HISTORY does not offer an example of fuch difinterefted efforts, towards the enlargement of human knowledge, as have been made by the Britih nation, fince the acceffion of his prefent Majefty to the Throne. America, with all its riches, might long have remained undifcovered, if the unequalled perfeverance and the glorious enthufiafm of Columbus had not providentially furmounted every difficulty, and, in fpite of ignorance and envy, forced their way to Ferdinand and Ifabella. That immortal navigator was protected at laft, only becaufe he opened a new and evident fource of gain. But a friendhip between Plutus and the Mufes was too fingular to be fincere; it only lafted whilft they, with no better fuccefs than the Dapaids, poured heaps of gold into his treafury.

The triumph of fcience was referved to later periods of time. Three voyages of difcovery, from the mot liberal motives, had already been performed, when a fourth was undertaken by order of an enlightened monarch, upon a more enlarged and majeftic plan than ever was put in execution
before. The greateft navigator of his time, two able aftronomers, a man of fcience to ftudy nature in all her receffes, and a painter to copy fome of her moft curious productions, were felected at the expence of the nation. After completing their voyage, they have prepared to give an account of their refpective difcoveries, which cannot fail of crowning, their employers at leaft, with immortal honour.

The Britifh legiflature did not fend out and liberally fupport my father as a naturalift, who was merely to bring home a collection of butterflies and dried plants, That fuperior wifdom which guides the counfels of this nation, induced many perfons of confiderable diftinction to act on this occafion: with unexampled greatnefs. So far from prefcribing rules for his conduct, they conceived that the man whom they had chofen, prompted by his natural love of fcience, would endeavour to derive the greateft poffible advantages to learning from his voyage: He was only therefore directed to exercife all his talents, and to extend his obfervations to every remarkable object. From him they expected a philofophical hiftory of the voyage, free from prejudice and vulgar error, where human nature fhould be reprefented without any adherence to fallacious fyftems, and upon the principles of general philanthropy; in fhort, an account written upon a plan which the learned world had not hitherto feen executed.

## $\begin{array}{lllllll}\mathbf{P} & \mathbf{R} & \mathrm{E} & \mathrm{F} & \mathrm{A} & \mathbf{C} & \mathrm{E} .\end{array}$

My father performed the voyage, and collected his obfervations agreeably to the ideas which had thus been entertained of him. Fully refolved to complete the purpofe of his miffion, and to communicate his difcoveries to the public, and not allowing himfelf any time to reft from the fatigues which he had undergone, he infrribed and prefented the firft fpecimen of his labours to his majefty within four months after his return. * The hiftory of the voyage, the principal performance which was demanded at his hands, next engroffed his whole attention. It was at firft propoled, that from his own and captain Cook's journals a fingle narrative fhould be compofed, in which the important obfervations of each fhould be inferted, and referred to their proper authors by different marks. My father received a part of captain Cook's journal, and drew up feveral fheets as a fpecimen; however, as it was foon after thought more expedient to feparate the two journals, this plan was not profecuted. The Right Hon. the Lords Commiffionters of the Admiralty, being defirous of ornamenting the account of the late difcoveries with a number of plates, engraved after the drawing of the artift who went on the voyage, generoufly granted the whole expence of the engraving in

[^0]
## P R E F A C E.

in equal thares to captain Cook and my father. An agreement was drawn up on the $13^{\text {th }}$ of April, 1776 , between captain Cook and my father, in the prefence, and with the fignature of the earl of Sandwich, feecifying the particular parts of the account which were to be prepared for the prefs by each of the parties feparately, and confirming to them both jointly the gencrous gift of the plates from the Board of Admiralty. In confequence of this, my father prefented a fecond fpecimen of his narrative for the perufal of the earl of Sandwich, and was much furprifed at firft that this fecond effay was entirely difapproved; but after fome time he was convinced, that as the word "narrative" was omitted in the agreement, he had no right to compofe a connected account of the voyage. He was told that if he meant to preferve his claim to half the profit arifing from the plates which the Board of Admiralty provided, he muft conform to the letter of the agreement; and though he had always confidered himfelf as fent out chiefly with a view to write the hiftory of the voyage, he acquiefced for the benefit of his family, and ftrictly confined himfelf to the publication of his unconnected philofophical obfervations made in the courfe of the voyage.

I muft confefs, it hurt me much, to fee the chief intent of my father's miffion defeated, and the public difappointed in their expectations

## PREFACE.

expectations of a philofophical recital of facts. However, as I had been appointed his affiftant in the courfe of this expedition, I thought it incumbent upon me, at leaft to attempt to write fuch a narrative. Every confideration prompted me to undertake the tafk, which it was no longer in his power to perform. It was a duty we owed to the public; I had collected fufficient materials during the voyage, and I had as much good will to begin with, as any traveller that ever wrote, or any compiler that was ever bribed to mutilate a narrative. I was bound by no agreement whatfoever, and that to which my father had figned, did not make him anfwerable for my actions, nor in the moft diffant manner preclude his giving me affiftance. Therefore in every important circumftance, I had leave to confult his journals, and have been enabled to draw up my narrative with the moft fcrupulous attertion to hiftorical truth.

Two anonymous publications on the fubject of our voyage have already appeared; but the prefent age is too enlightened to credit marvellous hiftories, which would have difgufted even the romantic difpofition of our anceftors. The incidents of our voyage are various, and deeply interefting, without the affiftance of fiction. Our courfe has been by turns fertile, and barren of events; but as the indufiry of the labourer reaps fome advantage from the moft
moft ungrateful foil, fo the moft dreary folitudes have yielded inftruction to the inquifitive mind.

Another narrative of this circumnavigation, is faid to have been written by captain James Cook of His Majefty's Royal Navy, under whofe command it was performed.

At firft fight it may feem fuperfluous to offer two relations of this voyage to the world ; but when we confider them as narratives of interefting facts, it muft be allowed that the latter will be placed in a ftronger light, by being related by different perfons. Our occupations when in harbour were widely different ; whilf captain Cook was employed in victualling or refitting the fhip, I went in queft of the manifold objects which Nature had fcattered throughout the land. Nothing is therefore more obvious, than that each of us may have caught many diftinct incidents, and that our obfervations will frequently be foreign to each other. But above all, it is to be obferved, that the fame objects may have been feen in different points of view, and that the fame fact may often have given rife to different ideas. Many circumftances familiar to the navigator, who has been bred on the rough element, ftrike the landman with novelty, and furnifh entertainment to his readers. The feaman views many objects on fhore with a retrofpect to maritime affairs, whilft the other attends to their œconomical ufes. In hort, the
the different branches of fcience which we have ftudied, our turns of mind, our heads and hearts have made a difference in our fenfations, reflections, and expreffions. This difparity may have been rendered ftill more evident, as I have flightly paffed over all regulations relative to the interior œconomy of the fhip and the crew : I have ftudioully avoided nautical details both at fea and in harbour, nor ventured to determine, how often we reefed, or fplit a fail in a ftorm, how many times we tacked to weather a point, and how often our refractory bark difobeyed her Palinurus, and miffed ftays. The bearings and diftances of projecting capes, of peaks, hills, and hummocks, of bays, harbours, ports, and coves, at different hours of the day, have likewife been in general omitted. Thefe inffructive particulars thrive in the proper field of the navigator. The hiftory of captain Cook's firft Voyage Round the World, * was eagerly read by all European nations, but incurred univerfal cenfure, I had almoft faid contempt. It was the fate of that Hiftory, to be compiled by a perfon who had not been on the voyage ; and to the frivolous obfervations, the uninterefting digreffions, and fophiftical principles of this writer, the ill-fuccefs of the work has been attributed; though few are able to determine, with what degree of juftice the

[^1]the blame is thrown upon the compiler. The active life of captain Cook, and his indefatigable purfuits after difcoveries, have made it impoffible for him to fuperintend the printing of his own Journals; and the public, I am much afraid, muft again converfe with him by means of an interpreter. His prefent performance will, in all probability, have another circumftance in common with the former, where many important obfervations, thought obnoxious, have been fuppreffed, as is cuftomary in France. The fame authority which blew off M. de Bougainville from the inland of Juan Fernandez, could hufh to filence the Britifh guns, whilft the Endeavour cannonaded the Portuguefe fort at Madeira. * Without entering farther into this fubject, I fhall only obferve, that the above remark will give an adequate idea of the authenticity of a performance, which is fubmitted to cenfure and mutilation, before it is offered to the public.

The philofophers of the prefent age, to obviate the feeming contradictions in the accounts of different travellers, have been at the trouble to felect certain authors in whom

[^2]whom they have placed confidence, and rejected as fabulous the affertions of all the reft. Without being competent judges of the fubject, they have affumed a few circumftances as facts; and wrefting even thofe to fuit their own fyftems, have built a fuperfructure which pleafes at a diftance, but upon nearer examination partakes of the illufive nature of a dream. The learned, at laft grown tired of being deceived by the powers of rhetoric, and by fophiftical arguments, raifed a general cry after a fimple collection of facts. They had their wih; facts were collected in all parts of the world, and yet knowledge was not increafed. They received a confufed heap of disjointed limbs, which no art could reunite into a whole; and the rage of hunting after facts foon rendered them incapable of forming and refolving a fingle propolition; like thofe minute enquirers, whofe life is wholly fpent in the anatomical diffection of flies, from whence they never draw a fingle conclufion for the ufe of mankind, or even of brutes. Befides this, two travellers feldom faw the fame object in the fame manner, and each reported the fact differently, according to his fenfations, and his peculiar mode of thinking. It was therefore neceffary to be acquainted with the obferver, before any ufe could be made of his obfervations. The traveller was no longer to truft to chance for a variety of occurrences, but to make ufe of his firft difcovery,
covery, as the thread of Ariadne, by the help of which he might guide his fteps through the labyrinth of human knowledge. It was therefore requifite that he fhould have penetration fufficient to combine different facts, and to form general views from thence, which might in fome meafure guide him to new difcoveries, and point out the proper objects of farther inveftigation. This was the idea with which I embarked on the late voyage round the world, and agreeably to which I have collected materials for the prefent publication, as far as the time, my fituation and abilities, would permit. I have always endeavoured in this narrative to connect the ideas arifing from different occurrences, in order, if poffible, to throw more light upon the nature of the human mind, and to lift the foul into that exalted ftation, from whence the extenfive view ,muft " juftify the ways of God to man." Whether I have fucceeded or failed in the attempt, remains to be decided; but the rectitude of the intention cannot, I truft, be mifconftrued. I have fometimes obeyed the powerful dictates of my heart, and given voice to my feelings; for, as I do not pretend to be free from the weakneffes common to my fellow creatures, it was neceffary for every reader to know the colour of the glafs through which I looked. Of this at leaft I am certain, that a gloomy livid tinge hath never clouded my fight. Accuftomed tolook on all the various tribes

## P R E F A C E.

of men, as entitled to an equal fhare of my good will, and confcious, at the fame time, of the rights which I poffers in common with every individual among them, I have endeavoured to make my remarks with a retrofpect to our general improvement and welfare; and neither attachment nor averfion to particular nations have influenced my praife or cenfure.

The degree of pleafure which may refult from the perufal of a work, depends not only upon the variety of the fubject, but likewife upon the purity and the graces of the ftyle. We muft refign all pretenfions to tafte and fentiment, if we did not prefer a well-told tale to a lame and tedious narration. Of late, however, the juft efteem in which an elegant diction is held, has been fo far abufed, that authors relying on the fluency of their language, have paid no attention to the matter which they propofed, but deceived the public with a dry and uninftructive performance. Such writers may poffibly acquire the approbation of fome individuals,

> "Who haunt Parnaffus but to pleafe their ear ;"

But I am convinced the generality of readers are always juft enough to overlook, in fone meafure, the defects of fyle, in favour of the novelty or ufefulnefs of the fubject. Without attempting to be curioully elegant, I have aimed at perfpicuity; and having

## $\begin{array}{lllllll}P & R & E & F & A & C\end{array}$

having paid the fricteft attention to this particular, I hope to meet with indulgence, if fome errors of lefs moment have efcaped my notice. It was owing to the repeated corrections of fome valuable friends, to which I fubmitted my manufcript, that I fent it late to the prefs; but from the unexampled activity of the printer, I am enabled to lay my work before the public even fooner than I expected. The Chart, on which our line of circumnavigation is delineated, has been engraved by the ableft artift in that branch, and I conftructed it with the moft minute attention from the beft authorities. After fpecifying the above particulars, of which I thought it my duty to apprize the reader, it only remains to difcharge a promife made in the courfe of the work, refpecting an account of the education and equipment of O -Maï in this country*. (See vol. I. p. 317.) In the narrow limits of a Preface I can only comprehend in a few lines the fubitance of what might furnifh an entertaining volume. OMaï has been confidered either as remarkably ftupid, or very intelligent, according to the different allowances which were made by thofe who judged of his abilities. His language, which is deftitute of every harfh confonant, and where every word ends in a vowel, had fo little exercifed his organs of fpeech, that they were wholly unfit

[^3]unfit to pronounce the more complicated Englifh founds; and this phyfical, or rather habitual defect, has too often been mifconftrued. Upon his arrival in England, he was immediately introduced into genteel company, led to the moft fplendid entertainments of this great and luxurions metropolis, and prefented at court amidft a brilliant circle of the firt nobility. He naturally imitated that eafy and elegant politenefs which is fo prevalent in all thofe places, and which is one of the ornaments of civilized fociety; he adopted the manners, the occupations, and amufements of his companions, and gave many proofs of a quick perception and lively fancy. Among the inftances of his intelligence, I need only mention his knowledge of the game of chefs, in which he had made an amazing proficiency. The multiplicity of objects which crouded upon him, prevented his paying due attention to thofe particulars which would have been beneficial to himfelf and to his countrymen at his return. He was not able to form a general comprehenfive view of our whole civilized fyftem, and to abftract from thence what appeared moft ftrikingly ufeful and applicable to the improvement of his country. His fenfes were charmed by beauty, fymmetry, harmony, and magnificence; they called aloud for gratification, and he was accurtomed to obey their voice. The continued round of enjoyments left him no time to think
think of his future life; and being deftitute of the genius of Tupaia, whofe fuperior abilities would have enabled him to form a plan for his own conduct, his underftanding remained unimproved. It can hardly be fuppofed that he never formed a wifh to obtain fome knu . . ledge of our agriculture, arts, and manufactures; but no friendly Mentor ever attempted to cherifh and to gratify this wifh, much lefs to improve his moral character, to teach him our exalted ideas of vitue, and the fublime principles of revealed relicion. After having fpent near two years in England, and happily undergone inoculation for the fmall pox*, he embarked with captain Cook in the Refolution, which failed from Plymouth in July ${ }^{1} 776$. The various feenes of debauchery, which are almoft unavoidable in the civilized world, had not corrupted the natural good qualities of his heart. At parting from his friends his tears flowed plentifully, and his filence and outward behaviour proved him deeply affected. He carried with him an infinite variety of dreffes, ornaments, and other trifles, which are daily invented in order to fupply our artificial wants. His judgment was in its infant ftate, and therefore, like a child, he coveted almoft every thing he faw, and particularly that which had amufed him by fome unexpected

[^4]unexpected effect. To gratify his childih inclinations, as it fhould feem, rather than from any other motive, he was indulged with a portable organ, an electrical machine, a coat of mail, and a fuit of armour. Perhaps my readers expect to be told of his taking on board fome articles of real ufe to his country; I expected it likewife, but was difappointed. However, though his country will not receive a citizen from us much improved, or fraught with valuable acquifitions, which might have made him the benefactor, and perhaps the lawgiver of his people, ftill I am happy to reflect, that the fhips which are once more fent out upon difcovery, are deftined to carry the harmlefs natives of Taheitee a prefent of new domeftic animals. The introduction of black cattle and Theep on that fertile ifland, will doubtlefs increafe the happinefs of its inhabitants; and this gift may hereafter be conducive, by many intermediate caufes, to the improvement of their intellectual faculties. And here I cannot but obferve, that confidering the fmall expence at which voyages of difcovery are carried on ${ }^{*}$, the nation which favours thefe enterprizes is amply repaid by the benefit derived to our fellow creatures. I cannot help thinking that our late voyage would reflect immortal honour on our employers, if it

Vol. I. b had

[^5]had no other merit than ftocking Taheitee with goats, the Friendly Illes and New Hebrides with dogs, and New Zeeland and New Caledonia with hogs. It is therefore fincerely to be wifhed, that voyages of difcovery, upon a difinterefted plan, may fill be profecuted with vigour, as much remains to be done, even in the South Sea; unlefs it fhould be in the power of illiberal men to defeat the great and generous views of a monarch, who is juftly called the patron of fcience. A fingle remark, which may be of extenfive ufe to pofterity; a fingle circumftance, which may make happy our fellow-creatures in thofe remote parts of the world, repays the toils of the navigation, and beflows that great reward, the confcioufnefs of good and noble actions.

Ballust.

A
VOYAGE to explore the high fouthern latitudes of our globe was refolved upon, foon June. after the return of the Endeavour in 177 I . Two $\underbrace{\text {. }}_{\text {Thurf.as }}$ ftout veffels, the Refolution and the Adventure, were fitted as King's floops for that purpofe, and the command of them given to Capt. James Cook, and Capt. Tobias Furneaux. On the inth of June, $177^{2}$, my father and myfelf were appointed to embark in this expedition, in order to collect, defcribe, and draw the objects of natural hiftory which we might expect to meet

Vol. I. B with
1792. with during our courfe. We prepared with the June, utmoft alacrity for this arduous underraking, and Satur. 20. in the fpace of nine days fent all our baggage on board the Refolution, then at Sheernefs, but which failed from thence for Plymouth on the Mond.22. 22d of June.

We left London on the 26 th, and in two days reached Plymouth, where the Refolution was not yet arrived. The firft of July we went on board the Augufta Yacbt, and waited on the Earl of Sandwich, then Firft Lord Commiffioner for executing the office of High Admiral. His Lordihip expecting the Refolution to come into Plymouth Sound that day, defired us to be on board of her, between the hours of five and fix in the evening. However, to our great difappointment, fhe did not appear, and his Lordfhip left Plymouth the next morning.
July. The third of July early, we faw the Refolution
Friday 3. lying in the Sound, where the had arrived the night before. Captain Cook purpofed to ftay here eight or ten days, and gave orders, that fome neceffary fhelves fhould be fixed up in our cabins previous to our reception on board. The defire of letting pafs no opportunity for the improvement of fcience, and for our own inftruction, prompted us to pafs thefe leifure hours in vifiting the tin mines in Cornwall. Having fatisfied our curiofity, and being both highly entertained and much inftructed by the fight of the rich extenfive works at Poldyce and Kenwyn,
Wed. 8 . we returned to Plymouth on the 8 th of July.
Satur. ir. On Saturday the inth, we went on board the Refolution lloop, which was now to fail with the
Sund. 12. firft fair wind. The next day it blew a frefh gale; and my father, walking on the quarterdeck, obferved our veffel to alter her pofition confiderably in regard to the Adventure (which
was to accompany us on our voyage) and to a maft-fhip, both at anchor in the Sound; at the fame time taking notice that the approached the rocks under the caftle. He immediately communicated his apprehenfions to Mr. Gilbert, the mafter, who happened to be upon deck with him. The mafter found, that the veffel having been moored to one of the tranfport buoys in the Sound, the buoy, not intended to fupport fuch a violent ftrain, had broke from its ground tackle, and was adrift together with the floop. In an inftant all hands were on deck, the fails fpread; and the cables cleared. We fhot paft the Adventure and matthip, and came to an anchor, after efcaping the moft imminent danger of being dafhed againft the rocks under the fort. Our feamen looked upon this fortunate event, as an omen favourable to the fuccefs of the voyage, while we could not avoid reflecting on the tutelar guidance of divine Providence, which had thus manifefted itfelf in a critical moment, that might eafily have put an effectual ftop to our projects.* We fhall, in the courfe of this hiftory, find frequent inftances of impending dea ftruction, where all human help would have been ineffectual, if our better fortune had not prevailed under the fuperior direction of him, without whofe knowledge not a fingle hair falls from our heads. We are ever ready to give due applaufe and do full juftice to the great akill and good conduct of our able circumnavigators, but we cannot avoid attributing every thing to its B 2 proper

[^6] proper source, and that especially to a higher power, which human art, though aided by effrontery and irreligion; dares not vindicate to itfelf.
Mon. 13. Early on Monday the $13^{\text {th }}$, we fer fail from Plymouth Sound, in company with the Adventare. I turned a parting look on the fertile hills of England, and gave way to the natural emotion of affection which that profpect awakened; till the beauty of the morning, and the novelty of gliding through the froth water attracted my attention, and difperfed the gloominess of former ideas. We foo paffed by Eddiftone lighthouse, a lofty and well-contrived tower, which is of the greateft advantage to navigation and commerce. It was impoffible to look at it, without foddering with apprehenfions for the lonely keepers; who are often obliged to pals three months there, deprived of all communication with the mainland. The fate of Winflanley, who was really crufted by the downfal of a former ftructure, which he himfelf had built on this rock, and the vibrations of the prefent tower, when winds and waves affail it, mut give them ftrong fears of a dreadful and fudden end.

In proportion as we flood off Shore, the wind encreafed, the billows role higher; and the velfol rolled violently from fade to fade. Those who were not unfed to the lea, nay forme of the oldelt mariners, were affected by the fea-ficknefs, in various degrees of violence. It was of different duration with different perfons, and after it had continued three days amongst us, we found the greatest relief from red port wine mulled, with fpices and fugar.
Mond.20. On the 20th, we fell in with Cape Ortegal, on the coat of Gallicia in Spain; the natives call it Ortiguera, and it was probably the Promontorium

## ROUND THE WORLD.

Trileucum of the ancients. The country hereabouts is hilly; where the naked rock appears it is white, and the tops of the mountains are covered with wood. I alfo obferved fome cornfields almolt ripe, and fome fpots which feemed to be covered with heath. The eagernefs with which every body gazed at this land, powerfully perfuaded me, that mankind were not meant to be amphibious animals, and that of courfe our prefent fituation was an unnatural one; an idea that feems to have occurred to Horace, when he fays,

> Necquicquam Deus abfcidit Prudens oceano diffociabili Terras; fi tamen impix Non tangenda rates tranfiliunt vada. Hoz. In vain did nature's wife command Divide the waters from the land, If daring thips and men profane, Invade th' inviolable main.

On the 22d, we faw the lighthoufe near $C_{0}$ - Wed. 22. runna, or, as our failors abfurdly call it, the Groyn. It was perfectly calm, the water fmooth as a mirror, and the hilly profpect very agreeably varied by corn-fields, inclofures, fmall hamlets, and gentlemens feats, every thing confpiring to banifh the remains of the fea-ficknefs entirely from amongit us, and to bring back that chearfulnefs which could not well keep company with empty ftomachs and a tempeftuous fea. In the evening we were near a fmall tartan, which we took to be a fifhing veffel from the Spanifh coaft ; and in that perfuafion, a boat was hoifted out and fent towards her, in order, if poffible, to purchafe fome frefh fifh. In going thither we obferved the whole furface of the fea every where covered with myriads of little crabs, not above

## A $\quad V \quad O \quad Y \quad A \quad G \quad E$

1772. an inch in diameter, which we found were of the July. fpecies called cancer depurator by Linnæus. The little veffel proved to be a French tartan from Marfeilles, of about 100 tons burden, freighted with flour for Ferrol and Corunna. The people in her begged for a fmall fupply of frefh water, having been driven far from their courfe by contrary winds during two months, by which means this neceffary article had been exhaufted above a fortnight ago, and they were reduced to live upon bread and a little wine. Whilft they continued in this diftrefsful fituation, they had met with feveral Chips at fea, and efpecially with feveral Spanifh men of war, though none had bcen humane enough to alleviate their fufferings. When the officer who commanded our boat heard this account, he fent their empty barrels on board our veffel to be filled with frefh water, and their eyes fparkled with the livelieft expreffion of joy when they received it. They thanked Heaven and us, and rejoiced that they fhould now be able to light their fire again, and be comforted with fome boiled provifions, after their long abftinence. So true is it, that a man with a feeling humane heart, may often, at a very cheap rate, indulge the inclination to affint his fellow-creatures.
This.23. The next afternoon, three Spanifh men of war paffed us, ftanding in for Ferrol. One of them feemed to be a 74 gun fhip, and the two others carried about 60 guns each. The fternmoft firit hoifted Englifh colours, but when we Shewed ours, The hauled them down, fired a gun to leeward, and hoifted the Spanifh enfign. Soon after fhe fired a fhot at the Adventure; but as we kept ftanding on, the Spaniard put about, and fired another fhot juft a-head of her. In confequence of this, our veffel brought to, and the

ROUND THE WORLD.
the Adventure now feemed only to follow our example. The Spaniard then hailed the Adventure in Englifh, and afked "what frigate that was ahead," (meaning our nloop); and having been fatisfied in that particular, he would not anfwer a queftion of the fame nature, which was put to him, but always replied, "I wifb you a good voyage." We continued our courfe, after a fcene fo humiliating to the mafters of the fea, and paffed Cape Finefterre during night.

Several porpeffes paffed us on the 25 th, all fwimming againft the wind, which had been north-eafterly ever fince we had left Cape Finifterre. At night the fea appeared luminous, particularly the tops of the waves and part of the fhip's wake, which were illuminated by a mars of pure light; but, independent of that, there appeared numerous little fparks infinitely brighter than any other part of this phænomenon.

On the 28th, at fix of the clock in the morn- Tuef. 28. ing, we difcovered Porto-Santo, which is about five or fix leagues long, barren and thinly inhabited. It has only one Villa or town, of the fame name, fituated on the eaftern fide, in a valley which is entirely cultivated, and appeared to have a fine verdure from the numerous vineyards it contains. This little inland is under the orders of the governor of Madeira, and the number of its inhabitants amounts to about $\sqrt{e}-$ ven hundred.

Soon after we made Madeira and the Ilfas Desertas, corruptly called the Deferters by our feamen. The town of Santa Cruz in Madeira was abreaft of us at fix in the afternoon. The mountains are here interfected by numerous deep glens and vallies. On the floping ground we obferved feveral country-houfes pleafantly fituated amidft furrounding vineyards and lofty cypreffes,

## A $\quad V \quad O \quad Y \quad A \quad G \quad E$

1792. cypreffes, which give the country altogether a July. romantic appearance. We were towed to the road of Funchal in a perfect calm, and came to an anchor in the dark.
Wed. 29. Early on the 29th, we were agreeably furprifed with the picturefque appearance of the city of Funchal, which is built round the bay, on the gentle afcent of the firft hills, in form of an amphitheatre. All its public and private buildlings are by this means feet off to advantage. They are in general entirely white, many of them two ftories high, and covered with low roofs, from whence they derive that elegant aftern file, and that fimplicity, of which our natrow buildings with fteep roofs, and numerous flacks of chimnies are utterly deftitute. On the fa fide are feveral batteries and platforms with cannon. An old cattle, which commands the road, is fituated on the top of a fteep black rock, furrounded by the fa at high-water, and called by the Englifh Loo-rock. On a neighbouring eminence above the town there is another, called San Foam do Pice, or St. John's cattle. The hills beyond the town ferve to complete the beauty of the landfcape, being covered with vineyards, inclofures, plantations, and groves, interfperfed with country-houfes and feveral churches. The whole feemed to raife the idea of a fairygarden, and enabled us to form forme conception of the hanging gardens of queen Semiramis.

About Seven o'clock a boat came off to us called the Pratique-boat, having on board a Capitan do Sal, who is one of the two Guarda-Mores of the board of health, appointed to regulate the quarantine of foch hips as come from the coat of Barbary, the Arches, and other parts furpected of infectious diftempers. This gentleman enquired into the fate of health of our

## ROUND THE WORLD.

Thip's company, and the place we came from, 1772. and returned on fhore with fatisfactory informa- JuLy. tion on this fubject.

After breakfaft we landed, and went with the captains to the houfe of Mr. Loughnan, a Britifh merchant, who fupplied the king's fhips, as contractor, with all the neceffaries. The conful, Mr. Murray, lately appointed, was not yet arrived, but Mr. Loughnan received us with fuch hofpitality and elegance, as do honour to himfelf and to the nation in general.

The city is far from anfwering the expectations which may be formed from its appearance towards the road. Its freets are narrow, illpaved, and dirty; the houfes are built of freeftone, or of brick, but they are dark, and only a few of the beft, belonging to Englifh merchants or principal inhabitants, are provided with glafswindows; all the others have a kind of lattice work in their ftead, which hangs on hinges and may be lifted up occafionally. The ground floors are moftly appropriated for the ufe of fervants, for hhops, and ftore-houfes.

The churches and monafteries are very plain buildings, without any difplay of the architectonic art : their infide exhibits a ftriking want of tafte; the little light which is admitted into them, ferving only to difplay heaps of tinfel ornaments, arranged in a manner which is truely Gothic. The convent of Francifcan friars is clean, and fpacious, but their gardens feemed not to be kept in the beft order. The nuns of Santa Clara politely received us at their grate, but afterwards deputed fome old women, to offer the artificial flowers of their manufacture for fale,

We walked with Mr. Loughnan to his coun-try-feat, which is fituated on the hills, about a mile from the city. We there met an agreeable company

## A V O Y A G E

1772. company of the principal Britifh merchants eftaJuly. blifhed at Madeira. The captains returned on board in the evening, but we accepted of Mr . Loughnan's obliging offer of his houfe during our fhort ftay.

Our excurfions began the next morning, and were continued on the following day. At five Friday3t. o'clock in the morning we went upwards along the courfe of a ftream, to the interior hilly part of the country. About one o'clock in the afternoon we came to a chefnut grove, fomewhat below the higheft fummit of the ifland, having walked about fix miles from Mr. Loughnan's houfe. The air was here remarkably cooler than below, and a fine breeze contributed to its temperature. We now engaged a negro to become our conductor, and after a walk of at leaft an hour and a half, we returned to our hofpitable manfion.
August. The next day we prepared for our departure. Satur. I. It was with regret that I left this delightful fpot, and fuch generous friends, who know how to enjoy the unfpeakable pleafure of communicating happinefs to their fellow citizens of the world. My heart fill preferves thofe fentiments of gratitude and efteem, which made me loth to part from hence, and to refign myfelf to the common fate of travellers. I was however, pleafed to find Britifh hofpitality exifting abroad, which Smollet could no longer trace in England.*

Before I leave this ifland, I fhall offer fuch remarks, as I had an opportunity of collecting during my ftay; and I am induced to believe they will prove acceptable, as they were communicated by fenfible Englifhmen, who had been inhabitants of Madeira for many years, and are thertfore

[^7]therefore of the beft authority. I am aware indeed, that an account of Madeira may by fome be looked upon as a fuperfluous work; but if, upon a candid perufal, it is found to contain fuch obfervations as have not yet appeared in the numerous journals of navigators, I hope I fhall not need a farther apology. It is very natural to overlook that which is near home, and as it were within our reach, efpecially when the mind looks forward, on difcoveries which it reckons more important, in proportion as they are more remote.

The ifland of Madeira is about 55 Englifh miles long, and ten miles broad, and was firft difcovered on the $2 d$ of July, in the year 1419, by $70 a 0$ Gonzales Zarco, there being no hiftorical foundation for the fabulous report of its difcovery by one Macbin an Englifhman. It is divided into two capitanias, named Funchal and Maxico, from the towns of thofe names. The former contains two judicatures, viz. Funchal and Calbetta, the latter being a town with the title of a county, belonging to the family of Caftello Melbor. The fecond capitania likewife comprehends two judicatures, viz. Maxico (read Marhico) and San Vicente.

Funcbal is the only cidade or city in this ifland, which has allo feven villas or towns; of which there are four, Calbetta, Camara de Lobos, Ribeira braba, and Ponta de Sol in the capitania of Funchal, which is divided into twenty-fix parifhes. The other three are in the capitania of Maxico, which confift of feventeen parifhes; thefe towns are called Maxico, San Vicente, and Santa Cruz.

The governor is at the head of all the civil and military departments of this ifland, of Porto-Santo, the Salvages, and the Ilbas Defartas, which laft

## A $V \quad O \quad Y \quad A \quad G \quad E$

17\%2. laft only contain the temporary huts of fome fifhAucust ermen, who refort thither in purfuit of their bu$\underbrace{\text { finefs. At the time when I was at Madeira, the }}$ governor was Don $\mathfrak{F} 0 a 0$ Antonio de Saa Pereira. He was efteemed a man of good fenfe and temper, but rather referved and cautious.

The law department is under the corregidor, who is appointed by the king of Portugal, commonly fent from Lifbon, and holds his place during the king's pleafure. All caufes come to him from inferior courts by appeal. Each judicature has a fenate, and a $7 u i z$ or judge, whom they choofe, prefides over them. At Funcbal he is called, fuiz da Fora, and in the abfence, or after the death of the corregidor, acts as his deputy. The foreign merchants elect their own judge, called the Providor, who is at the fame time collector of the king's cuftoms and revenues, which amount in all to about one hundred and twenty thoufand pounds fterling. Far the greateft part of this fum is applied towards the falaries of civil and military officers, the pay of troops, and the maintenance of public buildings. This revenue arifes, firft from the tenth of all the produce of this ifland belonging to the king, by virtue of his office as grand mafter of the order of Chrift; fecondly, from ten per cent. duties laid on all imports, provifions excepted; and laftly, from the eleven per cent. charged on all exports.

The ifland has but one company of regular foldiers of a hundred men : the reft of the military force is a militia confifting of three thoufand men, divided into companies, each commanded by a captain, who has one lieutenant under him, and one enfign. There is no pay given to either the private men, or the officers of this militia, and yet their places are much fought after, on
account of the rank which they communicate. Thefe troops are embodied once a year, and exercifed during one month. All the military are commanded by the Serjeante Môr. The governor has two Capitanos de Sal about him, who do duty as aides-de-camp.

The fecular priefts on the ifland are about twelve hundred, many of whom are employed as private tutors. Since the expulfion of the Jefuits, no regular public fchool is to be found here, unlefs we except a feminary where a prieft, appointed for that purpofe, inftructs and educates ten ftudents at the king's expence. Thefe wear a red cloak over the ufual black gown, worn by ordinary fudents. All thofe who intend to go into orders, are obliged to qualify themfelves by ftudying in the univerfity of Coimbra, lately re-eftablifhed in Portugal. There is alfo a dean and chapter at Madeira, with a bifhop at their head, whofe income is confiderably greater than the governor's; it confifts of one hundred and ten pipes of wine, and of forty muys of wheat, each containing twenty-four bufhels; which amounts in common years to three thoufand pounds fterling. Here are likewife fixty or feventy Francifcan friars, in four monafteries, one of which is at Funchal. About three hundred nuns live on the inland, in four convents, of the orders of Merci, Sta. Clara, Incarnafac, and Bom Fefus. Thofe of the laft mentioned inflitution may marry whenever they choofe, and leave their monaftery.

In the year 1768 , the inhabitants living in the forty-three parifhes of Madeira, amounted to 63,913 , of whom there were 31,341 males, and $3^{2,57^{2}}$ females. But in that year $5^{2} 43$ perfons died, and no more than 2198 children were born; fo that the number of the dead exceeded that of the
1772. the born by 3045. It is highly probable that $\underbrace{\text { Aucusr. fome epidemical diftemper carried off fo difpro- }}$ portionate a number in that year, as the ifland would fhortly be entirely depopulated, if the mortality were always equal to this. Another circumftance concurs to ftrengthen this fuppofition, namely, the excellence of the climate. The weather is in general mild and temperate: in fummer the heat is very moderate on the higher parts of the ifland, whither the better fort of people retire for that feafon; and in winter the fnow remains there for feveral days, whilft it is never known to continue above a day or two in the lower parts. The accuracy of the numbers of dead and born, may however be entirely depended upon, as a complete lift extracted from the parifh books was procured for us, from the governor's fecretary.

The common people of this illand are of a tawny colour, and well fhaped, though they have large feet, owing perhaps to the efforts they are obliged to make in climbing the craggy paths of this mountainous country. Their faces are oblong, their eyes dark; their black hair naturally falls in ringlets, and begins to crifp in fome individuals, which may perhaps be owing to intermarriages with negroes; in general they are hard featured, but not difagreeable. 'Their women are too frequently ill-favoured, and want the florid complexion, which, when united to a pleafing affemblage of regular features, gives our Northern fair ones the fuperiority over all their fex. They are fmall, have prominent cheekbones, large feet, an ungraceful gait, and the colour of the darkeft brunette. The jult proportion of their body, the fine form of their hands, and their large, lively eyes, feem in fome meafure to compenfate for thofe defects. The labouring
bouring men in fummer, wear linen trowfers, a coarfe fhirt, a large hat, and boots; fome had a

```
1/72.
``` August. \(\underbrace{\text { Avorm }}\) fhort jacket made of cloth, and a long cloak, which they fometimes carried over their arm. The women wear a petticoat, and a fhort corfelet or jacket, clofely fitting their Chape, which is a fimple, and often not an inelegant drefs. They have alfo a fhort, but wide cloak, and thofe that are unmarried, tie their hair on the crown of their head, on which they wear no covering.

The country people are exceeding fober and frugal; their diet in general confiiting of bread and onions, or other roots, and little animal food. However, they avoid eating tripe, or any offals, becaufe it is proverbially faid of a very poor man, " be is reduced to eat tripe." Their common drink is water, or an infufion on the remaining rind or k in of the grape (after it has paffed through the wine-prefs) which when fermented, acquires fome tartnefs and acidity, but cannot be kept very long. The wine for which the ifland is fo famous, and which their own hands prepare, feldom if ever regales them.

Their principal occupation is the planting and raifing of vines, but as that branch of agriculture requires little attendance during the greatelt part of the year, they naturally incline to idlenefs. The warmth of the climate, which renders great provifion againft the inclemencies of weather unneceffary, and the eafe with which the cravings of appetite are fatisfied, mult tend to indolence, wherever the regulations of the legiflature do not counteract it, by endeavouring with the profpect of encreafing happinefs, to infufe the fpirit of indultry. It feems the Portuguefe government does not purfue the proper methods againft this dangerous lethargy of the ftate. They have lately crdered the plantation
1772. of olive-trees here, on fuch fpots as are too dry Aucust and barren to bear vines; but they have not \(\underbrace{}_{\text {thought of giving temporary affiftance to the la- }}\) bourers, and have offered no premium by which thefe might be induced to conquer their reluctance to innovations, and averfion to labour.

The vineyards are held only on an annual tenure, and the farmer reaps but four-tenths of the produce, fince four other tenths are paid in kind to the owner of the land, one-tenth to the king, and one to the clergy. Such fmall profits, joined to the thought of toiling merely for the advantage of others, if improvements were attempted, entirely preclude the hopes of a future increafe. Oppreffed as they are, they have however preferved a high degree of chearfulnefs, and contentment; their labours are commonly alleviated with fongs, and in the evening they affemble from different cottages, to dance to the drowfy mufic of a guittar.

The inhabitants of the towns are more ill-favoured than the country people, and often pale and lean. The men wear French cloaths, commonly black, which do not feem to fit them, and have been in fafhion in the polite world about half a century ago. Their ladies are delicate, and have agreeable features; but the characteriftic jealoufy of the men ftill locks them up, and deprives them of a happinefs which the country women, amidft all their diftıeffes, enjoy. Many of the better people, are a fort of petite nobleffe, which we would call gentiy, whofe genealogical pride makes them unfociable and ignorant, and caufes a ridiculous affectation of gravity. The landed property is in the bands of a few ancient families, who live at Funchal, and in the various towns on the ifland.

Madeira

Madeira confilts of one large mountain, whofe 1772. branches rife every where from the fea towards the centre of the ifle, converging to the fummit, in the midft of which, I was told, is a depreffion or excavation, called the Val by the inhabitants, always covered with a frefh and delicate herbage. The ftones on the inle, which we examined, feemed to have been in the fire, were full of holes, and of a blackifh colour; in thort, the greater part of them were lava. A few of them were of the kind which the Derbyfhire miners call dunftone. The foil of the whole illand is a tarras mixed with fome particles of clay, lime, and fand, and has much the fame appearance as fome earths we fince found on the ifle of Afcenfion. From this circumftance, and from the excavation of the fummit of the mountain, I am induced to fuppofe, that in fome remote period, a volcano has produced the lava, and the ochreous particles, and that the Val was formerly its crater. At firft fight of Madeira I was of a different opinion; but the black Loo-rock, the cliff on which St. John's caftle ftands, the nature of the foil and ftones, and the fituation of the Val , convinced me, that the whole had formerly undergone a change by fire.

Many brooks and fmall rivulets defcend from the fummits in deep chafms or glens, which feparate the various parts of the ine. We could not however perceive any plains mertioned by others,* through which the waters would probably have taken their courfe, if any fuch had exifted. The beds of the brooks are in fome places covered with fones of all fizes, carried down Vol. I. C from

\footnotetext{
* See an Account of the Voyages undertaken by the order of his prefent Majefty, and fucceffively performed by the Captains Byron, Wallis, Carterer, and Cook. - Compiled by Dr. Hawkefworth, Vol. II.
}
1772. from the higher parts by the violence of winter \(\underbrace{\text { August }}\) rains or floods of melted fnow. The water is conducted by wears and channels into the vine. yards, where each proprietor has the ufe of it for a certain time; fome being allowed to keep a conftant fupply of it, fome to ufe it thrice, others twice, and others only once a week. As the heat of the climate renders this fupply of water to the vineyards abfolutely neceffary, it is not without great expence that a new vineyard can be planted; for the maintenance of which, the owners muft purchafe water at a high price, from thofe who are conftantly fupplied, and are thus enabled to fpare fome of it.

Wherever a level piece of ground can be contrived in the higher hills, the natives make plantations of eddoes (arum efoulentum, Linn.) enclofed by a kind of dyke to caufe a fagnation, as that plant fucceeds beft in fwampy ground. Its leaves ferve as food for hogs, and the country people ufe the roots for their own nourinhment.

The fweet potatoe (convolvulus batatas) is planted for the fame purpofe, and makes a principal article of diet; together with chefnuts, which grow in extenfive woods, on the higher parts of the ifland, where the vine will not thrive. Wheat and barley are likewife fown, efpecially in fpots where the vines are decaying through age, or where they are newiy planted. But the crops do not produce above three months provifions, and the inhabitants are therefore obliged to have recourfe to other food, befides importing confiderable quantities of corn from North America in exchange for wine. The want of manure, and the inactivity of the people, are in fome meafure the caufes of this difadvantage; but fuppofing hufbandry to be carried to its perfection here, I believe they could not raife corn fufficient

\section*{ROUND THE WORLD.}
fufficient for their confumption. They make their threfhing floors of a circular form, in a August. corner of a field, which is cleared and beaten folid for the purpofe. The fheaves are laid round about it, and a fquare board ftuck full of fharp flints below, is dragged over them by a pair of oxen, the driver getting on it to encreafe its weight. This machine cuts the ftraw as if it had been chopped, and frees the grain from the hufk, from which it is afterwards feparated.

The great produce of Madeira is the wine, from which it has acquired fame and fupport. Where the foil, expofure, and fupply of water will admit of it, the vine is cultivated. One or more walks, about a yard or two wide, interfect each vineyard, and are included by ftone walls two feet high. Along thefe walks, which are arched over with laths about feven feet high, they erect wooden pillars at regular ditances, to fupport a lattice-work of bamboos, which flopes down from both fides of the walk, till it is only a foot and a half or two feet high, in which elevation it extends over the whole vineyard. The vines are in this manner fupported from the ground, and the people have room to root out the weeds which fpring up between them. In the feafon of the vintage they creep under this latticework, cut off the grapes, and lay them into bafkets: fome bunches of thefe grapes I faw, which weighed fix pounds and upwards. This method of keeping the ground clean and moift, and ripening the grapes in the fhade, contributes to give the Madeira wines that excellent flavour and body for which they are remarkable. The owners of vineyards are however obliged to allot a certain Spot of ground for the growth of bamboos; for the lattice work cannot be made without them;
1772. and I was told fome vineyards lay quite neglected \(\underbrace{\text { Ausust. }}\) for want of this ufeful reed.

The wines are not all of equal goodnefs, and confequently of different prices. The beft, made of a vine imported from Candia, by order of the Infante of Portugal, Don Henry, is called Madeira Malmfey, a pipe of which cannot be bought on the fpot for lef's than 40 or \(42 l\). ferling. It is an exceeding rich fweet wine, and is only made in a fmall quantity. The next fort is a dry wine, fuch as is exported for the London market, at 30 or 31 l. fterling the pipe. Inferior forts for the Ealt-India, Weft-India, and North-American markets, fell at 28,25 , and 20 . fterling. About thirty thoufand pipes, upon a mean, are made every year, each containing one hundred and ten gallons. About thirteen thoufand pipes of the better forts are exported, and all the reft is made into brandy for the Brazils, converted into vinegar, or confumed at home.

The enclofures of the vineyards confift of walls, and hedges of prickly pear, pomegranates, myrtles, brambles, and wild rofes. The gardens produce peaches, apricots, quinces, apples, pears, walnuts, chefnuts, and many other European fruits; together with now and then fome tropical plants, fuch as bananas, goavas, and pineapples.

All the common domeftic animals of Europe are likewife found at Madeira; and their mutton and beef, though fmall, is very well tafted. Their horfes are fmall, but fure-footed; and with great agility climb the difficult paths, which are the only means of communication in the country. They have no wheel-carriages of any kind; but in the town they ufe a fort of drays or fledges, formed of two pieces of plank joined by crofs

\section*{ROUND THE WORLD.}
crofs pieces, which make an acute angle before; 1772. thefe are drawn by oxen, and are ufed to tranfport calks of wine, and other heavy goods, to and from the warehoufes.

The animals of the feathered tribe, which live wild here, are more numerous than the wild quadrupeds; there being only the common grey rabbit here, as a reprefentative of the laft-mentioned clafs. We obferved the fparrow-hawk, (falco nifus); feveral crows, (corvus corone); magpies, (corvus pica); \(\mathbf{f k y}\) and wood-larks, (alauda arvenfis, \(\mathcal{E}^{3}\) arborea); ftarlings, (fturnus vulgaris); yellow hammers, (emberiza citrinella); common and mountain (parrows, (fringilla domeftica \(\xi^{\circ}\) montana); yellow wagtails and robin redbreafts, (motacilla flava \(\mathcal{E}\) rubecula); and wild pigeons, of which we could not determine the fpecies. We likewife faw the houfe-fwallow and fwift, (birundo ruftica \(\mathcal{E}^{\circ}\) apus); and fome gentlemen of the Britifh factory affured us they had alfo feen the martin, (b. urbica). This laft genus of birds lives here all the winter, and only difappears for a few days in very cold weather, retiring to clifts and crevices of the rocks, and returning on the firft fair funny day. The redlegged partridge, (tetrao rufus), is likewife common in the interior parts of the ifle, where it is not much difturbed. In Mr. Loughnan's aviary I faw waxbills, (loxia aftrild), chaffinches, goldfinches, yellowfinches, and canary-birds, (fringilla coclebs, carduelis, butyracea, \(\mathcal{O}^{\circ}\) canaria; all which had been caught upon this ifland. Tame birds, fuch as turkies, geefe, ducks, and hens, are very rare, which is perhaps owing to the fcarcity of corn.

There are no fnakes whatfoever in Madeira; but all the houfes, vineyards, and gardens fwarm with lizards. The friars of one of the convents complained,

\section*{A \(V \quad O \quad Y \quad A \quad G \quad E\)}
1772. complained, that thefe vermin deftroyed the \(\underbrace{\text { Avaust. fruit in their garden; they had therefore placed }}\) \(\sim_{a}\) brafs kettle in the ground to catch them, as they are conftantly running about in queft of food. In this manner they daily caught hundreds, which could not get out on account of the fmooth fides of the kettle, but were forced to perifh.

The fhores of Madeira, and of the neighbouring Salvages and Defertas, are not without fifh; but as they are not in plenty enough for the rigid obfervance of Lent, pickled herrings are brought from Gothenburg in Englifh bottoms, and falted cod from New-York and other American ports, to fupply the deficiency.

We found a few infects here, and might perhaps have collected more, if our ftay had been of longer duration; thofe we met with were of known forts, and in no great variety. On this occafion 1 hall mention a general remark, which ought to be applied to all the iflands we have touched at during the courfe of our voyage. Quadrupeds, amphibious reptiles, and infects, are not numerous in iflands, at fome diftance from a continent, and the firft are not to be met with at all, unlefs they were formerly tranfported thither by men. Fifhes and birds, which are able to pals through water or air, are more frequent, and in greater variety. Continents, on the other hand, are rich in the above-mentioned claffes of animals, as well as in thofe of birds and fifhes, which are more univerfal. Africa, which we vifited during this voyage, in a few weeks fupplied us with a great variety of quadrupeds, reptiles, and infects, whilf all the other lands where we touched, afforded no new difcoveries in thofe claffes.

\section*{C H A P. II.}

The Paffage from Madeira to the Cape Verd Ilands, and from thence to the Cape of Good Hope.

L
ATE in the evening on the firft of Auguft, we got under fail, in company with the Adventure. A North-eaft wind forwarded our courfe fo well, that we got fight of Palma on the fourth, Tuefd. 4. early in the morning. This ifland is one of the group now called the Canaries, known to the ancients by the name of Infula Fortunata, one of them being already at that time diftinguifhed by the name of Canaria.* They were entirely forgotten in Europe, till towards the end of the fourteenth century, when the fpirit of navigation and difcovery was revived. Some adventurers then found them again, and the Bifcayans landed on Lanzarota, and carried off one hundred and feventy of the natives. Luis de la Cerda, a Spanifh nobleman of the royal family of Caltile, in

\footnotetext{
* It is probable that not only the Canaries, but likewife Madeira, and Porto Santo were known to the ancients; a circumfance from which it is poffible to reconcile their various accounts of the number of thefe inlands. Sce Plin. Hift. Nat. lib. vi. cap. 37. The defcription given of them by ancient writers, agrees with the modern accounts. See Voffus in Pompon. Melam. ad cap. x. v. 20. Ex iijdem quoque izfulis cinnabaris Romam advebebatur. Sane bodie etiamnum freguens eft in injulis fortunatis arbor illa qua cinnabarin gignit. }

\section*{A V O Y A G E}
1772. in confequence of a bull from the Pope, in the Avcust. year 1344, affumed the title of Prince of the Fortunate Iflands, but never went to take poffeffion of his eftates. Laftly, John, Baron de Bethencourt of Normandy, vifited thefe illands again in the year 1402, took poffeffion of feveral, and called himfelf King of the Canaries. His nephew ceded his claims upon them to Don Henry, Infante of Portugal; but they were afterwards left to the Spaniards, who now poffers them.
Wed. 5. The next day at five o'clock in the morning, we paffed the ifle of Ferro, remarkable only from this circumftance, that feveral geographers have reckoned their firft meridian from its weftermoft extremity. The fame day, being in about 27 deg. N. latitude, we obferved feveral flying fifhes, purfued by bonitos and dolphins, rifing out of the water in order to efcape from them. They were flying in all directions, and not againft the wind only, as Mr. Kalm feems to think. Neither did they confine themfelves to a ftrait-lined courfe, but frequently were feen to defcribe a curve. When they met the top of a wave as they fkimmed along the furface of the ocean, they paffed throueh, and continued their flight beyond it. From this time, till we left the torrid zone, we were almoft daily amufed with the view of immenfe fhoals of thefe fifhes, and now and then caugit one upon our decks when it had urfortunately taken its flight too far, and was fpent by its too great elevation above the furface of the fea. In the uniform life which we led between the tropics, where we found weather, winc, and fea, almoft conftantly favourable and agreable, the mind catched at every little circumftance that could give the hint to a reflection. When we faw the moft beautiful fifhes

\section*{ROUND THE WORLD.}
of the fea, the dolphin and bonito, in purfuit 1772. of the flying fifh, and when thefe forfook their native element to feek for fhelter in air, the application to human nature was obvious. What empire is not like a tumultuous ocean, where the great in all the magnificence and pomp of power, continually perfecute and contrive the deftruction of the defencelefs?-Sometimes we faw this picture continued fill farther, when the poor fugitives met with another fet of enemies in the air, and became the prey of birds,* by endeavouring to efcape the jaws of fifhes.

On the 8th we obferved the fea to be of a whi- Satur. 8. tifh colour, and tried for foundings, but found none with fifty fathoms of line. In the evening we croffed the tropic of cancer. About this time, the captain ordered the fhip to be fumigated with gunpowder and vinegar, having taken notice that all our books, and utenfils became covered with mould, and all our iron and fteel though ever fo little expofed, began to ruft. Nothing is more probable than that the vapours, which now filled the air, contained fome faline particles, fince moifture alone does not appear to produce fuch an effect. \(\dagger\) If it be afked how any faline particles, generally fo much heavier than the aqueous, can be raifed in vapours, I leave it to the philofophers to determine, whether the numerous animal parts which daily putrefy in the ocean, do not fupply enough of the volatile alkali, by the affiftance of which the above phonomenon might be explained. The great heat between the tropics feems to volatilife the marine acid contained in the brine and common falt : for

\footnotetext{
* Boobies (pelecanus pifcator); men of war birds ( \(p\). aquilus); and tropic birds (phaetbon athereus.)
\(\dagger\) This opinion is very judicioufly difcufled by Ellis, in his voyage to Hudion's Bay.
}
1772. it has been obferved, that on rags dipped in a Aucust. folution of any one of the alkalies, and fufpend\(\sim_{\text {ed over one of the pans where brine is evaporat- }}\) ed and falt is prepared, cryftals are foon formed of a neutral falt, compounded of the marine acid and the alkali in which the rags had been immerfed; hence perhaps we may be allowed to infer, that the marine acid is by the heat of the tropical fun volatilifed, and in that aërial or vaporous form attacks the furface of iron and fteel; nay, this little quantity of acid may perhaps, imbibed by the lungs, and pores of the 1 kin , become falutary; in the firft cafe to people under pulmonary difeafes; and in the fecond by gently bracing the habit of bodies relaxed by a tropical heat, and moderating the too violent perfiration.

The infpiffated effence of beer, of which we had feveral cafks on board, was obferved to be in motion before we left Madeira, and now began to burft the cafks and run out. The captain ordering it to be brought on deck, its fermentation was encreafed by the addition of frefh air, and feveral of the cafks had their heads forced out by the fermenting liquor, with an explofion like that of a fowling-piece. A kind of vapour, like fmoke, always preceded the eruption. A veffel, ftrongly fumigated with fulphur, was, by my father's advice, filled with this effence, by which means the fermentation was ftopped for a few days, but returned afterwards, efpecially in cafks expofed to the free accefs of air. Some cafks, which had been buried in the bal-laft-fhingle, were preferved and prevented from burfting. Perhaps the admixture of double-difilled fpirit, might have hindered the progrefs of fermentation in this effence. The beer made of it, by the fimple addition of warm water, was
very good and palatable, though it had a little \(177^{2}\). empyreumatic tafte, caufed by the infpiffation. Aucusr.

Auguft the 1 ith, we difcovered Bonavitta, one Tuef. 11 . of the Cape-Verd iflands. The next morning, the weather cleared up, after a Chower of rain, and prefented to our fight the ifle of Mayo. About noon we approached the ifle of San Jago, and anchored at three o'clock in the afternoon in Porto Praya.

Early the next morning we went on Thore, and Thurf.is. vifited the commandant of the fort, Don Jofeph de Sylva, a good-natured man, who fpoke the French imperfectly, and introduced us to the governor-general of the Cape-Verd iflands. This gentleman, whofe name was Don Joachim Salama Saldanha de Lobos, commonly refides at St. Jago, the capital of the ifland; but as he was very fickly, which his complexion witneffed for him, he had retired hither about two months ago, where the air is reckoned more falubrious. He occupied the apartments of the commandant, who was now obliged to dwell in a wretched cottage, and who gave us fome information relative to thefe iflands.

In 1449, Antonio Nolli, probably by others named Antoniotto, a Genoefe in the fervice of Don Henry, Infante of Portugal, difcovered fome of the Cape-Verd iflands, and on the firft of May landed on one of them, which had its name from thence. St. Jago was feen at the fame time. In 1460, another voyage was undertaken in order to fettle them; and on this occafion the remaining iflands were likewife difcovered. San Jago is the greateft of them, and about feventeen leagues in length. The capital of the fame name, lies in the interior parts of the country, and is the fee of the bifhop of all the Cape-Verd iflands. This ifle is divided into eleven parifhes,
1772. and the moft populous of thefe contains about Avcust. four thoufand houfes, fo that it is but very \(\xrightarrow[\sim]{\sim}\) thinly inhabited.

Porto Praya ftands on a fteep rock, to which we climbed by a ferpentine path. Its fortifications are old decayed walls on the fea-fide, and fences, fcarce breatt-high, made of loofe ftones, towards the land. A fmall church is inclofed within thefe walls, towards the fea; but, befides it, there are only a few cottages. A tolerable building, at a little diftance from the fort, belongs to a company of merchants at Lifbon, who have the exclufive right to trade to all the CapeVerd inlands, and keep an agent here for that purpofe. When we made application to this indolent Don, by the Governor's direction, to be fupplied with live cattle, he indeed promifed to furnifh as many as we wanted, but we never got more than a fingle lean bullock. The company perfectly tyrannizes over the inhabitants, and fells them wretched merchandize at exorbitant prices.

The natives of St. Jago are few in number, of a middle ftature, ugly, and almoft perfectly black, with frizzled woolly hair, and thick lips, like the moft ill-looking kind of negroes. The ingenious and very learned Canon Pauw, at Xanten, in his Recherches Philofophiques fur les Americains, vol. I. p. 186. feems to take it for granted, that they are the defcendants of the firt Portuguefe fettlers, gradually degenerated through nine generations (three hundred years) to their prefent hue, which we found darker than he defcribes it. But whether, according to his and the Abbé de Manet's * opinion, this change of complexion

\footnotetext{
* See his Nouvelle Hiftoire de l'Afrique Françoife, enrichie de Cartes, \&x. a Paris, \(1767,12 \mathrm{mo}\). vol, II. p. 22.4.
}

\section*{ROUND THE WORLD.}29
complexion was effected merely by the heat of 1772 . the torrid zone, or whether they have acquired Avgust. their fable colour by inter-marriages with negroes from the adjacent coaft of Africa, is a question which I do not venture to decide, though fo able and judicious an inveftigator of nature as Count Buffon, afferts, that " the colours of the human fpecies depend principally on the climate." See Hiftoire Naturelle, in 12 mo. vol. VI. p. 260. At prefent there are very few white people among them, and I believe we did not fee above five or fix, including the governor, commandant, and company's agent. In fome of the iflands, even the governors and priefts are taken from among the blacks. The better fort of them wear ragged European cloaths, which they have obtained by barter from hips that touched here, previous to the eftablifhment of the monopolizing company. The reft content themfelves with a few feparate articles of drefs, either a fhirt or a waiftcoat, or a pair of breeches, or a hat; and feem to be well pleafed with their own appearance. The women are ugly, and wear a long lip of friped cotton over the fhoulders, hanging down to the knees before and behind; but children are perfectly naked till the age of puberty. Defpotic governors, bigoted priefts, and indolence on the part of the court of Lifbon, will always keep thefe people in a wretched fituation, beneath that of any community of negroes in Africa, and prevent them from increafing their numbers, which are the real wealth of a nation. It is natural for people whofe folids are relaxed in a fervid climate, to incline to floth and lazinefs; but they are confirmed in thefe vices, and muft become indifferent to improvement, when they know the attempt would only make their \(\mathfrak{f i}\) tuation more irkfome. With a kind of gloomy infenfibility
1772. infenfibility they give themfelves up to beggary; Aucust the only fate which can protect them from the greedy clutches of tyrannical mafters; and they fhun every labour, which muft encreafe the treafures of others without benefit to themfelves; and which only breaks in upon thofe hours of reft, that are now the folace of their precarious condition. Such clouded profpects, that never admit a gleam of happinefs, cannot be incitements to marriage, and the difficulty of fupporting a wretched exiftence, is a fufficient reafon to decline the cares annexed to the relation of parents. Let us add to this, that the dry foil, whofe fertility depends on the fated return of annual rains, is parched up whenever a drought takes place; all vegetation is then deftroyed, and an inevitable famine fucceeds. It may be reafonably fuppofed, that the experience of fuch fatal periods, deters the inhabitants from indulging in the fweets of conjugal connections, when they mult apprehend that mifery, and perhaps the horrors of flavery, await their unhappy offfpring.*

The Cape-Verd iflands in general are mountainous, but their lower hills, which are covered with a fine verdure, have a very gentle declivity,

\footnotetext{
* On our return to the Cape of Good Hope, in 1775 , we were told of a general famine which had happened in the Cape-Verd iflands in 1773 and 1774, and which had rifen to fuch a height that hundreds of people had perifined for want. The commander of a Dutch hip, which touched at Sc. Jago during this diftrefsful feafon, received feveral of the natives, with their wives and children, who fold themfelves to him, in order to efcape the dreadful confequences of want. He carried them to the Cape of Good Hope, and fold them; but when the Government there was informed of it, he was ordered to redeem them at his own expence, to carry them back to their native country, and to bring a certificate from the Portuguefe governor, importing the execution of thefe orders.
}

\section*{ROUND THE WORLD.}
declivity, and extenfive vallies run between them. They are ill fupplied with water, which in many of them is only found in pits or wells. St. Jago has, however, a tolerable river running into the fea at Ribeira Grande, a town which takes its name from thence. At Porto-Praya there was only a fingle well fet round with loofe ftones, and containing muddy brackifh water, in fuch fmall quantities, that we drew it quite dry twice a day. The valley by the fide of the fort feems to have fome moifture, and is planted here and there with cocoa-nut-palms, fugar-canes, bananas, cotton, goava, and papaw-trees; but the greateft part of it is over-run with various forts of brufhwood, and another is left for paftures.

We may perhaps conclude from hence, that the Cape-Verd iflands in the hands of an active, enterprifing, or commercial nation, would become interefting and ufeful, and might be cultivated to the greateft advantage. The cochinealplant, indigo, fome fpices, and perhaps coffee, would thrive particularly wellin this hot and parched climate; and thefe productions would be fufficient to fupply the natives not only with the neceffaries, but likewife with the conveniencies and luxuries of life, under the benign influence of a free and equal government, like that under which we have the happinefs to live in this country. Inftead of feeding on a fcanty allowance of roots, we fhould fee their board heaped with plenty, and convenient houfes would then fupply the place of wretched hovels.

Some of the lower hills were dry and barren, fcarce any plants growing upon them; but others had ftill fome verdure on them, though we were now at the end of the dry feafon. They are all covered with abundance of ftones, which appear to have been burnt, and are a fpecies of lava.

\section*{\(\begin{array}{lllllll}A & V & O & Y & A & G & E\end{array}\)}
1772. The foil, which is fertile enough in the vallies, August. is a kind of rubbifh of cinders, and ochreous \(\sim_{\text {afhes ; and the rocks on the fea-fhore are like- }}\) wife black and burnt. It is therefore probable, that this illand has undergone a change from volcanic eruptions; and it will not be deemed unreafonable to form the fame opinion of all the Cape-Verd iflands, when we confider that one of them, the illand of Fuogo, ftill confifts of a burning mountain. The interior mountains of the country are lofty, and fome of them appear teep and craggy, being perhaps of a more ancient date than the volcanic parts which we could examine.

In the evening we returned on board; but as the furf ran confiderably higher than at our landing, we were obliged to frip in order to wade to our boats, which our beft fwimmers had loaded with water-calks, and fuch refrefhments as could be purchafed on fhore; not without fome danger of being hurt by fharks, which are numerous in the harbour. The captains, aftronomers, and mafters, had fpent this day in making aftronomical obfervations upon the little iflet in the harbour, named Ilba dos Codornizes, or Quail illand, from the birds which are in great plenty upon it. The commandant of the fort informed us, that the officers of a French frigate had likewife made aftronomical obfervations on this identical fpot fome time ago, having feveral watches of a new conftruction on board.*
Fridayi4. The next day captain Cook invited the gover-nor-general, and the commandant to dinner, and we ftaid on board, in order to act as interpreters
on

\footnotetext{
* This was the Ifis frigate, commanded by M. de Fleurieu, on board of which was M. Pingré, with feveral timekeepers. A journal of the voyage and obfervations made in that hip, has fince been publifhed in 2 vols. quarto.
}
on this occafion. The captain fent them his own 1772 . boat; but when it came on thore, the governor begged to be excufed, becaufe he was always affected with ficknefs on board any veffel, whether at fea or in harbour. The commandant promifed to come, but having at firt neglected to afk the governor's leave, the latter retired to take his fiefta (or afternoon's repofe) and no one ventured to difturb him.

The extreme fcarcity of refrefhments made our ftay at Porto Praya very fhort. We were therefore obliged to content ourfelves with a few calks of brackifh water, a fingle bullock, a few long-legged goats, with ftraight horns and pendulous ears, fome lean hogs, turkies, and fowls, and a few hundreds of unripe oranges, and indifferent bananas. 'The refearches we had made the preceding day, furnifhed us with a few tropical plants, moftly of known fpecies, with fome new kinds of infects and of filh. We alfo obferved feveral forts of birds, and among them guinea-hens, which feldom fly, but run very fwiftly, and which, when old, are very tough and dry eating. Quails and red-legged partridges are likewife common, according to the report of the natives, though we did not fee any; but the moft remarkable bird we found is a fpecies of Kingfifher,* becaufe it feeds on large landcrabs of a blue and red colour, whofe numerous habitations are round and deep holes in the dry and parched foil. Our failors, who catch at every thing that may afford them diverfion, purchafed about fifteen or twenty monkies, known by the name of St. Jago, or green monkies ( fimia fabaa); which were a little bigger than Vol. I. D cats,

\footnotetext{
* The fame feecies is found in Arabia Felix; vide ForIkal Fauna Arabica; as alfo in Abyffinia, as appears from the elegant and valuable drawings of James Bruce, Efq.
}
1772. cats, and of a greenifh-brown colour, with black Aucust. faces and paws. On each fide of their mouth, \(\xrightarrow[\sim]{\text { they had a kind of pouch (like many others of }}\) the monkey tribe) which the Englifh in the Weft-Indian colonies, call by their Spanifh name alforjes. The antic tricks of thefe little monkies were amuling for fome days, while their novelty lafted; but they foon became infipid companions, were neglected, fometimes cruelly bandied about the veffel, and ftarved to death for want of frefh food, fo that only three of them reached the Cape of Good Hope. A harmlefs race of animals, dragged from the happy recefs of native fhades, to wear out the reft of their lives in continual anguifh and torment, deferve a pitying remembrance, though humanity would fain have drawn the veil over all acts of iron-hearted infenfibility, and wanton barbarifm.

We got under fail in the evening and fteered to the fouthward, having mild weather with frequent fhowers of rain on the following days, and the wind blowing from N. E. by N. to N. N.E.
Sund. 16. On the 16 th, at eight o'clock in the evening, we faw a luminous fiery meteor, of an oblong hape and bluifh colour, and having a very quick defcending motion: its courfe was N. W. and it difappeared in the horizon after a momentary duration. Our diftance from St. Jago was fiftyfive leagues at noon, notwithftanding which, we faw a fwallow following our veffel, and making numberlefs circles round it. It he neceffary manœuvres of trimming the fails, in the evening difurbed it from its rooft on one of the gun-ports, upon which it took fhelter in the carved work of the ftern. The two following days it continued Tuef. 18. to attend the Ship on her courfe. During this time we obferved many bonitos in the fea around us, which frequently fhot paft us with great ve-

\section*{ROUND THE WORLD.}
locity; but notwithftanding our endeavours to 1772 . catch them with hooks, and frike them with Avgust. harpoons, we could not take a fingle one. The crew were more fuccefsful in hooking a fhark of about five feet in length. Its common attendants, the pilot-fifh (gafteroftcus ductor) and fuck-ing-filh (ecbeneis remora), likewife appeared with it; but with this difference, that the former carefully avoided being caught, and fwam about very nimbly, but the latter ftuck fo faft to the fhark's body, that four of them were hauled on deck with it. We dined on part of the fhark the next day, and found it a tolerable food when fried, but rather of difficult digettion on account of its fat.

Two days after, Henry Smock, one of the Thur. 20. carpenter's crew, being employed on the fides of the fhip, was fuddenly miffed, and probably had fallen over-board and was drowned. His goodnatured character, and a kind of ferious turn of mind, caufed him to be regretted even among his fhipmates, and muft embitter his lofs to thofe, whom the tender ties of parental or conjugal affection had united to him. Humanity ftole a tear from each feeling traveller, the tribute due to a rational fellow-creature of a gentle and amiable difpofition.

We had frequent fhowers after leaving St. Fridayzi. Jago, and experienced a remarkable heavy fall of rain on the 21 it, during which we caught up feven puncheons of frefh water in our fpread awnings. This fupply, though we were not diftrefsed for want of it, was however very feafonable, inafmuch as we were now enabled to give large allowance of this neceffary element to the crew. Captain Cook's remark deduced from long experience, that abundance of frefl water contributes to the prefervation of health in long voyages, is D 2 extremely

\section*{A \(\quad \mathbf{V}\) O \(\quad \mathbf{Y}\) A \(\quad \mathrm{G} \quad \mathrm{E}\)}
\({ }^{1--2}\). extremely judicious, and feems to be founded on Aucust. the known principles of phyfiology. If feamen \(\underbrace{}_{\text {have plenty of water to drink, and fome to walh }}\) themfelves and their linen, this effential precaution will in a great meafure prevent the fea-fcurvy from gaining ground among them. Their blood is diluted, and the wafte of fluids, caufed by profufe perfpiration in hot climates, is reftored by plentiful drinking, and the infenfibie perfpiration likewife goes on without a check, when the people frequently fhift their linen, and wafh off any uncleanlinefs that may obftruct the pores. It is evident that the greateft danger of putrid diftempers is thus precluded; fince the reimbibing of perfpired matter, and the violence of perfpiration without a frefh fupply to temper and dilute the faline and cautic quality of the remaining fluids, (which are often fuppofed to be the caules of inflammatory fevers) are both in a great meafure prevented.

The heavy rains of this morning, entirely foaked the plumage of the poor fwallow, which had accompanied us for feveral days paft; it was obliged therefore to fettle on the railing of the quarter-deck, and fuffered itfelf to be caught. I dried it, and when it was recovered, let it fly about in the fteerage, where, far from repining at its confinement, it immediately began to feed upon the flies, which were numerous there. At dinner we opened the windows, and the fwallow retook its liberty; but about fix in the evening, it returned into the fteerage and cabin, being fenfible that we intended it no harm. Having taken another repait of flies, it went out again, and roofted that night fomewhere on the outfide of the veffel. Early the next morning our fwallow returned into the cabin once more, and took its breakfalt of flies. Emboldened by the fhelter
which we afforded it, and the little difturbance 1772. it fuffered from us, the poor little bird now ven- August. tured to enter the fhip at every port and fcuttle which was open; fome part of the morning it paffed very happily in Mr. Wales's cabin; but after having left that it entirely difappeared. It is more than probable that it came into the birth of fome unfeeling perfon, who caught it in order to provide a meal for a favourite cat.

From the hiftory of this bird, which was of the common fpecies, or a houfe-fwallow (birundo ruftica Lin .) we may deduce the circumftances that bring folitary landbirds a great way out to fea. It feems to be probable, that they begin with following a fhip, from the time the leaves the land; that they are foon loft in the great ocean, and are thus obliged to continue clofe to the fhip, as the only folid mafs in this immenfe fluid expanfe. If two or more fhips are in company, it is alfo eafy to account for the expreffion of meeting with land-birds at a great diftance from land; becaufe they may happen to follow fome other fhip from the fhore, than that which carries the obferver; thus they may efcape obfervation for a day or two, or perhaps longer, and when noticed, are fuppofed to be met with at fea. However, great forms are fometimes known to have driven fingle birds, nay vaft flocks out to fea, which are obliged to feek for reft on board of hips, at confiderable diftances from any land. * I hall venture another

\footnotetext{
* Captain Cook very obligingly communicated to me a fact which confirms the above affertion. Being on board of a hip between Norway and England, be met with a violent ftorm, during which a flight of feveral hundred birds covered the whole rigging of the fhip. Among numbers of fmall birds, he oblerved feveral hawks, which lived very luxurioufly by preying on thofe poor defencelefs creatures.
}
1772. ther reflection on this incident. In the long foliAveust tary hours of an uniform navigation, every little \(\sim_{\text {circumftance becomes interefting to the paffen- }}\) ger; it is therefore not to be wondered at, if a fubject fo trifing in itfelf as putting to death a harmlefs bird, thould affect a heart not yet buffeted into infenfibility.
Sund. 23. On the 23 d, feveral cetaceous fifh, from fifteen to twenty feet long paffed the fhip, directing their courfe to the N. and N. W. They were fuppofed to be grampuffes, (delpbinus orca).
Tuef. 25 . Two days after the fame kind of fifh, and a number of leffer ones of a brownifh colour, called \(\int k i p\) - \(j a c k s\), from leaping frequently out of the water, were obferved. The wind for feveral days paft had blown from the N. W. and obliged us to take a S. E. courfe, fo that we were now got to the fouthward of the coaft of Guinea. Several of our navigators, who had frequently croffed the Atlantic, looked upon this as a fingular circumftance ; and indeed it fairly proves, that though nature in the torrid zone commonly produces regular and conftant winds, neverthelefs it fometimes deviates even there from general rules, and admits of feveral exceptions. In this fituation we alfo obferved feveral man-ofwar birds, (pelecanus aquilus). It is a common belief among failors that their appearance denotes a vicinity of land; but we were at prefent above a hundred leagues from any fhore, fo that this opinion feems to have no better fupport than many old prejudices. Each eradication of one of there is a gain to fcience; and each vulgar opinion, proved to be erroneous, is an approximation to TRUTH , which alone is worthy of being recorded for the ufe of mankind.

\section*{ROUND THE WORLD.}

On the firt of September, feveral dolphins, 1772. (coryphana bippurus) were feen; and we like- \(\underbrace{\text { Septem. }}\) wife took notice of a large fifh clofe to us, per- Tuefd.. fectly refembling the figure of a filh given in Willoughby's Hiftor. Pifcium, appendix pag. 5 . tab. 9. f. 3. which is taken from John Nieuhoff's account, and which the Dutch call zee-duyvel, or fea-devil. In its external fhape it was fimilar to the genus of rays, but feems to be a new fpecies; from whence it is evident, that even in the moft frequented feas, fuch as the Atlantic, many new difcoveries in natural hiftory might be made, if thofe who can diftinguifh unknown from known objects, had always opportunities of enquiring into them.

On the third of September great numbers of Thurf. 3. flying-fifhes were obferved, and a bonito (fcomber pelamys) was caught, whofe meat we found to be dry and lefs palatable than it is generally reprefented. We were lucky enough two days after Satur. 5 . to take a dolphin, (coryphana bippurus,) which is likewife dry meat; but the inimitable brightnefs of its colours, which continually change from one rich hue to another whilft it is dying, is, in my opinion, one of the moft admirable appearances which can occur to the voyager's view during a tropical navigation.

But here defrription clouds each hining ray;
What terms of art can Nature's pow'rs difplays?

A boat was this day hoifted out in order to find the direction of the current, and to determine the temperature of the fea-water at a great depth. We founded with 250 fathoms without finding any bottom. The thermometer in the air ftood at \(75 \frac{1}{2}\) deg. dipped under the furface of
1772. the fea it fhewed 74 deg . and after being let Sirptem. down to the depth of 85 fathoms and hauled up again, it was fallen to 66 deg. It faid \(30^{\prime}\) under water, and was \(27 \frac{1}{2}\) in hawling up. Our latitude at noon was \(0^{\circ} 52^{\prime}\) north. The boat being out, we had an opportunity of examining that kind of blubber, or fea-nettle, which Linnæus has named medufa pelagiia; together with another fubmarine animal called doris levis, and employed ourfelves in making drawings of them, and more minute defcriptions than have hitherto been publifhed.
Wed. g. On the gth, having paffed the line with a jight air, our crew ducked fuch of their hipmates as had never croffed it before, and did not care to redeem themfelves by paying a certain forfeit of brandy. Thofe who had been obliged to undergo the briny fubmerfion, changed their linen and clothes; and as this can never be done too often, efpecially in warm weather, the ducking proved a falutary operation to them. The quantity of frong liquors, arifing from the forfeits of the reft, ferved to heighten the jovial humour, which is the predominant characteriftic of failors. This day we likewife obtained a foutherly wind, which gradually came round to S. by E. and S.S.E. and fettled into the ufual trade wind.
Mon. 1. This day we caught feveral dolphins, and a fying-fifh one foot long fell on the quarter deck. Ever fince the 8 th we had daily oblerved feveral aquatic birds, fuch as man-of-war birds, boobies (pelecanus aquilus \(\mathcal{J}\) fula), petrels, gulls, and tropic-birds (phaëton atbereus). We had alfo at various intervals, found the fea covered with animals belonging to the clafs of mollufca, one of which, of a blue colour, in fhape like a fnail, vith four arms, divided into many branches, was named
named glaucus atlanticus; another, tranfparent 1772. like a cryital, and often connected in a long itring Septem: with individuals of the fame fpecies, was referred to the genus named dagy \(a\), mentioned in Lieut. Cook's voyage in the Endeavour. \({ }^{*}\) Two other fpecies of mollufca, which feamen call fallee, and Portuguefe men of war, (medufa velella \(\mathfrak{J}\) bolotburia phyfalis) likewife appeared about our veffel in great abundance.

On the 27th we tried the direction of the Sund. 27. currents, and the temperature of the fea again, with nearly the fame refult as before. The thermometer, which in open air ftood at \(72 \frac{1}{2}\) deg. and under the furface of the fea at 70 deg. after being let down 80 fathom, funk to 68 deg . It continued 15 min . under water, and was hauled up in 7 min . We likewife took up a new fpecies of the blubber (medufa). For two days paft, we had obferved a bird, which we were this day enabled to examine, when we knew it to be the common thear-water (procellaria pufinus). Having now reached the latitude of twenty-five degrees fouth, we found the wind gradually coming round from E. by S. to E. by N. and to N. E. which enabled us to fteer to the fouth-eaftward. Our bodies, which the heat of the torrid zone had in a great degree relaxed, now began to feel a confiderable alteration in the climate, and though the thermometer was not above ten degrees different from what it ufed to be near the line, yet I contracted a violent cold, attended with the tooth-ach, fwelled gums, and cheeks.

On the fourth of October, we obferved great Octов. numbers of the common little petrel, of a footy Sund. 4. brown, with white rumps (procellaria pelagica),

\footnotetext{
* See Hawkefworth's compilation, vol. II. p. 2.
}
1772. and found the air cold and fharp. The next \(\underbrace{\text { Octor. }}\) day the albatrofs (diomedea exulans), and the \(\sim_{\text {pintadas (procellaria capenfis), made their firlt }}\) appearance.
Sund. in. On the it it it was mild and almoft calm, after feveral days of hazy and fqually weather, which bad probably fharpened the appetite of the fea birds, and efpecially the pintadas; for thefe laft eagerly fwallowed hooks baited with pieces of pork or mutton, and no lefs than eight of them were caught in a fhort time. In the evening we obferved an eclipfe of the moon, of which the end at a medium happened at \(6 \mathrm{~h} .58^{\prime \prime} 45^{\prime \prime} \mathrm{p} . \mathrm{m}\). our latitude at noon being \(34^{\circ} 45^{\prime}\) fouth.
The next day we tried the current and the temperature of the fea a third time. We let down the thermometer 100 fathoms, where it continued 20 min . was hauled up in 7 min . more, and then thewed 58 deg. At the furface it food at 59 deg. and in the air at 60 deg. It being calm, we employed ourfelves in the boat with fhooting fea-fowl; among which were a fmall tern, a fhear-water, a new fpecies of albatrofs, and a new petrel: feveral animals of the mollufca-tribe likewife came within our reach, together with the belix jantbina, a violet-coloured fhell, remarkable for the extreme thinnefs of its texture, which breaks with the leaft preffure, and feems therefore entirely calculated to keep the open fea, or at leaft to Chun rocky fhores, * agreeably

\footnotetext{
* See Hawkefworth's Compilation, vol. II. p. 14. We find another remark at the end of that above quoted, which is of very different value, and feems to indicate that the ancient authors were not confulted. Whoever has looked into Pliny, can never have the leaft idea that the thin thell aforementioned could be "the purpura of the ancients." They had feveral kinds of mells, which yielded the purple dye,
}
agreeably to the obfervation in Lieutenant 1772. Cook's voyage in the Endeavour. Albatroffes, Остов. pintadas, and petrels of all kinds, amongt which was alfo the fulmar (procellaria glacialis), were now daily obferved.

On the 17 th, we had an alarm that one of Satur. 17. our crew was overboard, upon which we immediately put about, but feeing nothing, the names of all perfons on board the veffel were called over, and none found mifling, to our great fatisfaction. Our friends on board the Adventure, whom we vifited a few days after, told us they had indeed fufpected by our manceuvre, the accident which we had apprehended, but that looking out on the fea, Capt. Furneaux had plainly obferved a fea-lion, that had been the caufe of this falfe alarm.

On the igth we had a great fouthern fwell, Mond.ig. and faw a large whale, and likewife a fifh of the thark genus, of a whitifh colour, with two dorfalfins, and its length about eighteen or twenty feet. As we had been a confiderable time at fea, the Captain had for fome weeks paft ordered fourkrout (or cabbage fliced and fermented) to be regularly ferved to the crew, at a pint per man on meat-days, which was four times a week. The
but thefe were all rock- Thells. Earum genera plura, pabulo ef solo difcreta, lib. ix. cap. 61. Exquiruntur omnes scopuli getuli miricibus ac purpuris, lib. v.cap. 1. \section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathrm{Y}\) A \(\mathbf{G} \quad \mathrm{E}\)}
1772. The Lords of the Admiralty, attentive to every Остов. circumftance which bids fair to preferve the health of feafaring men, had ordered a very confiderable quantity of this falutary and palatable food to be put on board both of the Chips, and the event has proved that it is one of the beft prophylactics againft the fea-fcurvy.
Satar. 24. On the 24 th, the Adventure being a great way aftern, the captain ordered a boat to be hoifted out, and feveral officers and other gentlemen went a fhooting, which gave us a frefh opportunity of examining the two forts of albatroffes, and a large black fpecies of fhear-water, (procellaria aquinoitialis). Our navigation, which for nine weeks paft had been out of fight of any land, began to appear dull and tedious, and feemed to be diftreffing to many who were not ufed to an uniform reclufe life on board a fhip, without any refrefhments or variety of fcenes. We thould have found this long paffage equally ditagreeable, if it had not fupplied us with employment from time to time, and nurfed the hope of making many interefting difcoveries relative to the fcience of nature.
Thur. 29. On the 29th, early in the morning, we difcovered the land of the extremity of Africa, covered with clouds and fog; and feveral gannets and fmall diving-petrels, together with fome wild ducks, came out to fea from thence. Soon after the land difappeared entirely, and we could not fee it again till three o'clock in the afternoon, when its parts were much plainer, though the clouds ftill involved them. The wind blowing frefh, and the Adventure being a great way aftern, we could not venture to get into the Table bay during night, but ftood off and on till the next morning, having thick fqually weather, and heavy fhowers of rain.

The night was fcarcely begun, when the water all round us afforded the moft grand and aftonifhing fight that can be imagined. As far as we could fee the whole ocean feemed to be in a blaze. Every breaking wave had its fummit illuminated by a light fimilar to that of phofphorus, and the fides of the veffel, coming in contact with the fea, were ftrongly marked by a luminous line. Great bodies of light moved in the water along our fide, fometimes flower, fometimes quicker; now in the fame direction with our courfe, now flying off from it ; fometimes we could clearly diftinguifh their fhape to be that of fifhes, which when they approached any fmaller ones, forced thefe to haften away from them. Defirous of enquiring into the caufe of this aftonilhing phænomenon, we procured a bucket-full of the illumined fea-water. The moft accurate attention to it proved, that innumerable minute fparks, of a round fhape, communicated this luminous appearance to the water, and moved about in it with great brifknefs and velocity. After the water had been ftanding for a little while, the number of fparks feemed to decreafe; but on being Itirred again, the whole became as luminous as before. Again, as the water gradually fubfided the fparks were obferved to move in directions contrary to the undulations of the water, which they did not before, whilft the agitation was more violent, and feemed to carry them along with its own motions. We fufpended the bucket, to prevent its being too much affected by the motion of the fhip; the bright objects by this means betrayed more and more a voluntary motion, independent of the agitation of the water caufed by our hands, or by the rolling of the veffel. The luminous appearance always gradually fubfided, but on the leaft agitation

\section*{A VO Y A G E}
1772. agitation of the water, the fparkling was renewed, \(\underbrace{\text { Остов. in proportion as the motion was encreafed. As }}\) I tired the water with my hand, one of the luminous parks adhered to my finger. We examine it by the common magnifier of Mr . Ramfden's improved microfcope, and found it to be globular, transparent like a gelatinous subfrance, and Somewhat brownish: by the greateft magnifier we difcovered the orifice of a little tube, which entered the body of this little atom, within which were four or five inteftine bags connecked with the tube. Having examined feveral of them, which had much the fame appearance, I endeavoured to catch forme in water, and bring them under the microfcope in a concave glass, where its nature and organs might be better examine: but there minute objects were always hurt with our touch before we could place them in the concave glafs, and when dead only appeared as an indiftinct mas of floating filaments. In about two hours time the water had loft its luminous appearance. We had another bucketfull of it drawn before that time, but all our attempts to catch one of the little atoms in the glass proved ineffectual. Accordingly we haptened to draw the appearance of the firft globule, and to write down our observations. The molt probable conjecture which we could form concorning there little atomical animalcules was, that they might be the young fry of forme Species of medufa or blubber, though it may likewife be poffible, that they are beings of a diftinct genus.

There was a fingularity, and a grandeur in the display of this phenomenon, which could not fail of giving occupation to the mind, and Arizing it with a reverential awe, due to Omnipotence. The ocean covered to a great extent, with

ROUND THE WORLD.
with myriads of animalcules; thefe little beings, \(17 \div 2\). organized alive, endowed with locomotive power, \(\underbrace{\text { Остов. }}\) a quality of hining whenever they pleafe, of illuminating every body with which they come in contact, and of laying afide their luminous appearance at pleafure : all thefe ideas crouded upon us, and bade us admire the Creator, even in his minuteft works. It is the natural fault of young people to think too well of mankind; but I hope I thall not have formed too favourable an opinion of my readers, if I expect that the generality will fympathize with me in thefe feelings, and that none will be found ignorant or depraved enough to defpife them.

> Turrigeros elephantorum miramur humeros, taurorumque colla et truces in fublime jactus, tigrium rapinas, leonum jubas; Quemrerumnatura nusquam magis, QUAMIN minimis, totasit. Quapropter quefo, ne noftra legentes, quoniam ex his fpernent multa etiam relata faftidio damnent, quum in contemplatione Nature nihil poffit videri fupervacaneum. Plin. Hift. Nat. lib. xi. cap. 2.

The next morning, after a very rainy night, Frid. \(3^{\circ}\). we failed into Table bay. The mountains at the bottom of it, now appeared clear of clouds, and furprifed us with their prodigious craggy, fteep, and barren appearance. As we advanced farther into the bay, we difcovered the town at the foot of the black Table-mountain, and foon came to an anchor. After faluting the fort, and receiving the vifit of feveral officers in the fervice of the Dutch Eatt India company, we went on fhore with captains Cook and Furneaux, being prepared to meet with many new acquifitions to fcience, on a continent fo diftant from our own, and fituated in an oppofite hemifphere.

\section*{C H A P. III.}

> Stay at the Cape of Good Hope-Account of that Settlement.
1772. W E were no fooner landed than we all went to wait upon the governor, baron Joachim van Plettenberg, a man of a very liberal education, and extenfive knowledge, whofe politenefs and affability immediately gave us a good opinion of him. From him we proceeded to the other members of the council, and at laft retired to take up our lodgings at Mr. Brand's, now commander at Falfe bay, whofe houfe at the Cape town is commonly frequented by the Englifh captains who happen to touch there. Almoft every inferior officer of the Dutch company's government, the members of the council excepted, let their fupernumerary apartments to the officers and paffengers in the various Englifh, French, Danifh, and Swedifh fhips, which annually put in here, either on their voyage from or back to Europe.

We were not a little pleafed with the contraft between this colony, and the Portuguefe ifland of St. Jago. There we had taken notice of a tropical country, with a tolerable appearance, and capable of improvement, but utterly neglected by its lazy and oppreffed inhabitants; here, on the contrary, we faw a neat well-built town, all white, rifing in the middle of a defart, furround. ed by broken maffes of black and dreary mountains; or in other words, the picture of fuccefsful induftry. Its appearance towards the fea-fide, is not quite fo picturefque as that of Funchal.

\section*{ROUND THE WORLD.}

The ftore-houfes of the Dutch Eaft-India com- 1772. pany, are all fituated neareft the water, and the private buildings lie beyond them on a gentle afcent. The fort which commands the road, is on the eaft fide of the town, but feems not to be of great ftrength ; befides which, there are feveral batteries on both fides. The ftreets in the town are broad, and regular; all the principal ones are planted with oaks, and fome have in their middle a canal of running water, which on account of its fmall quantity, they are obliged to hufband by fluices, fo that parts of it are fometimes entirely drained, and occafion no very pleafant fmell. The national character of the Cutch ftrongly manifeits itfelf in this particular ; their fettlements being always fupplied with canals, though reafon and common fenfe evidently prove their noxious influence on the health of the inhabitants, efpecially at Batavia.

Quanto preftantius effet
——viridi fi margine clauderet undas
Herba, nec ingenuum violarent marmora tophum!
JUVENAL.
The houfes are built of brick, and many of them are white-wafhed on the outfide. The rooms are in general lofty and fpacious, and very airy, which the hot climate requires. There is but one church in the whole town, and that is extremely plain, and feems to be rather too fmall for the congregation. That firit of toleration, which has been fo beneficial to the Dutch government at home, is not to be met with in their colonies. It is but very lately that they have fuffered even the Lutherans, to build churches at Batavia, and at this place; and at the prefent time, a clergyman of that perfuafion is not tolerated at the Cape, but the inhabitants are obliged

Vol. I. E to

\section*{A \(\quad \mathbf{V} O \quad \mathrm{Y}\) A \(G E\)}
1772. to content themfelves with the chaplains of \(\underbrace{\text { Ocrob. }}\) Danih and Swedifh Eaft-India-men, who give \(\sim_{\text {them a fermon, and adminitter the facrament once }}\) or twice a year, and are very handfomely rewarded. The government, and the inhabitants do not give themfelves the trouble to attend to a circumftance of fo little confequence in their eyes, as the religion of their flaves, who in general feem to have none at all. A few of them follow the Mahommedan rite, and weekly meet in a private houfe belonging to a free Mahomedan, in order to read, or rather chaunt feveral prayers, and chapters of the Koran. As they have no prieft among them, they cannot partake of any other acts of worfhip.*
The flaves belonging to the company, who amount to feveral hundreds, are lodged and boarded in a ipacious houfe ereeted for that purrpofe, where they are likewife kept at work. Another great building ferves as an hofpital for the failors belonging to the Dutch Eaf-India fhips, which touch here, and commonly have prodigious numbers of fick on board, on their voyage from Europe towards India. The vaft number of men, fometimes fix, feven, or eight hundred, which thefe fhips carry out to fupply the military in India, the fmall room to which they are confried, and the hort allowance of water and

\footnotetext{
- We would not be underfload to throw an odium on the Datch in particular, when it is well known that the negroes, who wear the chains of the Englifh and French, are equally neglected: it was only intended to awaken a fellow-feeling towards an unhappy race of men , among the colonifts of all nations; and toremind them whilft they enjoy, or frive to enjoy the ineftimable bleffing of liberty, to exert themfelves in acts of humanity and kindnefs, towards thore from whom they with-hold it, perhaps, without remorfe.
}
falt provifion, they receive on a long voyage 1772. through the torrid zone, generally make confiОстов. derable havock among them : it is therefore no uncommon circumitance at the Cape, that a hip on her paffage thither from Europe, lofes eighty or a hundred men, and fends between two and three hundred others dangeroufly ill to the hofpital. A fact no lefs deplorable than certain, is, that the fmall expence and facility with which the ziel-verkoopers actually carry on their infamous trade of fupplying the India company with recruits, makes them lefs attentive to the prefervation of health among thefe poor people. Nothing is more common, in this and other Dutch colonies, than to meet with foldiers in the company's fervice who, upon enquiry, acknowledge they have been kidnapped in Holland. There is an apothecary's fhop belonging to the hofpital, where the moft neceffary remedies are prepared, but no expenfive drug is to be found in it, and the method of adminiftering to all the patients indifcriminately out of two or three huge bottles, full of different preparations, fuffices to convince us, that the frefh air of the land, and frefh provifions here, contribute much more to the recovery of the fick, than the fill of their phyficians. Patients who are able to walk, are ordered to go up and down the ftreets every fair morning; and all kinds of greens, pot-herbs, fallads, and antifcorbutics are raifed for their ufe in an adjacent garden belonging to the company. Travellers have fometimes praifed and fometimes depreciated this garden, according to the different points of view in which it has been confidered. It is true, a few regular walks of indifferent oaks, encompaffed with elm and myrtle hedges, are not objects engaging enough to thofe who are ufed to admire the perfection of

E 2 gardening

\section*{A \(\quad \mathbf{V}\)}

1;72. gardening in England, or who contemplate in Novemp. Holland and France cyprefs, box, and yew trees \(\underbrace{\text { che }}_{\text {cut out into vales, ftatues, and pyramids, or char- }}\) milles turned into pieces of architecture! But confidering that the trees were planted in the beginning of this century, more for ufe than ornament; that they fhelter the kitchen-herbs for the hofpital, againft the deftructive violence of forms ; and that they form the only fhady and airy walks, comfortable to voyagers and fick perfons in this hot climate, I cannot wonder that fome fhould extol as "" a delightful fpot,"* what others contemptuoully call "a friar's " garden." \(\dagger\)
Satur. i. The day after our arrival, the aftronomers of both fhips, Mr. Wales and Mr. Baily, fixed their inftruments afhore, within a few yards of the identical fpot where Meffrs. Mafon and Dixon had formerly made their aftronomical obfervations. The fame day we began our botanical excurfions in the country about the town. The ground gradually rifes on all fides towards the three mountains which lie round the bottom of the bay, keeping low and level only near the feafide, and growing fomewhat marfhy in the ifthmus between the Falfe and Table bays, where a falt rivulet falls into the latter. The marfhy part has fome verdure, but is intermixed with a great deal of fand. The higher grounds, which from the fea fide have a parched and dreary appearance, are however covered with an immenfe variety of plants, amongft which are a prodigious number of fhrubs, but farce one or two fpecies that deferves the name of trees. There are alfo a few

\footnotetext{
* Commodore (now admiral) Byron. See Hawkefworth's compilation, vol. I.
+ M. de Bougainville. See his Voyage round the World.
}

\section*{ROUND THE WORLD.}
a few fmall plantations wherever a little run of 1772. \(^{2}\) water moiftens the ground. Aboundance of in- Novemb. fects of every fort, feveral fpecies of lizards, landtortoifes, and ferpents frequent the dry fhrubbery, together with a great variety of fmail birds. We daily brought home ample collections of vegetables and animals, and were much furprifed to find a great number, efpecially among the latter, entirely unknown to natural hiftorians, though gathered in fields adjacent to a town, from whence the cabinets and repofitories of all Europe have been repeatedly fupplied with numerous and valuable acquifitions to the fcience.

One of our excurfions was directed to the Table mountain. The afcent was very fteep, fatiguing, and difficult, on account of the number of loofe ftones which rolled away under our feet. About the middle of the mountain we entered a bold grand chafm, whofe walls are perpendicular and often impending rocks, piled up in ftrata. Small rills of water oozed out of crevices, or fell from precipices in drops, giving life to hundreds of plants and low fhrubs in the chafm. Another kind of vegetables, growing on a drier foil, that feemed to concentrate their juices, fpread a fine aromatic fcent, which a gentle breeze wafted towards us from the chafm. At laft, after three hours walk, we reached the fummit of the mountain. It was nearly level, very barren, and bare of foil ; feveral cavities were however replete with rain-water, or contained a little vegetable earth, from whence a few odoriferous plants drew their nourifhment. Some antelopes, howling baboons, folitary vultures, and toads are fometimes to be met with on the mountain. The view from thence is very extenfive and picturefque. The bay feemed a fmall pond or balon, and the hups in it dwindled to little
1772. boats: the town under our feet, and the regular \(\underbrace{\text { Novime. compartments of its gardens, looked like the }}\) \(\underbrace{}_{\text {work of children. The Lion's Rump now }}\) feemed an inconfiderable ridge; we looked down on the fpiry Lion's Head, and only Charles' Mount rofe as it were in competition with the Table. To the northward, Robben ifland, the Blue hills, the Tyger hills, and beyond them a noble chain of mountains, loftier than that on which we ftood, bounded our view. A group of broken rocky maffes inclofed Hout baay (Wood bay) to the weft, and continuing to the fouthward formed one fide of the Table bay, and terminated in the famous foriny cape which king Manoel of Portugal named the Cape of Good Hope. To the fouth-eaft our view extended acrofs the low ifthmus between the two bays; beyond it we difcerned the colony of Hottentot Holland, and the mountains about Stellenbofch ; and on this fide we were delighted with a number of plantations infulated by the vaft heath, and finely contrafting their verdure with the reft of the country: Among them we diffinguifted Conftantia, famous in the antrals of modern epicures. After a ftay of two hours, finding the air very cold and fharp on the mountain, we defcended, very well pleafed with our excurfion, and amply rewarded for the toilfome part of it, by the beauty and extent of the profpect.

The country on the S. E. fide of the Table mountain attratted our particular attention, on account of the number of plantations on the floping grounds, and the variety of plants which that part produced. Its appearance, efpecially near the hills, is the pleafanteft on this fide of the ifthmus. By the fide of every little rivulet a plantation is fituated, confifting of vineyards,
ROUND THE WORLD. ..... 55
corn-fields, and gardens, and commonly fur- 1772. rounded with oaks from ten to twenty feet high, Novemb. which enliven the country, and afford fhelter againt ftorms. The late governor Tulbagh, who is looked upon as a father to this colony, rebuilt feveral houfes and gardens here, for the ufe of the governors, at Rondebofch and Niewland. They are plain, and have nothing particular to recommend them, but that they are kept in the beft order, confift of fhady walks, and are well fupplied with water. The company's granges or fheds are alfo erected hereabouts; and a little farther on there is a brewery, belonging to a private man, who has the exclufive privilege of brewing beer for the Cape. In a fine valley, on the fide of the mountain, lies the plantation called Paradife, remarkable for its delightful grove, and for producing feveral fruits, efpecially fuch as belong to tropical climates, which come to great perfection there. Alphen, the feat of Mr. Kerfte, (at that time commander in Falfe bay) was the boundary of our excurfions on this fide. We were here received with real hofpitality, which our worthy holt had brought from Germany, his native country. During a few days it was the centre of our botanical rambles, which always furnihed us with an abundant harveft, and gave us the greateft apprehenfions that with all our efforts, we alone would be unequal to the takk of collecting, defcribing, drawing, and preferving (all at the fame time) fuch multitudes of fpecies, in countries where every one we gathered would in all probability be a non-defcript. It was therefore of the utmoft importance, if we meant not to neglect any branch of natural knowledge, to endeavour to find an affiftant well qualified to go hand and hand with us in our undertakings. We were for-

\section*{A V O Y A G E}
1772. tunate enough to meet with a man of fcience, \(\underbrace{\text { Novemb. Dr. Sparrman, at this place, who after fudying }}\) \(\sim_{\text {under the father of botany, the great Sir Charles }}\) Linné, had made a voyage to China, and another to the Cape in purfuit of knowledge. The idea of gathering the treafures of nature in countries hitherto unknown to Europe, filled his mind fo entirely, that he immediately engaged to accompany us on our circumnavigation; in the courfe of which, I am proud to fay, we have found him an enthufiaft in his fcience, well verfed in medical knowledge, and endowed with a heart capable of the warmeft feelings, and worthy of a philofopher. But far from meeting with fuch great difcoveries in natural hiftory, as had been made in Lieut. Cook's firft voyage on a new continent, * we were obliged to content ourfelves with the produce of a few fmall iflands, which we could imperfectly inveftigate in the fhort faces of fometimes a few hours, or a few days, or to the utmoft of a few weeks, in unfavourable feafons.

During our flay at the Cape, the people on board our thip fet up the rigging, fcrubbed and payed the fides, and took in flore fome brandy and other neceflary articles of provifion for the crew, together with feveral fheep for the captains and officers. Several rams and ewes were likewife brought aboard, intended as prefents to the natives of the South-Sea; but the length of the voyage, and our run to the frozen zone, reduced them fo much, that this ufeful purpofe was entirely defeated. In order to purfue our refearches after natural knowledge, with greater certainty of fuccefs, we likewife bought a water-fpaniel here, in hopes that this animal would prove ufeful in fetching any game which

\footnotetext{
* New Holland.
}

\section*{ROUND THE WORLD.}
which fell out of our reach. It was with great difficulty we could meet with one, and we were obliged to pay an exorbitant price for it; though it afterwards proved of little fervice. It may feem fuperfluous to mention fo trifling an occurrence as this, but I believe it is hardly imagined, how great a number of little objects are to be attended to among many weightier concerns, by a traveller who means to improve his time to the utmoft advantage.

On the 22d we brought all our baggage on board, and the fame day we failed from Table bay. Previous to the mention of farther occurrences, I foal here endeavour to give a faccinct account of the fate of this Dutch colony, which it is hoped will afford fatisfactory inftruccion to my readers.

The fouthermoft extremity of Africa, circumnavigated fo early as the times of the Egyptian king Necho, and again in the reign of Ptolemæus Lathyrus, \({ }^{*}\) was once more difcovered in later times, by Bartolomeo Diazo, a Portuguefe nav:gator, in the year 1487. Vafco de Gama was the firft who made a voyage to India round it in 1497, which was looked upon as a kind of prodigy. It remained however ufelefs to Europeans
* The proofs of this affertion are enumerated in Schmidt Opufc. diff. iv. de commerce. Go navigation. Egyptior. p. 160. and more fully in Schlözer Handlungs Gefchichte (or Hiftory of Commerce) p. 300. Herodotus expressly fays, that Africa is furrounded by the fa, and that this was found out by forme Phoenician mariners font out for that purpofe by Pharaoh Necho from the Red Sea, who returned by the Mediterranean. lib. iv. cap. 42. Strabo, lib. ii. alfo mentions the expedition of one Eudoxus round Africa, in the reign of Ptolemy Lathyrus; and according to Pliny, the Carthaginians likewife have explored the coat of that continent. Hilt. Nat. lib. ii. cap. 67. Et Hanno, Carthaginis potential forente, circumvectus a Gadibus ad finem Arabia, nnvigationem eam prodidit fripto.

\section*{A V O \(\quad \mathbf{Y} A \mathrm{G} \quad \mathrm{E}\)}
1772. till the year 1650, when Van-Riebeck, a Dutch Noveme. furgeon, firft faw the advantage that would accrue to the Eaft-India Company in Holland, from a fettlement at fo convenient a diftance both from home and from India. The colony which he founded, has ever fince continued in the hands of the Dutch, and increafed in value for a confiderable time after his deceafe.

The governor depends immediately upon the Eaft-India Company, and has the rank of an Edele Hecr, the title given to the members of the fupreme council of Batavia. He prefides here over a council confifting of the fecond, or deputy governor, the fifcal, the major (who commands the fort), the fecretary, the treafurer, the comptroller of provifions, the comptroller of liquors, and the book-keeper; each of which has a branch of the Company's commerce affigned to his care. This council has the whole management of the civil and military departments, but the deputy-governor prefides over another, named the court of juftice, which tries all offences and crimes, and confits of fome of the members of the former; but no two relations can fit and have vote in the fame council, to prevent the influence of parties.

The income of the governor is very confiderable, for befides a fixed appointment, and the ufe of houfes, gardens, proper furniture, and every thing that belongs to his table, he receives about ten dollars for every leagre of , wine which the Company buy of the farmer, in order to be exported to Batavia. The company allows the fum of forty dollars for each leagre, of which the farmer receives but twenty-four; what remains is fhared between the governor, and fecond or deputy, the former taking two-thirds, which fometimes are faid to amount to 4000 dollars
per annam. The fecond governor has the direction of the company's whole commerce here, Noveme. and figns all orders to the different departments under him, as well as the governor to others. He and the fifcal have the rank of upper koopman. The fifcal is at the head of the police, and fees the penal laws put in execution; his income confifts of fines, and of the duties laid on certain atticles of commerce, but if he be ftrict in exacting them, he is univerfally detefted. The found policy of the Dutch have likewife found it neceffary to place the fifcal as a check, to overawe the other officers of the company, that they may not counteract the interefts of their mafters, or infringe the laws of the mother country. He is to that end, commonly well verfed in juridical affairs, and depends folely upon the mother country. The major (at prefent Mr.Von Prehn, who received us with great politenefs) has the rank of koopman or merchant: this circumftance furprifes a ftranger, who in all other European ftates, is ufed to fee military honours confer diftinction and precedence, and appears fill more fingular to one who knows the contraft in this particular between Holland and Ruffia, where the idea of military rank is annexed to every place, even that of a profeffor at the univerfity. The number of regular foldiers at this colony amounts to about 700 , of which 400 form the garrifon of the fort, near the Cape town. The inhabitants capable of bearing arms form a militia of 4000 men, of whom a confiderable part may be affembled in a few hours, by means of fignals made from alarm places in different parts of the country. We may from hence make fome eftimate of the number of white people in this colony, which is at prefent fo extenfive, that the diftant fettlements are above a month's journey
1772. journey from the Cape; but there remote parts November. lie fometimes more than a day's journey from each other, are furrounded by various nations of Hottentots, and too frequently feel the want of protection from their own government at that diftance. The faves in the colony are at leaf in the proportion of five or more, to one white perfon. The principal inhabitants at the Cape have fometimes from 20 to 30 laves, which are in general treated with great lenity, and formetimes become favourites with their matters, who give them very good cloathing, but oblige them to wear neither foes nor ftockings, referving the fe articles to themfelves. The laves are chiefly brought from Madagafcar, and a little veffel annually goes from the Cape thither on that trade; there are however, befides them, a number of Malays and Bengalefe, and forme negroes. The colonifts themfelves are for the greateft part Germans, with forme families of Dutch, and forme of French proteftants. The character of the inhabitants of the town is mixed. They are induftrious, but fond of good living, hofpitable, and fociable; though accuftome to hire their apartments to ftrangers, * for the time they touch at this fettlement, and used to be complimented with rich prefents of fluffs, \&c. by the officers of merchant hips. They have no great opportunities of acquiring knowledge, there being no public fchools of note at the Cape; their young men are therefore commonly rent to Holland for improvement, and their female education is too much neglected. A kind of diflike to reading, and the want of public amufement;, make their converfation uninteresting

\footnotetext{
* The terms are mentioned in Lieut. Cook's Voyage. See Hawkefworth's compilation, vol. III. p. 788. The members of the council are an exception in this respect.
}
uninterefting and too frequently turn it upon 1772. fcandal, which is commonly carried to a degree Novemb. of inveteracy peculiar to little towns. The French, Englifh, Portuguefe, and Malay languages are very commonly fpoken, and many of the ladies have acquired them. This circumftance, together with the accomplifhments of finging, dancing, and playing a tune on the lute, frequently united in an agreeable perfon, make amends for the want of refined manners and delicacy of fentiment. There are however among the principal inhabitants, perfons of both fexes, whofe whole deportment, extenfive reading, and well-cultivated underftanding would be admired and diftinguifhed even in Europe.* Their circumftances are in general eafy, and often very affluent, on account of the cheap rate at which the neceffaries of life are to be procured; but they feldom amafs fuch prodigious riches here as at Batavia, and I was told the greateft private - fortune at the Cape did not exceed one hundred thoufand dollars, or about twenty-two thoufand five hundred pounds fterling.

The farmers in the country are very plain hofpitable people; but thofe who dwell in the remoteft fettlements feldom come to town, and are faid to be very ignorant; this may eafily be conceived,

\footnotetext{
* Among them we cannot in juftice avoid mentioning the governor, Baron Joachim von Plettenberg, a gentleman whofe hofpitality and affability do great honour to him and his nation; Mr. Hemmy, fecond governor, and his family; Mr. Von Prehn, the major; Mr. Bergh the fecretary, a man of fcience, of a noble, philofophic turn of mind, with a family who diftinguiih themfelves in every mental and bodily accomplifhment, above the whole rifing generation of the Cape; Mr. Kerfte, Mr. de Wit, and our worthy hoft Mr. Chriftophel Brand, commander of the Poft at Falfe Bay, with all their families. It is a real fatisfaction to perpetuate the memory of valuable members of fociety, and friends to mankind.
}
1772. conceived, becaufe they have no better company Novels. than Hottentots, their dwellings being often leven. rat days journey afunder, which must in a great meafure preclude all intencourfe. The vine is cultivated in plantations within the compass of a few days journey from the town; which were eftablified by the first colonifts, and of which the ground was given in perpetual property to them and their heirs. The company at prefent never part with the property of the ground, but lex the furface to the farmer for an annual rent, which, though extremely moderate, being only twenty-five dollars for fixity acres, " yet does not give fufficient encouragement to plant vineyards. The diftant fettlements therefore chiefly raife corn and rear cattle; nay many of the fetchers entirely follow the fatter branch of rustic employment, and lome have vary numerous flocks. We were told there were two farmers who had each fifteen thoufand cheep, and oxen in propercion; and feveral who poffefled fix or eight thouSand Cheep, of which they drive great droves to town every year; but lions and buffaloes, and the fatigue of the journey, deftroy numbers of their cattle before they can bring them fo far. They commonly take their families with them in large waggons covered with linen or leather, spread over hoops, and drawn by eight, ten, and fometimes twelve pair of oxen. They bring butter, mutton-tallow, the flefh and fins of fencows (hippopotamus), together with lion and rhinoceros' fins, to fell. They have fevered naves, and commonly engage in their fervice feveral Hottentots of the poorer fort, and (as we

\footnotetext{
* Each acre of fix hundred and fixty-fix fquare :Rhynland roods, the rood of twelve feet. The proportion of the Rhynland foot to the Englifh is about ane hundred and fixteen to one hundred and twenty.
}
were told) of the tribe called Bofchemans or 1772 . Bufhmen, who have no cattle of their own, but commonly fubfift by hunting or by committing depredations on their neighbours. The opulent farmers fet up a young beginner by intrufting to his care a flock of four or five hundred theep, which he leads to a diftant fpot, where he finds plenty of good grafs and water; the one half of all the lambs which are yeaned fall to his fare, by which means he foon becomes as rich as his benefactor.

Though the Dutch company feem evidently to difcourage all new fettlers, by granting no lands in private property, yet the products of the country have of late years fufficed not only to fupply the Ifles of France and Bourbon with corn, but likewife to furnifh the mother country with feveral thip loads. Thefe exports would certainly be made at an eafier rate than at prefent, if the fettlements did not extend fo far into the country, from whence the products mult be brought to the Table bay by land carriage, on roads which are almoft impaffable. The intermediate fpaces of uncultivated land between the different fettlements are very extenfive, and contain many foots fit for agriculture; but one of the chief reafons why the colonits are fo much divided and fcattered throughout the country, is to be met with in another regulation of the company, which forbids every new fettler to eftablifh himfelf within a mile of another. It is evident that if this fettlement were in the hands of the commonwealth, it would have attained to a great population, and a degree of opulence and fplendor, of which it has not the leaft hopes at prefent: but a private company of Eaft-India merchants find their account much better in keeping all the landed property to themfelves, and
1772. tying down the colonift, left he fhould become \(\underbrace{\text { Novems. }}\) too great and powerful.

The wines made at the Cape are of the greateft variety poifible. The beft, which is made at M. Vander Spy's plantation of Conftantia, is fpoken of in Europe, more by report than from real knowledge; thirty leagres \({ }^{*}\) at the utmoft are annually raifed of this kind, and each leagre fells for about fifty pounds on the fpot. The vines from which it is made were originally brought from Shiraz in Perfia. Several other forts grow in the neighbourhood of that planta. tion, which produce a fweet rich wine, that generally paffes for genuine Conftantia in Europe. French plants of burgundy, mufcade, and frontignan have likewife been tried, and have fucceeded extremely well, fometimes producing wines fuperior to thofe of the original foil. An excellent dry wine, which has a flight agreeable tartnefs, is commonly drank in the principal families, and is made of Madeira vines tranfplanted to the Cape. Several low forts, not entirely difagreeable, are raifed in great plenty, and fold at a very cheap rate, fo that the failors of the EaftIndia fhips commonly indulge themfelves very plentifully in them whenever they come afhore.

The products of the country fupply with provifions the fhips of all nations which touch at the Cape. Corn, flour, bifcuit, falted beef, brandy, and wine are to be had in abundance, and at moderate prices; and their frefh greens, fine fruits, \(\dagger\) good mutton and beef, are excellent reftoratives to feamen who have made a long voyage. The climate is likewife fo healthy, that

\footnotetext{
* A leagre contains about one hundred and eight gallons, or a pipe.
\(t\) Their grapes and oranges are fome of the beft in the world.
}
that the inhabitants are rarely troubled with com- 1772. plaints, and ftrangers foon recover of the fcurvy \(\underbrace{\text { Novemb. }}\) and other diftempers. The winters at the Cape are fo mild that they hardly ever have ice about the town : but on the mountains, and efpecially thofe far in the country, they have hard frofts with fnow and hail ftorms; nay a frong foutheafterly ftorm fometimes brings on a froft during night even in the month of November, which is their fpring. The only inconvenience which they frequently fuffer are colds, brought on by the frequent change of air from ftrong winds, to which the Cape is fubject at all feafons. But notwithftanding the heat, which is fometimes exceffive, the inhabitants of Dutch origin feem to have preferved their native habit of body, and both fexes are remarkably corpulent, to which their good living may greatly contribute.

The Hottentots or aboriginal inhabitants of this country, have retired into the interior parts, and their neareft kraal or village, is about a hundred miles from the Cape town. From thence they fometimes come down with their own cattle, or attend the Dutch farmers who conduct their flocks to town for fale. We had no opportunity to make new obfervations upon them, as we only faw a few individuals, in whom we could not difcern any peculiarities but fuch as have already been defcribed by Peter Kolben, in his Prefent State of the Cape of Good Hope, \(\& c\). The circumftantial accounts given by this intelligent man, have been confirmed to us by the principal inhabitants of the Cape town. It is true, that he has been mifinformed in regard to
- Some circumftances; and that others chiefly relative to the colony, have at prefent another appearance than in his time: but he fill remains the beft author that can be confulted on the fubVol. I. F ject,
1772. ject, and as fuch we will venture to refer our \(\underbrace{\text { Novemb. }}\) readers to him.

We have had an occafion to obferve feveral facts alleged in Kolben, and we likewife find them mentioned in Lieutenant Cook's voyage. See Hawkefworth's compilation, Vol. III. p. \(7^{89} 9\), \&c. The Abbé de la Caille, an aftronomer, in the account of his voyage, which was publifhed foon after his death, has endeavoured to ruin the credit of Kolben's book, without giving us any thing better in its ftead. We fhould not have ventured to mention fo fuperficial a performance, as that of the Abbe, were it not neceffary to vindicate from his afperfions, the character of Kolben, as a faithful and accurate obferver. The Abbé lived with a family at the Cape, who were of a party directly oppofite to that which had fupported Kolben. He daily heard invectives againft him, and never failed to write them down, in order to give himfelf importance at the expence of the other.

> Nul n'aura d'efprit Hors nous et nos amis. \(\quad\) Boileav.

The extremity of Africa towards the fouth is a mals of high mountains, of which the outermoft are black, craggy, and barren, confiting of a coare granite, which contains no heterogeneous parts, fuch as petrified inells, \&c. nor any volcanic productions. The cultivated fpots which we faw had a ftiff clay mixed with a little fand and fmall pieces of ftone; but the plantations towards Falfe bay are almoft entirely on a fandy foil. The colony of Stellenborch is faid to have the moft fertile foil of all at the Cape, and the different plantations thrive there incomparably better than any where elfe, particularly

ROUND THE WORLD.
the European oaks, which are faid to have attained a confiderable height and flourifhing appearance, whillt they do not feem to fucceed near the town, where the talleft we faw was not above thirty feet high. The interior mountains are certainly metallic, and contain iron and copper; fpecimens of ores of both kinds were fhewn to us by Mr. Hemmy, and fome tribes of Hottentots melt both thefe metals; from whence we may conclude, that the ores they employ muft be rich and eafy of fufion. Hot fprings are likewife found at feveral places in the interior country; and the inhabitants of the Cape Town refort to one of them at the diftance of about three days journey, which is famous for curing cutaneous and other diftempers, and is probably of a fulphureous nature.

The variety of plants in this country is furprifing. In the little time we flaid there, we obferved feveral new fpecies growing in the environs of the town, where we fhould leaft have expected them. And though the collections of former botanitts from hence are very ample, yet Dr. Sparrman and the learned Dr. Thunberg * have gathered above a thoufand fpecies entirely unknown before. The animal kingdom is proportionably rich in the variety of its productions. F 2

The

\footnotetext{
* An eminent difciple of Linné, who after arrarging and clafling Dr. Burmann's herbals at Leyden, Itudied botany during three years at the Cape, and having made immente acquifitions to fcience, was fent to Batavia, at the expence of the Dutch Eaft-India company, in order to proceed to Japan in 1775. The fame gentleman was fo obliging, at Dr. Sparrman's requeft, to take with him, on one of his excurfions, Francis Maffon, employed in the Royal garden at Kew, who had been fent to the Cape on board the Kefolution, in order to collect live plants and feeds for the botanica! garden. Under Dr. Thunberg's kind guidance, who pointed out to him what was worthy of notice, he has made and brought home an ample colleclion.
}
1772. The greateft quadrupeds, the elephant, the \(\underbrace{\text { Novemb. rhinoceros, and the giraffe or camelopard, inha- }}\) bit this extremity of Africa; the two firf were formerly found within fifty miles of the Cape, but have been fo 'much purfued and hunted, that they are rarely feen at prefent within many days journey. The rhinoceros particularly is fo fcarce, that the government have iffued an order to prevent its being entirely extirpated. The hippopotamus, there called a fea-cow, which formerly ufed to come as far as Saldanha bay, is likewife fo feldom feen at prefent, that none muft be killed within a confiderable diftance of the Cape. Its meat is eaten here, and reckoned a great dainty: the tafte in my opinion is that of coarfe beef, but the fat rather refembles marrow. This animal feeds entirely on vegetables, and we were told can only dive a fhort fpace, not exceeding thirty yards. The wild buffalo is another huge quadruped, which now inhabits the more remote fettlements of the Cape, and is faid to have prodigious ftrength and ferocity. Its horns refemble thofe of the American wild ox (bifon), and are reprefented in the ixth vol. of M. de Buffon's Natural Hiftory. They often atiack the farmers travelling in the country, and kill many of their cattle, which they trample upon with their feet. Dr. Thunberg lof his horfes in one of thefe rencounters, and his fel-low-traveller, the Dutch company's gardener, narrowly efcaped between two trees. A young one, about three years old, belonging to the fecond governor, was put before a waggon, with fix tame oxen, but his frength was fuch that they could not move him out of his place. * Befides

\footnotetext{
* We fhould have gone into the country to fee this animal, but we only heard of it the day before our departure. This feems
}

\section*{ROUND THE WORLD.}

Befides this there is another fpecies of wild ox, \(17>2\). called by the natives gro, which has fender Novemb. horns, a mane, and brushes of hair on the note
 and wattles, and in the fender make of its limbs feems to refemble an horfe or an antelope, more than its cogeneric animals. This species we have drawn and defcribed, and it has been brought over to the menagerie of the Prince of Orange. Africa has always been known as the country of the beautiful genus of gazelles or antelopes, * and the different names which have been

Seems to be the animal mentioned by de Manet, Nouvelle Hiftoire de l'Afrique Françoile, tome ii. p. 129.
* We can only except a few fpecies found in India, and other parts of Afia, and one in Europe. The different feecies at the Cape are remarkable, forme for the elegance of their cape, forme for their colours, their horns, or their fize. The Coodoo, or Kolben's bock obne namen (goat without a name), from whence the name of M. de Buffon's Condom is probably derived, is the ftrepficeros of Linnet and Pallas, and its height is that of a horfe. Its leaps are faid to be of an attonifhing height. The Cape elk of Kolben, Pallas's antelope oryx, is about the fize of a flag. The bonte bock is the A. fcripta of Dr. Pallas. The antelope which they inproperly call a hart or flag at the Cape, is the A. bubali; of Pallas. The Egyptian antelope, Linne's and Pallas's gazella, and M. de Buffon's pafan, is here called gems-bock or chamos, which it does not in the leaft refemble. The blue antelope, (blaurwe bock) is really of a bluifh colour, but when killed foo lofes the velvet-like appearance of its fur. The spring. bock, a beautiful species, named A. pygargus by Pallas, live in vat herds in the interior parts of Africa, and travel to the fouthward in the fummer feafon, in fearch of food, attended by many lions, panthers, hyenas, and jackald, which prey upon them. Of this fancies we had the honour to prefent one to Her Majesty alive. Two small Species, with Several varieties not hitherto noticed, fupply the principal inhabitants with venifon of a fine flavour. Their fire is that of a fawn of the fallow deer. The duyker, or diving antelope, fo called from hiding itself among the buttes when purfued, and only emerging from time to time, is not yet fufficiently known, and the animal named a roebuck here, likewife deferves the farther attention of travellers.
1772. been improperly given to its fpecies, have hitherNovemb. to not a little contributed to obfcure our know\(\sim_{\text {ledge of them. A number of the fierceft beafts }}\) of prey likewife infeft the Cape, and the colonits can never be at fufficient pains to extirpate them. Lions, leopards, tyger-cats, friped and fpotted hyænas, (Pennant's Syn. of Quadr.) jackals, and feveral others, live on the numerous fpecies of antelopes, on hares, jerbuas, cavix, and many leffer quadrupeds with which the country abounds. The number of birds is likewife very great, and among them manyare arrayed in the brighteft colours. I cannot help mentioning, in confirmation of Kolben's accounts, that we have feen two fecies of fwallows at the Cape, though the Abbe de la Caille cenfures him for feeaking of them, becaufe they did not occur to himfelf. The Abbé alfo commits a miftake with regard to the knorhan, which is not a gelinote or grous, as he calls it, but the African buftard. Upon the whole, it would be eafy to refute almoft every criticifm which the Abbé has paffed on Kolben, if a work of fo little merit deferved fo much attention. Reptiles of all kinds, ferpents, (among which are many whofe bite is mortal, ) and a variety of infects fwarm about the Cape; and its fhores likewife abound in well-tafted fifhes, many of which are not yet known to the natural lift. In fhort, notwithftanding the many fpoils of the vegetable and animal kingdom, which have been brought from Africa, its immenfe interior countries remain almoft entirely unknown to the prefent time, and ftill contain great treafures of natural knowledge, which wait the future inveltigation of another Thunberg or another Bruce.

\section*{C H A P. IV.}

Run from the Cape to the Antarciic Circle; firft Seafon Jpent in bigh Soutbern Latitudes.-Arrival on the Coaft of New Zeeland.

WE failed from Table-bay, about four in the afternoon, on the 22 d of November, after Novemb. having faluted the fort. The wind blew in hard Sund. 22 . fqualls, which continued all night, and gave us once more a rough reception on the boifterous element; while the fame luminous appearance, which we had obferved before our coming into this bay, was perceived again, though in a much flighter degree. The next day towards eight in Mond 23 . the morning, we loft fight of the Cape, and directed our courfe to the fouthward. As we were now entering on an unexampled navigation, not knowing when we might meet with a new place of refrefhment, the captain gave the ftrictelt orders to prevent the wafte of frefh water; to this end a centry was placed at the fcuttled-cafk,* and a regular allowance of water was daily ferved out to the crew, befides which they were permitted. to drink at the cafk, but not to carry any water away. The captain himfelf wafhed with faltwater, and all our company were obliged to conform to this neceffary reftriction. The diftilling machine improved by Mr. Irving, was likewife conftantly employed, to fupply at leaft fome part of the quantity daily confumed.

\footnotetext{
* An open butt placed on the quarter-deck, and daily filled with frefh water out of the hold, for the ufe of the ship's company.
}

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y}\) A \(\quad \mathbf{G} \quad \mathbf{E}\)}
1772. On the 24th in the afternoon, the weather beNovemb.ing fair and moderate, after a hard gale we \(\underbrace{}_{\text {Tuef. } 24}\) caught nine albatroffes with a line and hook, baited with a bit of fheep's fkin. Several of them meafured above ten feet from tip to tip, between the expanded wings. The younger ones feemed to have a great mixture of brownifh feathers, whereas the full grown were almoft entirely white except their wings, which were blackifh, and their fcapulars, which were barred and fprinkled with dotted lines of black.

A large brown fifh refembling the fun fifh (tetrodon mola), was likewife feen clofe to the fhip for a fhort fpace of time.
Sund. 29. On the 2gth the wind, which had for three or four days paft blown a very ftrong gale, now encreafed fo much, that we ran during the laft twenty-four hours, almoft under the bare forefail. The fea at the fame time ran very high, and frequently broke over the floop, in which none of the cabins were prepared for fuch bad weather, our courfe from England to the Cape having been remarkably free of ftorms. The people, and efpecially perfons not brought up to-fea-affairs, were ignorant how to behave in this new fituation; the prodigious rolling of the veffel therefore daily made great havock among cups, faucers, glaffes, bottles, difhes, plates, and every thing that was moveable; whilft the hamorous circumftances fometimes attending the general confufion, made us bear thefe irreparable loffes with greater compofure than might have been expected. The decks, and the floors of every cabin were however continually wet; and the howl of the ftorm in the rigging, the roar of the waves, added to the violent agitation of the veffel, which precluded almoft every occupation, were new and awful fcenes, but at the fame

\section*{ROUND THE WORLD.}
fame time feverely felt, and highly difagreeable. 1772. The air was likewife unpleafantly tharp and cold Novemb. about this time, our latitude being now about \(42^{\circ}\) fouth; and frequent rains contributed to make the fervice of the feamen hard and comfortlefs. ' \(o\) fecure them in fome meafure againft the inclemencies of the weather, the captain ordered a general diftribution of clothes to be made, which had been exprefsly provided at the expence of the Admiralty to ferve this purpofe. Every perfon whofe duty expofed him to the feverity of fouthern climates, from the lieutenant to the failor, was provided with a jacket and a pair of trowfers of the thickeft woollen ftuff called fearnougbt,* or ftrong flannel, which kept out the wet for a long time, and had this only fault, in common with every thing the navy provides, viz. that they were fupplied by contract, and therefore generally too fhort for our people. If we confider the diftreffes to which M. de Bougainville's crew were reduced for want of cloathing, we cannot help reflecting on the better fortune of Englifh feamen, who, under an equitable government, may expect to be treated with peculiar care ; and who, on perilous expeditions, are humanely and attentively fupplied with neceffaries to face the dangers of the fea, and fupport their fpirits in adverfity. A trying moment frequently occurs, where the defpondence caufed by ill-treatment and heavy fufferings, muft have the moft fatal confequences, fince its direct oppofite, an undaunted refolution, is then moft neceffary; fuch a moment we experienced in this night. A petty officer in the forepart of the - veffel, awaking fuddenly, heard a noife of water ftreaming

\footnotetext{

}

\section*{A \(V \quad O \quad Y\) A \(G E\)}
1772. ftreaming through his birth, and breaking itfelf Norene: againft his own and his mefs-mates chefts; he \(\longrightarrow\) leaped out of his bed, and found himfelf to the middle of the leg in water. He inftantly acquainted the officer of the quarter-deck with this dreadful circumftance, and in a few moments almoft every perfon in the fhip was in motion; the pumps were employed, and the officers encouraged the feamen with an alarming gentlenefs, to perfevere in their work; notwithftanding which the water feemed to gain upon us; every foul was filled with terror, encreafed by the darknefs of the night.

Ponto nox incubat atra
Prefentemque viris intentant omnia mortem. Virgil.
For what obfeured light the heav'ns did grant, Did but convey unto their fearful minds A doubtful warrant of immediate death. Shakespeare.

The chain-pumps were now cleared, and our failors laboured at them with great alacrity; at laft one of them luckily difcovered that the water came in through a fcuttle (or window) in the boatfwain's fore-room, which not having been fecured againft the tempeftuous fouthern ocean, had been ftaved in by the force of the waves. It was immediately repaired, and clofely fhut up, and we efcaped for this time with the greateft part of the clothes and effects of the failors and officers thoroughly foaked in falt water. We fhould have found it difficult, if not utterly impoffible, to clear the thip of the water, if the midhipman had not providentially awaked before it had gained too much upon us: the prefence of mind of our officers, and the fpirit of our feamen would have been exerted in vain, and we muft perhaps have gone down to the bottom,

ROUND THE WORLD.
in the midft of a very dark night and turbulent 1772. ocean, which would have effectually prevented Novemb. our confort from giving us affiltance. A diftribution of fifhing-hooks and lines was made about this time to every perfon on board, as it was uncertain how foon we might meet with land, and confequently with an opportunity of making ufe of them.

The formy weather continued, intermixed Decems. with frequent rains and fogs, till the fifth of De-Satur. 5 cember,* when we fet the top-gallant fails for the firft time, after leaving the Cape of Good Hope, and obferved the latitude at noon, in \(47^{\circ} 10^{\prime}\) fouth. In the afternoon, however, the fhowers returned, and a weftern fwell announced a wind from that quarter, which actually came on during night, blowing at about S. W. and chilled the air fo confiderably, that the thermometer funk from \(44^{\circ}\) to \(3^{8^{\circ}}\) during the night, and fome fnow began to fall the next morning. The wind foon encreafed to a ftorm again; io that on the 7 th in the afternoon, we had only a Mon. 7. a fingle fail fet. A variety of birds of the petrel and tern genus, had attended us in greater or leffer numbers ever fince we had left the Cape, and the high fea and winds feemed to have no other influence on them, than that of bringing more of them about us. The principal forts were the Cape-petrel, or pintada (procellaria capen \(/ i s\) ), and the blue petrel, fo called from its having a bluifh-grey colour, and a band of blackifh feathers acrofs the whole wing. We likewife faw the two before mentioned fpecies of albatroffes \(\dagger\) from time to time, together with a third, lefs than the others, which we named the footy,

\footnotetext{
* We had loft fix large hogs of our live fock, and fome theep, during this uncomfortable weather.
\(\dagger\) See p. 42.
}
\(11+2\) 2. footy, and our failors called the quaker bird, from Bricemb. its having a greyifh brown colour. Many birds \(\sim\) of all thefe different fecies furrounded us on Torfd. 8. the 8 th of December, the wind Atll continuing very high, and the fea very turbulent. We now Jikewife faw pinguins * for the firft time, and fome bunches of fea-weed, of the fpecies called the fea-bamboo (fucus buccinalus, Lin:) Thefe appearances greatly favoured the hope of meeting with land, as it had hitherto been held uncontroverted that weeds, efpecially rockweeds, (fuch as thefe were) and pinguins were never to be met with at a great diftance from fhores; but experience has fhewn that thefe prognoftics are not to be relied upon, and probably derive all their credit from fingle accidental proofs in their favour, fupported by the name of fome celebrated mariner. Future obfervations on the nature of floating rock-weeds, and drift-wood, might perhaps lead to fome more determinate conclufions; for as thefe weeds mult have been at firf detached from the rocks on which they grew, it is probable that from the degree of frefhnefs or of putridity which they have when found, the time they have been adrift, and in fome rare intances, the diftances from land, may be conjectured; but the direction and force of the winds and waves, and other accidental circumftanees, matt

\footnotetext{
* Thefe birds, which fince the time of Sir John Narborough, have been repeatedly mentioned by almof every navigator that has vifited the Southern extremities of America, are fo well known to the Englifh reader, from the accoonts of Anfon, Byron, Bougainville, Pernetty, \&c. that it is fearce neceflary to defcribe them. They are in a manner amphibious creatures, and their wings are unfit for flying, bus haped like ftrong flefhy membranes, which perform all the functions of fins. There are upwards of ten different fpecies known to the naturalifis at prefent.
}

\section*{ROUND THE WORLD.}
muft in that cafe be carefully taken into confideration.
1772.

Decema.

The wind abated during night, fo that we fet our courfes on the gth in the morning. The Wed. g. thermometer at eight o'clock was however fallen to \(35^{\circ}\), and only rofe one degree at noon, being then in \(49^{\circ} 45^{\prime}\) of fouth latitude. Towards night it grew colder again, and at half an hour paft ten, we found the thermometer on deck very near \(32^{\circ}\), and the edges of the fcuttledcalk, filled with frefh water, were freezing. This great cold preceded the fight of ice floating in the fea, which we fell in -with on the next morn- Thuris. ing. The firft we faw, was a lump of confiderable fize, fo clofe to us, that we were obliged to bear away from it; another of the fame magnitude a little more a-head, and a large mafs about two leagues on the weather-bow, which had the appearance of a white head-land, or a chalk-cliff.

In the afternoon we paffed another large cubical mafs about 2000 feet long, 400 feet broad, and at leaft as high again as our main-top-gal-lant-malt head, or 200 feet high. According to the experiments of Boyle and Mairan,* the volume of ice is to that of fea-water, neariy as ten to nine: confequently, by the known rules of hydroftatics, the volume of ice which rifes above the furface of the water, is to that which finks below it, as one to nine. Suppofing the piece which we now faw to be entirely of a regular figure, its depth under water muft have been one thoufand eight hundred feet, and its whole height two thoufand feet, allowing its length as abovementioned two thoufand feet, and its breadth four hundred feet, the whole mals muft have
* See Mairan's Differtation fur la Glace. Paris, 1749, p. 2GI.
1772. have contained one thoufand fix hundred milliDecemp. ons cubic feet of ice.

Thefe prodigious pieces of ice, in all probability, drift but very flowly and imperceptibly, fince the greateft part of them being under water, the power of winds and waves can have but little effect; currents perhaps are the principal agents which give them motion, though I much queftion, whether their velocity is ever confiderable enough to carry them two miles in four-andtwenty hours. At the time we met with this frift ice, all our conjectures about its formation could not amount to more than bare probabilities, and had not fufficient experience to fupport them: but after we have made the tour of the globe, without finding the Southern Continent, the exiftence of which has been fo univerfally believed in Europe; it feems in the higheft degree reafonable to fuppofe this floating ice to have been formed in the fea;* an idea the more probable, as repeated and decifive experiments have evinced, that falt-water may be frozen.

This ice likewife ferved to fhew us the great difference between the temperature of the northern and fouthern hemifphere. We were now in the midft of December, which anfwers to our June, and the latitude obferved at noon gave only \(51^{\circ} g^{\prime}\) fouth, notwithftanding which we had already paffed feveral pieces of ice, and the thermometer

\footnotetext{
* Mr. Adanfon, on returning from Senegal, brought feveral bottles filled with fea-water with him, taken up in different latitudes, which being brought to Paris from Breft in the midit of winter, the water in them froze fo as to break them; the ice was perfectly frefh, and the refiduum of brine was run out. See his Voyage au Senegal, p. 1go. Mr. Edward Nairne, F. R. S. has made experiments on fea-wster during the hard froft in 1776 , inferted in the LXVI. volume of the Philofophical Tranfactions, which put it beyond a doubr, that folid and fref ice may be formed from feae water.
}

\section*{ROUND THE WORLD.}
mometer ftood at \(36^{\circ}\). The want of land in the \(17 / 2\). fouthern hemifphere feems to account for this Deceubcircumftance, fince the fea, as a tranfparent fluid, ablorbs the beams of the fun, inftead of reflecting them.

On the ith of December, about three o'clock Fridayir. in the afternoon, we paffed to leeward of a large piece, or ifland of ice, at leaft half a mile in length. The thermometer on deck, which had been at \(3^{\circ}\) about two o'clock, was rifen to \(41^{\circ}\), on account of the fair funhine, which continued all the afternoon: when we came abreaft of the ice, the wind directly blowing from thence, it gradually funk to \(37 \frac{1}{3}\); however we had no fooner paffed it, than the mercury regained its former ftation of \(41^{\circ}\). We alfo found that this difference of four degrees, very perceptibly affected our bodies, and concluded that the large maffes of ice greatly contributed to refrigerate the general temperature of the air in thefe inhofpitable feas. The waves dafhed with great violence againft the ifland of ice, as againft a fixed body; fometimes they broke entirely over it, notwithftanding its height, which was not much inferior to that of the beforementioned piece, and we frequently faw the fpray rife very high above it, a phænomenon, which, on account of the fair weather, had a remarkable fine effect. The fea-water by this means wafhed upon the ice, is probably congealed there, and ferves to encreafe the mafs; a circumftance very materially conducive to afcertain the hiftory of its formation.

Notwithftanding the coldnefs of this climate, our floops were ftill furrounded by birds of the petrel genus, albatroffes and pinguins. We particularly obferved a petrel, about the fize of a pigeon, entirely white, with a black bill and bluifh feet; it conftantly appeared about the icy maffes,
1772. maffes, and may be looked upon as a fure fore\(\mathrm{D}_{\mathrm{ecemb}}\) runner of ice. Its colour induced us to call it \(\rightarrow\) the fnowy-petrel. A grampus and feveral whales likewife made their appearance among the ice, and in thefe chilling regions ferved to vary the difmal fcene, and gave us fome idea of a fouthern Greenland.

The number of icy maffes encreafed around us every day, fo that we numbered upwards of
Sund. 13 . twenty of a valt fize on the 13 th in the afternoon. One of them was full of black fpots, which were taken for feals by fome, and for aquatic birds by others, though we could not find that they even Shifted their places. However feals being hitherto looked upon as certain figns of land, we founded in the evening with a line of one hundred and fifty fathoms, but found no bottom. The latitude we were now in, was that in which Captain Lozier Bouvet had placed his pretended difcovery of Cape Circumcifion, and our longitude was only a few degrees to the eaftward of it: the general expectation of feeing land, was therefore very great, and every little circumftance like the preceding roufed all our attention; the clouds a head were curioufly examined at every moment, fince every one was eager to be the firft to announce the land. We had already had feveral falfe alarms from the fallacious conformation of fog-banks, or that of iflands of ice half hid in fnow itorms, and our confort the Adventure had repeatedly made the fignals for feeing land, deceived by fuch appearances: but now, the imagination warmed with the idea of M . Bouvet's difcovery, one of our lieutenants, after having repeatedly been up to the mait-head, (aMon. 14 . bout fix o'clock in the morning on the 14 th) acquainted the captain that he plainly faw the land. This news foon brought us all upon deck: We faw

\section*{ROUND THE WORLD.}
faw an immenfe field of flat ice before us, broken into many fmall pieces on the edges, a vaft num- \(\underbrace{\text { Decemb. }}\) ber of iflands of ice of all hhapes and fizes rofe beyond it as far as the eye could reach, and fome of the moft diftant confiderably raifed by the hazy vapours which lay on the horizon, had indeed fome appearance of mountains. Several of our officers perfifted in the opinion that they had feen land here, till Captain Cook, about two years and two months afterwards (in February 1775) on his courfe from Cape Horn towards the Cape of Good Hope, failed over the fame fpot, where they had fuppoied it to lie, and found neither land or even ice there at that time. Numbers of pinguins, pintadas, fulmars, fnowy and blue petrels * attended this valt extent of ice, and different fpecies' of cetaceous animals fpouted up the water around us: two of them, fhorter than other whales, were particularly noticed, in refpect of their bulk and of a white or rather flefhy colour. A great degree of cold in thefe icy regions entirely precluded the idea of a fummer, which we had expected at this time of the year; our thermometer flood at \(31^{\circ}\) in the morning, and did not rife beyond \(33^{\circ}\) at noon, though the latitude we obferved this day was only \(54^{\circ} 55^{\prime}\) fouth. We paffed through quantities of broken ice in the afternoon, and haw another extenfive ice-field, beyond which feveral of our people ftill perfitted in taking fog banks for land. It fnowed a good deal during night, and in the morning it was almoft calm, but very foggy. A boat was hoifted out to try the direction of the current. Mr. Wales the altronomer, and my father, tock this opportunity to repeat the Vol. I. \(G\) experiments

\footnotetext{
* Aptenodytes antarctica; Procellaria capenfis, glacialis, nivea, \& vittata.
}
1772. experiments on the temperature of the fea at a \(\mathrm{D}_{\text {ecemb. certain depth. The fog encreafed fo much while }}\) \(\underbrace{}_{\text {they were thus engaged, that they entirely loft }}\) fight of both the fhips. Their fituation in a fmall four-oared boat, on an immenfe ocean, far from any inhabitable fhore, furrounded with ice, and utterly deftitute of provifions, was truly terrifying and horrible in its confequences. They rowed about for fome time, making vain efforts to be heard, but all was filent about them, and they could not fee the length of their boat. They were the more unfortunate, as they had neither maft nor fail, and only two oars. In this dreadful fufpence they determined to lie ftill, hoping that, provided they preferved their place, the noops would not drive out of fight, as it was calm. At laft they heard the jingling of a bell at a diftance; this found was heavenly mufic to their ears; they immediately rowed towards it, and by continual hailing, were at laft anfwered from the Adventure, and hurried on board, overjoyed to have efcaped the danger of perifhing by flow degrees, through the inclemencies of weather and through famine. Having been on board fome time, they fired a gun, and being within hail of the Refolution, returned on board of that floop, to their own damp beds and mouldering cabins, upon which they now fet a double value, after fo perilous an expedition. The rifks to which the voyager is expofed at fea are very rumerous, and danger often arifes where it is leaft expected. Neither can we trace the care of Providence more evidently in ftorms among hidden rocks and fhoals, and where water or fire threaten deftruction, than in thefe little circumftances, which the traveller and the reader are both too apt to forget or pafs lightly over, if they come to a favourable iffue.

\section*{ROUND THE WORLD.}

The quantity of impenetrable ice to the fouth did not permit us to advance towards that quarter; therefore, after feveral fruitlefs attempts, we ftood on to the eaftward, along it, frequently making way through great foots covered with broken ice, which anfwered the defcription of what the northern navigators call packed ice. Heavy hail fhowers and frequent falls of fnow continually obfcured the air, and only gave us the reviving fight of the fun during fhort intervals. Large iflands of ice were hourly feen in all directions around the floops, fo that they were now become as familiar to us as the clouds and the fea; their frequency however ftill led to new obfervations, which our long acquaintance with them ferved to confirm. We were certain of meeting with ice in any quarter where we perceived a Arong reflexion of white on the fkirts of the fky near the horizon. However the ice is not always entirely white, but often tinged, efpecially near the furface of the fea, with a moft beautiful fapphirine or rather berylline blue, evidently reflected from the water; this blue colour fometimes appeared twenty or thirty feet above the furface, and was there probably owing to fome particles of fea-water which had been dafhed againft the mafs in tempeftuous weather, and had penetrated into its interftices. We could likewife frequently obferve in great iflands of ice, different thades or cafts of white, lying above each other in ftrata of fix inches or one foot high. This appearance feems to confirm the opinion concerning the farther encreafe and accumulation of fuch huge maftes by heavy falls of fnow at different intervals. For fnow being of various kinds, fmall grained, . large grained, in light feathery locks, \&c. the various

17ク2. degrees of its compactnefs account for the difDecemb. ferent colours of the itrata.
Tuef. 22. We did not lofe fight of our deftination to explore the fouthern frigid zone, and no fooner perceived the fea more open than before, than we ftood once more to the fouthward. We made but fmall advances at firft, the wind being very faint, and almoft falling calm in the morning on Wed. 23 , the 23 d. We feized this opportunity to hoift out a boat, and continue the experiments on the current, and on the temperature of the fea. The fpecies of petrels which were numerous about us, were likewife examined, defcribed, and drawn this day, having been fhot as they hovered with feeming curiofity over our little boat.
Thurf24. We continued fanding foutherly, and even made a good deal of wefting, the wind being
Frid. 25. S. S. E. The next morning the wind blew pretty frefh, and carried us paft feveral iflands of ive; fome whales; and a number of birds appearing about us. Our firf Chriftmas day during this voyage, was fpent with the ufual chearralnefs among officers and paffengers; but among the failurs, notwithltanding the furrounding aoks of ice, with favage noife and drunkenneis, to which they feem to have particularly
Satur, 26. devoted the day. The next morning we failed though a great quantity of packed or broken ice, fume of which looked dirty or decaying. lfanc's of ice ftill furrounded us, and in the evening, the fun fettirg juft behind one of them, tinged its edges with gold, and brought upon the whole mafs a beautiful fuffulion of purple. A dead calm which fucceeded on the 27 th, gave us an opportunity of hoifting the boat out, and going to thoot pinguins and petrels. The chace of pinguins proved very unfuccefsful, though it afforded great fort; the birds dived fo frequently,

\section*{ROUND THE WORLD.}
continued fo long under water, and at times \(1: 72\). fkipped continually into and out of the water, Decemp. making way with fuch amazing velocity in a ftrait line, that we were obliged to give over the purfuit. At laft we came near enough to one, to wound it; but though we followed it clofely, and fired above ten times with fmall fhot, which we could obferve to hit, yet we were at lant obliged to kill it with ball. When we took it up, we perceived that its hard, glofly plumage, had continually turned the fhot afide. This plumage is extremely thick, and confifts of long narrow feathers, which lie above each other as clofely as fcales, and fecure thefe amphibious birds againft the wet, in which they. almoft conftantly live. Their very thick fkin and their fat feem wifely appropriated to them by nature, to refift the perpetual winter of thefe unhofpitable climates; their broad belly, the fituation of their feet far behind, and their fins, which fupply the place of wings, are conftructed with equal wifdom to facilitate the progrefs of their otherwife lumpifh bodies through the water. The one that we had now flot weighed eleven pounds and a half. The blue petrels which are feen throughout this immenfe ocean, and which now fettled in flocks of feveral hundreds on the fmooth furface of the water, were not worfe fitted out againtt the cold than the pinguins. Their plumage was amazingly abundant, and increafed their bulk in a great proportion; and two feathers inftead of one, proceeded out of every root, lying within each other, and formed a very warm covering. As they are almoft continually in the air, their wings are very Atrong, and of a great length to fupport them. On the ocean, between New Zeeland and America, we have found them above feven hundred leagues from
1772. any land; a diftance which it would have been \(\underbrace{D_{\text {ecemb }}}\) impoffible for them to have paffed, without an amazing ftrength in their bones and mufcles, and the affiftance of long wings. Poffibly thefe birds fpreading over the whole ocean far from any land, may live a confiderable time without frefh fupplies of food; that being the cafe with many animals of prey, both in the clafs of quadrupeds and that of birds. Our experience fhould feem in fome meafure to contradict, and in fome degree to confirm, this fuppofition. For whenever we lamed any of them, they difgorged a quantity of vifcid food, to all appearance recently digefted, which the reft immediately fwallowed up with fuch avidity as feemed to indicate a long faft. Therefore it may be probable, that feveral forts of blubbers (molluf(a) inhabit thefe icy feas, which may come to the furface in fair weather, and fupply the weary birds with food. We were glad to meet with fubjects from whence thefe little reflections could be drawn. They afforded us a momentary relief from that gloomy uniformity with which we flowly paffed dull hours, days, and months in this defolate part of the world. We were almoft perpetually wrapt in thick fogs, beaten with fhowers of rain, fleet, hail, and fnow, the temperature of the air being conftantly about the point of congelation in the height of fummer; furrounded by innumerable inlands of ice againft which we daily ran the rifk of being fhipwrecked, and forced to live upon falt provifions, which concurred with the cold and wet to infect the mafs of our blood. Thefe feverities naturally infpired a general wifh for a happier change of fituation and climate, though our feamen coming frefh and ftrong from England, were not yet difpirited amidft the numberlefs fatigues
and inclemencies to which they were expofed. The prophylactics, with which we had been fupplied, and which were regularly ferved to the crew, namely portable broth, and four krout, had a wonderful effect in keeping them free from the fea-fcurvy. Two or three men however, of a bad habit of body, could not refift this dreadful difeafe; one of them in particular, George Jackfon, a carpenter, fell ill ten days after leaving the Cape; his gums were ulcerous, and his teeth fo loofe, as to lie fideways. A marmalade of carrots, which had been much recommend, was tried, but without fuccefs, it having no other effect than that of keeping him open. Our furgeon, Mr. Patton, then began the cure with frefh wort, i. e. the infufion of malt, by which he gradually recovered, and in the fpace of a few weeks was perfectly cured, his teeth faft, and his gums entirely renewed. As the efficient caufe of his complaint ftill exifted, he was obliged to continue the ufe of wort even after his cure, and by that means was kept free from all fcorbutic fymptoms. The encomiums on the efficacy of malt cannot be exaggerated, and this ufeful remedy ought never to be forgotten on board of thips bound on long voyages; nor can we beftow too much care to prevent its becoming damp and mouldy, by which means its falutary qualities are impaired, as we experienced during the latter part of our voyage.

The new year began with fnow-fhowers and frem cold gales, which carried us to the weftward, under the meridian, where M. Bouvet
1773. Jan. Friday 1. placed the difcovery, which he called Cape Circumcifion. The fight of feals and pinguins once more revived the hopes of fome of our fellowvoyagers, who bid us look out for land, which by
1773. by their account could not be far off. Our courfe jan. however foon difappointed their expectations, and only ferved to invalidate their teftimonies of Sund. 3. the proximity of land.

The wind hifted to the no:th-weftward in the night, and we ftood back again to the eaft, having firf proceeded beyond the meridian of M. Bouvet's difcovery. We paffed the fpot where we had met with much ice on the 3 ift of December, and found it drifted away from thence; after which we continued our courfe to the S. E.

Satur. g, On the gth, in the morning, we faw a large ifland of ice, furrounded with many fmall broken pieces, and the weather bcing moderate we brought to, hoifted out the boats, and fent them to take up as much of the fmall ice as they could. We piled up the lumps on the quarterdeck, packed them into cafks, and after dinner melted them in the coppers, and obtained about thirty days water, in the courfe of this day, and in the latitude of \(61^{\circ} 36^{\prime}\) fouth. Two days aftervards we had another opportunity of fupplying our floops with ice, which our people pirformed with great alacrity, notwithitanding the excoriation of their hands, which the cold and the fharpnefs of the fea produced. Some white whales of a huge fize, feemingly fixty fiet long, were cbferved here, and many pinguins foated paft is, ftanding upright on fmall hits of ice. The water we melted out of this ice was perferly freft, and had a purer tafte than any which we bad on board. If any fault could te found with it, it was that the fixed air was expelled from it, by which means almof every one who wit was affected with fwellings in the glands of the throat. Viater melted from

\section*{ROUND THE WORLD.}
fnow or ice is known always to have this effect, and the conftant ufe of it in mountainous countries produces thofe enormous wens (roilres) which are common among Alpine nations, and are become fo habitual that they are looked upon as ornamental. Several perfons on board, unacquainted with natural philofophy, were very ferioully afraid that the ice, when it began to melt, would burft the cafks in which it was packed, not confidering that its volume mult be greater in its frozen than in its melted ftate, fince it floated on the furface. The Captain, to undeceive them, placed a little pot filled with ftamped ice in a temperate cabin, where it gradually diffolved, and in that fate took up confiderably lefs fpace than before. Ocular demonItration always goes farther than the cleareft arguments; but reafoning never has lefs weight than with failors.

On the 17 th, in the forenoon, we croffed the Sund. 17. antarctic circle, and advanced into the fouthern frigid zone, which had hitherto remained impenetrable to all navigators. Some days before this period we had feen a new fpecies of petrel, of a brown colour, with a white belly and rump, and a large white \(f_{p}\) ot on the wings, which we now named the antarctic petrel, as we faw great flights of twenty or thirty of them hereabouts, of which we fhot many that unfortunately never fell into the fhip. About five o'clock in the afternoon, we had fight of more than thirty large iflands of ice a-head, and perceived a ftrong white reflexion from the fky over the horizon. Soon after we paffed through vaft quantities of broken ice, which looked honey-combed and fpungy, and of a dirty colour. This continually thickened about us, fo that the fea be-
1773. came very fmooth, though the wind was frefh as ban. before. An immenie field of folid ice extended beyond it to the fouth, as far as the eye could reach from the maft-head. Seeing it was impoffible to advance farther that way, Captain Cook ordered the fhips to put about, and ftood north-eaft by north, after having reached \(67^{\circ}\) \(15^{\prime}\) fouth latitude, where many whales, fnowy, grey, and antarctic petrels, appeared in every quarter.
-Ted. 20. On the 19th and 20th we faw a bird, which a gentleman, who had been at Falkland's iflands, called a Port-Egmont hen, \({ }^{*}\) and which proved to be the Rkua or great northern gull (larus catarractes), common in the high latitudes of both hemifpheres. The appearance of this bird, was likewife conftrued into a prognoftic of land; but our difappointments had already been fo frequent in this refpect, that we were not eafily led to give credit to bare affertions. We faw a bird of this fpecies again on the 27 th, when we had a great variety of all kinds of petrels and albatroffes around us. It always foared up to a great height, perpendicularly over our heads, and looked down upon us, as it fhould feem with great attention, turning its head now on one fide, and now on the other. This was a novelty to us, who were ufed to fee all the other aquatic birds of this climate keep near the furface of the fea. The next evening, and on the 2gth, we had feveral porpeffes paffing by us with amazing fwifneefs in all directions. They were pied, and had a large blotch of white on the fides, which came almoft up to the back behind the dorfal fin. Their velocity was at leaft triple that of our veffels,

\footnotetext{
*This bird is mentioned in Lientenant Cook's voyage in the Endeavour, See Hawkefworth, vol. II. p. 312.
}

\section*{ROUND THE WORLD.}
veffels, though we now went at the rate of feven knots and a half. In the afternoon we faw a fmall black and white bird, which fome called an ice-bird, and others a murr, and which feldom or never go out of fight of land; but as we could not come near enough to examine it more accurately, we rather believed that it might be a fpecies of petrel. We ftood however off and on this night and the next, finding the fea very moderate, though the wind blew very frefh. We were the more induced to take this precaution as we had received intelligence at the Cape of Good Hope of a difcovery of land hereabouts, by the French captains M. de Kerguelen and M. de St. Allouarn, in January 1772.

As the journal of that voyage has been fuppreffed in France, I fhall here infert fuch particulars as were communicated to us by feveral French officers at the Cape of Good Hope. M. de Kerguelen, a lieutenant in the French navy, commanding the veffel (flute) la Fortune, and having with him a fmaller veffel (gabarre) le Gros Ventre, commanded by M. de St. Allouarn, failed from the Ifle of France or Mauritius, the latter end of 1771 . On the 13 th of January 1772, he faw two ifles, which he called the Illes of Fortune; and the next morning one more, which from its fhape they called Ifle Ronde. Almoft about the fame time, M. de Kerguelen faw land, of a confiderable extent and height, upon which he fent one of the officers of his fhip a-head in the cutter to found. But the wind blowing frehh, M. de St. Allouarn in the Gros Ventre Ihot a-head of the boat, and finding a bay, which he called the Gros Ventre's bay, fent his own yawl to take poffeffion of the land which was performed with the utmoft difficulty. Both the boats then returned aboard the Gros Ventre, and the
173. the cutter was cut adrift on account of the bad

Jan. weather. M. de St. Allouarn then fpent three \(\sim_{\text {days in queft of M. de Kerguelen, who had been }}\) driven fixty leagues to leeward, on account of his weak nuifts, and was returned towards the He of France. M. de St. Allouarn continued to take the bearings of this land, and doubled its northern extremity, beyond which it tended to the fouth-eaftward. In this direction he coafted it for the face of twenty leagues, and feeing it was very high, inacceffible, and deftitute of trees, he left it, ftanding over to the coaft of New Holland, from thence to Timor and Batavia, and at J dit back to the Ifle of France, where he died foon after his arrival. On M. de Kerguelen's seturn to Europe, he was immediately fent out again with a \(6+\) gun fip called the Roland, and the frigate l'Oifeau, captain Rofnevet; but after having juft feen the land, which he had difcovered in his former voyage, he returned without making farther difcoveries. The northern coaft ai the land which he difcovered, is fituated in about 48 degrees fouth latitude, and about 82 degrese eaft longitude from Ferro, or 6 degrees tidt of the ifle of France, (i. e. in about \(64^{\circ} 20^{\prime}\) taif from Greenwich.)
M. de Marion in his expedition of 1772 , in January, fell in with fmall inlands in three different places, about the latitude of \(46 \frac{1}{2}^{\circ}\) and \(47 \frac{1}{2}^{\circ}\), and about the longitudes of \(37^{\circ}, 46 \frac{1}{2}^{\circ}\), and \(48 \frac{1}{2}^{\circ}\) eaft from Greenwich. Thefe iflands were all of inconfiderable extent, high, rocky, deftitute of trees, and almoft entirely barren. M. de Marion had two fhips under his command, one the Mafcarin, captain Crozet, the other the Caftrie, captain Du Clefmure. They proceeded to the fouthern extremity of New Holland, or Diemen's land, firft feen by Tafman; and from thence to

\section*{ROUNDTHE WORLD.}
the bay of iflands in New Zeeland, where M. de Marion was killed with 28 of his men by the natives, of which more fhall be faid in the fequel. After this lofs M. de Crozet, on whom the command devolved, paffed through the weftern part of the South Sea to the Philippinas, from whence he returned to the Ine de France. Agreeably to thefe accounts, the difcoveries of the French voyagers have been laid down in an excellent chart of the fouthern hemifphere, by in. de Vaugondy, under the direction of the duke de Croy, and publifhed in March 1773.

On the 3 Ift in the evening, our latitude being nearly that of \(50^{\circ}\) fouth, we paffed by a large inland of ice, which at that inftant crumbled to pieces with a tremendous explofion. The next feb. morning a bundle of fea weeds was feen floating Mond. 1. paft the floop; and in the afternoon, captain Furneaux in the Adventure having hailed us, acquainted captain Cook that he had feen a number of divers, refembling thofe in the Englifh feas, and had paft a great bed of floating rockweeds. In confequence of thefe oblervations we ftood off and on during night, and continued an eafterly courfe the next morning. We faw ma-Tuefd. \(z\) ny petrels and black fhear-waters, fome rockweed, and a fingle tern (fterna) or as the feamen call it an egg-bird, which had a forked tail. At noon we obferved in \(48^{\circ} 36^{\prime}\) fouth latitude, which was nearly the fame in which the French difcoveries are faid to be fituated. After noon we ftood fouth-weftward, but the next day the gale encreafed to fuch a degree, as obliged us to hand our topfails, and ftand on under the courfes all night: however, at eight o'cluck on the fourth, we found a fmooth fea again, and fet more fail, changing our courfe to the north-weltward at noon. On the 6th our latitude at noon was

\section*{A V O Y A G E}
1773. nearly 48 degrees fouth, about 60 degrees eaft
\(\underbrace{\text { Fer. }}\) from Greenwich, when not feeing any land, we gave over the attempt to ftand in fearch of it, and directed our courfe once more to the foutheaftward, to the main object of our voyage. The fmoothnefs of the fea, whilf we had ftrong eafterly gales, however perfuaded us, that there was probably fome land near us to the eaftward, and the fituation given to the French difcoveries, in M. Vaugondy's late chart, has confirmed our fuppofition ; for, according to it, we mult have been at leaft two degrees of longitude to the weft of it, on the fecond of February, when we were fartheft to the eaft in the given latitude. Though we did not fall in with the land itfelf, yet we have done fo much fervice to geography by our track, as to put it beyond a doubt, that the French difcovery is a fmall ifland, and not, what it was fuppofed at firft to be, the north cape of a great fouthern continent.
Mond. 8. On the 8th in the morning, we had an exceeding thick fog, during which we loft fight of the Adventure, our confort. We fired guns all that day and the next, at firf every half hour, and afterwards every hour, without receiving any anfwer; and at night we burnt falfe fires, which likewife proved ineffectual.
Wed. 10. On the roth in the morning, notwithftanding all our endeavours to recover our confort, we were obliged to proceed alone on a difmal courfe to the fouthward, and to expofe ourfelves once more to the dangers of that frozen climate, without the hope of being faved by our fellow voyagers, in cafe of lofing our own veffel. Our parting with the Adventure, was almoft univerfally regretted among our crew, and none of them ever looked around the ocean without expreffing fome concern on feeing our thip alone

\section*{ROUND THE WORLD.}
on this valt and unexplored expanfe, where the appearance of a companion feemed to alleviate our toils, and infpired cheerfulnefs and comfort. We were likewife not entirely without apprehenfions, that the Adventure might have fallen in with land, as the fight of pinguins, of little diving petrels, and efpecially of a kind of grebe, feemed to vindicate its vicinity. Indeed, according to the chart of \(M\). Vaugondy we muft have been but very little to the fouth of it at that time.

On the 17 th we were near 58 degrees fouth, Wed. 17. and took up a great quantity of fmall ice, with which we filled our water-calks. A variety of petrels and albatroffes, had attended us continually; and from time to time the ikua, or great northern gull (larus catarraEtes), which our people called a Port Egmont hen, many pinguins, fome feals, and fome whales had made their appearance near us. A beautiful phænomenon was obferved during the preceding night, which appeared again this and feveral following nights. It confilted of long columns of a clear white light, fhooting up from the horizon to the eaftward, almoft to the zenith, and gradually fpreading on the whole fouthern part of the fky . Thefe columns fometimes were bent fideways at their upper extremity, and though in moft refpects fimilar to the northern lights (aurora borealis) of our hemifphere, yet differed from them, in being always of a whitifh colour, whereas ours affume various tints, efpecially thofe of a fiery, and purple hue. The ftars were fometimes hid by, and fometimes faintly to be feen through the fubftance of thefe fouthern lights, (aurora auftralis), which have hitherto, as far as I can find, efcaped the notice of voyagers. The fky was

\section*{A \(\quad \mathrm{V}\) O Y A G E}
1773. generally clear when they appeared, and the air
\(\underbrace{\text { FBE. }}\) iharp and cold, the thermometer flanding at the freezing point.
Wed. 24. On the \(24^{\text {th }}\), being in about 62 degrees fouth latitude, we fell in once more with a folid field of ice, which confined our progrefs to the fouth, very much to the fatisfaction of every body on board. We had now been long at fea, without receiving any refrefhment; the favourable feafon for making difcoveries towards the frozen zone, drew to an end; the weather daily became more fharp, and uncomfortable, and prefaged a dreadful winter in thefe feas; and, laftly, the nights lengthened apace, and made our navigation more dangerous than it had hitherto been. It was therefore very natural, that our people, exhaufted by fatigues and the want of wholefome food, fhould with for a place of refrefhment, and rejoice to leave a part of the world, where they
March. could not expect to meet with it. We continued Wed. 17 . however from this day till the 37 th of March to run to the eaftward, between \(61^{\circ}\) and \(5^{\circ}\) of fouth latitude, during which time we had a great fhare of eafterly winds, which commonly brought fogs and rains with them, and repeatedly expofed us to the moft imminent danger of being wrecked againt huge iflands of ice. The fhapes of thefe large frozen maffes, were frequently fingularly ruinous, and fo far picturefque enough; among them we paffed one of a great fize, with a hollow in the middle, refembling a grotto or cavern, which was pierced through, and admitted the light from the other fide. Some had the appearance of a five or fteeple; and many others gave full fcope to our imagination, which compared them to feveral known objects, by that means attempting to overcome the tedioufnefs of

\section*{ROUND THE WORLD.}
our cruize, which the fight of birds, porpeffes, feals, and whales, now too familiar to our eyes, could not prevent from falling heavily upon us. Notwithftanding our excellent prefervatives, effpecially the four-krout, Several of our people had now ftrong fymptoms of fea-fcurvy, fuch as bad gums, difficult breathing, livid blotches, eruptons, contracted limbs, and greenifh greafy filamints in the urine. Wort was therefore prefcribed to them, and thole who were the molt affected drank five pints of it per day; the contracted limbs were bathed in it, and the warm grains applied to them. By this means we fucseeded to mitigate, and in come individuals entirely to remove the fymptoms of this horrid difcafe. The rigours of the climate likewife volently affected the live hep, which we had embarked at the Cape of Good Hope. They were covered with eruptions, dwindled to mere fkeletons, and would hardly take any nourifhment. Our goats and hows too, mifcarried in the empeftuous weather, or their offspring were killed by the cold. In hort, we felt, from the nomerows concurrent circumftances, that it was time to abandon the high fouthern latitudes, and retire to forme port, where our crew might obtain: refrefhments, and where we might fave the few Cheep, which were intended as prefents to the natives of the South-fea inands.

On the 16 th, being in about 58 degrees of Couth latitude, we law the feal luminous at night, though not to foch a degree as we had observed it near the Cape, but only by means of tome flattered sparks. This phenomenon was however remarkable, on account of the high latitude we were in, and the cold weather, our thermometer being at \(33 \frac{1}{4}^{\circ}\) at noon. We fay the forthVol. I. H er:

\(\qquad\)
1773. ern lights again during the nights of the 16 th March. and 19th; and this lant time, the columns formed an arch acrofs the fky , rather brighter than any we had hitherto feen. We now ftood to the north-eaftward, in order to reach the fouth end of New-Zeeland; and on this courfe we had frong gales, and frequently faw weeds, efpecicially rock-weeds, together with numbers of patrels, and other birds. We were much amufed by a fingular chace of feveral ikuas or great grey gulls, after a large white albatrofs. The fruas feemed to get the better of this bird, notwithftanding its length of wings, and whenever they overtook it, they endeavoured to attack it under the belly, probably knowing that to be the moft defencelefs part; the albatrofs on thefe occafions had no other method of efcaping, than by fettling on the water, where its formidable beak feemed to keep them at bay. The ikuas are in general very ftrong and rapacious birds, and in the Faroe Iflands frequently tear lambs to pieces, and carry them away to their nefts. The albatroffes do not feem to be fo rapacious, but live upon fmaill marine animals, efpecially of the nolluyca, or blubber clafs. They appeared in great numbers around us, as we came to the northward of 50 degrees fouth, only few folitary birds having gone fo far to the fouth as we had penetrated; from whence it may be inferred, that they are properly inhabitants of the temperate zone.

As we ftood to the northward, we allo oblerved more feals every day, which came from the coaft of New Zeeland. A large trunk of a tree, and feveral bunctes of weeds were feen on the Thur. 25.25 th, and genat:y exhilarated the firits of our failors. Soon after the land was defcried, bear-
ing N. E. by E. at a vaft diftance. About five 1773 . o'clock in the afternoon we were within a few miles of it, and faw fome high mountains inland, and a broken rocky coaft before us, where feveral inlets feemed to indicate an extenfive bay or found. We tried foundings in 30 fathoms, but found none; however, at the maft-head they obferved funken rocks clofe to us, on which we immediately tacked, and ftood off fhore, as the weather was growing dark and mifty. The next morning we found this part of New Zeeland lay to the fouthward of Cape Weft, and had not been explored by captain Cook in the Endeavour.

Thus ended our firft cruize in the high fouthern latitudes, after a fpace of four months and two days, out of fight of land, during which we had experienced no untoward accident, and had been fafely led through numerous dangers by the guiding hand of Providence, which preferved our crew in good health during the whole time, a few individuals excepted. Our whole courfe, from the Cape of Good Hope to New Zeeland, was a feries of hardfhips, which had never been experienced before: all the difagreeable circumftances of the fails and rigging thattered to pieces, the veffel rolling gunwale to, and her upper works torn by the violence of the ftrain; the concomitant effects of ftorms, which have been painted with fuch ftrong expreffion, and blacknefs of Colorit, by the able writer of Anfon's Voyage, were perhaps the leaft diftreffing occurrences of ours. We had the perpetual feverities of a rigorous climate to cope with; our feamen and officers were expofed to rain, fleet, hail, and fow; our rigging was conftantly encrufted with ice, which cut the hands of thofe who were obliged to touch it; our provi-
\(\mathrm{H}_{2}\) fion
1773. fion of frefh water was to be collected in lumps March. of ice floating on the fea, where the cold, and the fharp faline element alternately numbed, and fcarified the failors' limbs; we were perpetually expored to the danger of running againit huge maffes of ice, which filled the immenfe Southern ocean; the frequent and fudden appearance of thefe perils, required an almoft continual exertion of the whole crew, to manage the Chip with the greateft degree of precifion and difpatch. The length of time which we remained out of fight of land, and the long abftinence from any fort of refrefhment were equally diftreffful; for our hooks and lines diftributed in November (Sce page 75.) had hitherto been of no fervice, on account of our navigation in high fouthern latitudes, and acrofs an unfathomable ocean, where we faw no fifh except whales, and where it is well known no others can be expected; the torrid zone being the only one where they may be caught out of foundings.

Horat:
We may add to thefe the difmal gloominefs which always prevailed in the fouthern latitudes, where we had impenetrable fogs lafting for weeks together, and where we rarely faw the cheering face of the fun; a circumftance which alone is fufficient to deject the moft undaunted, and to four the fpirits of the moft cheerful. It is therefore jufly to be wondered at, and ought to be confldered as a diftinguifing mark of divine protection, that we had not feit thofe ill effects which might have been expected, and juftly dreaded as the refult of fuch accumulated diftrefles.

C HAP.

\section*{C H A P. V.}

Stay at Dufky Bay; defcription of it, and account of our tranfactions there.

Atwenty-two days, and a run of above three thoufand five hundred leagues, out of fight of land, we entered Dufky Bay on the 26th of March Frid. 26, about noon. This bay is fituated a little to the northward of Cape Weft, and captain Cook, in his voyage in the Endeavour, had difcovered and named it without entering into it.* The foundings gave about forty fathoms in the entrance, but as we advanced, we had no ground with fixty, and therefore were obliged to pufh on farther. The weather was delightfuily fair, and genially warm, when compared to what we had lately experienced; and we glided along by infenfible degrees, wafted by light airs, paif numerous rocky iflands, each of which was covered with wood and fhrubberies, where numerous evergreens were fweetly contrafted and mingled with the various fhades of autumnal yellow. Flocks of aquatic birds enlivened the rocky fhores, and the whole country refounded with the wild notes of the feathered tribe. We had long and eagerly wifhed for the land and its vegetable productions, and therefore could not but eye the profpect before us with peculiar delight, and with emotions of joy and fatisfaction which were Itrongly marked in the countenance of each individual.

About
*See Hawkefworth's compilation, vol. III. p. 424 .

About three o'clock in the afternoon, we dropped an anchor under a point of an inland, where we were in forme meafure fheltered from the fee, and fo near the fore, as to reach it with a hawfer. The lop was no goner in fafety, than every faitor put his hook and line overboard, and in a few moments numbers of fine fish were hauled up on all parts of the veffel, which heightened the raptures we had already felt at our entrance into this bay. The real good tate of the fifth, joined to our long abstinence, inclined us to look upon our first meal here, as the mot delicious we had ever made in our lives. The view of rude fceneries in the fly of Ref, of antediluvian forests which cloathed the rock, and of numerous rills of water, which every where rolled down the fees declivity, altogether confired to complete our joy; and fo apt is mankind, after a long absence from land, to be presjudiced in favour of the wildeft fore, that we looked upon the country at that time, as one of the mort beautiful which nature unaffifted by art could produce. Such are the general ideas of travellers and voyagers long exhaufted by diftreffes; and with fuch warmth of imagination they have viewed the rude cliffs of Juan Fernandez, and the impenetrable forests of Tinian!

Immediately after dinner two boats were rent out to reconnoitre different parts of the bay, and chiefly to look for a fate harbour for our veffel, the first anchoring-place being open, inconveniint, and only serving the neceffity of the momint. We improved there opportunities of pourfuing our refearches in natural history, and eparated in order to profit by both excurfions. Each of the parties found convenient and well -helteed harbours, with plenty of wood and water; and wherever they went they met with fuch abundance

\section*{ROUND THE WORLD.}
abundance of fifh and water-fowl, that they entertained hopes of a conftant fupply of refrefh. March. ments during their ftay in thefe parts. This profpect prevailed upon Capt. Cook, who had but curforily examined the fouthern extremities of New Zeeland in his former voyage, to fpend fome time there, in order to gain a more competent knowledge of its fituation and productions. On our part, we perceived a new ftore of animal and vegetable bodies, and among them hardly any that were perfectly fimilar to the known fpecies, and feveral not analogous even to the known genera. With thefe therefore we hoped to be wholly employed during our ftay, in fpight of the approach of autumn, which feemed to threaten the vegetable creation.

Early the next morning, a fmall boat having Satur. 27. been fent out towards the fhore, returned in three hours time with as many fifhes, caught by the hook, as fupplied a plentiful dinner to all on board. The beft and moft favoury fifh was a fpecies of the cod, which, from its external colour, our failors called a coal-fifh: befides this we caught feveral fpecies of excellent flat cavalhas (fciana), fome fcorpens, mullets, horfemackrel, and many other forts of a fine tafte, which were entirely unknown in Europe. At nine o'clock we got under fail and went into Pic. kerfgill harbour, one of thofe examined the preceding day, where the fhip was moored head and ftern in a fmall creek, and fo near the fhore, that we could reach it by means of a ftage of a few planks. Nature had affifted us for this purpofe with a large tree, projecting in a horizontal pofition over the water, of which we placed the top on our gun-wale, connecting our planks with it. This fituation facilitated all our operations, and was particularly adapted to the conveniency of wooding

\section*{A V O Y A G E}

1-73. wooding and watering, for our floop's yards were March. locked in the branches of furrounding trees, and \(\underbrace{\text { about half a muket fhot a-ftern we had a fine }}\) ftream of frefh water.

We now began to clear away the woods from a neighbouring hill, in order to fix the aftronomer's obfervatory upon it, and to eftablifh our forge there, as our iron-works wanted repairs. Neár the watering-place we pitched tents for the fail-makers, coopers, waterers, and wood-cutters. Thefe occupations ferved to lower the great idea which our people had conceived of this country; for the prodigious intricacy of various climbers, briars, Chrubs, and ferns which were interwoven throughout the forefts, rendered the tafk of clearing the ground extrenely fatiguing and difficult, and almoft precluded the accefs to the interior parts of the country. It is indeed reafonable to fuppofe, that in the fouthern parts of New-Zeeland, the forefts have never been touched by human induftry, but have remained in the rude unimproved ftate of nature fince their firft exiftence. Our excurfions into them gave us fufficient grounds for this fuppofition; for not only the climbing plants and fhrubs obftructed our paffage, but likewife numbers of rotten trees lay in our way, felled by winds and old age. A new generation of young trees, of parafitic plants, ferns, and mofies fprouted out of the rich mould to which this old timber was reduced by length of time, and a deceitful bark fometimes ftill covered the interior rotten fubftance, whereon if we attempted to fep, we funk in to the waift. The animal creation afforded another proof that this country had not yet undergone any changes from the hands of mankind, and indeed at firft raifed the idea, that Dufky Bay was wholly uninhabit-

\section*{ROUND THE WORLD.}
ted. Numbers of fmall birds which dwelt in the 1773 . woods were fo little acquainted with men, that they familiarly hopped upon the neareft branches, nay on the ends of our fowling-pieces, and perhaps looked at us as new objects, with a curiofity fimiliar to our own. This little boldnefs in reality at firft protected them from harm, fince it was impoffible to fhoot them when they approached fo near; but in a few days it frequently proved the means of their deftruction; for a fly cat on board, had no fooner perceived fo excellent an opportunity of obtaining delicious meals, than fhe regularly took a walk in the woods every morning, and made great havock among the little birds, that were not aware of fuch an infidious enemy.

As we had plenty of fih, and faw a number of water-birds which might afford us a variety of animal food, fome of our botanical excurfions were in a great meafure inflituted in fearch of ufeful vegetables, to be eaten as greens. From thence the molt falutary effects might be expected, by a fet of people who had been above feventeen weeks at fea, and whofe blood muft have been more or lefs corrupted by living fo long on falt provifions.

On the firit day after our arrival we found a beautiful tree in flower, fomething related to the myrtle genus, of which an infufion had been drank intead of tea in Captain Cook's former voyage. We immediately repeated the experiment with great eagernefs, as we had not yet feen any plant which was fit to be ufed at our tables. Its leaves were finely aromatic, aftringent, and had a particular pleafant flavour at the firft infufion; but this fine tafte went off at the next filling up of the tea-pot, and a great degree
1773. of bitternés was then extracted. We therefore March. never fuffered it to be twice infufed. The ufe \(\sim_{\text {of this plant, which became general among our }}\) crew, probably contributed greatly to reftore their frength, and to remove all fcorbutic fymptoms. A plant, which might be of fervice to future navigators, deferved to be drawn, in order that they might know it again. In a fine foil in thick forefts it grows to a confiderable tree, fometimes thirty or forty feet high, and above a foot in diameter; on a hilly arid expofure I have, on the contrary, found it as a little fhrub, fix inches high, which bore flowers and feed; but its ufual fize is about eight or ten feet, and about three inches in diameter. In that cafe its ftem is irregular and unequal, dividing very foon into branches which rife at acute angles, and only bear leaves and flowers at top. The flowers are white and very ornamental to the whole plant. Another tree, which grew in great plenty round about us, was likewife tried, and afforded a good infufion; but the refemblance it bore to the trees of the fir tribe, and a kind of refinous tafte, foon convinced us that it was fitter to ferve the purpofes of the American fpruce-tree, and that a palatable and wholefome liquor might be brewed from it, as a kind of fubftitute for fpruce-beer. * In effect, with the addition of the infpiffated juice of wort, and of fome molaffes, we brewed a very good fort of beer, which we improved very confiderably afterwards, by correcting the too great aftringency

\footnotetext{
* This ufeful plant deferves a defcription for the benefit of the navigator; but, notwithttanding all our refearches, we could never find it either in flower or in fruit, owing to the unfavourable feafons in which we vifited New-Zeeland.
}
aftringency of our new fpruce, with an equal 1773 . quantity of the new tea-tree. Its tafte was plea- March. fant, and fomething bitter; and the only fault \(\underbrace{\text { - }}\) we could obferve in it was, that being taken on an empty fomach, it frequently caufed a naufea or ficknefs; but in all other refpects it proved a very falutary drink. The fpruce of New-Zeeland is a very beautiful tree, and confpicuous on account of its pendant branches, which are loaded with numerous long thread-like leaves, of a vivid green. It frequently grows to the height of fifty or fixty, and even one hundred feet, and has above ten feet in girth. Though the fpruce and the tea-trees alone afforded articles of refrefhment in Dulky Bay; yet we found the woods full of trees of various kinds, very fit for the ufe of Ahipwrights, joiners, and other mechanics; and Captain Cook was of opinion that, except in the river Thames on the northern inand, he had not obferved a finer growth of timber on all New-Zeeland.

We had not been above two days in this bay, before we found that our opinion of its being uninhabited was premature. On the 28 th in the Sund. 29. morning feveral of our officers went a fhooting in a fmall boat, and on entering a cove two or three miles from the fhip, perceived feveral natives upon a beach, who were about to launch their canoe. The New Zeelanders halloo'd at their approach, and feeming by this means more numerous than they really were, the officers thought proper to return and acquaint the captain with their difcovery; a ftep which they found the more neceflary, as the weather was very rainy, and might, in cafe of danger, have prevented their pieces from going off. They were fcarely returned

17*3. returned on board, when a canoe \({ }^{*}\) appeared off \(\underbrace{\text { March. }}\) a point, at about a mile's ditance from the \(\sim_{\text {floop; there were feven or eight people in it, }}\) who looked at us for fome time, but notwithftanding all the figns of friendfhip which we could make, fuch as calling to them to come to us, waving a white cloth, and promifing beads, they did not care to come nearer, and paddled back again the fame way they came. They appeared to be dreffed in mats, and had broad paddles with which they managed their canoe, like the inhabitants in the northern parts of New Zeeland. Captain Cook refolved to vifit them in the afternoon, in order to quiet the apprehenfion which they feemed to have entertained. We went in two boats, accompanying him and feveral of the officers into the cove, where the natives had been firft feen. Here we found a double carioe havled upon the fhore, near fome old, low huts, about which we faw veftiges of \(\dot{n}_{i}\). places, fome filhing-nets, and a few fcattered finh. The canoe which appeared to be old and in bad orcier, confifted of two troughs or boats joined together with ticks, tied acrofs the gunwales with ftrings of the New Zeeland flaxplant. \(\dagger\) Each part confifted of planks fowed together with ropes made of the flax-plant, and had a carved head coarfely reprefenting a human face, with eyes made of round pieces of earfhell, which fomewhat refembled mother of pearl. This canoe contained two paddles, a baiket full of berries of the coriaria rufcifolia Lin. and fome fifhes; but the natives were not to be feen or heard, which gave us reafon to believe that they had

\footnotetext{
* We flall always make ufe of this word to fignify an Indian embarkation, unlefs we mean to defcribe or fpecify i: more particularly.
+ See Hawkerworth's compilation, vol. III. p. 443.
}
had retired into the woods. To conciliate their \({ }^{1773}\). good will, we left fome medals, looking-glaffes, beads, \(\& \mathrm{c}\). in the canoe, and embarked again after a fhort ftay. We then rowed to the head of the cove, in order to furvey it, where we found a fine brook of frefh water coming down on a flat beach, from whence the water continued fhallow to a confiderable extent, fo that our boat ran aground feveral times. Ducks, fhags, black oyfter-catchers, and fome forts of plovers were very numerous here. At our return we vifited the canoe again, added a hatchet to the other prefents which we had left before, and to Shew the ufe of it, we cut feveral chips out of a tree, and left it fticking there. No natives appeared this fecond time, though we imagined they could not be far off, as we thought we could fmell the fmoke of a fire. However, captain Cook defifted at prefent from fearching in the woods, fince they purpofely avoided us, and choofing to leave it to time and their own free will to cultivate an intercourfe with us, he returned on board late in the evening.

Heavy fhowers of rain fell all the next morn- Mond.z9. ing, but intermitted in the afternoon, giving us an opportunity of going into the woods above our cove, where the rains had fo thoroughly foaked the foil, that together with the other impediments in walking in this country, the prodigious flipperinefs rendered our excurtion laborious and fatiguing. We met however with a few plants, which ftill fhewed fome late bloffoms, notwithftanding the advanced feafon; but we were at the fame time greatly tantalized by the appearance of numerous trees and Ihrubs, which had already loft their flowers and fruits, and only ferved to give us an idea of the great profufion of new vegetables in this country.

The
1733. The two following days we were entirely conMarce., fined on board, on account of the rain and formy weather ; which not a little damped our firits, and gave us reafon to fear we fhould fpend the remainder of our time very difagreeably. How-
Aprile ever, on the ift of April in the aftemoon, we Thurf. \({ }^{1}\). took the advantage of a lucid interval to make another vifit to the cove where we had feen the Indians. We found every thing in the fame fituation as we had left it, and it did not appear that any perfon had been near the canoe fince that time. The weather being now fair, we faw this cove in all its perfection. It is fo fpacious that a whole fleet of flips may lie at anchor in it, and fome of the loftieft hills in all the bay encompafs it on the fouth-weft fide, and are entirely covered with woods from the fummit to the. water's fide. The different projecting points, and the various iflands in the bay, form altogether a picturefque and pleafing fcene. The fmoothnefs of the water, illumined by the fetting fun, the different degrees of verdure, and the various notes of birds which refounded throughout the whole cove during this calm evening, greatly foftened the rude, uncultivated outlines of this landfcape.

The pleafure we had enjoyed in the evening, induced us to return to the cove again the next day, which continued to be perfectly fair. We fet out at fun-rife, and did not return till late in the evening, with a cunfiterable acquiftion of new birds, and plants. We had a young dog with us at this time, which the officers had taken on board at the Cape of Good Hope, and intended to try, whether we could not train him up to the gun: but we had no fooner difcharged the firft fowling-piece, than he ran into the woods, and would not return, though we ufed all poffible
fible means to recover him. Captain Cook likewife took the opportunity of the fair weather, to examine different parts of the bay; and touched at a little rock, near our firft anchoring place, which had already at that time acquired the name of Seal-rock, from the animals that came to feep upon it. Here he found a number of feals, and killed three of them, among which one afforded him great fport: for having been repeatedly wounded, it became quite furious, and attacked the boat, where it was at laft killed. It weighed 220 pounds, was about fix feet long, and very lean. After he had paffed feveral ifles, he reached the north-weft part of the bay, formed by the land of Point Fivefingers : there, at the bottom of a fine cove, he found a great variety of aquatic birds, of which he killed and brought on board a confiderable number.

Another rainy paufe of three days followed this excurfion, confining us to our hhip, where a fort of little crane-fies (tipula alis incumbentibu:), which had plagued us ever fince our entrance into Dukky Bay, became remarkably troublefome during the bad weather. They were numerous in the fkirts of the woods, not half fo large as gnats or mulketoes, and our failors called them fand-fies. Their fling was extremely painful, and as often as the hand or face grew warm, caufed a troublefome itching, the leaft irritation of which brought on a very violent fwelling, attended with great pain. We were, however, not all equally affected; myfelf in particular, never felt any great inconvenience from them; others, on the contrary, fuffered in a very violent degree, efpecially my father, who could not hold a pen to write down the common occurrences in a journal, and fell into a high fever at night.
1773. night. Various remedies were tried, but all Aprit. proved ineffectual, except the fimple unction with foft pomatum, and the conflant ufe of gloves.
Tuer. 6.
Early on the 6th, feveral of the officers went into the cove, which the captain had difcovered on the 2d; and the latter, accompanied by Mr. Hodges, Dr. Sparrman, my father, and myfelf proceeded in another boat, to continue the furvey of the bay, to copy views from nature, and to fearch for the natural productions of the country. We directed our courfe to the north fide, where we found a fine fpacious cove, from which we had not the leaft profpect of the fea. Along its fteep fhores we obferve feveral fimall but beautiful cafcades, which fell from vaft heights, and greatly improved the fcene; they gufhed out through the midft of the woods, and at laft fell in a clear column, to which a Thip might lie fo near, as to fill her cafks on board with the greateft fafety, by means of a leather tube, which the failors call a hofe. At the bottom there was a fhallow muddy part, with a little beach of chell-fand, and a brook, as in all the greater coves of the bay. In this fine place, we found a number of wild fowl, and particularly wild ducks, of which we thot fourteen, from whence we gave it the name of Duck Cove. As we were returning home, we heard a loud hallooing on the rocky point of an ifland, which on this occafion obtained the name of Indian Ifland; and ftanding in to the fhore, we perceived one of the natives, from whom this noife proceeded. He ftood with a club or battle-axe in his hand, on a projecting point, and behind him on the fkirts of the wood we faw two women, each of them having a long fpear. When our boat came to the foot of the rock, we called to him,
in the language of Taheitee, tayo, barre maï, " friend, come hither;" he did not, however, ftir from his poft, but held a long fpeech, at certain intervals pronouncing it with great earneftnefs and vehemence, and fwinging round his club, on which he leaned at other times. Captain Cook went to the head of the boat, called to him in a friendly manner, and threw him his own and fome other handkerchiefs, which he would not pick up. The captain then taking fome fheets of white paper in his hand, landed on the rock unarmed, and held the paper out to the native. The man now trembled very vifibly, and having exhibited ftrong marks of fear in his countenance, took the paper: upon which captain Cook coming up to him, took hold of his hand, and embraced him, touching the man's nofe with his own, which is their mode of falutation. His apprehenfion was by this means diffipated, and he called to the two women, who came and joined him, while feveral of us landed to keep the captain company. A fhort converfation enfued, of which very little was underftood on both fides, for want of a competent knowledge of the language. Mr. Hodges immediately took fketches of their countenances, and their geftures fhewed that they clearly underftood what he was doing; on which they called him tóä-tóä, that term being probably applicable to the imitative arts. The man's countenance was very pleafing and open; one of the women, which we afterwards believed to be his daughter, was not wholly fo difagreeable as one might have expected in New Zeeland, but the other was remarkably ugly, and had a prodigious excrefcence on her upper lip. They were a!l of a dark brown or olive complexion; their hair was black, and curling, and fmeared with oil and rudVol.I. I dle;
1773. dle; the man wore his tied upon the crown of April the head, but the women had it cut hort. Their \(\sim_{\text {bodies were tolerably well proportioned in the }}\) upper part; but they had remarkable flender, ill-made, and bandy legs. Their drefs confifted of mats made of the New Zeeland flax-plant, * interwoven with feathers; and in their ears they wore fmall pieces of white albatrofs fkins ftained with ruddle or ochre. We offered them fome finhes and wild fowl, but they threw them back to us, intimating that they did not want provifions. The approaching night obliged us to retire, not without promifing our new friends a vifit the next morning. The man remained filent, and looked after us with compofure and great attention , which feemed to fpeak a profound meditation; but the youngeft of the two women, whofe vociferous volubility of tongue exceeded every thing we had met with, began to dance at our departure, and continued to be as loud as ever. Our feamen paffed feveral coarfe jefts on this occafion, but nothing was more obvious to us than the general drift of nature, which not only provided man with a partner to alleviate his cares and fweeten his labours, but endowed that partner likewife with a defire of pleafing by a fuperior degree of vivacity and affability.
Wed. 7. The next morning we returned to the natives, and prefented them with feveral articles which we had brought with us for that purpofe. But fo much was the judgment of the man fuperior to that of his countrymen, and moft of the South Sea nations,' \(\dagger\) that he received almof every thing with indifference, except what he immediately conceived the ufe of, fuch as hatchets and

}

\section*{ROUND THE WORLD.}
and large fpike-nails. At this interview he in- 1773. troduced his whole family to us, confilting of April. two women, whom we fuppofed to be his wives; the young woman, a boy of about fourteen years of age, and three fmaller children, of which the youngeft was at the breaft. One of the wives had the excrefcence or wen on the upper lip, and was evidently neglected by the man, probably on account of her difagreeable appearance. They conducted us foon after to their habitation, which lay but a few yards within the wood, on a low hill, and confifted of two mean huts, made of a few fticks thatched with unprepared leaves of the flax-plant, and covered with the bark of trees. In return for our prefents they parted with feveral of their ormaments and weapons, particularly the battle axes, but they did not choofe to give us their fpears. When we were preparing to re-embark, the man came to the water-fide, and prefented to Captain Cook a drefs made of the flax plant, a belt of weeds, fome beads made of a little bird's bones, and fome albatrofs fkins. We were at firft of cpinion that thefe were only intended as a retribution for what he had received, but he foon undeceived us by fhewing a ftrong defire of poffeffing one of our boat-cloaks.* We were not charitable enough to part with our cloaths, when we knew the deficiency could nct: be fupplied again; but as foon as we came on board, Captain Cook ordered a large clu.ik to be made of red baize, which we brought to the man at our next vifit.

The rain provented our going to him the nixt Thurf. s. morning, but in the afternoon, the weather being a little more promifing, we returned to laI 2
dian

\footnotetext{
* Boat-cloaks are commonly of prodigious dimenfions ani great width, fo that the whole body may be wrapped intu them feveral times.
}
1773. dian Ifland. However, at our approach, inApril. ftead of being welcomed by the natives on the fore, we faw none of them, and received no anfwer when we fhouted to them. We landed therefore, and having proceeded to their habitation, foon found the reafon of this unufual behaviour. They were preparing to receive us in all their finery, fome being already completely adorned, and others ftill bufy in dreffing. Their hair was combed, tied on the crown of the head, and anointed with fome oil or greafe; white feathers were ftuck in at the top; fome had fillets of white feathers all round the head, and others wore pieces of an albatrofs fkin , with its fine white down in their ears. Thus fitted out, they fhouted at our approach, and received us ftanding, with marks of friendhip and great courtefy. The captain wore the new cloak of baize on his own houlders, and now took it off and prefented the man with it; he, on his part, feemed fo much pleafed with it, that he immediately drew out of his girdle a pattoo-pattoo, or fhort flat club made of a great filh's bone, and gave it to the Captain in return for fo valuable an acquifition. We endeavoured to enter into converfation; but, though Captain Cook had taken Gibfon, the corporal of marines, with him for that purpofe, he being fuppofed to know more of the language * than any other perfon on board, yet all our attempts to be underfood proved fruitlefs, becaufe it feemed this family had a peculiar harfhnefs of pronunciation. We therefore took leave of them, and proceeded to furvey different parts of the bay, fifhing at intervals, fhooting birds, and collecting fhells, and other marine productions

\footnotetext{
* He was particularly verfed in the language of the ifle of O -Taheitee ; and there is only a difference of dialect between it and the language of New Zeeland.
}
productions among the rocks. The weather was 1773. cloudy all this time, though it did not rain where we were; but when we returned to our Ship's cove, \({ }^{\prime}\) we were told it had rained there inceffantly in our abfence. The fame obfervation we had frequent opportunities of making during our fojourn in Dufky Bay. The probable caufe of this difference of weather at fuch little diftances, are the high mountains which run along the fouth fhore of the bay, gradually floping towards the weft cape. Thefe mountains being almoft conftantly capped with clouds, our cove, which lay immediately under, and was furrounded by them, was of courfe expofed to the vapours, which perpetually appeared moving with various velocities along the-fides of the hills, involving the tops of the trees over which they paffed in a kind of white femi-opaque mift, and defcending upon us at laft in rains or in fogs which wetted us to the fkin. The ifles in the northern part not having fuch high hills to attract and fop the clouds coming from the fea, permitted them to pafs freely on to the very bottom of the bay to the Alps, which we faw covered with perpetual fnow. The two next days the rains were fo heavy that no work could be done; the perpetual moifture which defcended in this place caufed fuch a dampnefs in all parts of our veffel, as could not fail to become very unwholefome, and to deftroy all the collections of plants which had been made. Our floop lying fo near the fhore, which was fteep and haggy with over-hanging woods, was involved in almoft conftant darknefs, even in fair weather, and much more fo during the fogs and rains, fo that we were obliged to light candles at noon. But the conftant fupply of frefh fifh confiderably alleviated thefe difagreeable circumftances, and, together with the fpruce-beer and the myrtle-

\section*{A V O Y A G E}
:-7. myrtle-tea, contributed to keep us healthy and Arath, ftrong even in this damp climate. We were now \(\rightarrow\) indeed become perfect ichtbyopbagi, for many amongft us entirely lived upon fifh. The fear of being cloyed with this delicious food, often fet us at work to invent new methods of preparing it, in order to deceive the palate; and we accordingly made foups, and pafties, boiled, fried, roalted, and ftewed our filhes. But it was pleafant to obferve, that all the arts of cookery only tended to furfeit the fooner, for thofe who wifely confined themfelves to plain boiling in fea water, always did honour to their meals;

\section*{As if increafe of appetite had grown}

By what it fed on.
Shakespare.
But what was more fingular than all, was, that in order to prevent any diflike to our food, we confined ourfelves, among a great variety of different forts, chiefly to one fpecies of filhes, which our failors from its dark colour, called the coalfifh, and which in tafte nearly refembled our Englih cod, being of the fame genus. Its meat was firm, juicy, and nutritive; but not fo rich and fit as that of many other fpecies, which we found very delicious, but could not continually feed upon. A very fine fpecies of crayfilh (cancer homarus, Lin.) larger than the lobfter, fome fhell-fifh, and now and then a cormorant, duck, pigeon, or parrot gave us an agreeable variety at our table, which, compared to its appearance when at fea, was now luxurious and profufe.

Every perfon in our floop experienced the good effects of this change of diet; nay every animal on board fecmicd to be benefited by it, except our fheep, which were not likely to fare fo well as ourfelves. The nature of the country accounts for this difagreeable circumftance. The whole fouthern
fouthern extremity of Tavai-poe-namoo, or the fouthern ifland of New Zeeland, and efpecially the land about Dufky Bay, confilts entirely of fteep rocky mountains, with craggy precipices, clad with thick torefts, and either barren or covered with fnow on their fummits. No meadows and lawns are to be met with, and the only flat land we found, was fituated at the head of deep coves, where a brook fell into the fea, which probably by depofiting the earth and ftones it brought from the hills, had formed this low and level ground. But even there the whole was over-run with woods and briars, and we could not find a fingle fpot of ground which might have afforded pafture, the grafs which grew on fome beaches being very hard and coarfe. However, after we had taken pains to furnifh our fheep with the frefheft fprouts which we could meet with, we were furprifed that they would not touch any of them : but upon examination we found that their teeth were loofe, and that many of them had every fymptom of an inveterate feafcurvy. Of four ewes and two rams which captain Cook brought from the Cape of Good Hope, with an intent to put them on fhore in New Zeeland, we had only been able to preferve one of each fex, and thefe were in fo wretched a condition, that their further prefervation was very doubtful. If future navigators mean to make fuch valuable prefents, as cattle of any fort to the inhabitants of the South Sea, the only probable method of bringing them fafely thither, would be to take the fhorteft route poffible from the Cape to New Zeeland, in the middle latitudes, and in the belt of reafons, when they may expect a quick paffage, and no fevere cold.

On the 1 Ith, the 1 ky being clear and ferene, promifed a fair day, which was very much want-

17-3. ed, in order to dry our fails and linen, as we had April not been able to do either fince our arrival in this \(\xrightarrow{\text { bay. We likewife obtained the ufe of a boat, in }}\) order to encreafe the number of our obfervations on the productions of nature. We directed our courfe to the cove where we had feen the firft canoe of the natives, and particularly to a waterfall, which we had obferved from afar a few days ago, and which had induced us to call this inlet Cafcade Cove. This water-fall, at the diftance of a mile and a half, feems to be but inconfiderable, on account of its great elevation; but after climbing about two hundred yards upwards, we obtained a full profpect of it, and found indeed a view of great beauty and grandeur before us. The firft object which ftrikes the beholder, is a clear column of water, apparently eight or ten yards in circumference, which is projected with great impetuofity from the perpendicular rock, at the height of one hundred yards. Nearly at the fourth part of the whole height, this column meeting a part of the fame rock, which now acquires a little inclination, fpreads on its broad back into a limpid theet of about twentyfive yards in width. Here its furface is curled, and dafhes upon every little eminence in its rapid defcent, till it is all collected in a fine bafon about fixty yards in circuit, included on three fides by the natural walls of the rocky chafm, and in front by huge maffes of ftone irregularly piled above each other. Between them the ftream fincs its way, and runs foaming with the greateft rapidity along the flope of the hill to the fea. The whole neighbourhood of the cafcade, to a diftance of an hundred yards around, is filled with the fteam or watry vapour formed by the violence of the fall. This mift however was fo rinick, that it penetrated our clothes in a few mi-

\section*{ROUND THE WORLD.}
nutes, as effectually as a fhower of rain would have done. We mounted on the higheft ftone before the bafon, and looking down into it, were ftruck with the fight of a molt beautiful rainbow of a perfectly circular form, which was produced by the meridian rays of the fun refracted in the vapour of the cafcade. Beyond this circle the reft of the fteam was tinged with the prifmatic colours, refracted in an inverted order. The fcenery on the left confifts of fteep, brown rocks, fringed on the fummits with over-hanging fhrubs and trees; on the right there is a valt heap of large ftones, probably hurried down from the impending mountain's brow, by the force of the torrent. From thence rifes a lloping bank, about feventy-five yards high, on which a wall of twen-ty-five yards perpendicular is placed, crowned with verdure and fhrubberies. Still farther to the right, the broken rocks are clothed with mofles, ferns, graffes, and various flowers; nay feveral ihrubs, and trees to the height of forty feet, rife on both fides of the ftream, and hide its courfe from the fun. The noife of the cafcade is fo loud, and fo repeatedly reverberated from the echoing rocks, that it drowns almoft every other found; the birds feemed to retire from it to a little diftance, where the fhrill notes of thrufhes, the graver pipe of wattle-birds, and the enchanting melody of various creepers refounded on all fides, and completed the beauty of this wild and romantic fpot. On turning round we beheld an extenfive bay, ftrewed as it were with fmall iflands, which are covered with lofty trees; beyond them on one fide, the mountains rife majeftic on the main land, capt with clouds and perpetual fnow; and on the other, the immenfe ocean bounded our view. The grandeur of this fcene was fuch, that the powers of de-

\section*{A V O Y A G E}

1-73. fcription fall fhort of the force and beauty of nature, which could only be truly imitated by the pencil of Mr. Hodges, who went on this voyage with us; and whofe performances do great credit and honour to his judgment and execution, as well as to the choice of his employers. Satisfied with the contemplation of this magnificent fight, we directed our attention next to the flowers which enlivened the ground, and the fmall birds which fung very cheerfully all round us. We had as yet found neither the vegetable nor animal creation fo beautiful, or fo numerous, in any part of this bay ; perhaps, becaufe the frong refraction of the fun-beams from the perpendicular walls of rock, and the fhelter from ftorms, made the climate confiderably more mild and genial in this fpot than in any other part. The foil was in nothing different here from that in other parts round the bay, but feemed to be the fame vegetable mould; and the rocks and ftones about the cafcade confifted of maffes of granite, or moor-ftone (faxum), and of a kind of brown talcous clay ftone, in ftrata, which is common to all New Zeeland.

We returned on board before fun-fet, well pleafed with our acquifitions during this excurfion. At our return we were told, that the Indian family, whom we had feen paddling into the cove, in the morning, in their beft attire, had gradually approached the fhip with great caution. Captain Cook meeting them in a boat, quitted it, and went into their canoe, but could not prevail on them to come along-fide of the fhip, and was obliged to leave them to follow their own inclination. At length they went ahhore, in a little creek hard by ours, and afterwards came and fat down on the fhore abreaft of the veffel, to which they were near enough to be heard, and fpoken
fpoken to. The captain gave orders to play the
1773. April. fife and bagpipe, and to beat the drum; but they entirely difregarded the two firft, and were not very attentive to the laft, nor could any thing induce them to come on board. Several of our officers and feamen then going on fhore to them, were received with great good-nature, and attempted to converfe with them by figns, which were for the moft part unintelligible, or mifunderfocd. However the young woman fhewed a great partiality to a young feaman, and from her geftures it was fuppofed the took him for one of her own fex; but whether he had taken fome improper liberties, or whether fhe had any other reafon to be difgufted, the would never fuffer him to come near her afterwards. We likewife went on fhore to them, after returning from our excurfion, and the man defiring us to fit down by him, frequently pointed at our boats that plyed between the fhip and the thore, and it appeared that he was defirous of poffefling one of them. They faid all night about a hundred yards from our watering-place, lighted a fire, and dreffed fome fifh there, thus evidently placing great confidence in us. In the evening a party of officers fet out in a fmall boat, to the north fide of the bay, where they intended to pafs the night, and continue fhooting all the next day.

Captain Cook, accompanied by my father, went in his boat the next morning, to furvey the Mon. 12. rocks and ines in the mouth of the bay. They entered a fine fnug cove, on the S. E. fide of the ifland, under which we had found our firft anchorage, and which was therefore named Anchor Ifland. Here they fat down by the fide of a pleafant brook, and made a flight repaft on fome boiled craw-fifh, which they had brought with them. From thence they proceeded to the outermoft

17-3. ermoft iflands, where they difcovered a number Arril. of feals on the rocks, fhot fourteen of them with ball, which they carried away with them, and might have killed many more, had the furf permitted them to land upon all the rocks in fafety. The feals in Dufky Bay are all of the fpecies called fea-bears,* which profeffor Steller firft defcribed on Bering's Ifland, near Kamtchatka, and which are confequently common to both hemifpheres. They are very numerous on the fouthern extremities of the continents of America and Africa, likewife at New Zeeland, and on Diemen's Land. The only difference we could perceive between thefe at Dulky Bay, and thofe defcribed at Kamtchatka, confifted in the fize, in refpect of which ours were inferior. They found it difficult to kill them, and many, though grievounly wounded, efcaped into the fea, and tinged the rocks and the water with their blood. Their meat, which is almoft black, and their heart and liver were eatable, the former, by the help of a good appetite, and a little imagination, might be eaten for beef, and the laft were perfectly fimilar to a calf's pluck. We were, however, obliged to cut away every bit of fat, before we dreffed the meat, which otherwife had an infupportable tafte of train-oil. Captain Cook availed himfelf of this opportunity of laying in a provifion of lamp-oil, which was boiled out of the feals fat: he alfo ordered the fkins to be made ufe of for repairing our rigging.
Tves. 13. The fuccefs of the preceding day encouraged him to make another trip to the Seal Mands, on which my father accompanied him again; but the fea ran fo very high, that it was by no means practicable to come near, and much lefs to land

\footnotetext{
* Phoca urfina Linn. Urfine Seal, Pennant. Syn. Qund. 271.
}

\section*{ROUND THE WORLD.}
on them. With a great deal of difficuliy they \(17 \%\) : weathered the S.W. point of Anchor Inand, Arkat. where the fea tumbled in with great impetuofity, and was fo much agitated, as to affict the mariners with ficknefs. They then rowed along the north fhore of that inland, where the captain landed to take the bearings of different points. It happened very fortunately, that they had taken this route; for they now difcovered the fmall boat adrift, which fet off from the floop on the 1 ith in the evening, and laid hold of it the moment before it was going to be dafhed againft the rocks. The boat was immediately fecured in a fmall creek, and after refrefhing the people with fome provifions which they found in it, captain Cook proceeded to the place where he fuppofed the party of officers to be, from whom it was drifted away. Between feven and eight in the evening they reached the cove, and found them on a fmall ifland, to which they could not then approach, becaufe the tide had left it. They landed therefore on an adjacent point, and after many fruitlefs attempts, at length fucceeded in making a fire. Here they broiled fome fifh, and after fupper lay down; the ftony beach was their bed, and their covering the canopy of heaven.

At three o'clock in the morning the tide permitted them to take the fportfmen from their barren ifland; after which they immediately failed with a fair wind, accompanied with howers of rain, to the cove where they had fecured the other boat. Here they found an immenfe number of petrels of the bluifh fpecies, common over the whole fouthern ocean,* fome being on the wing, and others in the woods, in holes under ground

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. ground formed between the roots of trees and in

APRil. the crevices of rocks, in places not eafily acceffible, where they probably had their nefts and young. In day time, not one of them was to be feen there, the old ones then being probably out at fea in queft of food. They now faw them going out for that purpore, and two days ago they had been obferved at the Seal Illands, returning in the evening in order to feed their young with the food which they had collected. They now heard a great variety of confufed founds coming from the fides of the hill, fome very acute, others like the croaking of frogs, which were made by thefe petrels. At other times we have found innumerable holes on the top of one of the Seal llands, and heard the young petrels making a noife in them; but as the holes communicated with each other, it was impoffible to come at one of them. We had already frequently obferved the old petrels flying about us in the evening, when we returned late from our excurfions, but till now they had always been taken for bats. They have a broad bill, and a blackifh ftripe acrofs their bluifh wings and body, and are not fo large as the common Thear-water or Mank's petrel of our feas. The inftinct is very wonderful which actuates thefe birds to burrow holes under ground for their young, to roam all over the ocean in queft of food for their fupport, and to find their way to the fhore when they are feveral hundred leagues diftant from it.

Having replaced the fportimen in their boat, they all proceeded to the hip, which they reached at feven in the morning, not a little fatigued from the night's expedition. The natives, probably forefeeing the bad weather, which continued all this day, had left the place they occupied

\section*{ROUND THE WORLD.}
near the fhip on the preceding night, and had 1773. retired to their habitations on Indian Mland. Ar"il.

The weather cleared up a little on the 15th in Thatis. the morning. Captain Cook therefore fet out to continue his furvey of the N. W. part of the bay, and we accompanied a party of officers to the cove in' that part where we intended to take up our quarters for the next night. In our way we rowed along-fide of our fifhing-boat, which conftantly went out in the morning to provide all our crew with their dinner, and took in a fail which we ftood in need of. We were furprifed to fee the young black dog in the boat with them, which ran away from us on the 2 d inftant; and were told, that, taking their ftation near the thore, at day-break they had heard a very piteous howling on the next point, and had found the dog, which came into the boat very readily as foon as they put in fhore. Though this animal had been in the woods during a fortnight, yet it was by no means famifhed, but on the contrary looked well fed and very fleek. A large fpecies of rails, which we called water-hens, and which are very numerous in this part of New Zeeland, with perhaps fome fhell-fifh on the rocks, or fome dead fifh thrown up by the fea, had in all probability afforded it fufficient fupport. We may from hence conclude, that as there is abundance of food for carnivorous animals in New Zeeland, they would probably be very numerous if they exifted there at all, and efpecially if they were endowed with any degree of fagacity, like the fox, or cat tribes. In that cafe they could not have efcaped the notice of our numerous parties, nor of the natives, and the latter would certainly have preferved their furrs, as a valuable article of drefs in their moift and raw climate, for want of which they now wear the \(\mathrm{k} i n \mathrm{~s}\) of dogs and of birds.
1773. April.
birds. The queftion, whether New Zeeland contained any wild quadrupeds, had engaged our attention from our firit arrival there. One of our people, ftrongly perfuaded that fo great a country could not fail of poffeffing new and unknown animals, had already twice reported that he had feen a brown animal, fomething lefs than a jackal or little fox, about the dawn of morning, fitting on a ftump of a tree near our tents, and running off at his approach. But as this circumitance has never been confirmed by any fubfequent teftimony, nothing is more probable than that the want of day-light had deceived him, and that he had either obferved one of the numerous wood-hens, which are brown, and creep through the bufhes very frequently; or that one of our cats, on the watch for little birds, had been miftaken for a new quadruped.

Having taken the fail on board, we continued our courfe, and began our refearches in the cove, where we killed many ducks of four different fpecies. One of them was remarkably beautiful, and of the fize of the eider duck. Its plumage was of a blackifh brown, elegantly fprinkled with white; all the covers of the wing were white, the rump and vent ferruginous, the quill and tail-feathers black, and the fecondaries green. Another fpecies was nearly of the fize of our mallard, but all of a light-brown, every feather being edged with a yellowifh white, of which there was a line on the cheek and eyebrows; the eyes of this fort had irides of a bright yellow, and on the wings there was a fpot of fine bluilh green inclofed in black lines. The third fort was a bluifh grey whiftling duck, about the fize of a wigeon; its bill had a remarkable membranaceous fubftance at the extremity on both fides, probably becaufe the bird

\section*{ROUND THE WORLD.}
is intended to live by fucking the worms, \&c. in the mud, when the tide retires from the beaches. Its breaft was fprinkled with ferruginous feathers, and on the wings it had a large white fpot. The fourth and mott common fort is a fmall brown duck, which is neally the fame as the Englifh gadwall. A little before dark, the captain, having examined all the harbours which lay in his way, fhot a number of wild fowl, and caught fifh fufficient for all our party, arrived at our rendezvous, where we had erected a tent, by means of the fails and oars. Our keen appetites difpenfed with the arts of cookery, and our fifh broiled à l' Indienne, over a ftrong fire, on a bit of a ftick, tafted as delicioufly as we could defire. With this fupper, and a draught of fpruce-beer, of which we had carried a fmall keg with us, we compofed ourfelves to fleep, and contrived to pafs the night, though not quite fo comfortably as in our beds. The next morning a boat went up to the head of the cove to ftart the game, which was done fo effectually, that almoft all the wild-ducks efcaped, the rain having wetted all our fire-arms. The captain now landed in the cove, and walked acrofs a narrow ifthmus, which feparates it from another cove on the north fide of the Five-finger Land. Here he found a prodigious number of the water-hens before mentioned, and brought away ten couple of them, which recompenfed him for the trouble of croffing the ifthmus, through intricate woods, where the water was frequently up to the waift. At nine o'clock we were all affembled again, and fet out on our return to the fhip; but as we continued examining every creek and harbour which we found on our way, and encreafing our collection of wildfowl, we did not return till feven o'clock in the Vol. I. K
fyetug.

\section*{A V O Y A G E}
1773. evening. We brought feven dozen of various Apris. forts of birds with us, among which were near \(\sim^{\text {thirty ducks, and immediately diftributed them }}\) to the feveral meffes of officers, petty-officers, and feamen, as far as they would go. We may take this opportunity to obferve, that there is no part of New Zeeland fo well ftocked with birds of all kinds as Dufky Bay. We found feveral forts of wild-ducks, fhags, cormorants, oyftercatchers or fea-pies, water or wood-hens, albatroffes, gannets, gulls, pinguins, and others of the aquatic kind. The land-birds were hawks, parrots, pigeons, and many leffer ones of new and unknown fpecies. The parrots were of two forts; one fmall and green, and the other very large, greyifh-green, with a reddifh breaft. As the birds of that genus are commonly confined to the warmer climates, we were much furprifed to find them in the latitude of \(46^{\circ}\), expofed to the raw rainy weather, which the height of the mountains almoft conftantly produces in Dukky Bay.
Sund. r8. The next day was fo rainy, that none of us could venture to ftir out of the floop; but the day after proving a very fine one, my father went up the hill, along the courfe of the brook, from which we filled our cafks. About half a mile upwards, through ferns, rotten trees, and thick forefts, he came to a fine lake of frefh water nearly half a mile in diameter. Its water was limpid and well tafted, but had acquired a brownifh hue, from the leaves of trees which dropped into it on all fides; he obferved no other inhabitant in it than a fmall fpecies of fifh (efox), without fcales, refembling a little trout; its colour was brown, and mottled with yellowifh fpots in the fhape of fome ancient Afiatic chaFacters. The whole lake was furrounded by a

\section*{ROÚND THE WÖRL̇D.}
thick foreft, confifting of the largeft trees, and :-73. the mountains rofe all round it in a variety of Apric. forms. The environs were deferted and filent, not the leaft note of the common birds was heard; for it was rather cold at this elevation; and not a fingle plant had bloffoms. The whole fcene was perfectly fitted to infpire a kind of pleafing melancholy, and to encourage hermit-meditation. The fine weather induced our friends the natives to pay us another vifit; they took up their quarters on the fame fpot, where they had been this day fevennight, and when they were again invited to come on board, they promifed to come the next morning. In the mean while they had a quarrel among themfelves, the man beat the two women who were fuppofed to te his wives; the young girl in return fruck him, and then began to weep. What the caufe of this difagreement was, we cannot determine; but if the young woman was really the man's daughter, which we could never clearly underftand, it fhould feem that the filial duties are ftrangely confounded among them; or which is more probable, that this fecluded family acted in every refpect, not according to the cuftoms and regulations of a civil fociety, but from the impulfes of nature, which fpeak aloud againtt every degree of oppreffion.

In the morning, the man refolved to come on Mon. 19 . board with the young woman, but fent the reft of his family a fifhing in the canoe. He walked with her round the cove, to the place where we had made a ftage or temporary bridge from the veffel to the Chore. Before they entered upon this, they were conducted to a place on the hill, where we kept our fheep and goats, which they feemed to be much furprifed with, and defired to poffers; but as we forefaw that they mult die

\section*{A \(\quad \mathbf{V} \quad O \quad Y \quad A \quad G \quad E\)}
1793. for want of proper food if we left them here,

April. we could not comply with this requert. Captain
\(\underbrace{\text { Cook, and my father met them at the ftage, and }}\) this man after faluting them with his nofe againft theirs, gave each of them a new cloak or piece of cloth made of the flax-plant, curioufly interwoven with parrot's feathers, and prefented the captain with a piece of green nephritic ftone, or jadde, \({ }^{*}\) which was formed into the blade of a hatchet. Before he ftepped on the bridge, he turned afide, put a piece of a bird's Kkin with white feathers through the hole in one of his ears, and broke off a fmall green branch from a neighbouring bufh. With this he walked on, and ftopping when he could juft reach the Chip's fides with his hand, fruck them and the mainfhrouds feveral times with his branch. He then began to repeat a kind of feech or prayer, which feemed to have regular cadences, and to be metrically arranged as a poem; his eyes were fixed upon the place he had touched, his voice was raifed, and his whole behaviour grave and folemn. The young woman, though at other times laughing and dancing, now kept clofe to the man, and was ferious all the while he fpoke, which lafted about two or three minutes; at the clofe of his fpeech he ftruck the תhip's fide again, threw the branch into the main chains, and came aboard. This manner of delivering folemn orations, and making peace, is practifed by all the nations which have been feen in the South Sea before our voyage, as appears from the teftimonies of various voyagers. Both the man and woman had a fpear in their hands when they were conducted on the quarter-deck; there they admired every thing they faw : a few geefe in our

\footnotetext{

}

\section*{ROUND THE WORLD.}
coops particularly attracted their attention: a \(1: 73\). handfome cat, was likewife much courted, but they always ftroked it the wrong way, fo as to make the hair ftand upright, though we fhowed them to do it in a contrary direction; probably they admired the richnefs of the furr. The man looked upon every new object with furprize, but as his attention could not be fixed to any one object for more than a fingle moment, many of our works of art muft have appeared to him as incomprehenfible, as thofe of nature. However, the number and ftrength of our decks and of other parts of our veffel engroffed his admiration more than any thing elfe. The girl, feeing Mr. Hodges, whofe pencil the had much admired, made him a prefent of a piece of cloth, of the fame kind as thofe which the man had given to captain Cook and my father. This cuftom of making prefents is not fo ufual in other parts of New Zeeland, as in the tropical iflands: but it appears on the whole, that this family were not always guided by national cuftoms, but took fuch meafures as prudence and integrity fuggefted in their fituation, which left them at the mercy of a greater force. We defired them to come into the cabin, and after a long debate among themfelves, they accepted the invitation, and defcended by the ladder. Here they admired every thing, and were particularly pleared to learn the ufe of chairs, and that they might be removed from place to place. They were prefented with hatchets by the captain and my father, and received a great number of trinkets of lefs value. Thefe laft the man laid down in a heap, and would have gone away without them, had we not reminded him of them; whereas he never let a hatchet or fpikenail go out of his hand, after he had once taken hold
1713. hold of it. They faw us fit down to our break-

April. faft, and were feated near us; but all our intreaties could not prevail on them to touch our victuals. They likewife exprefsly inquired where we went to fleep, and the captain fhowed them his cot, which was fufpended, at which they were mightily pleafed. From the cabin they proceeded to the gun-room, on the deck below; and having received feveral prefents there, they returned to the captain again. The man now pulled out a little leather bag, probably of feals fkin, and having, with a good deal of ceremony, put in his fingers, which he pulled out covered with oil, offered to anoint captain Cook's hair; this honour was however declined, becaufe the unguent, though perhaps held as a delicious perfume, and as the moft precious thing the man could beftow, yet feemed to our noftrils not a little offenfive ; and the very fqualid appearance of the bag in which it was contained, contributed to make it ftill more difguftful. Mr. Hodges did not efcape fo well ; for the girl, having a tuft of feathers, dipt in oil, on a ftring round her neck, infilted upon dreffing him out with it, and he was forced to wear the odoriferous prefent, in pure civility. We left them to amufe themfelves in the other parts of the Mip, and fet out in two boats, with the captain and feveral officers, to examine a long inlet which ran to the eaftward, in fight of our cove. In proportion as we receded from the fea, we found the mountains much higher, more fteep, and barren: the trees gradually diminifhed in height and circumference, and dwindled to fhrubs, contrary to what is obferved in other parts of the world, where the inland countries have finer forefts and better timber than the fea fhores. The interior ranges of mountains called the Southern Alps, appeared

\section*{ROUND THE WORLD.}
very diftinctly, of a great height, and covered with fnow on their fummits. We paffed by a 1773. Aprid. number of fhady iflands, which contained little coves and rivulets; and on one of the projecting points, oppofite the laft ifland, we faw a fine cafcade falling into the water, over a feep rock, clothed with thick bufhes and trees. 'The water was perfectly calm, polifhed, and tranfparent; the landfcape was diftinctly reflected in it, and the various romantic fhapes or the fteep mountains, contrafted in different maffes of light and Shade, had an admirable effect. About noon we put into a fmall cove, where we caught fome fifh, and fhot a few birds. From thence we rowed again till dufk, when we entered a fine cove, at the extremity of this long arm, and were obliged to take up our quarters on the firft beach we could land upon, after being prevented by fhoals from proceeding to the head of the cove. There we thought we perceived fomething fimilar to a fmoke, but finding nothing to confirm this opinion, and efpecially feeing no fire at night, we readily acquiefced in the idea of having been deceived by fome mifty vapour, or other object, which we might have indiftinctly feen. We prepared with great alacrity to pals the night here, and no one was excepted from his tafk on thefe occafions. As it may be curious to know the nature of our marooning parties, as our feamen call them, I fhall here give forme account of our proceedings this night. Having found a beach to land on, with a brook, and a wood clofe to it, our firft care was to bring on fhore the oars, fails, cloaks, guns, hatchets, \(\& \mathrm{cc}\). not forgetting a little keg of fpruce-beer, and perhaps a bottle of ftrong liquor. The boats were next fecured at a grappling, and with a rope made falt to a tree on thore. Some of us were
1773. then bufied in collecting dry pieces of wood for April. fuel, which in fuch a wet country as New Zeeland, was fometimes very difficult; fome erected a tent or wigwam, made of the oars and fails together with frong branches of trees, in a convenient dry fpot, fheltered as much as poffible, in cale of wind and rain. Others lighted the fire in front of the tent, by burning fome oakum, in which they had previoufly rubbed a quantity of gun-powder. The preparations for fupper were very fhort: fome of the failors cleaned our fifhes, fkinned the water-fowl, fplit, and laftly broiled them; when they were dreffed, one of the boat's gang-boards, wafhed clean, anfwered the feveral purpofes of a table, of difhes, and plates; and our fingers and teeth did yeoman's fervice, inftead of knives and forks. A keen appetite, procured by ftrong exercife, and excited by the fharp air of the country, foon taught us to overcome the ideas of indelicacy, which civilized pations connect with this way of living; and we never fo ftrongly felt how little is wanting to fatisfy the cravings of the ftomach, and to fupport the exiftence of human beings, as on thefe occafions. After fupper we liftened a while to the original comic vein of our boat's crew, who huddled round the fire, made their meal, and recited a number of droll fories, intermixed with hearty curfes, oaths, and indecent expreffions, but feldom without real humour. Then ftrewing our tent with heaps of fern leaves, and wrapping ourfelves in our boat-cloaks, with our guns and fhooting-bags for our pillows, we compofed ourfelves to fleep.

At day-break Captain Cook and my father, with two men, went in a fmall boat to take a view of the head of the cove, where they faw fome flat land. They went on fhore upon it at one corner,
corner, and ordered the boat to meet them at 197. the oppofite point. They had not walked a great April. way before they faw fome wild-ducks, and, by creeping through the bufhes, came near enough to fire and kill one of them. The moment they had fired they heard a hideous fhout of feveral loud and piercing voices round about them from different quarters. They fhouted in their turn, and taking up the duck retired towards the boat, which was full half a mile off. The natives continued their clamours, but didanot follow them; for indeed a deep branch of a river was between them, and their numbers were too inconfiderable to attempt hoftilities; but thefe circumfances we only learnt in the fequel. We had in the mean while taken a ramble into the woods in fearch of plants; but hearing the fhout of the natives, we embarked immediately in the remaining boat and joined the other, which by this time had taken Captain Cook and my father on board. We therefore proceeded up into a river, which was deep enough for the boats, and amufed ourfelves with fhooting ducks, which were here in great plenty. We now faw a man, woman, and child on the left fhore, and the woman waved to us with a white bird's \(\mathbb{1}\) in, probably in fign of peace and friendfhip. On this occafion I could not help admiring, that almoft all nations on our globe have tacitly agreed upon the white colour, or upon green branches, as tokens of a peaceable difpofition, and that with thefe in their hands they confidently rely on a ftranger's placability. Perhaps this general agreement had its origin anterior to the univerfal difperfion of the human fpecies; this will feem the more probable when it is confidered, that neither the white colour, nor the green boughs of a tree, have any intrinfic character, to which the idea of amity is natu-
1773. rally and neceffarily referred. Our boat being April. neareft to thefe natives, Captain Cook defired \(\underbrace{\text { and }}_{\text {the officer in it to land, and accept their proffer- }}\) ed friendfhip, whilit he meant to take the advantage of the tide to get as high up in the river as poffible. Whether the officer did not underftand Captain Cook's meaning, or whether he was too deeply engaged with duck fhooting, we did not land; and the poor people, to all appearance apprehenfive of the worft confequences, froma fet of men who nejected their propofals of peace, fled into the woods with the utmoft precipitation. The Captain in the mean while rowed about half a mile higher, where his boat was ftopped by the violence of the ftream, and by feveral huge ftones which lay acrofs the bed of the river, and redoubled the rapidity of the water. Here, however, he found a new fpecies of ducks, the fifth we had obferved in Dufky Bay. Its fize was fomething lefs than that of a teal, the colour of a lhining greenifh black above, and a dark footy grey below; it had a purple caft on the head, a lead-coloured bill and feet, a golden eye, and a white bar in the leffer quill feathers. On Captain Cook's return to us, we perceived two men in the woods along the bank oppofite to that where we had feen the friendly family. The Captain endeavoured to form an acquaintance with them, but when the boat came clofe along Shore, they always retired into the woods, which were fo thick, that they not only covered them from our fight, but alfo made it unadvifable to follow them. The ebbing tide obliged us to retire out of this river to the place where we had fpent the night; and, after breakfalting there, we embarked in order to fet out on our return to the Refolution. However, when we had farce put off, we perceived the two natives, who had walked
walked acrofs the woods to an open foot, from whence they halloo'd to us. The captain immediately ordered both the boats to row up to them, and coming into thallow water, he got out unarmed, attended by two men, and waded to the fhore, with a fheet of white paper in his hand. The two natives ftood about one hundred yards from the water's fide, each of them with a long fpear in his hand. When the captain advanced with his two men they retired; he then proceeded alone, but could not prevail on them to lay afide their fpears. At lait one of them fluck his fear in the ground, and taking a bunch of grals in his hand met the captain, and giving him one end of the grafs to hold while he kept the other, he pronounced a folemn fpeech in a loud tone of voice, during a minute or two, in which he made feveral paufes, perhaps waiting for a reply. As foon as this ceremony was over, they faluted each other, and the New Zeelander took a new garment from his own fhoulders and prefented it to the captain, for which he received a hatchet in return. Peace and friendihip being thus firmly eitablimed, the other man likewife came up to falute the captain, and was prefented with a hatchet; and feveral of us came alhore to them, at which they were not the leaft alarmed, but received every new comer with great cordiality. We now perceived feveral other natives, probably women, on the fkirts of the wood, and the two men earneftly entreated us to go up to their habitations, intimating by figns, that they would give us fomething to eat there; but the tide and other circumftances did not permit us to accept
- their invitation. When we had taken leave of them, the two men followed us to our boats, where they defired us to remove the mufkets which lay acrofs the ftern, and having complied
1773. with their requeft, they came along-fide, and afAprit. fifted us to launch the boats, which were aground \(\underbrace{}_{\text {on account of the ebb. We found however that }}\) it was neceffary to have an eye upon them, becaufe they feemed to covet the poffeffion of every thing they faw or could lay hands on, except the mukkets, wrich they would not touch, being taught to refpect them as inftruments of death, on account of the havock they had feen us make among the wild-fowl. We obferved no canoes among them, and their only means of tranfporting themfelves acrols the river, was on a few logs of wood connected together into a kind of raft, which was perfectly fufficient for that purpofe. Fifh and wild-fowl were in fuch plenty here, that they can have little occafion to roam to any diftance in queit of them, as their numbers did not feem to exceed three families; and the whole bay being almoft entirely deftitute of inhabitants, one fingle family more excepted, they need not be apprehenfive of difturbance from bad neighbours. The features of thefe men were rather wild, but not ill-favoured; their complexion refembled that of the family on Indian Ifland, of a mahogany brown; their hair bulhy, and their beards frizzled and black. They were of a middling ftature and ftout, but their legs and thighs very flender, and their knees too much fwelled in proportion. Their drefs and general behaviour feemed to be the fame as that of the other family before mentioned. The courage of this people has fomething fingular in it, for it fhould feem, that in fpight of their inferiority of force, they cannot brook the thought of hiding themfelves, at leaft not till they have made an attempt to eftablifh an intercourfe, or prove the principles of the frangers who approach them. It would have been impoffible for us, among the numerous iflands
and harbours, and in the mazy forefts upon them, to have found out the family which we faw on the Indian Ifland, if they had nor difcovered themfelves, and thus made the filf advances. We might alfo have departed from the cove without knowing that it was inhabited, if the natives had not fhouted at the difcharge of our mukets. In both cafes a certain opennefs and honefty, appear Atrongly to mark their character; for if it had the leaft admixture of treachery, they would have tried to fall upon us unawares, as they could not have failed of meeting with frequent opportunities of cutting off our numerous fmall parties, when difperfed in different parts of the woods.

It was noon when we left thefe two men, and proceeded down on the north fide of the long arm, of which Captain Cook took the bearings in his way. The night overtook us before he had completed this furvey; fo that we were forced to leave another arm unexplored, and to haften to the veffel, which we reached about eight o'clock at night. We were told that the native with his companion, the young woman, had ftaid on board till noon, after our departure; and having been informed, that we had left fome prefents in his double canoe in Cafcade Cove, he employed fome of his people to bring them away from thence, after which the whole family remained in the neighbourhcod of the fhip till this morning. They then took their departure, and we never faw them again, which was the more extraordinary, as they never went away empty handed from us, but had at different times received nine or ten hatchets, and four times that number of large fpike nails, befides other articles. As far as thefe things may be counted riches among them, this man was the wealthieft in all New Zeeland \({ }_{2}\)
1773. Zeeland, being poffeffed of more hatchets, than Arril. there were in the whole country befides, before the fecond arrival of Britifh veffels. The thin population in this part of the ifland makes it probable, that the few families in it lead a nomadic or wandering life, and remove according as the feafon, the conveniency of filhing, and other circumftances render it neceffary. We were therefore of opinion, that our friendly family had only removed upon this principle; but we were likewife told that before they went away, the man had made figns of going to kill men, and employing the hatchet as an offenfive weapon. If this circumftance was rightly underftood, we cannot fufficiently wonder that a family fo fecluded from all the reft of the world, in a fpacious bay, where they have a fuperfluity of food, and of all the neceffaries of life, the fewnefs of their wants confidered, fhould fill have a thought of warring with their fellow-creatures, when they might live peaceably and happily in their retirement. The pleafing hope of facilitating the œconomical operations of thefe people, and of encouraging fome degree of agriculture among them, by prefenting them with ufeful tools, was defeated by this determination. The ftate of barbarifm, in which the New Zeelanders may juftly be faid to live, and which generally hearkens to no other voice than that of the frongeft, might make them more liable than any other nation to refolve upon the deftruction of their fellow-citizens, as foon as an opportunity offered; and their innate and favage valour may probably affift them to put fuch projects in execution. On this occafion, I cannot omit mentioning a remarkable inftance of courage which characterifed the old man who had now left us; our officers having fired feveral mulkets in his prefence, he became defirous of difcharging
difcharging one himfelf, which they eafily granted; the young woman, fuppofed to be his daughter, fell proftrate on the ground before him, and entreated him, with the itrongeft marks of fear, to defift from his undertaking; but he was not to be diverted from his purpofe, and fired the mulket with the greatelt refolution, repeating it afterwards three or four times. This warlike difpefition, together with the irafcible temper of the whole nation, that cannot brook the leaft injury, is probably the caufe which has induced this fingle family, and the few in the long inlet we had vifited, to feparate from the reft of their fellowcreatures. All the difputes of favage people commonly terminate in the deftruction of one of their parties, unlefs they evade it by a well-timed flight: this may have been the cafe of the inhabitants of Dufky Bay, and admitting it, their defign of going to fight, is no more than a project of being revenged on their foes and oppreffors.

On the 23d, early in the morning, feveral of- Friday 23.
ficers, accompanied by Dr. Sparrman, went to Cafcade Cove, in order to afcend one of the higheft mountains in the bay, which was fituated on one fide of it. About two o'clock they reached the fummit, which they made known to us by lighting a great fire there. We fhould have accompanied them on this excurfion, but a violent flux attended with gripes confined us on board. It was owing to the careleffnefs of our cook, who had fuffered our copper kitchen-furniture to become full of verdigrife. In the evening however, we went to meet our travellers in Cafcade Cove, and after fearching the woods fome time for plants and birds, we brought them on board with us. At night the fire had fpread in a bright circular garland all round the fummit of the mountain, and made a very elegant illumination

\section*{A V O Y A G E}
1773. in honour of St. George's day. Our party relatApril. ed that they had a profpect of the whole bay, and of the fea beyond the mountains to the fouth, S. W. and W. N. W. for more than 20 leagues all round them, the weather being remarkably fine and clear. The inland mountains were very barren, and confifted of huge broken and craggy maffes, all covered with fnow on their fummits; the top of that on which they ftood, afforded feveral low fhrubs and various alpine plants, which we had feen no where elfe. A little lower down they faw a taller fhrubbery; below this a fpace covered with dry or dead trees, and next to thofe the living woods began, which increafed in fize as they defcended. The afcent had been fatiguing enough, on account of the intricacy of briars and climbers, but the defcent alfo was dangerous, becaufe of many precipices which they met on their way, and along moft of which they contrived to llide down by the help of trees and bufhes. At a confiderable height they met with three or four trees, which they took for palms, and of which they cut down one, and ufed its middlemoft thoot for their refrefhment. Thefe trees, however were not the true cabbage-palms, nor did they belong at all to the clafs of palms, which are generally confined to more temperate climates. They were properly fpeaking, a new fpecies of dragon-trees, with broad leaves, (dracana auftralis) of which the central fhoot when quite tender, taftes fomething like an almond's kernel, with a little of the flavour of cabbage. We afterwards obferved more of them in other parts of this bay.

The next morning I accompanied captain Cook to the cove on the N. W. part of the bay, which from the tranfaction of this day, received the name of Goofe Cove. We had five tame geefe left,

\section*{ROUND THE WORLD.}
left, of thofe which we had taken on board at \(17 \% 3\). the Cape of Good Hope, and thefe we intended to leave in New Zeeland to breed, and run wild. This cove was looked upon as the moft convenient place for that purpofe, fince there were no inhabitants to difturb then, and becaufe it afforded an abundance of proper food. We fet them on thore, and they immediately ran to feed in the mud, at the head of the cove where ue left them, pronouncing over them the crefcite \(\mathcal{E}^{3}\) multiplicamini, for the benefit of future generations of navigators and New Zeelanders. There can be little doubt indeed, but that they will fucceed in this fecluded foot, and in time fpread over the whole country, anfwerable to our original intention. The reft of this day was fpent in thooting, and among the different birds killed was a white heron (ardea alba), common to Europe.

The fair weather, which had lafted eight days fucceffively, was entirely at an end on the 25 th, sund. 25 . when the rain fet in again towards evening, and continued till the next day at noon. We had Mond.26. reafon to believe fuch a continuance of dry weather very uncommon in Dukky Bay, and particularly at this feafon, becaufe we never experienced above two fair days one after another, either before or after this week. We had, however, improved this opportunity to complete our wood and water, and put the floop in condition to go out to fea, and having taken on board all our men, we caft off our bridge, and removed out of the creek, into the middle of our cove, ready to fail with the firf fair wind. The fuperiority of a fate of civilization over that of barbarifm could not be more clearly fated, than by the alterations and improvements we had made in this place. In the courfe of a few days, a fmall part Vox. I. \(L\) of
1773. of us had cleared away the woods from a furface April. of more than an acre, which fifty New Zeeland-\(\xrightarrow[\sim]{-}\) ers, with their tools of ftone, could not have performed in three months. This fpot, where immenfe numbers of plants left to themfelves lived and decayed by turns, in one confufed inanimated heap; this fpot, we had converted into an active fcene, where a hundred and twenty men purfued various branches of employment with unremitted ardour:
Qualis apes cefate nova per fiorea rura
Exercet fub fole labor.
VIrGIL.

Such was their toil, and fuch their buly pains, As exercife the bees in flowery plains, When winter paft and fummer fcarce begun, Invites them forth to labour in the fun. Dryden.

We felled tall timber-trees, which, but for ourfelves, had crumbled to duft with age; our fawyers cut them into planks, or we fplit them into billets for fuel. By the fide of a murmuring rivulet, whofe paffage into the fea we facilitated, a long range of cafks, which had been prepared by our coopers for that purpofe, ftood ready to be filled with water. Here afcended the fteam of a large cauldron, in which we brewed, from neglected indigenous plants, a falutary and palatable potion, for the ufe of our labourers. In the offing, fome of our crew appeared providing a meal of delicious fifh for the refrefhment of their fellows. Our caulkers and riggers were ftationed on the fides and mafts of the veffel, and their occupations gave life to the fcene, and ftruck the ear with various noifes, whilft the anvil on the hill refounded with the ftrokes of the weighty hammer. Already the polite arts began to flourifh in this new fettlement; the various tribes of animals

\section*{ROUND THE WORLD.}
animals and vegetables, which dwelt in the unfrequented woods, were imitated by an artilt in his noviciate; and the romantic profpects of this Thaggy country, lived on the canvas in the glowing tints of nature, who was amazed to fee herfelf fo clofely copied. Nor had fcience difdained to vifit us in this folitary foot: an obfervatory arofe in the centre of our works, filled with the moft accurate inftruments, where the attentive eye of the aftronomer contemplated the motions of the celeftial bodies. The plants which clothed the ground, and the wonders of the animal creation, both in the forefts and the feas, likewife attracted the notice of philofophers, whofe time was devoted to mark their differences and ufes. In a word, all around us we perceived the rife of arts, and the dawn of fcience, in a country which had hitherto lain plunged in one long night of ignorance and barbarifm! But this pleafing picture of improvement was not to laft, and like a meteor, vanifhed as fuddenly as it was formed. We re-imbarked all our inftruments and utenfils, and left no other veftiges of our refidence, than a piece of ground, from whence we had cleared the wood. We fowed indeed a quantity of European garden feeds of the beft kinds; but it is obvious that the fhoots of the furrounding weeds will fhortly ftifle every falutary and ufeful plant, and that in a few years our abode no longer difcernible, muft return to its original chaotic ftate.

A new paffage out to fea, to the northward, was difcovered on the 27 th; and it being more convenient for our purpofe, than that by which we entered, we weighed on the 2gth in the after- Tharf.zg. noon, in order to ftand up the bay towards it. However, the wind falling calm, we were obliged to come to again in 43 fathom, under the north fide of an ifland which we named Long Inland,
1773. Apris.
1773. about two leagues from our cove. At nine the April. next morning we proceeded with a light breeze Friday 30. at weft, which with all our boats towing a-head, was fcarce fufficient to ftem the current; for after ftruggling till fix in the evening, we had gained no more than five miles, and anchored under the fame ifland, only a hundred yards from the fhore.
May At day light next morning we attempted to Satur. I. work to windward, having a gentle air down the bay, but the breeze dying away, we loft ground, and came with the ftern fo clofe to the fhore, that our enfign-ftaff was entangled in the branches of trees, on a perpendicular rock, clofe to which we could find no bottom. We were towed off without receiving any damage, and dropt an anchor below the place we fet out from, in a little cove on the north fide of Long Ifland. Here we found two huts, and two fire-places, which feemed to prove that the place had lately been inhabited. During our ftay here, we difcovered feveral new birds and fifh; and indeed caught fome fifh which are common to Europe, viz. the horfe-mackarel, the greater dog.fifh, and the fmooth hound.* The Captain was taken ill of a fever and violent pain in the groin, which terminated in a rheumatic fwelling of the right foot, contracted probably by wading too frequently in the water, and fitting too long in the boat after it, without changing his cloaths.
Tuefd: 4. We were detained in this cove by calms, attended with continual rains, till the \(4^{\text {th }}\) in the afternoon, when, affifted by a light breeze at S. W. we entered the reach or paffage leading out to fea. The breeze coming a-head juft at that time obliged us to anchor again under the eaft point of the entrance, before a fandy beach. Thefe

}

\section*{ROUND THE WORLD.}

Thefe little delays gave us opportunities of ex- 1773 . amining the fhores, from whence we never failed to bring on board new acquifitions to the vegetaMay
 ble and animal fyftem. During night we had heavy fqualls of wind, attended with rain, hail, Wed. 5 . and fnow, and fome loud thunder claps. Daylight exhibited to our view all the tops of the hills round us covered with fnow. At two o'clock in the afternoon a light breeze fprung up at S.S. W. which carried us down the paffage, though not without the help of our boats, to the laft point near the opening into the fea, where we anchored at eight in the evening. The fhores on both fides of the paffage were theeper than any we had feen before, and formed various wild landfcapes, ornamented with numerous little cafcades, and many dragon-trees (dracana).

The captain being confined to the cabin by his Thurr. 6. rheumatifm, fent an officer, accompanied by my father and myfelf, to explore the fouthernmont arm, which ran up ealtward from our new paffage into the interior country. During our abfence he ordered the Refolution to be well cleaned and aired with fires between decks, a precaution which ought never to be neglected in a moilt and raw climate.

We rowed up this new inlet, were delighted with many calcades on both fides of it, and found a number of good anchoring places, with plenty of fifh and wild-fowl. However, the woods confilted chiefly of fhrubberies, and began to look very bare, the leaves being moftly fhed, and what remained looking faded of a pale yellow colour. Thefe ftrong marks of approaching winter feemed to be peculiar to this part of the bay, and it is probable that the adjacent high mountains, all which were now crowned with fnow, caufed their premature appearance. We put into a little cove about two o'clock to broil a few
1773. fifhes for our dinner, and then went on till it was
\(\mathrm{May}_{\mathrm{A}}\) dark, taking up our night's quarters on a little beach, almoft at the head of the inlet. Here we made a fire, but flept very little on account of the cold of the night and the hardnefs of our pil-
Friday 7 , lows. The next morning we faw a cove, with a little flat land, to the north of us, which formed the end of this fpacious inlet or arm, about eight miles from its entrance. Here we amufed ourfelves with fhooting for fome time, and then fet out to return towards the Refolution; but the fair weather which had favoured us hitherto, was now fucceeded by a ftorm at N. W. which blew in hard fqualls, attended with violent fhowers of rain. We made fhift to row down the arm into the entrance which led to the floop, and there fharing the remains of a bottle of rum among our boat's crew, by way of encouragement, we entered the hollow fea in the paffage. The violence of the wind, and the height of the fhort waves were fuch, that in fpight of our utmont efforts we were thrown above half a mile to leeward in a few minutes, and narrowly efcaped being fwamped. With the greateft difficulty we regained the inlet out of which we had paffed, and about two o'clock in the afternoon we put into a fmall fnug cove, at its north entrance. After fecuring our boat in the beft manner poffible, we climbed on a bleak hill, where we made a fire on a narrow rock, and attempted to broil fome filhes; but though we were foaked with rain, and feverely cut by the wind, yet it was impoffible for us to keep near our fire, of which the flames were continually whirled about in a vortex by the form, fo that we were forced to change our places every moment, in order to efcape being fcorched or burnt. The ftorm now encreafed to fuch a vio:rnce, that we could hardly ftand on this barren
fpot; and therefore it was refolved, for our own and the boat's greater fafety, to crofs the cove, and take up our night's quarters in the woods
\(1-3\). Mar. immediately under the lee of the high mountains. Every one of us feized a firebrand and ftepped into the boat, where we made a formidable appearance, as if we were bound on fome defperate expedition. To our great difappointment the woods were almoft worfe than the rock we had left, being fo wet that it was with the utmoft difficulty our fire would burn; we had no Thelter from the heavy rains that came down upon us in double portions from the leaves; and the wind not allowing the fmoke to afcend, we were almoft ftifled with it. Here we lay down on the moilt ground, wrapped in wet cloaks thoroughly foaked and cold, fupperlefs, and tormented with rheumatic pains; and, notwithftanding all thefe inconveniencies, fell alleep for a few moments, being entirely exhaufted with fatigue. But about two o'clock we were roufed by a loud thunderclap. The ftorm was now at its height, and blew a perfect hurricane. The roar of the waves at a diftance was tremendous, and only overcome at times by the agitation of the forefts, and the crafhing fall of huge timber-trees around us. We went to look after our boat, and at that inftant a dreadful flafh of lightning illuminated the whole arm of the fea; we faw the billows foaming, and furioully rolled above each other in livid mountains; in a word, it feemed as if all nature was haftening to a general cataftrophe.

Non han piu gli elementi ordine ofegno, S'odono orrendi tuoni, ognor piu crefe De' fieri venti il furibondo fdegno. Increfpa, e inlividifce il mar la faccia, E s'alza contra il ciel che lo minaccia. Tassoni.

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. The lightning was inftantaneoufly followed by May. the moft aftonifhing explofion we had ever heard, reverberated from the broken rocks around us; and our hearts funk with apprehenfion left the ship might be deftroyed by the tempeft or its concomitant ætherial fires, and ourfelves left to perifh in an unfrequented part of the world. In this difmal fituation we lingered out the night, which feemed the longeft we had ever known.
Satur. 8. At laft about fix in the morning the violence of the ftorm abated, we embarked about day-break, and reached the veffel foon after, which had been obliged to ftrike yards and top-mafts. The inlet we had now furveyed, received the name of Wet Jacket Arm, from the dreadful night we paffed in it. There now remained only one inlet to the northward of this unexplored; and Captain Cook, finding himfelf recovered, fet out, immediately after our return, to examine it. He proceeded up about ten miles, and faw nearly the end of this arm, which, like the other, contains good harbours and plenty of frelh water, wood, fifh, and wild fowl. On his return his people had the wind and heavy rains to ftruggle with, and all returned on board thoroughly wet, at nine in the evening. The next morning the kg being clear, but the wind unfavourable for going out to fea, we accompanied Captain Cook once more on a fhooting party up the new arm, where we fpent the whole day, and met with tolerable good fport; but another party, who had taken a different route, came back almoft emptyhanded.

The wind continuing wefterly and blowing very hard, the captain did not think it advifeable to put to fea; but it falling moderate in the afternoon, he made an excurfion to an ifland in the entrance, on which were abundance of feals. He
and his party killed ten of them, of which they 1773. took five on board, leaving the reft behind \(\underbrace{\text { May. }}\) them.

The next morning it was pretty clear, the air Tuef. 1. very cold and fharp, and all the hills covered with fnow almoft half way down to the water, fo that the winter was now fairly fet in. A boat was fent to fetch off the feals killed laft night, which had been left behind; and in the mean time we weighed and failed from Durky Bay, getting clear of the land at noon.

The ftay which we had made here of fix weeks, and four days, together with the abundance of frefh provifions which we enjoyed, and the conftant exercife we ufed, had contributed to recover all thofe who had been ill of the fcurvy at our arrival, and given new ftrength to the reft. However it is much to be doubted, whether we fhould have preferved our health fo well as we did, without the ufe of the fermented liquor or fpruce-beer which we brewed. The climate of Dufky Bay, is I muft own, its greateft inconvenience, and can never be fuppofed a healthy one. During the whole of our flay, we had only one week of continued fair weather, all the reft of the time the rain predominated. But perhaps the climate was lefs noxious to Englifhmen than to any other nation, becaufe it is analagous to their own. Another inconvenience in Durky Bay is the want of celery, fcurvy-grafs, and other antifcorbutics, which may be found in great plenty at Queen Charlotte's found, and many parts in New Zeeland. The intricate forefts which clothe the ground, the prodigious fteepnefs of the hills, which on that account are almoft incapable of cultivation, and the virulent bite of fand-flies, which caufes ulcers like the fmall-pox, are certainly difagreeable circumftances;

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}

17-3. ftances; but of fmall confequence to thofe who Mar. only put in here for refrefhment, when compared to the former. With all its defects, Dufky Bay is one of the fineft places in New Zeeland, for a fet of people to touch at in our fituation, exhaufted with labours and hardhips of long continuance, and deprived of the fight of land above four months. Nothing is more eafy than to fail into it, there being no danger except what is vifible above water, and fo many harbours and coves exifting in every part of it, that it is impolfitle to mifs a convenient anchoring-place, where wood, water, fifh, and wild-fowl are to be found in plenty.

\section*{C \(\quad \mathrm{H} \quad \mathrm{A} \quad \mathrm{P} . \quad\) VI.}

Paffage from Dufky Bay to Queen Cbarlotte's Sound.-Function with the Adventure.-Tranfactions during our ftay there.

Tuer. п1. HAVIN G hoifted in our boat, which returned loaden with feals, we ftood to the northward, with a heavy S. W. fwell, and numerous footy albatroffes and blue petrels attending us. As we advanced along fhore, the mountains feemed to decreafe in height, and in four and twenty hours the thermometer rofe \(7^{\frac{1}{2}}\) degrees, having been at \(46^{\circ}\) on the day after we left Dufky Bay, and ftanding at \(53 \frac{1}{2}^{\circ}\) the next Thurf. 13- morning at eight o'clock.

On the 13th, being off Cape Foul-wind, our favourable gale left us, as if it meant to authenticate the propriety of the denomination, and we really had a contrary wind. It blew a hard gale
gale all the 16th, attended with heavy rains, 1773. and we kept plying the whole day, making one \(\mathrm{M}_{\mathrm{AY}}\). of our boards clofe in fhore under Rock's Sund. 16. Point.

At four o'clock in the morning on the \(17^{\text {th }}\) we ftood to the eaftward with a fair wind, fo that we were abreaft of Cape Farewell at eight o'clock. Here we faw the land appearing low and fandy near the fea-flore, though it rofe into high fnowcapt mountains in the interior parts. Vaft flocks of the little diving petrel, (procellaria tridactyla,) were feen fluttering on the furface of the fea, or fitting on it, or diving to confiderable diftances with amazing agility. They feemed exafly the fame which we had feen on the 2gth of January and the 8th of February, in the latitude of \(48^{\circ} \mathrm{S}\). when we were in fearch of M. Kerguelen's Iflands.

In the afternoon, about four o'clock, we were nearly oppofite Cape Stephens, and had little or no wind. We obferved thick clouds to the S. W. about that time, and faw that it rained on all the fouthern parts of that cape. On a fudden a whitifh fpot appeared on the fea in that quarter, and a column arofe out of it, looking like a glafs tube; another feemed to come down from the clouds to meet this, and they made a coalition, forming what is commonly called a water-fpout. A little while after we took notice of three other columns, which were formed in the fame manner as the firt. The neareft of all thefe was about three miles diftant, and its apparent diameter, as far as we could guefs, might be about feventy fathom at the bafe. We found our thermometer at \(56 \frac{1}{2}\) when this phenomenon firf took its rife. The nature of water-fpouts and their caufes being hitherto very little known, we were extremely attentive to mark every little circumftance
1773. circumftance attendant on this appearance. Their

Mar. bafe, where the water of the fea was violently agitated, and rofe in a fpiral form in vapours, was a broad fpot, which looked bright and yellowifh when illuminated by the fun. The column was of a cylindrical form, rather encreafing in width towards the upper extremity. Thefe columns moved forward on the furface of the fea, and the clouds not following them with equal rapidity, they affumed a bent or incurvated mhape, and frequently appeared croffing each other, evidently proceeding in different directions; from whence we concluded, that it being calm, each of thefe water-fpouts caufed a wind of its own. At laft they broke one after another, being probably too much diftended by the difference between their motion and that of the clouds. In proportion as the clouds came nearer to us, the fea appeared more and more covered with fhort broken waves, and the wind continually veered all round the compafs, without fixing in any point. We foon faw a fpot on the fea, within two hundred fathom of us, in a violent agitation. The water, in a fpace of fifty or fixty fathoms, moved towards the centre, and there rifing into vapour, by the force of the whirling motion, afcended in a fpiral form towards the clouds. Some hailfones fell on board about this time, and the clouds looked exceedingly black and louring above us. Directly over the whirl-pool, if I may fo call the agitated fpet on the fea, a cloud gradually tapered into a long flender tube, which feemed to defcend to meet the rifing fpiral, and foon united with it into a ftrait column of a cylindrical form. We could diftinctly obferve the water hurled upwards with the greateft violence in a fpiral, and it appeared that it left a hollow fpace in the centre;

ROUND THE WORLD.
fo that we concluded the water only formed a
1773. May. were ftrongly confirmed in this belief by the colour, which was exactly like any hollow glafstube. After fome time the laft water-fpout was incurvated and broke like the others, with this difference, that its disjunction was attended with a flafh of lightning, but no explofion was heard. Our fituation during all this time was very dangerous and alarming; a phænomenon which carried fo much terrific majefty in it, and connected as it were the fea with the clouds, made our oldeft mariners uneafy and at a lofs how to behave; for moft of them, though they had viewed water fpouts at a diftance, yet had never been fo befet with them as we were; and all without exception had heard dreadful accounts of their pernicious effects, when they happened to break over a fhip. We prepared indeed for the worft, by cluing up our topfails : but it was the general opinion that our mafts and yards muft have gone to wreck if we had been drawn into the vortex. It was hinted that firing a gun had commonly fucceeded in breaking water-fpouts, by the ftrong vibration it caufes in the air; and accordingly a four-pounder was ordered to be got ready, but our people being, as ufual, very dilatory about it, the danger was paft before we could try this experiment. How far electricity may be confidered as the caufe of this phænomenon, we could not determine with any precifion; fo much however feems certain, that it has fome connection with it, from the flath of lightning, which was plainly obferved at the burfting of the laft column. The whole time, from their firft appearance to the diffolution of the laft, was about three quarters of an hour. It was five o'clock when the latter happened, and
1773. the thermometer then ftood at \(54^{\circ}\) or \(2 \frac{1}{2}\) degrees \(\mathrm{May.}^{\text {. lower, than when they began to make their ap- }}\) pearance. 'The depth of water we had under us was thirty-fix fathom. The place we were in was analogous to moft places where waterfpouts have been obferved, inafmuch as it was in a narrow fea or ftrait. Dr. Shaw and Thevenot faw them in the Mediterranean and Perfian Gulph; and they are common in the WeftIndies, the Straits of Malacca, and the Chinefe fea. Upon the whole, we were not fortunate enough to make any remarkable difcoveries in regard to this phænomenon; all our obfervations only tend to confirm the facts already noticed by others, and which are fo largely commented upon by the learned Dr. Benjamin Franklin, F.R.S. His ingenious hypothefis, that whirlwinds and water-fpouts have a common origin, has not been invalidated by our obfervations. We refer our philofophical readers to his papers, as containing the moft complete and fatisfactory account of water-fpouts. *
Tuef. 18. About five o'clock the next morning we opened Queen Charlotte's Sound, and about feven we faw three flafhes rifing from the fouth end of the Motu-Aro, where a bippab, or ftrong hold of the natives, was fituated, which is defribed in Lieutenant Cook's voyage in the Endeavour. \(\dagger\) We immediately conceived that they were fignals made by Europeans, and probably by our friends in the Adventure; and upon firing fome fourpounders, had the pleafure of being anfwered out of the Ship Cove, oppofite the ifland. Towards noon we could difcern our old confort at anchor;

\footnotetext{
* See his Experiments on Electricity, \&c. 4to. fifth edition, London, 1774 .
+ See Hawkefworth's compilation, vol. II. P.395, 400.
}
anchor ; and foon after were met by feveral of her officers, who brought us a prefent of frefh fifh, and gave us an account of what had happened to them after our feparation. In the afternoon it fell calm, fo that we were obliged to be towed into the cove, where we anchored at feven in the evening. In the mean time Captain Furneaux came on board, and teftified his fatisfaction at rejoining us, by a falute of thirteen guns, which our people cheerfully returned. Thofe who have been in fituations fimilar to ours, may form an adequate idea of the reciprocal pleafure which this meeting produced. It was heightened on both fides, by the recent impreffions of accumulated dangers to which our feparate courfes had expofed us, and which under Providence we had happily efcaped.

The Adventure, after lofing our company, had continued her courfe to the northward of us, between the latitudes of \(50^{\circ}\) and \(54^{\circ}\) fouth, experiencing very heavy gales from the weftward during the whole time. On the 28 th of February, being in about \(122^{\circ}\) of longitude weft from Greenwich, Captain Furneaux thought it advifeable gradually to defcend into the latitude of Diemen's Land, or the extremity of New Holland, difcovered by Abel Janffen Tafman in November 1642. On the 9 th of March he fell in with the S. W. part of this coaft, and running along its fouthern extremity, came to an anchor on the 1 ith in the afternoon, in a bay on the ealt fide, which he called Adventure Bay, and which is probably the fame where Tafman lay at anchor, diftinguifhed by the name of Frederick Henry Bay. The fouthern extremities of this coaft confifted of large broken maffes of barren and blackifh rocks, refembling the extreme points of the African and American continents. The
1773. land round the bay rofe in fandy hillocks, of which the innermoft were covered with various forts of trees, rather remote from each other, and without any brufh-wood. They alfo found a lake of frefh water on the weft fide, covered with great flocks of wild-ducks and other aquatic fowls. Several iflands in the offing to the N. E. along fhore, were of a moderate height, and likewife covered with wood. Tafman probably took them for one great inland, which in his charts bears the name of Maria's Inand. The Adventure lay only three days in this bay, during which Captain Furneaux took in a fmall quantity of frefh water, and collected feveral curious animals, among which was a fpecies of Viverra, and a fine white hawk. Our Europeans perceived no inhabitunts during their ftay, but thought they obferved fome fmoke at a great diftance in the country.

On the 15 th in the evening they weighed and failed out of Adventure Bay, ftanding along fhore to the northward. They found it confifted of fandy hills of a moderate height, but faw at the fame time fome much higher in the interior country. At different parts of this coalt they met with feveral iflands, particularly thofe which Tafman named Schouten's and Vander Lyn's llands. About the latitude of \(41^{\circ} 15^{\prime}\) fouth, they opened a little bay, which, on account of feveral fires, probably lighted by the natives, they named the Bay of Fires. They continued examining the coaft, not without running fome danger from numerous thoals, till the \(19^{\text {th }}\) of March at noon, when being in the latitude of \(39^{\circ} 20^{\prime}\) fouth, and ftill feeing the land about eight leagues to the north-weftward, they concluded that Diemen's Land was connected with the continent of New Hollard, and directed

\section*{ROUND THE WORLD:}
their courfe towards the rendezvous at New Zeeland. However, as they had been obliged, by the frequency of fhoals, to keep out of fight of the coalt feveral times, and there remained a fpace of twenty leagues from the northernmoft land they had feen, to Point Hicks, the fouthern boundary of captain Cook's difcoveries in the Endeavour; it is ftill undetermined, whether a Atrait or paffage does not exift between the main of New Holland and Diemen's Land, though the appearance of quadrupeds upon the latter, rather feems to favour the idea of their being connected together. Be this as it may, there is perhaps no part of the world which fo well deferves future inveftigation as the great continent of New Holland, of which we do not yet know the whole outline, and of whofe productions we are in a manner entirely ignorant. Its inhabitants, from the accounts of all the voyagers who have vifited them, are but few in number, probably dwell on the fea-coafts only, go perfectly naked, and feem by all defcription to lead a more favage life than any nation in warm climates. There is confequently a vaft interior fpace of ground, equal to the continent of Europe, and in great meafure fituated between the tropics, entirely unknown, and perhaps uninhabited: nothing is more certain, from the vaft variety of animal and vegetable productions, collected on its fea-coafts in captain Cook's voyage in the Endeavour, than that the inner countries contain immenfe treafures of natural knowledge, which muft of courfe become of infinite ufe to the civilized nation, which fhall firft attempt to go in fearch of them. The fouth-welt corner of this continent, which hitherto remains wholly unexplored, may perhaps open a way to the heart of the country ; for it is not likely, that fo great Voi. I.

\section*{A V O \(\quad \mathrm{Y}\) A \(\quad \mathbf{G} \quad \mathrm{E}\)}
1773. an extent of land, fituated under the tropic, \(\underbrace{\text { May: }}\) fhould be deftitute of a great river, and no part of the coaft feems better fituated than that for its paffage into the fea.

After leaving this coaft, the Adventure continued fifteen days at fea, on account of contrary winds, and at length made the coaft of New Zeeland, near Rock's Point, on the fouthern inland, on the third of April, at fix in the morning, and came to an anchor at Ship Cove, Queen Charlotte's Sound, on the 7 th.

During their ftay here, they had made the fame eftablifhments on fhore as we had done at Dufky Bay, except the brewery, which they were not yet acquainted with. They had found the bippab, or Atrong-hold of the natives, at the fouthern end of Motu Aro, forfaken, and their aftronomer had fixed his obfervatory upon it. The inhabitants of this found, who amount to fome hundred perfons, in feveral diftinct and independent parties, often at variance with each other, had begun an intercourfe with them, and paid them feveral vifits, coming from the interior parts. They had been extremely well received, and did not hefitate to come on board, where they eat freely of the failors provifions, fhowing a particular liking to our bifcuit, and peafe-foup. They had brought with them great quantities of thir clothing, tools, and weapons, which they eagerly exchanged for nails, hatchets, and cloth.

On the IIth of May, being the fame day we failed out of Dufky Bay, feveral of the Adventure's people, who were at work on more, or difperfed on chooting parties, diftinctly felt a thock of an earthquake; but thofe who remained on board, did not perceive any thing of it. This circumftance may ferve to evince the probability of volcanoes on New Zeeland, as thefe two great phænomena

\section*{ROUND THE WORLD.}
phænomena on our globe feem to be clofely connected together.

We arrived in Queen Charlotte's Sound, at the time when the Adventure's crew began to defpair of ever meeting with us again, and had made preparations to fpend the whole winter in this harbour, in order to proceed to the eaftward, with the enfuing fpring, to explore the South Sea in high latitudes. Captain Cook, however, was by no means inclined to lie inactive during fo many months, efpecially as he knew, that confiderable refrefhments were to be had at the Society Ines, which'he had vifited in his former voyage. He therefore gave directions to put both floops in condition to go to fea, as foon as poffible; and the Refolution being entirely prepared for that purpofe, her crew affifted that of the Adventure for the fake of greater difpatch.

We began our excurfions the day after our Wed. is. arrival, and found the productions of the forefts very fimilar to thofe of Dußky Bay, but the feafon and climate infinitely more favourable to our botanical refearches. We were fortunate enough to meet with feveral fpecies of plants ftill in flower, and alfo found fome birds, which we had not feen before. But the antifcorbutic plants, which grew on every beach, gave this pert the moft diftinguifhed advantage over our firft place of refrefhment. We immediately gathered vaft quantities of wild celery, and of a well-tafted fcurvy-grafs (lepidium) which were daily boiled with fome oat-meal or wheat for breakfaft, and with peafe-foup for dinner ; and the people on board the Adventure, who had hitherto not known the ufe of thefe greens, now followed our example. We alfo found a fpecies of fow-thiftle (fonchus oleraceus, and a kind of plant which our people called lamb's quarters, M 2
(tetragonia
1773. (tetragonia cornuta \({ }_{2}{ }^{*}\) ) which we frequently ufed May. as fallads; and if we had not fuch plenty of \(\underbrace{}_{\text {wild-fowl and fifhes as at Dufky Bay, we were }}\) amply recompenfed by thefe excellent, vegetables. The fruce and the tea-tree of New Zeeland likewife grew in great plenty hereabouts, and we taught our friends to make ufe of both for their refrefhment.
Thurf.20. The next day we went to the Hippah, or fortification of the natives, where Mr. Bailey, the aftronomer of the Adventure had fixed his obfervatory. It is fituated on a fteep infulated rock, which is acceffible only in one place, by a narrow difficult path, where two perfons cannot go abreaft. At the top it had been furrounded by fome palifadoes, but thefe were in moft parts removed, and had been ufed for fuel by our people. The huts of the natives ftood promifcuoufly within the enclofure, and had no walls, but confifted only of a roof, which rofe into a fteep ridge. The inner ikeletons of thefe huts were branches of trees plaited fo as to refemble hurdles; on thefe they had laid the bark of trees, and covered the whole with the rough fibres of the flag, or New Zeeland flax-plant. We were told, that the people from the Adventure had found them exceeding full of vermin, and particularly fleas, from which it fhould feem that they had been but lately inhabited; and indeed it is not unlikely, that all thefe ftrong places are only the occafional abode of the natives, in cafe of danger from their enemies; and that they forfake them, whenever their perfonal fafety does not require their refidence. Our fellow-voyagers likewife found immenfe numbers of rats upon the Hippah rock, fo that they were obliged to put fome large jars in the ground, level with the furface, into which thefe vermin

\footnotetext{
* See Hawkefworth, vol. III.
}

\section*{ROUND THE WORLD.}
fell during night, by running backwards and forwards; and great numbers of them were caught in this manner. It is therefore very probable, that rats are indigenous in New Zeeland, or at leaft that their arrival there, is prior to its difoovery by European navigators. Captain Furneaux fhewed us feveral fpots of ground on the top of this rock, which he had ordered to be dug, and on which he had fown a great variety of gar-den-feeds; thefe fucceeded fo well that we frequently had fallads, and many difhes of European greens at our table, notwithftanding the feafon of winter was now far advanced. But the climate in this part of New Zeeland is extremely mild, when compared to that of Dufky Bay; and notwithftanding the vicinity of the fnowy mountains, 1 am inclined to believe it feldom freezes hard in Queen Charlotte's Sound; at leaft we experienced no froft during our continuance there to the 6 th of June.

On the 22d we went over to an illand in the Satur. 22. found, to which Captain Cook had given the name of Long Ifland in his former voyage. It confifts of one long ridge, of which the fides are fteep, and the back or top nearly level, though in moft places very narrow. On its N. W. fide we faw a fine beach, furrounding a little piece of flat land, of which the greateft part was marfhy, and covered with various graffes; the reft was full of antifcorbutics, and the New Zeeland flaxplant (phormium), growing round fome old abandoned huts of the natives. We cleared fome fpots of ground here, and fowed European garden feeds on them, which we thrught were likely to thrive in this place. We alfo climbed to the top of the ridge, which we found covered with dry graffes, intermixed with fome low, Arubby plants; and among them a number of quails,

\section*{A V O Y A G E}
1.73. quails, exactly like thofe of Europe, had their Max. refidence. Several deep and narrow glens which ran down the fides of the ridge to the fea, were filled with trees, fhrubs, and climbers, the haunt of numerous fmall birds, and of feveral falcons; but where the cliffs were perpendicular, or hanging over the water, great flocks of a beautiful fort of fhags, built their nefts on every little broken rock, or if poffible in fmall cavities about a foot fquare, which feemed in a few inftances to be enlarged by the birds themfelves. The argillaceous ftone, of which moft of the hills about Queen Charlotte's Sound confifted, is fometimes fufficiently foft for that purpofe. It runs in oblique ftrata, commonly dipping a little towards the fouth, is of a greenifh-grey, or biuifh, or yellowih-brown colour, and fometimes contains veins of white quartz. A green talcous or nephritic ftone, is alfo found in this kind of rock, and when very hard, capable of polifh, and remitranfparent; it is ufed by the natives for chiffels, hatchets, and fometimes for pattoo-pattoos: it is of the fame fpecies which jewellers call the jadde. Several fofter forts of this fone, perfectly opaque, and of a pale green colour, are more numerous than the flinty femi-tranfparent kind; and feveral fpecies of horn ftone and argillaceous flate likewife are feen running in great fltata through fome of the mountains. The latter is commonly found in great quantity, and broken pieces, on the fea beeches, and is what our feamen call fhingle, by which name it is diftinguifhed in the account of Captain Cook's former voyage. On thefe beaches we alfo met with feveral forts of finty fones and pebbles, and fome loofe pieces of black, compact, and ponderous bafaltes, of which the natives form fome of their fhort clubs, called pat-too-pattoos. In many places we likewife faw

\section*{ROUND THE WORLD.}
ftrata of a blackifh faxum Lin. confiting of a black 17:3. and compact mica or glimmer, intermixed with Mar. minute particles of quartz. The argillaceous flate is fometimes found of a rufty colour, which feems evidently to arife from irony particles; and from this circumftance, and the variety of minerals juft enumerated, there is great reafon to, fuppofe that this part of New Zeeland contains iron ore, and perhaps feveral other metallic bodies. Before we left this place, we found fome fmall pieces of a whitifh pumice-itone on the feafhore, which, together with the balaltine lava, ftrongly confirm the exiftence of volcanoes in New Zeeland.

On the 23 d in the morning, two fimall canoes Sund. 23 . came towards us, in which were five men of the natives, the firft we had feen fince the arrival of our floop in this harbour. Their appearance was nearly the fame as that of the Dufky Bay people, with this difference, that they feemed much more familiar and unconcerned. We bought fome filh of them, and likewife made them fome prefents, conducting them into the cabin, as they did not hefitate to come on board. Seeing us fit down to dinner, they freely partook of our provifions, but drank pure water, refufing to touch either wine or brandy. They were fo reflefs, that they removed from our table to that of the officers in the fteerage, where they likewife eat with great appetite, and drank great quantities of water fweetened with fugar, of which they were remarkably fund. Every thing they faw, or could lay hands upon they coveted, but upon the leaft hint, that we either could not, or would not part with what they had taken up, they laid it down without reluctance. Glafs bottles, which they called tawhaw were however particularly valuable to them; and whenever they
1773. Saw any of them, they always pointed to them, and then moved their hand to their breaft, pronouncing the word mokh, by which they ufed to exprefs their defire of poffeffing any thing. Among the variety of little prefents we made them they did not notice beads, ribbons, white paper, \&c. but were very eager after iron, nails, and hatchets; a proof that the intrinfic value of thefe tools cannot fail to make an impreffion on the minds of thefe people in the long run, though they were at firft indifferent to them, as not knowing their ufe and durability. Some of our people having made ufe of their canoes in the afternoon to tranfport themfelves to the fhore, they came into the cabin complaining to the captain, whofe authority over the reft they very well conceived; and their embarkations being reftored to them, they all went away highly pleafed.
Mond.24. The next morning at day-break they returned, but brought four other perfons with them, one of them a woman, with fome children, and traded as ufual about the fhips. The captains embarked with us after breakfaft, in order to vifit an extenfive inlet on the northern fhore of the found, which was called Weft Bay in the Endeayour's voyage. On our way we met a double canoe, manned with thirteen perfons, who, coming along fide, made acquaintance with Captain Cook, and feemed to recollect him, by enquiring for Tupaya, the native of O-Taheitee, whom he had taken on board during his former voyage, and who had lived to vifit this country with him. When they were told that he was dead, they feemed much concerned, and pronounced fome words in a plaintive tone. We made figns for them to go on board the veffels lying in Ship Cove; but when they faw us going on to the fouth,

\section*{ROUNDTHE WORLD.}
fouth, they returned to the cove from whence
1773. they came.

We found the country not quite fo fteep as at the fouthern extremity of New Zeeland, and the hills near the fea-fide were in general of an inferior height. In moft parts, however, they were covered with forefts, equally intricate and impenetrable as thofe of Dufky Bay, but containing a greater number of pigeons, parrots, and fmall birds, which perhaps abandon that rude climate during the cold feafon, and pafs their winter in thefe milder regions. Oyfter-catchers or fea-pies, and various forts of fhags, likewife enlivened the fea-fhores here, but ducks were extremely fcarce. Weft Bay contains a number of fine coves, each of which affords excellent anchorage; the hills rife gently all round it, covered with fhrubs and trees, and many of their fummits are clear of woods, but overgrown with a common fpecies of fern, (acrofticum furcatum.) This is likewife the cafe with many iflands in the found, and great part of the fouth-ealt fhore of the found from Cape Koamaroò to Eaft Bay. After collecting a number of new plants, among which was a fpecies of pepper, very much refembling ginger in the tafte, and fhooting many birds of all forts, we returned on board late in the evening.

The launch, which had been fent out in the morning to an adjacent cove, in order to cut greens for the fhip's company and fome grafs for our goats and fheep, did not return that day; but ftaying out all the next likewife, we began to be very uneafy about the twelve people in her, among whom were our third lieutenant, the lieutenant of marines, Mr. Hodges, the carpenter, and the gunner. Our apprehenfions were the more juft, as the wind and weather had been fayourable for their return from almof any part of
1773. the bay, till the morning of the 25th; foon af.

May. ter which it began to be very rainy and ftormy. On the day we had gone to Weft Bay, a large canoe with twelve of the natives came from the north to our fhip, and after felling a variety of their dreffes, fome ftone hatchets, clubs, fpears, and even paddles, they returned the way they came.

On the 26 th, afternoon, the weather being fomewhat cleared up, our launch arrived on board, but all the people in her were exhaufted with fatigue and hunger. All the provifion they had taken out with them confifted of three bifcuits and a bottle of brandy; and they had not been able to fucceed in catching a fingle fifh during the tempeftuous weather. After being toffed about by the waves, attempting in vain to return to the veffels, they had put into a cove, on which they found a few deferted huts of the natives, where they took fhelter, and juft kept themfelves from ftarving by eating a few mufcles that adhered to the rocks.

The next morning we made our refearches round the bottom of the cove, in queft of plants and birds; and in the afternoon we went out along the rocky fhores towards Point Jack[on, to kill fome fhags, which we had now learnt to relifh inftead of ducks. Between thefe two excurfions we received another vifit of the Indian family, whom we had feen before, on the 23 d . They feemed to be come for no other purpofe than that of eating with us, having brought nothing with them to exchange for our iron-work, We now enquired for their names, but they were a long time before they could underftand us; however, comprehending our meaning at laft, they gave us a collection of words, which had a fingular mixture of gutturals and vowels. The
oldeft among them was called Towahànha; the others Kotughâ-a, Koghoäà, Khoäà, Kollàkh, and Taywaherùa. This laft was a boy about 12 or 14 years of age, who had a very promifing countenance, and feemed to be the livelieft and moft intelligent among them. He came into the cabin and dined with us, eating very voracioully of a fhag-pye, of which, contrary to our expectation, he preferred the cruft. The captain offered him fome Madeira wine, of which he drank fomething more than one glafs, making a great many wry faces at firft. A bottle of very fweet Cape wine being brought upon the table, a glafs was filled out to him, which he relifhed fo well that he was continually licking his lips, and defired to have another, which he likewife drank off. This draught began to elevate his fpirits, and his tongue ran on with great volubility. He capered about the cabin, infifted on having the captain's boat-cloak, which lay on a chair, and was much vexed at the refufal; he next defired one of the empty bottles, and this requeft likewife proving fruitlefs, he went out of the cabin highly offended. On deck he faw fome of our fervants folding up linen which had been hung out to dry, and immediately feized on a table-cloth; but this being taken from him, his paffion was at the higheft pitch, he ftamped, threatened, then grumbled, or rather grunted a while, and at laft became fo fullen that he would not fpeak a word. The impatient temper of this nation never appeared more diftinctly than in this boy's conduct; but at the fame time we had room to confider, feeing the effect of ftrong liquors upon him, how fortunate it was that they were ufed to no lind of intoxicating draught, which would perhaps ferve to make their remper fill more fierce and ungoyernable than it is at prefent.

\section*{A \(\mathbf{V}\) O \(\quad \mathbf{Y}\) A \(\mathbf{G} \quad \mathbf{E}\)}

About thirty natives furrounded us in feveral their tools and weapons to fell, for which they received great quantities of our goods in exchange, owing to the eagernefs with which our crews outbid each other. There were a number of women among them, whofe lips were of a blackih blue colour, by punctuation; and their cheeks were painted of a lively red, with a mixture of ruddle and oil. Like thofe at Dufky Bay, they commonly had flender and bandy legs, with large knees; defects which evidently are deducible from the little exercife they ufe, and their mode of fitting crofs-legged and cramped up almoft perpetually in canoes. Their colour was of a clear brown, between the olive and mahogany hues, their hair jetty black, the faces round, the nofe and lips rather thick but not flat, their black eyes fometimes lively and not without exprefion; the whole upper part of their figure was not difproportionate, and their affemblage of features not abfolutely forbidding. Our crews, who had not converfed with women fince our departure from the Cape, found thefe ladies very agreeable; and from the manner in which their advances were received, it appeared very plainly that chaftity was not rigoroully obferved here, and that the fex were far from being impregnable. However their favours did not depend upon their own inclination, but the men, as abfolute mafrers, were always to be confulted upon the occafion; if a fpike-nail, or a Ihirt, or a fimilar prefent had been given for their connivance, the lady was at liberty to make her lover happy, and to exact, if poffible, the tribute of another prefent for herfelf. Some among them, however, fuomitted with reluctance to this vile proftitution; and, but for the authority and menaces of

\section*{ROUND THE WORLD.}
the men, would not have complied with the defires of a fet of people who could, with unconcern, behold their tears and hear their complaints. Whether the members of a civilized fociety, who could act fuch a brutal part, or the barbarians who could force their own women to fubmit to fuch indignity, deferve the greateft abhorrence, is a queftion not eafily to be decided. Encouraged by the lucrative nature of this infamous commerce, the New Zeelanders went through the whole veffel, offering their daughters and fifters promifcuoully to every perfon's embraces, in exchange for our iron tools, which they knew could not be purchafed at an eafier rate. It does not appear that their married women were ever fuffered to have this kind of intercourfe with our people. Their ideas of female chaftity are, in this refpect, fo different from ours, that a girl may favour a number of lovers without any detriment to her character; but if the marries, conjugal fidelity is exacted from her with the greateft rigour. It may therefore be alleged, that as the New Zeelanders place no value on the continence of their unmarried women, the arrival of Europeans among them, did not injure their moral characters in this refpect; but we doubt whether they ever debafed themfelves fo much as to make a trade of their women, before we created new wants by Thewing them iron-tools; for the poffeffion of which they do not hefitate to commit an action that, in our eyes, deprives them of the very fhadow of fenfibility.

It is unhappy enough that the unavoidable confequence of all our voyages of difcovery, has always been the lofs of a number of innocent lives; but this heavy injury done to the little uncivilized communities which Europeans have vifited,
1773. fited, is trifling when compared to the irretrieva-

May. ble harm entailed upon them by corrupting their morals. If thefe evils were in fome meafure compenfated by the introduction of fome real benefit in thefe countries, or by the abolition of fome other immoral cuftoms among their inhabitants, we might at leaft comfort ourfelves, that what they loft on one hand, they gained on the other; but I fear that hitherto our intercourfe has been wholly difadvantageous to the nations of the South Seas; and that thofe communities have been the leaft injured, who have always kept aloof from us, and whofe jealous difpofition did not fuffer our failors to become too familiar among them, as if they had perceived in their countenances that levity of difpofition, and that firit of debauchery, with which they are generally reproached.

Several of thefe people were invited into the cabin, where Mr. Hodges applied himfelf to fketch the moft characteriftic faces, while we prevailed on them to fit fill for a few moments, keeping their attention engaged, by a variety of trifles which we fhewed, and fome of which we prefented to them. We found feveral very expreffive countenances among them, particularly fome old men, with grey or white heads and beards; and fome young men, with amazing bufhy hair, which hung wildly over their faces, and increafed their natural favage looks. The ftature of thefe people was middle fized in general, and their form and colour almoft entirely the fame as that of the Dufky Bay people; their drefs was likewife made in the fame manner of the flax-plant, but never interwoven with feathers, in lieu of which they had bits of dog-fkin at the four corners of their cloaks, which the others were not fortunate enough to poffefs. The

\section*{ROUND THE WORLD.}
bogbee-bogbee, or fhaggy-cloak, which hangs 1773. round their neck like a thatch of ftraw, \({ }^{*}\) was Mar. almoit conftantly worn by them, on account of \(\rightarrow\) the feafon, during which the air began to be fharp, and rains were very frequent. But their other kinds of cloth \(\ddagger\) were here commonly old, dirty, and not fo neatly wrought as they are defcribed in captain Cook's firft voyage. The men wore their hair hanging in a very flovenly manner about them, but the women had theirs cut fhort, which feems to be the general practice among them. They alfo wore the head-drefs, or cap of brown feathers, mentioned in the account of captain Cook's former voyage. After thefe people had been on board a few hours, they began to fteal, and fecrete every thing they could lay their hands on. Several of them were difcovered in conveying away a large four-hour glafs, a lamp, fome handkerchiefs, and fome knives; upon which they were ignominioully turned out of the floop, and never permitted to come on board again. They felt the whole weight of thame, which this proceeding brought upon them; and their fiery temper, which cannot brook any humiliation, was up in arms at this punifhment; fo that one of them uttered threats, and made violent geftures in his canoe. In the evening they all went on fhore, abreaft of the lloops, and made fome temporary huts of the branches of trees, near which they hawled their canoes on the dry land, and made fires, over which they prepared their fuppers. Their meals confifted of fome frefh filhes, which they had caught in their canoes not far from fhore, with a kind of hoop-net, defcribed in captain Cook's

\footnotetext{
* See Hawkefworth's compilation, vol. III.
\(\ddagger\) Ibid p. 455 .
}

Cook's former voyage, which they managed with Max. a dexterity peculiar to themfelves.
Sund. 30. The next morning we had fine mild weather, and made a trip over to Long Ifland, in order to look after fome hay, which our people had cut there, and to collect greens for the chip's company, near the huts which the natives had abandoned. We were fortunate enough at the fame time to find fome new plants, and fhoot feveral little birds, different from thofe which had hitherto fallen into our hands. In the afternoon, many of our failors were allowed to go on fhore, among the natives, where they traded for curiofities, and purchafed the embraces of the ladies, notwithftanding the difguft which their uncleanlinefs infpired. Their cuftom of painting their cheeks with ochre and oil, was alone fufficient to deter the more fenfible from fuch intimate connections with them; and if we add to this a certain ftench which announced them even at a diftance, and the abundance of vermin which not only infefted their hair, but alfo crawled on their clothes, and which they occafionally cracked between their teeth, it is aftonifhing that perfons Should be found, who could gratify an animal appetite with fuch loathfome objects, whom a civilized education and national cuftoms fhould have taught them to hold in abhorrence.

> Hæc tetigit, Gradive, tuos urtica nepotes?

Juvenal.
Before they returned on board again, a woman ftole a jacket belonging to one of our failors, and gave it to a young fellow of her own nation. The owner finding it in the young man's hands, took it from him, upon which he received feveral blows with the fift. Thefe he believed were
meant in joke, but as he was advancing to the "1773. water-fide, in order to ftep into the boat, the May. native threw feveral large fones at him. 'The failor was rouzed, and returning to the fellow, began to box him after the Englith manner, and in a few moments had given the Zew Zeelander a black eye, and bloody nofe; upon which the latter, to all appearance much terrified, declined the combat, and ran off.

Captain Cook, who was determined to omit nothing which might tend to the prefervation of European garden-plants in this country, prepared the foil, fowed feeds, and tranfplanted the young plants in four or five different parts of this found. He had cultivated a fpot of ground on the beach of Long Ifland, another on the Hippah rock, two more on the Motu-Aro, and one of confiderable extent at the bottom of Ship Cove, where our veffels lay at anchor. He chiefly endeavoured to raife fuch vegetables as have ufeful and nutritive roots, and among them particularly potatoes, of which we had been able to preferve but few in a ftate of vegetation. He had likewife fown corn of feveral forts, beans, kidneybeans, and peafe, and devoted the latter part of his ftay in great meafure to thefe occupations.

Early on the firft of June feveral canoes full June. of natives came on board, whom we had not Tueld. a . feen before. Their canoes were of different fizes, and three of them had fails, which are but feldom feen among them. The fail confited of a large triangular mat, and was fixed to a mait, and a boom joining below in an acute angle, which could both be fruck with the greateft facility. The upper edge, or broadeft part of the fail, had five tufts of brown feathers on its extremity. The bottom of thefe canoes confifted of a long hollow trunk of a tree, and the fides

Vol. I. N were
1773. were made of feveral boards or planks above June. each other, which were united by means of a number of firings of the New Zeeland flaxplant, paffed through fall holes, and tied very fart. The fears between them are caulked with the downy or woolly fubftance of the reed-mace (typha latifolia). Some of the canoes were doubile, that is, two faftened along fide of each other, by means of tranfverfe flicks, lathed on with ropes; but where that was not the care, they had an outrigger, or narrow piece of plank fixed parallel to one fide of the canoe, by means of tranfverfe poles, to prevent their overfetting. All thole we now fam had not that profufion of carving and fine workmanship, mentioned in captain Cook's firft voyage, which he observed. in the canoes of the northern iflands; but feemed rather old, and worn out; they were not, however, different in the general conformation from thole defcribed there, and always had the diftorted human face at the head, the high fern, and the neat fharp-pointed paddles. The people in them brought for rale feveral ornaments, which were new to us, efpecially pieces of green nephritic fine, cut into various forms. Some were of a flat Shape, with a Sharp edge, and ferved as the blades of hatchets, or adzes; forme were formed into long pieces, which are hung into the ear ; others were little chiffels, inferted in a wooden handle, and again others were cut out with great labour into a contorted and fquatted figure, fomething refembling the caricatore of a man, in which a pair of monstrous eyes were inferted, made of the mother of pearl of an ear-fhell. This lat, which they called \(\hat{\theta}\) teegbce, was worn by perfons of both fexes, hanging on the breaft, from a firing paffed about the neck, and may perhaps relate to Come religi-

\section*{ROUND THE WORLD.}
ous matters. They fold us an apron, made of 1.73 . their clofe-wrought cloth, covered with red feathers, faced with white dog-fkin, and ornamented with pieces of the ear-fhell, which is faid to be worn by the women in their dances. They brought a number of their filh-hooks, which are of a remarkable clumfy form, made of wood, and barbed with a piece of bone, which was jagged, and which they affured us was human bone. Several rows of human teeth, drawn on a thread, hung on their breafts, in the place of, or along with the teegbee, but they readily fold them to us, in exchange for iron tools, or trinkets. A good many dogs were obferved in their canoes, which they feemed very fond of, and kept tied with a ftring, round their middle; they were of a rough long haired fort, with pricked ears, and much refembled the common fhepherd's cur, or count Buffon's cbien de berger (fee his Hift. Nat.) They were of different colours, fome fpotted, fome quite black, and others perfectly white. The food which thefe dogs receive is fifh, or the fame as their mafters live on, who afterwards eat their flefh, and employ the fur in various ornaments and dreffes. They fold us feveral of thefe animals, among which the old ones coming into our poffeffion, became extremely fulky, and refufed to take any fuftenance, but fome young ones foon accuftomed themfelves to our provifions. Several of the New Zeelanders came into the veffel, and fome were conducted into the cabin, where they received fome prefents; but none of them thewed that aftonifhment, and that degree of reflection and attention, which our old friend at Dufky Bay had manifefted on coming aboard. Some of them were ftrangely marked in the face with deeply excavated fpiral lines; and one of them in particular, a tall and ftrong man, and

17i3. nearly middle-aged, had thefe marks very regular
Jone. on his chin, cheeks, forehead, and nofe, fo that his beard, which would otherwife have been very thick, now confifted only of a few ftraggling hairs. This man's name was Tringho-Waya, and he feemed to have fome authority with his people, which was more than we had hitherto obferved among the fmall number who had vifited us. The chief object of their commerce were fhirts and bottles, of which lait they were remarkably fond: perhaps becaufe they have nothing in which to keep liquids, except a minute kind of calabath or gourd, which grows only in the northern ifland, and was extremely fcarce among the people in Q. Charlotte's Sound. They were not inclined however to make difadvantageous bargains, and demanded the beft price for every little trifle which they offered for fale, though they were never offended with a refufal. Some of them being in remarkable good fpirits, gave us a beiva, or dance, on the quarter-deck. They placed themfelves in a row, and parted with their fhaggy upper garments: one of them fung fome words in a rude manner, and all the reft accompanied the geflures he made, alternately extending their arms, and ftamping with their feet in a violent and almoft frantic manner. The laft words which we might fuppofe the burden of the fong, or a chorus, they all repeated together; and we could eafily diftinguifh fome fort of metre in them, but were not fure they had rhimes. The mufic wais extremely rough, and of no great extent in thele kinds of fongs. In the evening they all went off again, and returned to the upper part of the found from whence they came.
Wed. 2. The next morning we accompanied the captains Cook and Furneaux to Eaft Bay, and Grafs Cove, where they intended to collect a load of antifcorbutic

\section*{ROUND THE WORLD.}
antifcorbutic greens. We had not only endeavoured to leave ufeful European roots in this country, but we were likewife attentive to fock its wilds with animals, which in time might become beneficial to the natives, and to future generations of navigators. To this purpofe captain Furneaux had already fent a boar and two fows to Canibal Cove, where they had been turned into the woods to range at their own pleafure; and we now deprived ourfelves, with the fame view, of a pair of goats, male and female, which we left in an unfrequented part of Eaft Bay. Thefe places had been fixed upon, in hopes that our new colonifts would there remain unmolefted by the natives, who indeed were the only enemies they had to fear, as their inconfiderate and barbarous temper would not fuffer them to make any reflection on the advantages which future ages might reap from the propagation of fuch a valuable race of animals. On this excurfion we faw a large animal in the water about Grafs Cove, which feemed to be a fea-lion by its magnitude, but which we could not get a fhot at. We had already difcovered a fmall fpecies of bats in the woods, fo that the lift of the indigenous quadrupeds in New Zeeland was increafed to five, including the domeftic dog of the natives; and it is much to be doubted whether it is poffible to add a fixth to that number. After we had ranged the woods in different parts, collected reveral plants, fhot a few birds, and taken in a great load of wild celery and fcurvy-grafs, we returned late on board.

On the third of June, we fent fome boats to Long Ifland to fetch our hay on board; and having laid in a fufficient quantity of wood and water, put the fhip in a condition to go to fea, and refrefhed our crews with valt quantities of greens,
1773. we were ready to fail with the firft opportunity. Jone. One of our boats in returning faw a large double canoe, and another in which they counted abaut fifty men, who immediately chafed them: but cur people not being armed, hoifted fail, and foon got away from them, fo that the New Zeelanders gave over the purfuit, and returned towards Eaft Bay from whence they came. We can by no means pretend to affert that their intentions were hoftile in any degree, but prudence naturally fuggefted to our people, not to place themfelves in the power of a fet of uncivilized men, who follow their own caprice inttead of laws.
Frid. 4. The next morning we hoifted St. George's colours, the jack and pennant in honour of His Majefty's birth-day, which we prepared to celebrate with the ufual feftivities. The family of natives, whofe name I have mentioned page 171, and who by living conftantly in a neighbouring cove, were now intimate with us, came on board very early, and breakfafted with us. Whilt we were fitting in the fteerage, an officer acquainted the captain with the approach of a large double canoe, well manned with New Zeelanders, coming from the northward. We immediately went on deck, and faw the canoe about a muket hot from us, containing twenty-eight men, making towards our floop, which from her fize they probably took to be the commanding one. Our friends on board very earneftly told us they would be our enemies, and perfifted to fire at them; nay, Towahanga, the head of the family jumped on the arm cheft, which was placed on our quarter deck, and taking hold of a ftick, made a number of warlike motions with it, and foon after spoke to them very violently, but with fome degree of rolemnity, at the fame time brandifhing,
as it feemed in defiance, a large hatchet of green nephritic fone, which he had never fhewn us before. In the mean time the canoe approached, without taking much notice of our friend, whom we perfuaded at laft to be filent. Two people of a fine ftature, one at the ftern, and another about the middle of the canoe ftood upright, while all the reft continued feated. The former had a perfect black cloak of the clofe-wrought kind, patched in compartments with \(\operatorname{dog}\) - fk in; he held a green plant of the New Zeeland flag in his hand, and now and then fpoke a few words. But the other pronounced a long fpeech well articulated, loud, and very folemn, and gave his voice great variety of falls and elevations. From the various tones in which he fpoke, and a few geftures with which he accompanied his words, he appeared by turns to quettion, to boaft, to threaten, to challenge, and to perfuade us; he was fometimes running on in a moderate tone, then all at once breaking out into violent exclamations; after which he made fhort paufes in order to recover his breath. Having finifhed his oration, he was invited to come on board by the captain, who came to the fhip's fide; he feemed at firft dubious and miftruftful, but his natural fpirit foon overcoming that diffidence, he ventured on board; and was prefently followed by all his people, who traded with the greateft eagernefs for our iron wares. They immediately faluted the family of natives on board, with the ufual application of nofes, or as our failors expreffed it, they nofed each other, and paid every one of us upon the quarter-deck the fame compliment. The two fpeakers were taken into the cabin, where we learnt the fecond orator's name was '「eiratu, and that he came from the oppofite fhore of the northern illand, called Teera Whittee.
1773. They immediately enquired for Tupia (Tupaya),

June., and, like thofe mentioned p. 168, feemed much concerned, and pronounced fome words in a mournful or plaintive voice on hearing of his death. So much had this man's fuperior knowledge, and his ability to converfe in their language rendered him valuable, and beloved even among a nation in a flate of barbarifm. Perhaps with the capacity which Providence had allotted to him, and which had been cultivated no farther than the fimplicity of his education would permit, he was more adapted to raife the New Zeelanders to a fate of civilization fimilar to that of his own iflands, than ourfelves, to whom the want of the intermediate links, which connect their narrow views to our extended fphere of knowledge, muft prove an obftacle in fuch an undertaking.

Teiratu and all his companions were a taller race of people than we had hitherto feen in New Zeeland, none of them being below the middle fize, and many above it. Their drefs, ornaments, and arms were richer than any we had obferved among the inhabitants of Queen Charlotte's Scund, and feemed to fpeak a kind of affluence, which was entirely new to us. Among their dreffes were feveral cloaks entirely lined with dog-fkin, upon which they fet a high value, and which indeed gave them a comfortable appearance in the cold weather that now began to be felt. Many of their cloaks, made of the fibres of the New Zeeland flag (phormium), were new, and had elegant borders, very fymmetrically wrought in red, black, and white; fo that they might have paffed for the work of a much more polifhed nation.* The black is fo ftrongly fixed upon

\footnotetext{

}

\section*{ROUND THE WORLD.}
upon their fuffs, that it deferves the attention of our manufacturers, who greatly want a lafting dye of that colour on vegetable productions; but the little progrefs we could make in their language, rendered it impoffible to gain intelligence from them on this point. Their cloaks are fquare pieces, of which two corners were faftened on the breaft by ftrings, and ftuck together by a bodkin of bone, whalebone, or green jadde. A belt of a fort of clofe matting of grafs confined the lower extremities of their cloak to their loins, beyond which it extended at leaft to the middle of the thigh, and fometimes to the mid-leg. Notwithftanding this fuperiority over the natives of Queen Charlotte's Sound, they refembled them perfectly in their uncleanlinefs, and fwarms of vermin marched about in their cloaths. Their hair was dreffed in the falhion of the country tied on the crown, greafed, and ftuck with white feathers; and feveral of them had large combs, of fome cetaceous animal's bones, ftuck upright juft behind the bunch of hair on the head. Many of them were ftrongly carved with fpirals in the face; feveral had painted it with red ochre and oil, and were always much pleafed when we laid fome vermilion on their cheeks. We likewife faw fome little calabahes among them, neatly carved, in which they kept fome ftinking oil; but whether it was animal or vegetable I could never learn. All their tools were very elegantly carved, and made with great attention. They fold us a hatchet, of which the blade was of the fineft green jadde, and the handle curioully ornamented with fret-work. They alío brought fome mufical inftruments, among which was a trumper, or tube of wood, about four feet long, and pretty ftrait; its fmall mouth was not above two inches, and the other not above five in diameter; it made a
1773. very uncouth kind of braying, for they always

June. founded the fame note, though a performer on the French horn might perhaps be able to bring fome better mufic out of it. Another trumpet was made of a large whelk, (murex tritonis,) mounted with wood, curioully carved, and pierced at the point where the mouth was applied; a hideous bellowing was all the found that could be procured out of this inftrument. The third went by the name of a flute among our people, and was a hollow tube, wideft about the middle, where it had a large opening, as well as another at each end. This and the firft trumpet were both made of two hollow femicylinders of wood, exactly fitted and moulded together, fo as to form a perfect tube. Their double canoe was about fifty feet long, and feemed to be new; both the high ftern and the head were very curioully carved with fretwork and fpiral lines, as defcribed in captain Cook's former voyage. A mishapen thing, which with fome difficulty we perceived was meant to reprefent a human head, with a pair of eyes of mother of pearl, and a long tongue lolling out of its mouth, conftituted the foremoft extremity or prora of the canoe. This figute is the moft common in all their ornaments, and principally in every thing that relates to warlike affairs. The cuftom of lolling out the tongue in contempt and defiance of the enemy, feems to have given rife to the frequent reprefentations of it; the figure of the tongue forms the heads of their war-canoes, it is placed on the narrow extremity of their battle-axes, and they wear it on their breaft, tied to a ftring round the neck; nay they carve it on their very fcoops with which they bale the water, and on the paddles with which they manage their canoes

\section*{ROUND THE WORLD.}

Thefe people made but a very fhort ftay with us, for feeing it began to blow frefh, they all embarked and paddled over to the Motu-Aro. The captain, accompanied by feveral gentlemen, followed them about noon, and found feven canoes there hauled on chore, which had carried about ninety perfons to that ifland, who were all bufied making huts for their temporary fhelter. Our people were received with every mark of friendifip, and the captain diftributed many prefents to them. Among thefe was a number of brafs medals, gilt, about one inch and three quarters in diameter, which had been ftruck on purpofe to be left as a memorial of this voyage among the nations we hould meet with : on one fide was the, head of his prefent majefty, with the infeription, george ili. king of great britain, france, and ireland, \&xc. On the reverfe, the reprefentation of two men of war, with the names resolution and adventure over them; and the exergue sailed from england march mdcclixiif. * Some of thefe medals had already been given to the natives of Dufky Bay, and thofe of Queen Charlotte's Sound. In exchange for iron, cloth, and beads, our people collected a great number of arms, tools, dreffes, and ornaments, as curiofities among them, they having greater quantities of thefe things than any New Zeelanders we had feen. The captain and his company perceived that Teiratu feemed to be the principal or chief among them, by a certain degree of regard which the teft paid to him : they could not, however, determine any thing with precifion on this fubject. Refpect is always paid to the old men among

\footnotetext{
* It was originally intended that the floops fhould fail fo carly as March.
}
1773. among them, who may be fuppofed to owe their June. confequence to the long experience they have \(\xrightarrow[\sim]{\text { gained. But their chiefs, fuch as we believed }}\) this Teiratu to be, are ftrong, active, young men, in the prime and flower of their age. Thefe are perhaps elected, as among the North American favages; being men of avowed courage, ftrength, and military fagacity; from a confcioufnefs that a body of men, in cafe of war, neceffarily requires a leader to animate them as a foul, and upon whofe fuperior talents they may confidently place all their hopes. The more we confider the warlike difpofition of the New Zeelanders, and the numerous fmall parties into which they are divided, this form of government will appear indifpenfible; for it muft be evident to them that the qualifications of a chief are not to be inherited, or propagated from father to fon; and it is likewife probable, that this free people may have had opportunities of making the obvious reflection, that hereditary government has a natural tendency towards defpotifm.

Captain Cook, apprehenfive left the natives mould find our garden and defroy it, not knowing for what purpofe it was intended, conducted Teiratu thither, and fhewed him every plant in it, efpecially the potatoes. He expreffed a qreat liking to the laft, and feemed to know them very well, evidently becaufe a fimilar root, the Virginian or fweet potatoe, (convolvilus batatas, is planted in fome parts of the Northern Inland, from whence he came. The captain parted from him, after obtaining the promife that he would not deftroy his plantations, but leave every thing to grow up and propagate, and returned aboard the Refolution, where the marines fired three vollies, and our crews gave three hearty

\section*{ROUND THE WORLD.}
hearty cheers in token of affection to their king.

The wind frefhened confiderably after noon, and continued to blow very hard for two days following, fo that we were obliged to lie at anchor till the 7 th in the morning, when we weigh- Mond. 7. ed and failed out of Ship Cove, in company with the Adventure. Our ftay here had proved fo beneficial to our crews, that they might now be faid to be to the full as healthy as when they left England; and we had only a fingle fick man, a marine, on board our floop, who had laboured under a confumption and dropfy ever fince we had left England.

\section*{C \(\quad \mathbf{H} \quad \mathrm{A} \quad \mathrm{P} . \quad\) VII.}

Run from New Zeeland to O-Tabeitee.

WTE entered Cook's Strait after noon, and ftanding down to the fouthward, beheld the immenfe ocean before us, which goes by the name of the South Sea. This valt expanfe of fea, through which many former navigators had paffed, in the happy climate of the torrid zone, but whofe middle latitudes no European veffel, except the Endeavour bark, had hitherto attempted to explore, has always been believed to contain a large tract of land, diftinguifhed by geographers with the name of a Southern Continent. Previous to the Endeavour's voyage, New Zeeland was thought the weftern coaft of this unknown land, and certain pretended difcoveries near America were afferted as its eaftern fhores. Captain Cook in that voyage having cut off both thefe by his courfe, and even penetrated
1773. trated to 40 degrees of fouth latitude without

June. finding land, the fouthern continent was reftrained within narrower limits, though thefe were ftill confiderable enough to engage the attention of future navigators. We were now to enter on this unexplored part, and running to the eaftward between the 50 th and 40th degrees of fouth latitude, to fearch for undifcovered countries in the depth of winter. Many among our fellow-voyagers proceeded on this dangerots expedition in the firm belief that we fhould fpeedily find the coafts we went in queft of, whofe novelty and valuable productions would amply reward our perfeverance and fatigues. But captain Cook, and feveral others, judging from what had been done in the former voyage, and what they had already experienced on this, were far from expecting to difcover new lands, and greatly doubted the exiftence of a fouthern continent.

We were ftill in the mouth of the frait at
Tuefd. 8. eight the next morning, and faw the high mountains of the fouthern ifle loaded with fnow, from whence they had their name, whilft the weather below was clear and mild, our thermometer being about \(51^{\circ}\) in the fhade. Great fhoals of cetaceous fifh, of a perfectly black colour, with a white fpot before the back-fin, paffed by us. They were fired at from our veffel, and one of them being fhot through the head, could no longer plunge under water, but began to beat about furioully on the furface, and tinged the fea with its blood. It feemed to be about three yards long, and was flender and blunt-headed, from whence our failors called it the bottle-nofe, a name which Dale applies to a very different fifh, the beaked whale, of which the beak or
nofe refembles the neck of a bottle. * We went 1773. at the rate of three knots and a half at this June. time, fo that it was not thought proper to bring to, for the fake of taking up the dead fifh.

An infinite number of albatroffes, of all the Wed. 9.
three fpecies, hovered about us, after we were out of fight of the land. The common or large fort were of diverfe colours, which we believed to differ according to age, and that the oldeft were almoft wholly white, thofe next them fomewhat more fprinkled with brown, and the youngeft quite brown. Some of our failors, who had formerly failed on board of Eaft-India thips, after comparing the facility of thofe voyages to the hardihips of the prefent, propagated the ludicrous idea among their meffmates, that thefe birds contained the departed fouls of old India captains; who now, exiled to a part of the ocean which they fhunned before, were forced to gather a precarious fubfiftence inftead of enjoying their former affluence, and were made the fport of ftorms which they had never felt in their cabbins. This ftroke, which may pals for witty enough, confirms what I have before obferved of the original humour of fea-faring men.

The officers, who could not yet relifh their falt provifions, after the refrefhments of New Zeeland, had ordered their black dog, mentioned p. 110, to be killed, and fent the captain one half of it; this day therefore we dined for the firft time on a leg of it roafted, which tafted fo exactly like mutton, that it was abfolutely undiftinguifhable. In our cold countries where animal food is fo much ufed, and where to be carnivorous perhaps lies in the nature of men, or is indifpenfibly neceffary to the prefervation

\footnotetext{
* See Pennant's Britilh Zoology.
} there fhould exit a Jewish aversion to dogsflesh, when hogs, the mot uncleanly of all amimall, are eaten without fcruple. Nature rems expressly to have intended them for this use, by making their offspring fo very numerous, and their encreafe fo quick and frequent. It may be objected, that the exalted degree of inftinet, which we observe in our dogs, infpires us with great unwillingness to kill and eat them. But it is owing to the time we fend on the education of dogs, that they acquire thole eminent quaities which attach them fo much to us. The natural qualities of our dogs may receive a wonderful improvement, but education mut give its affiftance, without which the human mind itself, though capable of an immense expanfion, remains in a very contracted fate. In New Zeeland, and (according to former accounts of voyages) in the tropical ines of the South Sea, the dogs are the molt ftupid, dull animals inaginable, and do not feem to have the leaf advantage in point of fagacity over our hep, which are commonly made the emblems of fillinets. In the former country they are fed upon fifth, in the latter on vegetables, and both there diets may have ferved to alter their difpofition. Education may perhaps likewife graft new inftinets; the New Zeeland dogs are fed on the remains of their matters' meals ; they eat the bones of other dogs, and the puppies become true canibals from their birth. We had a young New Zeeland puppy on board, which had certainly had no opportunity of tatting any thing but the mother's milk before we purchafed it; however it eagerly devoured a portion of the fletch and bones of the dog, on which we dined today; while Several others of the European breed
breed taken on board at the Cape, turned from it without touching it.

We kept ftanding to the fouth-eaftward till the 16th at noon, attended by numerous birds of the petrel and albatrofs kind, together with now and then a fkua , or Port-Egmont hen. Beds of fea-weeds frequently were feen floating on the fea, but we were now too much accuftomed to their appearance, to attempt to draw any conclufions from it. The thermometer, which at our departure from New Zeeland, food at \(51^{\circ}\) at eight o'clock in the morning, funk in proportion as we came to the fouthward to \(48^{\circ}\), and fometimes to \(47^{\circ}\) at the fame time of day; but the temperature of the air upon the whole was extremely variable, and the weather equally unfettled. From thence it arofe, that we daily obferved rainbows, or parts of them about the horizon, efpecially in the morning. The wind during this time was likewife very changeable, and veered round the compafs in a direction contrary to the courfe of the fun, that is, from weft round by the north towards eaft, and fo further on; but it chiefly prevailed from the eafterly quarter, where we lealt expected it, fo that our fituation became tedious, and was made more irkfome by frequent fogs, rains, and heavy fwells. Having reached the latitude of \(46^{\circ} 17^{\prime}\) fouth, we directed our courfe to the north-ealtward, as much as the wind would permit.

On the 23 d , the weather being mild and the Wed. 23. wind very moderate, captain Furneaux came on board, and dined with us. He acquainted captain Cook, that all his people continued in good health, except one or two, who were infected with a naufeous difeafe, which is propagated by connections with the other fex. This information gave us great uneafinefs, it being evident Vol. I. \(O\) that

\section*{A V O \(\quad\) Y A \(\quad \mathbf{G} \quad \mathbf{E}\)}
1773. that the diftemper had already reached New Zee-

Jurie. land, fince our men muft have received it there. Struck with the horrid confequences which this evil would entail on the New Zeelanders, we recapitulated the opportunities which thofe people had of catching the infection from Europeans. The firlt difcoverer of this country, in 1642, Abel Janffen Tafman, had not the leaft amicable intercourfe with the inhabitants, and none of his people appear to have been afhore upon it. Captain Cook, the next navigator, who vifited it in the Endeavour Bark, 1769 and 1770 , came from O-Taheitee and the Society Illes, where Several of his people had contracted venereal complaints. However, as his paffage lafted nearly two months, the furgeon reported, when they made the coaft, that no man had fymptoms of the diftemper about him. Notwithftanding this affurance captain Cook had the precaution, not to fuffer any perfon to go on fhore, who had been under cure, and might be fufpected to have fome latent remains of this infectious evil; and to preclude the poffibility of communicating it to a guiltlefs people, he never fuffered the women to come on board. M. de Surville, a French navigator, failed from Pondichery in the St. Jean Baptifte, paffed through the Straits of Malacca, touched at the Bafhee Ifles, went round Manila, faw land to the S. E. of New Britain, about the latitude of \(10 \frac{3}{3}^{\circ}\), and longitude \(158^{\circ}\) eaft, which he called Port Surville; touched at New Zeeland, and proceeded to Callao, in South America, in order to trade there: but being drowned in the landing, and all his letters of recommendation being loft with him, the fhip was detained near two years, and then fent to France, with all her merchandize. M. de Surville lay in Doubtlefs Bay, on the 9th of December, 1769, and faw.

\section*{ROUND THE WORLD.}
faw the Endeavour ftanding paft him, though captain Cook could not fee his veffel, which lay under the land. What ftay M. de Surville made there, and upon what terms he was with the natives, I know not ; but the diftance between this place and Queen Charlotte's Sound, and the want of intercourfe between the inhabitants of both ports, make it improbable, even fuppofing the complaint to have exifted among his crew, that it could have reached fo far fouth.

The fame thing may be faid with regard to M. de Marion and captain Crozet, two French officers, whofe expedition, in 1772 , I have mentioned page 92 ; for the communication which their crews had with the natives, was confined to the environs of the Bay of Iflands, in the northernmoft part of the northern ille. Our two floops were the next in order, which touched at New Zeeland; but we had not the leaft reafon to fuppofe, that they carried any venereal complaint to that country. They had left the Cape of Good Hope, the laft place where it is poffible the failors might contract this diforder, fix months before they came to Queen Charlotte's Sound, five of which they had been at fea; an interval in which a radical cure may be expected, unlefs the difeafe be of too inveterate a nature. However, they were far from having any patients of this fort on board, and it is not likely that the poifon could lay dormant during that long interval of time, in a fet of men who had no other than falt provifions to live upon, and fpirituous liquors to drink, and who were expofed to wet and cold, and all the rigours of fouthern climates. We therefore concluded, that from all the concurring circumftances, the venereal difeafe was indigenous in New Zeeland, and not imported by Europeans; and we have hitherto had no reafon to
\[
\mathrm{O}_{2} \quad \text { alter }
\]
1773. alter our opinion on this fubject. But if, in fpite June. of appearances, our conclufions fhould prove erroneous, it is another crime added to the fcoreof civilized nations, which muft make their memory execrated by the unhappy people, whom they have poifoned. Nothing can in the leaft atone for the injury they have done to fociety, fince the price at which their libidinous enjoyments were purchafed, inftils another poifon into the mind, and deftroys the moral principles, while the difeafe corrupts and enervates the body. (See pag. 173.) A race of men, who amidat all their favage roughnefs, their fiery temper, and cruel cuftoms, are brave, generous, hofpitable, and incapable of deceiving, are juftly to be pitied, that love, the fource of their fweeteft and happieft feelings, is converted into the origin of the moft dreadful foourge of life.
Juny. The wind fill continued as changeable as before, till the beginning of July, having veered all round the compafs againit the fun, more than four times. During this face albatroffes, petrels, and fea-weeds, were frequently feen; rainbows alfo appeared almoft every morning, nay one night we obferved this phxnomenon pretty frong, caufed by the refracted light of the moon.
Friday 3. On the gth of July we were nearly in the fame longitude, where captain Cook, in the Endeavour, had reached \(40^{\circ} 22^{\prime}\) fouth, * but our laitude was about two degrees and a quarter more foutherly. Here we ioft a young he-goat, which fell over board, and notwithftanding all pofible means were tried for his recovery, fuch as chafing, injecting clyfters of the fumes of tobacco, \&c. our endeavours proved entirely ineffectual.

ROUND THE WORLD.
July 17 th, having paffed the longitude of \(127^{\circ} \quad 1773\). eaft, and being in about \(40^{\circ}\) fouth latitude, we began to run due north, after a very tedious Satur. 17. courfe in fearch of the fouthern continent, the exiftence of which, in the latitudes we had now paffed through, had been pofitively afferted. The uncomfortable feafon of the year, the many contrary winds, and the total want of interefting incidents united to make this run extremely tedious to us all, and the only point we had gained by it, was the certainty that no great land was fituated in the South Sea about the middle latitudes. In five days time our latitude being \(31^{\circ}\) fouth, we began to lofe fight of albatroffes and petrels, and the thermometer was rifen to \(6_{1 \frac{1}{2}}\), fo that we began to change our winter clothes for others, confiderably thinner, for the firft time after leaving the Cape of Good Hope. The fpirits of all our people were much exhilarated in proportion as we approached to the tropics, and our failors diverted themfelves with a variety of plays every evening. The genial mildnefs of the air was fo welcome to us, after a long abfence from it, that we could not help preferring the warm climates as the beft adapted for the abode of mankind. We faw a tropic bird on the 25 th in the afternoon, a fure fign Sund. 25 . that we were arrived into the temperate climates below \(30^{\circ}\) of latitude. The fetting fun illumined the clouds with the moft brilliant tints of gold, which confirmed us in the opinion that the colours of the fky are no where fo rich and beautiful as between or near the tropics.

On the 28 th we fpoke with the Adventure, and Wed. 2.3 heard that they had buried their cook three days ago, and that about twenty of her people were very ill of the fcurvy. This was the more furprifing to us, as we had but very few people af-
1773. fected with any fymptoms of that diforder, and \(\underbrace{\text { JuLr. }}\) only one who was dangeroufly fick. The next day captain Cook fent one of his feamen with a warrant to act as cook on board the Adventure; and feveral of our gentlemen took the opportunity of going to dine with their friends. They found captain Furneaux and fome others very ill of a rhenmatic complaint, and many of the people had fluxes. Their carpenter was remarkably ill of the fcurvy, and had great livid blotches on his legs. This difference between the falubrity of the two veffels probably arofe from the want of frefh air in the Adventure, our floop being higher out of the water, fo that we could open more fcuttles in bad weather than our confort. Our people likewife made a greater confumption of four-krout and wort, and particularly applied the grains of the latter to all blotches and fwelled parts, a regimen which had been omitted by thofe in the Adventure. On this occafion it is not improper to remark, that the fcurvy is more dangerous and virulent in warm climates than in cold. As long as we had kept in high latitudes it did not make its appearance, or was at leaft confined to a few individuals, who were naturally of a bad habit of body; but we had fcarcely had ten days of warm weather when one man died, and a number of others were affected with the worft fymptonis of this dreadful diftemper, on board the Adventure. It hould therefore feem that the heat contributes to inflammation and putrefaction; and its general effect, even among thofe who had no dangerous fcorbutic complaints, was a great degree of languor and debility.
Avevst On the 4th of Auguft a young bitch, of the
Wed. 4. terrier breed, taken on board at the Cape of Good Hope, and covered by a fpaniel, brought
ten young ones, one of which was dead. The 1773 . New Zeeland dog, mentioned above, which de- Aucust. voured the bones of the roafted dog, now fell upon the dead puppy, and ate of it with a ravenous appetite. This is a proof how far education may go in producing and propagating new inftincts in animals. European dogs are never fed on the meat of their own fpecies, but rather feem to abhor it. The New Zeeland dogs, in all likelihood, are trained up from their earlieft age to eat the remains of their mafter's meals; they are therefore ufed to feed upon fifh, their own fpecies, and perhaps human flef; and what was only owing to habit at firft, may have become inftinet by length of time. This was remarkable in our canibal-dog, for he came on board fo young, that he could not have been weaned long enough to acquire a habit of devouring his own fpecies, and much lefs of eating human flefh; however, one of our feamen having cut his finger, held it out to the dog, who fell to greedily, licked it, and then began to bite into it.

On the 6th, in the afternoon, being in about \(19 \frac{1}{2}\) deg. of fouth latitude, we got the eafterly trade-wind, which fet in frefh after feveral calms, attended with heavy fhowers of rain. The fun being at this time ftill in the oppofite hemifphere, was probably the caufe of our meeting with this wind fo much later than ufual, the tropics being generally reckoned its limits. Agreeable to the obfervation which we now made, we had found the trade-wind, in Auguft 1772, at Madeira, though that ifland is fituated in \(33^{\circ}\) of north tatitude. But the moft remarkable occurrence in our run was the nature of the winds previous to our obtaining the trade-wind. We had expected that, by going in a middle latitude be-
1773. tween 50 and 40 deg. fouth, we fhould meet with \(\underbrace{\text { August. }}\) regular wefterly winds, which are common in our feas during the winter months; inftead of this we found them veering round the compals in two or three days time, never fettling in any other than the eaftern quarter, and fometimes blowing with great violence. Thus the name of Pacific Ocean, which has formerly been given to the whole South Sea, is, in my opinion, applicable only to a part of it between the tropics, where the winds are fteady and uniform, the weather in general fair and mild, and the fea not fo much agitated as in higher latitudes.

Albecores, bonitos, and dolphins gave chace to many fhoals of flying-fifh, in the fame manner as we had obferved them in the Atlantic; while feveral large black-birds, with lang wings and forked tails,' which are commonly called men of war (pelicanus aquilus, Linn.) foared at a vaft height in the air, and fometimes defcending into a lower region, viewed a fifh fwimming under them, and darted down with amazing velocity, never failing to ftrike the filh with their bill. It is a well known fact, that gannets, which are birds of the fame genus in the Englifh feas, catch fifh in a fimilar manner. The fifhermen on the coaft frequently fix a pilchard or herring on the point of a knife faftened to a floating board, and the bird darting down upon it transfixes itfelf on the knife.

On the 11th, in the morning, we difcovered a low ifland to the fouthward of us, which feemed about four miles long, and about fix miles diftant. It appeared to be almoft level with the fea, only fome groups of trees rofe above the horizon, and among them a few cocoa-nut palms out-topped the reft. To people in our fituation, exhaufted with a tedious paffage, the bare fight
of land was fufficient to give fome confolation, though we could not expect to reap any benefit from its productions; and therefore this illand, though divefted of every thing frikingly beautiful, yet pleafed the eye by the fimplicity of its form. Our thermometer was now conitantly between 70 and 80 degrees in the morning; but the heat was far from being troublefome, as the fair weather was accompanied by a ftrong pleafant trade-wind, and our awnings were fpread over the quarter-deck. This inand, which was called Resolution ifland, feems to have been feen by M. de Bougainville. Its latitude is \(17^{\circ} 24^{\prime}\) fouth, and its longitude \(141^{\circ} 39^{\prime}\) weft from Greenwich. Our obfervation at noon was \(17^{\circ} 17^{\prime}\) fouth, our courfe being nearly eaft. In the evening, at half paft fix o'clock, we faw another ifland of the fame nature as the preceding, about four leagues diftant, which was named Doubtrul Inand. It being after fun-fet, we food to the northward till we had paffed by it. The next morning, before Thurfiz. day-break, we were alarmed by the fudden appearance of breakers within half a mile a-head of us. We changed our courfe inftantly, apprized our confort of the danger by proper fignals, and then flood along the reef. As foon as it was light we diftinguifhed an ifland of a circular form, including a large bafon or lagoon of fea-water; the northern fhores were covered with trees and palms in various clufters, which had a very elegant appearance; but all the reft was a narrow ledge of rocks, over which the furf beat with great violence; within it the lagoon was fhallow near us, but deeper under the wooded part; a difference which could eafily be diftinguifhed by the whiter or the bluer colour of the water. Captain Cook gave this ifle the name of Furneaux lland; it is fituated in \(17^{\circ} 5^{\prime}\) fouth latitude, and
177. \(143^{\circ} 16^{\prime}\) weft longitude. Standing along this reef Aucust, we faw a canoe failing near the northern part of the inle, and by the help of glaffes we obferved fix or feven men in it, one of which was placed at the ftern fteering with a paddle. They did not feem to have embarked in order to reconnoitre us, as they did not approach the fouthern reef, but kept clofe in with the wooded part of the inland. We proceeded all day with a favourable breeze and fair weather ti's fun-fet; but the navigation between thefe low iflands and reefs being extremely dangerous, becaufe they can only be feen at fhort diftances, we were obliged to bring to at night in order to avoid meeting with them Fridayis. unawares. Early the next morning we left another ifland of this kind on our farboard quarter, which was called Adventure Ifland; it lies in \(17^{\circ} 4^{\prime}\) fouth latitude, and \(144^{\circ} 30^{\prime}\) weft longitude. We fpoke with the Adventure about the fame time, and were told fhe had above thirty men on the fick lift, moft of them ill of the fcurvy. Our floop fill kept rather free of this diftemper, and every precaution was taken to preferve our crew in health by a plentiful ufe of fourkrout, by airing the hammocks every day, and frequently fmoaking the fhip with gunpowder and vinegar.

In the afternoon we faw an ifland right a-head, confifting of feveral clumps of trees, united by one reef, and from its fituation we judged it was the fame which captain Cook named Chain Ifland in his former voyage.* To prevent lofing our time by bringing the floops to at night, we hoifted a boat out, and fent it to fail a-head of our veffels, with a light, and to make fignals in cafe of danger. The South Sea between the tropics

\footnotetext{
'See Hawkefworth, vol. II. p. 86.
}
pics contains many low iflands, fingularly con- 1773. ftructed, which are level with the fea in moft Aucust. places, and at the utmoft a yard or two above it. They have frequently a circular form, including a lagoon or bafon of fea-water in their centre, and the depth of the fea all round them is unfathomable, the rocks rifing perpendicularly from the bottom. Their productions mult be few, and cocoa nut-trees are probably the moft ufeful which they contain; but notwithftanding this circumftance and their fmall fize, many of them are inhabited. The queftion how fuch little fots came to be peopled is not eafily to be anfwered; but it is not eafier to determine how the higher iflands in the South Sea have acquired their inhabitants. Commodore (now Admiral) Byron, and Captain Wallis, who fent fome of their people on thore upon thefe low inlands, found their inhabitants thy and jealous of ftrangers; a difpofition which is perhaps owing to the difficulty of preferving their exiftence from the fcanty provifions on their narrow circle, and which may be heightened by the confcioufnefs that their fmall numbers render them liable to oppreffion. The language of thefe people, and their cultoms, are therefore ftill unknown, and thefe are the only circumftances from which the origin of nations, who have no records among them, can be traced.

Early on the 15 th of Auguft we faw a high peak with a flattifh fummit, firft difcovered by Captain Wallis, who called it Ofnabruck Ifland, and afterwards by M. de Bougainville, in whofe chart it has the names of Pic de la Boudeufe, or le Boudoir. The mountain appeared of a confiderable height, and its top was broken or excavated perfectly like the crater of a volcano, which feemed evidently to have exitted here. The jifand was nearly of a circular form, and the mountain
1773. mountain rofe fteep to a conical fhape from all \(\underbrace{\text { Aucust. parts of the fea-fhore, there being but little level }}\) \(\underbrace{\sim}\) land round its foot. The whole mountain was green, and the bottom or low land was covered with trees. While we eagerly feafted our eyes with this pleafing profpect, one of our officers, who had formerly been fent clofe in fhore there by Captain Wallis, told us that the trees were of the kind which bear the bread-fruit, fo much extolled in the voyages of Anfon, Byron, Wallis, and Cook. He acquainted us at the fame time, that the natives were of the fame race as thofe who dwell on O-Taheitee and the Society Ines, of which the firft is within half a day's fail; and that they give the name of Maatea* to their own ifland. We never came nearer than four leagues to it, which was probably the reafon that no canoes came off to vifit us. Having very little wind we hoifted a boat out, which went on board the Adventure, and brought Captain Furneaux to dine with us. We had the pleafure to learn from him, that the flux among his crew was ceafed, and that none of his people were in any imminent danger from the fcurvy; we hoped therefore, from our vicinity to O - Taheitee, to have a fpeedy opportunity of reftoring their health by a wholefome vegetable diet.
In the evening, about fun-fet, we plainly faw the mountains of that defirable ifland, lying before us, half emerging from the gilded clouds on the horizon. Every man on board, except one or two who were not able to walk, haftened eagerly to the forecaftle to feaft their cyes on an object, of which they were taught to form the higheft expectations, both in refpect of the abuncance of refrefhments, and of the kind and generous

\footnotetext{

}
nerous temper of the natives, whofe character
1773. \(\underbrace{\text { Auous }: ~}\) them. The firt difcoverer was probably a Spaniard, Pedro Fernandez de Quiros, who failed from Lima in Peru, on the 21 ft of December 1605. He made an ifland on the roth of Fe bruary 1606, calling it la Sagittaria,* which, from all the concurring circumftances, feems to have been O-Taheitee. He found no harbours on the fouth part, where he fell in with it; but the people he fent afhore were treated with the greateft marks of friend/hip and kindnefs. Captain Wallis next found this ifland on the 18 th of June 1767, and called it George the Third's Ifland. Some unhappy mifunderftanding arifing between him and the natives at firft, he fired upon them, killed about fifteen, and wounded a great number; but thefe good tempered people, forgetting the great lofs they had fuftained, and the wounds their brethren had received, made peace with him foon after, and furnifhed him with a profufion of refrefhments, confifting of feveral roots, many forts of rich fruit, fowls, and hogs. M. de Bougainville arrived in the eaftern part on the 2d of April 1768, or about nine months and a half after the departure of Captain Wallis, and difcovered the true indigenous name of this ifland; fenfible of the amiable character of the inhabitants, he ftaid ten days among them, giving and receiving frequent marks of friendfhip and regard. Captain Cook, in the Endeavour, arriving here in April 5769 , to obferve the tranfit of Venus, circumnavigated the whole ifland in a boat; and, during a ftay of three months, had daily

\footnotetext{

}

We ftood on towards this ifland all night, and the favourable ideas which were raifed by the accounts of former navigators, made us pafs fome happy hours in expectation of the morning. We refolved to forget our fatigues and the inclemencies of fouthern climates; the clouds which had hitherto hung lowering upon our brows were difperfed; the loathed images of difeafe and the terrors of death were fled, and all our cares at reft.

Mond.16. the poets of all nations have attempted to defcribe, when we faw the inle of O-Taheitee, within two miles before us. The eaft-wind which had carried us fo far, was entirely vanifhed, and a faint breeze only wafted a delicious perfume from the land, and curled the furface of the fea. The mountains, clothed with forefts, rofe majeftic in various

\section*{ROUND THE WORLD.}
various firy forms, on which we already per- \({ }^{1} 773\). ceived the light of the rifing fun: nearer to the \(\underbrace{\text { August. }}\) cye a lower range of hills, eafier of afcent, ap peared, wooded like the former, and coloured with feveral pleafing hues of green, foberly mixed with autumnal browns. At their foot lay the plain, crowned with its fertile bread-fruit trees, over which rofe innumerable palms, the princes of the grove. Here every thing feemed as yet afleep, the morning fcarce dawned, and a peaceful thade ftill refted on the landfcape. We difcerned however, a number of houfes among the trees, and many canoes hauled up along the fandy beaches. About half a mile from the fhore a ledge of rocks level with the water, extended parallel to the land, on which the furf broke, leaving a fmooth and fecure harbour within. The fun beginning to illuminate the plain, its inhabitants arofe, and enlivened the fcene. Having perceived the large veffels on their coaft, feveral of them haitened to the beach, launched their canoes, and paddled towards us, who were highly delighted in watching all their occupations.

The canoes foon paffed through the openings in the reef, and one of them approached within hale. In it were two men almoft naked, with a kind of turban on the head, and a fafh round their waift. They waved a large green leaf, and accofted us with the repeated exclamation of tayo!* which even without the help of vocabularies, we could eafily trannlate into the expreffion of proffered friendhip. The canoe now came under our ftern, and we let down a prefent of beads, nails, and medals to the men. In return, they handed up to us a green Item of a plantane, which was their fymbol of peace, with a defire that it might

\footnotetext{

}
1773. might be fixed in a confpicuous part of the veffel. Aucust. It was accordingly fuck up in the main fhrouds, \(\xrightarrow[\sim]{\sim}\) upon which our new friends immediately returned towards the land. In a fhort time we faw great crouds of people on the fea-fhore gazing at us , while numbers in confequence of this treaty of peace, which was now firmly eftablifhed, launched their canoes, and loaded them with various productions of their country. In lefs than an hour we were furrounded by an hundred canoes, each of which carried one, two, three, and fometimes four perfons, who placed a perfect confidence in us, and had no arms whatfoever. The welcome found of tayo refounded on all fides, and we returned it with a degree of heart-fels pleafure, on this favourable change of our fituation. Coco-nuts, and plantanes in great quantity, bread-fruit and feveral other vegetables, befides fome frefh fifh were offered to us, and eagerly exchanged for tranfparent beads, and fmall nails. Pieces of cloth, fifh-hooks, hatchets of ftone, and a number of tools, were likewife brought for fale and readily difpofed of ; and many canoes kept plying between us and the fhore, exhibiting a picture of a new kind of fair. I immediately began to trade for natural productions through the cabin-windows, and in half an hour had got together two or three fpecies of unknown birds, and a great number of new fifhes, whofe colours while alive were exquifitely beautiful. I therefore employed the morning in fketching their outlines, and laying on the vivid hues, before they difappeared in the dying objects.

The people around us had mild features, and a pleafing countenance; they were about out fize, of a pale mahogany brown, had fine black hair and eyes, and wore a piece of cloth round their middle of their own manufacture, and another
another wrapped about the head in various pictu- 1773. refque fhapes like a turban. Among them were feveral females, pretty enough to attract the attention of Europeans, who had not feen their own country-women for twelve long months paft. Thefe wore a piece of cloth with a hole in the middle, through which they had paffed the head, fo that one part of the garment hung down behind, and the other before, to the knees; a fine white cloth like a muflin, was paffed over this in various elegant turns round the body, a little below the breaft, forming a kind of tunic, of which one turn fometimes fell gracefully acrofs the fhoulder. If this drefs had not entirely that perfect form, fo juftly admired in the draperies of the ancient Greek fatues, it was however infinitely fuperior to our expectations, and much more advantageous to the human figure, than any modern fafhion we had hitherto feen. Both fexes were adorned, or rather disfigured, by thofe fingular black ftains, occafioned by puncturing the fkin , and rubbing a black colour into the wounds, which are mentioned by former voyagers. They were particularly vifible on the loins of the common men, who went almoft naked, and exhibited a proof how little the ideas of ornament of different nations agree, and yet how generally they all have adopted fuch aids to their perfonal perfection. It was not long before fome of thefe good people came aboard. That peculiar gentlenefs of difpofition, which is their general characteriftic, immediately manifefted itfelf in all their looks and actions, and gave full employment to thofe, who made the human heart their ftudy. They expreffed feveral marks of affection in their countenance, took hold of our hands, leaned on our houlder, or embraced us. They admired the whitenefs of our bodies, and Vol. I. P frequently
1793. frequently pufhed afide our clothes from the Aucust. breaft, as if to convince themfelves that we were made like them.

Many of them feeing us defirous of learning. their language, by alking the names of various familiar objects, or repeating fuch as we found in the vocabularies of former voyagers, took great pains to teach us, and were much delighted when we could catch the juft pronunciation of a word. For my own part, no language feemed eafier to acquire than this; every harfh and fibilant confonant being banifhed from it, and almoft every word ending in a vowel. The only requifite, was a nice ear to diftinguifh the numerous modification of their vowels, which muft naturally occur in a language confined to few confonants, and which, once rightly underftood, give a great degree of delicacy to converfation. Amongft feveral other obfervations, we immediately found that the O or E with which the greateft part of the names and words in lieutenant Cook's firf voyage, begin, is nothing elfe than the article, which many eaftern languages affix to the greater part of their fubftantives. In confequence of this remark, I fhall always in the fequel either omit this prefix, or feparate it from the word itfelf by a hyphen : and I cannot help taking notice that M. de Bougainville has been fortunate enough to catch the name of the inland without the additional O , and expreffed it as well as the nature of the French language will permit, by Taiti, which, with the addition of a flight afpirate, we pronounce Taheîtee, or Tahitee.

Seeing an opening in the reef before us, which was the entrance to the harbour of Whai-Urua, in the leffer peninfula of O-Taheitee, we fent a boat to found in it, which found convenient anchorage. The boat afterwards proceeded to the fhore \(_{\boldsymbol{p}}\)

Thore, where a croud of the natives gathered round it, and we heard the fqueaking of pigs, which was at this time a more welcome found to us, than the mufic of the moft brilliant performer. Our people, however, were not fo fortunate as to purchafe any of them, all their offers being conftantly refufed, under the pretext that thefe animals belonged to the aree, or king.

A canoe now came along-fide, of a fomewhat larger fize than the reft, and brought a handfome man, above fix feet high, and three women, who all came on board. ' The man, who immediately informed us, that his name was O.Taï, feemed to be a perfon of fome confequence in this part of the ifland, and we fuppofed he belonged to that clafs of vaffals, or freeholders, who are called Manahounas in the firt voyage of captain Cook. He came on the quarter-deck, to all appearance thinking, that a place where our chiefs were ftationed, beft became him. He was remarkably fairer than any of the natives we had yet feen, and refembled in colour the Weft Indian Meftizos. His features were really handfome and regular; he had a high forehead, arched eyebrows, large black eyes, fparkling with expreffion, and a well-proportioned nofe; there was fomething remarkably fweet and engaging about his mouth; the lips were prominent, but not difagreeably large; and his beard was black, and finely frizzled; his hair was of a jetty colour, and fell in ftrong curls down his neck; but feeing that we all had ours queued, he made ufe of a black filk neckcloth, which Mr. Clerke made him a prefent of, to imitate our faflion. The body was in general well-proportioned, though fomewhat too lufty, and his feet were rather too large to harmonize perfectly with the reft. By the help of vocabularies we anked this man feveral
1773. queftions. One of the firft was, whether Too \(\underbrace{\text { Aucuss }}\) tahah was well? to this we were anfwered, that he was dead, being killed by the men of Tiarraboo, or the fmaller peninfula, and that O-Aheatua was \(e\)-aree, or the king of the Jatter; which was confirmed by all the other natives. Of his three female companions, one was his wife, and the other two his fifters: the latter took great pleafure in teaching us to call them by their names, which were both fufficiently harmonious, one was called Maroya, and the other Marorai. They were ftill fairer than O-Taï, but their ftature was fmall in comparifon to his, being at leaft nine or ten inches lefs. The laft mentioned was a graceful figure, with the mof delicate and beautiful contours, in the hands and all above the zone. Their face was round, and their features far from being fo regular as thofe of the brother; but an ineffable fmile fat on their countenances. They feemed never to have been aboard of a fhip before, fo much were they fruck with admiration on beholding its variety of objects. They did not content themfelves with looking around the deck, but defiended into the officers cabins, whither a gentleman conducted them, and curioufly examined every part. Marorai took a particular fancy to a pair of fheets which fhe faw fread on one of the beds, and made a number of fruitlefs attempts to obtain them from her conductor. He propofed a feccial favour as the condition; fhe hefitated fome time, and at laft with feeming reluctance confented; but when the victim was juft led to the altar of Hymen, the hip Itruck violently on the reef, and interrupted the folemnity. The affrighted lover, more fenfible of the danger than his fair miftrefs, flew in hafte upon the deck, whither all the reft of our people crowded from their feveral occupations. The tide, during
a perfect calm, had driven us by infenfible degrees towards the reef of rocks; and actually fet us upon it, before we could come into the entrance of the harbour, which was as it were within our reach. Repeated fhocks made our fituation every moment more terrifying; however, providentially there was no fwell which broke with any violence on the rocks, and the rea breeze, which muft have brought on abfolute deftruction to us, did not come in all day. The officers, and all the paffengers, exerting themfelves indifcriminately on this occafion, hoifted out the launch, and afterwards by heaving upon an anchor, which had been carried out to a little diftance, fucceeded in bringing the veffel afloat. The natives on board, feeing us work fo hard, affifted us in manning the capftan, hauling in ropes, and performing all forts of labour. If they had had the leaft fpark of a treacherous difpotion, they could not have found a better opportunity of diftreffing us; but they approved themfelves good-natured, and friendly in this, as on all other occafions. The heat during this violent exertion of our ftrength was immenfe; the thermometer being upwards of ninety degrees in the fhade, and the fun blazing in a perfectly clear iky. The Adventure was clofe to us, and efcaped tharing the fame diftreffes, by dropping an anchor in time. It was another fortunate circumftance, that the reef fhelved in this place fo as to admit of anchorage, which is indeed rarely the cafe, the coral rock being perpendicular in moft parts. It was about three o'clock when we were afloat again, after working for about an hour and a half. We now took fome refrefhments in a hurry, and as our fituation was ftill extremely precarious, in cafe an eafterly wind had come on, we manned the boats of both floops, and were towed
1773. towed off to fea, where we felt a land-breeze Aucust gently fwelling our fails, about five o'clock. As \(\sim\) foon as we were fure of it, we difpatched the boats to the affiftance of the Adventure; but the had already flipped her cables, in order to take advantage of the favourable wind, and followed us. We ftood-off and on all night, and faw the dangerous reefs illuminated by a number of fires, by the light of which the natives were filhing. One of the officers retiring to reft, found his bed deprived of the Theets, which in all probability the fair Maroraï had taken care of, when forfaken by her lover; though the mult have managed this little concern with confiderable ingenuity, as fhe had appeared on deck before any fufpicion had fallen upon her.
Tuef. 17. The next morning we refumed our courfe towards the fhore, and ftood in along the north part of the leffer peninfula. We were in a hort time furrounded, as the day before, by the natives, who in a great number of canoes brought us abundance of vegetable, but no animal food, and whofe clamours were fometimes loud enough to ftun our ears. Thefe canoes very frequently overfet, but the natives were not much difcompofed by fuch accidents, as both fexes were expert fwimmers, and re-eftablifhed themfelves in a moment. Seeing that I enquired for plants, and other natural curiofities, they brought off feveral, though fometimes only the leaves without the flowers, and vice verfa; however, among them we faw the common fpecies of black night-fhade, and a beautiful erytbrina, or coral flower; I alfo collected by thefe means many fhells, coralines, birds, \&c.

About eleven o'clock we anchored in a little harbour called O-Aitepeha, on the north-eatt end of the fouthern or leffer peainfula of Taheitee, named

\section*{ROUND THE WORLD.}
named Tiarraboo. Here the concourfe of na- 1773. tives ftill increafed, and we faw their canoes com-Aucust. ing towards us from all parts. They were eager to obtain our beads, nails, and knives, for which an immenfe quantity of their cloth, mats, bafkets, and various tools, as well as abundance of coco-nuts, bread-fruit, yams, and bananas were exchanged. Many of them came on deck, and took the opportunity of conveying away a number of trifles; nay, fome went fo far as privately to throw overboard the coco-nuts, which we had already purchafed, to their comrades, who immediately picked them up, and fold them to our people again. To prevent our being impofed upon for the future in this manner, the thieves were turned out of the veffel, and punifhed with a whip, which they bore very patiently.

The heat was as great as it had been the day before, the thermometer ftanding at \(90^{\circ}\) in the fhade, when the fky was covered with clouds; the wind likewife dying away again at noon to a perfect calm. Notwithftanding the wafte of fluids which the weather occafioned, we could not fay that we found the climate affected us too much, or was very difagreeable. On the contrary, allowing for the violent exercife we had undergone at the ftriking of the hip, we found ourfelves more refrefhed by the bare proximity of the thore, than we could have expected. The bread. fruit and yams proved a luxurious and moft welcome fubtitute for worm-eaten bifcuit; while plantanes, and a fruit of the fhape of an apple, called \(e\)-vee by the natives, furnifhed out a delicious deffert. Our only remaining wifh, with regard to eatables, was to be able to purchafe fome hogs and fowls, which might fupply the place of falt beef.
1773. In the afternoon the captains, accompanied by Aucust. feveral gentlemen, went afhore the firft time, in order to vifit O-Aheatua, whom all the natives thereabouts acknowledged as aree, or king. Numbers of canoes in the mean while furrounded us, carrying on a brifk trade with vegetables, but chiefly with great quantities of the cloth made in the ifland. The decks were likewife crouded with natives, among whom were feveral women who yielded without difficulty to the ardent folicitations of our failors. Some of the females who came on board for this purpofe, feemed not to be above nine or ten years old, and had not the lealt marks of puberty. So early an acquaintance with the world feems to argue an uncommon degree of voluptuoufnefs, and cannot fail of affecting the nation in general. The effect, which was immediately obvious to me, was the low ftature of the common clafs of people, to which all thefe proftitutes belonged. Among this whole order we faw few perfons above the middle fize, and many below it; an obfervation which confirms what M. de Buffon has very judicioufly faid on the fubject of early connections of the fexes, (fee his Hiftoire Naturelle.) Their features were very irregular, and in general very ordinary, except the eyes, which were always large and full of vivacity; but a natural fmile, and a conftant endeavour to pleafe, had fo well replaced the want of beauty, that our failors were perfectly captivated, and carelefsly difpofed of their fhirts and cloaths to gratify their miftreffes. The fimplicity of a drefs which expofed to view a well proportioned bofom and delicate hands, might alfo contribute to fan their amorous fire; and the view of feveral of thefe nymphs fwimming nimbly all round the floop, fuch as nature had formed them, was perhaps more than fuffi-
cient entirely to fubvert the little reafon which a mariner might have left to govern his paffions. A trifling circumftance had given caufe to their taking the water. One of the officers on the quarter-deck intended to drop a bead into a canoe for a little boy about fix years old; by accident it miffed the boat and fell into the fea; but the child immediately leaped overboard, and diving after it brought it up again. To reward his performance we dropped fome more beads to him, which fo tempted a number of men and women, that they amufed us with amazing feats of agility in the water, and not only fetched up feveral beads fcattered at once, but likewife large nails, which, on account of their weight, defcended quickly to a confiderable depth. Some of them continued a long while under water, and the velocity with which we faw them go down, the water being perfectly clear, was very furprifing. The frequent ablutions of thefe people, already mentioned in Captain Cook's former voyage, feem to make fwimming familiar to them from their earlieft childhood; and indeed their eafy pofition in the water, and the pliancy of their limbs, gave us reafon to look on them almoft as amphibious creatures. They continued this fport, and their other occupations about us, till fun-fet, when they all withdrew by degrees to the fhore.

In the evening the captains with their company returned on board, without having feen the king, who, perhaps miftrufting their intentions, had fent word, that he intended to vifit us the next day. They had taken a walk along the fhore to the eaftward, attended by a great croud of the natives, who infifted on carrying them on their houlders over a fine brook. After they had paffed it, the natives left them, and they proceeded
1773. proceeded accompanied by one man, who guided \(\underbrace{\text { August; }}\) them to an uncultivated projecting point, where different kinds of plants grew in wild luxuriance among feveral forts of fhrubs. On coming out of the fhrubbery they faw a building of ftones, in form of the fruftum of a pyramid; the bafe might meafure about twenty yards in front, and the whole confifted of feveral terraces or fteps above each other, which were ruinous and overgrown with graffes and fhrubs, efpecially on the back or inland part. This the native faid was a burying-place and place of worfhip, marài, and diftinguifhed it by the name of marai noAbeatua, the burying-place of Aheatua, the prefent king of Tiarraboo. Around it were placed perpendicularly, ar nearly fo, fifteen flender pieces of wood, fome about eighteen feet long, in which fix or eight diminutive human figures of a rude unnatural fhape were carved, ftanding above each other, male or female promifcuoully, yet fo that the uppermoft was always a male. All thefe figures faced the fea, and perfectly refembled fome which are carved on the fterns of their canoes, and which they call c-tee. Beyond the marai they faw a kind of thatch erected on four pofts, before which a lattice of fticks was placed in the ground, hung with bananas and cocoanuts no \(t\) ' Eatua, "for the Divinity." They fat down to reft themfelves under the fhade of this roof, and their guide feeing them a good deal exhaufted, took feveral of the bananas and offered them, with the affurance that they were mâa maitai, "good eating." They accepted them after this recommendation, and finding them really as delicious as they had been defcribed, made no fcruple to feaft with the gods. As the evening was now advancing, they returned to the fea-hhore, well pleafed with their reception
reception among thefe good-natured people, and brought on board a few plants, which we foon recognized as the productions common to tropical countries.

We contemplated the fcenery before us early Wed. 18. the next morning, when its beauties were moft engaging. The harbour in which we lay was very fmall, and would not have admitted many more veffels befides our own. The water in it was as fmooth as the fineft mirrour, and the fea broke with a fnowy foam around us upon the outer reef. The plain at the foot of the hills was very narrow in this place, but always conveyed the pleafing ideas of fertility, plenty, and happinefs. Juft over againft us it ran up between the hills into a long narrow valley, rich in plantations, interfperfed with the houfes of the natives. The flopes of the hills, covered with woods, croffed each other on both fides, varioully tinted according to their diftances; and beyond them, over the cleft of the valley, we faw the interior mountains thattered into various peaks and fpires, among which was one remarkable pinnacle, whofe fummit was frightfully bent to one fide, and feemed to threaten its downfall every moment. The ferenity of the fky , the genial warmth of the air, and the beauty of the landfcape, united to exhilarate our fpirits.
The launches of both fhips were fent to o-Wbaiurua, to fetch the anchors which we had left there when we ftruck on the reef. A party of marines and feamen were ordered on fhore at the fame time, to carry on a trade for provifions, and to fill our empty calks with frefh water. For this purpofe they occupied the remains of an abandoned fhed or cottage on the beach, which at once gave them fhelter from the fun, and fegured them againft the thievifh difpofition of the people.

\section*{A V O Y A G E}
1773. people. Before captain Cook went afhore he Aucust received a vifit from a man of fome note, called \(\underbrace{}_{\text {o-Poòe, who brought his two fons on board. }}\) They prefented the captain with fome of their cloth and fome little trifles, and in return they received knives, nails, beads, and a fhirt, in which having dreffed themfelves, they accompanied us to the fhore.

Our firft care was to leave the dry fandy beach, which could afford us no difcoveries in our fcience, and to examine the plantations, which from the fhips had an enchanting appearance, notwithftanding the brownifh caft which the time of the year had given. We found them indeed to anfwer the expectations we had formed of a country defcribed as an elyfium by M. de Bougainville, (fee the Englifh edition, p. 228.) We entered a grove of bread-trees, on moft of which we faw no fruit at this feafon of winter, and followed a neat but narrow path, which led to different habitations, half hid under various bufhes. Tall coco-palms nodded to each other, and rofe over the reft of the trees; the bananas difplayed their beautiful large leaves, and now and then one of them ftill appeared loaded with its cluttering fruit. A fort of fhady trees, covered with a dark-green foliage, bore golden apples, which refembled the anana in juicinefs and flavour. Betwixt thefe the intermediate face was filled with young mulberry-trees (morus papyrifera), of which the bark is employed by the natives in the manufacture of their cloth; with feveral fpecies of arum or eddies, with yams, fugar-canes, and other ufeful plants.

We found the cottages of the natives fcattered at fhort diftances, in the fhade of fruittrees, and furrounded by various odoriferous Thrubs, fuch as the gardenia, guettarda, and calophyllum.
lophyllum. The neat fimplicity of their ftructure gave us no lefs pleafure than the artlefs beauty of the grove which encompaffed them. The pandang * or palm-nut tree had given its long prickly leaves to thatch the roofs of the buildings, and thefe were fupported by a few pillars made of the bread-tree, which is thus ufeful in more refpects than one. As a roof is fufficient to fhelter the natives from rains and nightly dews, and as the climate of this ifland is perhaps one of the happieft in the world, the houfes feldom have any walls, but are open on all fides. We faw, however, a few dwellings conftructed for greater privacy, which were entirely enclofed in walls of reeds, connected together by tranfverfe pieces of wood, fo as to give us the idea of large bird-cages. In thefe there was commonly a hole left for the entrance, which could be clofed up with a board. Before every hut, on the green turf or on dry grafs, we obferved groups of inhabitants lying down or fitting in the eaftern ftile, and paffing their happy hours away in converfation or repofe. Some of them got up at our approach, and joined the croud that followed us; but great numbers, efpecially thofe of a mature age, remained in their attitude, and only pronounced a kind tayo as we paffed by them. Our attendant croud feeing us gather plants, were very ready to pluck and offer the fame forts to us, which they found attracted our notice. Indeed a variety of wild fpecies fprung up amidft the plantations, in that beautiful diforder of nature, which is fo truly admirable when checked by the hand of induftry, and infinitely

\footnotetext{
* Atbrodactylis. Char. Gen. Novor. Fortter. London 1776. Bromelia fylveftris, Linn. Flor. Zeyl. Keura. Forkal. Flora Arab. Pandanus. Rumph. Amboin.
}
1773. infinitely furpafles the trimnefs of regular garAugust. dens. Among them we found feveral fpecies of \(\underbrace{\text { graffes, which though thinner than in our north- }}\) ern countries, yet by growing always in the fhade, looked frefh, and formed a foft bed of verdure. The foil was by their means kept fufficiently moift to give nourifhment to the trees, and both were in a thriving ftate, owing to the reciprocal affiftance which they gave each other. Various little birds dwelt in the fhade of the bread-fruit and other trees, and had a very agreeable note, though common report among Europeans has denied the powers of harmony (I know not on what grounds) to the birds of warm climates. The heads of the talleft coco-trees were the ufual refidence of a kind of very fmall perroquets of a beautiful fapphirine blue, while another fort of a greenifh colour, with a few red fpots, were more common among the bananas, and appeared frequently tame in the houfes of the natives, who feemed to value them for their red feathers. A king's fifher, of a dark-green, with a collar of the fame hue round his white throat, a large cuckoo, and feveral forts of pigeons or doves, were frequently feen hopping from branch to branch, and a bluifh heron gravely falked along the fea fide, picking up fhell-fif and worms. A fine brook, rolling over a bed of pebbles, came down a narrow valley, and fupplied our waterers at its difcharge into the fea. We followed its ftream for a little while till we were met by a great croud of natives at the heels of three men, dreffed in various pieces of their red and yellow cloth, and provided with elegant turbans of the fame. Each of them had a long ttick or wand in his hand, and one of them was accompanied by a woman, whom upon enquiry we found to be his
wife. We demanded what their appearance 1773. meant, and were anfwered they were the \(T e-\underbrace{\text { Aucust }}\) apoonee; but when they obferved we did not underftand enough of their language to comprehend this term, they added that they were Tata-no- \(t^{\prime}\) Eatooa, men belonging to the divinity, and to the Marai, or burying-place; I fuppofe we might call them priefts. We fopped with them fome time, but as we did not fee that any religious, or other ceremony was performed, we returned to the beach. About noon captain Cook re-imbarked with us, and with the two fons of O-Poòe mentioned 220, without having feen Aheatua, who for reafons unknown to us, fill refufed to admit us to his prefence.

The two young fellows fat down to dinner with us, and partook of the vegetables, but did not touch our falt provifions. After dinner, one of them took an opportunity of ftealing a knife and a pewter fpoon, not contented with a number of prefents which he had received from the captain, without having made any return on his part, and which ought to have prevented him from infringing the laws of hofpitality. The theft being difcovered, he was kicked from the deck, jumped overboard, and fwam to the next canoe, where he feated himfelf, perhaps in defiance of our power. Captain Cook fired a mukket over his head, upon which he took to the water again, and overfet the canoe. A fecond mufket was levelled at him, but he dived when he faw the flafh, and did the fame when the tbird was difcharged. Captain Cook now manned his boat, and went to take the canoe, under which the man took fhelter; but he foon abandoned it, and fwam to a double canoe near the firlt, which was accordingly purfued. This canoe however got afhore through the furf, and the
1773. natives on the beach took up fones, which they Avcusr. levelled at our boat's crew, who thought it ad\(\underbrace{\sim}\) vifeable to retreat. However, a four-pounder directed towards the fhore, frightened the inhabitants fufficiently, fo that our people could feize two large double canoes, and bring them along-fide of the fhip.

We left the fhip after this difturbance, in order to take an afternoon's walk alhore near the watering-place, and to reftore the confidence of the people, who had entirely forfaken us on account of our open hoftilities. We purfued a different path from that which we had taken in the morning, and found great quantities of bananas, yams, eddies, \&c. planted round every cottage, inhabited by friendly good-natured people, who feemed however a little more fhy or referved than ufual, on account of what had happened. At laft we arrived at a large houfe, neatly conftructed of reeds, which we were told belonged to Aheatua, who was in another diftrict at prefent. Here we faw a hog, and a couple of fowls, the firft which the natives expofed to our fight, having hitherto been very careful to conceal them, and always refufing to part with them, under the pretext that they were the property of the aree or king. They made ufe of the fame excuie at prefent, though we offered a hatchet, which in their eyes was the moft valuable merchandife we had. After a fhort ftay, we returned the fame way we came, and brought a fmall collection of new plants on board. About fun-fet a boat was fent off, out of the harbour, to bury in the fea one lfaac Taylor, a marine, who died this morning of a complication of diforders. Ever fince we had left England, this man had been feverifh, confumptive, and afthmatic ; his complaints always kept increafing,
and at laft turned to a droply, which carried him 1773. off. All our people on board were now well, Aucust. except one, whofe remarkable fcorbutic habit of body always laid him up as foon as we came out to fea, where prophylactics and wort could but juft keep him alive. However this man, as well as the Adventure's crew, who were much affected with the fcurvy when they came in here, recovered amazingly by walking on fhore, and eating quantities of frefh fruit.

Early the next morning fome of the natives Thurf.rg. came off to us in a fmall canoe, and begged for the reftitution of thofe larger ones which had been taken from them on the day before. Captain Cook, who perceived the trade to have flackened in confequence of that feizure, none of the inhabitants coming to the fhip, and few to the watering-place, returned the canoes, as the beft means to reconcile us to the confidence of the natives; and though the effects of his indulgence were not inftantaneous, yet in a day or two our trade was perfectly re-eftablifhed.

After this peaceful prelude we went on hhore, in purfuit of botanical difcoveries. A intart fhower of rain which had fallen over night, had cooled the air confiderably, and made our walk extremely pleafant, before the fun could become troublefome. The whole country had profited by this rain, for every plant and tree feemed revived by it, and the groves exhaled a fweet refrefhing fmell. Whether it was owing to the early hour of our excurfion, or to the beauty of the morning, our ear was faluted by the fong of many fmall birds, which enlivened this delightful country. We had not walked far, when we heard a loud noife in the wood, which refembled the ftrokes of a carpenter's hammer. We followed the found, and at laft came to a fmall fhed, Vol. I.

Q where
1773. where five or fix women were fitting on both \(\underbrace{\text { August fides of a long fquare piece of timber, and beat }}\) the fibrous bark of the mulberry-tree here, in order to manufacture it into cloth. The infrument they ufed for this purpofe was a fquare wooden club, with longitudinal and parallel furrows, which ran fmaller and clofer together on the different fides. * They ceafed a little while to give us time to examine the bark, the mallet, and the timber on which they performed their operations. They alfo fhewed us a kind of glutinous water in a coco-nut fhell, which was made ufe of from time to time, to make the pieces of bark cohere together. This glue, which, as we underftood, was made of the bibifcus efculentus, is indifpenfibly neceffary in the manufacture of thofe immenfe pieces of cloth, fometimes two or three yards wide, and fifty yards long, which are compofed of little bits of bark, taken from trees never fo thick as the wrift. We carefully examined their plantations of mulberry-trees, but never found a fingle old one among them; as foon as they are of two years growth they are cut down, and new ones fpring up from the root, for fortunately this tree is one of the moft prolific in nature, and if fuffered to grow till it flowered and could bear fruits, might perhaps totally over-run the country. The bark muft always be taken from young trees; and thefe are carefully drawn into long ftems, without any branches, except juft at the top, fo that the bark is as entire as poffible. 'The method of preparing it before it comes under the mallet, we were not yet acquainted with at this time. The women employed in this manner, were dreffed in old and dirty rags of their cloth, and had very hard and

\footnotetext{

}

\section*{ROUND THE WORLD.}
and callous hands. We proceeded a little far- 1773. ther up in a narrow valley, where a well-looking Aucust. man invited us to fit down in the fhade before
 his houfe. There was a little area paved with broadifh ftones, on which he fpread banana leaves for us, and brought out a little ftool made of the bread-tree-wood, cut out of one piece, on which he defired one of us to fit down, whom he took to be the principal perfon. Seeing us all feated he ran into his houfe, and brought out a quantity of bread-fruit baked, which he laid before us on frefh banana leaves. To this he added a matted bafket full of the vee, or Taheitee apples, a fruit of the fpondias genus, which refembles the anâna, or pine-apple in the tafte, and entreated us to partake of thefe refrefhments. We breakfafted with a hearty appetite, fharpened by the exercife we had taken, the fine air of the morning, and the excellence of the provifions. We found the Taheitee method of dreffing bread-fruit and other victuals, with heated ftones under ground, infinitely fuperior to our ufual way of boiling them; in the former all the juices remained, and were concentrated by the heat ; but in the latter, the fruit imbibed many watery particles, and loft a great deal of its fine flavour and mealinefs. To conclude this treat our hoft brought us five frefh coco-nuts, which he opened by pulling the fibres off with his teeth. The cool limpid liquor contained in them he poured into a clean cup, made of a ripe coco-nut-fhell, and offered that to each of us in our turns. The people in this country had on all occafions been good-natured and friendly, and for beads fometimes fold us coco-nuts and fruit, if we called for them ; but we had not yet feen an inftance of hofpitality exercifed in fo complete a. manner during our hort tay. We Q2 there-
1773. therefore thought it our duty to recompenfe our \(\underbrace{\text { August. friend as much as lay in our power, and pre- }}\) fented him with a number of tranfparent beads and iron nails, with which he was highly fatisfied and contented.

We continued our walk into the country from this feat of patriarchal hofpitality, notwithftanding the uneafinefs which many of the natives expreffed, among the croud that followed us. When they faw us perfift in our expedition, the greateft part of them difperfed to their different habitations, and only a few of them attended us, who made it their bufinefs to act as our guides. We came to the foot of the firtt hills, where we left the huts and plantations of the natives behind us, and afcended on a beaten path, paffing through an uncultivated fhrubbery mixed with feveral tall timber-trees. Here we fearched the moft intricate parts, and found feveral plants and birds hitherto unknown to natural hiftorians. With thefe little acquifitions we returned towards the fea, at which our friends the natives expreffed their fatisfaction. We found a vaft concourfe of inhabitants on the beach at our trading place, and faw that our people had brought a great quantity of large eddoes and other roots, but few bread-fruits, which were now very fcarce, only a few trees bearing them fo late in the feafon, while moft of the others were already fhooting forth the embryo of a new crop. The exceffive heat of the fun, now tempted us to bathe in a branch of the adjacent river, which formed a deep pond of fome extent; and being refrefhed with this bath we returned on board to dinner. In the afternoon we had heavy rains, attended with wind, during which the Adventure drove from her moorings, but was brought up again by a timely manceuvre. This bad weather confined

\section*{ROUND THE WORLD.}
us on board, where we arranged the plants and 1773 animals which we had hitherto collected, and Aucust. made drawings of fuch as were not known before. Our three days excurfions had fupplied us only with a fmall number of fpecies, which in an ifland fo flourifhing as Taheitee, gave a convincing proof of its high cultivation; for a few individual plants occupied that face, which in a country entirely left to itfelf, would have teemed with feveral hundred different kinds in wild diforder. The fmall fize of the ifland, together with its vaft diftance from either the eaftern or weftern continent, did not admit of a great variety of animals. We faw no other fpecies of quadrupeds than hogs, and dogs which were domeftic, and incredible numbers of rats, which the natives fuffered to run about at pleafure, without ever trying to deftroy them. We found however a tolerable number of birds, and when the natives gave themfelves the trouble to fifh, we commonly purchafed a confiderable variety of fpecies, as this clafs of creatures can eafily roam from one part of the ocean to the other, and particularly in the torrid zone, where certain forts are general all round the world.

If the fcarcity of fpontaneous plants was unfavourable to the botanift, ftill it had the moft falutary effects with regard to the whole company on board of both our veffels, fince their place was occupied by great quantities of wholefome vegetables. We daily bought abundance of yams, eddoes, and Taheitee apples; together with fome bananas and bread-fruit, which, on account of the feafon, were grown very farce. The wholefome regimen which we had by this means been able to keep, had vifibly, and I might almoft fay miraculouny, operated to reftore to their health, all thofe who were ill of the icurvy
1773. at our arrival; and the only inconvenience we August. felt from it was a kind of flux, owing to the fud\(\underbrace{}_{\text {den change of diet, with which a few of the peo- }}\) ple were afflicted. Not content with this fortunate fupply, we could not help cafting longing eyes towards the hogs which we faw in great numbers on all our excurfions into the country, though the natives were always careful to hide them in low fyes, covered over with boards, forming a kind of platform, on which they fat or lay down. We tried all poffible means to engage the people to fell fome of them to us, and offered hatchets, fhirts, and other goods of value to the Taheitians, but fill without fuccefs, their conftant anfwer being, that thefe animals were the king's (arce's) property. Inftead of acquiefcing in this refufal, and acknowledging the kind difpofition of the natives, who furnifhed us at leaft with the means of recovering our ftrength, and reftoring our fick, a propofal was made to the captains, by fome perfons in the fhips, to fweep away by force a fufficient number of hogs for our ufe, and afterwards to return fuch a quantity of our goods in exchange to the natives, as we fhould think adequate to the fpoil we had taken. This propofal, which nothing but the moit tyrannical principles, and the meanert felfithnefs could have dictated, was received with the contempt and indignation which it juftly deicrved.

Our acquifitions in natural hiftory being hitherto fo inconfiderable, we had leifure every day to ramble in the country in fearch of others, as well as to pick up various circumftances which might ferve to throw a light on the character, manners, and prefent fate of the inhabitants.
Friday20. On the 20th towards noon, I directed my walk, in company with feveral officers, to the eaftern
point of the harbour. We foon came to a rivu-
1773. let, which was wide and deep enough to admit a canoe upon it, by means of which we ferried over to the oppofite fhore, where we perceived a houfe of fome extent, among the bufhes. Before it we faw a quantity of the finer forts of Taheitee cloth fpread out on the grafs, which the natives told us, had been wafhed in the river; and clofe to the houfe, fufpended on a pole, we obferved a target of a femicircular form, made of wickerwork, and plaited ftrings (of the coco-nut fibres), covered with the gloffy bluik-green feathers of a kind of pigeon, and ornamented with many thark's teeth, difplayed in three co-centric femicircles; I enquired whether it was to be purchafed, but was anfwered in the negative, and concluded that it was only expofed to the air, in the fame manner as we are ufed to do from time to time, with things which we preferve in clofe boxes. A middle-aged man, who lay ftretched at his eafe in the hut, invited us to fit down by him, and curioufly examined my drefs; he had long nails on his fingers, upon which he valued himfelf not a little, and which I found were a mark of diftinction, fince only fuch perfons, as had no occafion to work, could fuffer them to grow to that length. The Chinefe have the fame cuftom, and pride themfelves as much in it; but whether the Taheitians derive it from them, or whether chance has led them both to the fame idea, without any communication with each other, is poffibly beyond the art of Needham and Des Guignes to determine. In different corners of the hut we faw fome women and fome men, feparately eating their dinner of bread-fruit and bananas, and both parties, as we approached them, defired us to partake of their provifions. The fingular cuftom, which forces the fexes to fhun
1773. Shun each other's company at their meals, is al\(\underbrace{\text { Avgust. }}\) ready mentioned by former voyagers, who have been equally unfucceffful with ourfelves in difco. vering its caufe.

We left this hut, and ftrolled through an odoriferous fhrubbery to another, where we found O-Tai, his wife, and children, and his fifters Maroya and Marorai. The officer who had loft his bed-fheets was with us, but thought it to no purpofe to enquire for them, and rather tried to ingratiate himfelf with the fair one. Beads, nails, and various trifles were prefented to her, which the readily accepted, but remained inexorable to the paffionate folicitations of her lover. As fhe had in all probability obtained the pofferfion of the Theets, which fhe coveted, and for which alone the could have fubmitted to proftitution, it feems nothing could afterwards tempt her to admit the tranfient embraces of a ftranger. This is the moft likely conitruction we could put upon her conduct, and it became more probable to us, when we confidered, that fhe belonged to a family of fome note, and that, during captain Cook's long ftay on the ifland in the Endeavour, there had been few, if any inftances, that women among the better fort of people had demeaned themfelves fo far. After a fhort ftay with them, I returned to our trading place, but finding all our boats gone off, ventured to embark in a fingle canoe, without an outrigger, and was fafely brought on board the Refolution for a fingle bead, which was all I had left after this excurfion.
Satur. 21. At day-break the next morning we went afhore again, on another walk to the eaftward. We obferved the plain to widen, as we advanced beyond the eaft point of Aitepeha harbour, and of courfe growing richer in bread-fruit and coco-nut

\section*{ROUND THE WORLD.}
trees, bananas, and other vegetable productions, on moft of which we faw the buds of a future crop. The houfes of the natives were likewife found to be more numerous, and many feemed to us neater and newer than thofe near our an-choring-place. In one of them, which was of the clofer fort, walled in with reeds, we faw a great many bundles of cloth, and cafes for targets fufpended from the roof, all which, as well as the houfe itfelf, we were informed belonged to Aheatua. We walked about two miles in the moft delightful groves or plantations of fruittrees, where the natives were juft returning to their various employments. Among them we eafily noticed the manufacturers of cloth, by the hollow found of the mallet. However, it muft not be fuppofed, that the neceffities of thefe people urgently required their conftant application to work; for our appearance foon gathered a croud of them about us, who followed us all day as far as we went, and fometimes even neglected their meals on our account. It was not without fome interefted motives, that they attended upon us. Their general behaviour towards us was good-natured, friendly, and I may fay officious; but they watched every opportunity of conveying away fome trifles with amazing dexterity, and many among them, whenever we returned the kind looks they gave us, or fmiled upon them, thought that a proper time to take advantage of our good difpofition, and imanediately with a begging tone faid, tayo, pò̈, " friend, a bead !" which, whether we complied with or refufed, did not alter their good temper. When thefe petitions became too frequent, we ufed to mock them, by repeating their words in the fame tone, which always produced a general peal of goodhumoured laughter amongft them. Their converfation

17\%3. verfation was commonly loud, and it feemed that August. our appearance was their principal topic; every new-comer was immediately made acquainted by the others with our names, which they reduced to a few vowels and fofter confonants, and was entertained with a repetition of what we had faid or done that morning. His firf requeft was generally to hear a mulket fired off, which we com. plied with on condition that he fhould thew us a bird as a mark. However, we were frequently at a lofs how to behave, when he pointed out a bird at four or five hundred yards diftance, as they had no idea that the effects of our fire-arms were limited to a certain fpace. As it was not prudent to let them into this myftery, we always pretended that we could not fee the bird, till we came near enough to fhoot it. The firft explofion frightened them confiderably, and on fome produced fuch violent confternation, that they dropped down on the ground, or ran back about twenty yards from us, where they remained till we quieted their fears by profeffions of friendfhip, or till their more courageous brethren had picked up in: bird which we had killed. But they foon became more familiar, and though they always expreffed fome fudden emotion, yet they conquered by degrees the appearance of fear.

Notwithftanding the friendly reception which we met with on all fides, the natives were very anxious to keep their hogs out of fight, and whenever we enquired for them feemed uneafy, and either told us they had none, or affured us they belonged to Aheatua their king. As we perceived their reluctance to part with thefe animals, we thought it beft to take no farther notice of them, and though we faw great numbers of them confined in pigftyes almoft in every hut,
we pretended not to know that there were any, or not to care for them; this proceeding we always found had the good effect of encreafing the confidence of the people towards us.

Having advanced a mile or two, we fat down on a few large ftones, which formed a kind of paved area before one of the cottages, and defired the inhabitants to bring us fome bread-fruit and coco-nuts, in exchange for beads. They very readily fupplied us with a quantity of each, on which we breakfafted. The croud who followed us, fat down at a diftance from us, at our defire, in order that they might have no opportunity of fnatching up any of our arms, or other apparatus, which we were obliged to lay out of our hands, while we made our meal. To add to our good cheer, we were prefented with a coconut hell full of a ķind of diminutive frefh filh, which the natives are ufed to eat raw, without any other fauce than falt water. We tafted them, and found them far from difagreeable; however, as we were not ufed to eat them without being dreffed, we diftributed them, with the remains of the fruit, to our favourites among the croud.

Thus refrefhed, we continued our walk, but turned towards the hills, notwithftanding the importunities of the natives, who urged us to continue on the plain, which we eafily perceived arofe merely from their dillike to fatigue. We were not to be diverted from our purpofe; but leaving behind us almoft the whole croud, we entered, with a few guides, a chafm between two hills. There we found feveral wild plants which were new to us, and faw a number of little fwallows flying over a fine brook, which rolled impetuoufly along. We walked up along its banks to a perpendicular rock, fringed with various tufted frubberies, from whence it fell in a cryftalline

1:73. falline column, and was collected at the bottom Aucust. into a fmooth limpid pond, furrounded with ma\(\xrightarrow{\sim}\) ny feecies of odoriferous flowers. This fpot, where we had a profpect of the plain below us, and of the fea beyond it, was one of the molt beautiful I had ever feen, and could not fail of bringing to remembrance the moft fanciful defcriptions of poets, which it eclipfed in beauty. In the thade of trees, whofe branches hung over the water, we enjoyed a pleafant gale, which foftened the heat of the day, and amidit the folemn uniform noife of the waterfall, which was but feldom interrupted by the whiftling of birds, we fat down to defcribe our new acquifitions before they withered. Our Taheitian companions feeing us employed, likewife refted among the bufhes, viewing us attentively and in profound filence. We could have been well pleafed to have paffed the whole day in this retirement; however, after finifhing our notes, and feafting our eyes once more with the romantic fcenery, we returned to the plain. Here we obferved a great croud of the natives coming towards us, and at their near approach perceived two of our Shipmates, Mr. Hodges and Mr. Grindall, whom they furrounded and attended on their walk. We foon joined them, and refolved to continue our excurfion together. A youth, of a very promifing countenance, who had diftinguifhed himfelf by fhewing a particular attachment for thefe gentlemen, was entrufted with Mr. Hodges's port-folio, where he preferved the fketches and defigns, which he had frequent opportunities of making on his walk. No favour, or mark of affection could I believe have given this youth fo much real pleafure, as the confidence they had placed in him, upon which he feemed to value himfelf among his countrymen. Perhaps this circumftance, joined

\section*{ROUND THE WORLD.}
to the peaceable appearance of our gentlemen, who walked without arms of any kind, had a general effect upon all the people that furrounded us, as their familiarity and affection feemed much encreafed. We entered a fpacious hut together, where we faw a large family affembled. An old man, with a placid countenance, lay on a clean mat, and refted his head on a little ftool, which ferved as a pillow. His head, which was truly venerable, was well furnifhed with fine locks of a filvery grey, and a thick beard as white as fnow defcended to his breaft. His eyes were lively, and health fat on his full cheeks. His wrinkles, which characterize age with us, were few and not deep; for cares, trouble, and difappointment, which untimely furrow our brows, cannot be fuppofed to exift in this happy nation. Several little ones, whom we took to be his grand-children, and who, according to the cultom of the country, were perfectiy naked, played with their aged anceftor, while his actions and looks convinced us, that the fimple way of living to which he had been ufed, had not yet blunted his fenfes. Several well-made men and artlefs nymphs, in whom youth fupplied the want of beauty, furrounded the old man, and as we came in feemed to be in converfation after a frugal meal. They defired us to fit down on the mats among them, and we did not give them time to repeat their invitation. Their curiofity, which had perhaps never before been gratified with the fight of frangers, now prompted them to examine our drefs and our arms, without beftowing their attention longer than a moment on any fingle object. They admired our colour, preffed our hands, feemed to wonder that we had no punctures on them, nor long nails on our fingers, and eagerly enquired for our names, which, when
1773. known, they were happy to repeat. Thefe names, as they pronounced them, were not fo \(\underbrace{}_{\text {like the originals that an etymologift could eafly }}\) have deduced them, but in return they were more harmonious, and eafily pronounced. Forfter was changed into Matara, Hodges into Oreo, Grindall into Terino, Sparrman into Pamanee, and George into Teoree. The hofpitality which we had found under every roof, was not wanting here, and we were offered fome coco-nuts and evees to quench our thirf after the laft walk. One of the young men had a flute made of a bamboo, which had but three holes; he blew it with his noftrils, * whilft another accompanied him with the voice. The whole mufic, both vocal and inftrumental, confifted of three or four notes, which were between half and quarter notes, being neither whole tones nor femi-tones. The effect of thefe notes, without variety or order, was only a kind of drowfy hum, which could not indeed hurt the ear by its difcordant founds, but made no pleafing impreffion on our minds. It is furprifing that the tafte for mufic fhould be fo general all over the world, when the ideas of harmony among different nations are fo diftinet! Charmed with the picture of real happinefs, which was thus exhibited before us, Mr. Hodges filled his port-folio with feveral fketches, which will convey to future times the beauties of a fcene, of which words give but a faint idea. While he was drawing, all the natives looked on with great attention, and were highly pleafed to find out the refemblance between his performances and different perfons among them. Our acquaintance with their language, which we were at great pains to improve, was as yet very imperfect, and deprived us of the pleafure which

\footnotetext{
* See Hawkefworth.
}
we might have received from a converfation with 1773. thefe good people. A few feparate words, and \(\underbrace{\text { August. }}\) an interlude of dumb mimickry, was all that we had to fupply the place of a coherent fpeech. However, even this was fufficient to amufe the natives, and our docility and endeavours to pleafe feemed to be at leaft as agreeable to them, as their focial temper and willingnefs to give inftruction appeared to us. The old man, without changing his attitude, and continuing to recline his head on the ftool, anked us feveral little queftions, fuch as the captain's name, the name of the country we came from, how long we should ftay, whether we had our wives on board, \&c. It feemed that he was already apprifed of all thefe things by common report, but wifhed to have them confirmed from our own mouths. We fatisfied his curiofity as well as we could on thefe points, and after diftributing little prefents of beads, medals, and other trifles to his family, we fet forwards once more on our excurfion. The many paufes which we made at the hofpitable huts of the natives, always refrefhed us fo much, that we felt no manner of inconvenience, and could with eafe have walked round the whole ifland in the fame manner. The plain at the foot of the mountains offered no impediment to our progrefs; on the contrary, its paths were well beaten, and its whole furface perfectly level, and covered in many places with a fine growth of graffes. Not a fingle noxious animal appeared to deter us, and not even a gnat or mukketoe hummed unpleafantly about us, or made us apprehenfive of its bite. The bread-fruit groves, with their abundant foliage, intercepted the rays of the meridian fun, whofe action was greatly mitigated by a frefh fea-breeze. The inhabitants however, who were ufed to pafs the middle
1773. of the day in repofe, dropt off one by one in the August. bufhes, fo that only a few remained with us.
\(\sim_{\text {After we had walked about two miles farther to }}\) the fouth eaftward, we came to the fea-fhore at a place where it formed a little inlet. Here, furrounded on all fides with plantations, we met with a glade or lawn, in the midft of which we faw a marai (burying place) built up of three ranges of fones, like fteps, each about three feet and a half in height, and covered with graffes, ferns, and fmall fhrubs. Towards the country, at fome diftance from the building, there was an oblong enclofure round it made of ftone, about three feet high, within which two or three folitary coco-palms and fome young cafuarinas, with their weeping branches, gave an air of folemnity and pleding melancholy to the fcene. At a little diftance from the marai, furrounded by a thick fhrubbery, we faw an inconfiderable hut or fhed, (tupapow,) where, on a kind of ftage about breaft high, a corpfe was placed, covered with a white piece of cloth, which hung down in various folds. Young cocotrees and bananas were fpringing up, and dragontrees bloffoming around it. Near this we faw another hut, where a quantity of eatables lay for the divinity, (eatua, and a pole was fluck in the ground, on which we faw a dead bird wrapped in a piece of a mat. In this laft hut, which food on a fmall eminence, we obferved a woman fitting in a penfive attitude, who got up at our approach, and would not fuffer us to come near her. We offered her a fmall prefent, but the refufed to touch it. We underftood from the natives who were with us, that fhe belonged to the marai, and that the dead corfe was alfo a woman's, whofe obfequies the firft perhaps was performing.

After

After Mr. Hodges had made feveral drawings 1773. we returned from this place, which had really Aucust. fomething grand in its appearance, and feemed calculated to favour religious meditation. In our return we kept along the fea-fhore, till we came to a fpacious houfe, very pleafantly fituated amidft a grove of low coco-palms loaded with fruit. Two or three fried little fifhes, which one of the natives fold us for a few beads, were here fhared among us, to ftay our appetite, grown very keen again fince our breafffaft. Several of our company likewife bathed in the fea, as a farther refrefhment in this warm climate, and having afterwards bought fome pieces of cloth, (abow's) of the country fabric, dreffed in them, after the Taheitee fafhion, to the infinite pleafure of the natives. Our walk continued along the fhore beyond another maraï, much like the firft, to a neat houfe, where a very fat man, who feemed to be a chief of the diftrict, was lolling on his wooden pillow. Before him two fervants were preparing his deffert; by beating up with water fome bread-fruit and bananas, in a large wooden bowl, and mixing with it a quantity of the fermented four pafte of bread-fruit, (called mabeî.) The confiltence of this mixture was fuch, that it could properly be called a drink, and the inftrument with which they made it, was a peftle of a black polifhed ftone, which appeared to be a kind of bafaltes. * While this was doing, a woman who fat down near him, crammed down his throat by handfuls the remains of a large baked filh, and feveral bread-fruits, which he fwallowed with a voracious appetite. His countenance was the picture of phlegmatic infenfibility, and feemed to witnefs that all his thoughts centred in the care of his paunch. He fcarce

1-3. deigned to look at us, and a few monofyllables Accust which he uttered, were only directed to remind \(\underbrace{\text { A }}\) h feeders of their duty, when we attracted their attention. The great degree of fatisfaction which we had enjoyed on our different walks in this ifland, and particularly the pleafure of this day's excurfion, was diminifhed by the appearance and behaviour of the chief, and the reflections which naturally arofe from thence. We had flattered ourfelves with the pleafing fancy of having found at leaft one little fpot of the world, where a whole nation, without being lawlefs barbarians, aimed at a certain frugal equality in their way of living, and whofe hours of enjoyment were juftly proportioned to thofe of labour and reft. Our difappointment was therefore very great, when we faw a luxurious individual fpending his life in the moft fluggifh inactivity, and without one benefit to fociety, like the privileged parafites of more civilized climates, fattening on the fuperfluous produce of the foil, of which he robbed the labouring multitude. His indolence, in fome degree, refembled that which is frequent in India and the adjacent kingdoms of the Ealt, and deferved every mark of indignation which Sir Joln Mandeville expreffed in his A fiatic travels. That worthy knight, who, topfull of chivalry, and the valourous firit of his time, devoted his life to conftant activity, was highly incenfed at the fight of a monfter of lazinefs, who paffed his days " withouten doynge of " ony dedes of armes," and lived " everemore " thus in efe, as a fwyn that is fedde in fty, for. " to ben made fatte." *

}

\section*{ROUND THE WORLD.}

On leaving this Taheitian drone we feparated, and I accompanied Meff. Hodges and Grindall, whofe good-natured friend, the carrier of the port-folio, had earnettly invited us to his habitation. We arrived there towards five in the evening, and found it a fmall but cleanly cottage, before which a great abundance of frefh leaves were fpread on a ftony place, and a prodigious quantity of the beft coco-nuts and well-roatted bread-fruit were laid out in fine order. He immediately
ferve to make the fimilarity between him and the Taheitian chief more perfect.-" From that lond, in returnynge be " ten jorneys thorge out the lond of the grete Cbane, is " another gode yle and a great kyngdom, where the kyng " is fulle riche and myghty. And amonges the riche men " of his contree is a paflynge riche man, that is no prynce, "s ne duke, ne erl; but he hath mo that holden of him " londes and other lordfchipes; for he is more riche. For " he hathe every zeer of annulle rente 300000 hors charged " with corn of dyverfe greynes and ryzs; and fo he ledethe ": a fulle noble lif and a delycate, after the cuftom of the " contree. For he hathe every day 50 fair damyfeles, alle " maydenes, that ferven him evere more at his mete, and " for to lye by him o night, and for to do with hem that is " to his plefance. And when he is at the table, thei
" bryngen him hys mete, at every tyme 5 and 5 togedre. "And in bryngynge hire fervyce, thei fyngen a fong. And " after that, thei kucten his mete, and putten it in his " mouthe, for he touchethe no thing, ne handlethe nought, " but holdeche everemore his hondes before him upon the "table. For he hathe fo longe nayles, that he may take " nothing, ne handle no thing, for the nobleffe of that " contree is to have longe nayles, and to make hem growen " alle ways to ben as longe as men may.-And alle weys "theife damyfeles, that I fak of beforn, fyngen all the " tyme that this riche man etethe; and whan that he etethe " no more of his firft cours, thanne other 5 and 5 of faire " damyfeles bryngen him his feconde cours alle weys fyng" ynge as thei dide beforn. And fo thei don contynuelly " every day to the ende of his mete. And in this manere " he ledethe his lif, and fo did thei beforn him that weren " his aunceltres, and fo fchulle thei that comen aftre him." See the Voyages and Travaylls of Sir John Maundevile, knight, pag. 376.
1773. mediately ran to two elderly perfons, who were Aucust. bufy in frightening the rats from this plentiful \(\xrightarrow[\sim]{\text { ftore of provifions, and introduced them to us }}\) as his parents. They expreffed great joy on feeing the friends of their fon, and entreated us to fit down to the meal which lay before us. We were at firf ftruck with aftonifhment on finding it entirely prepared at our arrival, but we foon recollected that our friend had fent off one of his comrades feveral hours beforehand, very probably with directions to provide for our entertainment. As this was the firft regular meal to which we fat down this day, it will eafily be conceived that we fell to with a good appetite, and gave infinite fatisfaction to the good-natured old people and the generous-minded youth, who all feemed to think themfelves happy in the honour which we did to their excellent cheer. With fuch a venerable pair miniftering to us, if I may be allowed to indulge in a poetical idea, we ran fome rifk of forgetting that we were men, and might have believed ourfelves feafted by the hofpitable Baucis and Philemon, if our inability to reward them had not reminded us of mortality. However, all the beads and nails which we could mufter amongft us were offered to them, rather as a mark that we preferved a grateful fenfe of their good heart, than as any retribution. The youth went on with us to the beach oppofite to our veffels, and brought on board a great quantity of provifions, which we had left unconfumed at our dinner. He was there prefented with a hatchet, a fhirt, and various articles of lefs value by his friends, and returned that very evening on fhore to his parents, being probably enriched beyond his warmeft expectation.

The ufual trade had been carried on about the fhips, and on the beach oppofite to them, during our abfence, without any material incident, except captain Cook's meeting with Tuahow, the fame native who had accompanied him a confiderable way when he made the circuit of Ta heitee in a boat, in the courfe of his firft voyage.* We found him and two of his countrymen on board at our return, they having refolved to take up their night's lodging with us, which, though ufual at Matavaï Bay during the Endeavour's voyage, none had hitherto ventured upon in this place. Tuahow being already familiarized with our way of living, and acquainted with the various objects which commonly fruck his countrymen with wonder, eagerly entered into difcourfe with us, as he found us attentive to his queftions. He enquired after Tabane, Mr. Banks; Tolano, Dr. Solander; Tupaya, (Tupia) and feveral perfons in the Endeavour whofe names he recollected. He rejoiced to hear that Mr. Banks and Dr. Solander were well, and having often renewed his queftion, always received the fame anfwer to it; upon which he afked whether they would not come back to Taheitee, accompanying it with a look which ftrongly expreffed the wifh of feeing them again. When he heard of Tupaya's death, he was defirous of being informed whether it had been violent or natural, and was well pleafed to hear from fuch circumftances as we could by broken words and figns communicate to him, that ficknefs had put a period to his life. In return, we queftioned him concerning the death of Tootabàb, who had appeared as the acting chief of the ifland in captain Cook's former voyage. We plainly underfood that a great naval fight had happened between that
chief

See Hawkefworth, vol. II. p. 18:, \&c.

\section*{A \(\quad \mathrm{V}\) O \(\quad \mathbf{Y}\) A \(\quad \mathrm{G} \quad \mathrm{E}\)}

17-3. chief and old Abeatua,* the father of the preAucust. fent king of Tiarraboo, in which neither party \(\underbrace{}_{\text {had gained a decifive advantage; but that }}\) Tootahàh afterwards marching his army acrofs the ifthmus, which feparates the two peninfulas, had been defeated in an obftinate engagement, in which himfelf, Tuborai-Tamaide, and many other perfons of diftinction on his fide were flain. A peace was foon after concluded with O.Too \(\dagger\) the king of O -Taheitee, who, after Tootahàh's deceafe, had affumed the power of the fovereignty, of which before he had only enjoyed the title. Old Aheatua, according to Tuahow's account, died but a few months after this peace, and his fon, of the fame name, who, according to the cuftom of this country, had already, during his father's life-time, borne the title of \(t e-\) aree \(\ddagger\) (the king), and received the honours annexed to that dignity, now likewife fucceeded to its more effential part, the management of affairs.

This fubject being exhaufted, we took out the map of O-Taheitee, (engraved for captain Cooke's former voyage) and laid it before Tuahow, without telling him what it was. He was however too good a pilot, not to find it out prefently; and overjoyed to fee a reprefentation of his own country, immediately with his finger pointed out the fituation of all the whennuas or diftricts upon it, naming them at the fame time in their order, as we faw them written on the chart. When he came to O-Whai-urua the next diftrict with a harbour, to the fouth of our prefent an-choring-place, he pulled us by the arm to look

\footnotetext{

}
on attentively, and related that there had been a Ship (paheï) which he called paheï no Peppe, and which had lain there five days; that the people in her had received ten hogs from the natives, and that one of the crew ran away from the fhip, and now lived upon the ifland. From this account we concluded that the Spaniards had fent another veffel to examine O-Taheitee, probably firf difcovered by their navigators, and which of late years had been fo frequently vifited by the Englifh, as might juftly roufe their attention, on account of the pruximity of their own extenfive poffeffions in South america. Strange as it may feem, the name of Peppe confilmed us in our conjectures, notwithftanding its valt difference from Efpana, from whence we fuppofed it originated; becaufe we were by this time well acquainted with the cuftom of mutilating all foreign names, which the Taheitians poffefs, even in a higher degree than the French and Englifh. We put feveral queftions relative to this fhip to Tuahow, but could never obtain any farther intelligence from him, except that the man who had left it, always accompanied Aheatua, and had given him the advice not to furnifh us with any hogs. Whatever telf.interefted or bigoted motives that man may have had to give Aheatua fuch an advice, yet it feems to have been in reality the moft friendly and valuable which he could have offered to his protector. The way to keep the riches of his fubjects, among which are their hogs, in the country, and to prevent new wants from prevaiing among a happy people, was to get rid of us as loon as he could, by denying us the refrefhments of which we ftood moft in need. It were indeed fincerely to be wifhed, that the intercourfe which has lately fubfifted between Europeans and the natives
1773. of the South Sea inlands may be broken off in Aveust.time, before the corruption of manners which \(\underbrace{}_{\text {unhappily characterifes civilized regions, may }}\) reach that innocent race of men, who live here fortunate in their ignorance and fimplicity. But it is a melancholy truth, that the dictates of philanthropy do not harmonize with the political fyftems of Europe!
Sund. 22. Several of our people having taken a walk on fhore, the next day returned on board with the news, that they had met with Aheatua, who was at laft come to this diftrict in order to give us an audience. They had been admitted into his prefence without any ceremony, and his majefty, in the midft of all his court, had given up one half of his ftool (pappa), to Mr. Smith, one of our mates, who was of the party. He had at the fame time gracioufly affured him, that he wifhed to fpeak to captain Cook, and had as many hogs to give him, as be had hatchets to pay for them, which was by far the moft agreeable news we had heard for fome time. They alfo reported that they had feen a man refembling an European in colour and feature, but that upon fpeaking to him, he had retired into the croud. Wherher this was really an European, or whether the ftory which Tuahow had told us the evening before, had wrought upon the fancy of our men we cannot determine; fo much however is certain, that none of us ever faw him afterwards.
Mond.23. In confequence of Aheatua's declaration, the captains, with feveral officers, Dr. Sparrman, my father, and myfelf, went on fhore early on the 23 d . We proceeded about a mile along the river from which we filled our cafks, being conducted by Opao, one of the natives, who had lodged on board. A great croud coming down towards
us, thofe who furrounded us pulled off their up- \({ }^{1773}\). per garments, fo as to uncover their fhoulders, Aucust. which is a mark of refpect due to the king. We prefently joined the croud, in the midft of whom Aheatua fat down on a large ftool, cut out of folid wood, which one of his people had hitherto carried. He immediately recollected captain Cook, and made room for him on his ftool, while captain Furneaux, and the reft of us, chofe large ftones for our feats. An immenfe number of natives thronged about us on all fides, and included us in a very narrow circle, increafing the heat to fuch a degree, that the king's attendants were frequently obliged to keep them back by beating them.

O-Aheatua, the king of O-Taheitee-eetee, (Little Taheitee) which is otherwife called Tiarraboo, was a youth of feventeen or eighteen years of age, well-made, about five feet fix inches high, and likely to grow taller. His countenance was mild, but unmeaning ; and rather expreffed fome figns of fear and diftruft at our firft meeting, which fuited ill with the ideas of majefty, and yet are often the characteriftics of lawlefs power. His colour was of the faireft of his people, and his lank hair of a light brown, turning into reddifh at the tips, or being what is commonly called fandy. He wore at prefent no other drefs than a white falh (marro) round the wailt to the knees, made of the beft kind of cloth, and his head as well as all the reft of his body was uncovered. On both fides of him fat feveral chiefs and nobles, diftinguifhable by their fuperior ftature, which is the natural effect of the immenfe quantity of food which they confume. One of them was punctured in a furprizing manner, which we had never feen before, large black blotches of various hapes, almoft covering his arms, legs, and fides. This
1773. man, whofe name was E-Tee, was alfo remark. August. able for his enormous corpulence, and for the deference which the aree (king) paid to him, confulting him almoft upon every occafion. The king, during the time he fat on the ftool, which was his throne, preferved a grave or rather fiff deportment, fcarce to be expected at his years, though it feemed to be ftudied and affumed, only to make our meeting more folemn. This may be looked upon as a kind of recommendation by fome men, but it is unhappily a makk of hypocrify, which we should hardly have expected at Taheitee. After the firt falutation, captain Cook prefented Aheatua with a piece of red baize, a bed-fheet, a broad axe, a knife, nails, lookingglaffes, and beads; and my father gave him fimilar prefents, among which was an aigrette or tuft of feathers fixed on a wire, and dyed of a bright crimfon; upon this his majefty fet a particular value, and at the fight of it the whole croud gave a general thout of admiration, expreffed by the word awbay! The king now enquired for Mr. Banks, which only Tuahow had done before him, and then afked how long we intended to ftay, expreffing at the fame time, that he wifhed we might remain five months. Captain Cook's anfwer was, that as he did not receive fufficient fupplies of provifions, he muft fail immediately. The king confined his firft requeit to one month, and at laft to five days, but captain Cook perfifted in his refolution; Aheatua then promifed to fend us hogs the next day, but as this had been repeatedly faid without any confequence, we took no notice of it now ; for even in a ftate fo little refined as Tiarraboo, we found that the real benevolence of the middle clafs, which manifefted itfelf towards us in hofpitality and a number of good and noble actions, gave us no right to truft
the fpecious politenefs of the court and courtiers, who fed our hopes with empty promifes.

During this conference the croud, amounting at leaft to five hundred perfons, was fo exceffively noify, that it was impoffible at times to diftinguifh a word ; and on thofe occafions fome of the king's attendants with a Stentor's voice called out mamoo! (be filent) and enforced his commands by dealing out hearty blows with a long ftick. The aree feeing that captain Cook was not to be perfuaded to prolong his ftay in this harbour, got up, and walked down along the river with us, while his attendants carried his wooden ftool, and the kingly prefents which he had received. On this walk he laid afide the gravity, which was not natural to him, and talked with great affability to our common people. He defired me to tell him the names of all the perfons from on board both floops, who were prefent, to which he added the queftion, whether they had their wives on board? Being anfwered in the negative, his majefty, in a fit of good-humour defired them to look for partners among the daughters of the land, which they underftood it was meant at prefent in the light of a mere compliment. He fat down foon after, clofe to a houfe of reeds, into which we all retired when the fun appeared through the clouds. Here he called for fome coco-nuts, and began to tell the ftory of the Patheĭ no Peppe, or Spanifh Ship, of which Tuahow had given us the firft intimation. According to the king's account it feemed clear, that the fhip had been at Whai Uurua, five months before us, and had lain there ten days. He added, that the captain had hanged four of his people, and that the fifth had efcaped the fame punifhment by running away. This European, whom they named O.Pahootu, we enquired after
1773. to no purpofe, for a long while ; till his majefty's August. attendants feeing us very eager to become ac\(\xrightarrow[\sim]{\text { quainted with him, affured us he was dead. We }}\) have fince heard, that about the time mentioned by the natives, Don Domingo Buenechea, fent out from the port of Callao in Peru, had vifited O-Taheitee, but what the particulars of that voyage are, have never tranfpired. While we remained in the houfe, E-Tee, the fat chief, who feemed to be the principal counfellor of the king, very ferioufly afked us, whether we had a God (Eatua) in cur country, and whether we prayed to him (epoore?) When we told him, that we acknowledged a Divinity, who had made every thing, and was invifible, and that we alfo were accuftomed to addrefs our petitions to him, he feemed to be highly pleafed, and repeated our words with notes of his own to feveral perfons who fat round him. To us he feemed to fignify, that the ideas of his countrymen correfponded with ours in this refpect. Every thing concurs indeed to convince us, that this fimple and only juft conception of the Deity, has been familiar to mankind in all ages, and in all countries, and that only by the exceffive cunning of a few individuals, thofe complex fyttems of abfurd idolatry have been invented, which difgrace the hiftory of almoft every people. The love of empire, or the purfuit after voluptuoufnefs and indolence, feem to have infpired the numerous branches of heathen priefts with the idea of keeping the minds of the people in awe, by awakening their fuperfition. The natural love of the miraculous has made it eafy for them not only to put their projects in execution, but likewife to weave their prejudices fo firmly into the web of human knowledge, that to this moment the greater part of mankind pay them homage, and blindly fuffer themfelves to be cheated in the groffeft manner.

While E-Tee was converfing on religious mat- 1-73. ters, king Aheatua was playing with captain Aucusr, Cook's watch. After curioufly examining the
 motion of fo many wheels, that feemed to move as it were fpontaneoufly, and Thewing his aftonifhment at the noife it made, which he could not exprefs otherwife than by faying it " fpoke," (parou,) he returned it, and alked what it was good for. With a great deal of difficulty we made him conceive that it meafured the day, fimilar to the fun, by whofe altitude in the heavens, he and his people are ufed to divide their time. After this explanation, he called it a little fun, to thew us that he perfectly underftood our meaning. We were juft getting up to return towards the beach, when a man arrived who brought a hog along with him, which the king prefented to the captain, at the fame time promifing to give him another. With this fmall beginning we refted fatisfied, and taking our leave, without any troublefome ceremony, only pronouncing a hearty tayo, (friend,) which had more meaning in it than many a ftudied fpeech, we returned on board.

In the afternoon the captains went on fhore with us again to the king, whom we found where we had left him in the morning. He took that opportunity of requefting the captains again to prolong their ftay at leaft a few days; but he received the tame anfwer as before, and was plainly told, that his refufing to provide us with live ftock, was the reafon of their intended departure. Upon this he immediately fent for two hogs, and prefented one to each of the captains, for which he received fome iron wares in return. A highlander, who was one of our marines, was ordered to play the bagpipe; and its uncouth mufic, though almoft infufferable to our ears, delighted the king and his fubjects to a degree which we
1773. could hardly have imagined poffible. The difAucust. truft which we perceived in his looks at our firft interview was now worn off; and if we had ftaid long enough, an unreferved confidence might have taken its place, to which his youth and good-nature feemed to make him inclinable. The ftudied gravity which he had then affected, was likewife laid afide at prefent, and fome of his actions rather partook of puerility, among which I cannot help mentioning his amufement of chop. ping little fticks, and cutting down plantations of bananas with one of our hatchets. But, inftead of cultivating any farther acquaintance with him, we took our laft leave towards the clofe of the evening, and returned to the floops, which unmoored before night.
Tuef. 24. The inhabitants feeing us prepared for failing the next morning, came off in a vaft number of fmall canoes, loaded with coco-nuts and other vegetable provifions, which they fold excelively cheap, rather than mifs the laft opportunity of obtaining European goods. The tafte for baubles, which unaccountably prevails all over the world in different degrees, was fo extravagant here, that a fingle bead was eagerly purchafed with a dozen of the fineft coco-nuts, and cometimes preferred even to a nail, though the laft might be of fome ufe, and the bead could ferve merely as an infignificant ornament. We obferved that the trade was carried on much fairer this time than at our arrival, the natives being perhaps apprehenfive that any little fraud might break off a commerce, in which they now appeared deeply interefted. They accompanied us for this purpofe till we were a mile or two without the reefs \({ }_{y}\) and then returned to the beach, where we had left lieutenant Pickerfgill with a boat, in order to take advantage of their prefent difpofition.

\section*{ROUND THE WORLD.}

We were now able to breathe a little, after 17.3. the continual hurry which had been the neceffary August. confequence of the multiplicity of new objects around us, and of the fhort fpace of time which we had to obferve them. This interval of repofe was the more acceptable, as it gave us leifure to indulge the reflections which had crouded upon us during our ftay. The refult of thefe was a conviction, that this ifland is indeed one of the happieft foots on the globe. The rocks of NewZeeland appeared at firft in a favourable light to our eyes, lung tired with the conftant view of fea, and ice, and fky; but time ferved to undeceive us, and gave us daily caufe of diflike, till we formed a juft conception of that rude chaotic country. But O-Taheitee, which had prefented a pleafing profpect at a diftance, and difplayed its beaiuty as we approached, became more enchanting to us at every excurfion which we made on its plains. Our long run out of fight of land might have been fuppofed at firt to have had the fame effect as at New-Zeeland; but our flay confirmed inftead of deftroying the emotions which we had felt at the firlt fight; even though we had no soom to be fo well plealed with the refrefhments we had obtained, which were not by far fo plentiful as the filh and wild-fowl of New-Zeeland, and ftill obliged us to have recourfe to falt provifions. The feafon of the year, which anfwered to our month of February, had naturally brought on a fcarcity of truits; for though it does not manifeft itfelf here by refrigerating the air, as in countries more remote frum the tropics, yet it is the feafon when all vegetation recovers the juices which have formed the late crop, and prepares them for a new one. At this time feveral trees entirely thed their leaves, feveral plants died away to the very root, and the remaining ones looked
1773. parched on account of the want of rain, which Aucust. commonly takes place then, becaufe the fun is in - the oppofite hemifphere. The whole plain therefore was arrayed in a fober brownifh, and fometimes fallow colour. Only the lofty mountains preferved richer tints in their forefts, which are fupplied with more moifture from the clouds that hang on their fummits almoft every day. From thence, among other things, the natives brought great quantities of wild plantanes (vebee,) and that perfumed wood (e-bai) with which they give their coco-nut oil (monöe) a very fragant fmell. The fhattered ftate in which we faw the tops of thefe mountains, feemed to have been the work of an earthquake ; and the lavas, of which many of the mountains confilt, and of which the natives make feveral tools, convinced us of the exiftence of former volcanoes on this ifland. The rich foil of the plains, which is a vegetable mould, mixed with volcanic decays, and a black irony fand, which is often found at the foot of the hills, are farther proofs of this affertion. The exterior ranges of hills arefometimes entirely barren, and contain a quantity of yellowifh clay mixed with iron-ochre; but others are covered with mould, and wooded like the higher mountains. Pieces of quartz are iometimes met with here, but we never faw indications of precious minerals or metals of any kind, iron excepted, and of that there were but fmall remains in the lavas which we picked up; but the mountains may perhaps contain fome iron-ore rich enough for fufion. As to the piece of faltpetre, as big as an egg, which captain Wallis mentions as a product of Taheitee *, with all refpect for his nautical abilities, I beg leave to doubt of its exiftence, fince native falt-petre has never yet been found in folid lumps, as appears from Cronftedt's Mineralogy.

I he

\footnotetext{

}

The view of O-Taheitee, along which we now
1773. August. failed to the northward, fuggefted thefe curfory obfervations on its faffil productions, white our eyes remained eagerly fixed on the fpot which had afforded us fuch a fund of real amufement and infruction. Qur reflections were only interrupted by the fummons to dine on frefh pork, which was inftantly obeyed with an alacrity, that fufficiently. proved our long abftinence. We were agreeably furprifed to find this pork entirely free from the lufcious richnefs which makes it refift the fomach fo foon in Europe; the fat was to be compared to marrow, and the lean had almoft the tender tafte of veal. The vegetable diet which the hogs are ufed to at O-Taheitee, feems to be the principal caufe of this difference, and may have had fome influence even on the natural inftincts of thefe animals. They were of that fmall breed which is commonly called the Chinefe, and had not thofe pendulous ears, which, according to the ingenious count de Buffon, are the characters of flavery in animals. They were likewife much cleanlier than our European hogs, and did not feem to have that fingular cuftom of wallowing in the mire. It is certain that thefe animals are a part of the real riches of the Taheitians, and we faw great numbers of them at Aitepèha, though the natives took great pains to conceal them. But they are fo far from being their principal dependence, that I believe their total extirpation would be no great lofs, efpecially as they are now entirely the property of the chiefs. They kill their hogs very feldom, perhaps on'y on certain folemn occafions; but at thofe times the chiefs eat pork with the fame unbounded greedinefs, with which certain fets of men are reproached at the turtle-fealts in England; while the common fort rarely, if ever taite a little bit,

Vol. I. \(S\) which
1773. which is always held as a great dainty among August. them. Notwithftanding this, all the trouble of \(\underbrace{}_{\text {breeding, bringing up, and fattening the hogs is }}\) allotted to the lowert clafs of people.

We were becalmed in the evening, and during a great part of the night, but had a S. E.
Wed. 25. wind the next morning, fo that we ftood in fhore again, in fight of the northernmoft part of O . Taheitee, and of the adjacent ifle of Eimeo. The mountains here formed larger maffes, which had a more grand effect than at Aitepeha. The flopes of the lower hills were likewife more confiderable, though almoft entirely deftitate of trees or verdure; and the ambient border of level land, was much more extenfive hereabouts; and feemed in fome places to be above a mile broad. Towards ten o'clock we had the pleafure to fee feveral canoes coming off from the fhore towards us. Their long narrow fails, confifting of feveral mats fewed together, their ftreamers of feathers, and the heap of coco-nuts and bananas on board, had all together a picturefque appearance. For a few beads and naits they difpofed of their cargoes, and returned on fhore to take in another. About noon our boat arrived with lieutenant Pickerfgill, who had been very fucceffful in trading at Aitepeha, having purchafed nine hogs and a quantity of fruit. His majefty, Aheatua, had been prefent at the trading place the whole time, and after feating himfelf near the heap of iron wares, which our people had brought on thore, defired to market for them, and was extremely equitable in giving hatchets of different kinds for hogs of proportionate fizes. In the intervals however, he amufed himfelf as he had done the evening before, with chopping fmall fticks, with which our failors were much entertained, and after their manner, made many fhrewd

ROUND THE WORLD.
Shrewd obServations on triflers. Mr. Pickerfgill 1773. having expended his tack in trade, put off from August. Aitepeha in the afternoon, and came the fame \(\rightarrow\) evening to Hidden, the diftrict of O-Rettee (Ereti) where M. de Bougainville lay at an anchor in 1768. Here he was hofpitably entertained by the worthy old chief, who is fo juftly celebratted by that gallant French navigator; and the next morning his brother Tarooree embarked with our officer, in order to vifit the flips which they fam in the offing. When he came on board we found he had a kind of impediment in his organs of speech, by which means he fubftituted a \(K\) wherever the language required a \(T\); a fault which we afterwards obferved in feveral other individuals. He favoured us with his company at dinner, as well as another native named O.Wahow, who was the firft that had come aboard from this part of the inland, and to whom my father had immediately prefented a few beads and a fall nail, merely to try his difpofition. In return he produced a fifh-hook neatly made of mother of pearl, which he gave to his new friend. A larger nail was the reward of this good-natured action; and on the receipt of this he fent his boy to the fore in his canoe. Towards four o'clock the canoe returned, and brought on board this man's brother, and a prefent of a nomber of coconuts, feveral bunches of bananas, and a clothing-mat. There was fomething fo generous in O-Wahow's way of acting, above all the little ideas of bartering, that we could not fail to exprefs the higheft regard for him. A much more confiderable prefent was returned to him, rather to confirm him in his noble fentiments, than as a compenfation for his gift. With that he retired in the evening, promifing to return to us again, and expreffing foch extravagant emo-
1773. agreeably interrupted by the voices of feveral \(\underbrace{\text { Aucust }}\) natives that had remained on board, and enjoyed \(\sim_{\text {the beauty of the night with their friends, }}\) whom they had known in .a former voyage. They were feated at the fides of the veffel, and difcourfed on feveral topics, making their words more intelligible by different figns. We liftened to them, and found that they chiefly put queftions concerning what had happened to our people fince their laft feparation; and gave accounts in their turn of the tragical fate of Tootahah, and his friends. Gibfon, the marine, who was fo much delighted with this ifland; in captain Cook's former voyage, that he made an attempt to ftay behind, \({ }^{*}\). was now chiefly engaged in this converfation, as he underfiood more of the language than the. reft of the crew, and was on that account greatly valued by the natives. The confidence which there people placed in us, and their familiar, unreferved behaviour, gave us infinite fatisfaction, as it contrafted fo well with the conduct of the people of Aitepèha. We now faw the character of the natives in a more favourable light than ever, and were convinced that the remembrance of injuries, and the fpirit of revenge, did not enter into the compofition of the good and fimple Taheitians. It muft furely be a comfortable reflection to every fenfible mind, that philanthropy feems to be natural to mankind, and that the favage ideas of diftruft, malevolence, and revenge, are only the confequences of a gradual depravation of manners. There are few inftances where people, who are not abfolutely funk to a flate of barbarifm, have acted contrary to this general peaceable principle. The difcoveries of Columbus, Cortez, and Pizarro in America,

\footnotetext{

}

ROUND THE WORLD.
America, and thofe of Mendanna, Quiros, Schouten, Tafman, \(\dagger\) and Wallis in the South Sea, agree in this particular. It is highly probable, that the attack which the Taheitians made upon the Dolphin, took its origin from fome outrage unknowingly committed by the Europeans; and fuppofing it did not, if felf-prefervation be one of the firt laws of nature, furely from all appearances thefe people had a right to look on our men as a fet of invaders, and what is more than all, to be apprehenfive that even their liberty was at ftake. When, after a fatal difplay of fuperior European force, they were convinced that nothing farther than a fhort fay for refrefhment was intended, that the ftrangers who came among them were not entirely deftitute of humane and equitable fentiments; in fhort, when they found that Britons were not more favage than themfelves, they were ready to open their arms to them, they forgot that they had a difference, and bid them partake of each kindly production of their inle. They all exerted themfelves in acts of hofpitality and teftimonies of friendfhip from the loweft fubject to the queen, that every one of their guefts might have reafon to fay, he regretted his departure from this friendly fhore:

Invitus, regina, tuo de litore ceffi! Virgil.

\]

Account of our Tranfactions at Matavaï Bay.
Captain cook in his voyage in the Thurf. 26. Endeavour, had obferved, that in order to obtain \(\dagger\) We except the favages of New Zeeland.

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y} \quad A \quad G \quad E\)}
1773. obtain a fufficient fupply of refrefhments at Ma\(\underbrace{\text { Avgust. tavail Bay, it was abfolutely neceffary to conciliate }}\) \(\sim_{\text {the favour of the rovereign, unlet's peaceable }}\) meafures were entirely to be rejected, and the tragedies of former times be repeated. With this view he refolved to begin his operations here in the morning, by going to the province of O-Parre, where king O-Too refided. He did not, however, leave the hip till Maratata and his wife had been on board agreeable to their promife. In return for the prefents which they had received the evening before, they gave fome pieces of their beft cloth to the captain, and wete very proud to be admitted into the great cabin, while the reft of their countrymen were obliged to ftay without. As foon as captain Furneacx was come on board from the Adventure, captain Cook embarked in the pinnace with him, accompanied by doctor Sparman, my father, and myfelf. Maratata, without any ceremony, likewife came in with his wife, and immediately occupied the beft place in the ftern. A croud of attendants followed them, till the boat was fo full, that our people found it imporfible to ply their oars. The greater part of thefe unbidden guetts were therefore obliged to keave it, to their vifible difappointment; for they feemed to have fet a great value upon the liberty of fitting in our boat, which was freth painted, and had a pleafant green awning to fkreen us from the fun. We rowed acrofs the bay, and approached the fhore near a point where a thick fhrubbery furrounded a maraï of ftone, fuch as we had already oblerved in Aitepèha. This cemetery and place of worfhip was known to captain Cook by the name of ' Cootahah's marai; but when he called it by this name, Maratata interrupted him, intimating that it was no longer

\section*{ROUND THE WORLD. \\ 265}

Tootahah's after his death, but was known 1773. at prefent as O-Too's maraï. A fine mo- \(\underbrace{\text { Aucust. }}\) ral for princes, daily reminding them of mortality whilt they live, and teaching them that after death they cannot even call the ground their own which their dead corfe occupies!-The chief and his wife on paffing by it, took their upper garment from their fhoulders, which is a mark of refpect indifcriminately paid at the marai by all ranks of people, and feems to annex a particular idea of fanctity to thefe places. Perhaps they are fuppofed to be favoured with the more immediate prefence of the Deity, agreeably to the opinion that has been entertained of public places of worfhip, at all times and among all nations.

After paffing the marai, we rowed for fome time clofe along one of the fineft diftricts of O Taheitee, where the plains feemed to be very fpacious, and the mountains ran with a very eafy flope into a long point. A prodigious number of inhabitants lined the fhores, which were coverred with graffes, and haded with numerous palms clofe to the water's edge. Here we landed, amidft the joyful acclamations of the multitude; and were conducted to a group of houfes, hid under fpreading fruit-trees. Before one of the largeft we faw an area twenty or thity yards fquare, furrounded by an enclofure of reeds, not above eighteen inches high, in the middle of which the king was feated crofs-legged on the ground, in a great circle of perfons of both fexes, who feemed to be of the higheit rank in the ifland from their ftature, colour and deporment. Some of our failors laid down a number of prefents before him, which ferved as captain Cook's credentials. We all followed, and were intreated to fit down around the king. The refpect which was paid to the fovereign by all ranks of people, and which
1773. which confifted in uncovering the fhoulders in his \(\underbrace{\text { Aucust. }}\) prefence, did not prevent them from thronging \(\xrightarrow[\sim]{\sim}\) - around us on all fides with the greateft eagernefs of curiofity. The croud was beyond comparifon more numerous than at our interview with Aheatua, and the king's attendants in different corners of the area were obliged to exert themfelves in order to keep them within bounds. One in particular difplayed his activity in a furious manner to clear the way for us, by beating them unmercifully, breaking feveral fticks on their heads, and no doubt breaking their heads too.

> E come quel ch' ancor de la pazzia Non era ben guarito interamente; Per allargare innanzial Re la via, Menava quella mazza fra la gente, Ch' un imbraco fvizzero paria Di quei, che con villan modo infolente, Sogliono innanzi 'l Papa il di di fefta, Rompere a chi le braccia, a chila tefta. Tassont,

Notwithftanding this fevere treatment, they returned as obftinately to the charge as an Englifh mob, but bore the infolence of the king's officers with more patience. The king of O-Taheitee had never feen our people during'captain Cook's firt voyage, probably in confequence of the political views of his uncle Tootahah, who at that time had the whole management of affairs in his hands, and who might be apprehenfive of lofing his confequence among the Europeans, if they thould once know that he was not the greateft man on the ifland. Whether Tootahah's power was to be confidered as an ufurpation or not, is not eafily to be determined; fo much however may be alleged againtt him, that the king himfelf feemed to us to be a man of twenty-four or twenty-five years of age. O-Too was the talleft man whom we faw on the wholeilland which he governs, meafuring

\section*{ROUND THE WORLD.}
meafuring fix feet and three inches in height. His whole body was proportionately frong and well- \(\underbrace{\text { August. }}\) made, without any tendency to corpulence. His head, notwithftanding a certain gloominefs which feemed to exprefs a fearful difpofition, had a majeftic and intelligent air, and there was greatexprefion in his full black eyes. He wore ftrong whifkers, which with his beard, and a prodigious growth of curled hair, were all of a jetty black. The fame habit of body, and the fame fingular quantity of hair, which ftood puffed up all about the head intricately entwined and curled, characterifed his brothers, one a youth of about fixteen, another ten years of age, and likewife his filters, of which the eldeft now prefent feemed about twenty-fix. The women of O-Taheitee in general, cut their hair rather fhort ; it was therefore a very uncommon appearance on the heads of thefe ladies, and may, for aught we know, be a privilege referved only to thofe of the royal family. Their rank however did not exclude them from the general etiquette of uncovering the fhoulders in the king's prefence, a ceremony which afforded the whole fex numberlefs opportunities of difplaying an elegant figure to the greatelt advantage. The fimple drapery of a long white piece of cloth, like a muflin, was to be turned a hundred different ways, according to the convenience, or the talents and fine tafte of the wearer; no general fafhions force them to disfigure, inftead of adorning themfelves, but an innate gracefulnefs was the companion of fimplicity. The only perfon exempted from the general cuftom of uncovering the fhoulder, was the king's bòa *, one of his fervants, whom we could not better compare, than

\footnotetext{
*See Hawkefworth, vol. II. p. 270. eowa no learee, by which is meant e-boa no te ares (a friend to the king.)
}
1773. than to the lord in waiting, and of whom we un. Avgust derftood there were twelve who officiated by turns. Some of them were the fame gentlemen who had difplayed their dexterity before, by dealing out hearty blows to the crowd. The number of uncles, aunts, coufins, and other relations of his majefty, amongft whom we were feated, vied with each other in beftowing kind looks upon us, making profeffions of friend Mip, and-begging for beads and nails. The methods to obtain thefe trifles from uswere very different, and confequently not always equally fuccefsful. When we diftributed a few beads to one fet of people, fome young fellows would impudently thruft their hands in between them, and demand their hhare, as though it had been their due; thefe attempts we always made it our bufinefs to difcourage by a flat refufal. It was already become difficult to deny a venerable old man, who with a hand not yet palfied by age, vigoroufly preffed ours, and with a perfect reliance on our good-natuse, whifpered the petition in our ears. The elderly ladies in general made fure of a prize by a little artful lattery. They commoniy enquired for our names, and then adopted us as their fons, at the fame time introducing to us the feveral relations, whom we acquired by this means. After a feries of little careffes, the old lady began, Aima poc-èetee no te tayo mettua? "Have you not a little bead for your kind mother ?" Such a trial of our filial attachment always had its defired effect, as we could not fail to draw the mof favourable conclufions from thence in regard to the general kind difpofition of the whole people : for to expect a good quality in others, of which we ourfelves are not poffeffed, is a refinement in manners peculiar to polifhed nations. Our other female relations in the bloom of youth, with fome

Share of beauty, and conftant endeavours to 1773. pleafe, laid a claim to our affections by giving Ausust. themfelves the tender name of fifters; and all the world will agree that this attack was perfectly irrefiftible.

In a little time we met with an ample return for our prefents, efpecially from the ladies, who immediately fent their attendants (Towtows) for large pieces of their beft cloth, dyed of a fcarlet, rofe, or ftraw colour, and perfumed with their choiceft fragrant oils. Thefe they put over our cloaths, and loaded us fo well that we found it difficult to move in them. A variety of queftions concerning Tabane (Mr. Banks), Tolano (Dr. Solander), and many of their former acquaintances, immediately followed the more material bufinefs of receiving prefents; but Tupaya (Tupia) or as he was more commonly called Parua, notwithftanding the extenfive knowledge of which he feems to have been poffeffed, and which we expected thould have endeared him to his countrymen, was only mentioned by one or two perfons, who received the news of his death with perfect indifference. Whillt we were engaged in this converfation, our Highlander performed on the bag-pipe to the infinite fatisfaction of all the Taheitians, who liftened to him with a mixture of admiration and delight. King O.Too in particular was fo well pleafed with his mufical abilities, which I have already obferved were mean enough, that he ordered him a large piece of the coarfer cloth as a reward for his trouble.

As this vifit was merely a vifit of ceremony, we foon got up to return to our boat, but were detained a little longer by the arrival of EHappaï the father of the fovereign. He was a tall,

\footnotetext{
* See Hawkefworth, vol. II. p. 172. Whappai.
}
1773. a tall, thin man, with a grey beard and hair, August. feemed to be of a great age, but was not yet \(\underbrace{}_{\text {entirely worn out. He received the prefents }}\) which our captains made him, in a cold carelefs manner, which is natural to old people whofe fenfes are confiderably impaired. The accounts of former voyagers had already apprifed us of that ftrange conftitution, by virtue of which the fon affumes the fovereignty in his father's life time, * but we could not without furprife, behold the aged Happai, naked to the waift in his fon's prefence, conform to the general cuftom. Thus the ideas univerfally annexed to confanguinity, are fuppreffed in order to give greater weight to the regal dignity, and I cannot help thinking that fuch a facrifice to political authority, argues a greater degree of civilization than has been allowed to the Taheitians by our former navigators. However, though Happaï was not invefted with the fupreme command, his birth and rank entitled him to deference from the common people, and to a proper fupport from the king. The province or diftrict of O-Parre, was therefore under his immediate orders, and fupplied not only his wants, but thofe alfo of his attendants. After a very fhort ftay with this old chief, we parted from him, and from the king his fon, and returned on board in the pinnace, which Maratata had occupied during the whole time of our interview, priding himfelf very much on his fuppofed intereft with us. During our abfence feveral tents had been erected on Point Venus, for the convenience of our woodcutters and waterers, and the fick of the Adventure. The aftronomers of both veffels had likewife fixed their obfervatory nearly on the fame fpot, where Mr. Green and captain Cook had obferved

\footnotetext{
* See Hawkefworth, vol. II. p. 172,
}

\section*{ROUND THE WORLD.}
ferved the tranfit of Venus. We found a great 1773. number of inhabitants about the veffels, and Aucust. among the reft feveral of the better fort of people, who having accefs to all parts of the fhip, followed every body with their petitions for beads and other prefents. The captains to evade their endlefs importunities went on fhore to the tents, and thither we accompanied them in order to fee what natural productions the country afforded. Another excurfion of the fame kind was made in the afternoon, but as both were confined to an inconfiderable diftance, our difcoveries only confifted of a few plants and birds which we had not feen at Aitepèha.

The next morning very early, a number of Friday \(z_{-}\),
canoes came to the fhip from Parre, and in one of the fmalleft, the king in perfon brought many prefents to captain Cook. A live hog, a very large filh called a cavalha (fcomber bippos), and an albecore ready dreffed, about four feet long, with many bafkets of palm-leaves containing bread-fruit and bananas, were handed up to the deck fucceffively. Captain Cook ftood on the Ship's fide, entreating his majefty to come on board, but he did not ftir from his feat, till an immenfe quantity of the beft cloth of the country had been wrapped round the captain, encreafing his bulk to a prodigious dimenfion. After this ceremony, Too, with a countenance which betrayed a good deal of diffidence, ventured to come upon the quarter-deck, and embraced the captain, who in conjunction with his officers and ourfelves, devifed all poffible means to quiet thefe apprehenfions. Our quarter-deck was now fo crouded with the king's relations, that he was requefted to come into the cabin; but the defcent between decks was fo hazardous an enterprize according to his ideas, that he could
1773. by no means be prevailed on to attempt it, till Avgust. he had fent down his brother, a fine active youth \(\underbrace{}_{\text {about fixteen years of age, who placed a perfect }}\) confidence in us. Having reconnoitred the cabin, and finding it to his liking, he made his report accordingly to the king, who immediately ventured down. He received a great number of valuable prefents from captain Cook, who began to find himfelf very warm under his load of cloth. The principal people accompanied his majefty into the cabin, but they crouded in fo faft, that it was almoft impoffible to fir for them. Every one of thefe, as I have already mentioned, chofe his particular friend amongft us, and reciprocal gifts fealed every new connection. Captain Furneaux being arrived on board, we took an opportunity of fitting down to our breakfaft, when they feemed perfectly eafy, having prevailed on them to feat themfelves on chairs, which ftruck them with their novelty and convenience. The king paid great attention to our breakfaft, which was a mixture of Englifh and Taheitian provifions, and was much furprifed to fee us drink hot-water, \({ }^{*}\) and eat bread-fruit with oil. \(\dagger\) Though he could not be perfuaded to tafte our food, feveral of his attendants were not fo cautious, but eat and drank very heartily of whatever we fet before them. After breakfaft O-Too faw my father's fpaniel, a fine dog, but in very bad order at that time, and very dirty from the pitch, tar, and other uncleanlinefs on board the fhip. Notwithftanding thefe defects, the king expreffed a great defire of becoming his mafter, and made a requeft to that purpofe, which was readily complied with. He immediately commanded one of the lords in waiting, or boas, to take the dog into his cuftody;

\section*{ROUND THE WORLD.}
and in conformity to his orders, this man 1773. ever after carried the dog behind his majefty. \(\underbrace{\text { Avcust. }}\) The king foon after told captain Cook that he wifhed to return on fhore, and went on deck with all his attendants, carrying with him the prefents which he had received. Captain Furneaux took that opportunity of prefenting to him a fine pair of goats, male and female, which he had brought from on board his own veffel the fame morning. We fucceeded very well in our attempt to make him comprehend the value of thefe animals, and the manner of treating them; for he promifed that he would never kill nor feparate them, and take great care of their offspring. The pinnace was now ready, and the king embarked in it, with the captains and feveral other gentlemen, and proceeded to the royal refidence at O-Parre. During this paffage he appeared highly contented, afked a number of queftions, and feemed to have entirely conquered his former fears. His enquiries chiefly concerned the goats, which had attracted all his attention, and we could never tell him too often what they hould feed upon, and how they were to be managed. As foon as we came on thore, we pointed out to him a fine foot of ground, covered with a good bed of graffes, in the fhade of bread-fruit trees, and defired that the goats might always be kept in fuch places. At our landing, the fhore was crouded with people, who expreffed their joy on feeing their fovereign by loud acclamations. Among them we difcerned the late Tootahah's mother, a venerable grey-headed matron, who, on feeing captain Cook, ran to embrace him, as the friend of her deceafed fon, and wept aloud at the remembrance of her lofs. We paid the tribute of admiration due to fuch fenfibility, which endears our fellow-creatures to us wherever it is Vol. I. T met
1773. met with, and affords an undeniable proof of the August. original excellence of the human heart.
\(\underbrace{}_{\text {From hence we haftened away to our tents at }}\) Point Venus, where the natives carried on a regular trade with vegetables of all forts, which fold at very low rates, a fingle bead being given for a bafket of bread-fruit, or a bunch of coco-nuts. My father there met his friend O -Wàhow, who prefented him with a great quantity of fruit, fome fif, fome good cloth, and fome mother of pearl hooks. This prefent deferved a compenfation, but the generous Taheitian abfolutely refufed to take any thing, faying that he gave thefe things as a friend, and without any lucrative view. It feemed as if every thing had confpired this day to give us a favourable idea of the amiable nation among whom we refided.

We returned on board to dinner, and paffed the afternoon there in the occupations of defribing and drawing objects of natural hiftory. The decks in the mean while were conftantly crouded with natives of boths fexes, prying into every corner, and ftealing whenever they found an opportanity. In the evening we beheld a fcene new and ftriking to ourielves, though familiar to thofe who had been at Taheitee before. A great number of women of the loweft clafs, having been previoutly engaged by our failors, remained on board at fon-fet, after the departure of all their country people to the fhore. We had obferved inftances of the venality of the. Taheitian females at Aitepeha; but whatever might have been their condefcenfion towards our people in day-time, they had never ventured to pafs a night on board. The women of Matavai had ftudied the difpofitions of Britifh feamen much better, and knew. that they ran no rifls by entrufting themfelves to their care ; but on the contrary might make fure
of every bead, nail, hatchet, or fhirt which their lovers could mufter. This evening was therefore as completely dedicated to mirth and pleafure, as if we had lain at Spithead inftead of O-Taheitee. Before it was perfectly dark the women affembled on the forecaftle, and one of them blowing a flute with the noftrils, all the ref danced a variety of dances ufual in their country, amongft which there were fome that did not exactly correfpond with our ideas of decency. However, if we confider that the fimplicity of their education and of their drefs, makes many actions perfectly innocent here, which, according to our cultoms, would be blameable, we cannot impute that degree of unbounded licentioufnefs to them, with which the proftitutes of civilized Europe are unhappily reproached: As foon as it was dark, they retired below decks, and if their lovers were of fuch a quality as to afford them frefh pork, they fupped without referve, though they had before refufed to eat in the prefence of their own countrymen, agreeably to that incomprehenfible cuftom which feparates the fexes at their meals. The quantities of pork which they could confume were aftonihhing, and their greedinels plainly indicated that they were rarely if ever indulged with that delicious food in their own families. The intances of fenfibility in Tootahah's mother and in O-Wahow, and the favourable ideas which we had from thence formed of the Taheitians, were for recent in our memories, that we were much hurt at the fight of thefe creatures, who had entirely fargot the duties of life, and abandoned athemfelves to the brutal fway of the paffions. That there fhould exift fo great a degree of immorality in a nation, otherwife fo happy in its fimplicity, and in the fewnefs of its wants, is a reflection very difgeaceful to human
1773. nature in general, which, viewed to its greatelt \(\underbrace{\text { August, }}\) advantage here, is neverthelefs imperfect. Is it not to be lamented, that the beft gifts of a benevolent Creator feem to be the moft liable to frequent abufe, and that nothing is fo eafy to mankind as error ?
Satur. 28. Early the next morning O.Too, with his fifter Tedua-Towrai, and feveral relations, came alongfide, and fent up a hog and a large albecore into our veffel, but would not come on board. He had a fimilar prefent for captain Furneaux, but refufed to go to the Adventure till my father went with him. The ceremony of fwaddling the captain in O. Taheitee cloth was performed again before his majetty ventured on board; but that being over, he feemed to think himfelf fafe amongft us, and came on the deck, where captain Furneaux gave him a variety of prefents. His filter Tedua-Towrai was on board the Refolution in the mean while, and all the women paid her the fame refpect by uncovering the fhoulders, which the whole nation owes to the king. . The aetive youth, \(T\) '-Aree WATow, who was with the king his brother, had the fame honours paid to him ; and it appeared to us that the title Aree, though common to all the chiefs of diftriets, and the nobility in general, was pet applied by way of excellence to the perfons of the royal family. O-Too foon left the Adventure, rejoined his fifter on board the Refolution, and was accompanied by both the captains to Parre.
Sund. 29. On the 29th at day-break we landed at our tents, and proceeded into the country with an intention to examine its productions. A copious dew, which had fallen during night, had refrefhed the whole vegetable creation, and contributed, together with the early hour of the morning, to make our walk extremely pleafant.

\section*{ROUND THE WORLD.}

We found but few natives at the tents, fome of whom attended us to the ford in the river, and for a bead a-piece carried us acrofs, where it was twenty yards wide, without our wetting a foot. As we entered the grove, we perceived the inhabitants in their houfes juft getting up, and faw many of them performing their cuftomary ablution in the adjacent river of Matavai. There can be no doubt, that frequent bathing in this warm climate is extremely falutary, and particularly in the morning, when the water, being frefh and cool, cannot but be highly inftrumental in bracing the fibres, which might otherwife beome too much relaxed. The cleanlinefs which refults from this cuftom, is certainly one of the beft prefervatives againft putrid diforders, and has the farther advantage of making thefe people enjoy the comforts of fociety in a higher degree than thofe favages who feem to fhun the water, and become indifferent to each other, and loathfome to ftrangers by their fqualid appearance, and fetid exhalations. We walked on till we came to a little hut, the lowly dwelling of a poor widow with a numerous family. Her eldeft fon, Noona, a lively boy about twelve years old, had always been particularly attached to the Europeans, and being extremely quick of apprehenfion, underftood us much better at half a word, than many of his countrymen with all the getures we could invent, and after we had ranfacked our vocabularies. This boy, who, with a dark almoft chefnut-brown colour, combined a fet of pleafing, good-natured features, had agreed the evening before, to become our guide on this day's excurfion. At our approach we found his mother, who had provided a number of coco-nuts and fome other provifions for us, fitting on the fones before her cottage, and her children affembled about

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. about her, the youngeft of which was not above Aucust. four years old. She feemed to be active enough, but however of fuch an age, that we had fome difficulty to believe her the mother of fuch young children, in a country where we knew that the commerce of the fexes begins at an early age. The arrival of a well-looking woman, about three or four and twenty years old, who was Noona's eldelt filter, foon accounted for the wrinkles on her mother's brow. Intead of verifying the general obfervation, that women in hot countries lofe their fightlinefs much fooner than with us, we had now reafon to be furprifed, that they fhould be fo prolific here, as to bear children during a period of almoft twenty years. It was natural that our thoughts fhould return to the happy fimplicity in which the life of the Taheitians fmoothly rolls along, and which, undifturbed by cares and wants, is the caufe of the great population of their ifland.

A ftout fellow, whom we hired for a few beads, carried the provifions which the hofpitable old woman had offered us, fufpending them in equal portions on the two extremities of a Arong pole, about four feet long, which he placed on his fhoulder. Young Noona, and his little brother Toparree, about four years old, cheerfully accompanied us, after we had enriched the whole family with beads, nails, looking-glaffes, and knives.

The firt part of our march was a little diffcult, on account of a hill on which we mounted, in hopes of meeting with fomething to reward our trouble. But, contrary to our expectations, we found it entirely deftitute of plants, two dwarnih hrubs, and a fpecies of dry fern excepted. Here, however, we were much furprifed to fee a large flock of wild ducks, rifing before us, from a foit which was perfectly dry and barren, without

\section*{ROUND THE WORLD.}
without our being able to imagine what had brought them thither from the reeds and marihy banks of the river, where they commonly refided. We foon croffed another hill, where all the ferns and bufhes having lately been burnt, blackened our clothes as we paffed through them. From thence we defcended into a fertile valley, where a fine rivulet, which we were obliged to crofs feveral times, ran towards the fea. The natives had placed feveral fone weirs acrofs this rivulet, in order to raife the water, which might by that means be introduced into their plantations of the tarro, or eddy-root (arum efculentum), that requires a very marfhy, and fometimes an inundated foil. We found two fpecies of it, one of which has large gloffy leaves, and roots about four feet long, but is very coarfe; the other with velvet leaves and fmall, but more palatable roots. Both are exceffively pungent and cauftic, till boiled in feveral waters; however, hogs eat them raw without any reluctance. The valley became narrower as we advanced up along the rivulet, and the hills which included it were much fteeper, and covered with forefts. Every part of the level ground was, however, planted with coconut, apple, and bread-fruit trees, with bananas, ctoth-trees, and various roots, and a number of houfes were conveniently fituated at fhort diftances from each other. In different parts we met with immenfe beds of loofe pebble-ftones in the rivulet and on its banks, which feemed to have been wafhed out of the mountains, and worn into round or oblong fhapes, by the continual motion and agitation of the water. On the fides of the hills we gathered feveral new plants, fometimes at the rifk of breaking our necks, on account of the pieces of rock which rolled away under our feet. A great number of inhabitants
1773. affembled about us, and among them feveral who \(\underbrace{\text { August. }}\) brought us abundance of coco-nuts, bread-fruit, and apples for fale. We bought as much as we thought neceffary for our provifion, and hired fome of the natives to carry it. After proceeding up about five miles from the fea-fide we fat down in the thade of a number of trees, on a pleafant green turf, and made our meal, which confited of the fruit we had purchafed, and of fome pork and fifh which we had taken from on board. The natives formed a circle round us; but thofe who had been our guides and affiftants were permitted to fit by us, and partook of our cheer with a very good appetite. They were moft furprifed at the falt, which we had taken care to provide, and which they faw us eat with all forts of victuals, bread-fruit not excepted. Some of them were defirous of tafting it, and among thefe there were a few who relifhed it very well, becaufe they are ufed to employ feawater as a fauce both to fifh and to pork.*

It was about four o'clock in the afternoon, when we thought of returning to the fea-fide with our acquifitions. About this time a number of inhabitants came acrofs the hills with loads of horfe-plantanes, a coarfe fort, which grows almoft without cultivation, and which they brought for fale to our Ihips. We followed them along the fide of the rivulet to a place where fome children offered us a few little prawns picked out between the ftones in the bed of the river. We had no fooner taken them as a curiofity, and rewarded the children with beads, than upwards of fifty perfons of different ages and fexes fet about the fame employment, and brought us fo many of thefe littie creatures, that we were foon obliged
to refufe them. In the face of two hours we 1773. reached our tents on Point Venus, where we Aucust. found O-Wàhow, the generous native who had brought my father another prefent of provifions. In the courfe of this walk, we had obferved more idle perfonsthan at Aitepèha; the houfes and plantations appeared more ruinous and neglected, and from feveral people inftead of invitations, or marks of hofpitality, we only received importunate petitions for beads and nails. Still upon the whole we had great reafon to be contented with our reception among them, and the liberty of roaming at pleafure through all parts of their delightful country. We had now and then experienced their difpofition to theft, but had never loft any thing of value; for our handkerchiefs, which were the eafieft to come at, were made of their own thinner cloth, fo that they found themfelves difappointed as often as they had dextroufly picked our pockets, and with great good humour returned them to us. In my opinion this vice is not of fo heinous a nature among the Taheitians, as amongft ourfelves. People whofe wants are fo eafily fatisfied, and in whofe manner of living there is fo much equality, can have very few motives to fteal from each other, and their open houfes without doors and bars, are fo many proofs of mutual fafety. The blame then lies in a great meafure upon us, for bringing temptations in their way too powerful to be withftood. They feem indeed not to think their tranfgreffions of great fignification, perhaps from a reflection that they do not materially injure us by any little larceny.

During our abfence the captains had paid a vifit to the king at Parre, where they were highly entertained by the fight of a dramatic dance, which her royal highnefs Towrai performed, in a drefs

17-3. a drefs exactly defcribed in captain Cook's for\(\underbrace{\text { August; }}\) mer voyage, and with the fame geftures which \(\underbrace{}_{\text {are there mentioned. * Two men danced at dif- }}\) ferent intervals, when the princefs refted, and, with many ftrange diftortions, fpoke or fung fome words, probably relative to the fubject of their dance, which was unintelligible to our people. The whole entertainment lafted about an hour and a half, during which Tedua Towrai difplayed a wonderful activity, which furpaffed every thing that had been feen at the ifle of Ulietea in the former voyage.
Mon. jo. Early the next morning captain Cook fent lieutenant Pickerfgill to the fouth-welt part of the ifland, in order to purchafe fome frefh provifion, and particularly fome hogs, of which we had hitherto received only two from the king. We continued on board the whole day, defcribing the plants which we had found on our laft excurfion. In the evening, about ten o'clock, we heard a great noife on thore abreaft of our veffels, apparently occafioned by fome of our men. The captains immediately fent their boats afhore, with proper officers, who brought on board feveral marines and a failor. They had obtained leave to take a walk from the commanding officer at the tents, but had exceeded their time, and beaten one of the natives. They were immediately fecured in irons, as it was of the utmort confequence towards continuing upon an amicable footing with this nation, to punifh them in an exemplary manner. O-Too had promifed to come on board with his father the next morning, but this noife, of which he had received advice within half an hour after it had happened, made him fo juftly diffident of our intentions, that he fent

\footnotetext{

}

\section*{ROUND THE WORLD. \\ 283}
fent his meffenger or ambaffador (Whanno no 1773. \(t^{\prime}\) arce *, ) who was one of the principal lords of Aucust. his court, named E-Tee, to make an apology for his non-appearance. Before he came on board, however, Dr. Sparrman went on fhore with me near the place where the difturbance had happened, with a view to make another excurfion into the interior parts of the country. OWhaw, \(\dagger\) the old man, who had on former occafions fhewed his pacific difpofition, met us on the beach, and fpoke of the offence of the laft night not without expreffing fome difpleafure; but when we affured him that the offenders were in irons, and would be feverely punifhed, he feemed perfectly fatisfied. As we had nobody from the veffel to affift us, we defired O-Whaw to point out a native whom we might entruft with the botanizing apparatus. Several people having offered their fervices, he chofe a ftrong well-made man, who was immediately furnifhed with an empty bag, for the reception of plants, and with fome bafkets full of Taheitee apples, which we had purchafed on the fpot. We croffed One-tree-hill, and defcended into one of the firft vallies of O-Parre, where we were gratified with the fight of one of the moft beautiful trees in the world, which we called the Barringtonia. It had a great abundance of flowers, larger than lilies and perfectly white, excepting the tips of their numerous chives, which were of a bright crimfon. Such a quantity of thefe flowers were already dropped off, that the ground underneath the tree was intirely ftrewed with them. The natives called the tree buddoo, and affured us
that

\footnotetext{

}

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y} \quad A \quad G \quad E\)}
1773. that the fruit, which is a large nut, when bruifed, August. mixed up with forme fhell-fifh, and strewed into the dea, intoxicates or poifons the fifth for forme time, fo that they come to the furface of the water and fifer themfelves to be taken with the hands. It is fingular that various maritime plants in tropical climates have fuch a quality; the cocculi indici, in particular, are well known and unfed for that purpofe in the Ealt-Indies. We were unwilling to defer the examination of fo remarkable a plant till after our return on board, and therefore retired to a neat house, built up of reeds, round which feveral odoriferonus Shrubs and forme very fine coco-trees were planted. The owner, with that hofpitality which I have already often celebrated, rent a boy up one of the talleft palms to procure us forme of the nuts, which he performed with furprifing agility. He tied a piece of the tough rind of a banana talk to both his feet, in foch a manner that they could just encompass the tree on both fides, the piece of rind Serving as a fort of ftp or reft, whilst he lifted himfelf higher with his hands. The natural growth of the coco-palm, which annually forms a kind of elevated ring on the Item, certainly facilitated the boy's afcent, but the quickness and cafe with which he walked up and down were really admirable. We should have ill deferved this mark of kindnefs and atmention if we had not made our hoff a little presfent at parting, and rewarded the boy for the pleafure which we had felt in observing his dexferity.

From hence we proceeded up the valley, which having no rivulet in its middle, began to rife in proportion as we advanced. We refolved therefore to go upon the fteep hill on our left, and

\section*{ROUND THE WORLD.}
and with much difficulty accomplifhed our plan.
Our Taheitian friend laughed at us, when he faw us faint with fatigue, and fitting down every moment to recover our breath. We heard him blow or breathe flowly but very hard, with open mouth, as he walked behind us; we therefore tried the fame experiment, which nature had probably taught him, and found it anfwered much better than our flort panting, which always deprived us of breath. At laft we reached the ridge of the hill, where a fine breeze greatly refrefhed us, after our fatiguing afcent. When we had walked upwards along that ridge for fome time, expofed to the burning rage of the fun, reverberated from all parts of the barren foil, we fat down under the feanty fhade of a folitary pandang, or palm-nut tree, * which was at this time acceptable even to our friendly native. The profpect from hence was delightful; the reef which furrounded O-「aheitee, the bay with the fhips, and numerous canoes, and the whole plain of Matavaï with its beautiful objects, lay as it were under our feet, while the meridian fun threw a fteady and calm light on the whole landfcape. At the diftance of about fix leagues, the low ifland called Tedhuroa, appeared before us, forming a little circular ledge of rocks, covered with a few palms; and far beyond it the immenfe ocean bounded the view. The Taheitian who was with us, pointed out the direction of all the neighbouring illands which were not in fight at prefent, and informed us of their produce, whether they were high or low, inhabited or only occafionally vifited. Tedhuroa, which we faw was of the laft fort, and two canoes with their fails

}

\section*{A \(V \quad O \quad Y \quad A \quad G \quad E\)}
1773. fails fet, were at that time returning from thence, Aucust. where our guide informed us they often went to catch fifh in the lagoon. Having refted a little while, we advanced up towards the interior mountains, which now appeared diftinctly before us. The rich groves which crowned their fummits, and filled the vallies between them, invited us to advance, and promifed to reward our perfeverance with a load of new productions.: But we foon perceived a number of barren hills and vallies which lay between us and thofe defirable forefts, and found it was in vain to attempt to reach them this day. We confulted amongh ourfelves, whether we fhould venture to pais a night on thefe hills, but this was unadvifable, on account of the uncertainty of the time when our fhips were to fail, and likewife impracticable for want of provifions.-Our Taheitian told us, we fhould meet with no inhabitants, dwelling, or provifions on the mountains, and pointed out a narrow path which led down the fteep fide of the hill into the valley of Matavai. We began to defcend therefore, but found it more dangerous than when we came up: we fumbled every moment, and in many places were obliged to flide down on our backs. Our fhoes were rather a difadvantage to us, being made extremely flippery by the dry graffes over which we had walked, while the native with his bare feet was furprifingly fure-footed. In a fhort time we gave him our fowling-pieces, to enable us to make ufe of our hands, and at laft we refumed them again, and letting him go before, leaned on his arm in the moft difficult places. When we were about half-way down, he hallooed very loud to fome people whom he faw in the valley; but we did not believe at that time that they had heard him, efpecially becaufe

\section*{ROUND THE WORLD.}
he received no anfwer. However, prefently after
1773. we obferved feveral people coming up towards us, who afcended very faft, fo as to meet us in about half an hour. They brought us three frefh coco-nuts, which, whether they were really excellent in their kind, or whether our great fatigue recommended them to our tafte, we looked upon as the beft we had ever emptied. The natives bid us reft awhile, and told us that a little farther down they had left a number of coco-nuts, which they would not bring up left we fhould drink too haftily at firft. Their precaution was very laudable, but our thirft made us very impatient till they would permit us to move forward. At laft we fet out, and coming on a more level ground, entered a delicious little fhrubbery, where we fat down in the frefh grafs, and indulged with the cool nectar which our friends had provided. This draught enabled us to come down into the valley, where we were prefently furrounded by a croud of the natives, and prepared to return with them over the plain to the fea-fide; when a welllooking man, accompanied by his daughter, a young girl about fixteen, invited us to his houfe, which lay farther up, where he wifhed to entertain us with a dinner. Though we were much exhaufted with fatigue, we agreed not to difappoint him, and returned about two miles along the delightful banks of the river Matavai, through groves of coco, bread fruit, apple, and clothtrees, and numerous plantations of bananas and eddoes. The river formed various windings in the valley from fide to fide, fo that we were obliged to crofs it feveral times, and our new hoft with one of his fervants always infifted upon carrying us over on their backs. At laft we arrived at his houfe, which was fituated on a little eminence, where the river gently murmured over a bed
1773. of pebbles. An elegant mat was fpread for us on the Aucust dry grafs in a corner of the houfe, which was of the \(\xrightarrow[\sim]{\sim}\) clofer fort, being walled in with reeds. We were immediately furrounded by a great number of our friend's relations, who feated themfelves near us; and his daughter, who in elegance of form, clearnefs of complexion, and agreeable features, equalled, if not furpaffed the Taheitian beauties we had hitherto feen, together with fome of her young companions, were very affiduous in their endeavours to be agreeable. The moft efficacious remedy they employed befides their fmiles, to recover us from the great wearinefs which we felt, was to chafe our arms and legs with their hands, fqueezing the mufcles gently between the fingers and the palm. Whether this operation facilitated the circulation of the blood through the minuter veffels, or reftored the over-Atrained mufcles to their natural elafticity, I cannot determine ; but its effect was certainly fo falutary, that our frength was perfectly reftored, and we did not feel the leaft remaining inconvenience from the fatiguing journey of the day. Captain Wallis mentions a fimilar inftance of the excellence of this remedy, and of the beneficence of the inhabitants of Taheitee*; and Ofbeck, in his voyage to China, defcribes this operation as a common practice among Chinefe barbers, who are faid to be very expert at it \(\dagger\). Mr. Grofe too, in his voyage to the Eaft-Indies, gives a very circumftantial account of the art of champing, which feems to be a luxurious refinement upon this wholefome reftorative. It deferves to be mentioned here, that this ingenious

}

\section*{ROUND THE WORLD.}
nious author has given quotations from Martial 1773. and Seneca, which make it evident that the Ro - Aucusir. mans were acquainted with this practice. *

> Percurrit agili corpus arte tactatrix, Manumqué doctam fargit omnibus membris. \[ \text { Martial. }_{\text {ald }} \]

We had no longer reafon to complain of the want of appetite which had been the confequence of our fatigue; but as foon as our dinner was placed before us, confifting of vegetable food, fuitable to the frugal fimplicity of the natives, we partook of it very heartily, and foon found ourfelves in as good fipits as we had fet out with in the morning. We paffed about two hours with this hofítable family, and during that time diftributed the greatelt part of the beads, nails, and knives which we had brought from the fhip to our generous hoft; to his fair daughter, and her companions, whofe care had reftored our ftrength much fooner than we had a right to expect after fo laborious an expedition. About three o'clock we fet out on our return, and walked paft numerous dwellings, whofe inhabitants enjoyed the beauty of the aftermoon in various parties, under the fhade of their fruit-trees. In one of thefe houfes we obferved a man at work, in preparing a red dye, for fome cloth made of the bark of the paper-mulberry, which we commonly called the cloth-tree. Upon enquiring for the materials which he made uie of, we found to our great furprife that the yellow juice of a fmall species of fig, which they call mattee, and the greenifi juice of a fort of fern, or bind-weed, or of feveral other plants, by being fimply mixed together, formed a bright crimfon, which the VoL. I. \(J\) women

\footnotetext{

1773. women rubbed with their hands if the whole \(\underbrace{\text { August. }}\) piece was to be uniformly of the fame colour, or in which they dipped a bamboo reed, if it was to be marked or fprinkled in different patterns. This colour fades very foon, and becomes of a dirty red, befides being liable to be fpoiled by rain and other accidents; the cloth, however, which is dyed or rather fained with it, is highly valued by the Taheitians, and only worn by their principal people. We bought feveral pieces of cloth of different kinds for beads and fmall nails, and then walked on till we arrived at the tents, which ftood at leaft five miles from the place where we had dined. Here we difcharged our trufty friend whom O-Whaw had recommended, and who had behaved with a degree of attachment and fidelity to us, which from the thievifh character of the nation we had no room to expect. This behaviour was the more meritorious as our fituation frequently had afforded him excellent opportunities of running off with all our nails and knives, and with one of our fowling-pieces; temptations which required an uncommon degree of honefty to withftand. We next embarked in one of the canoes which plied between the fhips and the fhore, and for a couple of beads were fafely brought on board. Here we found the captain and my father juft returned from a long excurfion to the weftward. E-Tee, the king's ambaffador, who arrived on board immediately after our departure, had brought a prefent of a hog and fome fruit, but acquainted the captain that O -Too was matarw, a term which at once expreffed that he was afraid and difpleafed. To convince him that the outrages of laft night were not approved of, the offenders were brought to the gangway, and received a dozen of lafhes in his prefence, to the

\section*{ROUND THE WORLD.}
great terror of all the Taheitians on board. \({ }_{1773}\).
Captain Cook then ordering three wether-fheep Aucust. from the Cape, which were all we had left, to be put in his boat, embarked with captain Furneaux and my father, in order to regain the confidence of O -Too, without which he knew that no provifions were to be bought in the country. When they arrived at Parre, they were told that he was gone to the weftward; accordingly they went after him, about four or five miles farther, and landing in a diftrict called Tittahàh, waited feveral hours for him there; his fears having been fo ftrong, as actually to make him remove about nine miles farther from us than ufual. There was fomething in this conduct feemingly too much allied to cowardife; but we fhould likewife confider, that the power of Europeans had formerly been difplayed here in the terrific fliape of deftruction. It was three o'clock in the afternoon before he arrived with his mother; he exprefling the moft manifeft figns of fear and diftruft, and the with her eyes fwimming in tears. The report of E-Tee, the prefent of a new kind of animals, and all poffible affurances of friendThip on the part of our people, fucceeded to quiet their apprehenfions. At the king's defire, the bagpiper was ordered to play before him, and his performance produced an effect fimilar to that of David's harp, whofe harmonious founds foothed the atrabilarious temper of Saul. He fent for a hog, which was prefented to captain Cook; and foon after for another, which he gave to captain Furneaux. The captains believing this to be the laft opportunity of obtaining prefents from him, defired that a third might be brought for Matarra (my father's Taheitian name.) A little pig was given him, at which our people expreffed fome diflike; upon this, \(\mathrm{U}_{2}\) one

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathrm{Y}\) A \(\quad \mathbf{G} \quad \mathbf{E}\)}
1773. one of the king's relations, in the afcending line, Aucust. who are all ftyled Medooa (Father,) ftepped for\(\underbrace{\text { ward from the throng, and fpoke very loud, }}\) with many violent geftures, to \(\mathrm{O}-\mathrm{Too}\), pointing at our people, at the fheep they had prefented, and at the little pig which they had received. As foon as his fpeech was finifhed, the pig was taken back again, and after a fhort interval a large hog brought in its fead. Our people then produced their iron wares and a variety of trinkets, which they diftributed very freely; and in return were wrapped up in feveral abòws, or pieces of Indian cloth. They then took their leave of the whole court, and returned to their veffels about five o'clock.
Srptem. Preparations were made for failing from this Wed. i. ifland the next morning, whilft the natives crouded about us with fifh, thells, fruit, and cloth, of which we purchafed all that was to be had. Lieutenant Pickerfgill returned from his excurfion to the weftward about three in the afternoon. He had advanced beyond the fertile plains of Paparra, where O-Ammo, * who had once been the king of all Taheitee, refided with his fon the young \(T^{\prime}\)-Arce Derre. \(\dagger\) He took up his firft night's lodging on the borders of a fmall diftritt, which was now the property of the famous queen O-Poorea (Oberea). As foon as the heard of his arrival the haftened to him, and met her old acquaintance with repeated marks of friend hip. She had feparated from her hufband \(\ddagger\) fome time after the departure of captain Wallis, and was now entirely deprived of that greatnefs which had once rendered her confpicuous in fory, and auguft in the eyes of Europeans. \(\$\)

\section*{ROUND THE WORLD.}

The civil wars between the two peninfulas of the ifland had ftripped her, as well as the whole diftrict of Paparra, of the greateft part of her wealth, fo that the complained to the lieutenant that the was poor, (teittee,) and had not a hog to give her friends. The next morning therefore they left her, and in their return touched at Pa parra, where they faw Ammo, who, after parting with O-Poorea, had taken one of the handfomelt young women of the country to his bed, and appeared to be aged and indolent. His fair one gave a hog to our people, and, with fome of her female attendants, ftepped into the boat at their departure, and went the whole day with them, her own canoe attending to take her back again. On this excurfion the expreffed a gréáá degree of curiofity, which feemed never to have been gratified before by the fight of Europeans, infomuch that the was doubtful whether they were formed at all points like her own countrymen, till her eyes removed every doubt. With her they landed at Attahooroo, where a chief named Potatow * received them very cordially, and entertained them at his own houfe during the fecond night. He too had parted with his wife Polatebera, and taken a younger to his bed, while the lady had provided herfelf with a lover or a hurband, and they all continued to live very peaceably in the fame family. The next morning at parting Potatow promifed to accompany Mr. Pickerfill to Matavai, in order to vifit captain Cook, provided he might be fure of good treatment. Mr. Pickerfgill affured him of the beft reception; but the chief, for greater fafety, produced a few fmall yellow feathers, tied together into a little tuft, which he defired Mr. Pickerfgill to hold, whilft he repeated his promife,

\footnotetext{

}
1773. mife, " that Toote (captain Cook) would be the septem. "friend of Potatow." This done, he carefully \(\underbrace{\text { wrapped the feathers into a bit of Indian cloth, }}\) and put it in his turban. We knew, from former accounts, that red and yellow feathers were employed by the inhabitants of this ifland to fix their attention while they prayed to the Deity; but this ceremony conveyed an idea of a folemn affirmation or oath, which was quite new to us. Potatow was fo well fatisfied of the integrity of his friends, after this ceremony, that he and his wives, and feveral of their attendants, carrying with them two hogs and abundance of cloth, marched towards the boat, amidft an immenfe croud of people. He was, however, no fooner arrived at the water's fide, than the whole multitude eagerly preffed him not to venture amongft our people, and clinging to his feet endeavoured to hold him back; feveral women, with a flood of tears, repeatedly cried aloud that Toote would kill him as foon as he came on board; and an old man, who, by living at the chief's own houfe, feemed to be a faithful fervant to the family, drew him back by the fkirts of his garment. Potatow was moved; for a moment he expreffed fome marks of diffidence; but inftantly arming himfelf with all the refolution he was mafter of, he thruft the old man afide, exclaiming "Toote "aipa matte te tayo," (Cook will not kill his friends!) and ftepped into the boat with an air of undaunted majefty, that ftruck our Britons with aftonifhment. As foon as he was on board the Mip, he defcended into the cabin, accompanied by his wife Whainee-ọv, his former wife, and her friend, and brought his prefents to captain Cook. Potatow was one of the talleft men we had feen upon the ifland, and his features were fo mild, comely, and at the fame time majeftic,

\section*{ROUND THE WORLD.}
that Mr. Hodges immediately applied himfelf 1773. to copy from them, as from the nobleft models Septem. of nature. His whole body was remarkably ftrong and heavily' built, fo that one of his thighs nearly equalled in girth our fouteft failor's waif. His ample garments, and his elegant white turban, fet off his figure to the greateft advantage, and his noble deportment endeared him to us, as we naturally compared it with the diffidence of O-Too. Polatehera, his former wife, was fo like him in flature and bulk, that we unanimoufly looked upon her as the moft extraordinary woman we had ever feen. Her appearance and her conduct were mafculine in the higheft degree, and ftrongly conveyed the idea of fuperiority and command. When the Endeavour bark lay here, the had diftinguifhed herfelf by the name of captain Cook's fifter, (tuabeine no Toote;) and one day, being denied admittance into the fort on Point Venus, had knocked down the fentry who oppofed her, and complained to her adopted brother of the indignity which had been offered to her. After a fhort flay, being told that we intended to get under way immediately, they akked, with every demonttration of friendhhip and with tears in their eyes, whether we intended to return. Captain Cook promifed to be here again in the fpace of feven months, with which they refted perfectly fatisfied, and departed immediately to the weftward, their own canoes having followed our boat all the way.
In the mean while a young Taheitian, of the common clafs, who was very well made, and about feventeen years old, having talked to the captain of going no te wbennua tei Bretane, (to the land of Britain, for feveral days paft, had
1773. arrived on board with his father. His whole Septem. equipment confifted of a fmall piece of the In. \(\underbrace{}_{\text {dian cloth wrapped about his loins ; fo entirely }}\) did he depend upon our care and protection, Captain Cook gave his father, who feemed to be a middle aged man, a hatchet and fome prefents of leffer value, with which he defcended into his canoe with great compofure and firmners, with. out manifefting any figns of grief. We had fcarce cleared the reefs, when a canoe arrived with two or three natives, who demanded the youth back in the name of O-Too, and hewed fome pieces of cloth which they intended as prefents to the captain : but as they could not produce the iron-work which he had beftowed on the poor fellow's account, they were obliged to return without him. The youth, whofe name was Porea, fpoke to them, but would not leave us, though, to terrify him, we underftood that they prefaged his death amongit us. However, when they were at fome diftance, he looked wifhfully after them, leaned over the railing on the qquarterdeck, and fhed a flood of tears in an agony of grief. To divert him from this gloomy mood, we took him into the cabin, where he complained that he muft furely die, and that his father would weep for his lofs. Captain Cook and my father comforted him, faying tbey would be his fathers, upon which he hugged and kiffed them, and paffed from the extreme of defpandence by a quick tranfition to a great degree of chearfulnefs. About fun-fet he ate his fupper, and lay down on the floor cf the cabin; but feeing that we did not follow his example, he got up again, and remained with us till we had fupped.

It was with great regret that we departed from this delightful ifland, at a time when we were juft become acquainted with its happy inhabitants.

\section*{ROUND THE WORLD.}

We had only paffed fourteen days on its coaft, two of which had been fpent in removing from one part to the other. During this fhort face \(\underbrace{\text { Serfin }}\) of time, we had lived in a continual round of tumultuous occupations, which had left us little leifure to fludy the nature of the people. An immenfe variety of objects relative to their œconomy, their cuftoms and ceremonies, all which appeared new and interefting to us, had engaged our attention; but we afterwards found moft of them had been obferved by former navigators. Thefe therefore, for fear of prefuming too far on the indulgence of my readers, I have omitted in this narrative, and refer for the particular defcriptions of the dwellings, drefs, food, domeftic amufements, boats and navigation, difeafes, religion, and funeral rites, wars, weapons, and government, to the hiftory of captain Cook's voyage in the Endeavour bark, compiled by Dr. Hawkefworth (vol. II. from page 204 to page 276). All the merit of the preceding pages concerning the inle of Taheitee, mult therefore confift in a few gleanings and elucidations on feveral fubjects. However, I. am in hopes that the particular point of view in which I have beheld, and confequently reprefented circumftances already familiar to the reader from former accounts, will not prove uninterefting, and may in feveral inftances fuggeft new and valuable reflections.

The breeze with which we failed was fo moderate, that we continued near the fhore the whole evening, and were able to diftinguif the exuberant fcenery of the plain, beautiful enough, even at this dead feafon of winter, to vie with the richeft landfcapes, which nature has lavilhed on different parts of the globe. Its fertile foil, and

\section*{A V O Y A G E}
1773. genial climate, which produces all forts of nuSeptem. tritive wegetables almoft Spontaneoully, infures \(\underbrace{}_{\text {the felicity of its inhabitants. Allowing for the }}\) imperfect fate of fublunary happinefs, which is comparative at belt, there are not, I believe, many nations exifting whofe fituation is fo defirable. Where the means of fubfiftence are fo eafy, and the wants of the people fo few, it is natural that the great pu.p:re of human life, that of multiplying the number of rational beings, is not loaded with that multitude of miferies which are attendant upon the married fate in civilized countries. The impulfes of nature are therefore followed without reftraint, and the confequence is a great population, in proportion to the fmall part of the ifland which is cultivated. The plains and narrow vallies are now the only inhabited parts, though many of the hills are very fit for culture, and capable of fupporting an infinite number of people. Perhaps, in courfe of time, if the population flould encreafe confiderably, the natives may have recourfe to thefe parts, which are now in a manner ufelefs and fuperfluous. The evident diftinction of ranks which fubfifts at Taheitee, does not fo materially affect the felicity of the nation, as we might have fuppofed. Under one general fovereign, the people are diftinguifhed into the claffes of aree, manahoùna, and towtow, which bear fome ditant relation to thofe of the feudal fyitems of Europe. The fimplicity of their whole life contributes to foften thefe diftinctions, and to reduce them to a level. Where the climate and the cuftom of the country do not abfolutely require a perfect garment; where it is eafy at every flep to gather as many plants as form not only a decent, but likewife a cuftomary covering; and where all the neceffaries of life
are within the reach of every individual, at the expence of a trifling labour, ambition and envy mult in a great meafure be unknown. It is true, the higher claffes of people poffefs fome dainty articles, fuch as pork, fifh, fowl, and cloth almoit exclufively; but the defire of indulging the appetite in a few trifing luxuries, can at moft render individuals, and not whole nations, unhappy. Abfolute want occafions the miferies of the lower clafs in fome civilized ftates, and is the refult of the unbounded voluptuoufnefs of their fuperiors. At O-Taheitee there is not, in general, that difparity between the higheft and the meaneft man, which fubfilts in England between a reputable tradefman and a labourer. The affection of the Taheitians for their chiefs, which they never failed to exprefs upon all occafions, gave us great room to fuppofe that they confider themfelves as one family, and refpect their eldeftborn in the perfons of their chiefs. Perhaps the origin of their government was patriarchal, and the king might only be dignified by virtue of being confidered as the father of his people, till by degrees the conftitution fettled into its prefent form. Still there remains much ancient fimplicity in that familiarity between the fovereign and the fubject. The loweft man in the nation Speaks as freely with his king as with his equal, and has the pleafure of feeing him as often as he likes. This intercourfe would become more difficult as foon as defpotifm fhould begin to gain ground. The king at times amufes himfelf with the occupations of his fubjects, and not yet depraved by the falfe notions of an empty ftate, often paddles his own canoe, without thinking fuch an employment derogatory to his dignity. How long fuch an happy equality may laft, is uncertain; fince the indolence of the chiefs is already,
1773. already, notwithftanding the exuberant fertility Seftem. of the foil, a ftep towards its deftruction. Though \(\xrightarrow{\text { cultivation is a labour fcarce felt at prefent by }}\) the towtows, to whom it is allotted; yet by infenfible degrees it will fall heavier upon them, as the number of chiefs muft naturally increafe in a much greater proportion, than their own clafe, for this obvious reafon, becaufe the chiefs are perfectly unemployed. This addition of labour will have a bad effect on their bodies, they will grow ill-fhaped, and their bones become marrowlefs : their greater expofure to the action of a vertical fun, will blacken their \(\mathbf{1 k i n s}\), and they will dwindle away to dwarfs, by the more frequent proftitution of their infant daughters, to the voluptuous pleafures of the great. That pampered race, on the contrary, will preferve all the advantages of an extraordinary fize, of a fuperior elegance of form and features, and of a purer colour, by indulging a voracious appetite, and living in abfolute idlenefs. At laft the common people will perceive thefe grievances, and the caufes which produced them; and a proper fenfe of the general rights of mankind awaking in them, will bring on a revolution. This is the natural circle of human affairs; at prefent there is fortunately no room to fuppofe, that fuch a change will take place for a long feries of years to come; but how much the introduction of foreign luxuries may haften that fatal period, cannot be too frequently repeated to Europeans. If the knowledge of a few individuals can only be acquired at fuch a price as the happinefs of nations, it were better for the difcoverers, and the difcovered, that the South Sea had ftill remained unknown to Europe and its reflefs inhabitants.

C HAP.

\section*{C H A P. X.}

Account of our Tranfaciions at the Society Ifands.

\(T\)HE wind with which we failed from O-Ta1773. heitee, frefhened after fun-fet, and favoured our departure from that happy ifland, which we fill difcerned by moon-light.

The next day, at eleven o'clock, we faw the Thurf. \(=\) inle of Huahine, which is about twenty-five leagues from Taheitee, and was firt difcovered by captain Cook, on the 11 th of July, 1769. A number of our people now felt the effects of their intercourfe with the women at Matavaï Bay, and had fymptoms of a difagreeable complaint. All the patients, however, without exception, had this difeafe only in a very flight and benign degree. The queftion which has been agitated between the French and Englifh navigators, concerning the firft introduction of this evil to Taheitee, might be decided very favourably for them both, by fuppofing the difeafe to have exifted at Taheitee previous to their arrival. The argument, that none of captain Wallis's people received the infection, does not feem to controvert this fuppofition, but only proves, that the women, who proftituted themfelves to his crew, were free from it: which was perhaps owing to a precaution of the natives, who might be apprehenfive of expofing themfelves to the anger of the Atrangers, by conferring fuch a defperate gift upon

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. upon them. * We heard, however, of another Septem. difeafe of a different nature, whilit we ftaid upon \(\sim_{\text {the inland; }}\); and which they called o-pay-no-Pcppe, (the fore of Peppe,) adding, that it was brought by the hip which they defigned by that name, and which, according to different accounts, had either been two, three, or five months before us at Taheitee. By the account of the fymptoms, it feemed to be a kind of leprofy. Nothing is more eafy than to imagine, how the ftrangers (Spaniards) who vifited Taheitee in that fhip, might be innocently charged with introducing that difeafe. In order to give rife to a general error of this fort, it is fufficient that it broke out nearly about the time of their arrival, and that fome diftant connections between them and the perfons affected, could be traced. This is the more probable, as it is certain, that there are feveral forts of leprous complaints exifting among the inhabitants, fuch as the elephantiafis, which refembles the yaws; alfo an eruption over the whole fkin, and laftly a monftrous rotting ulcer, of a moit loathfome appearance. However, all thefe very feldom occur, and efpecially the laft; for the excellence of their climate, and the fimplicity of their vegetable food, which cannot be too much extolled, prevent not only thefe, but almoft all dangerous and deadly diforders.
Friday 3. Towards fun-fet we brought to within two leagues of Huahine; and the next day, at four o'clock, doubled the north end of that ifland,

\footnotetext{

M. de Bougainville, with the politenels of a well-bred man, doubts, whether the difeafe exifted at Taheitee previous to his arrival or not ; the Englinh feaman afferts his opinion as fact in pofitive terms.
}

\section*{ROUND THE WORLD.}303
and then bore up for the harbour of O-Wharre. Huahine is divided by a deep inlet into two peninfulas, connected by an ifthmus entirely overflowed at high-water. Its hills are much inferior to thofe of Taheitee in height, but their appearance ftrongly indicated them as the former feats of a volcano. The fummit of one of them had much the appearance of a crater, and a blackifh fpungy rock was feen on one of its fides, which feemed to be lava. At fun-rife we beheld fome of the other Society Ines, called O-Raietea (Ulietea,) O-Taba, and Borabora (Bolabola.) The laft forms a peak like Maätea, but infinitely higher and more confiderable, on the top of which there appeared alfo the crater of a volcano. There are two entrances to O-Wharre harbour; of thefe we chofe the fouthermolt, and having a very fteady breeze off fhore, our navigators tried their fkill in working in. The entrance might be about three or four hundred yards long, and barely a hundred yards wide between two reefs. However in this fpace we made fix or feven trips with amazing dexterity, each trip lafting about two or three minutes. We had not yet worked in, when the Adventure came in after us, but unfortunately approached too near one of the reefs, jult as the was putting about, and leaned on the fide of the coral rock. We were for the prefent intent only in faving our own Ship for fear of the worlt that might happen, and foon after came to an anchor. As foon as that was done, our boats were difpatched to the affiftance of our confort, and fhe was towed into the harbour. Her bottom being examined, it was found that the had fuffered no damage, which was likewife the cafe with the Refolution, when the ftruck on the coalt of Tiarraboo.

\section*{A \(\quad \mathrm{O}\) O Y A G E}
1773. The appearance of the country was exactly the Septem, fame here as at Taheitee, but upon a much fmaller fcale; the circumference of the whole ifle being only about feven or eight leagues. The plains are therefore very inconfiderable, and there are hardly any intermediate hills between them and the higher mountains, which take their rife immediately from the fkirts of the plain. The country, however, contained a vafiety of pleafant little fpots. Not a fingle canoe came off to us here beyond the reefs, but we had not been long at anchor before a few of them arrived load. ed with coco-nuts, bread-fruit, and large fowls. We were very glad to meet with thefe birds, having obtained only a fingle pair at Taheitee, where they had been entirely fwept away by former navigators. Amongit the natives who came on board, there was one who had a monftrous rupture or hernia, which did not feem to incumber him much, as he came up the fides of the fhip with great agility. The natives fpoke the fame language, had the fame features, and wore the fame cloth, made of bark, as thofe of Taheitee; but none of their women appeared. They bartered very fairly for our beads and nails, and in a little time had fold us a dozen of very large cocks, of a beautiful plumage; but it may be remarked, that they feldom brought the hens for fale. Towards eleven o'clock the captains went on thore to a large Thed, of which the fides reached to the ground, and which gave fhelter to a double canoe. Here they appointed a perfon to trade with the natives, which they did fo regularly that we collected upwards of twenty hogs this day for large fpike nails or fmall hatchets, and about a dozen of dogs, which feemed to be the moft flupid animals of their kind,

\section*{ROUND THE WORLD:}
kind, but were reckoned excellent provifion by 1773. the natives. During our firt walk we found Septem. two plants which we had not feen before; and we took notice that all the bread-trees in that part had already young fruit, of the fize of fmall apples, which, as the natives faid, would not be ripe in lefs than four months. The diftrict where we landed feemed to be entirely deftitute of bananas; the natives, however, brought us fome bunches of this fruit from other parts, which proves that they have the art of managing fome of their plantations fo as to produce at different feafons; but thefe late crops are, as may be eafily conceived, very trifling in quantity, and referved for the luxury of their chiefs.

We returned on board to dinner, and afterwards made another excurfion on fhore, where we were told, that the chiefs of the ifland would make their appearance the next day. We were not much incommoded by the inhabitants on our rambles, our train feldom exceeding fifteen or twenty, except near a place of general refort, fuch as the fhed where our trade was carried on. The fmalnefs of the ifland might be the principal caufe of the difference from what we had experienced at Taheitee; but it mult be added, that the natives here were not well enough acquainted with our difpofition to expect to reap any advantage from following us; and did not, upon the whole, exprefs that degree of curiofity, nor of fear, which was inherent in the Taheitians, who had had fufficient caufe to dread the fuperior power of our fire-arms.

Our Taheitian friend Porea went afhore with us in a linen frock and a pair of trowfers, and carried captain Cook's powder-horn and fhotpouch. He told us that he was defirous to be Vol. I. X looked
1773. looked upon as one of our people, and therefore never fpoke the Taheitian language, but continued to mutter fome unintelligible founds, which actually impofed upon the multitude. To favour the illufion, he would no longer hearken to his Taheitian name Porea, but defired to have an Englifh one; the failors immediately called him Tom, with which he was extremely well pleafed, and foon learnt the ufual anfwer of Sir, which he expreffed Yorro. What aim he propofed to himfelf in affuming this difguife, we could not conceive, unlefs it was, that he expected to have greater confequence in the character of an Englifh failor, than that of a Taheitian towtow.

The next day my father accompanied the captains to the trading-place, and from thence to the north part of the harbour, where they found the acting chief, Oree, who was the uncle of the prefent king Territarea (perhaps T'-Aree-Tarea.) They put afhore near a houfe on the water-fide, where Oree was feated amidft a number of his attendants. Two of the natives who were in the boat, feeing our gentlemen preparing to land, defired them to fit ftill a while, till they had brought fome plantane-ftems, in fign of peace and friendthip. They prefented two of thefe to our people, and defired them to ornament them with large nails, looking-glaffes, medals, \&c. This requett being complied with, the ftems thus loaded were brought on thore and prefented, whilf they bid our people pronounce to the firft no \(t\) 'Eatua, "for the Divinity," and to the fecond, na te tayo O-Toote no Oree, "from the friend, Cook, to Orec." This done, our people received in their turn five plantane-ftalks fucceffively under the following denominations.
1. The

\section*{ROUND THE WORI.D.}
1. The firt, accompanied with a pig, no \(t^{\prime}\) 17\%3. Aree "from the king," (meaning T'-aree-tarea, Septem. who was a boy about feven or eight years old .
2. The fecond, with another pig, no t'Eatua, " for the divinity."
3. The third, no te Toimoe. This term was entirely unintelligible to our people at that time, but it appeared from fubfequent explanations, to fignify " a welcome."
4. The fourth with a dog, no te Toura," from the rope." Here, though the words were underfood, the meaning was, if poffible, more obfcure than in the preceding article, and what is worfe, we could never obtain any light upon the fubject.
5. The laft with a pig, na te tayo O-Oree no Toote, " from the friend Oree to Cook."

To conclude this ceremony, the fame man who brought all thefe things, likewife prefented a red bag, containing a piece of pewter with this infcription, "His Britannic Majefty's Ship, Endeavour, Lieutenant Cook, commander, 16 th of July, 1769. Huahine," together with a counter.* This teltimony of captain Cook's firft vifit to the inand of Huahine, which he had left to Oree with an injunction never to part with it, was probably laid before him at prefent, to fhew that his directions had been ftrictly adhered to. As foon as he had received it, he ftepped afhore with all his company, and embraced Oree, who was an old man between fifty and fixty, thin, and very blear-eyed. He received our people very cordially as known friends, and prefented feveral large bales of cloth to the captain; after which the inhabitants flocked in great numbers to his houfe, with abundance of fowls, hogs, and dogs, \(\mathrm{X}_{2}\) which

\footnotetext{

}
1773. which they eagerly fold for the trifing confidera\(\underbrace{\text { Septem tion of nails, knives, and fmall hatchets. }}\) In the mean while Dr. Sparrman and myfelf, after landing at the trading-place, proceeded to Oree's houfe by land. On this walk we faw great numbers of hogs, dogs, and fowls. The laft roamed about at pleafure through the woods, and roofted on fruit-trees; the hogs were likewife allowed to run about, but received regular portions of food, which were commonly diftributed by old women. We obferved one of them in particular, feeding a little pig with the four fermented bread-fruit pafte, called mahei; fhe held the pig with one hand, and offered it a tough pork's fkin, but as foon as it opened the mouth to fnap at it, fhe contrived to throw a handful of the four pafte in, which the little animal would not take without this fratagem. The dogs in fpite of their ftupidity, were in high favour with all the women, who could not have nurfed them with a more ridiculous affection, if they had really been ladies of fafthion in Europe. We were witneffes of a remarkable inftance of kindnefs, when we faw a middle aged woman, whofe breats were full of milk, offering them to a little puppy which had been trained up to fuck them. We were fo much furprized at this fight, that we could not help expreffing our diflike of it ; but fhe fmiled at our obfervation, and added, that fhe fuffered little pigs to do the fame fervice. Upon enquiry however, we found that the had loft her child, and did her the juftice amongt ourfelves to acknowledge that this expedient was very innocent and formerly practifed in Europe.*

\section*{The}

}

\section*{ROUND THE WORLD.}

The dogs of all thefe iflands were fhort, and their fizes vary from that of a lap-dog to the largeft fpaniel. Their head is broad, the fnout pointed, the eyes very fmall, the ears upright, and their hair rather long, lank, hard, and of different colours, but moft commonly white and brown. They feldom if ever barked, but howled fometimes, and were fhy of ftrangers to a degree of averfion.

We met with fome of the birds here, which we had already feen at Taheitee, and alfo a blue white-bellied king's-fifher, and a greyifh heron. We fhot fome of each fort, but found a number of people among the croud, who annexed an idea of holinefs to thefe birds, and called them eatooas, which is the fame name by which they defign God. There were however at all times, at leaft an equal, if not greater number of people who defired us to fhoot them, and were very ready to point them out. Neither did any of them exprefs a mark of difapprobation after we had killed the birds. It is certain that they do not look upon them as divinities, becaufe thefe according to their ideas are invifible; but the name of eatooa which they beftow on them, feems to convey an idea of a much greater veneration, than that which protects fwallows and other birds in England, againft the mifchievous purfuit of unlucky boys. Here and in many other circumftances relative to civil, political, and religious inftitutions, we are entirely at a lofs; and on account of our fhort continuance among thefe iflanders, as well as for want of knowing their language, could never obtain any fatisfactory information.

With the acquifitions which we had made, we continued our excurfion to the northern arm of the harbour, where Mr. Smith, one of our mates, fuperintended

\section*{A V O Y A G E}

17-3. fuperintended the waterers. We found a numSeptem ber of natives affembled about him, who brought fo many hogs for fale, that we were plentifully fupplied with frefh meat, and could ferve it every day to both fhips companies. Vegetables on the other hand were fo fcarce here, that we rarely got plantanes, bread-fruit, and coco-nuts, but contented ourfelves with fome good yams, which when boiled fupplied the place of bread. Towards noon we reached Oree's houfe, after walking along a beach of a fmall white fhell fand, amidft a low kind of coco-palms, affording a good deal of Shade, which is always acceptable in thefe climates. Captain Cook had been more fuccefsful in trading than all the other parties, fo that when we returned into the boat, we had farce room enough to fit in it. In the afternoon -we returned to Oree's houfe, where we found him furrounded by a great number of the principal people of the ifland. They appeared to be fo exactly like the Taheitians, that we could perceive no difference, nor could we by any means verify that affertion of former navigators, that the women of this ifland were in general fairer and more handfome;* but this may vary according to circumftances. They were however not fo troublefome in begging for beads and other prefents, nor fo forward to beftow their favours on the new comers, though at our landing and putting off, fome of the common fort frequently performed an indecent ceremony, which is defcribed in the accounts of former voyagers, but without any of the preparatory circumftances which Ooratooa had practifed. \(\dagger\) We had likewife much lefs reafon to extol the hofpitality

\footnotetext{

}

\section*{ROUND THE WORLD.}
tality of the inhabitants, their general behaviour
1793. Seftem. being rather more indifferent, and the Taheitian cuftom of reciprocal prefents almoft entirely unknown. On our walks we were unmolefted, but their conduct was bolder and more unconcerned than that of the Taheitians, and the explofion, as well as the effects of our fowling-pieces did not Atrike them with fear and aftonifhment. Thefe differences were certainly owing to the various treatment which the people of both iflands had met with on the part of Europeans. There were, however, not wanting inftances of hofpitality and good-will even here. A chief, named Townù \(a\), entreated my father to come to his houfe, which lay in the interior part of the plain. He accepted the invitation, and was very well entertained; befides having an opportunity of purchafing one of thofe targets or breaft-plates which I have already mentioned.

Oree came on board early the next morning Sund. 5 . with his fons, the eldeft of them a handfome little boy, about eleven years old, who received our prefents with great indifference; but he, as well as all the people of the inland, were highly delighted with the bagpipe, and required it to be conftantly played. With Oree, who now went by the name of Cookee, as he had done whilft the Endeavour lay here,* we returned on Shore, where we difperfed in fearch of plants and other curiofities. In the evening we all met together again, when Dr. Sparrman, who had been entirely by himfelf towards the north point of the ine, acquainted us that he had met with a large lagoon of falt-water, which extended feveral miles parallel to the coaft, and had an intolerable ftench on account of the putrid mud which
lay

\footnotetext{

}

\section*{\(\begin{array}{lllllll}\text { A } & V & O & Y & A & G & E\end{array}\)}
1773. lay on its fhores. Here he had met with feveral

SEPTEM, plants, which are common enough in the ifles and coafts of the Eaft Indies, but not fo frequent in other parts of the South Sea iflands. A fingle native, whom he had entrufted with his plant bag, had proved extremely faithful to him. Whenever the doctor fat down to defcribe, the native feated himfelf behind him, and took both the fkirts of his coat, containing his pockets, in his hand, in order, as he faid, to prevent the thieves from coming at them. By this means the doctor had not loft any thing when he came on board; feveral of the natives, however, feeming to think him in their power, had beftowed upon him fome ill-natured looks and opprobrious names.

The next day he ventured out again entirely by himfelf, while we remained at the tradingplace with captain Cook. One of the natives, named Tubaï, a tall man, dreffed in feveral large pieces of the cloth of bark, ftained with red, and who had feveral bundles of birds feathers hanging at his girdle, prohibited the fale of hogs and bread-fruit, and actually feized a bag of nails which the captain's clerk held in his hand. However, when the latter called for affiftance, he let it go again, and perceiving one of our young gentlemen trying to frike a bargain for a large fowl, he took a nail from him by force, and threatened to beat him with his club. A complaint being made to captain Cook, jult as he was going aboard in a boat, he returned afhore, and bid Tubaii to leave the place. Upon his refufal, the captain went up to him and leized two large clubs which the native had in his hand; but the latter ttruggled with him, till captain Cook drew his hanger, on which he made off. The clubs, which were made of the cafuarinạ
cafuarina wood, were broken, and the pieces 1773 . thrown into the fea, by the captain's order, while Seftem. he recalled the reft of the natives, who began to be alarmed, and were preparing to leave the trading-place. They all agreed that this Tubai was a bad man, (tata-eeno,) and feemed to think that we had done him juftice. However, as captain Cook was going to fend his boat on board for a party of marines to protect our traders, the whole croud difperfed at once and left us alone. We had not been above two minutes at a lofs to account for their behaviour, when Dr. Sparrman arrived almoft ftripped naked, and with the marks of feveral violent blows. He had been accofted on his walk by two of the natives, who had invited him to proceed farther into the country, with many proteftations of friendfhip, and repetitions of the word tayo. At once, taking the advantage of an unguarded moment, they tore from his fide a hanger, the only weapon he had, and gave him a blow over his head as he was ftooping to arm himfelf with a ftone. He flumbled, and they tore a black fatin waiftcoat and feveral loofe parts of drefs from him. However, difengaging himfelf, he ran towards the beach and outftripped them, when fome bindweeds caught his feet, and detained him till the villains came up. They gave him repeated blows over his temples and fhoulders, which ftunned him; Itripped his Thirt over his head, and were juft preparing to cut his hands, becaufe the fleeve-buttons held the fhirt, when he fortunately opened them with his teeth, and they made off with their booty. Not above fifty yards farther on, fome natives were at dinner, who, feeing him paffing by, came out and invited him to ftop, but he hurried on towards the fea. In his way, however, he met two natives, who immediately

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y} \quad A \quad G \quad E\)}
1773. mediately took off their own cloth, (abòw,) dreff\(\underbrace{\text { Septem. ed him in it, and attended him to the trading- }}\) \(\underbrace{}_{\text {place. Thefe honeft people were rewarded to }}\) the beft of our power with various prefents, and we all hurried on board to reinforce our party. Dr. Sparrman being dreffed again, accompanied us to Oree's houfe, to whom we made our complaint. The old chief immediately refolved to affift captain Cook in the fearch after the thieves, but his noble refolution filled all his relations with terror. Upwards of fifty people of both fexes began to weep when he ftepped into the boat; fome with the moft pathetic and moving geftures tried to diffuade him ; and others held him back and embraced him; but he was not to be prevailed upon, and went off with us, faying, that he had nothing to apprehend, becaule he was not the guilty perfon. My father offered to remain on fhore as an hoftage, but he would not admit of it, and took only one of his relations in the boat with him. We rowed up a deep creek oppofite the Ships, where this villainy had been committed, and afterwards took a long walk into the country to no purpofe; for all Oree's meffengers, who were fent to apprehend the robbers, did not perform their duty. At Jaft we returned to the boat, where Oree re-embarked with us, notwithftanding the tears of an old lady and her handfome daughter. The young woman, in a fit of frantic grief, took up fome fhells and cut herfelf on the head with them, but her mother tore them out of her hands, and actually accompanied Oree to the fhip. Here he dined with us very heartily, but the woman, according to the cuftom of the country, would not touch our provifions. After dinner we brought him back to his houfe, which was crouded with different groups of the principal families

\section*{ROUND THE WORLD.}
milies on the ifland, who fat on the ground, and 1773 . many of whom thed tears plentifully. We fat Septem. down amongft thefe difconfolate people, and with all the Taheitian oratory we were mafters of, endeavoured to foothe them into content and good humour. The women, in particular, fhewed a great fenfibility, and could not recover for a long while. At laft we fucceeded to appeafe their violence of grief; and, as fome of us could not behold their diftrefs, without admiring the excellence of their hearts, we naturally fympathized with them, with a degree of fincerity which entirely regained their confidence. It is indeed one of the happieft reflections which this voyage has enabled us to make, that inftead of finding the inhabitants of thefe inles wholly plunged in fenfuality, as former voyagers have falfely reprefented them, we have met with the moft generous and exalted fentiments among them, that do honour to the human race in general. Vicious characters are to be met with in all focieties of men; but for one villain in thefe ifles, we can fhew at leaft fifty in England, or any civilized country.

In a little time the trade went on as brikly as ever, and we were particularly fortunate in obtaining a fupply of vegetables. Towards evening two of Oree's meffengers arrived with the hanger and a part of Dr. Sparrman's waiftcoat, which were reftored to him, and with thefe foon after we returned on board.

In the morning, at day-break, the captains went to Oree's houle, and returned the piece of pewter on which the commemoration of the firft difcovery was engraved. At the fame time they gave him a piece of copper, with this infcription: his britannick majesty's ships resolution AND ADVENTURE, SEPTEMBER 1773. to which they added a number of medals, and defired him

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. him to flew it to any ftrangers that happened to Septem. touch here. As foon as they were on board again, the feamen hove the anchor, and we got under fail, in company with the Adventure. The quantity of live ftock which we had purchafed during our three days ftay was amazing, and fhewed how great a value the natives had fet upon our iron-work. The Refolution alone had two hundred and nine live hogs, thirty dogs, and about fifty fowls on board, when the failed, and the Adventure had not much lefs. We were farce got under way when Oree arrived alongfide in a fmall canoe, and came on board; he acquainted us that the robbers, and the things they had carried off, were taken, and defired both the captains, as well as Dr. Sparrman, to come on fhore, in order to fee the villains punifhed. But unfortunately his fory was mifunderftood, and we loft an opportunity of feeing their method of inflicting punifhments. Captain Cook believing that Oree fpoke of fome of his countrymen who were embarked in the Adventure againft his will, immediately difpatched his boat to bring them back; but that veffel being a great way ahead, and we driving out to fea very fatt, Oree became impatient, took a cordial leave of us all, and returned on fhore in his little canoe, with only one of his countrymen to affift him. A little while after our boat returned from the Adventure, and brought on board \(O\) - \(M a \ddot{z}\), the only native who had embarked in that veffel with a view to go to England. He ftaid on board our hip till we reached Raietea, whither we now directed our courfe. As foon as we were come to an anchor there, he returned on board the Adventure, and afterwards came to England in her, and has for fome time engroffed the attention of the curious. He feemed

\section*{ROUND THE WORLD.}
to be one of the common people at that time, as 17-3. he did not afpire to the captain's company, but preferred that of the armourer and the common feamen. But when he reached the Cape of Good Hope, where the captain dreffed him in his own clothes, and introduced him in the beft companies, he declared he was not a lowionio, which is the denomination of the loweft clafs, and affumed the character of a boa, or attendant upon the king. The world hath been amufed at times with different fabulous accounts concerning this man, among which we need only mention the ridiculous ftory of his being a "Prieft of the Sun;" a character which has never exifted in the iflands from whence he came. His ftature was tall, but very flim, and his hands remarkably fmall. His features did not convey an idea of that beauty which characterizes the men at O-Taheitee; on the contrary, we do him no injuftice to affert that, among all the inhabitants of Taheitee and the Society Ines, we have feen few individuals fo ill-favoured as himfelf. His colour was likewife the darkeft bue of the common clafs of people, and correfponded by no means with the rank he afterwards affumed. It was certainly unfortunate that fuch a man fhould be felected as a fpecimen of a people who have been juftly extolled by all navigators, as remarkably well-featured and coloured, confidering the climate in which they live. The qualities of his heart and head refembled thofe of his countrymen in general ; he was not an extraordinary genius like Tupaia, but he was warm in his affections, grateful, and humane; he was polite, intelligent, lively, and volatile. For a further account of O-Maï, I refer the reader to the preface, where I have mentioned his ftay in England,
1773. land, his progrefs in knowledge, and his equipment at his return.
Wed. 8. Having left Huahine we failed to the weftward, and doubled the fouth end of an ifland, difcovered by captain Cook in 1769, which all the natives of Taheitee and the Society Ifles call O-Raietea, but which (upon what foundation I know not) is named Ulietea in captain Cook's charts. * The next morning we anchored in an opening of the reef, and fpent the whole day in warping into Hamaneno harbour. The country hereabouts afforded a profpect much refembling Taheitee; for the inland being about three times the fize of Huahine, had much broader plains, and loftier hills. The natives furrounded us in a number of canoes, and brought a few hogs; but our people looked at them with a carelefs indifference, and offered very low prices, being difficult to pleafe, fince their fuccefs at Huahine. In one of the canoes a chief came on board, named Oruwherra, a native of the adjacent inle of Borabora (Bolabola.) He was very athletic, but his hands very fmall, and the punctuation, which the natives call tattow, confifted of the moft fingular fquare blotches on his arms, and of large black fripes acrofs the beeaft, belly, and back. His loins and thighs were uniformly black. He brought fome green branches, and a little pig which he prefented to my father, being neglected by every body elif. Having received a few iron-tools as a return, he defcended immediately into his canoe, and was paddled to the fhore. But in a little time, another canoe arrived from him with coco-nuts and bananas, which his fervants offered to his new friend, refufing at the fame time to accept of any retribution. The pleafure which we felt from this circumftance,

\footnotetext{
* See Hawkefworth, vol. II. p. 283, et feq.
}
cumftance, can eafily be conceived. Philan- \({ }^{1773 .}\) thropy is never better rewarded, than when its Septem. objects are endowed with good and amiable qualities.

In the afternoon another chief, a native of the fame ifle of Borabora, came on board, and exchanged names with my father. His name was Herea, and his perfon the moft corpulent we ever faw in the South Sea iflands; round his waift he meafured no lefs than fifty-four inches, and one of his thighs was thirty-one inches and \(\frac{3}{4}\) in girth. His hair was likewife remarkable; for it hung down in long black wavy treffes to the fmall of his back, and in fuch quantity that it encreafed the apparent bulk of his head confiderably. His corpulence, his colour, and his punctures, like thofe of Oruwherra, were very diftinguifhing marks of his rank, to which indolence and luxury are annexed here as well as at Taheitee. It may perhaps want fome explanation, how both thefe chiefs, who were natives of the adjacent ifle of Borabora, could have any authority and poffeffions on Raietea. Already, in captain Cook's former voyage, it was known that O-Poonee the king of Borabora, had conquered not only the ifle of Raietea, but likewife that of O-Taha, which is included in the fame reef, and that of Mowrua which lies about fifteen leagues to the weltward. * The warriors who had ferved under him in thefe expeditions had been rewarded with ample poffeffions, and a great number of his fubjects had received grants in the conquered iflands. The king of Raietea Oo-Oorco, was however confirmed in his dignity, though his power was confined to the diftrict of Opoa; but at Taha, Poonee had placed a viceroy, named Boba, who was nearly related to him. Many

\footnotetext{
* SeeHawkefworth, vol. II. p. 295, et feq.
}
1773. Many of the natives of the conquered iflands
\(\underbrace{\text { Septem. }}\) had retreated to Huahine and Taheitee, preferring a voluntary exile, to a fubmiffion to the conqueror, and hoping one day to refcue their country from oppreffion. It feems, this was the motive which prompted Tupaia and O-Maï, who were both natives of Raietea, to embark in Britifh fhips, as both of them always expreffed a hope of obtaining a quantity of our fire-arms. Tupaia might perhaps have carried his fcheme into execution, if he had lived; but O-Mai's underftanding was not fufficiently penetrative, to acquire a competent idea of our wars, or to adapt it afterwards to the fituation of his countrymen. He was, however, fo fond of the thought of freeing his country from the Borabora men, that he has frequently faid, in England, if captain Cook did not affilt him in the execution of his plan, he would take care that his countrymen fhould not fupply him with refrefhments. In this opinion he perfifted till near the time of his departure, when he was perfuaded to adopt more peaceable principles. We were at a lofs to conceive the motives which could have induced a native of one of thefe iflands to become a conqueror. If we believed the accounts of the Borabora men, their native illand was as fertile and defirable as thofe of which they had taken poffeffion; therefore nothing but a fpirit of ambition could have ftimulated them to contentions. Such a fpirit ill agreed with the fimplicity and generous character of the people, and it gave us pain to be convinced, that great imperfections cannot be excluded from the beft of human focieties.
Thurf. g. On the day after our arrival, the captains went on fhore with us to a large houfe, clofe to the water's fide, which he knew to be the refidence

\section*{ROUND THE WORLD.}
of Orèa, the chief of the diftrict. We found 1773. him fitting in his houfe, with his wife, fon, Septem. daughter, and a great number of perfons of diftinction. Immediately after our arrival we fat down by them, and were fhut in on all fides by a thick croud of the natives, who made the place exceffively hot. Orèa was a middle-fized, lufty man, with a very lively intelligent countenance, and thin reddifh-brown beard. He joked and laughed very heartily with us, and entirely banifhed all kinds of ceremony and affectation. His wife was an elderly woman, but his fon and daughter, about twelve and fourteen years old. The latter was of a very white colour, and her features had not much of the general character of the nation, particularly her nofe, which was remarkaby well-fhaped, and her eyes, which gave her fome refemblance to a Chinefe. Her ftature was low, but her body elegantly proportioned, and her hands graceful beyond defcription; only the legs and feet were too large for the reft of the figure, and the cuftom of cutting the hair thort, appeared to be a great difadvantage. Her manners were very engaging, and the had a pleafing foft voice, like moft of her countrywomen, fo that the could not be refufed, when the alked for beads or other trinkets. As it did not agree with our cccupations, to ftay in the houfe, we took a walk into the groves, where we thot a few birds, and collected fome plants. We found here, to our great fatisfaction, that confidence and familiarity amongft the common people, which we had not experienced at Huahine, and we were happy at the fame time not to be importuned by them, in the begging ftrain of the Taheitians. In the afternoon we made another excurfion, and thot feveral king-fifhers. As foon as we had fhot the laft, we met Orèa, and his Vol. I. \(Y\) family

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1773. family walking through the plain with captain

Septem. Cook; the chief took no notice of the bird
\(\xrightarrow[\sim]{ }\) which we had in our hands, but his fair daughter lamented the death of her eatua, and ran from us, when we attempted to touch her with it. Her mother, and moft of the women, feemed likewife to be grieved at this accident, and at ftepping into the boat, the chief defired us with a very ferious air, not to kill the king-fifhers and herons on his inland, allowing at the fame time the liberty of fhooting any other forts of birds. We tried again to difcover the nature of their veneration for thefe two fpecies, but all our enquiries were as fruitlefs as they had been before.

We walked to the top of one of the neigh-
Fridayio. bouring hills the next day, and found feveral new plants in the vallies, between them. The foil at the top was a kind of Itone marle; on the fides we found fome fcattered flints, and a few fmall pieces of a cavernous or fpungy fone-lava, of a whitifh colour, which feemed to contain fome remains of iron. This metal, which is of general and extenfive utility, is difperfed through almoft all parts of the world, by the benevolent hand of nature, and may perhaps even here be contained in the mountains, in great quantity. The lava indicated the exiftence of former volcanoes in this illand, which we had indeed fufpected, becaufe all the adjacent illes, we had hitherto feen, ftrongly, and fometimes evidently bore the marks of changes by fubterraneous fire. One of the natives who had attended us, and carried fome refrefhments, pointed out the direction of feveral inlands in the neighbourhood, but which lay out of fight. About due weft, he faid, the ifle of Mopeehàh was fituated, and about S. by W. another, named Whennua òwrah. Both thefe, according to his accounts, were not inhabited,

\section*{ROUND THE WORLD.}
inhabited, and confifted only of circular ledges 1773 of coral, with palms on them, but were occafion- Septem. ally vifited from this and the adjacent ifles. They feem to be Lord Howe's Ifland, and the Scilly Ines, difcovered by captain Wallis. We defcended about noon, and found that captains Cook and Furneaux had juft left the fhore, after feeing a great dramatic dance, or heèva, performed by fome of the principal women in the ifland. We haftened on board, as the day proved very hot, and found both our veffels furrounded by a great number of canoes, in which were feveral perfons of diftinction of both fexes, who brought vaft quantities of cloth, made of the mulberry-tree's bark, and offered them in exchange for fmall nails. Our beads were much valued by the ladies as ornaments, but by no means current like the nails, fo that we could not even parchafe fruit with them. The Taheitians fet a much higher value on thefe trifles, which have no intrinfic worth; may we not conclude therefore, that a greater degree of general opulence is the caufe of their particular affection for trinkets, efpecially as affluence commonly tends to luxury?

The heat of the day prevented us from going on thore till near fun-fet. We landed at the wa-tering-place, where we found a little tupapow, or fhed, under which a dead body was depofited on a ftage, and a thick grove of various fhady trees furrounded it on all fides. As I had never feen the remains of the dead carelefsly expofed to all kinds of accidents in thefe iflands, I was a little furprifed to find the ground ftrewed with fculls and bones about this fhed; nor could I meet with any native at this time, from whom I could receive the leaft information on this fubject. I rambled about here for fome time entirely Y 2 alone,

\section*{A VO Y A GE}
1773. alone, all the inhabitants having repaired to the Septem; chief's houfe, where the drums gave notice of another heèva, or public dance; for they are fo fond of this amufement, that they crowd logethen from a confiderable diftance to have the pleafire of peeing it performed. The ftillnefs of the evening, and the beauty of the foot made this walk extremely pleafant, while the abfence of the inhabitants encouraged lome ideas of an enchanted country. Before we returned to our boat, we met, however, with a few of the natives, among ft whom one, a very intelligent man, gave us an account of nine in lands in the neighbourhood, with molt of which we were unacquainted. Their names were, 1. Mopeebàh, 2. Whennua-Oürab, 3. Adeèba, 4. Towtèepa, 5. Wourwòu, 6. Oobòrroo, 7. Tubooài, 8. Awhàow, and 9. Rorotòa. The firft two we had already heard of in the morning, but of the reft he afferted that they all had their own inhabitants, except Adeèha, which is occafionally vifited. Oobòrroo he faid was a whennua or high land, but all the reft he called matoo, that is low inands, or fuch as confift of ledges of coral.

Our curiofity was fo much railed by there accounts, that we applied for farther information to the chief Orèa, who came on board the next morning with his on Tehaiura, and feveral other chiefs. They enumerated the first, fecond, feventh, and ninth iflands of the preceding account; but their relations differed in this refpect, as they told us the fecond was regularly inhabited. Befides there they poke of two more, one called Woreèo or Woureèa, a large inland, and Oreèmatàrra another, both which had fettled inhabitants. The accounts of the fituation and diftances of there ifles were fo various and fo vague, that we could by no means depend upon

\section*{ROUND THE WORLD:}
them, for we never met with any man who had vifited them; however, they ferved to convince us, that the natives of the Society Ines have fometimes extended their navigation farther than its prefent limits, by the knowledge they have of feveral adjacent countries. Tupaya, the \(\mathrm{f}_{\mathrm{a}}\) mous man who embarked at Taheitee in the Endeavour, had enumerated a much more confiderable lift of names, and had actually drawn a map of their refpective fituations and magnitudes, of which lieutenant Pickerfill obligingly communicated a copy to me. In this map we found all the names above-mentioned, except Ooborroo and Tubooai : but if his drawings had been exact, our fhips muft have failed over a number of the iflands which he had laid down. It is therefore very probable that the vanity of appearing more intelligent than he really was, had prompted him to produce this fancied chart of the South Sea, and perhaps to invent many of the names of inlands in it, which amounted to more than fifty.
The chief and his fon breakfafted with us, and went afhore with a number of prefents in return for fome of theirs. We followed foon after, and were invited by him to become fpectators of a dramatic dance or heèva; which was the more readily accepted by us, as we had never feen one before. The place where it was performed was an area, about twenty-five yards long and ten wide, enclofed between two houfes which food parailel to each other. The one was a fpacious building, capable of containing a great multitude of fpectators; but the other was only a narrow hut, which was fupported on a row of poots, and open towards the area, but perfectly clofed up with reeds and mats on the oppofite fides; one corner of it was matted on all fides, and this was

\section*{A V O Y A G E}
1773. the dreffing-room of the performers. The whole \(\underbrace{\text { Septem; }}\) area was fpread with three large mats of the beft workmanfhip, ftriped with black on the edges. In the open part of the fmaller hut we faw three drums of different fizes, cut out of folid wood, and covered with Thark's fkin , which were continually ftruck with the fingers only by four or five men with amazing dexterity. The largeft of thefe drums was about three feet high and one in diameter. We had already fat fome time under the oppofite roof, amidft the principal ladies of the inland, when the actreffes appeared. One of them was Poyadua, the fair daughter of the chief Orèa, and the other a tall well chaped lady, of very agreeable features, and likewife a very fair complexion. * Their drefs was remarkably different from the ufual farhion of thefe iflands. It confifted of a piece of the brown cloth, of the country fabrick; or, inftead of that, of a piece of blue European cloth, clofely wrapped round the breaft, fo as to refemble the clofe dreffes which our ladies wear; a kind of ruff of four rows of their cloth, alternately red and white, refted on their hips, being tied on with a ftring; and from thence a great quantity of white cloth defcended to the feet, forming an ample petticoat, which we expected, from its length, would be a confiderable impediment to their agility, as it fairly trailed on the ground on all fides. The neck, fhoulders, and arms were left uncovered, but the head was ornamented with a kind of turban, about eight inches high, made of feveral fkains of plaited human hair, which they call tamow. Thefe being laid above each other in circles, which enlarged towards the top, there was a deep hollow left in the middle, which they had

\footnotetext{
*That is, confadgring her as a native of the Society Ines.
}

\section*{ROUND THE WORLD.}
had filled up with a great quantity of the fweet- 1773 . fcented flowers of the (gardenia) Cape jafmine. Septem. But all the front of the turban was ornamented with three or four rows of a finall white flower, which formed little ftars, and had as elegant an effect on the jetty black hair as if it had been fet out with pearls. They moved to the found of the drums, and to all appearance under the direction of an old man, who danced with them, and pronounced feveral words, which, from the tone of his voice, we took to be a fong. Their attitudes and geftures were much varied, and fometimes might admit of being conftrued into wantonnefs; but they were entirely free from that pofitive degree of grofs indecency which the chafte eyes of Englifh ladies of faihion are forced to behold at the opera. The movement of their arms is certainly very graceful, and the continual gefticulation of their fingers has fomething extremely elegant. The only action which gives offence to all our ideas of gracefulnefs and harmony, is the frightful cuftom of writhing their mouths into the ftrangeft diftortions, which it was impoffible for any one of us to imitate. They fcrewed their mouth into a flanting direction, and at laft threw the lips into a waving or undulated form, which feemed to us to be performed by means of an habitual and fudden convulfion. After they had danced for about ten minutes, they retired into the part of the houfe which I called their drefling-room, and five men, dreffed in mats, took their place, performing a kind of drama. This confifted of dancing in an indecent manner, and of a dialogue which had fome cadence, and in which they fometimes pronounced a few words, fnouting all together. This dialogue feemed to be clofely connected with their actions. One of them kneeled down, and another beat him
1773. him and plucked him by the beard, repeating Septem the fame ceremony with two others; but the laft feized and beat him in his turn with a ftick. After this they withdrew, and the drummers gave notice of the fecond act of dancing, which the two ladies performed with little variation from the firft. The men took their turn a fecond time; the ladies fucceeded them again, and concluded with a fourth act. Then they fat down to reff themelves, appearing fatigued to a great degree, and in a moft profufe perfiriation; one of them in particular, being rather luftier and of a lively difpofition, had a fuffufion of red in her cheeks, which was the ftrongeft proof of her fair complexion. The other, Orea's daughter, had performed her part to admiration, notwithftanding the fatigue of the preceding day, when the had acted boti in the morning and evening. The officers of both fhips, who were prefent, and ourfelves, loaded them with a great variety of beads and ornaments, which they had fo well deferved.

In the afternoon Oo-òoroo, the king of the ine of Raietea, came on board with Orea and feveral ladies, to vifit captain Cook. He brought a hog as an introductory prefent, and was well repaid with a great quantity of European goods. Among the ladies was one of the daにers, named Teina or Teinamai, who had performed in the morning, and whofe complexion we had much admired. She now appeared to much greater advantage than in the cumbrous drefs which the wore during the cercmony. Her own hair, which fortunately was not cut, formed finer ebon ringlets than ever the luxuriant fancy of a painter produced, and a narrow fillet of white cloth was carelefsly paffed between them. Her

\section*{ROUND THE WORLD.}
eyes were full of fire and expreffion, and an agreeable fmile fat in her round face. Mr. Hodges took this opportunity of drawing a fketch of her portrait, which her vivacity and reftlefs difpofition rendered almoft impolfible. This was, perhaps, the reafon that he was lefs fuccefsful than ufual, as the reprefentation is infinitely below the delicacy of the original. But though it has loft the refemblance to Te inamai, it may ferve as a fpecimen of the generality of features in this and the neighbouring inlands, and gives a tolerable idea of a Taheitian boy about ten years old. Towards funfet, all our noble vifitors returned afhore, extremely well pleafed with the reception which they had met with; a number of women of the loweft rank, however, remained on our decks, with a complaifance equal to that of the Taheitian girls, (fee pag. 274.)

It was remarkable that they were not without fome degree of vanity, as they never gave themfelves any other name than that of tediua, (lady,) which is the title of their female nobility, and which, by way of eminence, is particularly applied to the princeffes of thefe inlands. If the king's fifter happened to pafs by while we fat in a houfe at Taheitee, the natives who furrounded us were warned to uncover their fhoulders, by fome one who fied her at a diftance, fimply faying tedua barremai, (the lady comes hither!) or elfe they only faid aree! which on fuch occafions always denoted one of the royal family. Our failors, who did not underftand the language, took it for granted that their dulcineas were all of one name, which frequently occafioned fome pleafant miftakes.
1773. We fpent the two next days in various ramSeprem. bles along the fhores, in which we found many Sund. I2. deep creeks towards the northern part, with Mond. 13 . marfhes at the bottom, where wild-ducks and fnipes refided in great plenty. Thefe birds were more fhy than we expected, which we foon learnt was owing to their being much purfued by the natives, who looked upon them as dainty bits. On the firft of thefe days we were likewife entertained with another heèva or dramatic dance, by the fame perfons who had performed it before. It was in every refpect the fame with that which we faw on the eleventh, only its duration was much fhorter.
Tuef. i4. On the 14 th, at day break, captain Cook fent his launch, and captain Furneaux another boat, to the ine of O -Tahà, which was two or three leagues diftant, and inclofed in the fame reef within which we lay at anchor. They were in hopes of purchafing fome fruit there, which was very fcarce at Raietea, and to that purpofe provided lieutenant Pickerfgill and Mr. Rowe the mate of the Adventure, with a quantity of beads and nails. Dr. Sparrman and my father, unwilling to mifs this opportunity of examining another ifland, likewife embarked with them.

Orea, the chief of this part of the illand, having invited us to come and dine on fhore, the captains, with Several officers and paffengers of both hips, and myfelf, went on fhore about noon, taking with us a little pepper and falt, Pome knives, and a few bottles of wine. A great part of the chief's fpacious houfe was fpread with quantities of leaves, which ferved as a tablecloth, round which we feated ourfelves, with the principal inhabitants. We had not waited long, hefore one of the common people arrived with a hog frooking on his houlders, roafted whole,
and wrapped in a large bundle of plantane-leaves, which he threw upon the floor in the midgt of us: a fecond toffed a fmaller to us in the fame manner; and thefe were followed by feveral others bringing baikets, full of bread-fruit, bananas, and the fermented pafte of bread-fruit, called mahei. Our hoft now defired us to help ourfelves, and in a fhort time we had cut the two hogs in pieces. All the women, and the common fort of people, applied to us with a begging tone for portions, and what we diftributed was handed from our neighbours, to the remoteft perfons in the croud. The men confumed their fhare with every mark of a good appetite, but the women carefully wrapped theirs up, and preferved it till they fhould be alone. The eagernefs with which they repeated their importunities, as well as the envious looks of the chiefs, whenever we granted the requeft, convinced us, that the commonalty were in this ifland deprived of all forts of luxuries and dainties. We all agreed that the pork which was fet before us, tafted infinitely better, than if it had been dreffed after the European manner. It was much juicier than our boiled, and beyond comparifon more tender than roafted meat. The equal degree of heat with which it ftews under-ground, had preferved and concentrated all its juices. The fat was not lufcious and furfeiting, and the Kkin inftead of being hard as a ftone, which is always the cafe with our roafted pork, was as tender as any other part. After dinner our bottles and glaffes were brought in, and our friend Orea drank his Share without flinching, which appeared to us rather extraordinary, fince almoft all the natives of thefe iflands expreffed a great dillike to our ftrong liquors. Sobriety is a virtue almoft univerfal with them, and particularly
1773. among people of inferior rank. They are how- which is much admired by fome of the old chiefs. It is made in the moft difguftful manner that can be imagined, from the juices contained in the root of a fpecies of pepper-tree. This root is cut fmall, and the pieces chewed by feveral people, who fpit the macerated mafs into a bowl, where fome water (milk) of coco-nuts is poured upon it. They then ftrain it through a quantity of the fibres of coco-nuts, fqueezing the chips, till all their juices mix with the cocoa-nut-milk; and the whole liquor is decanted into another bowl. They fwallow this naufeous fuff as faft as poffible; and fome old topers value themfelves on being able to empty a great number of bowls. I was prefent at the whole procefs one of the firft days after our arrival at this ifland. Our paffenger, Porea, who was not fo referved with the natives here as he had been at Huahine, brought one of his new acquaintances into the captain's cabin, and immediately fat down with him to perform the operation. He drank about a pint, which in lefs than a quarter of an hour made him fo dead drunk, that he lay down on the floor without motion; his face was inflamed, and his eyes fwelled out of his head. A found fleep of feveral hours was neceffary to reftore him to his fenfes; but as foon as he had recovered them, he appeared thoroughly ahamed of his debauch. The pepper-plant is in high efteem with all the natives of thefe iflands as a fign of peace; perhaps, becaufe getting drunk together, naturally implies good fellowhip. It feems, however, that drunkennefs here is punifhed, like all other exceffes, by difeafe. The old men who make a practice of it are lean, covered with a icaly or fabby fkin, have red eyes, and red blotches
blotches on all parts of the body. They acknowledge thefe evils to be the confequence of drinking; and to all appearance, the pepper-plant, which they call awa, tends to produce leprous complaints.

As foon as we had dined, our boat's crew and fervants feafted on the remains; and the fame croud who had profited by our liberality before, now paid their court to them. The failors were complaifant only to the fair fex; and giving way to their natural difpofition for fenfuality, for every piece of pork required the performance of an indecent denudation. To complete our entertainment this day, the chief gave orders for performing another heeiva, and we were admitted (behind the fcenes) to fee the ladies drefling for that purpofe. They obtained fome ftrings of beads on this occafion, with which we took it into our heads to improve upon their ornaments, much to their own fatisfaction. Among the fpectators we obferved feveral of the prettieft women of this country; and one of them was remarkable for the whiteft complexion we had ever feen in all thefe iflands. Her colour refembled that of white wax a little fullied, without having the leaft appearance of ficknefs, which that hue commonly conveys; and her fine black eyes and hair contrafted fo well with it, that the was admired by us all. She received at firft a number of little prefents, which were fo many marks of ho. mage paid at the fhrine of beauty; but her fuccefs, inftead of gratifying, only fharpened her love of trinkets, and the inceffantly importuned every one of us as long as the fufpected we had a fingle bead left. One of the gentlemen fortunately happened to have a little padlock in his hand, which the begged for as foon as the had perceived it. After denying it for fome time,
1773. he confented to give it her, and locked it in her \(\underbrace{\text { Septem.l ear, affuring her that was its proper place. She }}\) \(\sim_{\text {was well pleafed for fome time; but finding it }}\) too heavy, defired him to unlock it. He flung away the key, giving her to underftand at the fame time, that he had made her the prefent at her own defire, and that if the found it incumbered her, The fhould bear it as a punifhment for importuning us with her petitions. She was difconfolate upon this refufal, and weeping bitterly, applied to us all to open the padlock; but if we had been willing, we were not able to comply with her requeft for want of the key. She applied to the chief; and he as well as his wife, fon and daughter, joined in praying for the releafe of her ear; they offered cloth, perfume-wood, and hogs, but all in vain. At laft a fmall key was found to open the padlock, which put an end to the poor girl's lamentation, and reftored peace and tranquillity among all her friends. Her adventure had however this good effect, that it cured her and fome of her forward country-women of their idle habit of begging. In the evening we returned on board, highly pleafed with the hofpitality and general good difpofition of the natives towards us. We were therefore furprized the next morning, that not a fingle canoe would come off to us, and going to Orèa's houfe, in order to enquire the reafon of this fudden change of behaviour, we to our farther aftonifhment found it abandoned by him and his family. A few of the natives, who came to us with a good deal of diffidence, told us that he had retired towards the north point of the ifland, being afraid that we meant to take him prifoner. It was immediately refolved upon to follow, in order to undeceive him, and give him frefh affurances of friendhip. We rowed along thore for feveral
feveral miles, till we came to the place to which
1773. he had retired. At our interview all were in Septem. tears, fo that we were obliged to have recourfe to a variety of carefles, to infpire them with new confidence towards us, and our beads, nails, and hatchets, were not the leaft efficacious arguments. They told us they believed captain Cook would confine them, in order to force their countrymen to bring back thofe people who were run away from us to O-Taha. We now faw through their mittake, and affured them that our party had not run away, but was fent on purpofe, and would certainly return this night. Orèa not yet fatisfied, named each of the principal perfons in that party fingly, and enquired concerning every one, whether he would come back, and the pofitive anfwers which we returned, at laft quieted his apprehenfions. While we were fitting in a circle with them, Porea our Taheitian, who intended to go to England, came running to the captain, returned the powder-horn, which he had hitherto carried for him, and faid he would come back to us prefently. We waited in vain a good while, and at laft were obliged to return on board without him ; nor did we fee him again during the little time we remained on the ifland. From the natives we could gather but little information, and the captain fearing left they fhould take a new alarm, if he interefted himfelf too frongly in his behalf, entirely dropped the enquiry. After dinner I accompanied him to the Thore again, on a vifit to Orèa. A very handfome youth, about feventeen years of age, who went by the name of O-Hedeedee, and who appeared to be of the better fort of people by his complexion and good garments, addreffed himfelf to me, expreffing a defire to embark for England. I was not inclined to believe at firft,
1773. that he would forfake the eafy way of life; whieh Septem. perfons of his rank enjoyed in thefe iflands, and fmiling at his propofal, told him the difagreeable circumitances to which he expofed himfelf by leaving his country. But, though I reprefented to him the rigours of climate which we had to endure, and the bad provifions to which he fhould be reduced in time, he was not to be diffuaded from his refolution, and a number of his friends joined with him to defire his admittance into our thip. Upon this I prefented him to captain Cook, and he having granted his requeft, we alt returned on board together. Before fun-fet our boats returned from O-Taha, where they had collected a load of bananas and coco-nuts, and a few hogs. They landed there on the 14 th in the morning, after a few hours fail, in a fine bay on the eaft fide, called O-Hamene. The country and its inhabitants perfectly refembled thofe of the other iflands in this archipelago. Their productions, vegetable and animal, were in general the fame, varying only in the abundance or fcarcity of fome articles. Thus, for inftance, the tree, which our failors called the apple-tree, (fpondias,) was plentiful enough at Taheitee, extremely rare at Raietea and Huahine, and not very common at Tahà ; fowls were hardly to be met with at Taheitee, but common in the Society Ifles; and rats, which infefted Taheitee in numberlefs myriads, were not quite fo numerous at O -Tahà; ftill lefs frequent at Raietea, and feen in very inconfiderable numbers at Huahine.

After our party had dined in O -Hamene harbour, they removed to the next creek to the north, and walked to the houfe of a chief named O-Tàh, where the natives faid there would be a heèva or public dance. The crowd increafed prodigiounly as they approached it, and in their

\section*{ROUND THE WORLD.}
way they faw a woman at a confiderable diftance, dreffed in a fingular habit,* and blacked all over.
1773. Septem. \(\underbrace{\sim}\) They were told the performed the burial rite, or mourned for a dead perfon. They found the aree, who was an elderly man, fitting on a wooden ftool, of which he offered one half to my father. The dance was begun fome time after by three young girls, the eldeft not exceeding ten, and the youngeft about five years of age. The ufual mufic was performed on three drums, and in the intervals of the dance three men performed fomething of a pantomime drama, which reprefented travellers afleep, and thieves dextroufly conveying away their goods, round which they had, for greater fecurity, placed themfelves. During their performance the croud made way for feveral people who advanced towards the houfe in pairs, but ftopped at the entrance. They were well dreffed, with fathes of their red cloth round their loins, and fkains of the tamow or plaited hair round their heads, and the whole upper part of their body was naked and anointed with coco-nut oil. Some among them were grown men and fome boys. O-Tàh called them the O-Da-widdee, \(\dagger\) which, from the geftures he made to explain himfelf, our people underftood to be mourners. When they appeared the area of the entrance was fpread with cloth of bark, which was, however, taken up immediately and given to the drummers. One of the latter quarrelled with another native, and they fought, pulling each other by the hair, and giving fome hearty blows. However, that the entertainment might not be interrupted, another drummer was fubftituted, and the boxers turned Vol. I. \(\quad\) Z out

\footnotetext{
*This is to be defcribed in the fequel.
\(\dagger\) Mahine and Omai called them by the name of Heabiddhee, and explained the word to fignify relations.
}

17-3. out of the houfe. Towards the end of the dance \(\mathrm{S}_{\mathrm{eftem}}\) the croud made way, and the O-Da-widdee ap\(\underbrace{}_{\text {peared once riore, but flood fill, as they had }}\) done at firft, without performing any other particular rite.

A great number of canoes were hauled up along the thore before the chief's houfe, and in one of them, which had a roof or covering, there was a dead corfe, for which the mourning rites were inftituted. Our gentlemen were obliged, therefore, to lay up their boats a little farther on, where they paffed the night under fhelter of a good houle, whilt it blew and rained exceffively hard.

The next morning the chief O-Tah, went into the boat with them, and they failed round the north point of the infe, feeing a sumber of long low inands, covered with palm and other trees, which lay in the reef. They turught a quantity of good bananas about ten o'clock, and dined a littie farther to the fouthwar?, near the houfe of the greateft chief in the ifland, whofe name was Boba, and who g verned it as a viceroy for C l'or nee, the king of Borab ra, (Bolabola) but was rot on the ifland at that t me. After dinner they mind a bag, which onthired a number of nails, iome looking glafes, and feveral frings of beads, being their whole fock in trade. After a ficrt debate, the officers refulved to feize as much of the property of the inhabitants as poffible, in order to iurce them to a reflitution. They immediaicl began at the place where they traded, and teok away a hog, fome mother of pearl fhills, and a quantity of cloth, not without being obliged to threaten with fiee-arms. The party was then divided; fome guoded the boats, fome the goods which were fized, and fome, with the lieutenant at their head, advanced into
the country in queft of greater feizures. The 1773. old chief, O-Tah, accompanied them, and was SEPTEM. tuder the Itrongeft influence of fear, which manifefted itfelf like that of the dogs in the fable. * Wherever they came the inhabitants hurried away before them, and drove their hogs into the mountains. The officer ordered three mufkets to be fired to frighten them, upon which a chief, who had one leg and foot fwelled to an enormous fize by the elepbantiafis, returned and furrendered his hogs and feveral large bales of cloth. Our people next proceeded to Boba's houfe, which they fripped of two targets and a drum, and with thefe fpoils they retired to the houfe which they had occupied before. O-Tàh left them in the evening, but returned foon after with the ftolen bag, containing about one half of the nails, beads, \&c. which were taken away with it, and paffed the night with our party. Early the next morning the proprietors of the goods which our people had feized, were told that every thing thould be reftored on condition that they procured the remaining beads and nails. In the mean time they advanced towards O-Herurua Bay on the S. W. part of the ifland, and, on their way, the chief, O-Tah, together with the other chief with the elephant's leg, who walked as well as any one of the reft, produced moft of the miffing iron and trinkets, which had been hid in bufhes; upon which our people gave up the cloth, hogs, targets, \&c. which had hitherto remained in their hands, and rewarded the owner of the hut, where they had paffed the night, as well as the old chief, for their fidelity and kindnefs. The beads which they had recovered, enabled them to purchafe a quantity of bananas in the difrict

\section*{A V O Y A G E}
1773. of Herurua, and afterwards in a bay called \(\underbrace{\text { Septem. A-Poto-Poto, or the Round Bay, where they }}\) faw one of the largent houfes in all the Society Illes. It was full of inhabitants, many of whom lodged with their families in different parts of it; the whole appearing to be rather a public building, erected for the cafual fhelter of travellers, like the caravanfaras of the Eaft, than a private dwelling-houfe. Here they dined, and after difpofing of every bead and nail which they had brought with them, fet out on their return to the ships, where they arrived about four o'clock in the afternoon, thoroughly wet by the waves which beat into their boats.

The next morning, the chief Orèa with his family came to take leave of us, and the Chip was filled with the friends of O.Hedeedee, who embarked with us, bringing him cloth of the country fabric, and a fea provifion of their balls of fermented bread-fruit (mahei) which they are very fond of, and which is one of the molt nutritive fubftances in the world. The daughter of Orèa, who had never ventured to vifit us before, came on board on this occafion, to beg for the greail awning of the captain's boat, which had mightily ftruck her fancy. She received abundance of prefents, but the captain could not poffibly grant her requeft. The trade for their tools, cloth, \&c. was very brifk all round the fhip about this time, till the anchor was weighed. Our friends parted from us, with the fincereft expreffions of grief, and hedding floods of tears, reproached fome of us with a want of fenfibility. Our civilized education in general tends to ftifle the emotions of our heart; for as we are too often taught to be afhamed of them, we unhappily conquer them by cuftom. On

\section*{1773.}

WTE. cleared the reefs of Hamaneno towards so o'clock, and fteered to the W.S.W. having the inlands of Raietea, Tahà, and Borabora in fight. Only one month had elapfed fince our arrival at Taheitee, and yet we found ourfelves recovered from the effects of a long uncomfortable cruize in cold wet climates, and during the worft of feafons; and all thofe who had the ftrongeft fymptoms of the fcurvy at that time, were now as perfectly reftored to their health as the reft. The vegetables of this delightful group of iflands had, in all likelihood, principally effected our cure, efpecially as we left our firft place of refrefhment, Aitepèha, in a tolerable ftate of convalefcence, though we had not then tafted any frefh animal food. Our profpect for the next month to come promifed a continuance of health, for we carried with us between two and three hundred

\end{array}
\]
hundred hogs in each fhip, befides a number of 1773. fowls and fome dogs, together with a great quan- Septem. tity of bananas, which formed a kind of orchard on our poop. It is true the want of room occafioned the death of feveral hogs, and the obftinacy of the old dogs in refufing to take any furtenance, deprived us of the greatef number of thofe animals. But we foon took an effectual method of faving our provifions by killing all the hogs which were weakened by confinement, and ftrewing the meat with falt. By this means it was preferved, and remained palatable and juicy without being fo unwholefome as the pickled meat we brought from England, which was now fo penetrated with falt, that if we attempted to fweeten it in water, we extracted all the remaining juices. The only inconvenience which the ftay among thefe ifles had brought upon our feamen, was a complaint which arofe from their own intemperance, in carrying on a free connection with common women. But this, though many of them were affected with it, was fortunately of fo light a nature, that it did not, in general, take them from their duty, and yielded quickly to the gentleft remedies.

Our young friend Hedeèdee, whom we had taken with us inftead of the Taheitian Porèa, felt himfelf much affected with the fea-ficknefs, occafioned by the motion of the fhip, to which he was not accuftomed. He told us, however, as we were looking at the high peak of Borabòra, that he was born in that inland, and was nearly related to O-Poonee, the great king who hat conquered Tahà and Raietea. He acquainted us, at the fame time, that his own name was properly Mahine, he having exchanged it for that of Hedeèdee with a chief in Eimeo; a cuftom which, as I have already obferved in another place,
1773. place, is common in all thefe iflands. His re\(\underbrace{\text { Septem. lation, king O-Poonee, was at prefent, accord- }}\) \(\underbrace{}_{\text {ing to his account, at Mowrùa, an ifland which }}\) we paffed in the afternoon. It confifted of a fingle mountain, of a conic form, rifing into a tharp point; and from the reports of the inhabitants of Raietea, fome of whom had frequently vifited it, we had reafon to conclude that its productions are perfectly fimilar to thofe of all the other ifles in this group.

Our poor friend did not recover his appetite till the next afternoon, when he feafted on part of a dolphin of twenty-eight pounds weight, which had been caught by one of our feamen. We offered to have it dreffed for him immediately, but he affured us it tafted much better raw; and accordingly we provided him with a bowl of fea-water, in which he dipped the morfels as in a fauce, and eat them with great relifh, alternately biting into a ball of maheï, or four bread-fruit pafte, inftead of bread. Before he fat down to his meal, however, he feparated a little morfel of the fifh and a bit of the mahei, as an offering to the Eatua or Divinity, pronouncing a few words at the fame time, which we underftood to be a fhort prayer. He performed Mon. 20. the fame ceremony two days after, when he dined on a raw piece of thark. Thefe inflances ferved to convince us, that his countrymen have certain fixed principles of religion, and that a kind of ceremonial worfhip takes place among them, which they have perhaps preferved ever fince their firit feparation from their anceftors on the continent.

We continued our courfe without any event Thur.23. worthy of notice till the 23 d , in the morning, when a low ifland appeared on our larboard bow. We fteered towards it, and about noon found it

\section*{ROUND THE WORLD.}
was divided into two parts; the latitude which 1773. we oblerved at that time was \(19^{\circ} 8^{\prime}\) fouth. We foon diftinguifhed a quantity of fhrubs and tufted Septem. trees upon it, over which rofe a prodigious number of coco-palms. By the help of our glaffes we obferved that the fhore was fandy, but here and there over-run with verdure, which probably was occafioned by the common bindweed of thefe climates (convolvulus Brafilienfis). A reef as we apprehended, connected the two parts of the ifland together, which notwithftanding its agreeable appearance, feemed to be entirely uninhabited. Captain Cook gave it the name of Hervey's Ine, in honour of the prefent earl of Briftol. A bird which refembled a fandpiper in its flight, and note, had appeared about the fhip, the day before we made this ifland, and might be faid to have announced its proximity ; but though we obferved another of the fame fort on the 26th, which actually fettled in the rig- Sund. 26. ging, yet we did not fall in with another ifland. We held a wefterly courfe from Hervey's Ifle, which lies in \(19^{\circ} 18^{\prime}\) fouth latitude and \(158^{\circ} 54^{\prime}\) weft longitude from Greenwich, till the firft of October, when we faw land before us about two Остов. o'clock in the afternoon. In four hours time we Friday 1. came within two or three leagues of \(i\), and found it of a moderate height; the hills were covered with trees, and offered a pleafing, though not magnificent profpect. At the fouthweft extremity we obferved a fmall rocky iflet, and to the northward a low land of greater extent. From thence we judged, that the ifle before us was the fame which Abel Janflen Tafman named Middieburg Ine, in 1643, and that the other to the north, was that of Amiterdam, difcovered by the fame navigator. We lay to all night, and Satur. 2 . with day-break paffed round the S. W. point of Middleburg
1773. Middleburg Ine, and ranged its weftern coaft: \(\underbrace{\text { Oстов. There appeared to be fome low land at the bot- }}\) tom of the hills, which contained plantations of fine young bananas, whofe vivid green leaves contrafted admirably with the different tints of various fhrubberies, and with the brown colour of the coco palms, which feemed to be the effect of winter. The light was ftill fo faint, that we diftinguifhed 位eral fires glimmering in the bufhes, but by degrees we likewie difcerned people running along the fhore. The hills which were low, and not fo high above the level of the fea as the ifle of Wight, were agreeably adorned with inall clumps of trees fcattered at fome diftance, and the intermediate ground appeared covered with herbage, like many parts of England. It was not long before we perceived fome of the in mbitants bufied in launching feveral canoes, und paddling towards us. We threw a rope into one of thefe canoes which ran up clofe to us, and one of the three people in her came on board, and prefented a root of the intoxicating pepper-tree of the South Sea Iflands, touched our nofes with his like the New Zeelanders, in fign of friendfhip, and then fat down on the deck without fpeaking a word. The captain prefented him with a nail, upon which he immediately held it over his own head, and pronounced fagafetai, which was probably an expreffion of thankfgiving. He was naked to the waift, but from thence to the knees he had a piece of cloth wrapped about him, which feemed to be manufactured much like that of Taheitee, but was covered with a brown colour, and a ftrong glue, which made it ftiff, and fit to refift the wet. His ftature was middle fized, and his lineaments were mild and tolerably regular. His colour was much like that of the common Taheitians,

\section*{ROUND THE WORLD.}
tians, \({ }^{*}\) that is, of a clear mahogany or chefnut 1773. brown; his beard was cut fhort or fhaven, and Остов. his hair was black, in fhort frizzled curls, burnt as it were at the tips. He had three circular fpots on each arm, about the fize of a crown piece, confifting of feveral concentric circles of elevated points, which anfwered to the punctures of the Taheitians, but were not blacked; befides thefe, he had other black punctures on his body. A fmall cylinder was fixed through two holes in the lap of his ear, and his left hand wanted the little finger. He continued his filence for a confiderable while, but fome others, who ventured on board foon after him, were of a more communicative turn, and after having performed the ceremony of touching nofes, fpoke a language which was unintelligible to us at that time. In the mean while we arrived at the N. W. point of the ifland, where we ftruck foundings on a good bottom, in an open road, and let go our anchors about nine in the morning. We were prefently furrounded by a number of canoes, each containing three or four people, who offered great quantities of their cloth for fale. The canoes were fmall, about fifteen feet long, very fharp built, and decked or covered at each extremity. Moft of them had out-riggers made of poles, like the fmall canoes at Taheitee, but the workmanhip of thefe boats was infinitely preferable, as they were joined together with an exactnefs which

\footnotetext{
* As 1 thall frequently mention the inhabitants of Taheitee, and of the Society Inlands, in comparifon with other inlanders, it will be proper to obferve, that fince the natives both of Taheitee and of the Society Inands, are perfectly alike in moft refpedts, I thall indifferently call a cultom Taheitian, or ufual at the Socicty lllands, which is common to them both. Therefore, unlefs I exprefly put thefe terms in contradiftinction to each other, I wifh to have them underftood in general as fynonymous.
}

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y}\) A \(\mathbf{G} \mathbf{E}\)}
1773. which furprifed us, and the whole furface had Octob, received an excellent polifh. Their paddles had fhort broad blades, fomething like thofe of Taheitec, but more neatly wrought, and of better wood. They made a great deal of noife about us, every one fhewing what he had to fell, and calling to fome one of us, who happened to look towards them. Their language was not unpleafing, and whatever they faid, was in a finging kind of tune. Many were bold enough to come on board, without expreffing the leaft hefitation, and one of thefe feemed to be a chief, or a man of fome quality, and was accordingly treated with a number of prefents, which he feverally laid on his head, when he received them, faying fagafetai every time. Our Englifh cloth and linen he admired moft, and iron wares in the next degree. His behaviour was very free and unconcerned; for he went down into the cabin, and wherever we thought fit to conduct him. He likewife told us, upon our enquiry, that the ifland near which we lay at anchor, (the fame which Tafman called Middleburg) was called Ea-Oowhe among his countrymen; and that the other to the north (or Tafman's Amfterdam Ifland) bore the name of Tonga-Tabboo. We confulted feveral of the natives, in order to have greater certainty on this point, and always received the fame names in anfwer.

After breakfaft, the captains went on fhore with us and the chief, who had continued on board all that time. A bed of coral rocks furrounded the coaft, towards the landing-place; but many canoes occupied the deep channels between thefe rocks, and a great number of inhabitants in them as well as on the fhore, fhouted for joy at our approach. The canoes immediately came along-fide the boat, and the natives
threw great bales of cloth into it, without afking \({ }^{1773}\). for any thing in return; while many of both fex- Остов. es fwam about perfectly naked, holding up fome \(\longrightarrow\) trifles, fuch as rings of tortoife-fhell, filh-hooks of mother of pearl, and the like, for fale. As foon as we could make way through the throng of canoes, we approached as near as poffible to the fhore, and were carried to it out of our boat, for which the natives very readily offered their backs. The people thronged about us with every expreffion of friendfhip, and offered a few fruits, with a variety of arms and utenfils. The cordial reception which we met with, was fuch as might have been expected from a people well acquainted with our good intentions, and accuftomed to the tranfitory vifits of European fhips. But thefe kind iflanders had never feen Europeans among them, and could only have heard of Tafman who vifited the adjacent Amfterdam illand, by imperfect tradition. Nothing was therefore more confpicuous in their whole behaviour than an open, generous difpofition, free from any mean diftruft. This was confirmed by the appearance of a great number of women in the croud, covered from the waift downwards, whofe looks and fmiles welcomed us to the flore.

We foon left the landing-place, and followed the chief, who invited us up into the country. The ground from the water's fide rofe fomewhat fteep for a few yards, above which it flattened into a beautiful green lawn, furrounded by tall trees and tufted fhrubberies, and open only to the fea. At the bottom of it, which might be about one handred yards from the landingplace, we faw a very neat well-looking houfe, of which the roof floped down within two feet of the ground. We advanced acrofs the delightful green, which was fo imooth, that it put us in mind of the fineft fpots in England, and were entreated to fit down in the houfe, which was moft elegantly laid out with mats of the beft workmanhip. In one corner of it we faw a moveable partition of wicker-work flanding upright, and, from the figns of the natives collected, that it feparated their bed-place. The roof, floping down on all fides, was formed of a great number of fpars and round ficks very firmly connected, and covered with a fort of matting made of banana leaves.

We were no fooner feated in the houfe, furrounded by a confiderable number of natives, not lefs than a hundred, than two or three of the women welcomed us with a fong, which, though exceedingly fimple, had a very pleafing effect, and was highly mufical when compared to the Taheitian fongs. They beat time to it by fuapping the fecond finger and thumb, and holding the three remaining fingers upright. Their voices were very fweet and mellow, and they fung in parts. When they had done they were relieved by others, who fung the fame tune, and at laft they joined together in chorus. A very ingenious gentleman, who was on this voyage with us, has favoured me with one of the tunes which he heard in this ifland, which may ferve as a fpecimen to the mufical part of my readers.

In this little fpecimen the mufic is in the minor key, (a flat third.) The varied the four notes without ever going lower than \(A\) or higher than \(E\); finging them rather flow,
and fometimes ending with the chord \(\frac{1}{9} \frac{0}{2}\)

\section*{ROUND THE WORLD.}

The kindnefs of the people was expreffed in 1773. every look and gefture, and they freely offered us fome coco-nuts, of which we found the liquor very palatable. We were likewife regaled with a moft delicious perfume in this place, which the breeze wafted towards us. It was a confiderable time before we difcovered from whence it proceeded; but at laft having looked at fome fhady trees at the back of the houfe, we perceived they were of the lemon tribe, and covered with beautiful branches of white flowers, which fpread this fragrant fmell. The natives foon brought us fome of the fruits, which we knew to be of the kind called fhaddocks in the Weft-Indies, and pomplemofes at Batavia and the adjacent Eaft-Indian ines. Their fhape was perfectly globular, their fize almoft as large as a child's head, and their tafte extremely pleafant.

On both fides of the lawn we took notice of a fence or enclofure made of reeds, diagonally plaited in an elegant tafte. A door, which confifted of feveral boards, and was hung on a rope initead of hinges, gave admittance into a plantation on each fide. We feparated, in order to examine this beautiful country, and at every ftep had reafon to be well pleafed with our difcoveries. The door was fo contrived as to Shut after us without any affiftance, and the enclofures were over-run with climbers, and efpecially a bindweed, having f .wers of a beautiful kyy -blue. The profpect now changed into an extenfive garden, where we faw a number or tufted fhaddocktrees, tall coco-palms, many 'iananas, and a few bread iruit trees. In the midt of this fpot the path lei us to a dwelling-houfe, like that on the lawn, furrounded by a great variety of hrubs in bloffin, whofe fragrance filled the air. We roamed through thefe bufhes, and collected a variety

\section*{A V O Y A G E}
1773. variety of plants which we had never met with in Ocros. the Society Ifles. The inhabitants feemed to be of a more active and induftrious difpofition than thofe of Taheitee, and inftead of following us in great crouds wherever we went, left us entirely by ourfelves, unlefs we entreated them to accompany us. In that cafe we could venture to go with our pockets open, unlefs we had nails in them, upon which they fet fo great a value that they could not always refift the temptation. We paffed through more than ten adjacent plantations or gardens, feparated by enclofures, communicating with each other by means of the doors before mentioned. In each of them we commonly met with a houfe, of which the inhabitants were abfent. Their attention to feparate their property feemed to argue a higher degree of civilization than we had expected. Their arts, manufactures, and mufic were all more cultivated, complicated, and elegant than at the Society Iflands. But, in return, the opulence, or rather luxury, of the Taheitians feemed to be much greater. We faw but few hogs and fowls here, and that great fupport of life, the breadtree, appeared to be very fcarce. Yams, therefore, and other roots, together with bananas, are their principal articles of diet. Their cloathing too, compared to that of Taheitee, was lefs plentiful, or at leaft not converted into fuch an article of luxury as at that ifland. Laftly, their houfes, though neatly confructed, and always placed in a fragrant fhrubbery, were lefs roomy and convenient. We made thefe reflections as we advanced towards the landing-place, where feveral hundred natives were affembled; and their appearance immediately ftruck us with the idea, that if they did not enjoy fo great a profufion of the gifts of nature as the Taheitians, thofe gifts
were perhaps diftributed to all with greater equa- 1773 . lity. We advanced among them, and were ac- \(\underbrace{\text { Ocrob. }}\) cofted with careffes by old and young, by men and women. They hugged us very heartily, and frequently kiffed our hands, laying them on their breaft, with the moft expreffive looks of affection that can be imagined. The general flature of the men was equal to our middle fize, from five feet three to five feet ten inches. The proportions of the body were very fine, and the contours of the limbs extremely elegant, though fomething more mufular than at Taheitee, which may be owing to a greater and more conflant exertion of ftrength in their agriculture and œconomy. Their features were extremely mild and pleafing, and differed from the Taheitian faces, in being more oblong than round ; the nofe fharper, and the lips rather thinner. Their hair was generally black and ftrongly curled, and the beard fhaven or rather clipt by means of a couple of fharp mufcle fhells, (mytili.) The women were, in general, a few inches fhorter than the men, but not fo fmall as the lower clafs of women at Taheitee and the Society Inles. Their body was exquifitely proportioned down to the waif, and their hands and arms were to the full as delicate as thofe of the Taheitian women; but like them they had fuch large feet and legs as did not harmonize with the reft. Their features, though without regularity, were as agreeable as we had in general obferved them at the Society Inles; but we recollected many individuals there, efpecially of the principal families, to which none of thefe could be compared. The complexion of both fexes here was the fame, a light chefnut brown, which had commonly the appearance of perfect health. That difference of colour and Vol. I. A a corpulence.
1773. corpulence, by which we immediately diftinguifhed the ranks at Taheitee, was not to be met with in this ifland. The chief, who had vifited us on board and accompanied us to the Shore, was in nothing different from the common people, not even in his drefs; it was only from the obedience which was paid to his orders that we concluded his quality. The cultom of puncturing the fkin and blacking it, was in full force among the men, and their belly and loins were very ftrongly marked in configurations more compounded than thofe of the Taheitians. The tendereft parts of the body were not free from thefe punctures, the application of which, befides being very painful, muft be extremely dangerous on glandulous extremities, and juftly excited our aftonifhment.

> —et pi\&ीa pandit fpectacula cauda! Hor.

The women, however, were exempted from this cuftom of disfiguring themfelves, and had only a few black dots on their hands. But befides thefe, both fexes had three fpots on the arms, confifting of concentric circles of punctures, without any blacking, which I have mentioned before. The men in general went almoft naked, having only a fmall bit of cloth round the loins. Some, however, wore a drefs nearly refembling that of the women. This was a long piece of cloth made of bark, in the fame manner as the Taheitee cloth, but afterwards painted chequer-wife, or in patterns nearly refembling our painted floor-cloths, and covered with a fize, which turned the wet for a long while. This they wrapped round their waift, the men nearly about their middle, the women more immediately under the breaft, and in both it commonly defcended below the knees. Inftead of the cloth
they likewife fubftituted mats, extremely well 1773. wrought, in form refembling thofe of Taheitee, Ocros and fometimes, though rarely, covered even their fhoulders and breafts with them. The men froquently wore a ftring round their necks, fiom which a mother of pearl thell hung down on the breaft. The women often had loofe necklaces, confifting of feveral ftrings of fmall fhells, intermixed with feeds, teeth of fifhes, and in the middle of all the round aterculum, or cover of a fhell, as large as a crown-piece. Both their ears were perforated, and fometimes with two holes, and a little cylinder cut out of tortoife- h hell or bone, was ftuck through both the holes. Sometimes thefe cylinders were only of reed, filled with a red folid fubftance, painted and lacquered with different colours in regular compartment:. The moft fingular circumftance which we obferved among thefe people was, that many of them wanted the little finger on one and fometimes on both hands; the differences of fex or age did nut exempt them from this amputation; for even amongtt the few children, whom we faw running, about naked, the greater part had already fufered this lofs. Only a few grown people, who had preferved both their little fingers, were an exception to the general rule. We immediately conjectured that the death of a near relation or fricnd might require thefe Atrange mutilations, in the fame manner as is cuftomary among the Hoticntots, in Africa:* the Guaranos, in Paraguay; and the Californians; and our enquiries, though unfuccefsful at firft, afterwards confirnied the conjecture. Another fingularity, which we coferved to be very general among thefe popple, A a 2 was

\footnotetext{
* See Kolben's account of the Cape of Gond Hope; alio, the Recherches Philofophiques fur les Americain, par inl. Pauw, vol. Il. p. 224, 229.
}
was a round foot on each cheek bone, which apОстов. peared to have been burnt or bliftered. Some had it quite recent, in others it was covered with a fcurf, and many had a very flight mark of its former exiftence. We could never learn how and for what purpofe it was made; but we fuppofed it could only be unfed like the Japanefe moxa, as a remedy against various complaints.

Notwithitanding the engaging manners of the natives, we foresaw that we should make but a very fort flay among them, because our captains could not obtain refrefhments in any confiderable quantity; which might be owing not fo much to their fcarcity upon the inland, as to the difficulty of making our goods current for fuch valuable articles, when they could obtain them in exchange for arms and utenfils. They had brought indeed a few yams, bananas, coco-nuts, and thaddocks for ale, but they foo dropt that branch of trade. Our people purchafed an incredible number of fin hooks made of mother of pearl, barbed with tortoife hell, but in Shape exactly refembling the Taheitee fifh-hooks, called wittewitt; * fame of which were near leven inches long. They likewife bought their hells, which hung on the breaft, their necklaces, bracelets of mother of pearl, and cylindrical ticks for the ear. They had the neateft ornamental combs that can be imagined, confining of a number of little flat flicks about five inches long, of a yellow wood like box, molt firmly and elegantly connected together at the bottom by a tiffue of the fibres of coconut, forme of which were of their natural colour, and others dyed black. Thee fibres were like wife employed in making a great variety of bankers,

\footnotetext{
* See Hawkefworth, vol. Il. p. 243. Alfo Parkinfon's Journal, p. 77, and Tab. XIII, fig. 25.
}
bafkets, wrought with regular compartments of 1773. two colours, brown and black, or fometimes all Ocrob. brown, and ornamented with rows of round flat beads, which were made by cutting pieces of fhells into that Shape. The tafte and the workmanhhip of thefe bafkets were elegant in the higheft degree, and varied into different forms and patterns. Thofe little ftools, which ferve as pillows for the head, were much more frequent here than at Taheitee; flattifh bowls, in which they place their meat, and fpatulas with which they mix up the bread.fruit pafte, were likewife in great abundance, and made of the club-wood (cafuarina equififeolia), which had this name from fupplying all the inlanders in the South Sea with weapons. The clubs of the people of this ifle were of an infinite variety of chapes, and many of them fo ponderous that we could farce manage them with one hand; the moft common form was quadrangular, fo as to make a rhomboid at the broad end, and gradually tapering into a round handle at the other. But many were fpatulated, flattifh, and pointed; fome had long handles and a blade which refembled the blade of a fleam; others were crooked, knobbed, \&c. But by far the greateft part were carved all over in many chequered patterns, which feemed to have required a long face of time, and incredible patience, efpecially when we confider, that a Tharp ftone, or a piece of coral, are the only tools which the natives can employ in this kind of work. All the different compartments were wrought and divided with a regularity which quite furprifed us, and the whole furface of the plain clubs was as highly polifhed, as if our beft workmen had made them with the beft inftruments. Befides clubs, they had fpears of the fame wood, which were fometimes plain, Marp-

\section*{A \(V \quad \mathrm{O} \quad \mathrm{Y}\) A \(\quad\) G \(\quad \mathrm{E}\)}
1773. fharp-pointed fticks, and fometimes barbed with Octor, a tting-ray's tail. They had likewife bows and arrows, of a peculiar conftruction. The bow which was fix feet long, was about the thicknefs of a little finger, and when flack, formed a flight curve. Its convex part was channelled with a fingle deep groove, in which the bow-ftring was lodged, and which was likewife big enough fumetimes to contain the arrow made of reed, near fix feet long, and pointed with hard wood. When the bow was to be bent, inftead of drawing it fo as to encreafe the natural curvature, they drew it the contrary way, made it perfectly frait, and then formed the curve on the other fide. The bow-ftring by this means never needed to be tenfe, as the arrow received fufficient moment by changing the natural bent of the bow; the recoil of which was never violent encugh to hurt the arm. Our feamen, unacquainted with the mature of thefe weapons, broke feveral of them by drawing them like cther bows. The immenfe quantity of arms belonging to the natives, correfponded very ill with the pacific difpofition, which had ftrongly fhone through their whole behaviour towards us, and which fill manifefted itfelf in their readinefs to difpofe of them. It is probable that they have fometimes quarrels among't themfelves, or wage war with the neighbouring iflands, but we could by no means difcover any thing from their converfation or figns, which might have ferved to throw a light on this fubject. The feveral articles above enumerated, together with all their forts of cloth, their elegant mats, which for workmanfhip and variety excelled even thofe of Taheitee, and a great many other trifles too tedious to mention, they brought to fell, and with great eagernefs exchanged for fmall nails, and fometimes for beads. But

\section*{ROUND THE WORLD.}
in refpect of the latter their tafte was different from that of the Taheitians; for the latter always chofe thofe that were tranfparent, but the people of Ea-oowhe would take no other than black opaque beads, with red, blue, and white ftripes. We traded with them till dinner time, and then re-embarked in order to return on board the fhips; but were obliged to fit down contented with the lofs of a grapnel, which the natives had contrived to fteal almoft as foon as it was let down into the water. Their kind looks and acclamations followed us till we returned on board, where a number of them traded in their canoes with the fame forts of goods which we had purchafed on thore. We faw feveral perfons among them afflicted with leprous complaints, in fome of which the diforder had rifen to a high degree of virulence; one man in particular had his whole back and fhoulders covered with a large cancerous ulcer, which was perfectly livid within, and of a bright yellow all round the edges. A woman was likewife unfortunate enough to have all her face deftroyed by it in the moft fhocking manner; there was only a hole left in the place of her nofe; her cheeks were fwelled up and continually oozing out a purulent matter; and her eyes feemed ready to fall out of her head, being bloody and fore. Thefe were fome of the molt miferable objects I recollect ever to have feen; and yet they feemed to be quite unconcerned about their misfortunes, traded as brifkly as any of the reft, and what was moft naufeous, had provifions to fell.

After dinner Dr. Sparrman remained on board with me, in order to arrange our acquifitions of the morning, and my father again accompanied the captains to the fhore, with a view to collect a frefh fupply. They returned about fun-fet,
1773. and my father gave the following account of this Остов. excurfion.
" At the landing-place the natives welcomed us with touts as in the morning, and the croud being as numerous as ever, the trade was carried on very brifkly, but provifions were farce, and Shaddocks in particular not at all to be had, as the feafon was not yet fufficiently advanced. Mr. Hodges, myfelf, and one fervant, left the trading place with two of the natives, whom we engaged to become our guides in cafe of neceffity, and walked up the hill to view the interior part of the country. Our walk lay through a number of rich plantations or gardens, enclofed as before mentioned with fences of reeds, or with quickhedges of the beautiful coral flower, (erytbrina corallodendron.) Beyond there we entered into a lane between two enclofures, and observed bananat and yams planted in rows on both fides, with as much order and regularity as we employ in our agriculture. This lane opened into a fine extenfive plain, covered with rich graffes. Having croffed it, we met with a mort delightful walk about a mile in length, formed of four rows of coco-nut trees, which ended in another lane between plantations of great regularity, furrounded by haddocks and other trees. It led through a cultivated valley to a foot where feveral paths croffed each other or met in one. Here we fam a fine lawn covered with a delicate green turf, and furrounded by large fhady trees on all fides. In one corner of it there was a houfe; which was empty at prefent, its inhabitants being probably by the water's fide. Mr. Hodges fat down to draw this delightful foot. We breathed the mont delicious air in the world, fraught with odours which might have revived a dying man; the fa breeze played with our hair and gently cooled

\section*{ROUND THE WORLD.}
us; a number of fmall birds twittered on all 1773. fides, and many amorous doves cooed harmoni- Ocros. oully in the deepeft fhade of the tree under which we were feated. The tree was remarkable for its roots, which came out of the ftem near eight feet above the ground, and for its pods of more than a yard long, and two or three inches broad. This fecluded fpot, fo rich in the beft productions of nature, where we fat folitary with no other human being befides our two natives, ftruck us with the idea of enchanted ground, which being the creation of our own gay fancy, is commonly adorned with all poffible beauties at once. In fact, there could not have been a more defirable fpot for a little place of retirement, according to the elegant imagination of Horace, if it had only been fupplied with a cryftal fountain or a little murmuring rill! But water is unfortunately the only bleffing denied this charming little ifland. To the left of this fpot we difcovered a fhady walk, that brought us to another graffy lawn, at the bottom of which we perceived a little mount with two huts upon it. A number of reeds fluck into the ground, at the diftance of one foot afunder, encompaffed this rifing, and feveral cafuarinas, with their flender branches and thread-like leaves, were planted before it. The natives, whom we had engaged to accompany us, would not approach this mount ; but we advanced and looked into the huts, though with great difficulty, becaufe the bottom of the roof was not above a fpan from the ground. We found a corfe in one of there huts, which had been lately depofited; but the other was empty. Thus the cafuarina or club-wood (tòa), here, as in the Society llands, pointed out the repofitories of the dead. Its dull brownih-green colour, and its long fpreading branches, where the leaves
1773. are thinly fcattered and hang weeping down, Ocrob. certainly become thefe melancholy places to the full as well as the funereal cyprefs. It is therefore probable that the fame train of ideas, which confecrated the latter in one part of the world to Thade the tombs, might fix upon the former in thefe regions for a fimilar purpofe. The mount on which the huts were placed was formed of fmall pieces of coral rock, like gravel, accumnlated without any particular order. From thence we proceeded a little farther, and ftill found the fame elegant plantations and the fame kind of houfes in the middle as before. Our natives conducted us through one of them, where they entreated us to fit down, and procured fome coco nuts, which proved extremely refrefhing. At our return we found our boats juft ready to put off, and embarked with them immediately. We had feen only a few of the natives on our walk, who paffed unconcernedly by us towards the place where the captains traded; and I believe we fhould have been entirely left to ourfelves if we had not engaged two of them to become our conductors. The difcharge of our guns, and their effect, neither excited their admiration nor their fear ; but they always appeared kind and courteous towards us. Their women were, in general, referved, and turned with difguft from the immodeft behaviour of ungovernable feamen, fome of them however appeared to be of eafy virtue, and beckoned to our people with laf. civious geftures."

The next morning early the captain went on fhore with us, and prefented the chief with a variety of garden feeds, explaining by figns how ufeful they would prove to him. This was as yet our only mode of converfation, though we had picked up a number of words, which, by

\section*{ROUND THE WORLD.}
the help of the principles of univerfal grammar, 1773. and the idea of dialects, we eafily perceived had Остов. a great affinity with the language fpoken at Taheitee and the Society Ines. O-Mai and Mahine (or O-Hedeedee, the two natives of Raietea and Borabora who embarked with us, at firft declared that the language was totally new and unintelfigible to them; however, when we explained to them the affinity of feveral words, they prefently caught the peculiar modification of this dialect, and converfed much better with the natives than we could have done after a long intercourfe with them. They were extremely well pleafed with this country, but foon perceived its defects, and told us there was but fcanty provifion of bread-fruit, few hogs and fowls, and no dogs, which was really the caie. In return, however, they liked the abundance of fugar-canes and of intoxicating pepper, of which the drink had been offered to captain Cook.

As foon as the captains had delivered their prefent, they returned to the fhips, and the chief came on board with us. Our anchor was weighed, our fails were fpread to the wind, and we forfook this happy ifland when we had farce difcovered its beauties. The chief, after felling a number of fifh-hooks for nails and beads, hailed one of the canoes which were palfing by, and left us with looks which fpoke his friendly, open difpofition.
We now failed along the weftern fhore of Tarman's Amfterdam inland, which the natives called Tonga-Tabboo, and found it a very low flat land, compared with that which we had left. The middle of this inland is nearly in \(21^{\circ}{ }_{1} 1^{\prime} \mathrm{S}\). latitude, and \(175^{\circ} \mathrm{W}\). longitude. Its higheft elevation above the level of the fea, appeared to the eye never to exceed fix or feven yards perpendicular.

\section*{A V O Y A G E}
1773. pendicular. On the other hand, its extent was much more confiderable than that of Ea-oowhe, and by the help of our fpying-glaffes, we difcovered the fame regular plantations which we had fo much admired there, and faw the fhores crouded with inhabitants, who gazed at us, probably with as much attention as we beftowed upon them. When we were about half way between both iflands, or nearly three leagues from each, we were met by feveral canoes full of men, who attempted to come along-fide, but as we happened to be too far to windward, they could only reach the Adventure, where they came on board.

In the afternoon we approached the northernmoft end of the ifland, and perceived fome fmall inles connected by reefs to the eaftward. Their fituation and that of the fhoal to the north-weft, where the fea broke with great violence, convinced us that we were now arrived at the very place where Tafman anchored in 1643, and which he called Van Diemen's Road. Here we dropped an anchor upon a rocky bank, and were immediately furrounded with numbers of the natives, fome in canoes, and fome fwimming, though we lay about a quarter of a mile from the fhore. We found them to be of the fame nation which inhabited Ea-oowhe, and their mercantile turn prompted them to bring an immenfe quantity of their cloth, mats, nets, utenfils, arms, and ornaments, which they eagerly exchanged for beads and nails. The fhips were no fooner moored, than a prohibition was made againt purchafing curiofities, and the natives were told to bring coconuts, bread-fruit, yams, and bananas, as well as hogs and fowls, of which we had already learnt the names. We purchafed a fmall quantity of provifions the fame evening, to give an example to the reft of the inhabitants, who were obliged

\section*{ROUNDTHE WORLD.}
to take their merchandize on fhore again. The 1773 . good effects of this ftep appeared the next morn- Ocros. ing, when the natives returned from fhore at day-break, and had loaded their canoes with vegetables and fowls. Many of them came on board as freely as if we had been old acquaintances, and did not appear to have the leaft idea of diftruf. One of them, a well made man, with a handfome open countenance, feemed to have fome authority among them, like the chief whom we had feen on Ea-oowhe. He defcended into the cabin, acquainted us that his name was Attahha, and received feveral prefents, among which he fet a high value on iron, and on red European broad-cloth. After breakfalt he went on thore with us in the pinnace. A coral reef furrounded the coaft, at the diftance of a mulket thot, and a fingle narrow pafs admitted us within it, where we found the water fo full of rocks and fo fhallow, that we were obliged to be carried out of the boat. A party of the marines were ported on the beach in cafe of danger, to protect the captain's clerk, who traded for provifions. The natives did not exprefs either furprize or diflike at this proceeding, perhaps becaufe they were unacquainted with its meaning. They received us with acclamations of joy as at Ea-oowhe, and defired us to fit down with them on the rocks along fhore, which confifted of coral, and were covered with fhell fand. We purchafed feveral beautiful paroquets, pigeons, and doves, which they brought to us perfectly tame; and our young Borabora-man Mahine (or Hedeèdee) traded with great eagernefs for ornaments made of bright red feathers, which he affured us had an extraordinary value at Taheitee and the Society Iflands. Here they were commonly pafted to aprons ufed in their dances; and made of the fibres
1773. fibres of coco-nut, or fixed upon banana leaves, \(\underbrace{\text { Ocrob }}\) forming rhomboidal frontlets or diadems, \&c. With a degree of extafy which gave the greateft weight to his affertion, he fhewed us that a little piece of feathered work, as broad as two or three fingers, would purchafe the largeft hog in his ifland. Both this youth and O-Mai were much pleafed with the inhabitants of thefe iflands, and began to underftand their language tolerably well.

We left the beach after the firft acquaintance with the natives, and afcended a few feet into a wild foreft confilting of tall trees, intermixed with fhrubberies. This wood though narrow, being in many places not above one hundred yards wide, was continued along the thore of Van Diemen's road, being more or lefs open in various parts. Beyond it the whole ifland was perfectly level. We walked acrofs a piece of uncultivated land, about five hundred yards wide, which adjoined to the wood. Part of it appeared to have been planted with yams, but the reft was full of grals, and had a little fwamp in the middle, where the purple water-hen, or poule fultane, refided in great numbers. As foon as we left this, we entered into a lane about fix feet wide, between two fences of reed, which enclofed extenfive plantations on each fide. Here we met many of the natives, who were travelling to the beach with loads of provifions, and courteounly bowed their heads as they paffed by us in fign of friendfhip, generally pronouncing fome monofyllable or other, which feemed to correfpond to the Taheitian tayo. The enclofures, plantations, and houfes were exactly in the fame ftyle as at Ea-oowhe, and the people had never failed to plant odoriferous fhrubs round their dwellings. The mulberry, of which the bark is manufactured into cloth, and the bread-
tree, were more fcarce than at the Society Ifles, and the apple of thofe inlands was entirely unknown, but the fhaddock well fupplied its place. The fealon of fpring, which revived the face of all nature, adorning every plant with bloffoms, and infpiring with joyful fongs the feathered tribe, doubtlefs contributed in a great meafure to make every object pleafing in our eyes. But the induftry and elegance of the natives, which they difplayed in planting every piece of ground to the greateft advantage, as well as in the neatnefs and regularity of all their works, demanded our admiration, whilft it gave us room to fuppofe, that they enjoyed a confiderable degree of happinefs.

One of the lanes between the enclofures led us to a little grove, which we admired for its irregularity. An immenfe cafuarina tree far outtopped the reft, and its branches were loaded with a valt number of blackifh creatures, which we took for crows at a diftance, but which proved to be bats when we came nearer. They clung to the twigs, by the hooked claws, which are at the extremity of their webbed fingers and toes; fometimes they hung with the head downwards, and fometimes the reverfe. We fhot at them, and brought down fix or eight at once, befides wounding feveral others which held faft on the tree. They were of the kind which is commonly called the vampyre *, and meafured from three to four feet between the expanded wings. A great number of them were difturbed at our firing, and flew from the tree very heavily, uttering a fhrill piping note; fome likewife arrived from remote parts at intervals to the tree, but the greatert number remained in their pofition, and probably

> go

\footnotetext{
* La Rougetre, of M. de Buffon. Vampyrus of Linné, and Pennant.
}
1773. go out to feed only by night. As they live chief\(\underbrace{\text { Ocros. }}\) ly upon fruit, it is likely that they commit great depredations in the orchards of the natives, fome of whom being prefent when we fired, feemed very well pleafed with the death of their enemies. We had feen fome of them who had caught thefe bats alive, and placed them in a cage of wickerwork very ingenioufly contrived, with an entrance like that of a filh-baiket, where the animal could eafily be put in, but could not come out again. They likewife affured us the bats were very mordacious, for which purpofe they feemed indeed to be well provided with large fharp teeth.

We had already obferved at Taheitee, at the Society Iflands, and even at Ea-oowhe, that wherever we met with a cafuarina, a buryingplace was at hand. Therefore, at fight of this venerable tree, which was hung with ill-omened creatures, we immediately conjectured that it would lead us to a cemetery or place of worfhip, and the event flewed that we were not miftaken. We found a beautiful green lawn, enclofed on all fides by fhady bufhes and trees, amongft which cafuarinas, pandangs, and wild fago-palms appeared with their various tints of green. A row of Barringtonias, as big as the loftieft oaks, formed one fide of it, and frewed it with their large bluhing flowers. At the upper end of it, there was a rifing two or three feet high, fet out with coral-ftones cut fquare. The area above was covered with a green fod, like the reft of the lawn. Two fteps, likewife of coral rock, led up to this part, in the midft of which a houfe was fituated, exactly like that which we faw at Ea-oowhe. Its length was about twenty, the breadth fifteen, and the height of the ridge ten feet. The roof defcended floping nearly to the ground, and was made of banana leaves. We entered into this building

\section*{ROUND THE WORLD.}
building with only one of the natives, the reft 1 :773. keeping at fome diftance. We found the floor Остов. covered with broken pieces of white coral rock, and in one corner a heap of blackifh pebbles, about eight feet long, which was elevated a foot above the white fones. The native told us that a man lay buried there, and pointing to the place where his little finger had formerly been cut away, he plainly fignified that when his maduas or parents * died, they mutilated their hands. We found two pieces of wood a foot long, carved into fome refemblance of the human figure, like thofe which are called e-tee at Taheitee, but they were treated in the fame manner, that is without the leaft degree of refpect or veneration, being frequently trod upon and kicked about. Thele burying-places, which are called a-Fiyetooca in the language of the country, are always delightfully fituated on green lawns, and furrounded with the fineft groves. That which I have here defcribed, was drawn by Mr. Hodges.

We continued our walk through the plantations, and met with very few inhabitants, they being almoft all gone towards the trading-place. Thofe we faw paffed by us, or continued their occupations without ftopping on our account. Neither curiofity, nor dittruft and jealoufy excited them to prohibit our farther progrefs; on the contrary, they always fpoke in a kind tone to us, which fufficiently characterifed their difpofition. We looked into many of the houfes and found them empty, but always laid out with mats, and delightfully fituated among odoriferous Shrubs. Sometimes they were feparated from the plantations by a little fence, through which a door, like thofe of Ea-oowhe, gave admittance, Vol. I. B b which

\footnotetext{
* Perhaps any relation in the aicending line.
}
1773. which could be fhut on the infide. In that cafe \(\underbrace{\text { Ocros. }}\) only the area, which this fence enclofed around the hut, was planted with the odoriferous grove, which is fo much in requeft with the natives. A walk of three miles brought us to the eaftern fhore of the ifland, where it forms a deep angle, which Tafman called Maria Bay. Where we fell in with it, the ground floped imperceptibly into a fandy beach; but as we walked along towards the north point, we found it rofe perpendicularly, and in fome places it was excavated and overhanging. It confifted, however, entirely of coral, which is a ftrong proof of fome great change on our globe, as this rock can only be formed under water. Whether it was left bare by a gradual diminution of the fea, or perhaps by a more violent revolution which our earth may formerly have fuffered, I hall not venture to determine. So much, however, may be affumed as a certainty, that if we fuppofe a gradual diminution of the fea, at the rate which they pretend to have obferved in Sweden*, the emerfion of this ifland muft be of fo modern date, that it is matter of aftonifhment how it came to be covered with foil, herbage, and forefts; fo well focked with inhabitants, and fo regularly adorned as we really found it. We picked up a quantity of fhells at the foot of the fleep rock, where we fometimes waded in water to the knees upon a reef, on account of the flood tide which was advancing. We likewife met with feveral natives returning from the trading-place, who fold us a number of fifhhooks and ornaments, a fifh-net made like our cafting-nets, knit of very firm though flender threads, fome mats and pieces of cloth. We likewife purchafed of them an apron, confifing

\footnotetext{

}

\section*{ROUND THE WORLD. 371}
of many wheels or ftars of plaited coco-nut fibres, about three or four inches in diameter, cohering together by the projecting points, and ornamented with fmall red feathers and beads cut out of thells. Finding that the water encreafed too faft upon us, we looked out for an afcent to the top of the rock, and having with fome difficulty found one, we re-entered the plantations, where we obferved the weeds rooted out with great care, and laid in heaps to dry. After a long walk, during which we miffed our way, and engaged one of the natives to become our guide, we entered a long narrow lane between two fences, which led us directly to the Fayetòoca or burying-place we had left before. Here we found captains Cook and Furneaux, and Mr. Hodges, with a great number of natives, feated on the fine lawn. They were in converfation with an old blear-eyed mans, who had a good deal of weight among the reft of the people, and was always accompanied by a number of them wherever he went. We were told that he had conducted our gentlemen to two fayetoocas, and had pronounced a folemn fpeech or prayer, with his face directed to the building, but at times turning to captain Cook, and addrefling the words to him, in a queftioning tone. In thefe moments he always made a hort paufe, as if he expected an anfwer, and feeing a nod enfue, proceeded with his fpeech. Sometimes, however, his memory feemed to fail, upon which he was prompted by another man who fat near him. From this ceremony, and the place where it was performed, we conjectured that he was a prieft. However, as far as we could fee into their religious notions it did not appear that they practifed any kind of idolatry; neither did they feem to have any particular veneration for birds like the Taheitians, but to worfhip a fupreme invifible Bb 2

Being.
1773. Being. What may have induced them, as wefl Ocrob. as the people of Taheitee and the Society Inles, to t:inite their repofitories of the dead and their places of worthip in one, remains in obfcurity. The religious tenets of a people are the laft things which ftrangers become acquainted with, whofe knowledge of the language is commonly too imperfect. Befides this, the dialect of the church frequently differs from the common dialect, and thus religion is veiled in myfteries, efpecially where there are priefts to take advantage of the credulity of mankind.

From this place we returned to the fea fhore, where a briik trade for vegetables, fowls, and hogs was carried on. Here we bought a large flat fhield or breaft-plate, of a roundih bone, white and polifhed like ivory, about eighteen inches in diameter, which appeared to have belonged to an animal of the cetaceous tribe. We likewife found a new mufical inftrument, confifting of eight, nine, or ten flender reeds, about nine inches long, joined to each other by fome fibres of coco-nut core. The length of its reeds feldom varied much, and the long and fhort ones were placed promifcuoully; a notch was formed at the top of each, and the method of playing was only to flide the inftrument backwards and forwards along the lips. It had commonly not above four or five different notes, and we never met with one which included a whole octave. Its refemblance to the fyrinx, or Pan's flute of the civilized Greeks, dignified it much more than any mufic which it contained. From the method of playing it, the lovers of mufic will eafily conceive that this divine art is entirely in its infancy among the inhabitants. The vocal part, which is the fame as we had already obferved it at Ea-oowhe, is very far from being unhar-
unharmonious, and the women beat time to it by 1773 . fnapping their fingers very exactly; but its whole Ocrob. extent is only of four notes, and therefore cannot admit of any variety. They had likewife a flute of a bamboo-reed, nearly of the thicknefs of a German flute, which they played with the noftrils, like the Taheitians. They commonly had ornamented it with various little figures, burnt in, and pierced four or five holes in it, whereas the Taheitian flute had but three in all. The method of ornamenting wood by burning figures into it, was frequently obferved in their bowls and various other utenfils.

It was near fun-fet when we geturned on board with our collection, and found the veffels ftill furrounded by many canoes, and the natives fwimming about extremely vociferous. Among them were a confiderable number of women, who wantoned in the water like amphibious creatures, and were eafily perfuaded to come on board, perfectly naked, without profefling greater chaftity than the common women at Taheitee, and the Society Ines. Our feamen tock advantage of their difpofition, and once more offered to our eyes a fcene worthy of the Cyprian temples. A fhirt, a fmall piece of cloth, nay a few beads, were fometimes fufficient temptations, for which fome of the women of Tonga-Tabboo, proftituted themfelves without any fenfe of fhame. This lubricity was, however, very far from being general, and we had reafon to believe that not a fingle married woman was guilty of infidelity. If we had been acquainted with the diftinction of ranks as at Taheitee, it is highly probable, that we fhould have obferved no other proftitutes than fuch as belonged to the lowert clafs of people. Still it remains an unaccountable fingularity in the character of the nations of this part
1773. of our globe, that they fuffer any of their unOстов. married women to admit the promifcuous embraces of a multitude of lovers. Can they imagine, that after giving fuch an unlimited courfe to the impulfes of nature, they will make better wives, than the innocent and the chafte? But it is in vain that we endeavour to find reafons for the arbitrary whims of mankind. Their opinions in refpect of the fex in particular, have been infinitely various in all ages and countries. In fome parts of India, no man of confequence will condefcend to marry a virgin; in Europe fhe who has loft that character is univerfally rejected. Turks, Arabs, Tartars, and Ruffians are jealous even of an imaginary characteriftic of virginity, which the native of Malabar beftows upon his Idol.

None of thefe women ventured to ftay on board after fun fet, but returned to the fhore to pafs the night, like the greater part of the inhabitants, under the Thade of the wild wood which lined the coaft. There they lighted numerous fires, and were heard converfing during the greateft part of the night. It feems their eagernefs to continue the trade with us, would not permit them to return to their dwellings, which were probably fituated in the remoteft part of the inland. Our goods were in great repute with them. Nails, which the natives commonly hung on a ftring round the neck, or fluck through the ear, were very current for towis, and fmaller ones for bunches of bananas, and coco-nuts. Their fowls were the largelt we had ever feen, and extremely well-tafted. Their plumage was commonly very gloffy, and beautifully coloured with red and gold. Our failors bought numbers of them, in order to enjoy the barbarous amufement of feeing them fight.

\section*{ROUND THE WORLD.}
fight. From the time of our leaving Huahine, \({ }^{1773 .}\) they had daily followed the cruel occupation of \(\underbrace{\text { Ocros. }}\) tormenting thefe poor birds, by trimming their wings, and incenfing them againft each other. They had fo well fucceeded with thofe of Huahine, that fome of them fought with the moft defperate fury of true game-cocks; but they were well difappointed with thofe which they purchafed at Tonga-Tabboo, and as they could not make them fight, they were forced to eat them in revenge.
Early the next morning, the captain's friend Tuefd. \(5^{\circ}\) Attahha or Attagha (fee p. 365.) came on board in one of the firit canoes, and breakfafted with us. He was dret in mats, one of which, on account of the coolvefs of the morning, he had drawn over his hhoulders. He refembled all other uncivilized people in the circumftance that his attention could not be fixed to one object for any fpace of time, and it was difficult to prevail on him to fit ftill, whilft Mr. Hodges drew his portrait. After breakfaft, the captains and my father prepared to return to the fhore with him ; but juft as he was going out of the cabin, he happened to fee a Taheitian dog running about the deck; at this fight he could not conceal his joy, but clapped his hands on his breaft, and curning to the captain, repeated the word goorree * near twenty times. We were much furprifed to hear that he knew the name of an animal which did not exift in his country, and made him a prefent of one of each fex, with which he went on fhore in an extafy of joy. That the name of dogs fhould be familiar to a people, who are not poffeffed of them, feems to prove

\footnotetext{
* Ooree fignifies a dog at Taheitee; and ghooree at New Zeeland.
}
1773. prove either that this knowledge has been proОстов. pagated by tradition from their anceftors, who migrated hither from other illands, and from the continent; or that they have had dogs upon their inland, of which the race, by forme accident, is become extinct; or laftly, that they fill have a: intercourfe with other inland where the fe animals exit.

I remained on board all this day, to arrange the collection of plants and birds which we had made upon our firlt excurfion, and which was far from despicable, confidering the fall fize of the inland. The natives continued to croud about our veffels in a number of canoes, whilft many were fwimming to and from the shore, who were probably not rich enough to poffefs a canoe. Thee embarkations were of different conftruction. The common fall trading-canoes were Sharp-bottomed, and ended in a harp edge at each extremity, which was covered with a board or deck, becaufe their narrow form frequently expofed there parts to an entire fubmerfion, which would have filled them with water without this precaution. They commonly had a flight outrigger or balancer, made of a few poles, to arevent their overfetting. The body of the canoe confined of feveral planks, of a hard brown wood, rewed together with firings made of the fibrous coco-nut core, and fo artfully joined that they appeared to be remarkably tight. The Taheitians fimply bore holes in each plank, through which they pals their strings; but by this means their canoes are always leaky. At Tongo-Tabboo they dub the infide of the plank in fuch a manner as to leave a projecting lift or rim clofe to the edge, and through this they pals their threads. Along the deck or narrow board
at each extremity are placed feven or eight 1773. knobs, which feem to be an imitation of the little Оcrob. fins, (pinnula (purice,) on the belly of bonitos, albecores, or mackarels; and I cannot but conjecture that the natives have taken thefe fwift firhes for their models in the conftruction of their boats. Though thefe canoes are commonly fifteen or eighteen feet long, yet they are as neatly and fmoothly polifhed as our beft cabinetwork, which muft appear the more furprifing when we confider that the tools of the natives are only wretched bits of coral, and rafps made of the fkins of rays. Their paddles were equally well polifhed, of the fame wood as the canoe, and had fhort rhomboidal broad blades, like thofe of Taheitee. The other fort of canoes were conftructed for failing, and perfons fkilled in nautical matters acknowledge that they were admirably well adapted for this purpofe. We faw one of them in Maria Bay, confilting of two joined together, of which the planks were fewed in the fame manner as in the common canoe; but they were covered all over, and had a kind of elevated ftage or platform, like the Taheitian war-canoes *. Some of them may carry one hundred and fifty men; and their fails, which are latine, are made of ftrong mats, in which the rude figure of a tortoife or a cock, \(\& c\). is fometimes reprefented + . As a farther detail would be tedious to moft readers, and inftructive only to mariners, I Thall only obferve, that it appears probable from the good conftruction of the failing-boats, that the inhabi-
tants

\footnotetext{
* See Hawkefworth, vol. II.
\(\dagger\) The figure of a canoe in Schouten's voyage, gives a yery good idea of one of the failing-boats of Tonga-Tajboo. See Dalrymple's Collection, vol. II. p. 17, ib.
}
1773. tants of thefe iflands are more experienced mariOcrob. ners than thofe of Taheitee and the Society Ines.
\(\underbrace{}_{\text {Among the great numbers of people who fur- }}\) rounded our fhips, we obferved feveral whofe hair feemed to be burnt at the ends, and were ftrewed with a white powder. Upon examination we found that this powder was nothing elfe than lime, made of fhells or coral, which had corroded or burnt the hair. The tafte of powdering was at its height in this ifland. We obferved a man who had employed a blue powder, and many perfons of both fexes who wore an orange powder, made of turmerick. St. Jerom, who preached againft the vanities of the age, very ferioully reprehends a fimilar cuftom in the Roman ladies: " Ne irrufet crines, et anticipet fibi ignes Gebenna!" Thus, by an admirable fimilarity of follies, the modes of the former inhabitants of Europe are in full force among the modern antipodes; and our infipid beaux, whofe only pride is the invention of a new fahhion, are forced to fhare that flender honour with the uncivilized natives of an ifle in the South Seas.

My father did not return from his excurfion till the evening, having proceeded a confiderable way towards the fouth end of the ifland. At noon a fmart fhower had obliged him to retire into a plantation and to take fhelter in a houfe. Fortunately for him the owner of this cottage was at home, and immediately invited him to fit down on the clean mats which covered the floor, whilf he went to provide fome refrefhments. In a few moments he brought feveral coco-nuts, and having opened his oven under ground, took out fome bananas and fifhes, wrapped in leaves, which were perfectly well done, and delicious to the tafte. The manner of cooking provifions is therefore
therefore exactly the fame as at Taheitee; nor 1773 . are the natives lefs inclinable to acts of hofpitali- \(\underbrace{\text { Ocroв }}\) ty and benevolence, though thefe virtues were not fo frequently exercifed towards us, becaufe we commonly found the country quite deferted, the inhabitants being drawn together towards our trading-place. The hofpitable man was rewarded with nails and beads, with which he performed the fagafetai, by laying them on his head, and accompanied my father back to the beach, carefully carrying a number of fpears and clubs for him, which he had purchafed on the road.

The harmlefs difpofition of thefe good people Wed. 6. could not fecure them againft thofe misfortunes, which are too often attendant upon all voyages of difcovery. Our goods tempted them at leaft as much as they had tempted the Taheitians, and they were confequently equally difpofed to pilfer. The captains had not been long on fhore the next day, when one of the natives took an opportunity of ftealing a jacket out of our boat. In a few moments no lefs than feven fhot were fired, without the captain's orders, though in his prefence, at the thief, who firft dived in the water, and at lait ran into the croud, by which means feveral innocent people were wounded. Notwithftanding this feverity, the good-nature of the people was fuch, that they did not forfake the trading-place, or take umbrage at our proceeding, but heard with unconcern the balls whiftling about their ears. A few hours afterwards, one of them was equally nimble on board our fhip, and luckily flipping into the mafter's cabin ftole from thence feveral mathematical books, a fword, a ruler, and a number of trifies of which he could never make the leaft ufe. He was feen making his efcape in a canoe, and a boat being difpatched after him, he threw all the ftolen effects overboard.

\section*{A V O Y A G E}
1773. board. Thefe were picked up by another of our Остов. boats, while the firlt continued in the purfuit of the thief. Our men fired a mufket into the ftern of his canoe, upon which he and fome others with him jumped into the fea. The thief was ftill hunted with incredible eagernefs, but difplayed a moft wonderful agility, diving feveral times under the boat, and once unfhipping the rudder. At lalt one of our people darted the boat-hook at him, and catching him under the ribs, dragged him into the boat; but he watched his opportunity, and notwithftanding his lofs of blood, leaped into the fea again, and efcaped to fome canoes, which came from the fhore to his affitance. It is remarkable that even fuch a difpofition for cruelty, as had been difplayed in the puffuit of this poor wretch, did not deprive us of the confidence and affection of his countrymen. The captains brought Attagha and another chief on board with them to dinner, and the trade was carried on as quietly as if nothing had happened. The chief who came with Attagha appeared to be of a fuperior rank, becaufe the latter, who ufed to fit at table with us on former occafions, now retreated a few fteps, fat down on the floor, and could not be prevailed upon to eat in his fight. He was a blear-eyed, elderly man, and having a great influence on the people in the canoes, was called the admiral by our fea-men. His drefs did not in the leaft indicate his fuperior dignity, probably becaufe thefe iflanders are little acquainted with the refinements of luxury, though on the other hand they feem to behave with great fubmiffion to their men of rank, directly contrary to what we had obferved at the Society Illes. 'The refpect which Attagha paid to the other chief, was however trifling in comparifon of that which we heard of on fhore after
after dinner. Here we found a well-looking middle aged man, fitting on the ground at the trading-place, and all the croud forming a circle about him. Some of our fportfmen acquainted us, that they had met with him near Maria Bay, where the other natives paffing by had proftrated themfelves on the ground before him, kiffed his feet, and put them on their necks. Upon enquiry, they had been repeatedly told, that he was the chief of the whole ifland, in the fame manner as Cookee (captain Cook) was chief of our fhips, and that they called him Ko-Haghee-too-Fallango *. Whether this was his name or his title I cannot determine, as we never heard it mentioned again by the natives; but they all agreed in telling us, that he was their \(\dagger\) Areeghee or king. They added that his name was Latoo-Nipooroo, of which we concluded that the former part (Latoo) was a title, it being the fame which Schouten and Le Maire, the Dutch navigators in the year 1616, found at the Cocos, Thaytors, and Horne illands, which are fituated in this neighbourhood, only a few degrees to the northward \(\ddagger\). We were confirmed in this opinion by the great correfpondence of the vocabularies, which thefe intelligent feamen have left us, with the language which was fpoken at TongaTabboo, and ftill more fo by the entire fimilarity in the behaviour and cuftoms of thefe iflanders. The captains walked up to the Latoo, and made him a number of prefents, which he received

\footnotetext{
\({ }^{*} K_{0}\) is the Article in thefe Inlands and at New Zeeland, which anfwers to the Taheitian \(O\) or \(E\).
\(t\) The fame word in the Taheitee dialect is pronounced Aree.
\(\ddagger\) See Dalrymple's Hiftorical Collection of Voyages and Difcoveries in the South Pacific Ocean, Vol. 1I. p. 27, 28, 8cc.
}
1773. ed with fo much gravity and feeming indifference, as bordered upon ftupidity. A mongft other things they put a fhirt on him, with a great deal of trouble, becaufe his behaviour was moft aukwardly paffive. He did not return any thanks for the prefents which he received, till an old woman fitting behind him, had repeatedly excited him to exprefs his gratitude. Upon this he held each feparate article over his head, and pronounced the word fagafetai, like the meaneft of his fubjects. The prief, who had led our captains to the places of worfhip, on the firft day after our arrival, was feated in the fame circle, and drank vaft quantities of the intoxicating pepperwater \({ }^{*}\), which was ferved in little fquare cups made of banana-leaves curioully folded. At his defire, we were very politely prefented with this dainty beverage, and in pure civility tafted of it. It had a naufeous infipid tafte, which was afterwards followed by a ftrong pungency, and its colour was fomewhat milky. The holy man took fuch large and frequent draughts of this ftuff every evening, as to become perfectly intoxicated. No wonder then that his memory failed him, when he was at prayer (fee p. 37 I .) that his whole habit of body was lean and fcabby, his face wrinkled, and his eyes red, and " purging thick amber \(\dagger\)." He had great authority among all the people, and a number of fervants attended to fupply him with replenifhed cups. The prefents, which he received from us, he retained in his own cuftody, whereas Attagha and feveral other chiefs, gave up to their fuperiors whatever the captains had prefented to them. The prieft had a daughter, who received many prefents from our people.

\footnotetext{
* Called awa at Taheitee, and kawa at Tonga-Tabboo, and Horne Illand.
\(\dagger\) Shakefpeare.
}

She was extremely well featured, and fairer than moft of the women of this country, who feemed to pay her fome degree of deference. A fairer complexion, and fotter features than thofe of the common people, are the natural effects of an ealy inactive life, unexpofed to the blaze of a tropical fun, and pampered with a profufion of the beft productions of the country. Muft we not conclude therefore that the beginnings of luxury will be introduced even here under the cloak of religion, and that another nation will be added to the many dupes of voluptuous prieft-craft ? So fmall a fpark as the cunning of a fingle man may in time kindle a dreadful and irrefitible fire! The obedience and fubmiffion with which thefe people revere their chiefs, are evident proofs that their government, though perhaps not perfectly defpotic, is yet far from being democratical ; and this kind of political conftitution feems likely' to facilitate the introduction of luxury. This feems to hold good likewife in regard to many iflands in the weftern part of the Pacific Ocean, fince the faithful defcriptions of Schouten, Le Maire, and Tafman, who vifited them, correfpond in every material particular with our own obfervations. The general difpofition for trading, and the kind and friencly reception which Atrangers have almoft conitantly met with in every ifland belonging to this group, prevailed upon us to give thete difcoveries of Schouten and Tafman the name of the Friendly Islands. Schouten's boats were indeed attacked at Cocos, Traitors, Hope, and Horne Inlands; but thefe attacks were inconfiderable, though feverely punifhed on the part of the Dutch navigator, who, after the firft difturbance at Horne Inland, lay there nine days in perfect good underftanding with the natives. Tafman, who twenty-feven years afterwards
terwards faw feveral iflands near fix degrees to the fouthward of thofe which Schouten had vifited, was received with every demonftration of peace and friend hip , though he was the firft European that difcovered them. Whether this behaviour was only a confequence of the intelligence which the natives of Tonga-Tabboo and Anamocka, (Amfterdam and Rotterdam Iflands,) might have received from thofe of Cocos, Hope, and Horne Iflands, concerning the fuperior ftrength of the ftrangers and the havock which they had made; or whether it was the natural effect of their peaceable difpofition, I cannot venture to determine, though I am inclined to adopt the former opinion. Captain Wallis probably faw Cocos and Traitors Iflands in 1767, which he called Bofcawen's and Keppel's Ines; but his people did the natives no hurt, except frightening them with the difcharge of a fingle mufket. M. de Bougainville faw fome of the north-eaftermoft iffes belonging to this group, of which the inhabitants had the fame general charater. He called his difcovery the \(A r\) cbipel des Navigateurs, juftly enough, as many fhips have fallen in with it. Since Tafman's time, no other navigator has had any intercourfe with the ife of Amfterdam, which be difcovered, previous to our arrival. During a face, therefore, of one hundred and thirty years, they have not materially changed their manners, dreffes, way of living, difpofition, \&cc. \&cc. Our ignorance of their language prevented our obtaining pofitive proof that they ftill preferved, by tradition, the memory of former vifitors; but they poffeffed fome nails, which muft have been brought to the ifland in Tafman's time. We purchafed one of thefe nails, which was very fmall and almoft confumed with ruft, but had been carefully preferved by being fixed on a wooden handle, probably to
ferve
ferve the purpofes of a googe or borer, and is now 1773. depofited in the Brith Mufeum. We likewife Остов. bought fome fmall earthen pots, perfectly black with foot on the outfide, and fufpected them to be memorials of Tafman's voyage; but afterwards we rather believed that they were manufactured by the natives themfelves. The accounts of Schouten, Tafman, and M. de Bougainville agree with ours, in refpect of the agility with which the natives committed petty thefts. Tafman and captain Wallis have likewife obferved their cuftom of cutting off the little finger; and according to Schouten's and Le Maire's circumftantial narratives, the natives of Horne Ifland were as fubmiffive to their king as thofe of Tonga-Tabboo. The experience of the fuperior power of the ftrangers, made them refpectful even to fervility towards the Dutch; their king proftrated himfelf before a Dutch purfer, and their chiefs placed their necks under his foot *. Thefe exceffive marks of fubmiffion feem to border upon meannefs and cowardice; but we never had reafon to fuppofe them tinctured with thefe vices. Their behaviour towards us was commonly accompanied with that freedom and boldnefs which the rectitude of intentions infpires; and though really polite, was never unbecoming. Here, however, as in all other focieties of men, we found exceptions to the general character, and had reafon to lament the behaviour of vicious individuals. Dr. Sparrman and myfelf having left the beach where the Latoo attracted the attention of all our people, entered the wood in purfuit of farther difcoveries in our branch of fcience. The firt difcharge of my fowling-piece at a bird brought three natives towards us, with whom we Vol. I. C c entered

\footnotetext{
*See Mr. Dalrymple's Hiftoricil Colledtion of Voyages in the Pacific Ocean, vol. II. p. 41 .
}
1773. entered into converfation, as far as our fuperficial knowledge of their tongue would permit. Soon after, Dr. Sparrman ftepped afide into a thicket in fearch of a bayonet, which he had loft from the end of his mufket. One of the natives, finding the temptation of the moment irrefiftible, grafped my fowling-piece, and ftruggled to wreft it from me. I called to my companion, and the two other natives ran away, unwilling to become accomplices in this attack. In the ftruggle our feet were entangled in a bufh, and we both fell together; but the native, feeing he could not gain his point, and perhaps dreading the arrival of Dr. Sparrman, got up before me, and took that opportunity of running off. My friend joined me immediately; and we concluded, that if there was fomething treacherous or vicious in the behaviour of this fellow, our feparation was alfo imprudent, becaufe it had furnifhed him with an opportunity to exercife his talents. We continued ftrolling about for fome time, without any finifter accident, and returned to the tradingplace on the beach, where we found almoft all the people whom we had left. Many of them were now feated in different little groups, which appeared to be fo many feparate families, and confifted of perfons of various ages and fexes. They were all in converfation, of which no doubt the arrival of our fhips furnifhed the topics; and many of their women amufed themfelves either with finging or playing at ball. There was a young girl in particular, whofe features were more regular than common, her eyes fparkling with vivacity, her whole frame admirably proportioned, and, what was moft remarkable here, her long jetty hair hanging down in graceful curls on her neck This girl, lively and eafy in all her actions, played with five gourds, of the fize of fmall apples,
apples, perfeefly globular; the threw them up 1773. into the air one after another continually, and ne- Остов. ver failed to catch them all with great dexterity, at leaft for a quarter of an hour. The mufical ladies again performed the fame tune which we had already heard at Ea-oowhe, the different voices falling in with each other very harmoniounly, and fometimes joining all together as in chorus. Though I never faw the natives of thefe illands dance, yet we may add this amufement to the lift of thofe which they are acquainted with, from their own accounts and geftures whenever they fold us their aprons made of ftars of coco-nut core, and ormamented with fhell-work and red feathers, or fuch as were curioufly wrought of mats in refemblance of fret-work. From thefe geftures I have great reafon to fuppofe that their dances are of a dramatic kind, and public, like thofe which 1 have fooken of in the Society Ifles, (fee pag. 325.) Schouten and Le Maire likewife ftrongly confirm this fuppofition by their account of the dances at Horne 1 lland *. It appeared, upon the whole, that the cultoms and language of thefe julanders have a great affinity with thofe of the Taheitians, and that it would not therefore be very fungular to find a coincidence even in their amufements. The greateft differences between thefe two tribes, who muit have originated from the fame Atock, feem to be owing to the different nature of their illands. The Society. Ines are well furnifhed with wood, and the tops of their mountains are ftill covered with inexhauftible forefts. At the Friendly laes this article is much fcarcer, the furface (at leaft of thofe which we have feen) being almoft entirely laid out in plantations. The natural confequence is, that the houfes are lofty \(\mathrm{Cc}_{2}\) and

\footnotetext{
*See Mr. Dalrymple's Collection of Voyages, vol. II. p. 47.
}
1773. and of immenfe extent in the first group of inland \(;\) Octcb. but much faller and left convenient in the lat. In one the canoes are numerous, I may almoft fay innumerable, and many of a vaft fie; and, in the other, very few in number, and much faller. The mountains of the Society Ines continually attract the vapours from the atmosphere, and many rivulets defend from the broken rocks into the plain, where they wind their ferpentine courfe and glide fmoothly to the ea. The inhabitants of thole iflands take advantage of this gift of bountiful nature, and not only drink of the falutatry element, but likewife bathe fo frequently in it that no impurity can long adhere to their kin. It is very different with a people who are abfolately denied this bleffing, and who mut either content themselves with putrid ftagnant rain-water in a few dirty pools, or go entirely without it. They are obliged to have recourfe to expedients in order to preferve a certain degree of cleanlinefs, which may preclude various diftempers. They therefore cut off their hair, and have or clip their beards, which doubtless makes them look more unlike the Taheitians than they would otherwife do. Still there precautions are not fufficient, especially as they have no fluid for drinking in any quantity. The body is therefore very fubject to leprous complaints, which are perhaps irritated by the ufe of the pepper-root water or ava. Hence alfo that burning or bliftering on the cheek-bones which we observed to be fo general among this tribe, that hardly an individual was free from it, and which can only be ufed as a remedy against rome diforders. The foil of the Society Ifles in the plains and vallies is rich, and the rivulets which interfect it, fupply abundance of moifture. All forts of evegetables therefore thrive with great luxuriance

\section*{ROUND THE WORLD.}
upon it, and require little attendance or cultiva- 1 -73. tion. This profufion is become the fource of Остов. that great luxury among the chiefs which we do not meet with at Tonga-Tabboo. There the coral rock is covered only with a thin bed of mould, which fparingly affords nourifhment to all forts of trees ; and the molt ufeful of all, the bread-fruit tree, thrives imperfectly on the illand, as it is deftitute of water, except when a genial hower happens to impregnate and fertilize the ground. The labour of the natives is therefore greater than that of the Taheitians, and accounts for the regularity of the plantations, and the accurate divifion of property. It is likewife to this fource we muft afcribe it, that they have always fet a higher value on their provifions than on their tools, dreffes, ornaments, and weapons, though many of thefe muft have coft them infinite time and application. They very juftly conceive the articles of food to be their principal riches, of which the lofs is abfolutely not to be remedied. If we obferved their bodies more flender and their mufcles harder than thofe of the Taheitians, this feems to be the confequence of a greater and more conftant exertion of ftrength. Thus, perhaps, they become induftrious by force of habit, and when agriculture does not occupy them, they are actuated to employ their vacant hours in the fabrick of that variety of tools and inftruments on which they beftow fo much time, patience, labour, and ingenuity. This induftrious turn has alfo led them, in the cultivation of all their arts, to fo much greater perfection than the Tabeitians. By degrees they have hit upon new inventions, and introduced an active fpirit and enlivening chearfulnefs even into their amufements. Their happinefs of temper they preferve under a poli-

\section*{A \(\quad \mathbf{V} \quad \mathbf{O} \quad \mathbf{Y} \quad \mathrm{A} \quad \mathbf{G} \quad \mathrm{E}\)}
1773. a political conftitution, which does not appear to Octob. be very favourable to liberty; but we need not go fo far from home to wonder at fuch a phænomenon, when one of the mort enslaved people in all Europe, are characterifed as the merriest and mot facetious of mankind. Still there may be more fincerity in the chearfulnefs of the natives of Tonga-Tabboo; for, exclufive of great and almost fervile fubmiffion, their king does not feem to exact any thing from them, which, by depriving them of the means to fatisfy the mont indifpenfible wants of nature, could make them miferable. Be this as it may, fo much feems to be certain, that their fyftems of politics and religion, from their fimilarity with the Taheitian, as far as we could judge, mut have had one common origin, perhaps in the mother country, from whence both there colonies iffued. Single diffonant cuftoms, and opinions may have acceded to the primitive ideas, in proportion as various accidents, or human caprices have given rife to them. The affinity of their languages is fill more decifive. The greateft part of the neceffaries of life, common to both groups of inlands, the parts of the body, in Short the molt obvious and univerfal ideas, were expreffed at the Society and Friendly lies nearly by the fame words. We did not find that fonoroufnefs in the Tonga-Tabboo dialect, which is prevalent in that of Taheitee, becaufe the inhabitants of the former have adopted the \(F, K\), and \(S\), fo that their language is more replete with confonants. This harnnefs is compenfated however by the frequent use of the liquid letters, \(L, M, N\); and of the fofter vowels \(E\) and \(I\), to which we mut add that kind of finging tone, which they generally retain even in common converfation. \(\qquad\) But it is time to return from this digrefion.

\section*{ROUND THE WORLD.}

We did not part from our friends till fun-fet, \({ }^{1773-}\) promifing to return to them once more the next morning. Our thips were well provided with bananas, yams, and coco-nuts; and, confidering the fmall fize of the ifland, as well as our Chort ftay, fixty or eighty hogs, befides a vaft number of large fowls, were a furprifing acquifition. During our ftay we had fearched the country in vain for water, and the mafter had been fent to the ealtward to furvey Maria Bay, and the low ifles which fhelter that harbour. The fituation of thefe iflands he found very exactly reprefented in the charts of the ever-accurate Tafman, and on one of them where he landed, he faw an aftonifhing number of fpeckled water-fnakes, with flat tails, which are harmlefs, and diftinguifhed in the fyftem of Linnæus, by the name of colubri laticaudati. In our branch we had not been unfuccefsful, this little ifland having afforded us feveral new plants, among which was a new fpecies of jefuit's bark, or cincbona, of which the bitter bark may perhaps be equally efficacious with that of Peru. We alfo collected feveral birds unknown before, and purchafed fome live fpecies, particularly of the parrot and pigeon tribe, of the natives, who feem to be very expert fowlers. But it did not appear to us, that the pigeons, which many carried perched on crooked iticks, were marks of diftinction, though Schouten at Horne Ifland where the fame cuftom prevails, is of that opinion*. In the laft boat which had brought our people on board in the evening, the Latoo or king had fent a great quantity of vegetables, together with a whole hog roafted, or dreffed under-ground, as a prefent to the captain. In the morning therefore, we

\footnotetext{
- See Mr. Dalrymple's Hittorical Collection, vol. II. p. \(4^{66}\).
}
1773. we embarked early in the pinnace, and rowed to Ocтов. the more to make a prefent in return. We found the Latoo fitting at a little diftance from the beach; and captain Cook gave him a Shirt, a fam, a hatchet, a brats kettle, and feveral articlos of leis moment, all which he received with fullen gravity; this deportment he never varied, except once, when he was feen to file as he conversed with Attagha. Among the croud, we observed a fingle man, who differed from all the reft, by having fuffered his hair to grow, and having twitted it into feveral round bunches, which hung wildly about his ears. This man, and the young girl mentioned page 386 , were the only perfons we met with, who had not conformed to the general cuftom of cutting off the hair.

After a hort converfation with the natives, of whom we bought a variety of their tools, on account of their elegant carving, we returned on board to breakfaft, and immediately after weighed the anchors and ret fail. The provifions lying in confuted heaps on the decks, prevented our going into the open fa immediately. We therefore kept ftanding off and on, under shelter of this inland, and did not take our departure till towards evening, when we shaped our course foutherly.
Friday 8. The next morning, the weather being nearly calm, we caught a hark, eight feet long, conequently bigger than any we had feen before. In the afternoon we fay the little inkle which Tafman calls Pylftaerts lind. This name refers to the birds, which the Dutch navigators obferved there, and which in all probability were tropic birds. Pylftaert literally fignifying arrow-tail, alludes to the two long feathers in the tail of this bird, from whence its French name of paille-en-
queue is likewife derived*. Its latitude is \(22^{\circ}{ }^{1773 .}\) \(26^{\prime} \mathrm{S}\). and its longitude \(170^{\circ} 59^{\prime} \mathrm{W}\). A con- \(\underbrace{\text { Octob. }}\) trary S. W. wind which fprung up towards evening, obliged us to cruize about till the roth in Sund. 10. the morning, when we came in fight of this little iflet again. It is of a moderate height, and has two hummocks, of which the fouthernmoft is the higheft. We recovered the trade-wind by degrees, fo that we were out of fight of this ifland about two o'clock in the afternoon, and having bid adieu to the tropical iflands of this ocean, directed our courfe a fecond time towards New Zeeland. We had now made fuch good ufe of the four months, after our departure from thence, as to have croffed the South Sea in the middle latitudes, in the depth of winter, examined a fpace of more than forty degrees of longitude betwe n the tropics, and refrefhed our people at Taheitee, the Society Iflands, and the Friendly Iflands during one and thirty days. The feafon for profecuting our difcoveries in high fouthern latitudes advanced, and the favage rocks of New Zeeland were only to give us fhelter, whilft we changed our fair-weather rigging, for fuch as might refift the forms and rigours of more inhofpitable climates.

\footnotetext{

}

C HAP.

\section*{C H A P. II.}

Courfe from the Friendly Ifles to New Zeeland.Separation from the Adventure.-Second flay in 2ueen Cbariotse's Sound.

Tuer. 12.
W E had no fooner left the torrid zone, than flocks of fea-fowls attended us on our courfe, and hovered lightly on the waves, which a tavourable gale had raifed. On the 12 th an albatrofs appeared, among the reft of the inhabitants of the temperate zone, which never dare to crofs the tropic, but roam from thence even to the polar circle; fo carefully has nature allotted to each animal its proper place of abode.
Satur. 16. The weather continued fair till the 16th in the morning, when we had a fall of rain. Some of the people who examined the pump-well, found there a dog, which they brought upon deck. This creature, which had been purchafed at the ifland of Huahine, like many others of the fame fpecies, had obftinately refufed to take any nourifhment, and in all probability had lived ever fince in that hole without the leaft fupport of food, for a fpace of thirty-nine or forty days. The whole body was reduced to a mere fkeleton, the legs were contracted, and he voided blood at the anus. The torments in which this poor animal mult have lived, were a leffon to our people, to purchafe only young puppies of this race for the future, as the grown dogs conftantly refufed to eat on board.

The next night feveral blubbers paffed by the Ship, which were vifible on account of their phofphoric light. Their luminous quality was fo great,
great, that the bofom of the fea, feemed to con- 1773. tain brighter ftars than the æther.
Sea-weed, fheer-waters, and albatrofles daily \(\sim^{\text {(1) }}\) appeared, as we advanced towards New Zeeland. On the igth, the fea was Juminous, and on the 20th, the diving petrels arrived in flocks about us, and indicated the proximity of the land, which we faw the next morning at five Tuef. 19. o'clock. We ftood in fhore all the day, till four in the afternoon, when we were abreaft of the Table Cape, and Portland Ifland which adjoins to it by a ledge of rocks. The fhores were white and fteep towards the fea, and we could perceive the huts and ftrong holds of the natives, like eagles airies on the top of the cliffs. A great number of natives ran along the rocks, in order to gaze at us, as we paffed by them, and many feated themfelves at the point which extends to the fouthward, but did not care to come off to usin their canoes. We failed between the funken rock and the land, and continued our courfe acrofs Hawke's Bay, and then along fhore, as it was growing dark.
In the morning we were to the fouth of Cape Friday2z. Kidnappers, and advanced to the Black Cape. After breakfaft three canoes put off from this part of the fhore, where fome level land appeared at the foot of the mountains. They foon came on board as we were not very far from the land, and in one of them was a chief, who came on deck without hefitation. He was a tall, middle aged man, clothed in two new and elegantdreffes, made of the New Zeeland flag or flax-plant. His hair was dreffed in the higheft fafhion of the country, tied on the crown, oiled, and fluck with white feathers. In each ear he wore a piece of albatrofs ikin covered with its white down, and his face was punetured in fpirals and curve lines.
1773. His companions fold us fome fifh, while he was entertained in the cabin. The captain prefented him with a piece of red baize, fome garden-feeds, two young pigs of each fex, and likewife three pairs of fowls. Our young Borabora man, Mahine, who did not undertand the language of the New Zeelanders at the firft interview, like Tupaya, hearing from us that thefe people were not poffeffed of coco-nuts and yams, produced fome of thefe nuts and roots with a view to offer them to the chief; but upon our affuring him the climate was unfavourable to the growth of palm-trees, he only pretented the yams, whilft we made an effort to convince the chief of the value of the prefents which he had received, and that it was his intereft to keep the hogs and fowls for breeding, and to plant the roots. He feemed at laft to comprehend our meaning, and in return for fuch valuable prefents, parted with his mabiepech or battle-axe, which was perfectly new, its head well catved, and ornamented with red parrot's feathers and white dog's hair. After a fhort ftay he returned on deck, where captain Cook prefented him with feveral large nails. He received thofe with fo much eagernefs that he feemed to value them above any other prefent; and having obferved that the captain took them out of the holes in the capftan, where his clerk had put them, he turned the capitan all round, and examined every hole to fee if there were not fome more concealed. This circumftance plainly fhews how much the value of iron tools is advanced in the eftimation of the New Zeelanders fince the Endeavour's voyage, when they would hardly receive them in many places. Betore their departure they gave us a heeva or warlike dance, which confilted of famping with the feet, brandihing fhort clubs, fpears, \(\& c\). making frightful contorfions

\section*{ROUND.THE WORI.D.}
contorfions of the face, lolling out the tongue, and bellowing wildly, but in tune with each motion. From their manner of treating the fowls which we had given them, we had no great reafon to expect fuccefs in our plan of focking this country with domeftic animals, and we much feared whether the birds would reach the fhore alive. We comforted ourfelves, however, with the thoughts of having at leait attempted what we could not hope to fee accomplifhed.

The wind, which had fhifted during our interview with thefe favages, blew right off fhore, and was very unfavourable. It encreafed towards evening into a hard gale, during which we hauled our wind, and ftood on different tacks for fear of being blown too far from the coaft. Heavy rains attended this gale, and penetrated every cabin in the fhip. Squalls were likewife frequent and fplit fome old fails, which were not fit to refift the violence of the tempeft. We had not expected fuch a rough reception in the latitude of \(40^{\circ}\) fouth, and felt the air from the bleak mountains of New Zeeland very cold and uncomfortable, the thermometer being at 50 degrees in the morning. A few hours of mode- Satur. 23 . rate and almoft calm weather fucceeded thefe poifterous beginnings, after which the gale frefhened to the fame height as the night before. By day it absted again, and permitted us to run in Thore, but every night it encreafed, and blew in furious gufts, which demanded all our attention. On the 24th, in the evening, we had reached the entrance of Cook's Strait, and faw Cape Pallifer before us; but the next morning a gale fprung Mon. 25 . up, which was already fo violent, at nine o'clock, that we were forced to hand our fails and lay to, under a fingle one. Though we were fituated under the lee of a high and mountainous coaft, yet

\section*{A V O Y A G E}
1773. yet the waves rofe to a valt height, ran prodigioully along, and were difperfed into vapour as they broke by the violence of the form. The whole furface of the fea was by this means rendered hazy, and as the fun thone out in a cloudlefs fky , the white foam was perfectly dazzling. The fury of the wind fill encreafed to as to tear to pieces the only fail which we had hitherto daxed to fhew, and we rolled about at the mercy of the waves, frequently hipping great quantities of water, which fell with prodigious force on the decks, and broke all that food in the way. The continual ftrain flackened all the rigging and ropes in the hip, and loofened every thing, in fo much that it gradually gave way and prefented to our eyes a general fcene of confufion. In one of the deepeft rolls the arm cheft on the quarterdeck was torn out of its place and overfet, leaning againft the rails to leeward. A young gentleman, Mr. Hood, who happened to be juft then to leeward of it, providentially efcaped by bending down when he faw the cheft falling, fo as to remain unhurt in the angle which it formed with the rail. I he confufion of the elements did not fcare every bird away from us : from time to time a black fhear-water hovered over the ruffled furface of the fea, and artfully withftood the force of the tempeft, by keeping under the lee of the high tops of the waves. The afpect of the ocean was at once magnificent and terrific : now on the fummit of a broad and heavy billow, we overlooked an unmeafurable expanfe of fea, furrowed into numberlefs deep channels; now on a fudden the wave broke under us, and we plunged into a deep and dreary valley, whillt a frefh mountain rofe to wind ward with a foaming creft, and threatened to overwhelm us. The night coming on was not without new hor-
rons, efpecially for thofe who had not been bred up to a fea-faring life. In the captain's cabin the windows were taken out and replaced by the dead-lights, to guard againft the intrufion of the waves in wearing the flhip. This operation difturbed from its retreat a fcorpion, which had lain concealed in a chink, and was probably brought on board with fruit from the iflands. Our friend Mahine affured us that it was harmlefs, but its appearance alone was horrid enough to fill the mind with apprehenfion.* In the other cabins the beds were perfectly foaked in water, whill the tremendous roar of the waves, the creaking of the timbers, and the rolling motion deprived us of all hopes of repofe. To complete this catalogue of horrors, we heard the voices of failors from time to time louder than the blaftering winds or the raging ocean itfelf, uttering horrible vollies of curfes and oaths. Without any provocation to ferve as an excure, they execrued every limb in varied terms, piercing and complicated beyond the power of defcription. Inured to danger from their infancy, they were infenfible to its threats, and not a fingle reflection bridled their blafphemous tongues. I know of nothing comparable to the dreadful energy of their curfes, than that difgrace to chriftianity the Anathema of Ernulphus \(\dagger\). In this comfortlefs fituation we continued till two o'clock the next morning, when the wind died away fudden- Tuef. 26. ly, and was fucceeded in an hour's time by another from a favourable quarter. In the calm interval between thefe two winds, the fhip rolled more violently than ever, fo that the main-chains were repeatedly dipped under water, with part of the quarter-deck.

\section*{A \(\quad \mathbf{V} \quad \mathrm{O} \quad \mathrm{Y}\) A \(\mathrm{G} \quad \mathrm{E}\)}
1773. We failed all this day towards the land, havs Остов. ing been driven off many leagues during the form. Tuef. 26. Pintadas, black fhear-waters, and other petrels now furrounded us in great flocks, and we paffed an albatrofs fitting faft afleep in the water, perhaps fatigued by the violence of the preceding gale.

The next day we were difappointed once more at the mouth of the frait, and got a contrary wind, which blew a ftorm before night. The fame weather continued for two days following, almoft
Frid. 29. without intermiffion. On the 29th, early in the morning, feveral water-fpouts were feen by the officer at watch; and foon after we had a flight shower and a favourable change of wind. In the evening we loft fight of the Adventure our confort, whom we never rejoined again during this voyage. The foul wind which in the morning on the 3oth certainly contributed to feparate her from us entirely, fhe being fo far aftern that this wind muft have had infinitely more effect upon her than upon our fhip.

It would be ufelefs and tedious to repeat the many changes from adverfe tempefts to favourable gales which fucceeded thofe already mentioned, and which made us defpair of ever coming to an anchor in New Zeeland again. We were buffetted about for nine nights together, during which fleep fcarce ever vifited our eyes. On the
Novem. Ift of November we got into Cook's Strait, but
Mond. 1. the weather proved fo inconftant, that it became contrary to us as foon as we had approached Cape Tera-wittee upon the Northern Ifland. Our fi-
Tuef. 2. tuation permitted us, however, the next day to come to an anchor in a new bay, which we difcovered immediately under this promontory to the weftward. The environs of this bay were dreary, blackifh, barren mountains, of a great height, al-

\section*{ROUND THE WORLD:}
moft wholly deftitute of woods and fhrubs, and running out into long fpits of Tharp columnar rocks into the fea. The bay itfelf feemed to extend a confiderable way up between the mountains, and by its direction left us in doubt, whether the land on which Cape Tera-wittee is fituated, is not a feparate ifland from Eaheino mauwe. This miferable country was, however, inhabited, and we had not been half an hour at anchor, before feveral canoes full of natives came on board. They were very defpicably habited in old Chaggy cloaks, which they called bogbbee-boggbee. The fmoke to which they are perpetually expofed in their wretched habitations, and a load of impurities which they had probably never walhed off fince their birth, perfectly concealed their real colour, and made them look of a vile brownifh yellow. The feafon of winter, which was juft at an end, had in all likelihood forced them at times to make their meals on putrid fifhes, which, together with the ufe of rancid oil for the hair, had to penetrated them with an infufferable ftench, that we could fmell them at a diftance. They brought a few of their fifh-hooks and fome dried tails of craw-fifh to fell, for which they eagerly received our iron-ware and Taheitee cloth. Captain Cook likewife prefented them with two pair of fowls, with ftrong injunctions to keep them for breeding; but it is hardly to be expected that thefe wretched favages will attend to the domeftication of animals. In their unthinking fituation, the firft moment they have nothing ready at hand to fatisfy the cravings of appetite, our fowls mult fall the victims to their voracity. If there are any hopes of fucceeding in the introduction of domeftic animals in this country, it mult be in the populous bays to the northward, where the inhaVol. 1 .

bitants
1773. bitants feem to be more civilized, and are already \(\underbrace{\text { Novemp. accuftomed to cultivate feveral roots for their }}\) fubfiftence.

About three o'clock in the afternoon the weather fell perfectly calm; but in a little time a foutherly wind came up the ftrait, at fight of which curling the water at a diftance, we weighed anchor and got out of the bay. And very fortunate it was that we did fo, for the gale encreafed after a few minutes to fuch a furious pitch, that we were hurried along with aftonifhing fpeed, and after paffing elofe to the dangerous rocks of the Brothers, on which a moft dreadful furf was breaking, we came to an anchor at night, under fhelter of Cape Koa-maroo in Queen Charlotte's Sound.
Wed. 3. The next day, about noon, we came fafely into the Ship-Cove, from whence we failed on the 7 th of June, near five months before. We were in great hopes of being rejoined here by the Adventure, becaufe captain Cook intended to make fome ftay at this place, though the early feafor of the year did not promife fuch abundance of refrefhments as we had enjoyed at our firft vifit.

We had hardly dropped our anchor, before feveral of the inhabitants, who had been out filhing, came to fee us in their canoes, and difpofed of the fifh which they had caught. We recollected them as fome of our old friends, and called them by their names, at which they expreffed great fatisfaction, doubtlefs becaufe it ferved to perfuade them that we were particularly concerned for their welfare by retaining them in memory. The weather was fair and warm, confidering the feafon, but our New Zeelanders were all covered with fhaggy cloaks, which are their winter dreffes. We queftioned them concerning the health of their abfent countrymen, and received

\section*{ROUND THE WORLD.}
various anfwers; but among the reft they ac- 1773. quainted us, that Goobaïa, one of their old Novemb. chiefs, had chafed the two goats which we had left in the woods of Grafs-Cove, and had killed and eaten them. This news whas moft unwelcome to u's, as it deftroyed all our hopes of focking the forefts of this country with quadrupeds.

In the afternoon we vifited all the plantations which we had left on the beach in Ship-Cove, on the Hippah-Rock, and on motu-Aro. We found almoft all the radifines and turneps fhot into feed, the cabbages and carrots very fine, and abundance of onions and parfley in good order; the peas and beans were almoft entirely loft, and feemed to have been deftroyed by rats. The potatoes were likewife all extirpated; but, from appearances, we gueffed this to have been the work of the natives. The thriving flate of our European potherbs, gave us a ftrong and convincing proof of the mildnefs of the winter in this part of New Zeeland, where it feems it had never frozen hard entough to kill there plants, which perifh in our winters. The indigenous plants of this country were not yet fo forward; the deciduous trees and Shrubs, in particular, were but juft beginning to look green, and the vivid colour of their frefh leaves well contrafted with the dark wintery hue of the evergreens. The flag, of which the natives prepare their hemp, was however in flower, together with fome other early fpecies. We collected all we could find, gathered a quantity of celery and fcurvy-grafs, and thot fome water-fowl, with all which we returned on board in the evening. We immediately made drawings and deferiptions of all that was new to us, and particularly of the flag, (phormium tenax, which, on account of the excellent flax that may be prepared from it, deferves to be more univerfally known.

1:7\%. The natives returned the next morning in more Novemb, canoes than the preceding day, and among them Thurf. 4 . was leiratu, the chief, who had made acquaintance with us on the fourth of June, and had pronounced a long harangue that day. He was now in his old clothes, of what the polite world would call de/babille; quite deftitute of the finery of chequered mats edged with dog- 0 kin, and his hair carelefsly tied in a bunch, inftead of being combed fmooth, and delectably greafed with ftinking oil. In fhort, from being the orator and leader of a troop of warriors, he feemed to be degraded to a fimple fifhmonger. It was with fome difficulty that we recognized his features under this difguife, upon which he was taken into the cabin, and prefented with fome nails Our iron ware, and our provifion of Taheitee cloth, were articles of fuch importance to Teiratu and his people, that they refolved to eftablifh themfelves near us, in order to be the firft to profit by our commerce, and perhaps to lofe no opportunity of laying their hands on any thing which belonged to us. Our Ship lay very near the beach where we intended to fill our empty calks with frefh water. Here we had already fet up a tent for the people who were employed in this branch of our preparations; another for our wood-cutters, and the aftronomical obfervatory. We went on fhore at this place, both before and afternoon, and made our way through a labyrinth of climbers which croffed from one tree to another. Mahine (or Hedeedee) likewife came on thore with us, and roamed through its intricate forefts, furprifed at the number of different birds, their fweet melody, and their beautiful plumage. One of our gardens, where the radifhes and turneps were in flower, was remarkably full of fmall birds, which fucked the nectareous juices of the blof-

\section*{ROUND THE WORLD.}
foms, and not feldom plucked them from the 1773. ftalk. We hot Several of them, and Mahine, Noyemp. who had never made ufe of fire-arms in his life before, killed his bird at the firft difcharge. The fenfes of all nations, not more polifhed than his countrymen, are infinitely more acute than ours, which a thoufand accidents tend to impair. We never were more clearly convinced of this, than at Taheitee; it was very ufual for the natives there, to point out fmall birds to us in the thickeft trees, or ducks and other water-fowl between buthes of reeds, where not one of us could ever perceive them.

The weather, which was warm and pleafant, facilitated our zoological refearches, fo that we brought home a number of birds in the evening.

The firf intelligence which we received from the fhore the next day, was a complaint againft Friday 5. the natives, who had ftolen during the night, a watch-coat from the waterers tent, and a bag filled with linen. The captain immediately went into the cove, where the favages had taken up their quarters, which was only feparated by a fingle hill from our watering place, and to which be had given the name of Indian Cove. Here he addreffed himfelf to their chief Teiratu, who fent for the folen goods, and returned them without hefitation, pretending that the theft was committed without his knowledge. Our people were politic enough to believe him on his word, becaufe the addrels of his countrymen had hitherto fupplied us with abundance of fifh, for a very moderate compenfation of Taheitee cloth, whilft we caught them but very faringly. In this place they found one of the fows, which captain Furneaux had left in Cannibal Cove; and Teiratu being queftioned concerning its two companions, pointed to different quarters of the bay,

\section*{A V O Y A G E}
1773. bay, whither he faid they had been carried. Novems. Thus by feparating the animals, and dividing \(\rightarrow\) them as a fpoil, thefe barbarians effectually deftroy the poffibility of propagating the fpecies. Too much occupied with the wants of the prefent moment, they overlook the only means of fecuring a certain livelihood to themfelves, and reject every attempt to civilize them.
8atur. 6. They were joined by a ftrong party on the 6th in the afternoon, who came from various parts of the bay, with a great quantity of fifh, and abundance of their clothes, arms, \&c. which they exchanged for Taheitee cloth. In the eveningthey retired to a beach oppofite the fhip, where they hauled their canoes afhore, made fome temporary huts, lighted fires, and broiled
Sund. 7. fome fifh for their fuppers. Early the next morning looking about us, we found they were all gone off, not excepting thofe who had lived at the Indian Cove. We were at a lofs to guefs the reafon of their fudden departure, till we perceived that they had taken away fix fmall cafks from our watering-place, probably for the fake of the iron hoops. It is certain, that by fupplying us with fifh for another day, they would have received three or four times the value of this iron, manufactured for their ufe; but we have already obferved that they are not much troubled with reflections, and probably value a bird in hand more than two in a bulh. We were the greatelt fufferers on this occafion, being now reduced to catch fifh for ourfelves, though we could not fpare a fufficient number of hands, and were not acquainted with the haunts of the fighes as well as the natives. Our people were occupied in cleaning, caulking, and breaming the fhip, fetting

\section*{ROUND THE WORLD.}
up and repairing the rigging, and, in thort, in fitting her for the next fouthern cruize. A great party were on thore to fill our empty calks with frefh water, to make provifion of fuel, and to revife the Chip's bifcuit, which was in a very decayed condition. It had unfortunately been packed into new, or what are called green calks, the ftaves of which being damp, had communicated the moifture to the bread, a confiderable part of which was perfectly rotten, and all the reft, more or lefs covered with mould. To prevent the fatal effects of this corruption, all the bread was carried afhore, the bad carefully felected from that which was ftill eatable, and this laft put into an oven and baked over again, till it was thoroughly dried.

The weather during this time was as boifterous and inconftant, as that which had fo long kept us out of this harbour. Scarce a day paffed without heavy fqualls of wind, which hurried dawn with redoubled velocity from the mountains, and ftrong fhowers of rain which retarded all our occupations. The air was commonly cold and raw, vegetation made flow advances, and the birds were only found in vallies theltered from the chilling fouthern blaft. This kind of weather in all likelihood prevails throughout the winter, and likewife far into the midft of fummer, without a much greater degree of cold in the former, or of warmth in the latter feafon. Iflands far remote from any continent, or at leaft not fituated near a cold one, feem in general to have an uniform temperature of air, owing perhaps to the nature of the ocean which every where furrounds them. It appears from the meteorological journals kept at Port Egmont on the Falkland
1773. land Inlands *, that the extremes of the greateft \(\underbrace{\text { Novemb. cold, and the greateft heat obferved there through- }}\) out the year, do not exceed thirty degrees on Fahrenheit's fcale. The latitude of that port is \(51^{\circ} 25^{\prime}\) fouth ; and that of Ship Cove in Queen Charlotte's Sound, only \(41^{\circ} 5^{\prime}\). This confiderable difference of fite, will naturally make the climate of New Zeeland infinitely milder than that of Falkland's Inlands, but cannot affect the general hypothefis concerning the temperature of all inlands; and the immenfe height of the mountains in New Zeeland, fome of which are covered with fnow throughout the year, doubtlefs contributes to refrigerate the air, fo as to affimilate it to that of the Falkland's Ines, which are not fo high.

The inclemency of the feafon did not prevent the natives from rambling about in this fpacious found. Having been entirely forfaken by them for three days together, a party arrived near us on the 9 th, in three canoes, one of which was elegantly carved in fretwork on the ftern. They fold us fome curiofities, and then went on hore abreaft of the fhip; but we did not remember having ever feen them before. The next day two wretched canoes joined thefe, in which was our friend Towahanga with his family + . He came immediately on board, with his little boy Khoâa and his daughter Ko-parree, and difpofed of a great number of green nephritic ftones wrought into chiffels and blades of hatchets. He was introduced into the cabin, where captain Cook

\footnotetext{
* See the Journal of the Winds and Weather, and Degrees of Heat and Cold by the thermometer at Fall:land's Illand, from February 1766, to January \(1-67\), inferted in \(M_{i}\). Dalrymple's collection of Voyages in the Southern Atlantic Ocean. + See Page 17 .
}

\section*{ROUND THE WORLD.}

Cook gave him many little prefents, and dreffed his little boy in one of his own white mirts. The boy was fo overjoyed at his finery, that we found it abfolutely impoffible to keep him in the cabin by fair words. He was bent upon parading it before his countrymen on the deck, and perfifted to importune us till we let him out. His little vanity, however, had the moft difaftrous confequences. An old he-goat, which went about our decks, to the great terror of all the New Zeelanders, took offence at the ludicrous figure of poor Khoâa, who was loft in the ample turns and folds of his fhirt, and awkwardly trotted along with felf-complacency. The fturdy mountaineer Atepped in his way, and raifing himfelf on his hindlegs, butted with his head full againft him, and laid him fprawling on the deck in an inftant. The unfuccefsful efforts which the boy made to rife, together with his loud lamentations, fo provoked the goat, that he prepared to repeat the compliment, and would probably have filenced this knight of the rueful countenance, if fome of our people had not interpofed. His fhirt was now fullied, and his face and hands covered with dirt ; and in this pitiful plight he returned into the cabin. His air was quite dejected, his eyes full of tears, and he feemed to be perfectly cured of his vanity. He told his misfortune, crying to his father; but far from exciting pity, he provoked the favage's indignation, and receiged feveral blows as a punilhment of his folly, before we could-make his peace. We cleaned his firt and walhed him all over, which perhaps had never happened to him before during his life, and thus fucceeded to reftore him to his former tranquillity. However, his father, dreading a future misfortune, carefully rolled up the fhirt, and taking off his own drefs, made a bundle of it, in which he placed
1773. all the prefents which he and his fon had \(\underbrace{\text { Novemb. }}\) received.
Frid. 12. The natives continued to fell their artificial curiofities and fome fifh to our people this day and the following, both which proved very rainy. On the 12 th, in the morning, the weather being clear again, Dr. Sparrman, my father, and myfelf, went to the Indian Cove, which we found uninhabited. A path, made by the natives, led through the foreft a confiderable way up the fteep mountain, which feparates this cove from Shag Cove. The only motive which could induce the New Zeelanders to make this path, appeared to be the abundance of ferns towards the fummit of the mountain, the roots of that plant being an article of their diet. The fteepeft part of the path was cut in fteps paved with fhingle or flate, but beyond that the climbers impeded our progrefs confiderably. About half way up, the foreft ended, and the reft was covered with various fhrubs and ferns, though it appeared to be naked and barren from the fhip. At the fummit we met with many plants which grow in the vallies and by the fea-fide at Dufky Bay, owing to the difference of climate, which is fo much more rigorous in that fouthern extremity of New Zeeland. The whole to the very top confifts of the fame talcous clay which is univerfal all over the ifland, and of a talcous ftone, which when expofed to the fun and air, crumbles in pieces and diffolves into lamellæ. Its colour is whitilh, greyifh, and fome. times tinged with a dirty yellowifh red, perhaps owing to irony particles. The fouth fide of the mountain is ciad in forefts almoft. to the fummit. The view from hence was very extenfive and pleafing; we looked into Eaft Bay as into a fifh-pond, and faw Cape Terà-wittee beyond the frait. The mountains in the fouth arofe to a valt height,
and were capt with fnow ; and the whole profpert on that fide was wild and chaotic. We made a fire as a memorial of our expedition, and then cappe down the fame path by which we had afcended. The next morning we made an excurfion to Long \(\$ 1\) and, where we found a number of plants and forme birds which were new to us. In the whods on the caft fide we heard fome petrels in holes under ground croaking like frogs and cackling like bens; and we fuppored them to be af the litthe diving fpecies, which I have noticed before. It feems to be a oencral cultom of the petrel tribe to make theif nefts in fubserraneous hodes, as we found the blue or filvery fort lodged in the fame manner at Duflky Bay.

Ever fince the 12th the weather was mild and yery fair ; the natives refided abreaf of the fhip, and fupplied us with plenty of filh, whilf our fait ors caryied on their former amours with the women amopgit whom there was but one who had toperaple features, and fomething foft and femipine in her looks. She was regularly given in marriage by her parents to one of our thipmates, who was earticularly beloved by this nation, for devoting much of his time to them, and treating them with thofe mayks of affection which, even amone a favage race, endear mankind to each Qther. Togheeree, for fo the girl was callud, pmoged af faithful to her huboand as if he had heen m New Zeelander, and confantly rejected the addrofles of other feamen, profefing henfelf 4) margied woman, (tinfa-tạne) Whatever attyhment the Englifhman had to his New Zeelang wife, he never attempted to take her on hogrd, forefeeing that it would be highly inconvenient to lodge the numgrous retinue which cramiled in her garments and weighed down the hain of her head, He therefore vifited her on dhore,
1773. Thore, and only by day, treating her with plen\(\underbrace{\text { Novemb. ty of the rotten part of our bifcuit, which we re- }}\) jected, but which fhe and all her countrymen eagerly devoured. Mahine, the native of Borabora, whom we had on board, had been fo much accuftomed in his own country to obey every call of nature, that he did not hefitate to gratify his appetites in New Zeeland, though he was too clearfighted at the fame time not to perceive the vaft falling off from his own country-women. The force of inftinct triumphed over his delicacy, and can we wonder at it, when our civilized Europeans fet him the example? His conduct towards the New Zeelanders in general deferves to be commended. There needed not much penetration to difoover that their prefent exiftence was very wretched in comparifon of that of the tropical iflanders; but he alfo frequently expreffed his pity, whilft he enumerated to us a variety of articles of which they were ignorant. He diftributed the roots of yams to thofe who vifited the fhip at the Black Cape, and always accompanied the captain whenever he went to plant or fow a piece of ground in this harbour. He was not, like Tupaya, fo much a mafter of their language as to converfe freely with them, but he foon underfood them much better than any one of us, from the great analogy of their language to his own. Our vifit to the tropical iflands had, however, contributed to make the New Zeeland dialect more intelligible to us than before, and we plainly perceived that it had a great affinity to that of the Friendly Ifles, which we had juft left. From fuch little data we can only guefs at the probable route by which a country, fo far to the fouth as New Zeeland, has been peopled.
Sund. I4. The weather continuing fair on the 14th at night, the captain and my father went on fhore different times by our accurate and indefatigable aftronomer, Mr. William Wales, F. R. S. has afcertained the longitude of Queen Charlotte's Sound to be \(174^{\circ} 25^{\prime}\) Eaft from Greenwich.

The next morning we accompanied the cap-Mond.15. tain to Eaft Bay, where we vifited feveral fmall parties of the natives, in three different places. They received us very amicably, prefented us with fifh, which was always the moft valuable article they had to give, and fold us feveral large hoopnets * for our iron and Taheitee cloth. Towards the bottom of the bay we mounted on the fame hill which captain Cook had afcended in his firf voyage \(\dagger\), intending to look out on the fea if we could perceive the Adventure. But when we reached the fummit, we found fo thick a haze on the water, that we could fee no farther than two or three leagues. The monument which captain Cook had erected here formerly, confifting of a pile of loofe ftones, under which fome coins, bullets, \&cc. had been buried, was entirely demolifhed at prefent; the natives having probably furpected that a treafure of European goods was depofited there. At the foot of this hill fome friendly people, like thofe of which captain Cook took notice at this place in his firft voyage, came to us, and difpofed of many of their arms, utenfils, and dreffes. In the afternoon we tried the hoopnets which we had bought of the natives, and had tolerable fuccefs. Thefe

}

\section*{A V O Y A G E}
1773. Thefe nets are made of the Iplit leaves of the Novems. flag, fo often mentioned, after they have been \(\sim_{\text {dried and beaten. No plant promifes to become }}\) fo ufeful to Europe by tranfplantation as this flag. The hemp or flax which the New Zeelanders make of it, with their coarfe materials, is exceffively ftrong, foft, gloffy, and white; and that which has been prepared again in England, has almoft equalled filk in luftre. It grows on all kinds of foil, and, being perennial, may be cut down to the root every year, and tequires fcarce any attendance or care in the cultivation.
Wed. 17. On the 17 th, we fpent the forenoon in cutting down a number of very tall trees, of which we wifhed to gather the flowers, but all our efforts were in vain. We had no fooner cut a tree, than it hung in a thoufand bindweeds and climbers from top to bottom, from which it was not in our power to difengage it. The three following days we had much rain, which confined us on board ; nor did we receive any vifits from the natives during that time.
Sund. 21. On the 21ft in the morning, none but women came from the fhore in two canoes, and feemed to be under great appreherfions for their men, fignifying to us that they were gone to fight with another party. From the direction in which they pointed, we concluded that their enemies dwelt fomewhere in Admiralty Bay.
Mond.22. On the 22d, the weather being mild and fair, the captain, accompanied by Dr. Sparrman, my father, and myfelf, went into Weft Bay, and in its deepeft recefs carried aihore two fows and a boar, with three cocks and two hens, which we fet at liberty a good way up in the woods. We flattered ourfelves that having chofen a marky fpot, which is not likely to be frequented by the inhabitants, the animals would be left to molti-

\section*{ROUND THE WORLD.}
ply their fpecies without any moleftation. A
1793. Novemb. \(\underbrace{\text { n- }}\) the entrance of the bay, and probably would not fufpect that we were come on fo particular an errand. If therefore the fouthern ifle of New Zeeland fhould in courfe of time be ftocked with hogs and fowls, we have great reafon to hope that the care with which we concealed them in the woods, has been the only means of preferving the race.

At our return feven or eight canoes arrived from the northward, fome of which, without paying any attention to us, went directly into Indian Cove, whilft the reft came on board with a great variety of dreffes and arms, which they fold to our people. They were more dreffed than we had commonly feen any, during this fecond ftay at Queen Charlotte's Sound, their hair was tied up, and their cheeks painted red. All thefe circumftances confpired to confirm the account which the women had given us the day before, that their hufbands were gone to fight, as it is ufual for them to put on their beft apparel on thofe occafions. I am much afraid that their unhappy differences with other tribes, were revived on our account. Our people not fatisfied with purchafing all the hatchets of ftone, patoo-patoos, battle-axes, clothes, green jaddes, fin-hooks, \&cc. of which the natives of our acquaintance were poffeffed, continually enquired for more, and fhewed them fuch large and valuable pieces of Taheitee cloth, as would not fail to excite their defires. It is not improbable that as foon as this appetite prevailed among the New Zeelanders, they would reflect that the fhorteft way to gratify it, would be to rob their neighbours of fuch goods, as the Europeans coveted. The great itore of arms, ornaments, and clothes which

\section*{A \(\quad \mathrm{V} \quad \mathrm{O} \quad \mathrm{Y}\) A \(\quad \mathbf{G} \quad \mathrm{E}\)}

1773: which they produced at this time, feemed to
\(\underbrace{\text { Novemb }}\) prove that fuch a daring and villainous defign had really been put in execution; nor was it to be fuppofed that this could have been accomplifhed without blood/hed.
Tuer. 23. In the morning, which was very foggy, the natives at our watering-place were feen to eat a root boiled or baked by means of hot ftones ; and Mr . Whitehoufe the firft mate brought fome of it on board, which tafted rather better than a turnep. My father returned on fhore with him ; for a few trifles obtained fome large pieces of this root, and with fome difficulty prevailed on two of the natives to accompany Mr. Whitehoufe and him into the woods, in order to point out to them the fpecies of plant to which the root belonged. They walked up a confiderable way without any arms whatfoever, trulting to the honefty of their guides. Thefe men pointed out a fpecies of fern-tree, which they called mamagboo, as having the eatable root; and at the fame time fhewed the difference between this, and another kind of fern-tree, which they named ponga. The firft is full of a tender pulp or pith, which when cut exfudes a reddifh juice of a gelatinous nature, nearly related to fago. This is fo much the lefs fingular, as the real fago-tree is a fpecies of fern. The good nutritive root of the mamaghoo mult not, however, be confounded with that wretched article of New Zeeland diet, the common fern-root, or acrofichum furcatum, Linn. The latter confifts of nothing but infipid fticks, which after being broiled over the fire for fome time, are beaten or bruifed on a ftone with a piece of wood much refembling the Taheitian cloth-beater, but round inftead of fquare, and without any grooves. The bruifed mafs is chewed, what little juice there may be in

\section*{ROUND THE WORLD̈.}
it fucked out, and the reft thrown afide. The 1773. mamaghoo on the contrary is tolerably good Noveme. eating, and the only fault feems to be, that it is not plentiful enough for a conftant fupply. At their return they were witneffes of an inftance of the ferocity of manners of this favage nation. A boy about fix or feven years old demanded a piece of broiled pinguin, which his mother held in her hands. As the did not immediately comply with his demand; he took up a large fone and threw it at her. The woman incenfed at this action ran to punifh him, but fhe had fcarcely given him a fingle blow, when her hufband came forward, beat her unmercifully, and dahed her againft the ground, for attempting to correct her unnatural child. Our people who were employed in filling water, told my father they had frequently feen fimilar inftances of cruelty among them, and particularly, that the boys had actually fruck their unhappy mother, whilft the father looked on left fhe hould attempt to retaliate. Among all favage nations the weaker fex is ill-treated, and the law of the frongelt is put in force. Their women are mere drudges, who prepare raiment and provide dwellings, who cook and frequently collect their food, and are requited by blows and all kinds of reverity. At New Zeeland it feems they carry this tyranny to excefs, and the males are taught from their earlieft age, to hold their mothers in contempt; contrary to all our principles of morality. I leave this barbarity without a comment, in order to relate the remaining occurrences of this day, which was pregnant in difcoveries relative to the New Zeelanders. The captain, with Mr. Wales, and my father, went to Motu-Aro in the afternoon, where they looked after the plantations, collected greens for the Ihip, \&xc. In the mean while Vol. I. E e fome
1773. fome of the lieutenants went to the Indian Cove, Novembe with a view to trade with the natives. The firft \(\underbrace{}_{\text {objects which ftruck them were the entrails of a }}\) human corfe lying on a heap a few fteps from the water. They were hardly recovered from their firft furprize, when the natives fhewed them feveral limbs of the body, and expreffed by words and geftures that they had eaten the reft. The head without the lower jaw-bone, was one of the parts which remained, and from which it plainly appeared, that the deceafed was a youth about fifteen or fixteen years old. The fkull was fractured near one of the temples, as it feemed by the ftroke of a pattoo-pattoo. This gave our officers an opportunity of enquiring how they came in poffeffion of the body. The natives anfwered, that they had fought with their enemies, and had killed feveral of them, without being able to bring away any of the dead befides this youth. At the fame time they acknowledged that they had loft fome of their friends, and pointed to feveral women who were feated apart, weeping and cutting their foreheads with fharp ftones, in commemoration of the dead. Our former conjectures were now amply verified, our apprehenfions that we were the imnocent caufes of this difafter encreafed, and the exiftence of anthropophagi confirmed by another ftrong proof. Mr. Pickerfgill propofed to purchafe the head, in order to preferve it till his return to England, where it might ferve as a memorial of this voyage. He offered a nail, and immediately obtained the head for this price *, after which he returned on board with his company, and placed it on the taffarel \(\dagger\). We were all occupied

\footnotetext{
* The head is now depofited in the collection of Mr. John Hunter, F. R. S.
\(\dagger\) The upper part of the ftern.
}
pied in examining it, when fome New Zeelanders \({ }^{1773 .}\)
came on board from the watering-place. At fight of the head they expreffed an ardent defire of poffeffing it, fignifying by the moft intelligible geftures that it was delicious to the tafte. Mr. Pickerfgill refufed to part with it, but agreed to cut off a fmall piece from the cheek, with which they feemed to be well fatisfied. He cut off the part he had promifed, and offered it to them, but they would not eat it raw, and made figns to have it dreffed. Therefore, in prefence of all the fhip's company, it was broiled over the fire; after which they devoured it before our ey s with the greateft avidity. The captain arriving the moment after with his company, the New Zeelanders repeated the experiment once more in his prefence. It operated very ftrangely and differently on the beholders. Some there were who; in fpite of the abhorrence which our education infpires againft the eating of human flefh, did not feem greatly difinclined to feaft with them, and valued themfelves on the brilliancy of their wit, while they compared their battle to a hunt-ing-match. On the contrary, others were fo unreafonably incenfed againft the perpetrators of this action, that they declared they could be well pleafed to fhoot them all; they were ready to become the moft deteftable butchers, in order to punifh the imaginary crime of a people whom they had no right to condemn. A few others fuffered the fame effects as from a dofe of ipecacuanha. The reft lamented this action as a brutal depravation of human nature, agreeably to the principles which they had imbibed. But the fenfibility of Mahine, the young native of the Society Iflands, fhone out with fuperior luftre among us. Born and bred in a country where the inhabitants have already emerged from the
1773. darknefs of barbarifm, and are united by the Novemb. bonds of fociety, this feene filled his mind with \(\underbrace{}_{\text {horror. He turned his eyes from the unnatural }}\) object, and retired into the cabin, to give vent to the emotions of his heart. There we found him bathed in tears; his looks were a mixture of compafion and grief, and as foon as he faw us, he expreffed his concern for the unhappy parents of the victim. This turn which his reflections had taken, gave us infinite pleafure; it fpoke a humane heart, filled with the warmeft fentiments of focial affection, and habituated to fympathize with its fellow-creatures. He was fo deeply affected, that it was feveral hours before he could compofe himfelf, and ever after, when he fooke on this fubject, it was not without emotion. Philofophers, who have only contemplated mankind in their clofets, have ftrenuoufly maintained, that all the affertions of authors, ancient and modern, of the exittence of men-eaters are not to be credited; and there have not been wanting perfons amongft ourfelves who were feeptical enough to refufe belief to the concurrent teftimonies in the hiftory of almolt all nations in this particular. But caprain Cook had already, in his former voyage, received ftrong proof that the practice of eating human flefh exited in New Zeeland ; and as now we have with our own eyes feen the inhabitants devouring human flefh, all controverfy on that point mult be at an end. The opinions of authors on the origin of this cuftom are infinitely various, and have lately been collected by the very learned canon Pauw, at Xanten, in his Recbercbes Pbilofopbiques fur les Americains, vol, l. p. 207. He feems to think that men were firft tempted to devour each other
from real want of food and cruel neceffity *. \({ }^{1773 \cdot}\) Many weighty objections, however, may be Novemb. made againft this hypothefis; amongtt which the following is one of the greateft. There are very few countries in the world fo miferably barren as not to afford their inhabitants fufficient nourifhment, and thofe in particular, where anthropophagi Atill exift, do not come under that defcription. The northern ifle of New Zeeland, on a coaft of near four hundred leagues, contains fearcely one hundred thoufand inhabitants, according to the moft probable guefs which can be made; a number inconfiderable for that valt fpace of country, even allowing the fettlements to be confined only to the fea-fhore. The great abundance of fifh, and the beginnings of agriculture in the Bay of Plenty and other parts of the Northern Ifle, are more than fufficient to maintain this number, becaufe they have always had enough to fupply ftrangers with what was deemed fuperfluous. It is true, before the dawn of the arts among them, before the invention of nets, and before the cultivation of potatoes, the means of fubfiftence may have been more difficult; but then the number of inhabitants muft likewife have been infinitely fmaller. Single inftances are not conclufive in this cafe, though they prove how far the wants of the body may fimulate mankind to extraordinary actions. In 1772, during a famine which happened throughout all Germany, a herdiman was taken on the manor of Baron Boineburg, in Heffia, who had been urged by hunger to kill and devour a boy, and afterwards to make a practice of it for feveral months. From his confeffion it appeared, that he

\footnotetext{
* His fentiments are copied by Dr. Hawkefworth, who has difingenuoufly concealed their author. See his Com. pilation, vol. III. p. 447.
}
1773. he looked upon the flefh of young children as a Novemb. very delicious food; and the geftures of the \(\rightarrow\) New Zeelanders indicated exactly the fame thing. An old woman in the province of Matogroffo, in Brafil, declared to the Portuguefe governor *, that She had eaten iuman flefh feveral times, liked it very mush, and fhould be very glad to feaft upon it again, efpecially if it was part of a little boy, But it would be abfurd to fuppofe from fuch circumftances, that killing men for the fake of feafting upon them, has ever been the fpirit of a whole nation; becaufe it is utterly incompatible with the exiftence of fociety. Slight caufes have ever produced the moft remarkable events among mankind, and the moft trifling quarrels have fired their minds with incredible inveteracy againft each other. Revenge has always been a ftrong paffion among barbarians, who are lefs fubject to the fway of reafon than civilized people, and has ftimulated them to a degree of madnefs which is capable of all kinds of exceffes. The people who firft confumed the body of their enemies, feem to have been bent upon exterminating their very inanimate remains, from an exceis of paffion; but, by degrees, finding the meat wholefome and palatable, it is not to be wondered that they hould make a practice of eating their enemies as often as they killed any, fince the action of eating human flef , whatever our education may teach us to the contrary, is certainly neither unnatural nor criminal in itfelf. It can only become dangerous as far as it fteels the mind againft that compalionate fellow-feeling which is the great bafis of civil fociety; and for this reafon we find it naturally banifhed from every people

\footnotetext{
* M. de Pinto, now ambaffador from Portugal at the Britịh court; a nobleman equally eminent for his extenfive knowledge and his excellent heart.
}
as foon as civilization has made any progrefs 1773. among them. But though we are too much Novems. polifhed to be canibals, we do not find it unnaturally and favagely cruel to take the field, and to cut one another's throats by thoufands, without a fingle motive, befides the ambition of a prince, or the caprice of his miftrefs ! Is it not from prejudice that we are difgufted with the idea of eating a dead man, when we feel no remorfe in depriving him of life? If the practice of eating human flefh makes men unfeeling and brutal, we have inftances that civilized people, who would perhaps, like fome of our failors, have turned fick at the thought of eating human feelh, have committed barbarities without example among!t canibals. A New Zeelander, who kills and eats his enemy, is a very different being from an European, who, for his amufement, tears an infant from the mother's breaft, in cool blood, and throws it on the earth to feed his hounds.*

> Neque hic lupis mos nec fuit leonibus. Nunquam nifi in difpar feris.

The New Zeelanders never eat their adverfaries, unlefs they are killed in battle; they never kill their relations for the purpofe of eating them; they do not even eat them if they die of a natural death, and they take no prifoners with a view to fatten them for their repaft \(\dagger\); though thefe circumftances have been related, with more or lefs truth of the American Indians. It is therefore not improbable, that in procefs of time they will entirely lay afide this cuftom; and the introduction of new domertic animals into their country

\footnotetext{
* Bifhop Las Cafas fays, he has feen this atrocious crime committed in America by Spanifh foldiers.
+ See Hawkefworth, vol. II. p. 433.
}
1773. try might haften that period, fince greater affluence would tend to make them more fociable, Their religion does not feem likely to be an obftacle, becaufe from what we could judge, they are not remarkably fuperftitious, and it is only among very bigoted nations, that the cuftom of offering human flefh to the gods, has prevailed after civilization. Tupaya \({ }^{*}\), the only man who could freely converfe with the New Zeelanders, foon learnt that they acknowledged a fupreme Being; and this fpark of divine revelation probably remains amongft all nations on the globe. To this they add the belief of fome inferior divinities, fo correfpondent to thofe of the Taheitians, that their fyftem of polytheifm muft be of very ancient date, and feems to derive its origin from their common anceftors. We never obferved a fingle ceremony in New Zeeland, which could be fuppofed to have a religious tendency; and I know of only two circumitances which may be diftantly conftrued to favour of fuperftition. The firft is the name of atuce, "s the bird of the divinity,". which they fometimes give to a fpecies of creeper \(\dagger\) (certbia cincinata.) This name feems to indicate a veneration like that which is paid to herons, and king-fifhers at Taheitee, and the Society Ifles; but 1 cannot fay that they ever expreffed the leaft wifh to preferve the life of this bird in preference to the reft. The fecond is the cuftom of wearing an amulet of green jadde on the breaft, from a ftring round the neck. This piece of ftone is of the fize of two crown-pieces, and carved fo as to bear a rude refemblance to a human being. Thefe they call e.teeghee, a name which is doubtlefs equivalent to the Taheitian
e tee.

\footnotetext{
*See Hawkefworth, vol. III. 4-2.
\(\dagger\) Our failors called this the poe-bird. Its common Neve Zeeland name is kogo.
}

\section*{ROUND THE WORLD.}
e-tee *. In that ifland, and the adjacent group, e-tee fignifies a wooden image of the human figure, erected on a pole at their cemeteries, in memory of the dead, but to which no worlhip nor particular refpect is paid. The New Zeeland teeghee feems to be worn with a fimilar view, but not to be better refpected; for though they did not part with it for a trifle, yet with half a yard of broad cloth or red kerfey, which were our beft goods in Queen Charlotte's Sound, we never failed to purchafe it. Befides this, they often wear feveral rows of human teeth round the neck, but we underftood that they were only the memorials of their prowefs, fince they had belonged to the enemies whom they had killed. It always appeared to us, that they have no priefts or jugglers of any kind among them, which accounts for their having fo little fuperfition. When the comforts of life are multiplied, it is poffible that fome individuals may be artful enough to improve upon their prefent ideas of religion, in order to enjoy exclufive advantages; for it has often been the fate of mankind, that the moft facred, and moft jneftimable gift of heaven, has ferved as a cloak under cover of which they have been deluded.

Having fitted the fhip to encounter the rigorous climate of the fouth, and received on board her provifion of frefh water and wood, as well as the bifcuit which had been baked over again, we reimbarked all the tents from the fhore, and on the 24th, early in the morning, unmoored and rode Wed, 24. by a fingle anchor. The natives immediately repaired to the beach which we had left, and finding there a heap of bread-duft which had been rejected as unfit for ufe at the revifal of our bifcuit, they fell to, and confumed it all, though our

\footnotetext{
* Better pronounced E-Tee-ee.
}
1773. our hogs had before refufed to touch it. We Novemp. could not attribute this proceeding to neceffity, becaufe they had plenty of frefh fifh, of which they daily fold us enough for our confumption. It was rather owing to the diverfity of their tafte from ours, or to the natural inclination for variety, which made them eat the worft of vegetable food, becaufe it was a rarity, in preference to fifh, which is their conftant diet. They had another motive for vifiting the place of our late eftablifhment; this was, to pick up any little trifles, fuch as nails, rags, \&c. which we might have left behind. Whilft they were fo employed, fome others came from the interior parts of the bay, and offered a great quantity of their tools and weapons to fell.

In the afternoon, a boat was fent on fhore to bury a bottle at the foot of a tree, with a letter for captain Furneaux, in cafe he fhould come into the harbour after our departure. Another boat, with feveral officers, and my father, went to Indian Cove, where the entrails of the body ftill lay on the ground. The war-canoe, in which the expedition had been made, had a carved head ornamented with bunches of brown feathers, and a double-forked prong projected from it, on which the heart of their flain enemy was transfixed. Our gentlemen purchafed a quantity of their prepared hemp or flax, and many filh-hooks, armed with bone, which, according to the account of the natives, was taken from the human arm.
Thrr. 25. At four o'clock the next morning, a boat was fent to Motu-Aro, in order to take a few cabbages out of our plantations. My father took that opportunity of fearching the fhore for the laft time, and was fortunate enough to find fome plants which we had not feen before. In the mean while we hove the anchor, fet fail, and took
up the boat on our way; but finding the current and wind againft us, we were forced to come to again about feven o'clock, between Motu-Aro and Long Lland. Here we lay an hour or two, and then fet fail with a more favourable breeze, which carried us into Cook's Strait.

We ftood clofe in thore under cape Terrà-Wittee, and fired feveral guns to give the Adventure notice of our approach, in cafe the had lain in one of the adjacent harbours. Between the Capes Terrà-Wittee and Pallifer, we difcovered a very deep bay, of which the fhores had every where a gentle flope, and efpecially towards the bottom, where the hills were fituated at fuch a diftance, that we could but juft difcern them. If there is a fufficient depth of water for thips in this bay, and of that we had no room to doubt, it appears to be a moft convenient fpot for an European fettlement. There is a great fretch of land fit for cultivation, and eafily defenfible; there is likewife plenty of wood, and almoft certain indications of a confiderable river; and laftly, the country does not feem to be very populous, fo that there would be little danger of quarrels with the natives; advantages which are not frequently to be met with jointly in many fpots of New Zeeland. The flag (pbormixm tenax) of which the natives make all their clothes, mats, ropes, and nets, affords fuch an excellent kind of flax, which is at once gloffy, elaftic, and ftrong, that it might become an article of commerce in India, where cordage and canvas are wanted. Perhaps in future ages, when the maritime powers of Europe lofe their American colonies, they may think of making new eftablifhments in more diftant regions; and if it were ever poffible for Europeans to have humanity enough to acknowledge the indigenous tribes of the South Sea as their brethren, we might have fettlements
1773. \(\underbrace{\text { Novemz. }}\)
1773. fettlements which would not be defiled with the \(\underbrace{\text { Novems }}\) blood of innocent nations.

We continued firing guns as we ftood paft
Frid. 26. this bay, and the next morning having douibled Cape Pallifer, we ran along the coaft to the northward till the evening, likewife firing guns from time to time. Our attempts to rejoin our confort were to no purpofe; we heard no anfwer to all our fignals, though we hearkened with an attention, and an eagernefs which plainly fhewed how unwillingly we ventured on a fecond cruize among numberlefs dangers without a companion. We were forced at laft to give up the thought of feeing her again, and about fix o'clock took our departure from Cape Pallifer, fteering to the S. S. E.

The fcurvy, which had afflicted fome of our people after the firft tedious cruize to the fouth, between the Cape of Good Hope and Dufky Bay, had been entirely fubdued by the wholefome diet on fifh, and the drinking of fprucebeer in that harbour; and afterwards by the excellent greens in Queen Charlotte's Sound. Our difagreeable paffage in winter from New Zeeland to Taheitee, had revived the fymptoms of the difeafe in many perfons, and in fome to a confiderable degree; but the continual fupply of freth vegetables, which we received at that ifland, together with the provifion of excellent pork at the Society and Friendly Ines, had entirely re-eflablifhed them. Our fecond flay at Queen's Charlotte's Sound had likewife furnifhed us, as before, with abundance of celery and fcurvy-grafs, which counteracted the noxious effects of falted meat; fo that we were, to appearance, in a good ftate of health at our fecond departure from thence. It may, however, juftly be queftioned, whether the continual hardfihips
and labours which we had undergone, had not in reality made the fhew of health deceitful, and Novemв. impaired the body fo much that it was not able to refift fo long as it had formerly done. The officers and paffengers entered upon this fecond cruize under feveral difficulties which did not exift before. They had now no live-ftock to be compared to that which they took, from the Cape of Good Hope; and the little fore of provifions which had fupplied their table with variety in preference to that of the common failor, was now fo far confumed, that they were nearly upon a level, efpecially as the feamen were inured to that way of life by conftant habit almoft from their infancy; and the others had never experienced it before. The hope of meeting with new lands was vanifhed, the topics of common converfation were exhaufted, the cruize to the fouth could not prefent any thing new, but appeared in all its chilling horrors before us, and the abfence of our confort doubled every danger. .We had enjoyed a few agreeable days between the tropics, we had feafted as well as the produce of various illands would permit, and we had been entertained with the novelty of many objects among different nations; but, according to the common vicififitudes of fortune, this agreeable moment was to be replaced by a long period of fogs and frofty weather, of fatting, and of tedious uniformity. The late AbbéChappe, in his voyage to California, (or his compiler, M. Caffini, in his name,) obferves, * "that variety " alone has charms for the traveller, who goes "in queft of her from one country to another." His philofophy is at the fame time of fuch an exalted nature, that he pronounces \(\dagger\) "the life "which is led at fea to be tedious and uniform " only
\[
* \text { Pag. 22. } \quad \dagger \text { Pag. } 13 .
\]

\section*{A V O Y A G E}
1773. " only to thofe who are not accuftomed to look \(\underbrace{\text { Novemp. " round them, and who behold all nature with }}\) \(\underbrace{\text { " the eye of indifference." Had the good }}\) Abbé been unfortunate enough to make a vifit to the antarctic circle, without the company of feveral hundred fattened fowls, which kept him in good humour on his fhort trip from Cadiz to Vera Cruz, his philofophy would not have taken fo high a flight. But though he found variety at fea, he was not fo fortunate in Mexico. * Here he crofled great tracts of uncultivated country and extenfive forefts, he faw nature in a favage ftate, allowed that the was rich and beautiful; but, in the fpace of a few days, her multiplicity of charms became infipid and uniform in his eyes. And yet this traveller affures us, that he was aftronomer, botanif, zoologit, mineralogitt, chymift, and philofopher !

We quitted the fhores of New Zeeland with ideas very different from thofe of Abbé Chappe; and if any thing alleviated the drearinefs of the profpect with a great part of our Chip-mates, it was the hope of completing the circle round the South-Pole in a high latitude during the next inhofpitable fummer, and of returning to England within the fpace of eight months. This hope contributed to animate the fpirits of our people during the greateft part of our continuance in bad weather; but in the end it vanifhed like a dream, and the only thought which could make them amends, was the certainty of paffing another feafon among the happy illands in the torrid zone.

\section*{C H A P. III.}
qbe fecond courfe towards the bigh foutbern latitudes from New Zeeland to Eafer Ifand.

THE morning after we had taken our de1773. parture, we had a N. N. W. wind, which raifed \(\underbrace{\text { Novemb. }}\) the thermometer to 64 deg. The two next days Satur. 27. it food at 54 deg. then at 48 ; and when we were in about \(49^{\circ}\) of fouth latitude, at \(44 \frac{1}{2}\) deg. On the 28th of November, we obferved a number of feals, or perhaps fea-lions, paffing by us at a diftance towards the land which we had left. From that time to the 6th of December we daily faw great flocks of blue and other petrels, together with the different fpecies of albatroffes, the tkuas or grey gulls, many pinguins, and abundance of fea-weed. About feven in the evening, on that day, we were in the latitude of \(51^{\circ} 33^{\prime}\) fouth, and long. \(180^{\circ}\); confequently juft at the point of the antipodes of London. The remembrance of domeftic felicity, and of the fweets of fociety, called forth a figh from every heart which felt the ties of filial or parental affection. We are the firft Europeans, and I believe I may add, the firft human beings, who have reached this point, where it is probable none will come after us. A common report prevails indeed in England concerning Sir Francis Drake, who is faid to have vifited the antipodes, which the legend expreffes by "his having paffed under the " middle arch of London bridge :" but this is a miftake, as his track lay along the coalt of America, and probably originates from his having paffed the periaci, or the point in \(180^{\circ}\) long. on the

\section*{A V O Y A G E}
1773. the fame circle of north latitude, on the coalt of Decemb. California.

In proportion as we advanced to the fouthward Fridayio. the thermometer fell ; and on the roth, in the morning, the wind coming more ahead, it defcended to \(37^{\circ}\). At noon we had reached the latitude of \(59^{\circ}\) fouth, without having met with any ice, though we fell in with it the preceding year on the 1 oth of December, between the 50th and 5 Ift deg. of fouth latitude. It is difficult to account for this difference; perhaps a fevere winter preceding our firft courfe from the Cape of Good Hope, might accumulate more ice that year than the next, which is the more probable, as we learnt at the Cape that the winter had been fharper there than ufual ; perhaps a violent ftorm might break the polar ice, and drive it fo far to the northward as we found it ; and perhaps both thefe caufes might concur, with others, to produce this effect.

On the inth, at night, the cold encreafed, the thermometer ftanding at 34 deg. and at four Sund. 12. o'clock the next morning a large ifland of floating ice was feen ahead, which we paffed an hour afterwards. At eight o'clock the thermometer was already at \(31^{\frac{1}{2}}\) deg. the air being probably refrigerated by the ice, though we did not fee more than this one piece. At noon we found the latitude to be \(61^{\circ} 4^{6}\) fouth. The next morning the thermometer food at 31 deg . and we ran to the eaftward with a frefh breeze, though we had a furprizing fall of fnow, which filled the air to fuch a degree that we could not fee ten yards before us. Our friend Mahine had already expreffed his furprize at feveral little fnow and hail fhowers on the preceding days, this phænomenon being utterly unknown in his country. The appearance of " white ftones," which melted
in his hand, was altogether miraculous in his eyes, and though we endeavoured to explain to him that cold was the caufe of their formation, yet I believe his ideas on that fubject were never very clear. The heavy fall of fnow this day furprifed him more than what he had feen before, and after a long confideration of its fingular qualities, he told us he would call it the wbite rain when he came back to his country. He did not fee the firlt ice on account of the early hour of the morning ; but two days after, in about 65 deg. of fouth latitude, he was frruck with aftonifhment upon feeing one of the largeft pieces, and the day following prefented him with an extenfive field of ice, which blocked up our farther progrefs to the fouth, and gave him great pleafure, fuppofing it to be land. We told him that fo far from being land, it was nothing but frefh water, which we found fome difficulty to convince him of at firf, till we fhewed him the ice which was formed in the fcuttled cafk on the deck. He affured us, however, that he would at all events call this the wbite land, by way of diftinguifhing it from all the reft. Already, at New Zeeland, he had collected a number of little flender twigs, which he carefully tied in a bundle, and made ufe of inftead of journals. For every ifland which he had feen and vifited, after his departure from the Society Ifles, he had felected a little twig; fo that his collection amounted at prefent to nine or ten, of which he remembered the names perfectly well in the fame order as we had feen them, and the white land, or whennua tèatèa, was the laft. He enquired frequently how many other countries we fhould meet with in our way to England, and formed a feparate bundle of them, which he fudied every day with equal
Vo L. I. F.f care
1773. care as the firft. The tedioufnefs of this part of \(\underbrace{D_{E C E M B}}\) our voyage probably made him fo eager to know how it would end ; and the falt provifions, together with the cold climate, contributed to difguft him. His ufual amufement was to feparate the red feathers from the aprons, ufed in dancing, which he had purchafed at Tonga-Tabboo, and to join eight or ten of them together into a little tuft, by means of coco-nut core. The reft of his time he paffed in walking on deck, vifiting the officers and petty officers, and warming himfelf by the fire in the captain's cabin. We took this opportunity to improve in the knowledge of his language, and, by degrees, revifed the whole vocabulary which we had collected at the Society Ines. By this method we became poffeffed of a fund of ufeful intelligence concerning his country and the adjacent inles, which led us to make many enquiries at our fublequent return to thofe iflands.

The ice-fields appeared, in different parts of Wed. 15 . the horizon, about us on the 15 th in the morning, fo that we were in a manner embayed; and, as we faw no poffibility of advancing to the fouth, we ran to the N. N. E. to get clear of them. The weather, which was already foggy, became thicker towards noon, and made our fituation, amidft a great number of floating rocks of ice, extremely dangerous. About one o'clock, whilft the people were at dinner, we were alarmed by the fudden appearance of a large illand of ice juft a-head of us. It was abfolutely impoffible either to wear or tack the fhip \({ }^{*}\), on account of its proximity, and our only refource was to keep as near the wind as poffible, and to try to weather the; danger. We were in the moft dreadful fufpenfe
for

\footnotetext{
* i. e. To go round either with or again the wind.
}

\section*{ROUND THE WORLD:}
for a few minutes together, and though we for: \(17>3\). tunately fucceeded, yet the fhip paffed within her own length to windward of it. Notwithftanding the conftant perils to which our courfe expofed us in this unexplored ocean, our fhip's company were far from being fo uneafy as might have been expected; and, as in battle the fight of death becomes familiar and often unaffecting, fo here, by daily experiencing fuch hair-breadth efcapes; we paffed unconcernedly on, as if the waves, the winds, and rocks of ice had not the power to hurt us. The pieces of ice had a variety of fhapes; in the fame manner as thofe which we had obferved to the fouthward of the Indian Ocean ; and many pyramids, obelifks, and church fipirs appeared from time to time. Their height was not much inferior to that which we had oblerved among the firft iflands of ice in 1772; and many likewife refembled them in being of a great extent and perfectly level at top.

The number of birds which we had hitherta met with on our paffage, would have perfuaded any other voyagers but ourfelves of the approach of land. We were, however, fo much ufed to their appearance on the fea at prefent, as never once to form any expectation of difcovering land from that circumftance. Flocks of blue petrels and pintadas, many albatroffes, with now and then a folitary fkua had attended us every day; and to thefe, fince our approach to the ice, we could join the fnowy and antarctic petrels and the fulmars. However, pinguins, fea-weed, or feals; had not been obferved fince the 10th.
The weather, which was extremely moitt and difagreeably cold, proved unfavourable to the doves and pigeons which many people had purchafed at the Society and Friendly Iflands, and to the finging-birds which they had been at great Ff 2
paiṇ

\section*{A V O Y A G E}
1773. pains to catch alive at New Zeeland. We had

Decemb
\(\qquad\) five doves at our departure from this country, all which died one after another before the 16th of December, being much more expofed to the cold in our cabins, than in the failors births. The thermometer in our cabins was never more than 5 deg. higher than in the open air on deck, and their fituation abreaft of the main-maft, where the ftrain of the fhip is greateft, expofed them to currents of air, and made them admit water like fieves.
Friday 17. On the 16 th, in the afternoon, and on the 17 th, we hoifted out our boats and collected fome loofe pieces of ice to fill our empty cafks with frefh water. The ice which we picked up was old and fpungy, and impregnated with faline particles, from having long been in a ftate of decay; therefore did not afford us very good water, but it was drinkable, particularly if we let the pieces of ice lie on deck for fome time, by which means the falt-water was almoft entirely drained off. From this time till the 2oth we faw no birds about us, which difappeared without any vifible caufe; but on that day fome albatroffes appeared again.

Having left the ice behind which obftructed our paffage, we had gradually advanced to the fouthward again, that being our principal object,
Mon. 20. and on the 20th in the afternoon, we croffed the antarctic circle the fecond time during our voyage. The weather was wet and foggy, ice illands were numerous around us, and the gale was very brifk. Many antarctic petrels, and a whale which fpouted up the water near us, feemed to indicate our entrance into the frigid zone. At night two feals appeared, which we had not feen for fourteen days paft, and gave fome faint hopes of feeing land to feveral of our fhipmates; but our courfe difappointed their expectations, by continuing within

\section*{ROUND THE WORLD.}
within the circle as far as \(67^{\circ} 12^{\prime} \mathrm{S}\). lat. for feve- \({ }^{1773 .}\) ral days following.
On the 23 din the afternoon, we were furround- Thurf.23. ed with iflands of ice, and the fea was in a manner covered with fmall fragments. The fhip was therefore brought to, the boats hoifted out, and 2 great quantity of good ice taken on board. The birds were at prefent very numerous about us again, and fome antarctic and other petrels were thot and taken up, which we had an opportunity of drawing and defcribing. About this time many perfons were afflicted with violent rheumatic pains, head-aches, fwelled glands, and catarrhal fevers, which fome attributed to the ufe of icewater. My father, who had complained of a cold for feveral days paft, was obliged to keep his bed to day, having a fevere rheumatifm with a fever. His complaint feemed rather to arife from the wretched accommodations which he had on board, every thing in his cabin rotting in the wet which it admitted, and being mouldy. The cold was fo fenfible there this day in particular, that he found only a difference of two degrees and a half between the thermometer there, and that upon the deck.

After hoifting in our boats we made fail to the northward, as much as a contrary wind permitted, during all the night and the next day. On the 25 th, the weather was clear and fair, but the Satur, 3 . wind died away to a perfect calm, upwards of ninety large ice iflands being in fight at noon. This being Chriftmas-day, the captain according to cuftom, invited the officers and mates to dinner, and one of the lieutenants entertained the petty-officers. The failors feafted on a double portion of pudding, regaling themfelves with the brandy of their allowance, which they had faved for this occafion fome months beforehand, being folicitous
1773. folicitous to get very drunk, though they are \(\underbrace{D_{\text {ecemb. }}}\) commonly folicitous abcut nothing elfe. The fight of an immenfe number of icy maffes, amonglt which we drifted at the mercy of the current, every moment in danger of being darhed to pieces againft them, could not deter the failors from indulging in their favourite amufement. As long as they had brandy left, they would perfift to keep Chriftmas " like Chriftians," though the elements had confpired together for their deftruction. Their long acquaintance with a feafaring life had inured them to all kinds of perils, and their heavy labour, with the inclemencies of weather, and other hardfhips, making their mufcles rigid and their nerves obtufe, had communicated infenfibility to the mind. It will eafily be conceived, that as they do not feel for themfelves fufficiently to provide for their own fafety, they mult be incapable of feeling for others. Subjected to a very frict command, they alfo exercife a tyrannical fway over thofe whom fortune places in their power. Accuftomed to face an enemy, they breathe nothing but war. By force of habit even killing is become fo much their paflion, that we have feen many inftances during our voyage, where they have expreffed a horrid eagernefs to fire upon the natives on the nighteft pretences. Their way of life in general prevents their enjoying domeftic comforts; and grofs animal appetites fill the place of purer affections.

\section*{ROUND THE WORLD:}

Though they are members of a civilized \(\mathrm{fO}-1773\). ciety, they may in fome meafure be looked upon as'a body of uncivilized men, rough, paffionate, revengeful, but likewife brave, fincere, and true to each other.

At noon the obfervation of the fun's altitude determined our latitude to be \(66^{\circ} 22^{\prime}\) fouth, fo that we were juft returned out of the antarctic circle. We had fcarcely any night during our ftay in the frigid zone, fo that I find feveral articles in my father's journal, written by the light of the fun, within a few minutes before the hour of midnight. The fun's ftay below the horizon was fo very hort this night likewife, that we had a very ftrong twilight all the time. Mahine was a very frong twilight all the time. Manine was
fruck with the greateft aftonifhment at this phenomenon, and would fcarcely believe his fenfes. All our endeavours to explain it to him mifcarried, and he affured us he defpaired of finding belief among his countrymen, when he fhould come back to recount the wonders of petrified rain, and of perpetual day. The firft Venetians who explored the northern extremes of the European continent, were equally furprifed at the continual appearance of the fun above the horizon, and relate that they could only diftinguifh day from night, by the inftinet of the feafowl, which went to rooft on chore, for the fpace of four hours *. As we were in all likelihood far diftant from any land, this indication failed us, and we have often obferved numerous birds on the wing about us all the night, and particuon the wing about us all the night, and particu-
larly great flocks of different fpecies, fo late as eleven o'clock. \({ }^{12}\) if \(_{f}\)
- Pietro Quirino failed in April r431, and was miferably flipwrecked at the ille of Roeft or Ruften, on the coaft of Norway, under the polar circle, in January 1432.-See Navigazioni et Viaggi raccolti da G.B. Ramufio. Venet. 1574. vol. 1I. p. 204, 210.
1773. At fix in the evening, we counted one hundred \(\underbrace{D_{\text {ecemb }}}\) and five large maffes of ice around us from the deck, the weather continuing very clear, fair, and perfectly calm. Towards noon the next day we were ftill in the fame fituation, with a very drunken crew, and from the maft-head obferved one hundred and fixty-eight ice-illands, fome of which were half a mile long, and none lefs than the hull of the fhip. The whole fcene looked like the wrecks of a fhattered world, or as the poets defcribe fome regions of hell; an idea which ftruck us the more forcibly, as execrations, oaths, and curfes re-echoed about us on all fides.
Mond.27. A faint breeze fprung up in the afternoon, with which we made flow advances to the northward, the number of ice illands decreafing in proportion as we receded from the antarctic circle. About four the next morning, we hoifted out our boats, and took in a frefh provifion of ice. The weather changed foon after, the wind coming about to the north-eaftward, which brought on much fnow and fleet. My father, and twelve other perfons were again much afflicted with rheumatic pains, and confined to their beds. The fcurvy did not yet appear under any dangerous form in the fhip, and all thofe who had any flight fymptoms of it, amongft whom I was one, drank plentifully of the frefh wort, quite warm, twice a day, and abfained as much as poffible from falt-diet. A general languor and fickly look however, manifefted itfelf in almoft every perfon's face, which threatened us with more dangerous confequences. Captain Cook himfelf was likewife pale and lean, entirely loft his appetite, and laboured under a perpetual coftivenefs.

\section*{ROUND THE WORLD.}

We advanced to the northward as much as the 1774 winds would permit us, and loft fight of the ice on the firft of January 1774, in \(59^{\circ} 7^{\prime}\) S. latitude. Satur, IOn the 4 th, the wind blowing from the weftward Tuef. 4. was very boifterous, and obliged us to keep all our fails double-reefed; the fea ran high, and the fhip worked very heavily, rolling violently from fide to fide. This continued till the 6th Thur. 6. at noon, when, having reached \(51^{\circ}\) of S. latitude, we bore away from the wind, to the N.N.E. We were now within a few degrees of the track which we had made in June and July laft, in going from New Zeeland to Taheitee, and had directed our courfe towards it, in order to leave no confiderable part of this great ocean unexplored. As far as we had hitherto advanced, we had found no land, nor even indications of land; our firft track had crofled the South Sea in the middle latitudes, or between 40 and 50 degrees. In our courfe till Chrittmas, we had explored the greateft part of it between 60 degrees and the antartic circle; and the prefent courfe to the northward had crofled the face between the two former runs. If any land has efcaped us, it muft be an ifland, whofe diftance from Europe, and fituation in uncouth climate cannot make it valuable to this country. It is obvious that to fearch a fea of fuch extent as the South Sea, in order to be certain of the exitence, or non-exiftence of a fmall ifland, would require many voyages in numberlefs different tracks, and cannot be effected in a fingle expedition. But it is fufficient for us, to have proved that no large land or continent exifts in the South Sea within the temperate zone, and that if it exifts at all, we have at leaft confined it within the antartic circle.
1774. Jan:

The long continuance in thefe cold climates began now to hang heavily on our crew, efpecially as it banifhed all hope of returning home this year, which had hitherto fupported their fpirits. At firft a painful defpondence, owing to the dreary profpect of another year's cruize to the South, feemed painted in every countenance; till by degrees they refigned themfelves to their fate, with a kind of fullen indifference. It muft be owned however, that nothing could be more dejecting than the entire ignorance of our future deftination, which, without any apparent reafon, was conftantly kept a fecret to every perfon in the fhip.

We now ftood to the north-eaftward for a few days, till we came fo far as \(47^{\circ} 52^{\prime}\) fouth latitude, where the thermometer rofe to 52 degrees.
Mond.ı. On that day, which was the 11 th, at noon, the courfe was directed to the S. E. again, though this frequent and fudden change of climate could not fail of proving very hurtful to our health in
Satur. 15 . general. On the 15 th the wind encreafed very much, and in a fhort time blew a tempeftuous gale, which took

> Cur_ the riwian billows by the top, Curling their monitrous heads and hanging them With deaf'ning clamours in the lippery frouds.

Shakespeare,
At nine o'clock a huge mountainous wave ftruck the fhip on the beam, and filled the decks with a deluge of water. It poured through the fky light over our heads, and extinguifhed the candle, leaving us for a moment in doubt, whether we were not entirely overwhelmed and finking into the abyfs. Every thing was afloat in my father's cabin, and his bed was thoroughly foaked. His rheumatifm,

\section*{ROUND THE WORLD.}
rheumatifm, which had now afflicted him above a 1774 . fortnight, was fill fo violent as to have almoft deprived him of the ufe of his legs, and his pains redoubled in the morning. Our fituation at pre- Sund. 16. fent was indeed very difmal, even to thofe who preferved the bleffing of health; to the fick, whofe crippled limbs were tortured with exceffive pain, it was infupportable. The ocean about us had a furious afpect, and feemed incenfed at the prefumption of a few intruding mortals. A gloomy melancholy air loured on the brows of our thipmates, and a dreadful filence reigned amongit us. Salt meat, our conftant diet, was become loathfome to all, and even to thofe who had been bred to a nautical life from their tender years: the hour of dinner was hateful to us, for the well known fmell of the victuals had no fooner reached our nofe, than we found it impoffible to partake of them with a hearty appetite.

It will appear from hence that this voyage was not to be compared to any preceding one, for the multitude of hardfhips and diftreffes which attended it. Our predeceffors in the South Sea had always navigated within the tropic, or at leaft in the belt parts of the temperate zone; they had almoft conftantly enjoyed mild eafy weather, and failed in fight of lands, which were never fo wretchedly deftitute as not to afford them refrefhments from time to time. Such a voyage would have been merely a party of pleafure to us; continually entertained with new and often agreeable objects, our minds would have been at eafe, our converfation cheerful, our bodies thealthy, and our whole fituation defirable and happy. Ours was juft the reverfe of this; our fouthern cruizes were uniform and tedious in the higheft degree; the ice, the fogs, the ftorms and pufled furface of the fea formed a difagreeable fcene,
1774. fcene, which was feldom cheered by the reviving

Jan. beams of the fun; the climate was rigorous and our food deteftable. In Short, we rather vegetated than lived; we withered, and became indifferent to all that animates the foul at other times. We facrificed our health, our feelings, our enjoyments, to the honour of purfuing a track unattempted before. This was indeed, as the poet fays,
- propter vitam vivendi perdere caufas.

Juveral.
The crew were as much diftreffed as the officers, from another caufe. Their bifcuit, which had been forted at New Zeeland, baked over again, and then packed up, was now in the fame decayed fate as before. This was owing partly to the revifal, which had been fo rigorous, that many a bad bifcuit was preferved among thofe that were eatable, and partly to the neglect of the cafks, which had not been fufficiently fumigated and dried. Of this rotten bread the people only received two-thirds of their ufual allowance, from œconomical principles; but, as that portion is hardly fufficient, fuppofing it to be all eatable, it was far from being fo when nearly one-half of it was rotten. However, they continued in that diftrefsful fituation till this day, when the firft mate came to the captain and complained bitterly that he and the people had not wherewith to fatisfy the cravings of the ftomach, producing, at the fame time, the rotten and ftinking remains of his bifcuit. Upon this the crew were put to full allowance. The captain feemed to recover again as we advanced to the fouthward, but all thofe who were afflifted with

\section*{ROUND THE WORLD.}
with rheumatifms continued as much indifpofed 1774 as ever.

The firf ice iflands which we met with on this run were in \(62^{\circ} 30^{\prime}\) fouth, on the 20th, Thurf. 20 . but they did not accumulate in number, in proportion to our progrefs, fo that we croffed the antarctic circle again on the 26 th , without Wed. 26. feeing more than a few folitary pieces. On that day we were amufed with the appearance of land; for after ftanding on towards it for fome hours, it vanifhed in clouds. The next day, Thurf.27. at noon, we were in \(67^{\circ} 52^{\prime}\) fouth; confequently to the fouthward of any of our former tracks, and met with no ice to fop us. The blue petrels, the little ftorm petrels, and the pintadas fill accompanied us, but albatroffes had left us fome time ago. We were now once more in the regions of perpetual day *, and had funfhine at the hour of midnight.
On the 28 th , in the afternoon, we paffed a large bed of broken ice, hoifted out the boats, and took up a great quantity, which afforded a. feafonable fupply of frefh water. At midnight the thermometer was not lower than \(34^{\circ}\), and the next morning we enjoyed the mildeft funhine we had ever experienced in the frigid zone. My father therefore ventured upon deck for the firft time after a month's confinement.

We now entertained hopes of penetrating to the fouth as far as other navigators have done towards the north pole; but on the 3oth, about feven o'clock in the morning, we difcovered a folid ice-field of immenfe extent before us, which bore from E. to W. A bed of fragments floated all round this field, which feemed to be raifed feveral feet high above the level of the water. A valt

\footnotetext{
* In the frozen zone, where the fun remains fix months above and fix months below the horizon, dividing the year into one long day and night.
}
1774. A vaft number of icy maffes, fome of a very Jan. great height, were irregularly piled up upon it, as far as the eye could reach. Our latitude was at this time \(7 \mathrm{I}^{\circ} 10^{\prime}\) fouth, confequently lefs than 19 deg . from the pole; but as it was impoffible to proceed farther, we put the fhip about, well fatisfied with our perilous expedition, and almoft perfuaded that no navigator will care to come after, and much lefs attempt to pafs beyond us. Our longitude at this time was nearly \(106^{\circ} \mathrm{W}\). The thermometer here was at \(32^{\circ}\), and a great many pinguins were heard croaking round us, but could not be feen on account of the foggy weather which immediately fucceeded.

As often as we had hitherto penetrated to the fouthward, we had met with no land, but been ftopped fooner or later by a folid ice-field, which extended before us as far as we could fee. At the fame time we had always found the winds moderate and frequently eafterly in thefe high latitudes, in the fame manner as they are faid to be in the northern frozen zone. From thefe circumftances my father has been led to fuppofe, that all the fouth pole, to the diftance of 20 degrees, more or lefs, is covered with folid ice, of which only the extremities are annually broken by ftorms, confumed by the action of the fun; and regenerated in winter.

\section*{——ftat glacies iners Menfes per omnes.— Horat.}

This opinion is the lefs exceptionable, fince there feems to be no abfolute neceffity for the exiftence of land towards the formation of ice \({ }^{*}\), and becaufe we have little reafon to fuppofe that there actually is any land of confiderable extent in the frigid zone.

\footnotetext{
*See Vol. I. p. \(7^{8 .}\)
}

\section*{ROUND THE WORLD.}

We ran to the northward with moderate winds till the 5th of February, when we got a fine freh breeze after a thort calm. The day after it shifted to S. E. and frefhened fo as to blow very hard at night, and fplit feveral fails. As it was favourable for the purpofe of advancing to the northward, the only circumftance that afforded us comfort, we were far from being concerned at its violence, and in the next twenty-four hours Tuefd. 8. made upvards of three degrees of latitude. The fame gale affifted us till the 12 th, when we obferved the latitude to be \(50^{\circ} 15^{\prime}\) fouth, our thermometer being once more returned to the milder temperature of 48 degrees. We were now told that we fhould fpend the winter feafon, which was coming on apace, among the tropical iflands of the Pacific Ocean, in the fame manner as we had paffed that immediately preceding. The profpect of making new difcoveries, and of enjoying the excellent refrefhments which thofe illands afford, entirely revived our hopes, and made us look on our continuance on the weftern fide of Cape Horne with fome degree of fatisfaction.

A great number of our people were however afflicted with very fevere rheumatic pains, which deprived them of the ufe of their limbs; but their fpirits were fo low, that they had no fever. Though the ufe of that excellent prophylactic the four krout, prevented the appearance of the fcurvy during all the cold weather, yet being made of cabbage, it is not fo nutritive that we could live upon it without the affiftance of bifcuit and faltbeef. But the former of thefe being rotten, and the other almoft confumed by the falt, it is obvious that no wholefome juices could be fecreted from thence, which might have kept the body Atrong and vigorous. Under thefe difficulties all
1774. our patients recovered very flowly, having nothing

Feb. to reftore their ftrength; and my father, who had been in exquifite torments during the greateft part of our fouthern cruize, was afflicted with tooth-aches, fwelled cheeks, fore-throat, and univerfal pain till the middle of February, when he ventured on deck perfectly emaciated. The warm weather which was beneficial to him, proved fatal to captain Cook's conftitution. The difappearance of his bilious complaint during our laft pufh to the fouth had not been fo fincere, as to make him recover his appetite. The return to the north therefore brought on a dangerous obfrruction, which the captain very unfortunately nighted, and concealed from every perfon in the fhip, at the fame time endeavouring to get the better of it by taking hardly any fuftenance. This proceeding, inftead of removing, encreafed the evil, his ftomach being already weak enough before. He was afficted with violent pains, which in the fpace of a few days confined him to his bed, and forced him to have recourfe to medicines. He took a purge, but inftead of producing the defired effect, it caufed a violent vomiting, which was affifted immediately by proper emetics. All attempts however to procure a paffage through his bowels were ineffectual; his food and medicines were thrown up, and in a few days a moft dreadful hiccough appeared, which lafted for upwards of twenty-four hours, with fuch aftonifhing violence that his life was entirely defpaired of. Opiates and glyfters had no effect, till repeated hot baths, and plafters of theriaca applied to his ftomach, had relaxed his body and inteftines. This however, was not effected till he had lain above a week in the moft imminent danger. Our fervant fell ill about the fame time with the captain, of the fame diforder,

\section*{ROUND THE WORLD.}
ath natrowly eftaped, but continuted weak and utherviceable the greateft part of our cruize between the tropics.

During this time we advanced to the northward very falt; fo that on the \(22 d\) we reached Tuef. 22. \(36^{\circ}\) 10 S. latitude, where the albatroffes left us. Our longitude being about \(94 \frac{\frac{1}{2}}{2}\) degrees weft from Greenwich, we fleered to the fouth-weftward, in quelt of a fuppofed difcovery of Juan Fernandez, which, alccording to Juan Luis Aridis, a Spanifh author, is faid to lie in \(40^{\circ}\) fouth latitude, and by Mr. Dalrymple's chart in \(90^{\circ}\) weft from London *. We ftood on to the weftward till the \(25^{\text {th }}\) at noon, where being in \(37^{\circ}\) Friday 25. \(50^{\prime} \mathrm{S}\). and about \(101^{\circ} \mathrm{W}\). and feeing no figns of lathd, we altered our courfe fomething to the northward. The dangerous fituation of captain Cook, was perhaps the reafon, why our track wats not continued farther to the fouth, fo as to put this matter entirely out of doubt for the future. It was indeed of the utmoft importance at prefent, to haften to a place of refrefhment, that being the only chance to preferve his life.

On the 26 th, captain Cook felt fome relief from the medicines which had been adminittered to him, and during the three following days, recovered fo far as to be able to fit up fometimes, and take a little foup. Next to Providence it whis chiefly owing to the fkill of our furgeon, Mr. Patton, that he recovered to profecute the remaining part of the voyage, with the fame fpirit with which it had hitherto been carried on. The care ath affiduity with which this worthy man, watched him during his whole illnefs, cannot bé fufficiently extolled, ats all our hopes of future difcoveries, as well as unibn in the fhip; depended folely on the prefervation of the captain. The furgeon's extreme attention however, Vol. I. G g had
*See Mr. Dalrymple's Hiftorical Collection, vol. I. p. 53. and the Chart.
1774. had nearly coft him his own life. Having taken no

Fex. reft for many nights together, and feldom venturing to fleep an hour by day, he was fo much exhaufted, that we trembled for his life, upon which that of almoft every man in the fhip in great meafure depended. He was taken ill with a bilious diforder, which was dangerous on account of the extreme weaknefs of his ftomach, and it is more than probable, that if we had not fpeedily fallen in with land, from whence we collected fome flight refrefhments, he muft have fallen a facrifice to that rigorous perfeverance and extreme punctuality with which he difcharged the feveral duties of his profeffion.

We had eafterly winds ever fince the 22d of February, which was probably owing to the fituation of the fun, fill continuing in the fouthern hemifphere. The weather was warm and comfortable again, the thermometer being at 70 degrees; and fome gray terns were feen from time to time, which according to our friend Mahine's account, never went to a great diftance from March. land. On the firlt of March, fome bonitos appeared fwiftly fwimming paft the fhip, and the next day, being in \(30 \frac{1}{2}\) degrees of latitude, we faw tropic birds again.

The fcurvy now appeared with very ftrong fymptoms in the Ship, and I was particularly afflicted with it. Excruciating pains, livid blotches, rotten gums, and fwelled legs, brought me extremely low in a few days, almoft before I was aware of the diforder ; and my fomach being very weak, through abtinence from an unwholefome and loathed diet, I could not take the wort in fufficient quantity to remove my complaint. The fame cafe exifted with regard to a number

\section*{ROUND THE WORLD.}
number of other people, who crawled about the decks with the greatelt difficulty.
'We had almoft calm weather from the 3 d to the 6th, the 1 ky was clear, and the warmth and ferenity of the weather remarkably pleafing; but we were impatient to proceed to a place of reFrefhment, and this delay ill fuited with our wifhes.

On the 5 th, at night, we faw fome towering clouds and a haze on the horizon to the fouthward, from whence we hoped for a fair wind. Already, during night, we had fome fmart fhowers, and at eight o'clock the next morning we faw the furface of the fea curled to the foutheaftward, upon which we trimmed our fails, and advanced again with a fair wind. The next morning four large albecores were caught, the Mond. 7 . lealt of which weighed twenty-three pounds. They afforded us a moft delicious repaft, it being now an hundred days fince we had tafted any freh fifh. Shearwaters, terns, noddies, gannets, and men of war birds, appeared numerous about us, hunting the hoals of Aying-fifh which our fhip, the bonitos, albecores, and dolphins had frightened out of the water.

We reached the 27 th degree of \(S\). latitude on the 8th at noon, and then fhaped our courfe due Tuef. 8. weft in fearch of Easter Island, difcovered by Jacob Roggewein in 1722, and fince vifited by the Spaniards in \(1770^{*}\), who gave it the name of St. Charles's Inand. On the roth, in the morning, the birds of the grey tern-kind were Thurf.io: innumerable about us, whilft we advanced at the rate of feven miles an hour. We lay to during night, being apprehenfive of falling in with the land, which we actually difcovered at five o'clock G g 2
the

\section*{A \(\quad V \quad O \quad Y \quad A \quad G \quad E\)}
1774. the next morning. The joy which this fortunate event fpread on every countenance is fcarcely to be defcribed. We had been an hundred and three days out of fight of land; and the rigorous weather to the fouth, the fatigues of continual attendance during ftorms, or amidft dangerous maffes of ice, the fudden changes of climate, and the long continuance of a noxious diet, all together had emaciated and worn out our crew. The expectation of a fpeedy end to their fufferings, and the hope of finding the land ftocked with abundance of fowls and planted with fruits, according to the accounts of the Dutch navigator, now filled them with uncommon alacrity and cheerfulnefs.

> E l'uno a'l altro il moftra, e in tanto oblia La noia, e'l mal de la paffata via.

We advanced but flowly towards the land by day; to the great difappointment of all on board, who became more eager in proportion as new difficulties arofe to prilong their diffreffes. The land appeared of a moderate height, and divided Into feveral hills, which gently floped from their fummits ; its extent did not feem to be confiderable, and we were at too great a diftance to be able to form any conjecture as to its productions. The next morning we were becalmed within five leagues of the ifland, which had then a black and fomewhat difagreeable appearance. We amufed ourfelves with catching fharks, feveral of which fwam about the fhip, and eagerly fwallowed the hook, which was baited with falt pork or beef. In the afternoon a breeze fprung up, with which we ftood towards the fhore, in great hopes of reaching an anchoring-place before night. The land did not look very promifing as we ad.

\section*{ROUND THE WORLD.}
agreed, there being little verdure, and fcarcely any buttes upon it; but to us who had lingered
1774.

March fo long under all the diftrefles of a tedious cruize
 at fen, the mot barren rock would have been a welcome fight. In our way we perceived a great number of black pillars ftanding upright, near two hummocks, and in different groups. They feemed to be the fame which Roggewein's people took for idols *; but we gueffed already, at that time, that they were foch monuments, in memory of the dead, as the Taheitians and other people in the South Seas erect near their buryingplaces, and call E-Tee.

The wind, which was contrary, and very faint, the approach of night, and the want of an anchoring-place on the eat fide of the inland, difappointed us once more, and forced us to pals another night under fail, during which we daw feveral fires in the neighbourhood of the pillars above-mentioned. The Dutch, who likewife obferved them, called them facrifices to the idols; but it fears to be more probable that they were only lighted to drefs the food of the natives.
We paffed the night in making feveral trips, in order to keep to windward of the inland and as near it as. poffible, refolving to purfue our fearch of anchorage the next day. In the mean time we reflected on the excellent means of afcertaining the longitude, with which our hip had been furnished, and which had carried us exactly to this: inland, though Several former navigators, fuch as Byron, Carteret, and Bougainville had miffed it, after taking their departure from iflands at fo short a diftance from it as thole of Juan Fernandez §. Captain Carteret it feems was only miffed

\footnotetext{

§ Juan Fernandez, properly fo called, or la de Tierra, and la Mas a fuera.
}
1774. mifled by an erroneous latitude in the geographiMarch. cal tables which he confulted; but this could not \(\sim\) be the cafe with the reft. We had the greateft reafon to admire the ingenious conftruction of the two watches which we had on board, one executed by Mr. Kendal, exactly after the model of that made by Mr. Harrifon, and the other by Mr. Arnold on his own plan, both which went with great regularity. The laft was unfortunately ftopped immediately after our departure from New Zeeland in June 1773, but the other went till our return to England, and gave general fatisfaction. It appears, however, that in a long run the obfervations of diftances of the moon from the fun or ftars, are more to be depended upon, if they be made with good inftruments, than the watches or time-keepers, which frequently change their rates of going. The method of deducing the longitude from the diftances of the fun and moon, or moon and ftars, one of the moft valuable acquifitions to the art of navigation, muft immortalize its firft inventors. Tobias Mayer, a German, and profeffor at Gottingen, was the firft who undertook the laborious tafk of calculating tables for this purpofe, for which his heirs received a parliamentary reward. Since his death the method was fo much facilitated by additional calculations, that the longitude will perhaps never be determined with greater precifion at fea by any other means.

The latitude of Eafter ! lland correfponds within a minute or two with that which is marked in admiral Roggewein's own MS. journal \({ }^{*}\), and his longitude is only one degree erroneous, our obfervations having afcertained it in \(109^{\circ} 46^{\prime}\) weft from

\footnotetext{

An Account of Eafter Ifland, and our Stay there.

0N the 13th, early in the morning, we ran Sund. 13 . clofe to the fouth point of the ifland, where the thore rofe perpendicularly, and confifted of broken rocks, whofe cavernous appearance, and black or ferruginous colour, feemed to have been produced by fabterraneous fire. Two detached rocks lay about a quarter of a mile off this point; one of them was fingular on account of its hape, refrombling a huge column or obelifk, and both were the habitations of numerous fea-fowls, which funned our ears with their difcordant fcreams. Soon after we opened another point about ten miles diftant from this, and as we advanced we perceived the ground gently floping to the fea. On the flope we difcovered feveral plantations by the help of our glaffes; but the furface of the ifle in general appeared to be extremely dreary and parched, and thefe plantations were fo thinly fcattered upon it, that they did not flatter our hopes ofmeeting with confiderable refrefhments. Howearer, our eyes, long unufed to the enchanting profpect of verdure, were conftantly directed towards the Chore, where we diftinguifhed a number of people nearly naked, haftily punning down from the hills towards the fea-fide. We could not perceive that they had any arms, which we immediately interpreted into a fign of a peaceable difperition. In a few minutes we faw them launch
*1774. a canoe, in which two men came off towards us. March. They were along-fide in a hort time, having paddied very briskly, and immediately called out for a rope, naming it by the fame word as the Taheitians. We had no Sooner thrown them the rope, than they tied a great clutter of ripe bananas to it, making figns for us to haul it up. The fudden emotions of joy in every countenance, at the fight of this fruit, are fcarcely to be defcribed; they can only be felt in their full extent by people in the fame wretched fituation with ourfelves at that time. At leapt fifty perfons endeavoured to begin a converfation with the people in the canoe, who being addreffed by fo many at once, could not anfwer one of them. Captain Cook lent for forme ribbands, to which he tied rome medals and beads, and lowered them down in return for their prefent. They deemed to admire them much, but haftened afore with them immediately. In dropping aftern, they fattened a small piece of cloth to a filhing-line which we towed after us; it was immediately hauled up, and appeared to be made of the fame bark as the Taheitian cloth, and coloured yellow. From a few words which they pronounced, we concluded their language, to: be a dialect of the Taheitian, which we had now found in both extremities of the South Sea. Their whole appearance confirmed us in this opinon, and proved them iffued from the fame flack. They were of a middle future, but rather thin; their features refembled thole of the Tahitians, but were leis agreeable: one of them had a beard, which was cut to the length of about half an inch; the other was a youth of about feventeen. They had punctures of the fame nature with thole unfedby the natives of the Society and Friendly Lands and of New Zeeland; but their whole body, which was perfectly naked, was marked with them. The
gresteff angularity which we obferved about them 1774. Than the fige of their ears, of which the lap or ex- Marct. tramity was fretched out fo as almoft to reft on لـهـهـ thei houlder, and pierced by a very darge hole, thraugh. which four or five fingers might be thrult with eafe. This circumftance entirely agreed with thedefcription which the ferjeant-major of Roggewioin's Ahip gives of thefe people *. Their canoe was another curiofity, being patched up of many pieces, each of which was not more than four or five inaches wide, and two or three feet long. Its length might be about ten or twelve feet, its head and ftern were raifed confiderably, but its middle was very low. It had an outrigger or balancer magde of three flender poles, and each of the men had a paddle, of which the blade was likewife compafed of feveral pieces, This defcription alfo exacily correfponds with the Dutch account of Roggewein's voyage, printed at Dort in 1728 十; and funficiently proved that the ifland is very deflitute of wood, though the contrary is afcertained in the ferjeant-major's relation' of that voyage \(\S\).
:Thqugh ive fruck foundings oppofite the place from'whence this canoe put off, yet in hopes of finding a tretter place of anchorage, we ran along the coago of the ifland, till we came in fight of its nortbiern extremity, which we had already feen the day before from the other fide. But being difapppointed in our expectation, we put about with a siaw: to return to the place which we had left:: A great number of black pillars thood along the stiore, many of: which were eleyated on platformsicorifiling of feveral ranges of forie. We could

\section*{A V O Y A G E}
1774. could now diftinguif fomething refembling a huMarch. man head and fhoulders towards their upper end; but the lower part appeared to be a rude flone, without being carved into a refemblance of the human fhape. Sometimes we perceived two, fometimes four, and even five together in a row; but fome were likewife placed by themfelves. We faw but few plantations towards the north end, the land being much more bluff or fteep there, than about the middle of the ifland, and we could eafily perceive that there was not a tree upon the whole ifland, which exceeded the height of ten feet.

In the afternoon we hoifted out a boat, and the mafter went towards the fhore to take foundings in the road, from whence the canoe had come off to us. As foon as the natives perceived our boat on the water, they affembled along fhore, near the place to which our people feemed to direct their courfe. Among a croud of naked men, we faw fome who feemed to be dreffed in a bright cloth of a yellow, or rather orange colour, from whence we fufpected that they were their principal people. We now likewife began to difcern their houfes, which feemed to be extremely low and long, higheft in the middle, and floping down towards both extremities. They much refembled a canoe turned with the keel or bottom upwards. In the minddle there feemed to be a fmall entrance or door, 'which was fo low, that a man of a common fize muft ftoop to get in. Towards evening we tet go our anchor in about forty fathom, gravelly bottom off the \(S\). W. part of the ifland. The mafter returned prefently after, and brought one of the natives in the boat with him. This bold fellow had jumped into the boat without any ceremony or invitation, while it was clofe to the thore, and exprefsly defired to be brought on board.
board. He was of the middle fize, about five 1774 . feet eight inches high, and remarkably hairy on the breaft and all over the body. His colour was a chefnut brown, his beard ftrong, but clipped thort, and of a black colour, as was alfo the hair of his head, which was likewife cut thort. His ears were very long, almoft hanging on his fhoulders, and his legs punetured in compartments after a tafte which we had obferved no where elfe. He had only a belt round his middle, from whence a kind of net-work defcended before, too thin to conceal any thing from the fight. A ftring was tied about his neck, and a flat bone, fomething fhaped like a tongue, and about five inches long, was faftened to it, and hung down on the breaft. This, he told us, was a porpoife's bone (eeve toharra), expreffing it exactly by the fame words which a Taheitian would have made ufe of. To explain himfelf better, he alfo called it eeveeeeka, which we well underftood to fignify the bone of a fifh *. He was no fooner feated in the boat, than he complained of being cold by thivering, and making various geftures of a very intelligible nature. Mr. Gilbert, the mafter, therefore gave him a jacket, and put a hat on his head, and in that dreis he appeared upon deck. The captain and pafengers prefented him with nails, medals, and ftitings of beads, the laft of which, he defired to have tied round his head. At the beginning he fhewed forme marks of fear or diffidence, afking whether we thould kill him as an enemy (matte-toa?) but upon being affured of good treatment and friendihip on our part, he feemed perfeetly fecure and unconcerned, and talked of nothing buat dancing (beeiva). It was with fome difficulty

\footnotetext{
*Eeya at. Taheitee, and ceka at New Zeeland and the Friendly Illes mean a filh:
}
1774. ficulty that we undertood him at firft ; but havMarch. ing enquired for the names by which he diftinguilhed the parts of the body, we foon found them to be nearly the fame with thofe which are ufed in the Society Ines. If we mentioned a word which he did not comprehend, he repeated it feveral times with a look which ftrongly expreffed his ignorance of it. As night approached, he faid he wanted to go to fleep, and complained of cold. My father gave him a large Taheitee cloth of the thickeft fort, in which he wrapped himfelf, faying he found it comfortably warm. He was afterwards conducted into the matter's cabin, where he lay down on a table, and fept very quietly the whole night. Mahine, who had already expreffed his impatience to go on fhore, was much pleafed to find that the inhabitants fpoke a language fo fimilar to his own, and attempted to converfe with our new vifitor feveral times, but was interrupted by the queftions which many other perfons in the fhip put to him.
Mon. 34 We dragged our anchor during night, and drove off the bank, fo that we were obliged to fet fail again, in order to recover our fituation. Immediately after breakfaft, captain Cook went afhore with the native, whofe name was Maroowahai, together with Mahine, my father, Dr. Sparrman, and myfelf, though my feet and legs were ftill fwelled exceffively, and I was hardly able to walk. : We found a frug cove for boats, among a number of rocks which heltered the landingplace from the mountainous fwell that tumbled in upon the fhore. A bout a hundred, or a hundred and fifty natives were affembled on the fpot where we landed, almoft all of them naked, fome having only a belt round the middle, from whence a fimall bit of cloth, fix or eight inches long, or a little net, hung down before. A very few of them

\section*{ROUNDTHE WORLD.}
had a cloak which reached to the knees, made of 1774 clath, refembling that of Taheitee in the texture, March. and fitched or quilted with thread to make it the more lafting. Moft of thefe cloaks were painted yellow with the turmeric-root. The people did not make the lealt unfriendly motion at our landing, but expreffed a prodigious dread of our fire-arms, of which they feemed to know the deadly effects. We faw but few arms among them; fome however had lances or fpears, made of thin ill-fliapen fticks, and pointed with a fharp triangular piece of a black glaffy lava (pumex vitreus, Linn.) commonly called Iceland agate. One of them had a fighting club, made of a thick piece of wood about three feet long, carved at one extremity; and a few others had thort wooden clubs, exactly refembling fome of the New Zeeland patoo-patoos, which are made of bone. We oblerved fome who had European hats and caps, chequered cotton handkerchiefs, and ragged jackets of blue wooltenteloth, which were fo many indubitable teftimonies of the vifit which the Spaniards had made to this illand in 1770 . The general appearance of the natives feemed to argue a great fterility of the country. They were inferior in Ptature to the natives of the Society and Friendly Ifles, and to thofe of New Zeeland, there being not a fingle perfon amongft them, who might be reckoned tall. Their body was likewife lean, and their face thinner than that of any people we had hitherto feen in the South Sea. Their want of cloathing, and a great eagernefs to obtain our goods without offering any thing in return, feemed altogether to be fafficient marks of poverty. They were all prodigioully punctured on every part of the body, the face in particular; and their women, who were very fmall and flender limbed, had likewife punctures on the face, which refem-
1774. bled the patches fometimes worn by our ladies. The number of women in the croud did not exceed ten or twelve; they were feldom fatisfied with their natural clear brown colour, but painted the whole face with a reddifh brown ruddle, over which they laid on the bright orange of the turmeric-root; or ornamented themfelves with elegant ftreaks of white thell-lime. The art of painting is therefore not confined to thofe ladies who have the happinefs to imitate French fathions. The women were all dreffed in pieces of cloth, which appeared fcanty when compared to the Taheitian dreffes. Both fexes had thin, but not favage features, though the little fhelter which their barren country offers againft the fun-beams, had contracted their brows fometimes, and drawn the mufcles of the face up towards the eye. Their nofes were not very broad, but rather flat between the eyes; their lips ftrong, though not fo thick as thofe of negroes; and their hair black and curling, but always cut fhort, fo as not to exceed three inches. Their eyes were dark brown, and rather fmall, the white being lefs clear than in other nations of the South Seas. Their ears were remarkable for the great length of the lap, which frequently hung on the fhoulder, and was pierced with fo large a hole, that the extremity could be tucked up through it. In order to bring it to this fize, they wore a leaf of a fugar cane, which is very elaftic, rolled up in it like a fcroll; by which means it was always on the ftretch. The violent action of the fun upon their heads has forced them to contrive various coverings for that part. Many of the men wore a ring about two inches thick, ftrongly and curiounly plaited of grafs, and fitting clofe round the head. This was covered with great quantities of the long black feathers which decorate the neck of the man of
war bird. Others had huge bufhy caps of brown \({ }^{1774}\). gulls feathers, which were almof as large as the March. full-bottomed wigs of European lawyers; and ftill others wore a fimple hoop of wood, round which a number of the long white feathers of a gannet hung nodding, and waved in the wind. The women wore a great wide cap, made of very neat mat-work; it was pointed forwards, formed a ridge along the top, and two large lobes behind on each fide, which we found extremely cooling for the head. The only ornaments which we faw among them, were the flat pieces of bone in the Shape of a tongue, or like a laurel leaf, which both fexes wore hanging on their breaft, together with fome necklaces and ear-jewels made of fhells.

After ftaying among the natives for fome time on the beach, we began to walk into the country. The whole ground was covered with rocks and ftones of all fizes, which feemed to have been expofed to a great fire, where they had acquired a black colour and porous appearance. Two or three Ihrivelled fpecies of grafles grew up among there ftones, and in a flight degree foftened the defolate appearance of the country. About fifteen yards from the landing. place we faw a perpendicular wall of fquare hewn ftones, about a foot and a half or two feet long, and one foot broad. Its greateft height was about feven or eight feet, but it gradually floped on both fides, and its length might be about twenty yards. A remarkable circumftance was the junction of thefe ftones, which were laid after the mof excellent rules of art, fitting in fuch a manner as to make a durable piece of architecture. The ftone itfelf of which they are cut is not of great hardnefs, being a blackifh brown cavernous and brittle ftony lava. The ground rofe from the water's fide upwards;
wards; fo that another wall, parallel to the firft about twelve yards from it and facing the country, was not above two or three feet high. The whole area between the two walls was filled up with foil and covered with grafs. About fifty yards farther to the fouth there was another elevated area, of which the furface was paved with fquare flones exactly fimilar to thofe which formed the walls. In the midft of this area, there was a pillar confifting of a fingle ftone, which reprefented a human figure to the waiff, about twenty feet high, and upwards of five feet wide. The workmanfhip of this figure was rude, and fpoke the arts in their infancy. The eyes, nofe, and mouth were fcarcely marked on a lumipifh ill-fhaped head; and the ears, which were exceffively long, quite in the farhion of the country, were better executed than any other part, though a European artift would have been afhamed of them. The neck was clumfy and fhort, and the houlders and arms very flightly reprefented. On the top of the head a huge round cylinder of tone was placed upright, being above five feet in diameter and in height. This cap, which refembled the headdrefs of fome Egyptian divinity, confifted of a different ftone from the reft of the pillar, being of a more reddifh colour; and had a hole on each fide, as if it had been made round by turning. The cap together with the head, made one half of the whole pillar which appeared above ground. We did not obferve that the natives paid any worfhip to thefe pillars, yet they feemed to hold them in fome kind of veneration, as they fometimes expreffed a diflike when we walked over the paved area or pedeftals, or examined the ftones of which it confifted.

A few of the natives accompanied us farther on into the country, where we had feen fome buthes
at a diftance, which we hoped would afford us 1774 . fomething new. Our road was intolerably rug- March: ged, over heaps of volcanic ftones, which rolled away under our feet, and againft which we continually hurt ourfelves. The natives, who were accuftomed to this defolate ground, flipped nimbly from ftone to ftone without the leait difficulty. In our way we faw feveral black fats running about, which it feems are common to every ifland in the South Sea. Being arrived at the fhrubbery which we had in view, we found it was nothing but a fmall plantation of the paper mulberry, of which here, as well as at Taheitee, they make their cloth. Its ftems were from two to four feet high, and planted in rows, among very large rocks, where the rains had walhed a little foil together. In the neighbourhood of thefe we faw fome buihes of the bibifcus populneus, Linn. which is common alfo in the Society Intes, where it is one of the numerous plants made ufe of to dye yellow; and likewife a mimofa, which is the only flrub that affords the natives fticks for their clubs and pattoo-pattoos, and wood fufficient to patch up a canoe.

We found the face of the country more barren and ruinous the farther we advanced. The fmall number of inhabitants, who met us at the land-ing-place, feemed to have been the bulk of the nation, fince we met no other people on our walk; and yet for thefe few we did not fee above ten or twelve huts, though the view commanded a great part of the inland. One of the fightlieft of thefe was fituated on a little hillock, about half a mile from the fea, which we afcended. Its conftruction was fuch as evinced the poverty and wretched condition of its owners. The foundation confirted of fones about a foot long, laid level with the furface in two curve lines, converging at the exVol. I.

H h
tremities.

\section*{A V O Y A G E}

17-4. tremities. Thefe lines were about fix feet afurder in the middle, but not above one foot at the ends. In every ftone of this foundation we obferved one or two holes, in each of which a ftake was inferted. The middlemoft ftakes were fix feet high, but the others gradually diminifhed to two feet. On the top the ftakes all converged, and were tied by frings to tranfverfe fticks, by which they were kept together. A kind of thatch, made of fimall fticks, and covered with a neat matwork of fugar-cane leaves, leaned on each row of ftakes, forming a very fharp ridge or angle at the top, and retting firmly on the ground at the bottom. A hole was left on one fide, about eighteen inches or two feet high, over which the people had built a round projecting funnel to keep off the wet. We crept on all fours into this opening, and found the infide of the hut perfectly naked and empty, there being not fo much as a wifp of ftraw to lie down upon. We could not ftand upright in any part except juft in the middle, and the whole place appeared dark and difmal. The natives told us they paffed the night in thefe huts, and we eafily conceived their fituation to be uncomfortable, efpecially as we faw fo very few of them, that they muft be crammed full, unlefs the generality of the people lie in the open air, and leave thefe wretched dwellings to their chiefs, or make ufe of them only in bad weather.

Befides thefe huts, we obferved fome heaps of ftones piled up into little hillocks, which had one fteep perpendicular fide, where a hole went under ground. The face within could be but very fmall, and yet it is probable that thefe cavities likewife ferved to give fhelter to the people during night. They may, however, communicate with natural caverns, which are very common in the lava currents of volcanic countries. Such ca-

\section*{ROUND THE WORLD.}
verns are very frequent in Iceland, famous for having been the dwelling-places of the ancient inhabitants. Mr. Ferber, the firt mineralogical hiftorian of Vefuvius, has noticed fuch a fubterraneous hole in one of the modern lavas of that mountain. We fhould have been glad to have afcertained this circumftance, but the natives always denied us admittance into thefe places.

A plantation of fugar-canes and one of bananas adjoined to the houfe we had vifited, and both were in excellent order, confidering the ftony quality of the ground. The bananas were all growing in holes one foot deep, which we fuppofed to be contrived for colleeting the rain, and preferving it for a longer time about the plant. The fugar-canes were about nine or ten feet high, even in this parched country, and contained a very fweet juice, which the inhabitants prefented to us very frequently, and particularly whenever we afked for fomething to drink. We concluded from thence that they had no water on the ifland; but coming back to the landing-place we met captain Cook, whom the natives had conducted to a well very clofe to the fea, which was cut deep into the rock, but full of impurities. When our people had cleared it, they found the water in it rather brackifh, but the natives drank of it with much feeming fatisfaction.

Captain Cook had not been very fortunate in trading with the people. They feemed indeed to be fo deftitute as to have no provifions to fpare. A few matted bafkets full of fweet potatoes, fome fugar-canes, bunches of bananas, and two or three fmall fowls ready dreffed, were the whole purchafe which he had made for a few iron tools, and fome Taheitee cloth. He had prefented the people with beads, but they al"ays threw them away with contempt, as far as ever they could. WhatHh 2

\section*{\(4 . \quad\) A \(\quad V \quad \mathbf{O} \quad \mathbf{Y}\) A \(\quad\) G}
1774. ever elfe they faw about us, they were defirous of March. poffeffing, though they had nothing to give in return. Their namber was now decreafed nearly to one half, many of them having probably gone home to their dinners; however, the number of women was always remarkably fmall in proportion to the men, there being not above twelve or fifteen at our firft landing, and about fix or feven when we embarked again. They were neither referved nor chafte, and for the trifling confideration of a fmall piece of cloth, fome of our failors obtained the gratification of their defires. Their features were mild enough, and the large pointed cap gave them the air of profeffed wantons.

We returned on board the fhip before noon, and found it at anchor, though we had left it under fail. The frefh fruits and roots which we brought on board, were immediately diftributed as far as they would go, and proved a molt feafonable sefrefhment to our fick. We tafted the fowls, which feemed to have been dreffed under-ground, by means of hot ftones being wrapped op in green leaves, in the manner practifed amongit all the nations of the South Sea, whom we had hitherto vifited. The potatoes were of a gold-yellow colour, and as fweet as carrots, therefore not equatly palatable to us all; however they were extremely nourifhing, and very antifcorbutic. The juices of this, and all the other vegetables on this inland, feemed to have been concentrated by the drynefs of the foil. Their bananas were reckoned very delicious in their kind, by thofe who were fond of this fruit, and their fugar-canes were fweeter than any we had tafted at \(T\) aheitee.

In the afternoon we returned on fhore again, and an officer went with another boat to fill water at the well. We found but few natives near the landing-place, and among them was one, who

\section*{ROUND THE WORLD.}
appeared to have fome little authority, and readily accompanied the captain wherever he went. He was not \(S_{0}\) timorous as the reft of his countrymen, but walked boldly along with us, whilf the others were alarmed at the leaft motion which appeared unufual to tinem. This difpofition, however, did not prevent them from picking our pockets, or fealing any thing which fuited them. We had not been half an hour on fhore, when one of them came behind Mahine, and very nimbly fnatching a black cap from his head, ran off with the greateft velocity cver the heaps of rugged ftones, where it was impoffible to followhim. Mahine was fo furprifed, that it was fome time before he could find words to complain to the captain; and when he did it, the thief was alneady at a great diffance. About the fame time, as Mr. Hodges was fitting on a little eminence, and fketching a view of the country, one of the natives ran off with his hat in the fame manner. Mr. Wales was ftanding by him with a mufket in his hand, but very juftly reflected, that fo nlight a crime did not deferve the punifhment of a leaden bullet.

In our walk along the fea-hore, we difcovered 2 few ftalks of the fame fecies of celery which is plentiful on the beaches of New Zeeland, and we alfo found two other little plants common to that country. Whether thefe plants originally exiated on the iland, or fprung up from feeds, which the current of the fea, or birds by their plumage might tranfport from the oppofite fide of the ocean, I cannot venture to determine. We likewifs met with a plantation of yams (dioforea alata, Linn.) which in fo poor a fora as that of Eafter 1,land was a great addition. The great correfpondence in the features, cuftoms, and languages of there people, to thofe of other natives of the South Sea
1774. Sea illands, gave us fome room to hope for fuch \(\underbrace{\mathrm{MaRCH}^{\text {A }}}\) domeftic animals among them, as we had obferved at Taheitee or New Zeeland. But notwithftanding the moft diligent fearch, we never met with any other than common fowls, which were of a very fmall breed, and had a dull plumage. It is true we obferved alfo two or three noddies, which were fo tame as to fettle on the fhoulders of the natives, but from thefe individuals we could not conclude, that they kept a regular breed of them.

About fun-fet we left the watering-place, and walked to the cove where our boat lay at a grapnel. In our way we paffed over the area on which the fingle pillar before-mentioned was placed. A few natives who ftill accompanied us, made figns that we fhould defcend, and walk in the grafs at the foot of the pedeftal; but feeing that we did not care to underftand their geftures, they made no other attempt to oppofe our progrefs. We put fome queftions to the moft intelligent perfons among them, concerning the nature of thefe ftones, and from what we could underftand, we concluded that they were monuments erected to the memory of fome of their areekees, or kings. This led us to believe that the pedeital was perhaps to be confidered as a burying-place, and on looking carefully round it, we found a number of human bones, which confirmed our conjecture. The length of thefe bones was exactly fuch as might be expected in perfons of a middle ftature, and a thigh-bone which we meafured, exactly correfponded with that of a perfon about five feet nine inches high. To the weftward of the cove, there was a range of three pillars, ftanding on a very large elevated area or pedeftal. This range the natives diftinguifhed by the name of banga-roa, and the fingle pillar they called obeena. About

\section*{ROUND THE WORLD.}
ten or twelve people were feated at a little diftance from the laft, round a fmall fire, over which they had rafited a few potatoes. Thefe ferved for their fupper, and they offered us fome of them as we paffed by. We were much furprifed with this inftance of hofpitality in fo poor a country, efpecially when we compared it to the cuftoms of ciyilized nations, who have almoft entirely laid afide all tender feelings for the wants of their fellowcreatures. At the fame time we were very glad to be convinced, that the conjectures of the Dutch concerning the fires which they faw on this ifland, were ill-founded, as we did not fee the leaft reafon to fuppofe, that they were lighted for religious purpofes. We naw embarked with a fmall quantity of potatoes, and with about fix or feven common plants which we had gathered, and returned on board. Thofe only who were ill of the fcur\(v y\), reaped fome benefit from their vifit to the thore. I who went out in the morning with my legs exceffively fwelled, and fo tender that I could hardly fand upon them, returned on board much better; the fwelling was fomething reduced, and my pains at leaft were gone. I could not attribute this fudden change to any thing elfe, than the exercife I had taken on fhore, and perhaps to thofe falutary antifcorbutic effluvia of the land, which, it is faid, are alone fufficient to recover thofe, who have contracted the fcurvy on a long cruize at fea.

Early the next morning, captain Cook appoint- Tuef. 15 . ed a party of marines and failors, under the command of lieutenants Pickerfill and Edgecumbe, to reconnoitre the interior parts of the country, in order to be convinced, if poffible, whether any pther part was better cultivated, or more clofely inhabited than that which we had hitherto feen. Mr. Wales, Mr. Hodges, Dr. Sparrman, and ny

\section*{A \(\quad \mathbf{V} \quad \mathrm{O} \quad \mathbf{Y} \quad \mathrm{A} \quad \mathrm{G} \quad \mathrm{E}\)}
1774. my father affociated with them, fo that the whole \(\underbrace{\text { March. }}\) party confifted of twenty-feven men.

After breakfaft I accompanied captain Cook and feveral officers afhore, where we found about two hundred inhabitants affembled, amongft whom were fourteen or fifteen women, and very few children. It was impoffible for us to guefs at the caufe of this difproportion in the number of the different fexes; but as all the women we faw were very liberal of their favours, I conjectured at that time, that the married and the modeft, who might be fuppofed to form the greater part, did not care to come near us, or were forced by the men to ftay at their dwellings in the remote parts of the ifland. Thofe few who appeared were the moft lafcivious of their fex, that perhaps have ever been noticed in any country, and fhame feemed to be entirely unknown to them; our failors likewife difclaimed all acquaintance with modefty, for nothing but the fhadow of the gigantic monument fcreened them from the fun.

Mr. Patton, lieutenant Clerke, and myfelf left the fea-fide, where the concourfe was greateft, and took a walk into the country. The heat of the fun was very violent, the beams being reverberated from the broken ground, and there was not a fingle tree to give us fhelter. My companions had taken their fowling-pieces in hopes of meeting with fome birds; but they were greatly difappointed, there being probably no other landbirds on the ifland than the common fowl, which were tame and extremely fcarce. We followed one of the paths which the natives had made, till we came to a cultivated fpot, confifting of feveral fields planted with fweet potatoes, yanis, and eddoes, together with a fpecies of night thade, which is ufed at Taheitee and the ne:ghbouring iflands as a vulnerary remedy, (folanum nigrum?)
and may, for aught I know, be cultivated here \({ }_{1774}\). for the fame purpofe. The grafs, which com- \(\mathrm{MARCH}^{\text {. }}\) monly frings up among the ftones on the uncultivated foil, was here carefully plucked up, and fpread over the whole plantation as a manure, or perhaps to preferve it in fome meafure from the parching beams of the fun: It thould feem from there circumftances that the natives are not altogether ignorant of rural œconomy, and till the ground at a great expence of time and labour. At a little diftance from thefe fields we met with two huts, conftructed exactly like that which I have mentioned page 465 , but much fmaller. The entrance was ftopped up with a great quantity of fmall bruhhwood, and we at firf imagined that we heard the voices of women within, but after liftening for fome time we heard nothing farther to confirm us in this belief. We rambled from thence to the top of a hillock covered with fhrubberies, which we found to confift of nothing but a fpecies of mimofa, that fcarcely attained the height of eight feet, and afforded us very little thelter from the fun. Here we refted a while, and then defcended by a different route into another fet of fields, which were treated in the fame manner as the reft. None of them had any fort of enclofures, though the hiftorians of Roggewein's voyage, who feem to have confulted fancy more than truth, make mention of them. The encreafing heat of the day had entirely exhaufted us, when we had fill a confiderable way to make down to the fea-fide. Fortunately we paffed by a native who was at work, gathering potatoes in one of the fields. We complained of great thirft to him, upon which, though he was an old man, he immediately ran to a large plantation of fugarcanes, and brought us a great load of the beft and juicieft on his back: We made him fome prefents
1774. prefents in return for them, cut them into walk\(\underbrace{\text { March }}\); ing.fticks, and, as we went along, gradually peeled and fucked them, finding their juice extremely refrefhing.

At our return to the landing-place we found captain Cook ftill occupied in trading with the inhabitants, who brought him fome fowls ready dreffed, and fome matted bafkets full of fweet potatoes, but fometimes deceived him by filling the bafket with fones, and only laying a few potatoes at the top. The moft valuable article of trade on our part were empty coco-nut fhells, which we had received at the Society and Friendly Iflands; but they were not current, unlers the hole in them was very fmall, or unlefs they had a cover. The 'Iaheitian and European cloths were valued in the next degree according to the fize of the pieces; and iron-ware bore an inferior price. The greateft part of the natives who traded with us inftantly ran off with the cloth, nut-fhell, or the nail which had been given in exchange for their potatoes, as if they were apprehenfive that we might repent of our bargain, even though they dealt honeftly with us. Some among them were bold enough to run off with what they had received as the price of their provifions, before they had delivered up the goods for which we had bargained. From fuch circumftances the deplorable condition of the natives became more and more confpicuous. The fcarcity of cloth among them was extremely great, moft of the people being forced to go naked; but this did not prevent their felling what little cloth they had in exchange for that of Taheitee. The defire of poffefing this cloth prompted them to expofe to fale feveral articles which perhaps they would not have parted with fo eafily under other circumftances. Among thefe were their different caps or headdreffes,

\section*{ROUND THE WORLD.}
drefles, their necklaces, ornaments for the ear, and feveral human figures, made of narrow pieces of wood about eighteen inches or two feet long, and wrought in a much neater and more proportionate manner than we could have expected, after feeing the rude fculpture of the itatues. They were made to reprefent perfons of both fexes; the features were not very pleafing, and the whole figure was much too long to be natural ; however, there was fomething characteriftic in them, which flewed a tafte for the arts. The wood of which they were made was finely polifhed, clofe-grain-- ed, and of a dark-brown, like that of the cafuarina. But as we had not yet feen this tree growing here, we eagerly expected the return of our party, hoping they would make fome difoveries to explain this circumftance. Mahine was moft pleafed with thefe carved human figures, the workmanhip of which much excelled thofe of the eTees in his country, and he purchafed feveral of them, affuring us they would be greatly valued at Taheitee. As he took great pains to collect thefe curiofities, he once met with a figure of a woman's hand, carved of a yellowifh wood, nearly of the natural fize. Upon examination, its fingers were all bent upwards, as they are in the action of dancing at Taheitee, and its nails were reprefented very long, extending at leaft threefourths of an inch beyond the fingers' end. The wood of which it was made was the rare perfumewood of Taheitee, with the chips of which they communicate fragrance to their oils. We had neither feen this wood growing, nor obferved the cuftom of wearing long nails at this ifland, and therefore were at.a lofs to conceive how this piece of well-executed carving could be met with there; we hoped, however, to unravel this circumitance allo at the return of our party. Mahine afterwards
1774. wards prefented this piece to my father, who has March. in his turn made a prefent of it to the Britifh \(\sim_{\text {Mufeum. Mahine was likewife very eager to }}\) collect as many feathered caps as he could meet with, efpeceially thofe which had the feathers of a man of war bird, that bird being very fcarce about Taheitee, and much valued on account of its gloffy black colour.

Whilt captain Cook continued in the cove, another trade for potatoes was carried on at the watering.place. Here the defire of poffeffing our goods, made fome of the natives guilty of a crime againft their own countryman. A field of fweet potatoes was fituated clofe to the well, and a confiderable number of people of different ages and fizes, bufied themfelves in digging them up, and bringing them for fale to our people. They had carried on this occupation for fome hours, when another native arrived, who was in a vehement paffion with them, and drove them all away, remaining alone to dig the roots up himfelf. He was the owner of the field, whom the reft had robbed of the fruits of his labour, finding an eafy method to difpofe of their ftolen goods. It is not to be doubted that thefe offences againf the laws of civil fociety, are fometimes committed even at the Society Ines, becaufe the inhabitants have often told us, that they inflicted a capital punifhment upon fuch offenders; but we never faw any inftances of it there. On this occafion at Eafter Ifland, we did not obferve that they annexed any penalty to the crime, though we faw it committed. Perhaps this is owing to the different degree of civilization of thofe two cogeneric tribes.

We went on board at noon, where we dined on fome fowls and potatoes, which we found delicious after the fatigues of the morning. We obferved

\section*{ROUND THE WORLD.}
obferved a few natives on board, who had ven- 1774. tured to fwim off, though the fhip lay about three \(\underbrace{\text { March. }}\) quarters of a mile from the fhore. They expreffed the moft unbounded admiration at every thing they faw, and every one of them meafured the whole length of the veffel from head to ftern, with his extended arms; fuch a great quantity of timber of fo flupendous a fize, being altogether incomprehenfible to people whofe canoes were patched of many fmall bits of wood. Among them was one woman, who had arrived on board in the fame manner, and carried on a particular traffic of her own. She vifited feveral of the inferior officers, and then addreffed herfelf to the failors, emulating the famous exploits of Meffalina*. A few Englifh rags, and fome pieces of Taheitee cloth, were the fpoils which fhe carried away with her, being fetched off by a man in the patched canoe, which was perhaps the only one in the ifland. Another of her country-women had vifited our thip the day before, and been equally unbounded in her revels. It remained a doubt with us, whether we fhould moft admire their fuccefs among a fickly crew, exhaufted by the long continuance of a noxious diet, or their own fpirit and infatiate temper.

In the afternoon we returned to the fhore again, and I walked on the hills to the fouthward, which rofe with a very eafy llope. Here I met with a large plantation of bananas, beyond which I found fome remains of a ftone wall, which was perhaps once the bafe of a fatue. From thence I croffed fome fields, where I faw a family of the natives at work, taking potatoes out

\footnotetext{
* See Plin. Hift. Nat. lib. x, c. 63. Tacit. Annal. lib. xi. Juvenal Sat. vi. 129.
}
1774. out of the ground. I walked up to their hut, March. which was one of the fmalleft I had yet feen, and as they came about me, I fat down among them. 'Their whole number amounted to fix or feven perfons, one of whom was a woman, and two were young boys. They prefented me with fome fugar-canes, and in return, I made them a prefent of a fmall piece of Taheitee cloth, which they immediately wrapped about the head. They did not exprefs that great curiofity which we had obferved among the people of the Society Ifles, but foon returned to their former occupation, in which all were employed without exception. Some of them had head-dreffes made of feathers, which they readily offered to exchange for pieces of cloth no bigger than a handkerchief. About the hut I perceived a few fowls, the only ones which I had feen alive on the ifland. Their behaviour towards me was wholly inoffenfive, agreeably to the general character of the nations in the South Sea. From the expreffions of the hiftorians of Roggewein's voyage, it fhould feem, that the Dutch very wantonly fired upon the natives, who gave no provocation, and killed a confiderable number of them, intimidating the reft to a great degree. It is probable, that the terror with which they looked upon the deftructive arms of Europeans at that time, and during the late vifit of the Spaniards, was revived among them at our appearance, and had an influence on their general timid behaviour towards us; but it is not to be doubted, at the fame time, that there is a mildnefs, fellowfeeling, and good-nature in their difpofition, which naturally prompts them to treat their vifitors kindly, and even hofpitably, as far as their wretched country will permit.

\section*{ROUND THE WORLD.}

I returned the fame way by which I came, and foon after went on board the fhip with captain Cook. About nine o'clock a mufket was fired on thore, as a fignal for a boat, and the pinnace being fent off, returned foon after with our party, who had been to examine the ifland. My father being more fatigued than any body elie, on account of his long rheumatic complaint, was obliged to go to bed immediately; but the other gentlemen fupped with us, on a few fowls which we had purchafed on thore, and gave us fome account of their travels. As it will be moft agreeable to fee it in connection, I fhall here infert that which I have extrated from my father's journal.
"Immediately after landing, we walked direefly inland or acrofs the country, under the higheft hill which lies towards the fouth, till we came to the other fide of the ifland. About an hundred natives, and among them four or five women, accompanied us on our march, and fold us 2 quantity of potatoes and a few fowls, which we added to our ftock of provifions. We found the whole country ftrewed with ftones of various fizes, of a cavernous or fpongy texture, and of a black, brown, or reddifh colour, which had indubitable marks of having been in a volcanic fire. The paths through this rugged ground are in fome meafure cleared of the flones, but fo very narrow, that we were obliged to turn our toes inwards, at which the natives are perfectly expert, and to fet one foot exactly before the other. This mode of walking was exceffively fatiguing to us who were not ufed to it, fo that we continually hurt our feet or ftumbled. On both fides the ground was covered with a thin perennial Jamaica-grafs, (pafpalum,) which grew in bunches or tufts, and was fo dippery that we
1774. could not walk on it. We reached the eaft fide March. of the illand, near a range of feven pillars or - Gatues, of which only four remained ftanding, and one of them had loft its cap. They ftood on a common pedeftal, like thofe which we had feen on the other fide, and its ftones were fquare and fitted exactly in the fame manner. Though the ftone of which the ftatue itfelf is formed feems to be foft enough, being nothing but the red tufa which covers the whole ifland, yet it was incomprehenfible to me how fuch great maffes could be formed by a fet of people among whom we faw no tools; or raifed and erected by them without machinery. The general appellation of this range was Hanga Tebòw; hanga being the word which they prefix to every range. The names of the ftatues were \(K o^{*}\) Tomoaï, Ko-Tomoèereє, Ko-Hòo-00, Morabèena, Oomarèeva, Weenâbco, Weenapè.
" From hence we continued our march to the northward along the fea, having a precipice on our right. The ground was the fame ferrugineous tufa for a confiderable way, covered with fmall fragments; but after fome time we came to a foot which was a fingle coherent rock or lump of black melted lava, which appeared to contain fome iron. There was no foil, grafs, or plant whatfoever upon it. Beyond it we paffed through a number of plantations of bananas, potatoes, and yams, and one of eddoes. The grafs between the ftones was plucked up and fpread on the land, to fcreen it from the fun, to keep the moifture of the rain in it, and at laft to manure it.
"The natives continued to offer fome potatoes for fale ready drefled, and, at a hut where

\footnotetext{
* \(K_{0}\) is the article, as at New Zeeland and in the Friendly Illes.
}

\section*{ROUND THE WORLD.}
we halted, they fold us fome fifh. Some of them \({ }^{1774}\). carried arms, which were no other than the thin March. fticks we had feen before, and which were headed with a black vitreous lava, carefully wrapped in a fmall piece of cloth. Only one of them had a bat-tle-axe, refembling that of the New Zeelanders, though much fhorter. It had a head carved on each fide, and a fmall round portion of the black glafs above-mentioned inftead of eyes. They had likewife fome fmall crooked human figures made of wood, of which we could not learn the ufe or fignification; we did not, however, think that our ignorance on this fubject intitled us to call them idols, which is too commonly the judgment paffed upon the works of art of unknown nations.
" "After leaving this hut we fill advanced to the northward, without feeing any new objects. A man and a woman met us from fome neighbouring houfes, each with a large matted bag, of very neat workmanhip, filled with hot potatoes, and placed themfelves by the fide of the path where we were to pafs. As we came on, the man prefented each of us with fome of the roots, and having diftributed a portion to the whole party, he ran with amazing fwiftnefs to the head of our file to thare out the reft, till he had given away the whole. He received a large piece of cloth from me, which was the only requital for an inftance of hofpitality, of which I never faw the like even at Taheitee. Soon after the natives told us their aree, or bareekee, or king was coming towards us. Several men came on before him, and diftributed fugar-canes to us all in fign of friendfhip, at the fame time pronouncing the word beeo *, which fignifies friend. We now Vol. I.

\footnotetext{

}
1774. faw the king ftanding on a hill, and walked up March. to him, Mr. Pickerfgill and myfelf making him \(\xrightarrow[\sim]{\text { fome prefents. We alked for his name, which }}\) he told us was Ko-Toneetai, adding that he was arse or king. We were defirous of knowing whether he was only the chief of a diftrict, or of the whole ifland; upon which he fpread out his arms, as it were to include the whole ifland, and faid Waibu. To fhew that we underfood him, we laid our hands on his breaft, and, calling him by name, added his title, king of Waihus at which he expreffed very great fatisfaction, and converfed a great deal with his people on that fubject. He was a middle-aged man, rather tall; his face and whole body ftrongly punctured. He wore a piece of cloth made of the mulberry bark, quilted with threads of grafs, and ftained yellow with turmerick; and on his head he had a cap of long fhining black feathers, which might be called a diadem. We did not perceive any great degree of homage or attention paid to him by the people; and indeed in fo poor a country there feems to be nothing which he could have referved for himfelf, without a manifeft incroachment on the natural rights of mankind, which might have produced dangerous effects. When we wanted to continue our march he feemed to diflike it, and defired us to return, offering to accompany us; but feeing our officer determined to proceed at all events he defifted, and went with us.
"We marched to an elevated fpot, and ftopped a little while to take fome refrefhments, and to give Mr. Hodges time to draw fome of the monuments, near one of which we found an entire fkeleton of a man. Our people fat down on the ground, and laid their bundles of provifion

\section*{ROUND THE WORLD.}
fion before them, whilft the officers, and other gentlemen with myfelf, converfed with the natives. One of our failors, who carried my plant-bag, in which were a few nails, \&cc. being lefs careful of his bundle than the reft, a native fnatched it up and ran off with it. None of us faw it, except lieutenant Edgecumb, who immediately fired his muket, loaded with fmall thot, at the thief, and thus gave the alarm to us all. The native being wounded threw down the bag, which our people recovered, but he fell foon after; his countrymen took him up, and fled to a little diftance, till we beckoned to them to return, which almoft all of them did. Though this was the only inftance of firing at a native during our ftay at Eafter Mand, yet it is to be lamented that Europeans too often affiume the power of inflicting punihments on people who are utterly unacquainted with their laws.
"From this Spot we continued our march 2 good way inland, and were conducted to a deep well, which appeared to have been formed by art, and contained good frefh water, though fomewhat troubled. We all drank heartily of it, and then went on, paffing by feveral large fatues, which had been overturned, till we came in fight of the two hummocks, near which we had perceived the greateft number of pillars or flatues, from the fhip, on the 12 th. We mounted on an eminence in the neighbourhood, from whence we beheld the fea on both fides of the inland, acrofs a plain which we had likewife difcovered from the fhip at that time. We viewed the whote eaftern coaft, and its numerous pillars, and were convinced that there was no bay or harbour on that fide of the ifland. With this information we returned back to a large flatue,
1774. which the natives called Mangototo, and in the March. fhade of which we dined. In its neighbourhood we met with another huge ftatue, which lay overturned; it was twenty-feven feet long, and nine feet in diameter, exceeding in magnitude every other pillar which we had feen on the illand.
"In returning, we ftopped once more at the well, and quenched our thirft, which the raging heat of the fun, reverberated from barren rocks, had excited. From thence we directed our march fomething nearer the ridge of hills which ran along the middle of the ifland, but found the path more rugged and fatiguing than ever, the country being ftrewed with volcanic cinders, and defolate all round us, though we found many remaining proofs of its having been formerly cultivated. I now felt how much I had been weakened by the long continuance of the rheumatifm, which had crippled all my limbs, and was hardly able to keep up with the reft, though I had formerly, upon fimilar occafions, been indefatigable. The natives feeing us ftrike into a difficult path had all left us, except one man and a little boy, Finding that our officers with their party, went too much out of their way, by miftaking the direstion of our fhip, I left them; and with Dr. Sparrman, a failor, and the two natives, purfued the neareft path, which the latter had plainly pointed out. The man feeing me very faint, offered me his hand, and walking on the loofe ftones by the fide of the path, with amazing dexterity fupported me for a confiderable way; the little boy going before, and picking up the ftones which obftructed the path. By refting feveral times, we were at laft enabled to reach the fummit of the hill, from whence we faw the fea to the weft, and the fhip at anchor. The hill

\section*{ROUND THE WORLD.}
was covered with a fhrubbery of the mimofa, which 1774 . grew here to the height of eight or nine feet, March. and fome of whofe ftems near the root, were about the thicknefs of a man's thigh. We found another well here-abouts, of which the water was infected with a putrid tafte, and the fmell of bepar fulpburis, but of which we drank, notwithftanding its naufeoufnefs. The fun fet very foon after we had left this well; fo that we continued our walk downwards, for more than two hours entirely in the dark, during which my Indian's affiftance was particularly valuable to me. I waited for Mr. Pickerfgill and the reft of the party, having gained near three miles upon them, and arrived fafely at the faa-fide with them, after walking at the loweft computation, at leaft five and twenty miles on the moft deteftable roads, where not a fingle tree appeared to give us fhelter from the fcorching fun. I rewarded my friendly conductors with all the Taheitee cloth, and iron ware, which I had about me, and arrived fafely on board with the party."

From this narrative it is evident, that the moft diligent enquiries on our part, have not been fufficient to throw a clear light on the furprifing objects which ftruck our eyes in this inland. We may however, attempt to account for thole gigantic monuments, of which great numbers exift in every part; for as they are fo difproportionate to the prefent ftrength of the nation, it is moft reafonable to look upon them as the remains of better times. The nicelt calculations which we could make, never brought the number of inhabitants in this ifland beyond feven hundred,* who,
* The Spaniards in the S. Lorenzo, and frigate Rofalia, make the population of Eafter Inand amount to between two and three thoufand; but it may be doubted whether they examined the interior country, as well as our people. See Mr. Dalrymple's Letter to Dr. Hawkefworth.
1774. who, deflitute of tools, of melter, and clothing, March. are obliged to fpend all their time in providing \(\underbrace{}_{\text {food to fupport their precarious exiftence. It is }}\) obvious that they are too much accupied with their wants, to think of forming flatues, which would coft them ages to finifh, and require their united ftrength to erect. Accordingly, we did not fee a fingle infrument among them on all our excurfions, which could have been of the leaft ufe in mafonry or fculpture. We neither met with any quarries, where they had recently dug the materiais, nor with unfinifhed fatues which we might have confidered as the work of the prefent race. It is therefore probable, that thefe people were formerly more numerous, more opulent and happy, when they could fpare fuffcient time to flatter the vanity of their princes, by perpeiuating their name by lafting monuments. The remains of plantations found on the fummits of the hills, give ftrength and fupport to this conjecture. It is not in our power to determine by what various accidents a nation fo flourifing, could be reduced in number, and degraded to its prefent indigence. But we are well convinced that many caufes may produce this effect, and that the devaftation which a volcano might make, is alone fufficient to heap a load of miferies on a people corfined to fo fmall a fpace. In fact, this ifland, which may perhaps, in semote ages, have been produced by a volcano, fince all its minerals are merely volcanic, has at leaft in all likeiihood been deftroyed by its fire. All kinds of trees and plants, all domeftic animals, nay a great part of the nation itelf may have perihed in the dreadful convulfion of nature: hunger and mifery muft have been but too powerful enemies to thofe who efcaped the fire. We cannot well account for thofe

\section*{ROUND THE WORLD.}
thofe little carved images which we faw among 1774. the natives, and the reprefentation of a dancing March. woman's hand, which, as I have mentioned above,
 are made of wood, at prefent not to be met with upon the ifland. The only idea which offers itfelf, is that they were made long ago, and have been faved by accident or predilection, at the general cataftrophe which feems to have happened. All the women whom we faw in different parts of the illand, did not amount to thirty, though our people croffed it almoft from one end to the other, without feeing the leaft probability that the women had retired to any fecluded part. If there are really no more than thirty or forty women, among fix or feven hundred men, the whole nation is in a fair way of becoming entirely extinct in a fhort fpace of time, unlefs all our phyfical principles on the plurality of hufbands are erroneous. The greater part of the women whom we faw gave us no reafon to fuppofe that they were accuttomed to a fingle partner ; on the contrary, they feemed habitually to have arrived at the fpirit of Meffalina, or of Cleopatra. But this difproportion is fuch a fingular phænomenon in human nature, that we cannot without difficulty give credit to it, and would willingly lay hold of any argument which, though incumbered with difficulties, might reftore the proportion between the fexes. It is true our party did not fee any valley or fecluded glen, to which the women might have confined themfelves during our ftay; but I muft remind the reader of thofe caverns mentioned before, to which the natives always refufed to admit us. The caverns of Iceland are fpacious enough to contain feveral thoufand inhabitants ; and nothing is more probable than that, in a fimilar yolcanic country, fuch caverns may afford room
1774. for a few hundreds. What reafons the Eafter \(\underbrace{\text { March. }}\) Ilanders may have to be more jealous of their women than the Taheitians, we know not ; but we are acquainted with the outrageous and wanton behaviour of the failor, wherever he has fo great a fuperiority over the Indian, as the Dutch and Spaniards muft have had over the people of Eafter Ifland. The principal objection againft this fuppofition is, however, the fmall number of children which we faw, there being no reafon to feclude them from our eyes, whatever might be thought neceffary with regard to the women. In fhort, this matter muft remain unafcertained, and if, in fact, the number of women is inconfiderable, it muft have been diminifhed by fome extraordinary accident, which none but the natives could have explained; but, in all our doubts, our ignorance of their language prevented us from acquiring any information.

The next morning we fent a boat afhore to take in fome water, and the weather continuing calm, another went off to trade with the natives in order to encreafe our little fock of potatoes. One of the natives likewife plied between the fhip and the fhore, bringing off potatoes and bananas in the patched canoe. In the mean while a fmart fhower falling on board the fhip, enabled our people to collect a quantity of frefh water in the awnings and fails of the fhip, which were fpread to catch it. Another boat went off to the fhore in the afternoon, but towards evening a faint breeze fpringing up, the fhip fired a gun, in confequence of which the boat came on board, and we failed N. W. by W. from Eafter Ifland.
We had been greatly difappointed in the expectation which we had formed of this ifland, as a place of refrefhment. The only article of any importance was their fweet potatoes; but after

\section*{ROUND THE WORLD.}
we had regularly fhared out all we had purchafed, the common people had only a few fcanty meals of them. As to the bananas, yams, and fugarcanes which we had bought, they were in fuch inconfiderable quantities, that they farce deferve to be mentioned. All the fowls. which we had obtained, and which, in general, were of a very fmall breed, did not amount to fifty; and even the quantity of water which we had filled was inconfiderable and ill tafted. However, this fmall fupply was fo feafonable, that it preferved us from the too violent attacks of the fcurvy and bilious diforders, till we could reach a better place of refrefhment. Indeed, when I confider the wretched fituation of the inhabitants, 1 am furprifed that they parted with a quantity of provifions to us, of which the cultivation muft have coft them great pains and labour. The barren refractory foil of their inland, the fcarcity of domeftic animals, and the want of boats and proper materials for fifhing, all concur to render their means of fubfiftence extremely difficult and precarious. Yet the defire of poffeffing the new toys and curiofities which ftrangers brought among them, hurried them away, and prevented their reflecting on the urgency of their own moft natural and unavoidable wants. In this, as in numberlefs other circumftances, they agree with the tribes who inhabit New Zeeland, the Friendly and the Society Iflands, and who feem to have had one common origin with them. Their features are very fimilar, fo that the general character may eafily be diftinguifhed. Their colour, a yellowifh brown, moft like the hue of the New Zeelanc:ers; their art of puncturing, the ufe of the mul-berry-bark for clothing, the predilection for red paint and red dreffes, the Thape and workinanfhip of their clubs, the mode of dreffing their victuals,
1774. all form a frong refemblance to the natives of the iflands above mentioned. We may add to there, the fimplicity of their languages, that of Eafter 1lland being a dialect which, in many refpects, refembles that of New Zeeland, efpecially in the harfhnefs of pronunciation and the ufe of gutturals, and yet, in other inftances, partakes of that of Taheitee. The monarchial government likewife ftrengthens the affinity between the Eafter lnanders and the tropical tribes, its prerogatives being only varied according to the different degrees of fertility of the inlands, and the opulence or luxury of the people. Eafter Ifland, or, as the natives call it, Washu, is fo very barren, that the whole number of plants growing upon it does not exceed twenty fpecies, of which far the greater part is cultivated *; though the fpace which the plantations occupy is inconfiderable, compared with that which lies wafte. The foil is altogether ftony, and parched by the fun, and water is fo fcarce, that the inhabitants drink it out of wells which have a flrong admixture of brine; nay, fome of our people really faw them drink of the fea-water when they were thirfty. Their habit of body muft, in fome meafure, be influenced by thefe circumfances; they are meagre, and their mufcles hard and rigid; they live very frugally, and, in general, go almoft wholly naked, only covering the head, which is the moft fenfible of heat, with feathered caps, and puncturing or daubing the reft with colours. Their ideas of decency are, of courfe, very different from thofe of nations who are accuftomed to clothing. They cut thort their hair and beards from motives of cleanlinefs, like the people of Tonga-Tabboo,

\footnotetext{
* The Spaniards mention white calabafhes, (pompions,) among the vegetable productions of this ifland; but we did nat fee any.-Sce Mr. Dalrymple's judicious letter to Dr. Hawkefworth.
}

\section*{ROUND THE WORLD.}
but fortunately feemed to be lefs fubject to leprous complaints. It is eafy to conclude that the king of fuch a people cannot have great and confpicuous advantages over the commonalty, nor did our party obferve any thing of that kind. The religion of the Eafter Iflanders is ftill wholly unknown to us, becaufe abftract ideas are not to be acquired in fo fhort a time as our ftay. The ftatues, which are erected in honour of their kings, have a great affinity to the wooden figures, called Tee, on the chiefs' marais or burying-places at Taheitee; but we could not poffibly confider them as idols, though Roggewein's people would pafs them for fuch upon us. The fires which the Dutch interpret as facrifices, were only made ufe of by the natives to drefs their meals; and though the Spaniards fufpected them to be a kind of fuperftition, they were, perhaps, equally miftaken, becaufe the fcarcity of fuel obliged the inhabitants to be careful of it, and to prevent their provifions being uncovered after they had once been put under ground with heated ftones.

We are unacquainted with the amufements of the people of Eafter Inland, having never feen them engaged in any kind of diverfion, nor taken notice of a fingle mufical inftrument among them. They cannot, however, be entire ftrangers to amufements, fince Maròo-wahai, who nept on board, talked a great deal of dancing, as foon as we had quieted his fears with refpect to the fafety of his perfon. The difpofition of thefe people is far from being warlike; their numbers are too inconfiderable, and their poverty too general, to create civil difturbances amongft them. It is equally improbable that they have foreign wars, fince hitherto we know of no ifland near enough to admit of an intercourfe between the inhabitants; neither could we obtain any intelligence from
1774. from thofe of Eafter Ifland upon the fubject. This \(\underbrace{\text { March. }_{\text {AR }}}\) being premifed, it is extraordinary that they fhould have different kinds of offenfive weapons, and efpecially fuch as refemble thofe of the New Zeelanders; and we muft add this circumftance to feveral others, which are inexplicable to us in their kind.

Upon the whole, fuppofing Eafter Ifland to have undergone a late misfortune from volcanic fires, its inhabitants are more to be pitied than any lefs civilized fociety, being acquainted with a number of conveniencies, comforts, and luxuries of life, which they formerly poffeffed, and of which the remembrance muft embitter the lofs. Mahine frequently lamented their unhappy fituation, and feemed to feel for them more than he had done for the New Zeelanders, becaufe he found them much more deftitute. He added another ftick to the bundle which compofed his journal, and remembered Eafter Ifland with this obfervation, tata maïtaï, whennùa èens, that the people were good, but the iffand very bad; whereas at New Zeeland he had found more fault with the natives than the country. His feelings were always warm from the heart, which education had filled with real philanthropy; they were likewife juft, in general, becaufe his fenfes were found and acute, and his underftanding, though uncultivated, was free from many prejudices.

\section*{END OFTHEFIRSTVOLUME.}```

[^0]:    * Characterés Genèrum Plantarum quas in Infulis maris aufralis colleg. \&c. Joannes Reinoldus Forfter, LL. D. \& Georgius Forter, $4^{\text {to. Lond. }} 1776$.

[^1]:    * In the Endeavour, from 1768 , to 1771 , drawn up by Dr. John Hawkefworth.

[^2]:    * The two circumftances here alluded to, are well known facts, though fuppreffed in the publifhed narratives. M. de Bougainville fent fome time at Juan Fernandez, and completely refrefhed his crew there, though be wifhes to haveit underltood, that contrary winds prevented his touching at that ifland. Captain Cook in the Endeavour, battered the Loo-fort at Madeira, in conjunction with an Englifh frigate, thus refenting an affront which had been offered to the Britifh flag.

[^3]:    * The native of the Society Inands brought over by captain Furneaux in the Adventure, and vulgarly called Omiah.

[^4]:    * This difeafe proved fatal to Aotourou, the native of O Taheitee, whom M. de Bougainville brought to France, and who received nearly the fame education as $\mathbf{O}$ - Maï.

[^5]:    * The whole expence of the voyage in which I embarked did not exceed the fum of 25000 . including all extraordinary dilburfements.

[^6]:    *That it is not uncommon for fhips, under the fame circumftances as the Refolution floop, to take confiderable damage, appears from what happened to the Aldborough, May 19, 1776, which broke from the buoys in the fame manner, but drove afhore on Drake's illand, and was bulged to pieces.
