This Cooler, without bottles, \$	17 00
Special 2 gal. bottles (each)	1 40

The "Perfection" Cooler

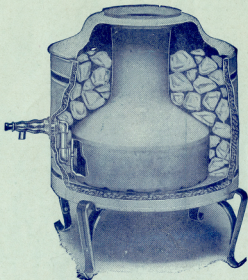

Combines the essentials of the perfect cooler for water or any liquid. It keeps the water or liquid cold, preserves it from contamination by the ice, reduces the ice consumption to a minimum. The "Perfection" Coolers are noted for their ice economy, requiring almost 20% less ice than any other make of Cooler. This is an economy not found in other Coolers. They keep a large quantity of water or other beverages at a low temperature as long as a bit of ice remains.

The ice may be replenished without removing the bottle.

Points and Features of the "Perfection" Cooler

Built on sanitary principles, every part readily removed for cleaning.

The glazed stoneware container is the best of mediums for the containing and cooling of any liquid.

THE COOLER TUB

Illustration shows the heavy shell of heavily galvanized special made iron, between which is the insulation of No. 1 grade of ground cork, thus precluding sweating.

The glazed stoneware container around which the ice is packed is the most sanitary medium for a pure product. It is easily removed for cleansing and ample in capacity.

The ice door is in the front of the tub, a great convenience. The entire top can be removed. The bottle rest is mound shaped, made of rustless metal. This top elevates the bottle out of the way of the ice filling door, centres the bottle in cooler, and gives perfect balance.

Every seam is interlocked and hand soldered, and then rolled flat to an almost invisible line.

It is strong in every part, and is built for hard usage.
