*One oz. to 100 ft. drill; 5 to 6 lbs. to
the acre, in drills.*

A rich, deep, light soil is particularly necessary for a successful growth of beets. For early supply, sow very early in spring, soon as ground can be worked, in drills 18 inches apart, 1 inch deep and thin to 4 inches in the row. For autumn and winter crops, sow later in the season. When young, the leaves make excellent greens.
