand ; w. by the seigniories of Noyan and Sabrevois; N. by Farnham.-This tract is well timbered and produces hard wood of every kind, with pine and cedar in abundance. It is watered by Pyke River and Rock River. Siveral roads traverse the $\boldsymbol{T}$. to Missiskoui Bay and the r. Richelieu, and there is one now in progress which will afford a more direct communication with Montreal and with the United States through St. Armand. There is a small village consisting of from 25 to 30 houses with about 200 inhabitants but no church.

Standon, township, in the co. of Bellechasse, is bounded N. E. and s. e. by waste lands ; s. w. by parts of Cranbourne and Frampton ; n. w. by Buckland. This tract is for the most part a rough hilly country and very indifferent land. On the s. E. bank of the Etchemin there is a good swell of hard wood land extending to the N . E., which is supposed to be by far the best land in the $\mathbf{r}$. Those parts of the first and third ranges that lie in the immediate rear of Frampton are granted, and are in general good land and fit for either grain or grass. The part between the Etchemin and the lake near the s. angle of the r . is excellent upland, well calculated for settling.-The hills seldom excced half a mile in diameter at their base, but they are steep and rugged, and there is very little level land between them.-The r. Etchemin rises near the N . e. boundary line, and runs s. w. through the centre of the r. to Cranbourne and Frampton.

Stanfolid, township, in the co. of Drumnond, is bounded e. by Somerset ; w. by Bulstrode ; in front by the r. Becancour; in the rear by Arthabaska. Being very low and extremely swampy, not much of the land is fit for cultivation. It is traversed by some rivers and small streams that fall into the Becancour. One half was granted to the Hon. Jenkin Williams, the present holder. -Ungranted and unlocated, 16,693 acres.
Stanstead, county, in the district of Montreal, is bounded E . by Sherbrooke ; w. by Missiskoui in part and in part by Shefford; s. by the province line; N. by parts of Shefford and Sherbrooke. It contains the townships of Hatly, Barnston, Barford, Stanstead, Bolton and Potton, with all the gores and augmentations of the suid townships. Its extreme length is 30 miles, and its breadth $14 \frac{1}{5}$ containing 632 square miles. Its centre is in lat. $45^{\circ} 9^{\prime}$ n., long. $72^{\circ} 4^{\prime} w$. It sends two members to the provincial parliament, and the place of election is at Copps Ferry.-The soil and timber of this co. are generally excellent, and its local situation is advantageous. East of Lake Memphramagog are large swells of land, and west of the lake the surface is not only uneven but mountainous. The most settled parts are Stanstead, Hatley and part of Barnston. The chief route to the United States passes through this county. The principal rivers are the Missiskoui and Coaticook. Of the numerous lakes in this co. the chief are the Memphramagog, Tumefobi and Scaswaninepus.

Stanstead, township, in the co. of Stanstead, is bounded e. by Barnston; w. by Lake Memphramagog; n. by Hatley; s. by the province line. This tract is certainly superior to any of the adjacent townships in locality, excellence of soil, and quality of timber. There are many large swells of land, some of considerable elevation, clothed with oak, pine and nearly all the best sorts of hard woods; in the lower parts is great abundance of common timber. The s. half of this township, granted in 1800 , to Isaac Ogden, Esq. is well settled and in a very thriving state of cultivation, producing every species of grain peculiar to the province, and the wheat is of superior quality; many excellent situations and a congenial soil offer opportunities for the growth of hemp and flax to almost any extent. The northernly half is not so well settled as the easternly, but for no other reason than having been granted later, viz. in 1810, as the land is good and fit for every purpose of agriculture. It is the property of Sir R. S. Milnes, Bart. being a portion of the 48,000 acres granted to him by the crown. This town contains about 350 lots, 200 acres each, on which were settled, in 1821, at least 500 families, and the population was then about 3,000 . The settlements, along the border of the beautiful Lake Memphramagog, are most delightfully situated and in a very forward and promising state of improvement; the houses dispersed over them are well built, and are surrounded by neat well stocked gardens, fine young orchards, and every requisite convenience of rustic life; their appearance conveys to the traveller a very favourable opinion of the content
and happiness of their owners.-In 1821, Mr. Charles Kilborn was proprietor of lots in the 8th and 9 th ranges, containing together 400 acres, of which he had cleared about 100 , the cost of clearing and inclosing which was about 3/. per acre. He then possessed upwards of 200 head of cattle, including sheep, and had erected on his farm 3 dwelling-houses, two barns, a grist-mill, a sawmill, a fulling-mill, a carding-machine, and other buildings, which cost him upwards of $1,5 \% 1$. but which he valued in 1821 at only about $750 /$. There were many persons whese firms were more improved, who had a greater number of cattle, and whose buildings were far more valuable than Mr. Kilborn's - This $\mathbf{~}$. is well watered by rivers and lakes.-The Tillage of $S$ (tuss! ad is built near the province line and consists of $2 ?$ houses and 200 souls; the houses are in general neat and substantial; many of them two stories high and several are built with brick. The style of building is very different here and throughout the township to what is practised in the seignorial settlements of the province, and borders considerably, if not absolutely, to the American style as practised in the adjoining state of Vermont. The main stagre road from Quebec into the states of Vermont, New Hampshire, \&c. passes through it, from which, as bringing a continual influx of strangers, some little consequence is derived.-At stanstead plain, one mile $N$. of the village of stanstead, is another village delightfully situated on an extensive plain, where are several traders' shops, a printing office and mechanics' shops of almost every description ; it is a place of increasing importance--(irorgeville, at Copp's Ferry, on lake Memphramagog, is a flourishing village in which there are, as well as in Stanstead, many tradesmen and mechanics. The ferry is crossed in an excellent horse boat towed by two horses, which passes from Stansteal to Bolton, 2 ! ! miles, regularly three times every day; the income of this boat has hitherto amounted to 7 per cent. of its cost which was nearly 4001 . This small profit would undoubtedly be increased, were the roads, leading from the country east of the lake towards Montreal, made mure effiectually passable for summer carriages.-April 16, 1823, a large mass of the rock, composing that part of the mountain called Barnston pinnacle, which at this place rises perpendicular about 300 feet, detached itself from its towering height, and fell into the pond at its base with a tremendous
noise; two distinct reports quickly succeeded each other, similar to the discharge of heavy artillery, which were heard more than twenty miles. This mighty concussion shook the houses for several miles within its vicinity.

$\mathrm{S}_{\text {roke, }}$ township, in the co. of Sherbrooke, lies on the east side of the river St. Francis, and is bounded N. W. by Windsor ; n. e. by Dudswell; s. e. by Eaton and Westbury ; s. by Ascot. The land is of first-rate quality, and fit for all the purposes of agriculture. Beech, basswood, ironwood and maple, are the more prevalent kinds of timber. $\lambda$ few swamps occur, but they are neither extensive nor deep; in fact, they are scarcely more than common wet-lands, and require only carcful ditching to become very good meadows, of which there are already, in different parts, many large extents of the most luxuriant kind. This $\boldsymbol{T}$ is uncommonly well watered by several rivers and streams, which, after winding in all directions, fall into the St. Francis. In the 14th range there is a small lake. On the banks of some of the minor rivulets many good patches for the growth of hemp can be found, and on the parts that lie a little higher is a fine soil for the cultivation of flax. Although a part of this т. was granted in 1803 and 4 , it may be said to have been totally neglected until lately; but as new settlers are now encouraged to take lands, it is to be expected that this fine tract will soon exhibit productive farns and a thriving population. -Ungrunted and unlocated 7,000 acres.

## STONEHAMANDTEWKESBURY.

Stoneham and Tewkesbury, townships, in the co. of Quebec, are bounded N . and N. E. by waste lands; s. w. by St. Ignace ; s. e. by Cote de Beaupré; s. by Beauport and Notre Dame des Anges. These townships lie contiguous to each other and were surveyed and subdivided many years ago, but they still remain very indifferently settled. They have no line of division between them and are distributed into lots and ranges as if they were one township.-The surface is mountainous and rocky, the larger part barren and unfit for cultivation, with the exception of some scanty patches in the vallies that are moderately good and would bear tillage, and the part extending from the front to the river Jacques Cartier, where the land is chiefly arable and of a yellow loamy nature.-It is watered by the large rivers, St. Anne, Jacques Cartier and Batiscan, running majestically between the lofty ridges of mountains, by several rivers of inferior magnitude, and by some small lakes. The timber is beech, maple, birch, and pine of good dimen-sions.-The most valuable part was granted to Kenelm Chandler, Esq. and is now the property of Mrs. Brydon.-Many of the following particulars respecting these townships are extracted from the journal of the persons who were lately sent to report on the capabilities of these tracts, and will, it is conceived, prove useful to settlers. This examination was made between the 22d of June and 16 th of July, and appears to have been carried on with care and amidst no inconsiderable difficulties.-These two townships, which appear to have been always conjoined, are traversed by three separate streams which run in a south-westernly direction. The river Huron appears to issue from Lake à Hibou in the 17 th lot of the 6th range, which, leaving the township in the 6th lot of the 1st range, falls into Lake St. Charles so much noted for its beautiful scenery.

The Jacques Cartier river enters the township at the 36 th lot of the 20 th range, and leaves it at the lst lot of the 7th range, watering a great extent of excellent land, a great deal of which requires only a road to render it fit for immediate settlement. Two branches of the Ste. Anne, in their course to the south-west, cross the T . in its north-western extremity.-The nearest part of the T. ascertained to be tit for cultivation extends from Scott's clearance in lot 8, range 2nd, in a northernly direction, along the Indian path, by which settlers may trace it as far as Lake à Hibou; this tract joins, at its northern extremity, another excellent piece of land, lying on the Jacques Cartier ; this section is about 3 or 4 miles in length. Another piece of land every way fit to be settled, adjacent to the former, begins at Craig's clearance in the 5 th lot of the 2 nd range, enclosing Lake Durand and extending N. w. to three small lakes in the 5 th range. The longest extent of land recommended in the survey alluded to is found along both banks of the Jacques Cartier, commencing at lot 9 in the 7 th range, and ending about lot 30 in the 16 th range; this portion includes the valley of the Jacques Cartier for 13 miles in length and varying from 2 to 3 in breadth; it is in general bounded by mountains or by hilly and rocky lands on both sides; it possesses a rich soil and is covered with elm, 'ash, black birch and maple. Sugar may bu made in abundance. The river Jacques Cartier abounds with fish. The road to this section, from the most s . part of the T . nearest to Quebec, will be about 5 miles in length and will pass through a part of that country that can be easily opened.-Two small rivers, Caché and Epaule, fall into the Jacques Cartier from the east, near the 23rd lot in the 8th range: the banks of the latter consist of excellent land; and the timber which indicates the best soil is found in abundance, and in addition to the trees mentioned above there are here very fine cedar and spruce. The Epaule extends to the extremity of the township and every where discovers the same favourable symptoms, except in one place where the mountains shelve down to the river side. To the south of this tract is the other river, Caché, on which the land is much inferior but abounds in good mill-sites, which in time will dolbtless be valuable.-In the 10 th and 11 th ranges, between the 13th and 21st lots, are situated three lakes, named St. Thomas, St. Vincent and William. The

## STO

first two lie close together, the third is about half a mile from the others. They all communicate with each other, and send a considerable stream into the north-west side of the Jacques Cartier. The land in the vicinity of these lakes, especially on the east side, is well calculated for settlements and the lakes swarm with fish, from which settlers might derive great part of their subsistence. A road of three miles in length, but over a considerable hill, would connect this tract with that mentioned on the Jacques Cartier, which river can here be conveniently passed by a ferry. The same tract extends to the eastward about 5 miles.-Another tract of land of similar description lies to the east of the Jacques Cartier, from a place in that river called the Forks, along a line traced by an Indian path and to the distance of three miles.-These appear to be the most fertile portions of this township, and are those to which settlers ought first to direct their attention. When these have been once brought into cultivation the other parts of the district may also be found to be useful, but cannot at present be settled to any advantage.-Beyond the 12 th range, between the two branches of the Ste. Anne and on both sides of them, the land appears to be much inferior; it is mountainous and rocky, occasionally covered with trees that indicate the poorer kinds of soil, and in many places is entirely destitute of timber of any kind. Here also the frequent occurrence of what are called windfalls indicates the prevalence of high winds and storms.-The vicinity of these townships to Quebec and their general fertility ought to make them objects of attention in the present conspicuous exertions that are making for the settlement of the country; and it has already been announced that a good road is about to be opened to supersede the very inconvenient one now in use. From the general improvement of the internal communications and from our improved knowledge of these townships, and especially if a correct survey shall be made, it may be expected that the prosperity of Stoneham and Tewkesbury will increase with rapidity.-The following statistical account was taken in 1824, when $77_{\frac{1}{2}}$ arpents were under cultivation.

Stratforn, a projected township in the co. of Sherbrooke, lies between Winslow, Garthby, and Lingwick.
Stukfley, township, in the co. of Shefford, is bounded e. by Orford; w. by Shefford; n. by Ely ; s. by Bolton. Although the surface of this tract is generally uneven and broken, the land in some parts is rather above the medium quality. Beech, maple and basswood, with henlock and cedar in the hollows and moist lands, are the prevailing sorts of timber.-It is watered by streams falling into the Yamaski, which have their sources among the hills stretching across it, and also by some small lakes.

Sud, du, river, in the co. of Bellechasse, rises in the $T$. of Standon and runs rapidly between steep mountains to the v . w. It then winds round $\mathrm{h}_{\mathrm{y}} \mathrm{s}_{\mathrm{t}}$. Gervais for 8 leagucs, where it leaves the chain of mountains. This beautifully winding stream reccives a branch descending from the augmentation to S . Michel, and, from the confluence of this branch with the main stream in the S . of St . Vallicr, the river meanders through a fine plain in a north-easternly direction to the village of ist. Thomas, where it forms a large basin before it discharges into the $S$. Lawrence. Its course is much impeded by shoals and it is not
navigable for any thing but canoes. A little below the village its breadth is 150 yards; the level of its bed is 20 feet above the St . Lawrence, which occasions a fall that from the latter has a very beautiful effect. On each side of it, just at the break of the descent, are two saw-mills in situations most advantageously chosen for ensuring a continual supply of water. The basin is spacious and well sheltered; at high water vessels from 20 to 25 tons may run in for security against a gale, by taking care to avoid a muddy flat at its entrance: the channel, however, is not difficult. The branch called Bras St. Nicholas has its source in the high lands, in the rear of Bonsecours and L'Islet, and runs parallel to the ist. Lawrence, but in an opposite direction, until it falls into the R. du Sud at the village of St. Thomas. At its confluence a handsome bridge, called Prevost Bridge, was crected in 1812 by Jacques Morrin; it is 120 feet in length, 18 in breadth and 1.5 above the level of the water. Over the Riviere du Sud there is a much handsomer one, called Regent's Bridge, built in 1:1:3, by François Friclette; it is 300 feet long, 20 in breadth and 15 above the water's level; it is built with wood and supported by substantial neat piers with a very handsome railing on the top. These bridges are nearly tugether and almost at right angles, having a very light and pretty appearance. The lands near the source of this river are reported by the hunters to be of the best quality, and the valley through which it runs is a level, rich and fruitful plain. The richness of the harvests in this luxuriant valley formerly acquired for it the reputation of being the granary of Lower Canada, but it is now supposed to yield in fertility to the lands on the river Richelieu; its scenery, however, is extremely soft and beautiful.
Sumbuent or South-went, river, in the co. of Rouville. There are two rivers of this name in the augmentation to Monnoir: the Great southwest River rises in Lake John and runs into the r. Yamaska; near its mouth it recejves the Little South-west River, which waters the sooteh settle-ment.-Tide Momoir, s.
Sudocert, Bras de, river, in the counties of Megantic and Beauce, is supplied by small lakes in the т. of Tring, from which it enters the S . of Yaudreuil and discharges itself into the r. Chaudière. It is generally passable in canoes but not in boats.

Suffolk or Lockaber, township, in the co. of Ottawa, vide Lochaber.-Besides the grant to Mr. M•Millan in 1807, a grant of 1945 acres was made to Philemon Wright, Esq. in 1823.
Sugar Loaves, in the co. of L'Islet and south of the Grande Rivière Noire, are 5 small mountains connected by ridges; the diameter of their bases is from 15 to 20 perches, and the length of their sloping sides from 4 to 5 perches. They are rather stony and end in abrupt rocks covered with mixed timber. Most of them are close to the bank of the river.-V. Grunde Rivière Noire.
Scmaly River, in the t. of Leeds, joins the Ossgood River.

Sutron, township, in the co. of Missiskoui, is bounded e. by Potton; w. by St. Armand; s. by the province line; N. by Brome. The land is generally very good and every branch of cultivation might be carried on to advantage, except in some few marshy places which could, however, be easily drained and converted into very good meadow land. The timber is chiefly ash, elm, maple and beech ; on the lower parts are the kinds usually found on wet soils, viz. cedar, spruce, fir, hemlock, \&c.-It is watered by the River Missiskoui, that crosses the s. E. corner, and by many small rivers.-Several roads have been opened in different directions towards Missiskoui Bay, the other townships and the state of Vermont.-Settlements to a large extent have been made and agriculture appears to be carcied on with spirit. The principal settlements are on each side of the r. Missiskoui and its n. branch. A road has been laid out from Rickford in the United States to the $\mathbf{T}$. of Brome. On the streams that intersect the cultivated parts are two grist and three saw-mills. In this T . bog and mountain iron-ores are found and an iron forge is established.-About 3,000 acres are under cultivation.

## T EM

T.

Tadoussac, $v$. Sagurnay, r.
Talayorle, river, rises in a lake in the rear of Stoneham and running s. w. traverses Fief Hubert, and descending through Fausembault into Bourglouis meets another river that rises in $: 3$ small lakes at the N . w. corner of Fief Hubert. The union of these streams forms the $r$. Stc. Anne.

Tartigo, v. Turtigoo.
Tartigoshiche, $v$. Turtigooshiche.
Tasinfreau River, in the t. of Buckland, is one of the branches of the Riviire des Abenaquis which runs into the r. Etchemin.

Temiscaming Lake. in the co. of Ottawa, about 400 miles N . $\mathbf{w}$. of Montreal, is a large lake: the country about it is fertile and will make good settlements hereafter. Mr. M'Kay, in the spring of 1818 or 19 , planted $3 i$ bushels of potatoes on the borders of this L . and they grew exceedingly well; he also sowed some peas and other seeds with similar success. He likewise purchased in Hull a bull, with some cows and calves, for the use of his farm on this lake.

Temiscouata (F.), v. Madawaska, s.
Temiscouata Lake, in the co. of Rimoushi, is, by the lowest estimate, 29 miles in length, and it varies from half a mile to $2 \frac{1}{2}$ miles in breadth, and is sufficiently deep for ressels of considerable burthen. It is encompassed by lofty mountains gradually descending, and covered with thick wood almost down to its margin. Several hare rivers lend the aid of their copious streams to swell the waters of this romantic and secluded expanse: the principal rivers are called the N:amjamskutesek, the Toledo or Rivicre au Canot, and the Ashberusk. On the borders of the lake the soil is, in many places, light, sandy, and gravelly, and extensive pineries are found in its vicinity and along the rivers that run into it. The scenery is remarkably various, beautiful and picturesque, but the charms of the spring, the summer and the autumn can scarcely compensate, in this spot, so far removed from the comforts and the pleasures of society, for the dreary solitude of the winter. This lake abounds with fish of almost every description to be found in fresh water, particularly the toledo, the white fish, and the salmon-trout, which weighs from 10 to 20 lbs ., and is frequently
speared by the settlers. In 1821 Col. Fraser commenced his settlements on this lake; it then consisted of about 4 houses, a saw-mill and from 70 to 80 acres cleared. Col. Fraser has discovered a bed of excellent lime on the borders of the lake. A small steam-boat on this lake would materially facilitate the intercourse between Canada and New Brunswick-Vide Mabawaska, F. and Temiscouata Portage.

Temiscouata Portage, $v$. Roads.
Templeton, township, in the co. of Ottawa, is bounded e. by Buckingham; w. by Hull; in the rear by Portland; in the front by the r. Ottawa. Eight ranges were surveyed in 180.5 and the greater part of the lands thus laid out have been found of an excellent quality, abounding with meadows and rising from the front into fertile swells, but some parts are stony. The land approaching the Ottawa is rather low, but the soil is tolerably soud for the production of most sorts of grain and many of the most uscful succulents; the lack parts are not much inferior to the front in soil and timber. Templeton has the advantare of Ilull. Norway white and yellow pine are abundant; the rear ranges are chiefly timbered with chm, birch, beech, maple and basswood ; and the front with spruce, cedar, basswood and balsam. It is excedingly well watered by the great and little rivers Blanche, the entrance of the River Gatincal, and by many inferior streams lesides several ponds along its front, which overflow in spring and autumn. A long narrow pond extends across Nos. 26, 25, 2. 4 and 23 of Long Point Range, almost parallel to the shore, and another of the same description stretches obliquely across several Jots $w$. of the $n$. Blanche in the lat range- - The south-westernly quarter of Templeton was laid out pursuant to a warrant of surver issued in the names of Mr. Plitemon Wright and associates. The sottlements in this township are chicfly in that quarter, and may, like those of Eardly, be said to have grown ont of those of Hull. The s. e. quarter, or rather 13. 30,0 acres. were sranted to Mr. Mexander M‘Millan and others, in Mar. 1897 ; the greater number of his associates have reconveyed their lands to him. The road opened by the commissioners passes over the front of this township, but owing to the want of settlers to keep it in repair it is neglected and has become almost impassable. In 1824 there were 150; acres under cultivation and 30 cleared, on x $\times 2$

## TER

which were 7 houses and 4 barns.-Ungranted and unlocated, 40,807 acres.

Terra Firma of Mingan, v. Mingan.
Terrebois, or Deverbois, seigniory, in the co. of Kamouraska, is bounded N. E. by the S. of Rivic̀re du Loup ; s. w. by Granville and Lachenaye; in the rear by waste lands; in front by the St. Lawrence.

Tittc.-" Cette concession ne se trouve ni dans le bureau du ticeretiare ni dans le Régistre des Foi et Hommage: son front étant inconnu elle occupe sur la carte mage: son qui se trouve entre les concessions de Messrs. Teespe qui se trouce entre les concessions de Messrs.
de Granduille et de Lachenaie."-This concession was de Graudzille et de Lachenaie.- - This concession was originally
1673 , and wasted to consins of three leagues by three. - See Caliers d'Intendance, No. 2 ì 9, folio 61.

Terrebonne, county, in the district of Montreal, is bounded N. E. by the s. w. boundary line of the $S$. of Lachenaye to the depth thereof, thence westward along the rear boundary line thereof, thence westward along the rear boundary line of the aug. of Terrebonne to the s. w. boundary of the $\mathbf{T}$. of Kilkenny, thence along the said boundary n. w. to the depth thereof, and thence on the same course to the northern boundary of the province; s. w. by the co. of Two Mountains; N. w. by the N. boundary of the province; s. E. by the Rivière des Prairies, together with the island and seigniory of Isle Jesus, and all the islands in that river, nearest to the county, and in whole or in part fronting it. It comprehends the seigniories of Isle Jesus, Terrebonne, Des Plaines, aug. of Terrebonne, Blainville, part of Mille Isles and its augmentation, and the township of Abercrombie. Its extreme length is 290 miles and its breadth 14 , containing 3100 sq. miles. Its lat. on the River St. Jean or Jesus is $45^{\circ} 39^{\prime} 20^{\prime}$ north, lon. $73^{\circ} 20^{\prime}$ west. It sends two members to the provincial parliament and the places of election are St. Rose and Ste. Anne des Plaines. The principal rivers

## TER

are the St. Jean or Jesus, Ste. Anne or Mascouche, North River, Achigan, and au Chiens. The soil and timber are of various qualities; but the soil, generally, consists of a mixture of sand and clay. The centre of this county is traversed by a species of dry plains, on which grows only small underwood; the front, especially below the Grande Coteau, offers excellent land and presents fine cultivated farms, and in the rear is found fine hard-wood. This co. is traversed by numerous roads, on which are the chief settlements presenting, in many places, well cultivated farms. The chief roads are, those along the front and the r . Mascouche, the Chemin de la Grande Ligne, in Blainville, and that along the eastern seignorial line of Terrebonne. The principal villages are those of Terrebonne and St. Therese.-This co., like that of Two Mountains, is circumscribed in its limits by the same cause-the difference existing in the bearings of the Ottawa county lines from those on the St. Lawrence running due N.w., therefore its northern limit does not extend to the N. w. boundary of the province, as above stated.

Terrebonne, seigniory, in the co. of Terrebonne, is bounded N. E. by Lachenaye; s. w. by the S. of Rivière du Chène and by Blainville; in the rear by Abercrombie and Kilkenny; in the front by the r. St. John or Jesus.-Two leagues in front by 6 in depth. Granted in 3 parts; the lst part, Dec. 23, 1673, two leagues in front and depth, to Mr. Dautier Deslandes; the 2nd part, called Desplaines, Apr. 10, 1731, of similar dimensions, to Sieur Louis Lepage de St. Claire; the 3rd part, Apr. 12, 1753, also of similar dimensions, to Sieur Louis de la Corne. This S. is

## TERREBONNE.

now the property of the heirs of the late Simon M'Tavish, Esq. of Montreal.-The soil towards the front is as rich and luxuriant as any in the province, and towards Desplaines it is generally of first-rate quality, but the remote parts are mountainous with a rough gravelly or stony soil. The high lands produce abundance of beech, maple, birch and elm timber ; in some few places, that lie low and wet, there are cedars and spruce firs. Full two-thirds of this property are conceded, the greater part of which is under good cultivation and is extremely productive. The front is particularly well settled and exhibits cvery appearance of comfort and even affluence.-The rivers Achigan and Mascouche, with 3 or 4 rivulets, water this $S$. completely; they turn some very good corn and saw-mills, and those called the Terrebonne mills are celebrated as being the most complete and best constructed in the country. The carding and fulling-mills are also of great use.-The lands in the front of this seigniory are rich and productive, but not so much so in the augmentation to Desplaines, a tract so named on account of its extensive plains of inferior soil covered with brushwood: some parts of the angmentation, however, are valuable and well settled. -The 3rd augmentation, which presents, generally, rich and fertile land and good timber, is settling fast, and comprises the new settlement of New Glasgow, on the river Achigan. The great number of roads which traverse this seigniory and extend along the banks of the several rivers are tolerably good and well settled. The Chemin de la Grande Ligne, leading from the village to New Glasgow, is considered of great use, and offering a communication with the new townships, and may ultimately prove as useful as that which traverses Blainville by St. Therese.The Parish of Terrebome forms scarcely a third part of the seigniory. Three-fourths of it are conceded and the remainder, viz. Lu Grand Coteau, is in woodland, and being considered unfit for cultivation has no road across it. Almost all the lands fit for cultivation were conceded previously to 1759 . The extent of these concessions was 3 arpents by 20 , and the conditions were 2 sols tournois per arpent or one sol and one pint of wheat, and on a whole range 5 sols quit rent. Afterwards continuations were added to the old concessions, but they were generally of no use except for wood, the soil being
nearly a sterile sand; these continuations were for the most part 20 arpents each.-The Village of Terrebonne is pleasantly situated on a projecting point of land, having several beautiful islands in front, which, by their varied and romantic scenery, greatly contribute to embellish the prospect. It contains about 200 well-built houses of wood and stone, besides the church and par-sonage-house; the seignorial-house is a wellconstructed mansion; indeed there are several houses built in a very good style in this village, it being a favoured spot where many gentlemen, who have realised large fortunes in the N . w. company fur trade, retire to enjoy the comforts and luxuries of private life. A fair is annually held at this village on the 3rd Tucsday in Sept., and it is also a place of some traffic, occasioned by the continued influx of persons bringing grain to the mills from distant parts, and by the large exports of flour that annually take place; in consequence many of the residents are traders and artisans, whose commercial concerns impose a degree of consequence upon the village. In 1803 this seigniory was purchased by the late Simon M'Tavish, Esq., to whose heirs it now belongs, for $25,100 l$. currency; since that period many large sums have been expended in making numerous judicious and beneficial improvements.

Terres Rompues (R.), v. Missiquinipi.
Tewkesbury, township, in the co. of Quebec, is bounded w. by Stoneham; in front by Cite de Beaupré ; in the rear by waste lands. The surface is generally mountainous and rocky; the greater part barren and unfit for cultivation, though here and there some scanty patches of better land lie in the valleys, where the soil is moderately good and would bear tillage.-It is watered by the Jaques Cartier and some smaller streams, and also by some small lakes.-The timber is beech, maple, birch and pine of good dimen-sions.-Ïde Stoneham.

Thames, river, in the $\mathbf{T}$. of Inverness.
Thetford, township, in the co. of Megantic, is bounded n. w. by Leeds; s. E. by Adstock, and lies between Broughton and Ireland.-This township, though generally mountainous, has a few intervals of good land fit for cultivation, on which grain, hemp, and flax might be raised; the s. $\mathbf{E}$. part is very indifferent, and covered with a thick moss, beneath which there is a bed of stone, with not more than five or six inches of poor exhausted earth upon it. The timber generally is not bad and consists of beech, elm, birch and maple, with plenty of hemlock, spruce fir, \&c.-Watered by two large lakes, a few moderate-sized rivers and many small streams.-One-half of it is the property of Dr. North.-Ungranted and unlocated, 22,000 acres.

Toledo or Riviere au Canot, derives its source in a chain of small lakes to the $N$. $E$. of Lake Temiscouata, into which it discharges itself; although rapid, it is navigable for canoes.-The Toledo trout is worthy of remark ; it is very like a common-sized cod-fish and is taken in such quantities at a particular season, that the inhabitants of $L$. Temiscouata and others, even from the Madawaska settlement, salt them for their use in winter. It is the largest fish taken either in this river or the lake, and is only found near the mouth of the river. It is caught with the line and hook.

Tomefobi Lake, in the t. of Hatley, extends diagonally from the 4 th to the 9 th range about 8 miles and its breadth 1 mile. The banks are beautiful and picturesque, with landscape and woodland scenery as romantic as the most fertile genius of an artist could well imagine. It abounds with excellent fish and, like the other lakes in Hatley, is the resort of innumerable wildfowl of various descriptions. Its outlet unites with 2 or 3 other streams, from Compton and Clifton, and falls into the r. St. Francis in Ascot.

Tomisticobish (R.), v. Riviere des Vases.
Tonnancour or Pointe du Lac, seigniory,

## TON

in the co. of St. Maurice, is bounded N. e. by St. Marguerite and St. Maurice ; s. w. by Gatineau ; in front by Lake St. Peter and the St. Lawrence. -It contains fiefs Normanville and Souvagot.$1 \frac{1}{f}$ leagues in front by 2 in depth. (iranted Nov. 3, 1734, to Sieur René Godefroi de Tonnancour. It now belongs to Madame Montour.A reddish light soil on clay or marrl spreads over the greater part of this scigniory; the front is sandy, flat and low, but towards the interior it gradually becomes better and higher, rising more abruptly towards the rear: Hax flourishes well and the land is congenial to the growth of hemp. -All the grant is conceded in 7 ranges, of which 3 are entirely settled and a fourth in progress. The lands conceded prior to 17.91 were rented at 20 sols per arpent and a capon.-The prevailing timber is maple, beech, ash, birch and some pine. -It is watered by part of the Petite Machiche, by the Riviere au Sible which turns 2 saw-mills, by the r. St. Charles, on which are erected one saw-mill and a corn-mill, 2 stories high with 4 sets of stones, and by the r. au Glaise which drives a saw-mill and a carding and fulling-mill. Neither of these rivers is navigable, but on their banks are some good settlements, which with those along the front embrace about one-half of the grant.-The roads are generally fine and several pass through the interior; the main one crosses the front and runs along the it. Lawrence. -The Pointe du Lac is a large projection from the front of the seigniory, forming the $\mathrm{N} . \mathrm{E}$. extremity of Lake it. Peter: on this promontory are some remains of barracks that were erected for the accommodation of troops during the first American war. On the east side of La Rivière de la Pointe du Lac stands a good-looking church, a parsonagehouse and a chapel; not far removed from this spot are Montour's Mills, large, commodious and well-built, and near to them are some extensive storehouses and dwellings; on the opposite side of the road, a little above the mills, stands the proprietor's manor-house, a very handsome building, finely situated and commanding a prospect over a tract of country abounding in picturesque beauties.-Agricultural labour is performed with horses, and one-fourth of the wheat grown is sold in flour, and half the hay produced is also soldThe iron-mine of St. Maurice extends into this seigniory.

Trinite, la, (S.), v. Cap St. Michel.
Trinite, la, river, falls into the r. Saguenay; it is an inconsiderable stream similar to the St . Charles near Quebec. It is on the s.w. side of the Saguenay and derives its name from three small hollows, or, as some say, from three large headlands on the shore of the Saguenay and on the north side of the place where it joins that river. It winds along a valley and into a deep bay, where there is a salmon-fishery. It is about half way between Tadoussac and Chicoutimi ; wherefore the bay which lies opposite to it, and which was before called Le Ruisseau de la Trinité, has

TRO
been occasionally called "Half Way Bay", and the "Trinity." It forms an excellent harbour and lies 2 leagues from St. John's Cove. The cliffs are at least 1800 ft . high and overhang the water.

Trors Pistoles, river, in the co. of Rimouski, is formed by two large branches that take their sources s. of the Temiscouata Portage, which they cross, and, running N. in a parallel direction, meet about 2 miles above their confluence with the R. Abawsisquash. The e. branch rises partly in Lake la Petite Fourche, and the w. branch is formed by the junction of two streams that descend from Côte de la Grande Fourche. This r. traverses the S. of Trois Pistoles from the rear to the front and descends into the St. Lawrence.

Trois Pistoles, seigniory, in the co. of Rimouski, is bounded n. e. by Richard Rioux ; s. w. (according to title) by Dartigny or Villerai ; in the rear by waste lands; in front by the St. Law-rence.- 2 leagues in breadth and depth. Granted, Jan. 6, 1687, to Sieur de Vitré.-Besides the isles and islets in front, the Isles aux Basques are included in this grant.-This seigniory is divided into numerous fiefs. The surface is uneven, but the soil is generally good; in front it is light, and in some parts sandy ; in the rear the soil is strong. There are 3 ranges of concessions, 2 of which are completely settled, and the third partially, having only 20 settlers: the farms are 42 arpents by 3 . In the front range, which is most settled, twothirds of the farms are under cultivation, in the 2nd range one-third, and in the 3rd range only 20 farms are cultivated.-The principal rivers are, the Trois Pistoles and its branches, the Rivière du Moulin which turns a saw-mill, the Ruisseau de l'Eglise which turns two saw-mills, and Rivière des Coqs which also turns a saw-mill and discharges itself into Bay des Coqs.-Maple, cedar, birch and epinette are in abundance, and there is also some pine.-There is only one house built with stone ; all the others, as well as the church, are built with wood. The Parish of Trois Pistoles, although limited to 3 leagues in front, comprehends the S . of Ha Ha in Rioux.

## T W O

Two Mountains, county, in the district of Montrial, is bounded n. e. by the s. w. boundary of the S . of Blainville and the augm. to Mille Isles, ly the rear line of the augm. to the $\mathbf{S}$. of the Lake of Two Mountains, by the rear line of Argenteuil, the E. outline of the т. of Wentworth continued to the s. w. bounds of the r. of Howard, thence along the said bounds, and continuing on the same course, n. w. to the northern boundary of the province ; w. by the co. of Ottawa; s. and s. w. by the r. Ottaw:i, including Isle Bizarre and all the islands in the r. Ottawa nearest to the county, in the whole or in part fronting or intersecting it ; N. and N. w. ly the northern boundary of the province. It comprises the scigniories of Mille Isles or Rivire du Chene, Lake of the Two Mountains and its augm., and Argenteuil ; also the township: of Chatham, Grenville, Wentworth, Harrington, Arundel, and Howard; and the parishes of saint Eustache, Suint Beni it, Sainte Sholastique, Lake of Two Mountiins, and Isle Bizarre, and all the parishes, townships and lands in the whole or in part comprised within the above limits. Although the northern lwundary of this co . is stated above to extend to the $\mathrm{N} . \mathrm{w}$. boundary of the province, the difference of bearing existing between the division line scparating the same from the co. of Ottawa with the western boundary line of the co. of Lathenaye, is such when prolonged as to intersect each other at the distance of alonut 55 miles from the Ottawa, and consequently reluecs the superficies of the co. as follows; extreme leneth 86 miles, breadth 40 , contents 979 square miles. Its lat. on the Ottawa is $45^{\prime \prime} 31 \mathrm{~N}, 74^{\circ} 21^{\prime} 30^{\prime \prime} \mathrm{w}$. It sends two members to the provincial parliament, and the places of election are st. Andre and st. Eustache.-The soil and timber generally in this flowrishing co. are unexceptiomable.-It is abundantly watered by the rivers DuChine, Du Nord, Rouge, Calumet, Kingham, Au Prince, Davis, and their numerous branches. All these rivers are more or less interrupted by rapids and falls and consequently are not navigable, but the most practicable at intervals for boats and canoes is the Du Nord or North River. This co. embraces a most extensive front on the Ottawa. It is traversed by numerous roads on which are to be seen flourishing settlements; the chief post route to the Ottawa traverses this co., passing through the villages of St. Eustache, Grand Brulé, st.

## TWOMOUNTAINS．

Andrews，Davis Village and Grenville．This co． comprises the Indian mission of the Two Moun－ tains and ranks the 3rd in point of population and the 4th in agricultural produce．

Two Mountains，seigniory，has been already described，ride Lake of Two Mountains．The following additional information will，however， be found important．

The Parish of St．Benoit is in the front of the S．，extending the whole width by about $3 \frac{1}{2}$ leagues in depth．The soil is fertile and rich，and in many places fit for the cultivation of hemp．It is nearly all inhabited．－－The timber that remains is of good quality；and the parish is watered by the Belle Rivière，or Rivière du Chene，and by two smaller rivers called St．Pierre and Du Prince． There are two principal roads leading from St． Eustache to St．Andrew＇s；one of which passes over the Belle Rivière and leads through the Cite St．Louis to La Chute．In the front is the Indian village，in the centre is the $r$ ．of Grand Brule， and in the rear the r ．of Belle Rivière，near the
front of the $P$ ．of St．Scholastique．In Grand Brulé 3 houses are built with stone，the rest with wood．In the neighbourhood of the Indian vil－ lage is a saw－mill built with wood．－The grain principally grown in this $P$ ．consists of wheat， oats and peas．The best farmers have 7 horses and the poorest one．

The Parish of St．Scholastique is in the rear half of the $S$ ．，bounded in front by the village of Belle Rivière，or near it；$w$ ．by the $p$ ．of La Chute；e．by the P．of Ste．Anne，near the small chapel on North River，including the new settle－ ments in the $\mathbf{N}$ ．of the $\mathbf{S}$ ．peopled by Irish emi－ grants．－This p．is watered by the North River， which is navigable the whole width of the sei－ gniory，and by the Belle Rivière，a small stream that takes its source in the parish．Here is one small village，lately commenced ；it is situated on the Belle Rivière，where the presbytery is built， and contains about 10 houses，a stone corn－mill and a saw－mill built with wood．The inhabit－ ants manufacture some woollens and linen，about sufficient for half of their consumption．The soil is generally good，but N．of the North River it is in some places rocky and of lighter quality，though the timber is better．There is a good proportion of soft timber in every part of the P．A saw－mill is erected on a brook $N$ ．of North River into which it runs；a saw－mill is also built on the Belle Rivière near the presbytery．All the land is conceded，but a great portion remains uncleared， especially in the rear．The principal road leads across the $\mathbf{P}$ ．，from the parish of Ste．Anne to that of La Chute．

The Parish of La Chute has been but lately erected and the presbytery recently built．It formerly formed part of the P．of St．Benoit．

## U P T

## Statistics of the Mission.

L.

Cakanatsi, The Lake of Crooked Mountains, is about 10 leagues long ly 3 broad; it is very deep and abounds with fish; a single carrying place separates it from the great L. Mistassinis.

Umqui, river, $v$. Humquin.
Uniatchouan or Viatchouan, and the Cniatchouanish, run into $\mathbf{l}$. St. John, and are navigable for large bateaux for many leagues, and farther up for bark canoes.

Upikubatch, river, falls into Lake Kiguagomi, forming a large bay; it descends from a succession of rapids. This river, for about one mile up its N. E. bank, has been explored; this side was found to be abrupt and broken, and the opposite bank bounded by a succession of rocky hills. The mouth of this k . is surrounded with rocky mountains, and opposite to it is Presqu' Isie, nearly half a league in length; it is alluvial, and covered with alders: between this Presqu' Isle and the shore are $\mathbf{3}$ small islands of the same description.

Upton, township, in the co. of Drummond, is of an irregular figure, extending along the boundaries of De Ramzay and De Guir to the river St. Francis ; it is bounded s. e. by Acton and Grantham, and abuts s. upon Milton. The land is flat and low, with many extensive swamps covered with tamarack, alder and cedar. By the side of the St. Francis, and other streams that intersect it, there are some few spots which, if under cultivation, might produce good crops of grain ; but the soil in general is not of a favourable description. Both sides of the road leading along the Ruisseau des Chênes are well settled, and the road is well made.

Utsissagomo or Vomiting Lake, lies between lakes Mistassinis and Chuamonshuane ; it is about 30 leagues in circumference, full of islands, and abounding with fish.

## V.

Vacher, Ruisseau Vacher, rises in several springs near the $v$. of $S_{t}$. Jacques, in the $S$. of St. Sulpice, and running e. falls into the r. L'Assomption.
Valin, $\dot{a}$, river, rises in a small lake, and rums into the N . bank of the k . sugucnay, half a league below the r. Caribou. Half a league from its mouth are falls, that would facilitate the ercction of mills. It is an inconsiderable stream, and nearly such as that of the St. Charles, near Quebec.

Vallee, Great and Little, rivers, rise in the waste lands behind the S. of Grande Vallée des Monts, in the co. of Gaspé. Their courses are parallel, and of similar length, both traversing that seigniory into the Gulf of $\mathrm{S}_{\mathrm{t}}$. Lawrence.

Vallee des Monts. $r$. Grande Vallee des Munts.

Varennes, scigniory, in the co. of Vercheres, between Boucherville and Cap, St Michel or La Trinite, is bounded in the rear by the augm. to Beloil-23 arpents in front by one league in depth. Granted, 29th Oct., 16j2, to Sicur de Varennes, and is at present the property of Paul Lussier, Esq.-'The whole of this little grant is good and fertile land, nearly all in cultivation and pleasantly watered by two or three little streams. The church, belonging to this property, surpasses in beauty all those of the surrounding sciguiories, and its exterior and interior decorations dencrve notice: descending the river its three spires form a conspicuous object, which may be seen from Montreal, a distance of five leagues: a very good parsonage-house stands near it. There is also a

[^2]
## VAR

neat chapel.-It is watered by the St. Charles and other small streams.-Many of the houses of the tenants are well built, and dispersed through every part; but nowhere in sufficient number to form a village.-All the lands are conceded, and the greater part previous to 1759.-On a farm in this parish is a mineral spring, which, though known to be such for a long time, is not the less neglected, it is said, than that in the neighbourhood of Three Rivers: the water is saline. The intended road between Varennes and Beloel has not been commenced on account of the inadequacy of the sum appropriated for that purpose by the commissioners of internal communications; the amount of that sum is 2001 . currency, and the expense of the road has been calculated at 5002 . The road is to extend 75 arpents, 9 poles, and 2 feet, over 3 concessions: the first nearest Varennes is under culture, with the exception perhaps of one fourth its depth, which is in copse ; the second in timber and copse, and the third in copse and newly cleared land, except about one seventh, which is under culture. In the line of the road are three ravines and a water-course, which make it necessary to build four bridges.-There is no want of persons desirous of making new settlements if they could obtain lands, particularly if they were near their relatives and friends, but there are none. The parish of Sto. Anne, by a regulation of Sept. 20, 1721, confirmed by an order in council of Mar. 3, 1722, extends about 2 leagues in front, and comprehends the fief Le Sueur, St. Michel, La Trinité and Varennes, including Isle à l'Aigle, and also Isle Ste. Therese, with the exception of the domain of Langloiserie and the houses of Louis and Crboin Briant, which are comprehended in the limits of the parish of Pointe aux Trembles, in the Island of Montreal.

## VA U

Vases, des, or Tomisticobish, river, runs into the s. bank of the Saguenay, between the mouth of the Chicoutimi and Ha Ha Bay : at its mouth a dangerous shoal and reef of rocks project, which are covered at flood tide: some fine specimens of red marble have been found here.

Vasigamenke, river, runs into Ha Ha Bay. It is fed by small rivulets, running through channels formed by gullies of a moderate depth. This R. on an average is about $4 \frac{1}{2}$ chains in width; it is very rapid, and runs over a bed of gravel. The quantity of water it brings down is considerable, and it has changed its bed in many places between its mouth, and a distance of about three miles up. There are banks raised in the middle of it, which are from six to nine chains wide, and frequently a quarter of a mile long. Navigable for canoes to a great distance.

Vaudreuli, county, in the district of Montreal, is bounded N . and E. by the river Ottawa; s. and s. e. by the St. Lawrence, and s.w. and w. by the boundary line separating that part of Lower Canada and Upper Canada situate between the St. Lawrence and the Ottawa. It includes Isle Perrot and all the islands in the Ottawa and the St. Lawrence, nearest to the county, and in the whole or in part fronting it. It comprises the seigniories of Vaudreuil, Rigaud, Soulanges and New Longueuil and the township of Newton. Its extreme length is 29 miles, and its breadth 20 ; containing 316 square miles. Its centre is in lat. $45^{\prime \prime} 21^{\prime} 15^{\prime \prime}$ N., long. $74^{\circ} 16^{\prime} \mathrm{w}$. It sends two members to the provincial parliament, and the places of election are Vaudreuil and Village of Cedres. This co. is of a triangular shape and is formed by the tongue of land dividing the waters of the St . Lawrence from those of the Ottawa. Its local situation offers manifold advantages: the opening of new roads, leading from one great river to the other; and the new settlements in the interior which are fast increasing, add considerably to its importance. The chief and most flourishing settlements are to be seen on the borders of the St. Lawrence, the Ottawa, and on each side of the rivers, de L'Isle, Quinchien, and La Graisse ; there are several locks and cauals in this co., the chief of which are at the cascades, and Coteau du Lac: the latter is a military post and a port of entry. The co. contains the villages of Vaudreuil, Cascades, Cedres and Rigaud.

Vaudrevil, seigniory, in the co. of Beauce, is bounded n. e. by Cranbourne; s. w. by Tring; N. w. by St. Joseph ; s.e. by Aubert de l'Isle and Aubert Gallion.-3 leagues in front by 4 leagues in depth. Granted, Scp. 93,1736 , to Sieur Fleury de Gorgendiere. It now belongs to Monsieur de Léry.-The surface of this property is uneven and broken, and although much encumbered with rocks, which in many places are thinly covered, the soil is not of an inferior quality; the cultivated parts lie on each side of the Chaudiére, and vary, from a quarter to half a mile in depth; they contain about 170 concessions, many in a flourishing state.--The timber consists of a general assortment of the best quality.-Besides the Chaudiere, it is watered by several other streams, of which the Bras de Sud Ouest, falling into the Chaudiére, is the largest. The Chaudiére may be crossed at two or three fords; but these, after two days' rain, are too much swollen to be safe for a carriage. - The parish of T'undreuil does not include the whole of the seigniory. The unconceded lands in this part of the S. are not considerable, and they are in general thought to be fit for cultivation; they have no roads across them, nor are they surveyed. More than three-fourths of the lands were conceded prior to the conquest; and the extent conceded to each individual was 3 arpents in front by 20 in depth, the surplus in some of them are continuations. The conditions on which they were granted are, in general, very moderate. Many persons are desirous of taking new lands, but there remains not enough for all, and it appears as if the unconceded lands were reserved for the children of the more ancient and well-known families of the parish, who seem to be preferred to strangers.

Tillc.—" Connession du 23me s.ptembre, 17:36, faite par Charles Marquis de Bcanharnois, (Touverneur, et cille's
 de trois libues de terre de tornt et de deux lieuce de pro fondeur des deux cites di la riviere da Sanlt de la Chatdiede, en remontant, a commencer a la fin de la concession arcordée anjourdhui au sienir Rismad de I'tudreail, ensemble les inlo, islets et lan:s quise trouvent dans la dite

Vavdreule, seigniory, in the co. of Vaudreuil, is bounded N . by the Lake of Two Mountains; $\therefore$. by Soulange ; w. by Rigaud; e. by the narrow chamel that scparates it from Isle Perrot- $\mathbf{4}$ leagues in front, and $1!$ league in the broadest part and half a leaguc in its narrowest. Granted, Oct.12, 1702 , to Mr. de Vaudreuil, and now the property of Robert Inarwood, Estl-This seigniory is in a very flourishing state; two thirds conceded in lots of 3 acres in front ly 20 to 30 in depth, formin. six different ranges, parallel to the Ottawa; the whole number of lots is $37 \%$, and of these 290 are under excellent cultivation.-The soil is good nearly throughout, and in many places of the best quality, producing grain and all the usual crops of the country.-Three small rivers, the Quinchien, Du Moulin and another stream, water it; in spring they are navigable for boats, but after the freshes have subsided even small canoes cannot work upon them.-Maple, elm, ash, birch, beech, white and yellow pine of superior quality, are found. -There is an extensive bed of iron ore in the Petite Ciste, near the centre of the s.; it extends $\mathbf{e}$. $w$. and s. about 10 miles.-Cloth, flannel and some linen are manufactured, of fine quality.-There are 20 orchards, and the soil is well adilipted for the growth of fruit : the apples are excellent. The inhabitants rear poultry of all descriptions, and sell them in the $S$ of the Lake of Two Mountains. The butter is principally made by the English farmers, the habitans making scarcely sufficient firr
their own consumption. Flax is sown, but no hemp, though the soil is fit for it. The English settlers in Côté St . Charles grow the greatest quantity of hay, having extensive meadows. Twothirds of the grain on an average are sold at the Montreal market and to merchants of the placeThe root, called ginseng, which is crystallized by Mr. J. M.C. Le Denier, a respectahle inhabitant of the parish, is found in great abundance and exported by him. This drug is good for a variety of spasmodic complaints.-On the bank of the river, about six miles from the Pointe des Cascades, is the pleasant village of Vaudreuil, containing 38 houses, all well built of wood, except one, which is of stone, surrounding the church and parsonage house, which are both of stone. There are, however, many stone louses dispersed through the S . The seignorial, or manor-house, is situated on a well-chosen spot, near a small rapid, about $\frac{1}{2}$ mile from the church; surrounded by some groves of elm, plane and linden trees, which with avenues and other plantations in the English style afford many very pleasing prospects. At a little distance from the manor-house are a corn-mill and a wind-mill. The village of Cascades, situated on the point jutting out into Lake St. Louis, contains 17 houses, 4 of which, including the guard house, are built with stone; and it has 3 taverns: 2 of the houses stand in the S. of Soulange. This v . stands on the stage road that connects the two provinces, and, considering its situation as a great thoroughfare, it has not increased in any respect so much as might have been expected, particularly as it enjoys the advantages of being at the head of one line of navigation and at the foot of another; this perhaps may be accounted for by the rapid manner in which travellers pass through it, for as soon as they leave the steam-boat they enter the stage and pass on immediately; and those who arrive by the stage enter the steam-boat with similar haste : thus all pass through and no one stops. Three stages, in general, are constantly on the run up and down from the $v$. of Coteau, and are frequently full of passengers and luggage; the fare is $5 s$. for each passenger. The canal and locks are in good order, and 5 men who live in the guard-house, under the superintendence of Mr. Robins, take care of the works. The rates are 7 s . for a batean, and 14. for a Durham-boat, through the canal, Split Rock, and the Coteau du Lac.-The major part of the men of this seigniory are voyageurs, like

## VER

their neighbours, yet agriculture does not languish, nor is there a want of artisans in any of the useful trades: there are also 5 manufactories of pot and pearlash. The ferry-boats from Ste. Anne, on the Island of Montreal, which is the general route to Upper Canada, land their passengers in this seigniory near the manor-house, and from the number of travellers continually passing much interest and variety are conferred upon the neigh-bourhood.-Besides the main road several others pass through Vaudreuil, and are all kept in very good repair as well as the bridges. From Point Cavagnal to the manor-house are several small islands, which are appendages to this $S$. under the original grant.

Title.-"Concession du 12me Octobre, 1702, faite par Ifcctor de Calliérc, Gouverneur, et Jean Bachart, Intendant, à Mr. de Vaudreuil, pour ses enfans nés et à naître, de la moitié d'une langue de terre, située au lieu dit les Cascades, contenant quatre lieues de front sur une lieue et demie de profondeur au plus large de la dite langue de terre, et une demi lieue au plus étroit, à commencer vis-à-vis l'Isle aux Tourtes; joignant icelle pareille Concession accordée au Sieur de Soulange."-Régistre d'Intendance, No. 5, folio 38.

Vaugaoubskibank, river, rises a few miles s. of Bouchette's camp, at the s. corner of the co. of Bonaventure, and runs into the r. St. John.

Vercheree, county, in the district of Montreal, is bounded N. w. by the St. Lawrence ; s. E. by the river Richelieu or Chambly; s.w. by the seigniories of Boucherville, Montarville and Chambly; N.E. by that part of the s.w. boundary of the seigniory of St. Ours between the St. Lawrence and the Richelieu, comprising all the islands

## V ER

in those rivers in front of, and nearest to, the county, in whole or in part fronting it. It comprehends the seigniories of Contrecceur, Bellevue, Verchères, Saint Blain, Guillodiere, Trinité or Cap Saint Michel, Varennes, Beloeil and its augmentation, Cournoyer and all the islands in the said River St. Lawrence opposite the same, Isle Bouchard excepted. Its extreme length is 13 miles, and its breadth 19, containing 192 square miles. Its centre is in lat. $45^{\prime \prime} 32^{\prime} 30^{\prime \prime}$ n., long. $73^{\circ} 16^{\prime \prime} 0^{\prime \prime}$. It sends two members to the provincial parliament, and the place of election is at Verchères. The face of the country is level and low, and the soil generally light, but productive; it is chiefly watered by the st. Lawrence and the Richelieu, by which it is bounded; few streams of any note traverse it. The roads are numerous, and the whole co. exhibits rich and flourishing settlements ;-it contains a number of mills all worked by wind, which evinces the deficiency of water-courses. It contains six parishes, and the handsome village of Varennes, besides some minor ones.

Vercheres, seigniory, in the co. of Verchìres, on the south side of the St . Lawrence, is bounded n. E. by St. Blain; s. w. by Bellevue; in the rear by Cournoyer; in front of the St . Lawrence. -One league in front by two in depth. Granted, Oct. 29,1672 , to Sieur de Verchires, and is now the property of Madame Boucherville.-The land is generally good, with several varieties of soil; the largest proportion of which is in a creditable state of culture. It is watered by a small river and two or three rivulets, that turn a grist-mill, and some saw-mills. It has a neat church, a

V E R
parsonage-house, and a chapel, in the centre of a small village.-In the parish of Verchères all the lands are conceded, some as far back as 1727 ; and there are roads in all directions. The terms of concession were various; some were charged 2 bushels of wheat and 42 sols for 60 superficial arpents; some, one bushel of wheat and l piastre for 90 superficial arpents; some, 1 bushel of wheat for 610 superficial arpents; and others were charged more or less. No one goes hence to settle in the townships; for the fathers of families, who have sufficient means, purchase lands for their children either in the parish or in the seigniories in the rear.

Vermillion, river, runs into the s.w. side of the r. St. Maurice about 8 miles above the post of Latuque.
Verte, river, rises in the mountains s. of Temiscouata portage, and running N. enters the fief Cacona, where it divides the fourth range into two parts. It then directs its course to the $\mathrm{S}_{\mathrm{t}}$. Lawrence, into which it falls nearly opposite Green Island. It has a ferry at the main road, near its mouth. This r. is rapid, and being obstructed by falls is not navigable.

Verte, Isle, seigniory, in the co. of Rimonski,
is bounded in front by the r. St. Lawrence; s. w. by the Rivière Verte, and in the rear by waste-lands.-2 leagues in front by 2 in depth. Granted Apr. 27, 1684, to Sieurs Dartigny and Cardonniere, and afterwards to Sieur Dartigny only.-It comprises Isle Verte or Green Island, and all the isles, islets and shoals between them. - In front, there are two concessions; one-third part of the first and one quarter of the second only are settled. The soil in general is similar to that of Trois Pistoles, and is in front light, stony and indifferent. In this $S$. are many fine pineries. The church, 70 ft . by 40 , is built of wood, and the presbytery, 45 ft . by 32 , of stone. The S . is divided into many small fiefs. Fishing and hunting being followed as the means of livelihood, tend to retard the settlement of the lands; which is impeded by most of the tenants holding their lands in fief, possessing farms of 2 or 3 front arpents, and even more, by 2 leagues in depth, so that the seignior has no power to concede them; the advancement of cultivation is also retarded by the inhabitants taking more land than they can cultivate, which deprives the young labourers of the power to obtain lands, although the possessors have more than they cultivate.-Isle Verte or Green Island, which is an appendage to this seigniory, lies nearly opposite this seigniory, and is an appendage, to its being granted at the same time and to the same proprietor. It is $6 \frac{1}{2}$ miles in length, and its greatest breadth is one mile. The soil is good, and yields fine pasturage for a large number of cattle; and some of the low grounds are frequently overflown by the salt water during high tides. It also produces tolerable timber. A lighthouse is erected near the N. F. end of the island on a rocky point which juts far into the river, but is by no means elevated. This island is inhabited by two families. On the s. side Mrs. Fraser, a widow lady, has about 150 acres under cultivation, with a comfortable dwelling-house, a farm-house, and their respective appendages, all pleasantly situated at the foot of a small bank running along that side of the island which is divided from the settlements of Cacona by an arm of the St . Lawrence, about $\frac{3}{4}$ of a mile in width. This channel is almost dry at low water and offers to the river-craft a safe anchorage and shelter in stormy weather. The fishery, which consists principally of herrings, has not unfrequently produced 100 barrels at one tide; but large quantities are
allowed to escape or are otherwise lost for want of proper means to cure them all.

Title.-" Concession du 27 me Avril, 1684, faite par le Febvre de la Barre, Gouverneur, et de Meulles, Intendant, aux Sieurs Dartigny et de la Cardonniere, depuis au Sieur Dartigny seul, contenant deux lieues de terre, prés et bois, de front sur le fleuve $\boldsymbol{S t}$. Laurent sur deux lieues de profondeur dans les terres; à prendre depuis une rivière qui est vis-à-vis l'isle Verte, du côté du Sud de la dite isle, icelle riviére comprise, jusqu'à deux lieues en descendant le dit fleuve, ensemble les isles, islets et battures qui se rencontrent vis-à-vis les dites deux lieues, jusquàà la dite rencontrent vis-a-vis les dites deux lieues, jusqua a dite
isle Verte, icelle mème comprise."-Régistre d'Intendance, Let. B. folio 22 .

Vieupont (F.), in Ste. Marguerite, S.
Vievpont, fief, in the S. of Ste. Marguerite, in the co. of St. Marice, extends along the St. Lawrence 17 arpents by one league in depth; being the space between two streams called the Third and Fourth Rivers. Granted, Aug. 23, 1674 , to Mr. Joseph Godefroi, Sieur de Vieupont; and its precise extent of frontage determined by royal ordinance, June 15, 1723.-A small lot of land between Vieupont and Labadie is said to have belonged to Mr. '「onnancour.

Title.-" Concession du 23me Août, 1674, faite à Mr. Joscph Godefroi Sieur de Vieapont, d'une étendue de terre sur le fleuve St. Laurent, du còte du Nord, à commencer depuis la rivière appel'́e la troisiéme rivière jusqu’à celle depuis la riviere appelie la troisiéme riviere jusqua celle appelee la quatrieme riziere; contenant quinze arpens de
front avec une lieue de profondeur. Par une Ordonnance du 1 sme Juin, 1723 , il a été regle que le fief ci-dessus du lsme Juin, 72.3 , il a ete regle que le fief ci-dessus
auroit dix-sept arpens de front sur une lieue de profon-deur."-Cuhic's d'Intendance, pour Cancienne Concession.

Au plant plus haut cité un lopin de terre entre Vieupont et Latadie est dit appartenir à Mr. Tonnancour."-Régistre des Foi et Hommage, No. 95, folio 78.

Vilied, a small river in fief Maranda, in the co. of Lotbiniere. It runs into the St. Lawrence.

Village of Industriy, v. Lavaltrie, S.
Villechauve (S.), v. Beauharnois.
Villetay, fief, in the co. of Rimouski.
Vincelot, seigniory, and its augmentation, in the co. of L'Islet, is bounded N. E. by Bonsecours, s. w. by Cap St. Ignace and Ste. Claire ; in front by the St. Lawrence; in the rear by waste lands. -The original grant one league square. The augmentation is one league in breadth by two in depth. The former was granted, Nov. 3, 1672, to the widow Amiot ; the latter, Feb. 1, 1693, to Sieur de Vincelot.-Towards the river the land is low, the soil a light sandy earth with clay or

## VIN

marl; in the rear the soil is a light coloured loam as it approaches the mountains; the greatest part is under cultivation, and it is rather bare of tim-ber.-The Bras St. Nicholas and some small streams water it very well.-The front is indented by a large bay, near which is situated the church and parsonage-house, and the telegraph station No. 6.-Several roads by the St. Lawrence, and on the side of the Bras, communicate with the adjoining seigniories. The augmentation is remarkable for neither goodness of soil nor quality of timber; it is mountainous, and wholly uncultivated.

Title:-_" Concession du 3me Novembre, 1672, faite par Jean Talon, Intendant, à Demoiselle Veuve 1 mion, dune lieue de terre sur autant de profondeur, à prendre sur lo fleuve St. Laturnt, depuis le from, S. Irnact, icellui compris
 No. 1, folio 26 .

Augmentation.-"Concession du ler Férier, 1603, fäite par Louis de Buade, ronverneur, et Jean Bochart, Intendant, au Sieur de rincelot, d'une lieue de terre de front aver deux lieues de profondeur, derriere et au bout de son fief de r'molot, au Cap St. Ignace, qui a pareillement une lieue de front sculement, sur une lieue de profondeur, suivant les alignemens généraux de ce pays."一Résistre d'Intendance, No. $\mathbf{\&}$, fulio 9 .

Vincennes, seigniory, in the co. of Bellechasse, is bounded s. w. by Mont-à-peine; n. e. by Beaumont ; in front by the St. Lawrence ; in the rear by Livaudiére. 70 arpents in front, by one league in depth. Granted, Nov. 3, 1672, to Sieur Bissot ; and Féréol Roy, Esq., is the present proprietor.-The land lies rather high towards the St. Lawrence, and is, on the most elevated parts, of a lightish sandy earth; in other places a dark mould, on a substratum of rock, is prevalent. The greatest portion is in very respectable culture, and produces fine crops of grain, \&c. The timber has been greatly reduced, and what now remains is but of indifferent quality. Several small streams falling into the St. Lawrence provide rather a scanty irrigation ; one of them works a grist-mill seated in a cove under the lofty bank of that river. There are many good farm-houses and other dwellings along the several roads that intersect the seigniory.-It comprises two ranges conceded; in one are 20 farms, and in the other 23 , and they measure 3 arpents in front by 40 in depth. Two-thirds of the concessions are under cultivation. In the first are 31 houses, of which six are built with stone, and the population consists of 58 men and 61 women and children; the 2 d

## W A R

contains 21 houses, in cluding one of stone, $3 t$ men and 28 women and children.

Title.-" Concession du 3me Nowmbre, laie, faite par Jian Tuthn, Intendant, au Sieur Bissot, de soixante et dix arpens de terre de front, sur une lieue de profondeur, prendre sur le fleuve st. Larront, depuis les terres ap partenantes au Sieur de la C'isiére, jusqu'aux turré non convedres."- Rigistre d'Intendance, No. 1 , folio 30 .

Visitation, la, (V.), in Champlain, S.
Viveri, river, in Yaudreuil, in the co. of Vaudreuil, rises in the second range of concessions and ruming N ., empties itself into the Lake of Two Mountains, about half a mile above the Pointe du Detroit.

Vomiting River, $v$. Utsissagamo.

## W.

Wafianissis, (R.) $v$. Wagansis.
Wagansis, or Watianisisis, river. There are two rivers of this name, the Great and Little Wagansis, being head branches of the r. Ristigouche, in the co. of Bonaventure. From hence is a portage leading to the Grande Rivitre that falls into the St. John, which forms part of the inland communication, extending up the Ristigouche to the Madawaska settlement and Lake Temiscouata. The distance of the portage between the two rivers is about nine miles, and the land is divided by a height which is of pretty casy ascent; this portage is well fitted for culture and is covered in general with hard wood, spruce and other woods. Both rivers, if cleared of the trees that obstruct their course, would be navigable for canoes; the land near them is flat and their borders are covered with alders and high trees.-On the south side of this $\boldsymbol{r}$. below the bank and at the extremity of the portage stands the cross crected by the late catholic bishop of Quebec, Joseph Octave Plessis. At this place, the author, and Mr. Johnson, in 1817, ended their exploring survey, pursuant to instructions of the commissioners appointed for settling the boundaries between the British provinces and the United States, under the $\overline{5}$ th article of the treaty of Ghent.

Ware, an unsurveyed township in the co. of Bellechasse, is bounded N. E. and s. a. by waste lands ; w. and N. w. by Watford, Cranbourne and Standon. This township is supposed to be in general very superior to the adjacent townships, both as to soil and climate; a small part adjoining

## W E N

Standon is indifferent, but the $s$. and w. parts have a very promising appearance, and are well watered by the river St. John, whose various head-streams traverse almost every part of it, the waters falling into the Chaudière, and those communicating with Lake Etchemin. This township is in general a level, flat country, and in this respect entirely differing from those adjacent.

Warwick, township, in the co. of Drummond, is bounded n. E. by Arthabaska; s. w. by Kingsey ; s. e. by Tingwick.-A poor and rather sterile tract, and, excepting the first three ranges, is almost useless, being rough, broken and swampy, -defying all the art and labour of industry.-It is thickly covered with spruce and hemlock.-In the spring it is deeply overflown by several branches of the r. Nicolet. The s. e. half has been subdivided and granted to various persons.Ungranted and unlocated, 8,751 acres.

- Washer, a projected township in the co. of Ottawa, is bounded N. e. by Wakefield, and s. e. by Eardley.
Watford, township, in the co. of Beauce, lies in the rear of Aubert de L'Isle, and s. e. of Cranbourne. It is watered by branches of the r. La Famine.

Weedon, township, in the co. of Sherbrooke, is bounded n. e. by Garthby ; s. w. by Dudswell; and lies between H am and Lingwick.- Ungranted and unlocated, 32,700 acres.

Wembrook, river, in the s.w. angle of the co. of Bonaventure. One of the sources of the r . Ristigouche.

Wendover, township, in the co. of Drummond, is bounded N. E. by the main branch of the r. Nicolet ; s. w. by the r. St. Francis; s. e. by Simpson; N. W. by Courval, and the augment. to Nicolet. The quality of this tract cannot be highly praised : the land near the r. St. Francis is the best and will admit of cultivation; but a short distance thence it sinks into low deep swamps, where the soil is chiefly yellow sand and gravel; these extend nearly as far back as the rear boundary, and are overflowed in the spring. On the driest situations the timber is maple, birch, beech and pine; in the swamps, hemlock, \&c.Watered by two branches of the Nicolet and some other streams and traversed by two roads, one along the St. Francis, and another towards the Nicolet, called Bureau's road and leading to Shipton.-Ungranted and unlocated, 11,657 acres.

Wentworth, township, in the co. of Two Mountains, is bounded n. E. by Chatham Gore; s. w. and in the rear by waste lands ; in front by Chatham. The greater part is mountainous and rocky, very inapplicable to arable purposes; but on the first three ranges, the land is found to be of a tolerably good quality, but no part of it is settled upon. Although there are no very strong inducements to attempt cultivation, this township produces most excellent timber for naval purposes, in great abundance, with the advantage of easy conveyance by the Riviere du Nord or North River, by which it is watered and by several other streams and some small lakes.-Ungranted and unlocated, 32,200 acres.

Westbury, $\mathbf{t}$. in the co. of Sherbrooke, very small and of a triangular figure, containing no more than 12,262 acres, exclusive of the proportionate reserves, and lying between Stoke, Eaton, Dudswell and Bury. It was granted in 1804, to the late Hon. Henry Caldwell, receiver-general of Lower Canada, and is now possessed by his son, Sir John Caldwell.-The w. side is favourable to the encouragement of agriculture in most of its branches; but the E . side is much inferior, being rough, uneven and swampy. The timber, partaking of the quality of the land, consists, on the first part, of very good beech, maple, pine and birch; inferior kinds only are produced on the latter. The River St. Francis is navigable here for canoes and small boats, and by it the logs felled in the adjacent woodlands are floated singly down to the Eaton falls: numerous streams of inconsiderable note fall into that river. A few settlers on the river side have got their farms into a very respectable state.-The population does not exceed 60 , but its good situation is likely to increase the number.

West River, runs through part of the $\mathbf{T}$. of Chatham, and leaving it between lots 6 and 11 of the 7 th range, enters the $S$. of Argenteuil and empties itself into North River, about 3 arpents above Chute Mills. About 4 miles from its confluence it is divided into 4 branclics, where the navigation is impeded by rapids and small cataracts; it takes its rise in lakes in the townships in the rear of Chatham; its average breadth is 120 ft . The fishing in this r. is not much attended to, although some trout, bass, carp, \&c. are caught.

Wexford, a projected township in the co. of Lachenaye, is bounded N. E. by Chertsey; s. e. by Kilkenny ; in the rear by waste lands.

Whatham, a projected township in the co. of Ottawa, is bounded e. by Mansfield ; w. by Chichester; in the rear by waste lands; in front by Lake Coulange, an expansion of the Ottawa. The river Coulange waters the $\mathbf{s}$. E . angle and near its mouth is Fort Coulange.

Whitton, a projected township in the co. of Sherbrooke, lies between Adstock, Stratford and Gayhurst.
Wiatshuan (R.), $v$. Outatchouan.
Wickiam, in the co. of Drummond, lies between Grantham and Durham, and is bounded in the rear by Acton; in front by the n. St. Francis. The land is generally level, but the interior and rear are so swampy and thickly covered with cedar, spruce fir, and hemlock, as to be little capable of being converted to any agricultural purpose. Near the river, and also towards the townships of Grantham and Dunham, the land is more elevated, considerably better in quality, and might soon be made fit for the production of most sorts of grain and useful for other farming purposes. The timber generally consists of oak, pine, maple, and beech, each of good dimensions, and along the

## W I N

St. Francis there are much pine and spruce with some elm and oak.-In the interior there are but a few very small rivulets; but it has the advantage of being traversed in front by a very beautiful and serpentine course of the St. Francis that affords complete irrigation to the best lands.23,786 acres have been granted to Mr. William Lindsay and others. On the bank of the St. Francis the soil produces good crops of Indian corn, and the rear ranges, though generally low, are fit for the growth of wheat, hemp, and particularly flax.-The high road leads through this т. and the mail passes once a week from Quebec to Boston.-The principal proprietors are the heirs of the late William Lindsay, collector of St. John's, and Col. Heriot; the former have a large farm and house at Long Point.-This t. lies in the p. of Drummondville.-Lingranted and unlocated, 7326 acres.

William Menry, $v$. Sorel, S.
Wilham's-Tuwn, e. Beauharnots, s.
Windigo, river, runs into the r. St. Maurice from the N. E., about 4 miles above the Grand Detour.
Windsor, township, in the co. of Sherbrooke, lies between Shipton and Stoke, and is bounded n. e. by Wotton; s.w. by the r. St. Francis. This is a fine tract of land, the soil excellent and so happily varied that almost every kind of agricultural produce may be grown, particularly hemp and flax. The surface is undulated by moderate elevations that are well clothed with maple, beech, birch, and fir-trees of good size; on the flat lands ash and cedar prevail. A few swamps occur here and there, but they are of so trifling a depth as to be drained with very little trouble, and might be converted into excellent meadows.-Watered by two large streams and several small ones running into the St. Francis.-Notwithstanding the suz z 2
perior excellence of the land, this township is badly settled; but the whole has been granted to the officers and privates of the Canadian militia, who served in 1785 and 6 ; it was intended as some compensation for their past services, but scarcely any of them were inclined to make the most advantage of the reward by turning their swords into ploughshares and themselves into industrious cultivators; instead of which they preferred disposing of their lots for whatever present profit they could turn them to: indeed, the lands granted in this manner have been almost generally neglected.

Live Stock.

Winslow, a projected township in the cos. of Megantic and Sherbrooke, lies between Gayhurst, Stratford, Coleraine, and Oulney.
Wipuscool, river, runs into the bay of HaHa in the r. Saguenay.

Wiqui or Ouiqui Lake, is the original source of the r. Chicoutimi, and lies at the $w$. end of Lake Kiguagomi, with which it communicates by a channel from 12 to 15 feet wide and 68 yards long. It is of a circular form and about 260 yards in diameter ; by another explorer it is stated to be about half a mile in length and a quarter in breadth. In the distance are seen the lofty hills of Kiguagomi.

Wiscouamatche Lake empties itself into $\mathbf{L}$. St John by the river Kaoissa. It is about 3 miles long and varies very much in width on account of the bays on each side, which are more or less deep. In the first of these bays on the south side is a small island. The lake varies in depth according to its width. The mountains n.E. begin rising to a certain height and have their summits nearly of a round figure. On the n.w. and $w$. the land also rises more gradually and without rocks.

## W R I

Wissuscoue, river, runs from the s. w. into the bay of $\mathrm{Ha}-\mathrm{Ha}$ in the r . Saguenay. It is about the size of the r. Vasigamenké. For 4 or 5 miles up this r. the banks are rather high, but afterwards the land becomes generally level and consists in great part of a bed of vegetable mould lying on clay. The timber is for the most part liane, white birch, cedar, spruce, sapin and alder. There is a fine mill-seat on this river about two miles from its mouth.

Woburn, a projected township, in the extreme point of the co. of Beauce, between Lake Megantic and the province line, lies between Ditchfield and Clinton.

Wolf Creek, in the co. of Rouville, rises in low marshy lands near the province line and runs in a northwardly direction through the S. of Foucault, discharging its waters into South River in the S. of Noyan. It has no rapids and is not deep enough for navigation. It is a small stream and works a corn and a saw-mill.

Wolfstown, township, in the co. of Megantic, is bounded N. w. by Chester and Halifax ; n.e. by Ireland ; s.w. by Ham. The n.w. nalf of this $\mathbf{T}$. is moderately good, a part of which lying towards the north has been granted and might be made to repay the trouble of cultiva-tion.-The timber is pine, beech, basswood, cedar and hemlock. The s. E. half is a chain of rocky heights of which no part is arable or indeed convertible to any use.-Ungranted and unlocated, 22,300 acres.

Woodrridge, a projected township in the co. of Kamouraska, lies at the rear of the S. of Kamouraska and between Bungay and Ixworth.

Wotron, a projected township in the co. of Drummond, lies between Ham and Windsor. It is watered by the head stream of the r. Nicolet. Wright Village, v. Hull, t.

Yamachiche (P.) $r$. Grosbots.
Yamaska, county, in the district of Three Rivers, is bounded $E$. by the co. of Nicolet; w. by the co. of Richelieu; n. by the St. Lawrence; s. by the rear lines of the scigniories of Courval, Pierreville and Deguire or Rivicre David. It comprehends the seigniories of La Baie du Febvre, Courval, Lussaudiere, Pierreville, St. François and its augmentation Lavalliere or St. Michel d'Yamaska, and Deguire.-Its extreme length is 21 miles and its breadth 15 , containing 283 sq. miles; its centre is in lat. $46^{\circ} 0^{\prime} \mathrm{N}$., lon. $72^{\prime \prime} 41^{\prime} 20^{\prime \prime} \mathrm{N}$. It sends two members to the provincial parliament, and the place of election is at the village of St . François. The principal rivers are the Yamaska, the St. François, the Rivière David, and a branch of the Nicolet. The face of the country is generally level and the land of an excellent quality, and in many parts of the interior producing good timber. All the front of this co., on the lake St. Peter, presents large and valuable meadows; it is traversed by numerous roads, on which are to be seen rich and flourishing settlements. The chief routes are, the main front road, that leading from St. Antoine into the townships, and the communication from Sorel to Drummondville that traverses the western extremity of this co. It contains the Indian village of St. François and that of $\mathrm{S}_{\mathrm{t}}$. Antoine.

Yamaska or Rivière des Savannes, waters the counties of Shefford, Drummond, St. Hyacinthe, Richelieu and Yamaska. Its s.w. branch rises
from several sources in Granby, Brome, Sutton and Durham, which unite in Farnham. It then takes a x . course, dividing the S . of St. Hyacinthe into two nearly equal parts: it then separates the aug. to St. Ours from Bourchemin, and having received the waters of the r . Chibouet it turns suddenly to the $\mathrm{N} . \mathrm{w}$. , traversing the s . w. section of the S. of St. Charles; being then increased by a river from the N.E. that descends through the aug. to St. Ours, it again takes a sudden turn and with a slight inclination to the N. divides Bourgmarie West and Bonsecours from St. Charles and Bourgmarie East; after which it penetrates the $s$. angle of the $S$. of Famaska, and turning a little more towards the N . traverses that seigniory diagonally to its N . angle, where it falls into the St. Lawrence on the N. e. side of Baie St. François. The northeast branch is formed by the union of several streams that rise in Ely, Acton and Roxton from Upton; where this confluence is effected the N. E. branch runs through the w. angle of Milton and then enters the S. of St. Hyacinthe, where it joins the south-west branch. The country which the Yamaska waters forms nearly an isosceles triangle, having for its base a line of 30 miles and each of its equal sides about 50 . It covers, therefore, nearly 700 square miles. The Yamaska winds above 90 miles through a rich and fertile country. The banks of the river are generally clevated, rising in most places by gentle but broken swells to the elevation of from 15 to 25 feet. Its navigation is interrupted by occasional rapids, the chief of which are the Rapide Plat and the cascades. From its mouth it may be navigated by large bateaux about 16 miles, but not more than 9 in summer. Above the rapids that obstruct the navigation at this distance this river offers several excellent mill-sites that have been availed of by the proprietors of all the seigniories through which it passes. Its average width is about 400 feet.

Yamaska, seigniory, in the co. of Yamaska, is bounded n. e. by sit. François; s. w. by Sorel and Bonsecours; in the rear by Bourgmarie East; in front by Lake st. Peter. This property is deseribed in the title to be only about half a league in front, but in reality it is $1 \frac{1}{2}$ league by 3 leagues in depth. Granted, Sept. 24,1683 , to M. de Lavaliere and is now the property of J. M. de Tonnancour, Esq.-Cultivation of a favourable de-

YAMASKA.
scription extends over nearly one half of the seigniory; the different concessions, large and small, amount to upwards of 160 , lying on each side of the River Yamaska, by the Petit Chenail, and in the Côtes St. Louis and Ste. Catherine. The Bay of La Valliere or Yamaska, extends across the upper part of it into Sorel, and that of St. François makes rather a deep incision on its eastern side; immediately surrounding these bays the land is low and marshy, but a short distance from them are many large tracts of most excellent meadow ; farther to the rear the soil is rich and very productive, consisting of good yellow loam and a fine clay intermixed with light earth, affording much good arable land and some spots well adapted to the cultivation of flax and hemp. The front is moderately well furnished with timber of a middling and inferior quality, as white fir, spruce fir, hemlock, \&c.; but on the drier grounds in the rear some of a superior description is produced, as plane, beech, hickory and oak. The land is tolerably well watered by several small streams, in addition to the little river David that has its source in the adjoining savannas or large swamps. The convenience of good roads is afforded in every direction. The main road from the eastward leading to the town of William Henry crosses the $R$. Yamaska at a ferry just above la Petite Isle Tonnancour ; the price of passage is $3 d$. each person, $6 d$. for a horse and $12 d$. for a carriage. A cornmill and a windmill are near the ferry.-In front of the seigniory are the isles du Moine, aux Raisins, \&c. In the mouth of the river is the large island St. Jean, entirely covered with wood, some of it of good quality. At the head of this island are the extensive steam mills of W. Buchanan, Esq., the power of which is applied to the manufacture of flour, barley and oatmeal, and to the sawing of timber. Mr. Buchanan resides on the island, and occupies a neat lodge very agrecably situated at the forks formed by the Yamaska and the branch falling into Bay de la Valiere. The bays yield a great variety of fine fish, and along their shores game of several sorts is found in abundance-As the limits of the Parish of St. Michel d'Yamaska are not defined, it is difficult
to state the precise quantity of unconceded lands, which is, however, supposed to amount to more than 350 farms, each containing 3 arpents by 30 . One half of the unconceded lands are of no value; one quarter is of tolerable quality but difficult to clear and the other quarter of good quality but difficult to drain : these lands have been surveyed but have no road across them.-By a contract of concession passed Jan. 23, 1719, before Verron, a notary at Three Rivers, it appears that an extent of land, 3 arpents by 20 , paid at that time a crown, 2 capons and 1 sol marqué. The causes that chiefly impede the progress of agriculture in this $\mathbf{P}$. are the want of water-courses, which it is requiste to make before the roads can be rendered passable; and the district line, which is the greatest impediment to the formation of roads, because it renders two proces verbaux necessary before a road can be formed. There is in this $\mathbf{P}$. a cite of 40 inhabitants who for 20 years (ending in 1821) laboured in vain to obtain an exit road, chemin de sortie. There are many young persons in this $\mathbf{P}$. who would form new settlements if they could procure lands not far from their relatives.
