— No. 34.

THE T. EATON CO. LIMITED.

Main Entrance—

190 YONGE ST., - TORONTO, ONT.

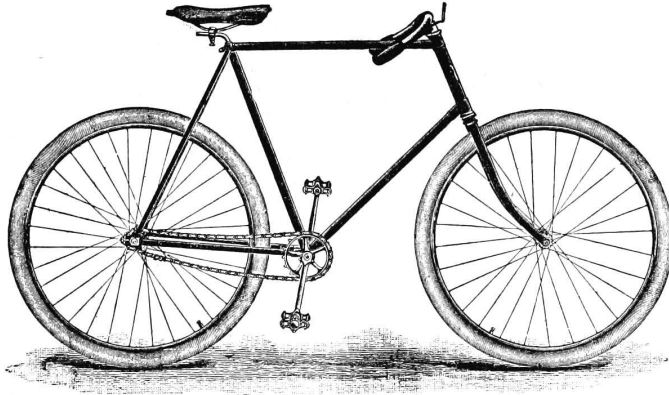

A BICYCLE

COSTS
NOTHING
TO KEEP

And is always ready for business or
pleasure. They are no longer a
luxury, but a necessity, and for that
reason a good one should be sold at
a low price. This is our mission in
the Bicycle business: To serve the
many as well as the few.

There is no ladies' wheel in the market more beautiful than our "Eatonia," Model D., light and very strongly built. Price, \$70.

WE EMPLOY NO AGENTS—WRITE DIRECT.

Special Features.

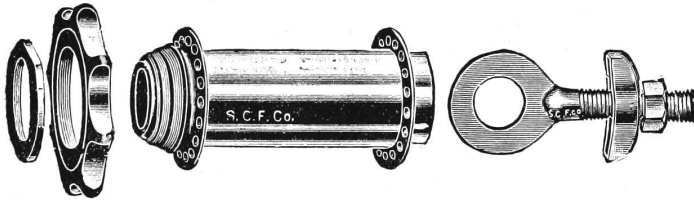

Fig. 1.

Fig. 2.

Eatonia Hubs, Fig. 1, illustrates rear hub with detachable rear sprocket and lock nut used on our Eatonia bicycles. The hubs are turned from drop forged tool steel, are light, properly made and very strong.

Eatonia Chain Adjustment, Fig. 2, illustrates the Eatonia chain adjustment, simple, effective and strong. No difficulty in getting and keeping rear wheel centered between the forks.

Eatonia Chain. $\frac{1}{4}$ -inch Indianapolis is used on all Eatonia bicycles, ensuring strength and durability.

Eatonia Sprocket Wheels are both drop forged and nickel-plated, with the teeth properly cut to fit chain, and perfectly fastened to axle and hubs, ensuring strength and ease of running.

Eatonia Dust-Proof Ball-Bearings. Large balls are used, $\frac{3}{16}$ in bracket and $\frac{5}{16}$ in rear and front hubs are used, detachable bearing cases, made of specially hardened steel, are fitted in hubs and bottom brackets. All Eatonia wheels run easy because of perfect bearings, rigid frame, and true sprockets.

WE EMPLOY NO AGENTS—WRITE DIRECT.

Eatonia Cones are made of best drop-forged tool steel, carefully made, accurately true and properly hardened. They withstand wear and will not break. They fit properly within bearing cases and flush with outside of hubs and bracket, making the bearings almost absolutely dust proof.

Eatonia Bottom Brackets. The bottom brackets are made of drop-forged steel, large size, with perfectly fitting detachable bearing cases, and properly fitting cones and large ball-bearings.

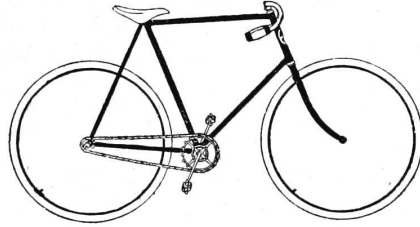

The Tread in Models A and B is 5 inches, in C and D, $4\frac{1}{2}$ inches. Models C and D have also a special one-piece crank and axle, with a detachable sprocket wheel.

Eatonia Frame. Special attention has been given to the construction of the frames for Eatonia bicycles. Only the best cold drawn, seamless steel tubing is used. All joints are drop-forgings, carefully brazed to tubing and properly re-inforced. The rear forks and back stays are thoroughly braced, making the frame very strong, capable of standing severe strains, and rigid enough to carry the heaviest rider without springing out of true. To the strength and rigidity of the frame is due, to a large extent, the success and easy running of Eatonia bicycles.

Parts for Eatonia Bicycles. All parts of Eatonia bicycles are interchangeable, and if lost or broken may be replaced. We keep these parts always in stock and supply them to riders of our wheels at their exact cost to us. *No trouble about replacing broken parts of Eatonia bicycles. No exorbitant prices charged for parts or repairs.* We honestly recommend our Eatonia bicycles to all persons requiring a neat, strong, easy running and durable wheel.

MODEL 41.

Price, - - \$110.00.

MODEL 43.

Price, - - \$165.00.

Are Standard for the World. Made by the POPE MFG. CO.

WE EMPLOY NO AGENTS—WRITE DIRECT.

Columbia Bicycles are the product of the oldest and best equipped bicycle factory in America, and are the result of nineteen years of successful striving to make the best bicycles in the world. 1896 Columbias are stronger, handsomer, more graceful and improved than ever. They are the nearest approach to absolute bicycle perfection.

Model 40 Columbia is the finest example of light and high grade bicycle construction ever put out for the general use of the great riding public. Every appointment will appeal to and amply satisfy the most advanced taste of old and new riders.

Gear, 63, 66, 70 or 76.

Weight, regular equipment, with $1\frac{1}{2}$ -inch road tires, $22\frac{1}{2}$ lbs.

Made in 20, 23, 25 and $26\frac{1}{2}$ inch frames.

Model 41 Columbia is without question the most elegant machine, and the most worthy of its fair riders that has yet been seen. It combines all the features that make Columbias so easy running, light and durable, with extremely graceful lines and beautiful finish.

Gear, 59, 63 or 66.

Weight, with brake, rear wheel and chain guards, 25 lbs ; without $22\frac{1}{2}$ lbs.

Model 43 Columbia (Tandem) is rigid in construction and exceedingly elegant in design.

It has bottom steering connection, permitting steering by either rider, and is in every way the ideal machine of its class.

Gear, 70, 76 or 80.

Weight, with $1\frac{3}{4}$ -inch heavy road tires, 41 lbs.

Model 44 Columbia is the finest machine in the world for road racing and for light park and boulevard use.

It embraces, in lighter and more refined form, all the features of the other 1896 Columbias, and yet is so rigid as easily to withstand severe strains.

Gear, 66, 70, 76 or 80.

Weight, regular equipment, with $1\frac{1}{2}$ -inch road tires, 20 lbs.

WE EMPLOY NO AGENTS—WRITE DIRECT.

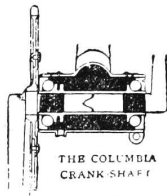

Special Features of Columbia Bicycles.

These features are not the result of accident, but come from patient and costly experiment.

The Special Testing Department of the Columbia works is, we believe, the only department of its kind in any bicycle factory. Every part of the machine—the material, and the machine itself—are all submitted to the severest tests before leaving the factory. No guess work about Columbias.

The Tubing used in Columbias is made in their own tube department, and has a strength and lightness far superior to tubing made elsewhere. The special 5 per cent. nickel-steel tubing used only in Columbia bicycles is, by actual test, far superior to any other tubing made.

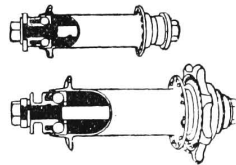

Steel Forgings are used for all joints and brackets of Columbia Bicycles.

THE COLUMBIA
CRANK SHAFT

The Columbia Patented Crank-Shaft Mechanism, which created so profound a sensation among cycling experts when introduced upon 1895 Columbias, is maintained. It is the most valuable improvement since the introduction of the pneumatic tires. It adds stiffness to the frame and crank-shaft. Admits of the narrowest possible tread. Obtained without reducing the width of the rear forks or detracting from the strength or rigidity of the machine.

The Large Barrel Hubs and Large Crank-Shaft Bracket first introduced in Columbias, adds to the ease of running, lightness and strength of the machine. Large balls make the bearings run with exceeding smoothness, and direct oiling is secured by oil holes immediately over the ball races.

The Hartford Single Tube Tire forms the regular equipment of Columbia bicycles. This tire excels in speed, durability and ease to repair, and gives less annoyance and expense than any other.

WE EMPLOY NO AGENTS—WRITE DIRECT.

The Columbia adjustable Handle-Bar is a pronounced success, rigid, light and gracefully curved—can be set in any position to suit the rider.

The Columbia Self-Oiling Chain carries in a felt pad on each block sufficient oil to lubricate it, and by means of its accurate adjustment to the sprockets runs almost without friction. The sprocket wheels are both detachable.

Columbia Ball Bearings are noted for their durability and ease of running. All ball cases are removable, and the bearings are practically dust-proof

Laminated Wood Rims are used on all Columbias.

Columbia Tread is right. Model 44 has a 5-inch tread, all others have 5½. Strength and durability are not sacrificed, although the Columbia Crank-Shaft permits of very much narrower tread.

Columbia Ball Pedals are very near perfection. They are light rubber, weigh 22 ounces—Rat-trap 17½ ounces per pair. Yet they will stand heavy service without loss of that accuracy of adjustment so necessary to speed and ease of running.

Columbia Nickel and Enamel are unequalled. They are standards of excellence. All Columbias are finished in black and nickel.

Columbia Saddles are remarkably comfortable and handsome.

A Tool Bag to match saddle, with complete set of tools, goes with every machine.

Repairs . . .

All repairs and all parts necessary to repair Columbia bicycles are obtainable in Toronto. No necessity to send to foreign factories for any parts or repairs required. In this respect Columbia wheels are on equal footing with Canadian-made wheels. No reason for argument against Columbias.

WE EMPLOY NO AGENTS—WRITE DIRECT.

Hartford Bicycles for 1896 are thoroughly constructed of excellent material, and most complete in design and equipment. They are strong, durable and easy running. They rank foremost among medium-priced wheels—and compare favorably with higher priced ones.

Hartford, No. 1 is a superior, up-to-date bicycle, strong, rigid, light, easy running, elegant in equipment and finish. It has 23 or 25-inch frame, 10-inch steering head, 28-inch wheels, with wood rims and 1 $\frac{3}{8}$ -inch No. 80 Hartford single tube tires. Detachable front and rear sprockets. Vulcanite and cork handles. 7-inch cranks. Columbia rubber or rat-trap pedals. Tool-bag, with tools and repair kit and lantern bracket with every machine.

Gear, 63, 66 $\frac{1}{2}$ or 70. Weight, 24 lbs. Price, \$85.00.

Hartford, No. 2 is a light, graceful, attractive, easy running bicycle of proven strength and quality, for ladies' use. Equipment similar to No. 1, with 6-inch cranks, front wheel brake, rear mud guards and dress and chain guards.

Weight, 24 lbs. Price, \$85.00.

Hartford, Nos. 3 and 4, each supplies the need of a durable and easy running bicycle of moderate weight, at low cost.

Weight, 27 lbs. Price, \$65.00.

Hartford, Nos. 5 and 6 are complete machines for boys and girls. Built on the most perfect designs of gents' and ladies' wheels. They are light, very durable and easy running; 26-inch wheels with wood rims and pneumatic tires.

Weight, 24 lbs. Price, \$55.00.

A Special Catalogue, giving minute and full descriptions of Columbia and Hartford bicycles, will be mailed to you on receipt of a three cent stamp.

All Columbia and Hartford bicycles bear the guarantee of The POPE MFG. CO.

WE EMPLOY NO AGENTS—WRITE DIRECT.

Our Guarantee.

TO every purchaser of any bicycle herein illustrated we deliver a machine free from imperfections in material or workmanship, and we will make good at any time within one year from date of purchase any defects not caused by misuse, neglect or accident provided the parts claimed to be defective are returned to us for inspection. Transportation charges must be prepaid before claim will be allowed.

Tires. All our Eatonia Bicycles are fitted with Morgan & Wright "Quick Repair" Tires; Columbias and Hartfords with Hartford Single Tube Tires. We assume no responsibility in the matter of tires further than the guarantee by tire manufacturers to us, and print in full the Morgan & Wright guarantee, and would particularly call attention to the portion which requests riders to refer all matters of defective tires direct to them, instead of to the bicycle dealer or manufacturer.

Fig. 1.

Morgan & Wright Guarantee.

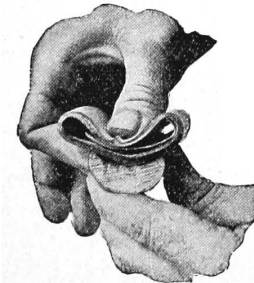

Fig. 2.

WE SHALL CONTINUE in 1896 our custom of repairing all tires of our manufacture free of charge. We shall replace defective parts when, in our judgment, the defect is from our fault. In no case will we replace when worn out in service or injured by accident. *Make your request direct to us, and not through the makers of your wheel.* Express charges on tires must be prepaid in every instance. If return by mail is desired, postage at the rate of one cent per ounce must come with request for repairs. Do not send the wheel with the tire. See that every package sent has your address securely fastened to package. Before sending to us kindly attempt the repair yourself, so that our efforts may be directed to assist those really in

WE EMPLOY NO AGENTS—WRITE DIRECT.

need. It is a good idea for riders to buy an extra inner tube, complete with valve, and keep same ready for use. The small expense will save delay and insure many a pleasant day's sport. Any pneumatic tire ever made, or to be made, will sometime need repairs, and will ultimately wear out in service. Don't forget this when reading advertisements. All genuine Morgan & Wright tires have the firm-name and the patent dates in raised letters on the side. All others are imitations or infringements, and the public is warned against them. The Morgan & Wright tires are made upon honor, of the very best material obtainable in the world. They have proved during the past four years to be far the most durable tires ever produced, and have to their credit more hard-fought road records and extraordinarily long rides than all other makes put together.

JANUARY, 1896.

MORGAN & WRIGHT.

Messrs. RICE LEWIS & SON, Toronto,

the well-known hardware firm, are sole Canadian Agents for these tires, and will cheerfully carry out every letter of the Morgan & Wright guarantee.

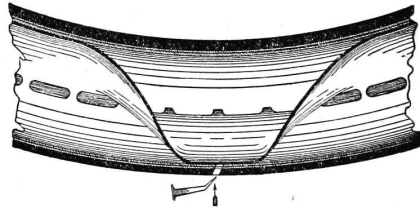

Fig. 3.

Figures 1, 2 and 3 illustrate process of repairing puncture in M. & W. quick repair tires. It only requires two or three minutes.

Pointers About Tires.

Always keep tires well inflated. See that they are thoroughly cemented to the rim. If allowed to get loose they may twist on the wheel and injure the valve or cut at the edge of the rim.

Read carefully Morgan & Wright's catalogue which you will find in the tool bag of all Eatonia Bicycles.

Cheap Boys' and Girls' Wheels.

Lawn Tennis.

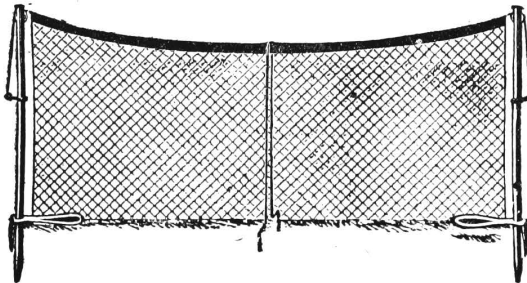

Our tennis goods are of the very finest quality. We import them direct from the factories of such well-known firms as Jefferies and Slazenger & Sons, of London, Eng., and are consequently able to sell them at much lower prices than ordinary retail dealers.

Racquets.

We carry a complete line of racquets, made by the above firms, graded according to price. All are equally well finished, well made and perfectly balanced. Prices from \$1.00 to \$7.50 each.

N.B.—In ordering racquets state whether they are for ladies' or gents' use, as they range in weight from 12 to 15 ounces.
