PRESENT, THE REPRESENTATIVE OF

HER MAJESTY, QUEEN VICTORIA,

IN THE PREMIER PROVINCE OF THE DOMINION, HAS ALWAYS EXHIBITED THE

WARMEST INTEREST IN ALL THAT HAS TENDED TO PROMOTE THE

GROWTH AND PROGRESS OF TORONTO, WHETHER IN

ARTS, SCIENCES, LITERATURE, RELIGION, TRADE, COMMERCE,

OR MANUFACTURES,

THESE PAGES ARE RESPECTFULLY DEDICATED BY

THE AUTHOR.

## PREFACE TO THE REVISED EDITION.

---

IN the Chapter of Introduction I stated that "nothing would appear of which the writer was not an eye-witness," and that statement has been verified. In the present edition it is necessary to explain that the eighty additional pages contain, chiefly, accounts of the Indian and Colonial Exhibition and the celebration of the Queen's Jubilee, and I had hoped to have been present in England at either one or the other. Circumstances, however, over which I had no control, prevented me from seeing them, but what is given has been carefully selected from the most authentic sources, which are, however, so various as well as numerous, that it would be both tedious and unprofitable to credit them to their authors, especially as in weaving the web the original threads have in some instances changed their texture, though it is hoped without losing either their substance or their brilliancy. Being chiefly facts, however, and many, if not all, of a valuable character, the success of the first edition leads me to hope the present will be found still more useful and interesting. Many of the incidents related previously are now even more appropriate, having much in relation to the life and history of Her Majesty the Queen, from personal knowledge, although at the time not written with any view to the present Jubilee celebration.

The progress of Toronto during the past year has had a full share of attention, and the statistics as to its growth and prosperity as a Commercial and Manufacturing Centre which are given, cannot fail to interest everyone who is loyal to the fair City of Toronto.

“ A reader should sit down to a book, especially of the miscellaneous kind, as a well-behaved visitor does to a banquet. The master of the feast exerts himself to satisfy all his guests, but if, after all his care, there should be something or other on the table that does not suit this or that person's taste, they politely pass it over without noticing the circumstance, and commend other dishes, that they may not distress their host or throw any damp on his spirits.”—*Erasmus*.

H A R B O U R  
MAP OF THE CITY OF TORONTO.

# TORONTO "CALLED BACK."

## CHAPTER OF INTRODUCTION.

---

I DO not intend to write an autobiography. In "calling back" from memory the facts and incidents to be related, there was no intention of their ever meeting the public eye, but they were written partly for recreation and partly for personal and family gratification.

As, however, nothing will appear of which the writer was not an eye-witness, it may be that in narrating scenes of life in Dublin, or in describing grand sights witnessed in London, or Paris, or the great Naval Review at Portsmouth, the interest of some reader may be so awakened, on either side of the Atlantic, as to lead him to turn to an account of the growth and progress of Toronto.

Since the writer's first trip to Europe from this city he has influenced a number of families to make it their home, and they in turn have influenced others; and should in the future any capitalist, manufacturer, or any other desirable citizen of any other city or country, be induced to adopt Canada, and especially Toronto, as his future place of residence, and contribute in any way to its wealth and population, his object will be attained.

Nor do I intend to write a book of travels. There are gifted individuals who, having made a trip across the Atlantic, and "run through" from Liverpool to London, then over the

Continent, and perhaps gone round the world in 90 days, have the faculty of writing so easily, that on their return home they write a book; but the present writer makes no pretensions to such literary ability, although, from an average of travels of 10,000 miles a year, by sea and land, for many years, materials might be furnished for such a purpose.

One could tell of passages made in nearly all the old Cunard Royal Mail steamers,—the *Asia*, *Africa*, *Arabia*, *America*, *Europa*, *Niagara*, and *Persia*, the last of the ocean paddle-wheel steamers crossing the Atlantic (the *Scotia* only excepted); with recollections of the celebrated Commanders, who had the proud boast of never having lost a life,—Lott, Stone, Leitch, Harrison, Shannon, and Commodore Judkins; also of the splendid steamers of the Inman Line, then of our own Allan Line, and occasional trips in the "White Star;" of hairbreadth 'scapes from rocks and icebergs, of storms and winds, from the gentle zephyr through all the gradations of ships' "log" record,—light and strong breezes, half gales and whole gales, thunder storms, hurricanes, and tremendous hurricanes, with an occasional cyclone, described by a writer as "a magnificent scene. The whole ocean, from the central speck on which he stood to the vast vanishing circle of the horizon, as one boundless, boiling cauldron.

"Millions of waves simultaneously leaping in thunder from the abyss and rearing themselves into blue mountain peaks, capped with white foam and sparkling in the sunlight for a moment, to be swallowed up in the darkness of the roaring deep the next. A lashing, tossing, heaving, falling, foaming, glancing rise and fall of liquid mountains and valleys, awful but ravishing to look upon."

And then might turn to beautiful, calm weather, pleasant company, music, games, mock trials; splendid bills of fare—four meals a day, with every delicacy that money could procure; refined society, comprising distinguished statesmen, ambassadors with their suites, celebrated divines and historians, poets and men of leisure, merchant princes and buyers, representing all the large mercantile houses, some of the best patrons of the

ocean steamers; also of people of all nationalities, English, Irish, Scotch, American, French, German, Italian, Portuguese, Turks, Spaniards, Russians, and Japanese; of the hardships of the steerage as well as the luxury of the saloon; all of which might make a readable volume.

In the hands of the distinguished novelist, Wilkie Collins, whom I have heard read from his own works in this city, the facts with which I could furnish him might be woven into a romance equal in interest to the "Woman in White."

The inimitable Dickens, whom I have also heard and by whose tombstone—which, amongst the numberless monuments in the Poets' Corner, Westminster Abbey, in memory of the great poets, essayists, novelists and dramatists in past centuries, is most remarkable for its plainness, and without any epitaph but "Dickens"—I afterwards stood, could have produced out of the materials a book quite as true to life as "Martin Chuzzlewit."

Or the lamented Hugh Conway might have given to the world another volume quite as popular as "Called Back;" but simple facts and "a plain, unvarnished tale" are all that are offered in these pages.

A residence for several years in Lancashire, with an opportunity of seeing the working of the principle of Free Trade; afterwards six years travelling through the United States, and sending large orders to be shipped from England to the principal cities, from Baltimore to St. Louis, in the face of a tariff which averaged 60 per cent., and watching the growth of the manufacturing industries during that time; and, in addition to all this, the experience of an importer to Toronto, with a tariff gradually increasing from 12½ per cent. to 25 per cent., ought to furnish some valuable information.

But in writing on the growth and progress of Toronto, it is best to allow every person to draw his own conclusions as to whether our city has been benefited by the multiplication of manufacturing establishments, as well as to the question of how far she is indebted to the present policy for their success.

To go over the ground taken by those who so ably and

beautifully described the progress of Toronto in its civic and political phases during the

#### SEMI-CENTENNIAL

from 1834 to 1884, would be quite superfluous. The programme of the celebration itself forms a splendid record of the events which transpired during that period.

The grand tableaux in the daily processions, illustrating the progress of the city, from the rude and uncivilized to the high state of refinement at the present time, were most striking and impressive.

If, however, the growth and progress of Toronto as an importing centre has been given, the writer has never seen it, and yet, in this respect, there are distinct marks of contrast between the present and the past which are not only striking but marvellous.

Perhaps, with the exception of London and Chicago, no other city in the world has made such rapid strides in the march of progress, and this it will be my endeavor to show to the best of my ability.

#### Early Days.

"I have observed, that a reader seldom peruses a book with pleasure till he knows whether the writer of it be a black or a fair man." *Addison.*

My uncle, Dr. Conyngham Crawford, having refused to accept a commission in the British Army offered by the Marquis of Conyngham, on account of religious scruples on the part of his parents, adopted the medical profession, and came to the United States, where he became a celebrated physician and lecturer in one of the medical colleges in Philadelphia. Having no prospect of a family, he expressed the wish that my parents should call me after him, partly from a wish to perpetuate the name in our branch of the family, and with the intention of leaving me his property should I survive him.

When school days came I was, at his request, educated with a view of qualifying for the same profession. Having mastered the course of classics required for the examination at Apothe-

caries' Hall, Dublin, which was necessary as preparatory for the studies for the degree of Medical Doctor, I was about to enter for examination, when, in my thirteenth year, news came of my uncle's death.

The letters from the executors contained a copy of his will, in which all his property, real and personal, was left to me.

Glad to find that I should not be compelled to continue the study of medicine, which I never fancied, I decided to enter into a mercantile life, and through the introduction of a personal and intimate friend of Mr. Todd's, soon entered the celebrated house of Todd, Burns & Co., the youngest lad who had ever entered on a salary.

As I may describe another of these splendid establishments, for which Dublin has since become so famous, I shall only give a general idea of this house, so well known to all travellers from America.

When I entered there, in 1840, it was the largest house in Great Britain; the house of Shoobred & Co., of Tottenham-Court Road, London, being its only equal as to the number of employees, while inferior in amount of trade done.

Including fifty well-educated lads from Scotland, there were 400 living on the premises, and for comfort of domestic arrangements, strict system, and thorough discipline, the house could not be excelled in the world at the time.

There being an opinion in America that apprentices to the dry goods trade in the Old Country are badly paid, I shall just state the terms on which these boys were engaged and kept for five years. In addition to first-class board, with comfortable bed-rooms, use of reading-rooms and magnificent library, each boy was paid £5 the first year, and £5 advance the succeeding four years, when they were at liberty to remain or leave for a better situation.

The oversight of their moral and commercial training was particularly attended to, and a schoolmaster kept in the house for their general education. This was attended to every evening in a splendid school-room devoted to the purpose, with every school requisite.

**Todd, Burns & Co.**

The house of Todd, Burns & Co. is situated at the corner of Mary and Jervis Streets, and within sight of Nelson's Pillar in Sackville Street and the General Post Office at the corner.

Along this street any fine day might be seen a long line of carriages, representing the wealth, beauty and fashion of the city, only surpassed by the brilliant display of equipages on the occasion of a levee, drawing-room, or ball at the Castle.

A walk to the Post Office, at the corner of Sackville and Mary Streets, at nine o'clock any night, afforded a most enjoyable sight, especially in summer when it was clear daylight. Nine Royal Mail coaches stood in the Post Office yard to receive the mails, each with coachman and guard in scarlet and gold. A gunsmith was always in attendance to examine the cavalry pistols and blunderbus of each guard to see they were in perfect order, and while the clock was striking the hour the thoroughbreds, four-in-hand, prancing and rearing, emerged from the yard into Sackville Street, while the guards vied with each other in their performances on their key bugles. In Sackville Street the horses were let go to do their ten miles an hour, a beautiful sight to behold.

While a large wholesale trade was done, the chief feature of the establishment was the extensive retail branch, conducted strictly on the departmental system, each department managed by a buyer.

The system of introducing customers to the different departments was managed by Messrs. Todd and Burns personally, assisted by a large staff of superintendents, the principals giving special attention to the humbler classes, while the more aristocratic were looked after by the superintendents.

The domestic arrangements for the accommodation of so many young men were very complete, and the diet excellent; whether the moral tone was improved or not by the use of beer, a barrel of that beverage was made to disappear every day.

The house of Todd, Burns & Co. still maintains its high rank amongst the great establishments of Britain.

I left on account of greater inducements to assist in the establishment of the house of

**Pim Bros. & Co.**

This firm, composed of three brothers, Jonathan, William, and Thomas, a leading family of the Society of Friends, had been in an exclusively wholesale business in William Street up to the year 1841.

At this time an old military barracks in South Great St. George's Street, off Dame Street, and in the vicinity of Stephens' Green, Merrion Square, and other fashionable localities, was guarded by sentries, when Messrs. Pim Bros.—thinking an establishment on the south side of the Liffey, similar to that of Todd Burns & Co. on the north, would be equally successful—conceived the idea of buying the property, which was about to be abandoned by the Government. They were not long in putting their ideas into practice. Having turned the premises into a warehouse, they set about to engage competent young men to conduct the business, and as even a year's experience in the house of Todd, Burns & Co. was a great recommendation, I had only to make application to get an engagement; and in this way twenty-five were engaged, the writer being the youngest. With this staff, from which the buyers and managers were selected, we commenced to lay the foundation of what in seven years became the model house of Great Britain, and has continued to grow ever since, till at the present time it has attained to the same position there that the house of A. T. Stewart & Co. occupied for so many years in America.

The principle on which this great house was founded was to throw the whole responsibility on the heads of the departments, the firm not interfering in any way except to supply unlimited capital, and allow the results of each stock-taking to show the merits or demerits of the managers.

When fully organized there were twenty-two regular departments, the business of each being kept as distinct as if in different buildings, and as this was the first house in which this system was discovered and applied, a brief description of its

workings may be interesting and useful to some who have not yet adopted it.

The difficulty always had been, that where a salesman went from one department to another he got the credit of the sale, while the department in which the goods were sold had nothing to show for it. This defect still existed in Todd, Burns & Co. and the large London houses.

To cure this defect, a system of furnishing to each department bill-heads, with the name of department printed at top, was introduced. To each of these bill-heads a cheque at the bottom was attached with name of department to correspond. When a sale was made, no matter to what department the salesman belonged, these cheques were filed in the cashier's desk during the day, and the next morning a lot of boys set to work, with large sheets prepared for the purpose, entering every amount to credit of each of these twenty-two departments; thus showing daily, weekly, monthly, and at stock-taking—semi-annually—an exact return of each department's business, and of each salesman's work during that period. Of course, the goods had been previously charged to each department in the counting-house.

To complete this system, when one salesman went through a number of departments, which was sometimes allowed, as in the case of a friend, bill-heads were provided, with "general" cheques, on which the amount sold in each department was distinctly stated, the entry boys being careful to separate these amounts and distribute them under their proper headings; and further, each department had a locked till for coppers, of which one man had the sole charge, and who, every day, emptied the contents into linen bags, all stamped with name of department and credited to each accordingly. As no bill was given for less than sixpence, and the giving a bill over that amount was compulsory, change was got at the desk, and the amount of sale dropped into these tills, so that the returns were exact.

It was the duty of each manager—or, in his absence, of the second in charge—every morning, to examine the bill-heads,

after distribution by the porters, to see that they did not get mixed in being taken from the lockers.

As the buying is at the foundation of every mercantile business, buying the best goods from the best houses was the great object, and proved to be an extraordinary success in this house.

As the wholesale and retail branches were under the same buyer's management, his responsibility was so much the greater; and when a buyer decided to visit his particular market he had no one to consult, having a *carte blanche* to go when he thought proper, and buy just what he considered right.

Buyers were supposed to spend a guinea a day while on their trip, with the price of a pint of wine extra, which was invariably charged at all the commercial hotels, whether they used it or not. It being the prerogative of the president at the dinner-table to order for each guest, it would be entirely *infra dig.* for any house to attempt to violate so time-honored a custom, even when the principals happened, as in our case, to be the very leading "Friends" in the country. The custom still prevails in all commercial rooms at hotels in England.

These commercial dinners are always supposed to be enjoyed after the business of the day is over, and if goods were opened that appeared to have had less than the usual care in selection, or were a little inferior in value to the buyer's usual purchases, it was a sort of standing joke that Mr. So-and-so had bought such a lot of goods "after dinner."

The inducements held out to buyers by interested manufacturers required a firm resolution to refuse all sorts of presents which were offered, and which, if accepted, placed him under an obligation, greater or less, to purchase.

The writer has had most liberal offers, sometimes so far as to pay all his expenses visiting celebrated castles in Warwickshire, etc., all of which he felt it his duty most positively to decline.

The system of "shopping" as practised in America was positively unknown to us.

The rule was that no customer should be allowed to leave the house without being served. This bore heavily on young lads just leaving home, having the fear of dismissal before their

eyes; and yet it was almost invariably enforced, the only exception being by reference to a superintendent.

It was assumed that, as there was no restriction imposed on the buyers, they were supposed to be constantly supplied with every line of goods in their department, and every line complete in widths, shades, prices and variety, and in this particular alone was there ever a question put to the buyers.

If a salesman was asked why he had not sold any particular article and he said it was not in stock, while this was no excuse for him, as he was expected to sell something else, the buyer was generally asked why he had not the article in stock; and, having full scope to order or personally select at all times, no excuse was accepted, but it was looked upon simply as to that extent neglectful on his part.

As to the control of his assistants, it might be said to be almost absolute. The orders were, if they did not suit in every respect not to continue their services. For years the writer felt this a delicate position to be placed in, as all his assistants were older than himself; and it being the custom to reduce the number at the dull season—and the heads were expected to name the one or two that must go—he had the satisfaction of never having one in his department discharged during six years, always managing to have them changed to another department.

To explain the absence of the shopping system it is necessary to state that, the rules of these houses being known, no person appeared to enter the house except with the intention of buying. The ladies of the higher classes came with their lists all prepared, and were shown from department to department till all was selected; so, through all classes, there was no time for bantering, as there was no idea of anything but a fixed price. So, with this throng of customers from morning till night, the business moved like a piece of machinery or clockwork. No person was allowed to remain in the business who violated any rule, and no allowance was made for even the slightest delinquency, the system of fines being the slightest punishment for such delinquency—after these, dismissal.

The rule of serving every customer being enforced led to wonderful expedients to accomplish the object.

Frequently ladies declining to buy an article at the counter, yet purchasing the exact duplicate when brought from the wholesale department, salesmen have often been heard to boast that they could sell black for white, which they often did. No person was allowed to stand idle for a moment, and no "buzzing" or "clubbing" was allowed. Every head of a department was expected to see every man constantly employed. The writer's wholesale department upstairs occupied a position from which a view of over one hundred young men could be obtained at any time, and this was a favorite spot of the governor's, where he could observe all without been seen. In chatting he would sometimes say, "Who is that young man counting the flies on the ceiling?" if the young man happened to show an indolent manner.

The number of salesmen was so great, and the changes so frequent, the heads of the firm scarcely knew even their names, except those of the managers.

The system of daily business was strictly regular, commencing exactly at 8 o'clock, and ending at 7 in summer and 6 in winter. During these hours a continuous line of carriages might be seen extending nearly half the length of the street, a watchman in livery always in attendance outside to take messages and parcels.

For six years the house was never without workmen constantly employed in carrying out extensions and improvements, as number after number on the street was added, and continued to go on during all my subsequent visits to the city up till a comparatively recent period; and only a few days ago I heard the enlargement was still going on.

The average sales in the retail department alone, all for cash, were £1,000 sterling per day in 1847.

In addition to the inside business of the house were the manufacturing departments: the celebrated poplins employed several hundred hands; the grey calicos, at Greenmount Spinning Works, owned by the firm, and the manufacture of upholstery,

trimmings, and paper and leather branches employed several hundreds more; and such was the enterprise of the firm that a time of depression was unknown. Even during the potato famine, in 1846, there was no falling off in the business, although this might have been expected in some of the departments, such as jewellery and silks, yet the sales showed no diminution.

#### ROUTINE OF DAILY BUSINESS.

The first bell rang at 7.30, when the junior hands and porters went down to sweep and dust—the former inside the counters, the latter outside. At 8 o'clock the second bell rang for all others to be in their departments. At the same time a porter stood at the main entrance, watching the clock opposite, over the main stairway, and precisely to the minute the doors were opened, when a large number of customers, who waited for the time to arrive, would be admitted. The arrangements for meals were posted up in the library every Monday morning, showing a division into three classes, which changed alternately every week, giving all an equal privilege as to time.

At 8.30 the first bell for breakfast was the signal for the first class, at 9 for the second, and at 9.30 for the third, no one being allowed to leave his place till his reliever returned. Dinner and tea were arranged on the same principle.

The weather was the only thing that affected our daily business, the complaint of hard times or falling off in trade being quite foreign to us.

The short hours of business, especially on the long summer days—part of the time being clear daylight till 10 o'clock—gave us all a fine opportunity for enjoyment and recreation.

Those who preferred to remain at home had the advantage of a magnificent library, which, although established by a monthly contribution from each young man (which was compulsory), had become the property of the firm. This, with the news room, containing all the leading magazines, periodicals, and latest newspapers, was an inestimable boon, and highly appreciated by the lovers of literature.

At 11 o'clock precisely the door was locked; and so strict

was the rule, I have seen the porter refuse to turn back the key in the lock to admit a late-comer, the transgressor of the rule being obliged to seek lodgings elsewhere, with the certainty of a reproof in the morning, and, if repeated, of dismissal.

At 11.30 a superintendent went round every room with a dark lantern to see that every one was in his proper bed, and all lights put out.

Every morning the house doctor went round the rooms, and if any were sick, or shamming, a sick diet was immediately prescribed; and on Sundays, if any remained in their rooms, whether to carry on a flirtation with the good-looking chambermaids or from a fit of laziness, the same sick diet was prescribed.

The cooking arrangements were perfect. Twenty legs of mutton could be roasted at one time, while the stewing, steaming, and boiling in the same range all went on at the same time; one hundred loaves of Manders' celebrated bread were cut by a machine daily.

The domestic arrangements of the house generally would well repay a visit from travellers.

The magnificent plate-glass front of the house, comprising from 74 to 88 in consecutive numbers in the street, was on a fine day lined with carriages, while this line sometimes extended beyond. We select one out of many of the equipages for description. Look at this

#### EQUIPAGE

and its appointments. Mark the exquisite balance of that claret-bodied chariot upon its springs; the fine sway of the sumptuous hammer-cloth in which the smiling coachman sits buried to the middle; the exact fit of the saddles sitting into the curve of the horses' backs, so as not to break to the most careless eye the fine lines which exhibit action and grace. See, when they stand together, alert, fiery, yet obedient to the weight of a silken thread; and as the coachman sees you studying his turnout, observe the perceptible feel of the reins, and the just visible motion of his lips, conveying to the quick ear of his horses the premonitory, and to us inaudible, sound, while, with-

out drawing a hair-breadth upon the traces, they paw their fine hoofs and expand their nostrils impatiently. Come nearer, and observe not a speck or a raised hair on those glossy coats. Observe the nice fit of the dead black harness, the modest crest upon the panel, the delicate picking out of white upon the panels, and if you would venture upon a freedom of manners, look in through the window of rose-tinted glass and see the luxurious cushions, and the costly and splendid adaptation of the interior.

One of the twin-mated footmen waits upon my lady as she completes her purchases, and as she, with a charming smile, says good-bye to the salesman—who had recognized a carriage customer before she had spoken ten words, was certain of it as soon as she took off her glove, and had enjoyed a *tête-à-tête* for which a Prince Royal might sigh and an ambassador might negotiate in vain—hands the parcel to the footman, who with silver-headed stick attends her ladyship to the door.

The twin footman flies to the carriage door, the small foot presses on the carpeted step, the airy vehicle yields lightly and recovers from the slight weight of the descending form, the coachman inclines his ear for the half-suppressed order from the footman, and off whirls the admirable structure as if horses, footmen, and chariot were but the parts of some complicated centaur—some swift-moving monster upon legs and wheels.

Mr. Thomas Pim combined business with pleasure. He owned a yacht, and was the only member of the Bristol Yacht Club who was not by birth a nobleman. In the winter the skipper was appointed to work in the warehouse. Mr. Pim always kept a saddle-horse in the city, and had daily rides in the Phoenix Park. His residence was Monkstown Castle, near Kingstown.

In 1846, the potato crop having failed, we never saw one for six months. This increased the consumption of bread in the house to an enormous extent.

The bakers' attempt to raise the price of bread was checked by Mr. Pim's threat to open large public bakeries, and sell at a

small profit, adding, that if the people would not buy his bread he would put a slice of bacon in every loaf.

As an instance of the generosity of this firm, Mr. John West, for many years head superintendent, having taken a trip to America, speculated largely in lands near Chicago. After spending a few years in Paris as agent for their celebrated poplins, for which thirteen prize medals have been obtained, he determined to return to America and settle on his property. Before leaving he was invited to a supper given by the firm, when on turning up his plate he found a cheque for £1,000 sterling placed there as a parting gift.

And this firm, with its princely revenues, army of assistants, thousands of dependents, its several branch establishments and numerous agents, all working with a clockwork regularity incomprehensible to the muddling proceedings of Ordnance, Horse Guards, Admiralty, Woods and Forests and Public Works, is a model of the firms which organize the labor of the staple trade of Great Britain. Neither are the principals money-grabbing drudges. They can afford time, as we have seen, for healthful recreation; neither do any of their dependents appear to be overworked. Such is the establishment of which the writer had the honor of being one of the founders.

#### INCIDENTS FROM 1841 TO 1847.

---

##### Daniel O'Connell.

No name will remain more prominently on the pages of Irish history than that of Daniel O'Connell. His persuasive oratory, his brilliant wit, and laughter-provoking humor, attracted great crowds to listen to his speeches in Conciliation Hall. While his persevering efforts in the House of Commons were the best proof of his patriotism, it may be, that had he confined his ambition to the attainment of a "Home Rule" for Ireland, he might have succeeded at the time in seeing his object accom-

plished. In 1843 he confidently stated that the great repeal year had arrived, the repeal of the union being avowedly the object he had in view.

As history appears to be repeating itself in Ireland, when a Lord Mayor refused to hoist the city flag on the occasion of the visit of the Prince of Wales in 1885, and, while I write, the new Lord Mayor is said, in a despatch from Dublin, to join in a movement to erect a monument to the three Fenians who were executed in Manchester for the murder of Policeman Brett, one is reminded that, nearly forty years ago, the celebrated Daniel O'Connell, having been elected Lord Mayor amidst scenes of terror and riot, was said to have displayed his feelings by having the statue of King William III. in College Green painted bronze with as much green as possible.

This celebrated equestrian statue, said to be the finest in Europe, had a short time before been overturned by an explosion of gunpowder, and, after its re-erection, was painted orange and blue—the Trinity College students, close by, taking great pains on the 12th of July to add decorations of ribbons and flowers of the same color.

The agitation for the repeal of the union was prosecuted with systematic vigor by its advocates. The city was divided into districts, and house-to-house visitation carried on by the collectors of the "repeal rent," and as some of the contributors showed considerable ignorance of the nature of the object, they sometimes innocently stated their belief that the repeal would be over next week "for sure," and the knowing ones, to help the joke, would tell them it was coming over from England "in three ships." The climax of the excitement on this question was reached by Mr. O'Connell issuing a proclamation calling a mass-meeting to be held upon the Strand of Clontarf, a suburb of the city, near the Hill of Howth. All went well for the cause until the afternoon of the day before the meeting.

In the meantime the guards on the Bank of Ireland, the Castle, and all the barracks, were doubled, and orders issued for supplies of rations for the men and provender for the horses as in the time of siege.

O'Connell promised that half a million of men would meet next day to show the British Government their strength, but not being an advocate of "physical force," like Smith O'Brien and the Young Ireland party, he warned them against any display beyond that of numbers. However, the Government, regarding these meetings as an attempt at intimidation, determined to stop the proceedings, and a counter proclamation was issued that afternoon forbidding the meeting. This led to O'Connell's advising its postponement *sine die*. Nevertheless, the Government, to effectually prevent any further demonstration, marched the troops through the city the next day. Fully 15,000 of all arms marched with fixed bayonets and drawn swords, while artillery and cavalry, with nets of hay attached to the saddles and every arrangement for battle, made the streets echo with their warlike tread.

In the midst of this scene appeared Tom Steele, the "head pacificator," waving a green branch under the immediate direction of O'Connell himself, driving through the dense masses of people and advising them to retire peaceably to their homes. The subsequent arrest and conviction of O'Connell, after a long trial in the four courts, on a charge of high treason, is a matter of history. The punishment was reduced to six months' imprisonment in Richmond Bridewell, and here on any Sunday during that time might be seen thousands of people all round the grounds, eager to catch a glimpse of his jolly face through the bars. Provisions, delicacies of all kinds, and a variety of presents, with every manifestation of sympathy, were given him to the fullest extent.

At the expiration of the time he made his triumphal procession through the city, seated on a large car drawn by four horses, with a white-bearded Irish harpist and some of his most intimate friends around him. The procession, which was about six miles in length, halted at the Bank of Ireland, where the last Irish Parliament had met, and round after round of cheers were given, after which they passed on through the city.

By this step on the part of the Government peace was secured, but from that time O'Connell's sovereignty ceased to

exist. He had led the peasantry in sight of the promised land, but failed to enter.

The hot-headed Young Ireland party supplanted him, and a farcical rebellion followed under Smith O'Brien. The abortive O'Connell agitation resulted in nothing more than the uprising at Balgarry. The Liberator was essentially a man of peace, opposed to secret societies and everything resembling physical force.

After a lapse of many years a statue has been erected to his memory, at the foot of Sackville Street. A monument representing one of the round towers of Ireland stands close to the vault in which the body (except the heart, which was left in Rome, where he died,) is deposited.

The writer, a few years ago, visited the beautiful cemetery of Glasnevin and entered the vault. The coffin was covered with fresh flowers gathered close by, the cemetery being a perfect flower garden. The Botanical Gardens, almost adjoining, are only excelled by Kew Gardens, in London, and contain every specimen in botany, from the lily of the valley to the cedars of Lebanon.

### Something Like Fenianism.

The establishment of Pim Bros. & Co. was so situated that it ran back to the wall of the Lower Castle yard. From our bedroom windows we could see the guard of cavalry parade, and had a view of the Chapel Royal connecting with the Castle itself.

Whether it was the favorable position which the house occupied for an attack on the Castle, or not, a plot was discovered in which a large number of the young men were implicated.

The police, having had private information, prepared for a descent on the establishment.

A large number of us usually went down to the Pigeon House Fort on Dublin Bay, as here there was deep water for a swim, and one morning, having gone as usual about 5 o'clock, on our return we found the police had been through the bedrooms, expecting to find their prey. In their trunks papers

containing their commissions to various rank were found. Quite a number of arrests were made, and some who had been out for a swim, whose friends had been out on the watch to warn them, thinking discretion the better part of valor, made tracks for the land of liberty. Amongst the number was one who at present is doing a large business in Louisville, Kentucky.

One of those who were arrested, and who held the commission of captain, as his papers showed, was, up to a late date, a corset manufacturer in New York. The Government did not prosecute any of those who were arrested, so they were allowed to get out of the country, possibly for their country's good.

#### Father Matthew.

During this time the Rev. Theobald Matthew, familiarly known as Father Matthew, was busily engaged in his good work of temperance and total abstinence. His influence over the masses, especially of his own Church, was something remarkable.

On Sunday afternoons he was to be seen in the open square at the back of the Custom House, administering the pledge to the thousands who knelt on the pavement while he passed from rank to rank placing his hand on the head of each person. This was considered equivalent to taking a pledge, and each of these received a medal, which no doubt was carefully preserved.

Dr. Cuyler, of New York, said lately in a speech at Exeter Hall, London, that in 1842 he made his first speech by the side of Father Matthew in the City Hall, Glasgow. The doctor stated he was then but a youth, and Father Matthew gave him a warm kiss, which he felt to be a kind of consecration to temperance work.

The writer has a pleasing recollection of attending one of Father Matthew's addresses, in front of a Roman Catholic chapel at Donnybrook, when also a youth, and also of the kind-hearted, benevolent-looking father taking him by the hand, which he warmly shook, and drawing him from the crowd to a position near himself, where he stood to the close of the address.

### Evangelical Alliance.

At this time the Evangelical Alliance was formed in London, and shortly after the formation of the Irish branch followed, in Dublin. Ministers of all Evangelical denominations united cordially on the seven fundamental points which constituted the basis, the English Church clergymen alone keeping aloof.

Archbishop Whately, being opposed to the movement, issued a manifesto forbidding ministers under his jurisdiction to unite with the dissenters or nonconformists.

One curate refused to submit to his orders, and was deposed from his position. Being an old man with a family, and having no other means of support, great sympathy was shown in his case. A public meeting was held in the Rotunda, and resolutions passed sympathising with him and condemning the action of the Archbishop.

At the same time meetings were held at which the action of the Alliance in London, in refusing to admit representatives of the Methodist Episcopal Church South into the Alliance, on the ground of the slavery then existing, was discussed.

Bishop Soule, and his colleague, Rev. Mr. Sargent, came over as the Southern deputation to ask for admission, and were refused, it being proved that the Bishop himself held slaves at the time.

The feeling at these meetings was very strong, and intensified by the presence, a short time before, of Frederick Douglas, who denounced the whole system of American slavery, and from personal experience of the horrors of the lash, the gag, and the thumbscrew, had depicted the evil in such a way as to carry the feelings of his audiences completely away; and with true British feeling in favor of freedom, the American representatives were allowed to return home to relate the failure of their mission.

Having had the pleasure of being present at the great Evangelical Conference held in New York about ten years ago, when representatives from every part of the civilized world were present, including a converted Brahmin in his native costume,

I could not help contrasting the circumstances with the feeble commencement—the growth and spread of this organization being truly wonderful.

During the month of January, this year, the present Archbishop of Dublin assisted in the services of the Evangelical Alliance.

### Dublin Castle.

The balls at the Castle were the occasion of great excitement, their splendor equalling any given at Buckingham Palace, and causing a large amount of money to be circulated amongst all classes.

Having had the *entrée* to the gallery of St. Patrick's Hall, through a friendly official, I had an opportunity of witnessing these brilliant gatherings. The feathers and diamonds on some of the most beautiful women in the world, mingling with the brilliant military uniforms of the gentlemen, shown to the best advantage by about 2,000 wax-lights, was a scene not soon to be forgotten.

The House of Commons, thirty years ago, voted the abolition of the Vice-Royalty by a majority of three to one. The measure was dropped solely in deference to Irish opposition, particularly the opposition of the citizens of Dublin, who liked the pageant, the entertainment and the expenditure.

The glory of Dublin would depart with its Viceroy, and this the citizens knew full well.

### Lord-Lieutenants.

Earl de Grey, during his term of office, gained the reputation of being stingy.

It was customary for every Lord-Lieutenant to send beef for a Christmas Dinner to the Mendicity Institution. It was reported that Earl de Grey had sent cheap and inferior meat.

On the occasion of his departure from the Castle the usual military arrangements were carried out. The streets, all the way from the Castle along Dame Street, College Green, and

down to the Westland Row Station, were lined on both sides with troops, through which the Vice-Regal carriages passed amidst dense throngs of people.

Suddenly an addition to the crowd was made, by the appearance of four men carrying on their shoulders the carcass of an ox, minus the meat, and marching close to the carriage of the Lord-Lieutenant, and so amidst the cries of "shins of beef," the Vice-Regal party made their ignoble exit.

Such is the temper of a certain class in that city as to make the popularity of any high official to a great extent dependent on imaginary as well as real grievances. And yet, while this state of feeling exists, the city is so overrun with "purveyors" of every kind "to His Excellency," that were the Castle a whole town in itself there are as many bakers, butchers, grocers, Italian warehousemen, hatters, furriers, boot and shoe makers, wine and spirit merchants, dairymen, and even chimney-sweepers, "to Their Excellencies," as indicated by their own sign-boards, as would amply supply all the demands of Dublin Castle.

The Earls of Carlisle and Eglinton were very popular as Lord-Lieutenants during their term of office.

A despatch from Dublin, January 28th, 1886, says:—"Lord Carnarvon, ex-Viceroy of Ireland, left Dublin Castle to-day, accompanied by his wife, for their home in England. The retiring Viceroy was followed to the railway station by enormous crowds, and his route all the way to Kingstown, where he took the ferry for Holyhead, was lined with people anxious to witness his departure. He was cheered almost continuously from the time he left Dublin Castle until he departed from the Irish coast. The enthusiasm of the populace was phenomenal."

### Reviews in Phœnix Park.

Up to the time of Louis Napoleon being proclaimed Emperor of France, the Battle of Waterloo was commemorated on the 18th of June by a sham fight.

The Duke of Wellington, from regard for the feelings of the Emperor, ordered these reviews to be discontinued.

On the open ground near the Vice-Regal Lodge, commonly called the "Fifteen Acres," but really of much larger extent, these grand military displays took place. The flower of the British Army, stationed at the various barracks, including lancers, dragoons, hussars, infantry and artillery, generally numbering from 10,000 to 15,000 men, took part in these manœuvres.

Here for several years Lord Cardigan, the future hero of the charge of the Light Brigade, could be seen on his Arabian charger, at the head of the 11th Hussars, or Prince Albert's Own, of which he was colonel.

This regiment, wearing the loose jacket worn in commemoration of their having won a battle when only partially dressed, and with crimson trousers over the new saddle cloths lately presented by Prince Albert, made a splendid appearance. The sight attracted immense crowds, and was very imposing.

### **Holiday Excursions.**

Where there were so many points of interest, the difficulty was to decide on some particular place to resort to in these delightful outings.

There was Maynooth, with its College and beautiful grounds, and a magnificent library always open to visitors, and close by was the splendid seat of the Duke of Leinster; Clontarf Castle and the Hill of Howth were other attractive points for a holiday excursion. There were Kingstown and Bray, and Killiney Hill, from which a magnificent view, on the land side, could be had away back to the city, with the intervening bathing villages; and on the other side the Bay of Dublin, said to rival that of Naples, and the Irish Channel studded with ships from every clime; but the County Wicklow seemed to offer the greatest inducements for a day of real pleasure.

At 5 o'clock on a fine summer's morning, with a splendid four-in-hand before a car holding ten on each side, and the "well" in the centre well filled with cold fowl and hams, and all the necessary appendages, and generally with one or two

musical instruments, the twenty mile drive over a road without an uneven spot in the whole distance—over hill and down dale, amid ever-changing scenes of beauty and romantic grandeur, with the perfume of the hawthorn in the fresh morning air—was as exhilarating as delightful, and for pleasure could not be exceeded in the world.

The supply of provisions being reserved for a later period of the day, breakfast was served at the first stopping place, Roundtown.

The way in which the first supply of beefsteak and ham-and-eggs disappeared always astonished the good-looking girls who waited at the table, and while a second edition was being prepared the most boisterous merriment went on.

The seat of Lord Monck, formerly Governor-General of Canada, was passed, as also that of Lord Powercourt. Mountains and glens, lakes and waterfalls succeeding each other, the "seven churches" at Glendalough, the most attractive spot, is reached.

Here is the lake of which Tom Moore has written :

" By that lake whose gloomy shore  
Skylark never warbled o'er."

The water is said to possess some peculiar quality which has the effect of driving away the warblers.

From this lake rises a precipitous rock several hundred feet in height, and in the face about midway up is a cave, called St. Kevin's bed, having, at the bottom, the appearance of the form of a man in the solid rock, giving rise to the legend that here St. Kevin took refuge from the wiles of a fascinating young lady who pursued him, and at length, having made her way to the mouth of the cave where he lay, feet outward, he pushed her into the lake below.

On the stone are carved the names of nearly all celebrated Irish travellers, including Sir Walter Scott, Rev. Caesar Otway, Mr. and Mrs. S. C. Hall, and others.

The guide who "coins" legends always assists visitors to enter this cave, which is a very dangerous operation, and more

especially so in getting out, as this is done feet foremost. Not being able to see where you are going, and the deep lake immediately below, you are entirely at the mercy of the guide, who places your feet in certain niches known only to herself—the guide at that time being a woman called Kathleen, said to be the name of the victim of St. Kevin's determined celibacy.

The scenery in this neighborhood is unsurpassed, and continues to be very fine till the destination of the day's excursion is reached, at the Vale of Avoca, of which Tom Moore says:

“There's not in this wide world a valley so sweet.”

### **Donnybrook Fair.**

“Who has not heard of sweet Donnybrook Fair?  
An Irishman, all in his glory, was there,  
With his sprig of shillelah, and shamrock so green.”

During the time of the writer's residence in Dublin this celebrated gathering was in full blast, once a year.

Whether there was a sale of merchandise, as at Leipsic, or a grand bazaar, such as is seen in the grounds of the nobility in England, for some benevolent or charitable object, or a cattle fair, during the day, I do not profess to know, but in the evenings and at night, when the crowds poured into the grounds, it had peculiar features in which it differed from all other fairs.

It must be admitted that nothing so bad was seen as what, when a boy, I had witnessed at fairs in other parts of Ireland.

At some of these the “who'll-tread-on-the-tail-of-my-coat” challenge was literally given, and promptly accepted by opposite factions, and the battle commenced. Those who had no cudgels were supplied with pokers, tongs, and other weapons, taken without permission from the neighboring houses by the women, who also supplied ammunition in the shape of paving stones; and soon heads were broken and the blood flowed copiously. This generally continued till either the priest appeared on horseback, and by the free use of a long whip, or the constabulary with fixed bayonets, dispersed the rioters.

Sometimes when the constables were attacked they fired on the mob, wounding some and killing others.

The rush to Donnybrook was very great, although the general character of the crowds differed from those to be seen on the road to the Derby. There was an entire absence of the aristocratic four-in-hand and other carriages of a stylish character, and none of the "dust veils" worn by the gentlemen in dry weather. The usual mode of conveyance was by the outside cars, and if one of these happened to be disengaged, the driver made the tempting offer to parties on the road to "rowl" six of them out for a shilling.

The first sight of the grounds, if not imposing, was certainly very surprising. Like a vast military camp the tents were spread all over, interspersed with, and surrounded by, a miscellaneous collection of shows of all kinds from every part of Great Britain and Ireland.

There were menageries and theatres, peep shows and Punch and Judys, giants, dwarfs, fat women and living skeletons, monstrosities of all kinds, acrobats, jugglers, clowns, mountebanks, gypsies, nigger minstrels, organ grinders, hurdy-gurdy men, and thimble-riggers, all inviting customers with a din that is utterly indescribable. In the tents were fiddlers and pipers, and the dance went on merrily, while the free use of whiskey contributed to make matters still more lively.

Occasionally a batch of Trinity College students, bent on fun, would appear rushing through the crowd, and from one show to another, up on the platforms, and down again, then through the tents, much to the astonishment of proprietors and the great amusement of visitors.

The whole business has been entirely abolished by law as a public evil.

The memory of years spent in Dublin is pleasant. As a place of residence it possesses many attractions. Its squares and parks, especially Phoenix Park, with the Zoological Gardens close by; the Botanical Gardens at Glasnevin; the beauty of its suburbs, and its historical associations, all combine to make it the pride of its citizens.

To lovers of first-class music, especially cathedral and choral, Dublin is unsurpassed in all that can delight the ear.

To be privileged to hear the choir of Trinity College Chapel at early matins, then the Chapel Royal choir at ten o'clock, from which, if we choose, to go to Christ Church at twelve, and St. Patrick's at three, would be to enjoy the very greatest treat in this class of music.

Trinity College Chapel on a Sunday morning is a moving sight.

Five hundred young men in college gowns, thronging the chapel from end to end—the very flower of British youth, in manly beauty, in strength, in race, in courage, in mind—all kneeling side by side, bound together in a common bond of union by the grand historic associations of that noble place; all mingling their voices together with the trebles (all well-trained boys) of the choir and the thunder music of the organ.

This is a spectacle not often equalled, and to take a share in it a privilege not to be forgotten.

In the beautiful grounds of Trinity College the writer was accustomed to take his morning walk, frequently meeting the celebrated Archbishop Whately, with whom it was a favorite resort.

### **St. Patrick's Cathedral.**

The choral music of St. Patrick's Cathedral is almost unrivalled in its combined powers of voice, organ and scientific skill. The majestic harmony of effect thus produced is not a little deepened by the character of the church itself, which with its dark rich fretwork, knightly helmets and banners, and old monumental effigies, seems all filled and overshadowed by the spirit of valorous antiquity.

Mrs. Hemans, who after residing in Dublin for several years, died there, and was buried in St. Anne's Churchyard, speaks of the exquisite music of St. Patrick's, the effect of which is such as once heard can never be forgotten. "If earthly music can ever be satisfying it must be such as this, bringing home to our bosoms the solemn beauty of the Liturgy, with all its endeared

associations, in tones that make the heart swell with ecstasy and the eyes often flow with unbidden tears."

There was one anthem frequently heard within these walls which Mrs. Hemans used to speak of with peculiar enthusiasm—that from the 3rd Psalm, "Lord, how are they increased that trouble me!" The consummate skill exhibited in the adaptation of sound to sense in the noble composition is, in truth, most admirable. The symphony in the fifth verse—"I laid me down and slept,"—with its soft, dreamy vibrations, gentle as the hovering of an angel's wing, the utter *abandon*, the melting away into slumber implied by the half-whispered words that come breathing as from a world of spirits, almost "steep" the senses in forgetfulness, when a sudden outbreak, as it were, of light and life bursts forth with the glad announcement—"I awaked, for the Lord sustained me"—and then the old sombre arches ring with an almost overpowering peal of triumph, bearing to heaven's gate in the exalting chorus which follows.

The leading singers in the cathedrals were David Weyman, Vicar-Choral of St. Patrick's; Dr. John Smith, composer to the Chapel Royal, and R. W. Beatty, Professor of Music to Christ Church, with the celebrated Robinson Brothers leading tenor and bass.

Dr. Smith, although a very corpulent man, was said to be the only true counter-tenor singer of the day, taking the highest notes with his natural voice as pure as the warbling of a bird. The first named three gentlemen were eminent composers, whose works appear in every complete Church Psalmody.

### Emigration.

Who should emigrate? This is a question much more easily asked than answered. The best answer appears to be, "those who are obliged to do so."

If this be so, and America has been peopled with those who have come from every country in Europe, how does it happen that there is on every hand such an accumulation of wealth?

Was all this acquired by people who came here, not from choice, but of necessity ?

If so, the possession and use of brain and muscle must have stood in good stead in the absence of other capital.

And yet the rule is that few, if any, do leave the Old Country from choice ; and none who are really doing well at home should emigrate with the expectation of doing better, no matter what their occupation or profession may be.

But those who are not doing well, who find it difficult, with an increasing family, to keep up appearances, and find it necessary to make a change, may safely emigrate with a fair prospect of improving their condition.

If these pages should meet the eye of any young man wishing to know about Canada, and Toronto in particular, he may be able to form a pretty correct opinion of the chances of success from the facts stated.

No doubt that in proportion to the population the failures in business in America are more numerous than in Great Britain, especially if the figures of mercantile agencies can be relied on.

But if a city can grow in wealth and prosperity like Toronto, in a comparatively short time, as no city in the Old Country (London always excepted) is doing, *it is clear that some must become rich* where on the whole so much has been accumulated.

There are exceptions to the rule as to emigration. Some do leave home who are well to do, but have some ulterior object in the future as to the settlement of their families.

The hope of doing better for one's self in a new country, the dreams of youth, and correspondence with friends, with the love of novelty and, perhaps, adventure, influence many young men.

Having gained an excellent position by remaining in the house from its establishment, while about 2,000 young men had come and gone, and being one of the two who alone remained of the original founders, when we had decided to leave for America the heads of the firm were incredulous at first, but finding our decision was made, the leading partner used all his

persuasion to induce us to remain, telling us we would "cry salt tears" when we found ourselves in America.

But all to no purpose, we had determined to find out for ourselves what America was like.

In the meantime addresses of regret and good wishes were prepared and signed by hundreds of our companions in the business, and arrangements made for a presentation supper at considerable expense.

The writer, having conscientious objections to these festive occasions, which generally ended in over-indulgence, with much regret at offending his friends, declined the intended honor, and all his subsequent experience has confirmed his opinion that he acted rightly in his decision.

A volume could be written on this subject. Having heard all the celebrated temperance lecturers in England and America, including Mr. John B. Gough and Hon. Neal Dow, also Cardinal Manning, Sir Wilfred Lawson, Wm. Lloyd Garrison, Dr. Rees, and a host of others, I can say, I never heard a statement of the evil effects of intemperance exaggerated, but have seen instances as terrible as any they have related in actual life.

Where are the 2,000 young men with whom I associated in one house alone? The history of many I know, but cannot enter more fully into the subject. When the question of temperance is growing to be of such intense interest in Canada and in Toronto, and the future merchants, manufacturers, and bankers of the city are to take part in the movement, the writer, who can safely say he has come into actual contact with more business young men in Great Britain and America than any other man in Toronto, gives it as his deliberate opinion, that nothing short of total abstinence is a safeguard against evil consequences, whether travelling or at home.

The reception of various addresses from societies and friends, in a quiet way, wound up my connection with the beautiful city, which I have never missed an opportunity of visiting, when time has permitted, on my business journeys to Britain.

Departure for New York.

“Isle of Beauty, fare thee well.”

On the 17th of March, 1847, our party of five, and a manservant who accompanied one of our friends, sailed from Liverpool in the ship *Sheridan*, Captain Cornish, of the “Dramatic” Line—the other three being called respectively the *Garrick*, *Roscious*, and *Siddous*.

Not being pressed for time, we had decided to come by a sailing vessel, and as far as the writer is concerned it was the first and last experience in that line.

When time becomes money it does not pay to roll on the deep from side to side, in the most beautiful weather, in a dead calm for days together.

The voyage was devoid of interest and very unlike any of my after passages in steamers. The cabin passengers were few, and those of the steerage had a hard time. The Captain, being a harsh man, thought nothing of kicking them should they trespass on the after part of the deck, where they would sometimes lie down to get away from the surroundings of the fore-castle.

On the other hand, we who liked a change would fain get out on the bow, or the jib-boom, and watch the figure-head of the gallant ship, as she alternately rose high on the crest of a wave and then plunged into the deep abyss.

Our first adventure in this way taught us a lesson. Standing on the fore-castle we scanned the horizon for the sight of a sail, when quietly a ring was made with chalk around our feet, and out of this we were expected not to move till we had “paid our footing,” and of course we could not refuse the jolly tars their usual *douceur*.

Had we been in a hurry the passage would have been a terrible tax on our patience. Now terrific storms, with thunder’s roll and lightning’s flash—and so vivid was the lightning, that from pitch darkness the sea, as far as the eye could reach, was suddenly lit up so as to appear like an ocean of flame. Again

followed a dead calm, with a ground-swell so heavy that in the roll the mainyards would dip in the water; the rolling so violent that standing was impossible, and many a fearful pitch took place.

When sea-sickness had done its work amongst the steerage passengers, the natural passion for a fight soon showed itself amongst our Hibernian friends.

The Munster and Connaught men soon got up a good old-fashioned faction fight, perhaps to illustrate the beauties of "Home Rule" on the "rolling deep."

So at it they went, hammer, tongs, and shillelubs, pitching each other down the hatchways, head over heels. Matters having become serious, the sailors thought it time to spoil the sport. Handspikes, from "heaving" the capstan were heaved to some purpose, and the Irishmen soon beat a retreat.

The most remarkable incident of the voyage was having spoken a vessel one hundred days out from Ireland, short of provisions, which were liberally supplied from our ship.

And so twenty-six days passed, and the land appearing in sight we soon arrived in New York.

### First Impressions of New York.

"Hail! Columbia."

Our youthful dreams of this city represented it metaphorically as having its streets lined with orange trees and paved with gold, but this illusion was soon dispelled.

From Liverpool docks—five miles in length and having twenty miles of dockage, with massive gates set in everlasting granite—to the wooden wharves of New York, must strike the eye of every one arriving there as a wonderful contrast.

On reaching the dock over piles of merchandise and emigrants' baggage, we found ourselves in a sea of mud. One of our party, on taking "soundings," reported a depth of twelve inches in the middle of the street.

On our way to the hotel we were struck with the melancholy appearance of the private streets,—long lines of houses, having

green outside shutters all closed, without the appearance of a flower-pot, or the face of a chambermaid airing curtains or looking out, presented a striking contrast to scenes so familiar just left behind, when wall flowers and crocuses were blooming, and where windows were opened every morning all the year round.

It being now the middle of April, we expected spring weather, and feeling hearty after the sea voyage, enjoyed the fresh air. Our astonishment on reaching a hotel was very great to find the guests crowded round a stove, nearly red hot, all very grave, ruminant, expectorant and whittling. Our appearance soon attracted attention, and remarks were made as to the freshness of our complexion (a compliment we could not truthfully return), and we were informed that they "guessed" (the first time we had heard the word so applied) we would not be long in the country before we should lose all that high color. Not at all anxious to adopt the sallow shade, we were by no means encouraged, and having made necessary arrangements, and feeling uncomfortable with the sickening heat, rushed out of doors to get relief; and never for the week we remained in the city did we venture again near one of those health-destroying inventions.

The stoves of the present time are entirely different, and in every way adapted to the climate.

We soon found that to see Broadway, including A. T. Stewart's marble store and Barnum's Museum, was to see New York.

A. T. Stewart's was very fine in marble, and the inside arrangements were very superior, but the system of doing business did not appear to us as perfect as that we had just left.

We were struck with the signs of "Dry Goods Store," "Flour and Feed," "Help Wanted," etc., none of which we had seen before, and had to enquire what they meant. We found that "helps" meant servants, and as there were no masters, the term "boss," which we have never yet known the meaning of, was used to distinguish what in the Old Country is known by the other familiar term.

On enquiring as to the police, none of that class appearing

to us on the streets, we were told they might be known by the wearing of a small metal badge fastened to the collar of the coat, with the stars and stripes and "*E pluribus unum*" inscribed upon it, and further, that no man in the country could be found to wear a uniform.

This accounted for the entire absence of anything in the shape of livery on the coachmen.

To wear a livery button or cockade would be derogatory to the dignity of men who were all equal.

The ladies on the streets were invisible as to their faces, each having a green woollen barege veil tightly drawn over the face.

The appearance of Astor House illuminated, on the night of our arrival, as seen from the Park opposite, was very fine. This was effected by a candle being placed in every pane of glass in the whole building, and the name "Taylor" in gas over the principal entrance. This we found was in celebration of one of General Taylor's victories in Mexico.

The experience of our first morning at the hotel did not alter the unfavorable impression of the previous day.

According to our usual custom, our boots were left outside our doors, pretty well coated with mud, and on taking them in found them just in the same condition. In reply to our enquiries why they were not cleaned, we were told, if we required that labor performed we must make a special contract with a person that they would send; the arrangement was made accordingly.

The cheery voice of the English chambermaid, as she knocked at the door and called "hot water, sir," with boots which might serve as a mirror, by the application of "Day and Martin's" blacking, were all sadly missed.

Breakfast was announced by the ringing of a bell, when we found what was to us a novel bill of fare. The selections by the guests were chiefly in the shape of mush, buckwheat cakes, pickles and green tea, while we were satisfied with old-fashioned ham-and-eggs and coffee. The solemnity of the proceedings was quite remarkable; so far we had not seen the shadow of a smile on any one's countenance. Having got through we found all the other guests had long since disappeared, and then, with-

out giving offence, we gave full vent to our feelings by hearty bursts of laughter, and the mutual exclamation, "And this is America!" How different from all our expectations!

On Sunday we observed in the churches notices that gentlemen were "not to spit in the pews," and the clergymen during the service made free use of the "cuspadores."

But "*tempora mutantur nos et mutamur in illis*." We have lived to see the millionaires and aristocrats of New York vie with the "*crème de la crème*" of London society, and the Central Park equipages, including crests and mottoes, with livery of every hue, rivalling Rotten Row and the carriage drives in Hyde Park; while a four-in-hand coaching club copies the style, as far as the roads will admit, of the Brighton Club of noblemen in London.

Touching crests and mottoes, a story is told of the celebrated Lundy Foot, manufacturer of the snuffs known all over the world as "Irish Blackguard" and other remarkable brands, known only to the writer by enjoying many a good sneeze in passing the mill near Essex Bridge.

When Mr. Foot first got a carriage, he adopted as a motto beneath the family crest, the Latin words, "*Quid rides?*"—why do you laugh? On his first appearance, the Dublin street boys, quick to catch a new idea and enjoy a joke, taking the words in their English orthography, set up the cheer, "Quid rides! Quid rides!"

The upper ten of new York, no doubt, are more careful in the selection of their mottoes.

To see New York to-day is to see an almost entirely new city. Some of the old buildings, as the Astor House and City Hall, remain, but the magnificent warehouses on Broadway and adjacent streets are unsurpassed in the world, and nearly all have been built since that time.

A. T. Stewart's fine store was latterly turned into a wholesale warehouse, and the magnificent new marble block, bounded by 10th and 11th Streets and Broadway and the Bowery, a perfect palace, was opened as the great retail house of America, and altogether the finest in the world.

The hotels, for magnificence, are of world-wide fame, while Central Park, Brooklyn Bridge, the great reservoirs at 42nd and 150th Streets, the Grand Central Depot, all so often described, are now striking objects of interest.

The splendid private residences, of 5th Avenue especially, are magnificent in style and finish.

### From New York to Toronto.

By night steamer on the Hudson River the travelling was very fine and comfortable. The steamer *Isaac Newton*, then called a floating palace, landed us at Albany. The New York Central to Rochester and Buffalo was then taken. The rails consisted of a plain plate of iron fastened to the sleepers with iron spikes. We were informed, that for one of these plates to start at one end and obtrude itself into the car, to the danger of life and limb, was a matter of common occurrence.

We escaped this danger and arrived safely at Rochester, where, for the first time, we noticed frame houses and plank sidewalks, with both of which we soon became familiar. Arriving, via Buffalo, at the Falls,—the station at Buffalo consisting of the open firmament above and the street below,—we took up our abode at the American Hotel, from which we were to make our first visit to Canada.

The ice was coming down from Lake Erie in great masses, and the only means of crossing was a small ferry-boat, which took passengers across to the landing below the Clifton House. On enquiry we found that this boat had not crossed for several days, and it was quite uncertain when any attempt would be made. The ice became more and more massed, forming the usual bridge.

Having waited for several days the ice at length began to move, when the ferryman asking us if we would risk the crossing, we consented. The ice at this time was floating in large packs; so off we started, with two oarsmen, and with one foot on the ice and one in the boat they pushed the boat by main force through. To have been carried a hundred yards below the

landing would have sealed our doom, but having worked our way through we placed our feet for the first time on Canadian soil. Having executed this dangerous navigation we soon tasted the pleasures of land travelling.

The stage for St. Catharines was soon ready, and we shortly found ourselves "at sea" on dry land.

Having driven a long distance on what we thought was a field or common, there being no sign of hedge or fence visible, we enquired when we should reach a road. With a smile of self-complacency and a look of pity for our *freshness* or verdancy, the driver informed us we had been on the main road all the time. It so happened that the year before, being the year of the memorable potato famine in Ireland, the Government had spent immense sums in making and repairing roads, to give employment to the people, the consequence of which was the greatest perfection in road-making; and without exaggeration, the worst road you could find was infinitely better than any we saw for years afterwards, not excepting the city macadamized streets. We soon found, however, that to mention this to our driver only subjected us to his contempt.

Our driver appeared to think "the lines" had fallen to him in pleasant places, and was quite satisfied with the state of things; while the writer, years after, on handling "the lines" (as Americans say for reins) over mud, slush, old planks and corduroy, found it incumbent to drive from his memory the smooth roads, hawthorn hedges, and the beauties of highly cultivated landscapes left behind, and think only of farms without rent, and the real necessities of life enjoyed so abundantly, in this land where the inhabitants possess truly a "goodly heritage."

#### ST. CATHARINES

was reached at length, and here we rested for the night, and the next afternoon started with four good horses in the Mail Stage for Hamilton.

To attempt a description of this journey as it appeared to us at the time would only result in failure.

With both hands we grasped the seat to save our heads from bumping against the top of the conveyance, and many times when we got into a deep rut we had to use rails from the fence to pry the wheels out. And so at 2 o'clock on Sunday morning, covered with mud and thoroughly exhausted, we reached Weekes' Hotel, the clerk at the time being Mr. Riley, so long and well known afterwards in Toronto in connection with the firm of Riley & May, of the Revere House.

Having been regular church-goers, we were in our places in the red brick Wesleyan Church on John Street, at 11 o'clock, and soon found we were on British soil and amongst our own countrymen under the same Queen and flag. Here we soon found friends, and myself relatives, the first day, and with the natural longing for old familiar faces when far away from home, we walked ten miles to Copetown to see a family with whom we had been acquainted in Dublin, and were amply repaid for our visit. Again taking the regular Mail Stage, we arrived in Toronto, after a tedious ride, and put up at Macdonald's Hotel, King Street, then the best in the city.

VIEW OF TORONTO, C.W.  
1847.

ROBERT SMITH & CO

# TORONTO FROM 1847 TO 1857.

## First Impressions of Toronto.

Our first view from the door of Macdonald's Hotel, which stood on the site of the present Romain buildings, did not give us a favorable impression of the town. From near Bay Street to the corner of York was an immense vacant space filled with rubbish, and at the back a dirty lane with a few of what we for the first time heard of by the name of "shanties."

Walking eastward as far as the Market, and, returning to Yonge Street, proceeding as far north as Queen, we found we had, so far as business was concerned, seen Toronto, with the exception of a few wholesale warehouses to the south of King.

Having never seen a view of Toronto, except one which appeared a short time before in the London *Illustrated News*, our expectations were not of a very sanguine character,—that view representing the "City" of Toronto something like what a view of Oakville might be at the present time. Why it should be called a city was something we could not quite understand, as even towns in Canada lately honored with that appellation are far superior in architecture to what Toronto was at that time,—such cities as Guelph, Brantford and London having kept pace with the improvements which have taken place in the intervening years.

Everything appeared flat, dull, uninteresting, and especially unfinished. Not a single point of attractiveness could we discover in or about the place, although we were quite taken with the people.

The contrast between the city we had left and Toronto was most depressing, and grew more marked as we viewed the outskirts. Having letters from friends we soon found a cordial welcome to several homes, which went a great way to reconcile us to the place.

On enquiry we found, rather to our surprise, that there were two churches having organs, something we had not expected to find: one was in the old Cathedral and the other in the Richmond Street Wesleyan Church.

On being introduced to Rev. Messrs. Cooney and Harvard by letters, the former took us with pride to see the new church on Richmond Street. It then stood on an almost vacant lot, there being no building between it and Bay Street.

On entering he pointed with a good deal of satisfaction to the fine organ, which stood behind the pulpit at the time. We attended divine service on the following Sunday, when Mr. Cooney preached, and were much interested. The musical portion of the service was very pleasing and effective. A well-known alderman of the city at the present time was leader of the tenors, and the writer has a distinct recollection of his flexible voice as he glided from tenor to counter-tenor, and occasionally appeared imperceptibly to run into a falsetto, which added much to the harmony and contributed very greatly to the general effect.

We were equally pleased in the old Cathedral. The beautifully composed and impressively delivered sermons of the Rev. Mr. Grasset were such as should never be forgotten, while the music was of a very high order.

During the week we had an opportunity of visiting some of the retail stores, the principal of which were Betley & Kay's, corner of King and Yonge Streets; Walker and Hutchinson's, P. Patterson's, and Walter McFarlane's.

My friend and companion of seven years, dropping into Betley & Kay's, was immediately offered a situation, which he accepted, much to my surprise, as we had not decided to remain in Toronto at the time; and here my loneliness commenced.

My destination was Brockville, where I intended to go, having a letter from my grand-uncle (and his uncle) to the Hon. George Crawford, who was to advise me as to my future movements.

The unwillingness to part with my friend, and the unsolicited offer of a situation, also on King Street, with the desire to have a rest after so much travelling, led to my acceptance of the offer, and so we entered on our new career.

To compare the business of King Street in 1886 with what it was in 1847 could give no conception of the difference which it may be imagined we found after leaving the business already described.

The prospect of its being only temporary alone made it at all enduring, while it gave time to arrange plans for the future and get some knowledge of the mode of doing business before deciding where to choose as a future field of operation. The want of system in showing goods, the bantering about price, and the lack of customers, made it tiresome beyond description.

Here we first became acquainted with the habit of

“SHOPPING,”

either for amusement or for comparison of prices before purchasing. The custom was almost universal to go from Yonge Street to the Market before deciding on what or where to buy. The common expression was: “We will look around, and return if not better suited elsewhere.” At the same time the anxiety to press sales was painfully apparent, the offer of a reduction in price being the principal inducement held out.

This of course led to exaggeration, and often misrepresentation, and was altogether demoralizing to both seller and buyer. The few houses named were, I believe, exceptional in this respect, and were the first to introduce the “one price” system.

In consideration of my previous experience, the principal of the business in which I had made a temporary engagement immediately took charge of a customer where any deviation from the marked price was asked, well knowing that on no account would I condescend to such a practice.

The arguments of friends to induce us to settle in Toronto were drawn more from the absence of the rudeness and inconvenience that existed before we were born, or the wonderful future that lay before the city, than from any especially attractive features the present afforded.

Amusements or entertainments there were scarcely any. There was the old Mechanics' Institute, where the present Police Court now stands—then a dirty lane,—where a subscriber could read books or papers. This, and the auction room of William Wakefield, who, by his genial humor and English physiognomy, did all in his power to entertain his customers, were about the only places of resort of an evening.

And so summer came on, and recollections of botanical and private gardens, parks, squares, delightful suburbs, music, lectures, literary entertainments, all crowded on one's memory to make the contrast painful.

Suburbs there were none, except Yorkville, then an embryo village with a few scattered houses, the best being the residence of Mr. Bloor, which still remains. As no resident of Toronto went there except on business, the journey was not often undertaken.

Toronto business men lived either over their stores, or on some street south of Queen.

Our first tour of exploration in the outskirts was along Carlton Street from Yonge, then a clay road without houses or sidewalks. Having got as far as the present Homewood Avenue, we found a small gate-house, and on entering the wicket discovered a natural pathway through a thick pine grove. Proceeding north we reached the house now occupied by Homer Dixon, Esq., and finding further progress that way, or egress, impossible, retraced our steps.

Our next adventure was along Bloor Street east to the present cemetery fence, and thence backwards again; and these for a time constituted our only recreation grounds, except the College Avenue.

In taking a morning or an afternoon walk, there was the absence of many pleasing objects so familiar in former every-

day life. The "wee crimson-tippit" flowers that covered the pasture fields like a carpet; the banks of primroses, buttercups and violets, abounding by every roadside; the double line of hawthorns whose blossoms perfumed the air with their delicious fragrance, and the honeysuckle and wall-flowers in every lane; the meadows, thick with May flowers, all were missed during this first summer in Toronto. For the hedgerows we found the unsightly snake fence, and for the evergreens of holly, laurel, and ivy, the everlasting, monotonous pines, good for use but not very ornamental.

The study of this class of "flora" no doubt might be interesting to those who studied the subject from a utilitarian point of view, and the smaller species might have been discovered by an adventurous descent down the ravine to where the river Don flowed in its native beauty; and some ferns and beautiful wild flowers might have been discovered, very interesting to students in botany; but to the casual observer these beautiful objects were at that time conspicuous by their absence.

Along Church Street, any summer's afternoon, especially in a swamp at the south-east corner of the present beautiful Normal School grounds, could be heard the music of a frogs' concert, accompanied at a short distance with the tintinabulation of the bells on the necks of the cows which roamed through the brownish-green pastures and amongst the thick bush which prevailed east of Church and north of Queen Streets. These sounds were further augmented by the cackling of flocks of geese, which, in their amphibious character, had their choice of both native elements.

The song of the lark, the thrush, the blackbird, and goldfinch, so familiar before, was no more heard; the buzz of the bumblebee, and the whirr of the numerous insects that abounded in the bush, being the only substitute.

Apart from its political history, which has been given so repeatedly, Toronto possessed no points of interest beyond what any town on the shore of Lake Ontario possesses at the present time, except that she had made a step in advance and outgrown them in population and trade.

The young friends with whom we became acquainted, and whose ideas were circumscribed by the visible horizon, would not admit of the superiority of any other place in any respect. If you spoke of London, Dublin, or New York as great places, you were immediately met with the question, "Was not Toronto also a city?" And the statement that she had one street forty miles long extinguished all your arguments and left them masters of the situation.

When it is borne in mind that at that time Toronto, as far as intercourse with the outer world was concerned, was far more isolated than is Regina to-day, it will be admitted that these young people had a pretty good conceit of the place.

A correspondence was soon opened with friends in Great Britain with a view to importing goods, either to Toronto or Montreal, and at the same time I had an opportunity of writing to my uncle's executors in Philadelphia, as to the property already referred to. The reply was to the effect that the climate of Mississippi was bad, and if I went there I could not find an honest lawyer in the State. The American war coming on prevented further efforts for several years. Under these circumstances I allowed the matter to rest until I visited that city, when no trace of the executors could be found, and only at the Centennial, in 1876, did I discover my uncle's tomb in "Macpelah" Cemetery, where a handsome marble monument is erected to his memory. It may be that, like the Lawrence-Townley estate, the property may turn out to be of fabulous value.

### Toronto in 1847.

To give an idea of the general appearance of Toronto at this time, it may assist the imagination to conceive of all its present attractions being removed, and all the improvements that have taken place still unanticipated.

To do this it will be necessary, commencing with the Island, to remove every building there at present, leaving the lighthouse, Privat's Hotel, which then stood near the present gap, and two or three fishermen's huts at the West Point.

Crossing the Bay, the whole Esplanade must be taken away, leaving two or three wharfs with a ragged edge of stagnant water between.

The whole of the railway tracks, with all buildings and stations, must next disappear.

Coming north, all the block, stone and wood pavements; all the street railway tracks; all telegraph poles and wires, except a single line to Hamilton and Montreal; all the gas lamps except about a hundred; all the water hydrants except about twelve; all that are called "modern conveniences," which are now considered indispensable in every house; the suburbs of Brockton, Parkdale, Seaton Village, Riverside, Leslieville; all the streets north of Queen and west of John—leaving some scattered houses outside these limits—except Yonge and Church Streets.

As it is supposed there are at present 30,000 houses in the city and suburbs, you must imagine 26,500 of these taken away, leaving 3,500 as composing the entire city at that time. From these 3,500 you may deduct 2,500 of frame and rough-cast houses, leaving 1,000 of a better class; from which again, if you take 500 two-storey red brick, you have 500 which comprised all the best buildings, including churches, banks and private residences, the best of the latter being those at present on Bay Street, and a few detached mansions scattered over the city.

To complete the picture must be added the absence of every shade tree—except those on College Avenue—which now adorns and beautifies the city; every flower-bed and conservatory, and in stores all plate-glass windows.

In addition to all this you have to conceive of 90,000 of the population being left out, and some idea may be formed of Toronto in 1847.

At this time only four of the present churches were in existence: the Richmond Street Wesleyan, Power Street Roman Catholic, St. George's Episcopalian, and Little Trinity. The others that were then built have either been burned down, or removed to give place to present structures, amongst which are

the St. James' Cathedral, which has taken the place of the old one burned in 1849, and Knox Church, on the site of the old one burned in 1847.

Not one of the banks or large insurance buildings; none of the wholesale houses as they now appear; none of the benevolent institutions, then existed; and none of the public schools or colleges except Upper Canada College.

Front Street occupied the same relative position to the Bay as the Esplanade does at present.

There were no buildings on the south side except the Custom House, and only a few scattered along on the north side, leaving the view of the Bay uninterrupted.

There was a skating-rink near where the Custom House now stands.

Going westward from Yonge Street, on the north side of Front, where the warehouse of Messrs. McMaster, Darling & Co. now stands, was the residence of Judge Macauley; next that of Judge Jones; further west the residence of Mr. Joseph Rogers, and at the corner of Bay Street was the Baldwin mansion.

Where the Queen's Hotel now stands Capt. Thomas Dick had four dwellings; these afterwards were used as Knox College, and subsequently were turned into a hotel kept by Mr. Swords.

Holland House, in the rear, on Wellington Street, lately the residence of ex-Mayor Manning, and at present the Reform Club, and which was built in 1832, by Hon. Henry John Boulton, and from its peculiar style of architecture sometimes called "The Castle," was occupied by Mr. Boulton at this time.

At York Street corner, a picturesque cottage was the residence of Capt. Strachan, son of the Bishop of Toronto, whose palace adjoined with the entrance on Front Street. This building is now a boarding-house.

Turning up Simcoe to corner of Wellington you saw the Hagerman mansion, and returning eastward on Wellington, the little white house lately occupied by Mr. Mercer, standing by itself at the corner of Bay.

When Toronto was first settled most of the buildings were

erected at the upper end of the Bay, towards the river Don, and it was generally supposed that the east end would become the principal part of the city. As the buildings were extended, however, they began to creep westward and northward.

The town in its young days was much scattered, the roads were bad, and communication between distant portions of the town, at least in certain seasons of the year, was difficult; in consequence, houses of business were started at each extremity, which, in some cases, realized to their owners handsome profits.

As the town increased the footpaths were improved, business became more concentrated, and at this time was almost confined to the space between York Street and the Market, and it was doubtful whether, if the best store was removed to either extremity, it would do a paying business. The necessary consequence of this state of things was that the value of property and rents within the limits mentioned had risen enormously.

In the absence of street railways the few travellers who had occasion to reach the steamboats in summer (in winter the stages called for passengers at their houses) were limited for accommodation to a few old-fashioned one-horse cabs, owned by well-known drivers, and the number of horses and vehicles of all kinds was so small as to make it an easy matter for any inquisitive person to know the owner of every particular turnout in the town.

The only city omnibus at this time was one that ran to Yorkville every hour, and a ride in this was not very exhilarating at certain seasons, especially when the frost was breaking up. The jolting was terrific, but as few or none of the Toronto people lived in Yorkville, there was not much travel up or down.

An hourly omnibus started from the Market to Parliament Street, but it did not pay and was soon discontinued.

The question of meat being an important one, it may be stated, from actual experience, that after repeated endeavors to masticate the beefsteaks, my young friend and myself came to the conclusion that, having heard that oxen were employed in

the country for ploughing and other purposes, the Toronto market was supplied with beef from their carcasses after their usefulness as living animals had departed. The supply of vegetables was excellent.

### Gossip.

The extent to which regard for local boundaries, customs, and every-day chit-chat is sometimes carried, can only be realized in a small town.

At home, in this nook, all life is lived under minute inspection of neighbors, and perhaps the unavoidable supervision of parson and squire.

The fierce light that beats upon the throne is not clearer than that which exhibits the young man "sowing his wild oats." He sins under a microscope, and the professional gossip finds rich material for the next social or tea-party by placing him under the instrument for the general entertainment of the company, and so the engagement of lovers is discussed as earnestly as if each person were personally or directly interested in the result of every matrimonial arrangement.

In 1847 Toronto had not outgrown the habits which characterize the country town. The gossip which prevails where every person knows all about the business and social life of his neighbors, was still noticeable, and the absence of all foreign news, oftener than once a fortnight, gave a local character to the general topics of conversation.

Every birth, marriage and death furnished material for discussion in every family circle, and very much as it is on board ship, out at sea, the most trivial matters were invested with exaggerated importance.

On Sundays, generally, three carriages could be seen at St. James' Cathedral, and as a good deal of rivalry existed between the owners of two out of three, in the style of the appointments, the coachmen's livery, and horses and harness, their appearance on driving from church was a standing topic at almost every dinner-table; the dresses of the ladies coming in for a full share of the criticism, of course of a good-natured character.

The arrival of the English mail, once a fortnight, created a pleasing diversion for a time from the monotony of daily life. The news telegraphed from New York ahead of the mails was given in a condensed form, in printed "extras," which were issued by the newspaper people; there being no second edition of papers as at present.

### Incidents.

Amongst the incidents of the summer of 1847 a strange one occurred, which afforded matter for town-talk for some time, although at the present time it would probably be confined to the daily police reports.

A gentlemanly-looking person was observed for several evenings to promenade a portion of King Street—between Yonge and Church—fashionably dressed, and when nearly opposite the present *Globe* office, stand near a lamp post and read what appeared to be letters, then, using a white handkerchief, make signals of a mysterious character, and repeat the same time after time and evening after evening. At length a plan was laid to discover the identity of the individual by a number of young men approaching in a body. Apparently afraid of detection the "gentleman" took to his heels, making for the darkness which prevailed beyond Simcoe Street, where the gas lamps ended. A policeman joining in the chase an arrest was made, and the prisoner taken to the police station to account for "his" conduct. On being brought to the light, and the hat, which was a handsome silk one, removed, behold a maiden stood "revealed in all her charms," which was clearly seen by her long flowing tresses falling over her shoulders.

On being brought before the magistrate the next day, wearing the same clothing, she was discharged with a reprimand, but the motive which led to such an extraordinary adventure was never fully explained.

During the summer a young minister, to whom the writer was introduced, was engaged to be married, and asked me to be his best man on the occasion, to which I consented.

On the Sunday following my first interview he was appointed

to preach somewhere on the Dundas Road, and requested me to accompany him, stating that he would call for me with a horse and buggy. Feeling curious to know what description of vehicle that might be, never having heard the name before, and at the same time thinking it very repulsive, and also wishing to have a specimen of Canadian driving horses, besides being assured that a drive on Sunday on a mission of piety, necessity, or mercy, was perfectly justifiable, the arrangement was made.

Arriving at the place in good time, my friend preached an excellent sermon, apparently to the edification of the congregation.

On our return to the city he appeared to be in excellent spirits, and showed off the trotting qualities of the horse to good advantage. When near Queen Street we espied a pig lying in the middle of the road. He said to me that if the animal did not get out of his way he would drive over it. No sooner said than done. The squealing of the pig being likely to set the owner in pursuit the horse got a loose rein, and in a short time we were out of sight, never pulling up till I found we were in the old barrack square. This was my first experience of buggy riding and fast trotting in Canada.

I attended to assist my clerical friend in the matrimonial affair, some fifty miles west of Toronto, the following October.

So much has been written on the condition of the streets of Toronto that the subject has become monotonous, and as in 1886 it still continues to engage a large amount of public attention, nothing will be said in this connection from personal observation, the writer preferring to quote the descriptions of a few other parties, some of which were written prior to 1847.

The first is that of a lady, ten years previously, Mrs. Jamieson, wife of Vice-Chancellor Jamieson.

This lady, whose name is pleasantly familiar to lovers of art and literature, was for some time a resident of Toronto. She reached the city by way of New York, Albany and Queenston, towards the end of 1836.

Her husband, then Attorney-General, had been a resident for several years, but she arrived unexpectedly and he was not there to meet her.

When she stepped from the boat her foot sank ankle deep in the mud, and there being no conveyance at hand she was compelled to walk through the muddy, uninviting streets to her husband's residence near the foot of Brock Street.

It was during her abode here that she wrote her "Winter Studies" and "Summer Rambles." She describes the city as it appeared in the winter :

"What Toronto may be in summer I cannot tell ; they say it is a pretty place. At present its appearance to me, a stranger, is most strangely mean and melancholy. A little ill-built town, on low land at the bottom of a frozen bay, with one very ugly church without tower or steeple, some government offices, built of staring red brick, in the most tasteless and vulgar style imaginable ; three feet of snow all around, and the grey, sullen wintry lake, with the dark gloom of the pine forest bounding the prospect,—such seems Toronto to me now."

As a set-off to this desponding account, she admits that some of the shop fronts on King Street are rather imposing, and declares, in a patronizing kind of way, that the front of Beckett's apothecary shop is worthy of Regent Street in appearance.

A few words from Sir H. R. Bonnycastle, in 1845, may be given. He "was greatly surprised and pleased to see the alterations since 1837, then not one-third of its present size. Now it is a city in earnest, with upwards of 20,000 inhabitants, gas lit, with good plank sidewalks, and macadamized streets, vast sewers and houses of brick or stone. The main street, King Street, is two miles in length. St. George's church was built in 1844."

Another writer says: "Few who now stroll down the well-boarded sidewalks of King Street reflect upon the inconveniences attending this recreation to their sires and grandsires and granddames, who were compelled to tuck up their garments and pick their way from tuft to tuft and from stone to stone.

"It was no unusual sight to behold the heavy lumber waggon sticking fast in the mud, up to the axle, in the very middle of King Street, opposite to what is now McConkey's refectory.

"The party-going portion of the citizens were content either

to trudge it, or to be shaken in a cart drawn by two sturdy oxen. The fashionable cry then was 'Mrs. McTavish's cart is here,' and the 'gee up' resounded as clearly among the pines and elms as the glib 'all right' of the modern footman along the gas lit street.

Since those days the art of photography has been discovered, and it is not probable that Mr. Eli Palmer—the only artist of which Toronto could boast in 1847—could have brought his camera with the Daguerrean process to bear on Mrs. McTavish's cart to get a good picture in a conveniently short space of time.

A late number of London *Fun* thus describes a scene in the studio of a photographer in that city:

MR. JUGGINS—"Look here, Mr. Photygrapher, 'ow much d'yer want to take me and the missus and the kids altogether?"

PHOTOGRAPHER—"Well, I could take a carte of you for five shillings."

MR. JUGGINS—"Cart, be blowed! Stick us in a waggonette."

No doubt Mrs. McTavish would have preferred a waggonette also, and had the art attained its present state of perfection an instantaneous photograph could have been taken that would have been quite interesting.

"A little nonsense now and then  
Is relished by the wisest men."

Mr. Wm. Osborne—who had left Dublin, in consequence of the failure of the silk trade, when French goods were first admitted free of duty—was a good specimen of a Dublin gentleman, and amongst other stories about the state of Toronto streets in former years, related the following, without in any way vouching for its accuracy:

A gentleman, walking on the loose planks forming a sidewalk on King Street, espied a good-looking hat in the middle of the street. Curious to see and pick up the hat, he managed to reach it, and on removing it, discovered to his surprise the head of a living man underneath.

This individual at once appealed for help and deliverance, urging, as a special plea, that if prompt assistance was not

rendered, his horse, which was underneath, would certainly perish.

The usual mode of extrication by the use of shovels and oxen was soon applied, and man and horse excavated.

This being the climax of exaggeration on this muddy question, it must now be dismissed.

Apart from the social enjoyments among friends—and of those we had a full share—there was nothing, either in the business or surroundings, to lead to a preference of Toronto to any other place, when the world was before us where to choose.

In business, the farmers were always complaining about something. Prices of produce were too low or too high; the former from too good crops, and consequent low prices, and the latter because they had not enough to sell.

The roads were a constant source of complaint, which appeared to be natural from our little experience of mud and ruts, and when winter came on they generally had either too much snow or too little.

Those leaving home in sleighs, fifty or sixty miles back, found bare streets, and had a hard time to get back to sleighing again.

As my friend and myself had never heard complaints of roads before, this topic became terribly monotonous, and the same remark applies to the prices of produce, although in Toronto a trade of the greatest importance.

There was the prospect of trade increasing by the growth of towns and villages outside, and the facilities for transport by water navigation in summer; but as railroads were not thought of, and there was neither steam nor water power, except what could be got in the Don river for the latter, and by importing coal for the former, little was said of manufactures, and the prospect of their establishment was exceedingly dull.

The prospect of the growth of Toronto—from the two facts of the great agricultural country at its back, and the harbor and water communication in the front—led to a decision, and within a few months of arriving in the country the writer was in communication with friends in England with a view to

importing a stock of goods, which was successfully accomplished the next year.

Information as to Toronto in England was not very flattering. A gentleman had a servant-maid whose brother had enlisted in a regiment which was subsequently ordered to Canada. While quartered in Toronto, the young man took to himself a help-mate, an Anglo-Canadian, who afterwards returned with him to England. On his arrival at home his sister paid him a visit. On her return her mistress asked her if she had seen her new sister; she replied in the affirmative, adding, "But Lor', mammy, she's not very dark. I thought she'd be black."

As an example of the accuracy of description, Mr. R. Montgomery Martin wrote about this time:—"The country bordering Lake Ontario is well wooded; through the numerous openings the prospect is enlivened by flourishing settlements, the view being extremely picturesque along the White Cliffs of Toronto, (!) heightened on the north by the remarkably high land over Presque Isle, called the Devil's Nose."

### Richmond Street Wesleyan Church,

around which so many hallowed memories will ever cluster, is one of the four which remain of those existing in 1847.

Thinking it may interest many who have been associated with it in years gone by, and some since its erection in 1845, a copy of the inscription on the brass plate at present in the corner stone is given on the opposite page.

This *fac simile* was obtained by the writer twenty-five years ago, in England, from the Rev. J. P. Hetherington, who was one of the resident ministers at the time it was built.

It will be seen that it was called a chapel, after the English custom, and was a representative British institution, as we were told the next day after our arrival in the city.

This church, like City Road in London, which it resembles in the plainness of its architecture, may be regarded as the cathedral of Methodism in Toronto.

In 1847, the congregation worshipping here was styled the

ENGRAVER.

loyal British Wesleyan body, while the Adelaide Street people were said to be more of the American type, and not quite so loyal.

However that may have been, the union which took place in 1849 settled the matter and made both one, which event was celebrated by a union tea-meeting in Richmond Street Church.

Dr. Alder, who had been sent out by the British Conference, had been the means of effecting this consummation; but so strong was the feeling against it that several of the British ministers would not remain in Canada, and went to the Lower Provinces, amongst whom were Dr. Richey, father of the present Lieutenant-Governor of Nova Scotia, and Rev. Ephraim Evans, while shortly after Rev. Enoch Wood and Rev. S. D. Rice came up to supply their places.

This church had the peculiarity of having, till the late improvements, the entrance door at the same end as the pulpit, which appeared to cause a good deal of annoyance to some ministers while conducting the service.

Rev. Dr. Dixon, from England, on one occasion remarked in the course of the service, that he wished they had put the pulpit at the other end. It had one good effect, however, on those who were a little bashful, by inducing them to come in good time, and so be spared the gaze of those whom they had to face on entering the doors.

#### Rev. James Caughey.

In the fall of 1853—while waiting in Kingston for the Toronto boat, the last of the season—I met, at the British American Hotel, the Rev. James Caughey, the celebrated revivalist, on his way to Toronto. Having frequently heard him when in Dublin, he seemed pleased when I reminded him of the fact.

The night was very stormy, and after some conversation in the saloon about mutual friends, we retired for the night to the same stateroom. I noticed that he did not undress, and on enquiry as to his reason he replied he thought better to be prepared for anything that might happen during the night.

This may have been a wise precaution, but it did not appear to me to be conducive to comfort.

On arriving at Toronto, I escorted him to the house of Mr. Richard Yates, whose guest he was during the following six months. The excitement he created was not confined to the Richmond Street Church and congregation, but extended to every church. People of all denominations flocked in crowds every night, Saturday excepted, during six months, with unabated interest. The effect was marvellous; numbers who thought he addressed them individually, when describing particular characters, waiting at the close of the service to enquire who had told him of their case. There were many remarkable cases of restitution and conscience-money paid to the customs. On one occasion, at night, when the house was crowded to the doors, and the writer occupied a pew almost in the centre of the church, the preacher, in the middle of his sermon, in making a point by way of illustration, referred to some remarkable case which had occurred in Dublin (of which, however, I had not heard), and, supposing that I must have known of the case, stated that his friend—mentioning my name—was cognizant of the facts; as every eye was immediately turned to where I sat, my situation was rather embarrassing.

As his visit was so intimately associated with Richmond Street Church, it will not be considered out of place to refer to it in connection with other reminiscences, that church being one of the few land marks remaining of Toronto, in 1847, and many remarkable men having, from time to time, occupied its pulpit.

#### A. & S. Nordheimer.

In 1847 this firm occupied premises on the north side of King Street, nearly opposite their present establishment.

The senior partner, Mr. Abraham Nordheimer, was an accomplished musician, and it was quite a treat to witness the enthusiasm he displayed when exhibiting the fine points of the instruments to intending purchasers.

Mr. Samuel Nordheimer undertook the outside work, travelling a great deal, and to this firm is due to a great extent the

credit of having educated the taste of the people of Canada up to its present high musical standard.

Prior to this time, if an Old Country family had brought out a piano, although not of the most modern style, they were supposed to have belonged to the better class of society at home; but even these instruments were few and far between.

It was on Mr. S. Nordheimer's journeys, between Toronto and Montreal, that the writer first became acquainted with him, and soon found that by his universal courtesy, polished manners and pleasing address, he was winning golden opinions, not only in the towns and cities, but amongst the better class of farmers; and the firm being sole agents for the Chickering & Stodart and Dunham pianos, soon succeeded in placing a large number of these instruments in the hands of the better class of people, all over Canada. The fame of the firm is now as extensive as the Dominion, and their success has been as great as their highest ambition could have desired.

In the chapter on "Toronto as a Musical City," reference will be made to their successful efforts to induce the first-class musicians and vocalists of the world to visit Toronto, when it was little known, and had few attractions for these great artists; but the influence of Messrs. Nordheimer—through their connections in Europe and the United States—overcame all difficulties, and to them is due, from the citizens of Toronto, a debt of gratitude for many a musical treat during the past thirty-five years.

#### **The Toronto Post Office.**

In 1847, and up till 1852, the whole business of the Toronto Post Office was transacted in a small building on Wellington Street, where the present Exchange now stands. The delivery office was a room about 20 x 40 feet, and the distributing room was an old cellar-kitchen some 20 feet square.

The staff up to 1850 consisted of a postmaster, three clerks, and a letter carrier. The postmaster was Mr. Charles Berczy, and the clerks, John Armstrong, Christopher Walsh, and W. H. Pearson (now secretary of the Consumers' Gas Co.), who suc-

ceeded Geo. H. Wilson, the present accountant of the Bank of Montreal, in 1847.

John McCloskey was letter carrier, and a charge of one "copper" was made on each letter delivered by him.

At this time, and up till 1850, the English mails were only delivered fortnightly—by stage from Halifax in winter, and partly by steamboats in summer. The rate of postage on English letters was 1s. 2½d. sterling, or 1s. 4d. Halifax currency (about 27 cents); the postage to Halifax was 2s. 9d.; Quebec 1s. 6d.; Montreal, 1s. 2d.; Kingston, 9d.; Windsor, 10½d; the lowest rate being 4½d.

In 1850 there were only about 400 boxes in the Post Office.

Postage stamps were at this time unknown, and the postage on paid letters was written in red ink, and on unpaid in black.

The only visible representative of Her Majesty on ordinary occasions was either Mr. Walsh or Mr. Armstrong, who for the time being combined in themselves the offices of receiving, delivery and inquiry clerks; and as every letter must be taken to the Post Office, these gentlemen were known to every man, woman and child in Toronto and Yorkville who ever posted a letter.

The arrival of the English mail, once a fortnight, broke in on the usual monotony and brought a rush to the wicket from which the delivery, both general and particular, took place.

Up to 1852 the Post Office Department was under the control of the Imperial Government, which was represented by Mr. Stayner, but at this time, almost simultaneously with the introduction of the bonding system through the United States, the business was transferred to the Canadian Government, and the mails began to arrive once a week, via Boston and New York alternately. These mails were conveyed in charge of conductors, of whom there were three—Messrs. McNamee, Malone and Magillivray—two taking the mails to above ports respectively, and one extra to supply in case of need. The conductor taking the outgoing mails waited at his port for those coming in, and this system continued for many years. During Mr. Malone's time of conducting the mails a circumstance occurred, illustrating the economy of the Government at that day.

The writer, in company with Mr. John Kay, Mr. Patrick Hughes and three others, on our way from England, accompanied the mails from Boston, arriving at Suspension Bridge on Saturday night too late to connect with the train for Toronto. Feeling anxious to get home, instead of staying over Sunday at the Bridge we telegraphed for a special train to meet us at Hamilton; the charge to be forty dollars.

On arriving at Hamilton we found an engine and one car all ready, and took on board Mr. Malone and the English mails, with a Roman Catholic clergyman who wished to get to Toronto with us. To this gentleman we offered a free passage, but hoped to receive from the Post Office authorities a share of the cost of the special train. The trip was made within an hour, perhaps then the "fastest time on record." On the following Monday one of our party waited on Hon. Mr. Foley, Postmaster-General, stating the case, and asking for the proportion of the expense for carrying the mails; his reply was, that the letters would have been in quite time enough for the merchants on Monday morning by first regular train. He did not even consider that Mr. Malone would have had to pay his expenses at a hotel over Sunday, and so we had to pay the whole bill.

#### Toronto Gas and Water Works.

In 1841 Mr. James Crapper had been brought out from London by Mr. Furness, and in the same ship were imported the gas and water pipes to commence the supplying of the city with these two great requisites.

In 1847 there may have been altogether about 100 gas lamps, and at this time the Consumers' Gas Co. was established, on the principle that the consumers, by taking up the stock, would themselves get all the benefit. Mr. Henry Thompson sold all the shares, the writer being one of the first to subscribe. Since that time the success of the Company is well known.

The water supply was very imperfect, especially in case of fire, and even up to 1850 no arrangement had been made to keep the city furnished with a constant and adequate supply.

The licensed carters were compelled under a penalty to attend all fires, for the purpose of conveying water from the Bay in casks.

As the first who arrived was entitled to two dollars' reward, these men were in the habit of filling their casks at night, and carting them to their own houses so as to be ready for a race at the first sound of the fire alarm.

It was very remarkable, that about this time scarcely a Saturday or Sunday night passed without a fire taking place.

Some said they occurred opportunely on these nights, because everybody was at liberty, and the firemen being volunteers, their occupations were not interfered with; while others went so far as to say that the very love of excitement, in some way to relieve the monotony that prevailed over everything, had led to the wilful acts of incendiarism, which undoubtedly took place, but which were all overruled for the growth and general improvement of the city.

The fire brigade in 1850 consisted of four engine companies, two hook and ladder and one hose company; Mr. Ashfield being then the chief engineer.

The old hand-engines were not very powerful, and when the firemen grew tired at the pumping, the law compelled any bystanders to "lend a hand;" while many were willing, many more could be seen taking their departure when there was a prospect of a "draft" for active service.

There were some remarkable instances of destruction of property, one of which the writer distinctly remembers.

A fire took place in a frame building on King Street, one door from the corner of Yonge, then occupied by Messrs. Betley & Kay. The flames from the wooden building were driven by an easterly wind into the millinery and mantle room over the store of Betley & Kay. On the arrival of the firemen the fine windows were immediately smashed in with axes, when the door might have served as well, and when the fire was extinguished it was found that a number of fine silk velvet mantles had been placed at the door of the room to prevent the water from spreading to other parts of the building.

### The Circulating Medium.

In the house I had just left the daily cash sales averaged £1,000 sterling. This amount was taken in five cashiers' desks, by boys under sixteen years of age, and the rapidity with which the change had to be given may be judged from the number of cheques handed in from about four hundred salesmen.

The coins were farthings, half-pence, pence, sixpences, shillings, half-crowns, crowns, half-sovereigns and sovereigns.

Farthings were strictly charged on all amounts to 2s. 6d., and no salesman could omit them at 2s. 5 $\frac{3}{4}$ d. The desks have frequently been swept out to find a missing half-penny, as everything must balance. There being no Canadian Silver Currency at this time, the process of making change out of what was technically called "specie" was a perfect study. There were Mexican and United States dollars and half-dollars; United States 6 $\frac{1}{4}$ , 12 $\frac{1}{2}$ , and 25-cent pieces; English sixpences, shillings half-crowns, with a miscellaneous assortment from every other country.

Coin and bank note detectors were used in every place to ascertain the value of the coin and the genuineness of bank notes, especially those from the United States.

As each had to make his own change in the absence of a cashier, this was found to be a work of great difficulty, to know when a York shilling ceased to possess that value by reason of abrasion or defacement and became a 10-cent piece, and involved many a dispute; and the same with all the other coins. In payment of a debt the Mexican dollar would go for 5s. 1d., or \$1.02, but in independent trading it was just \$1.

Anyone visiting New York at this time, and buying a newspaper, if he gave a good 25-cent piece would generally lose in change, through the manipulation of the boys, from one to four cents, just as the boy happened to have more or less of the small coins. Toronto had no newsboys at this time. As for coppers, I have no doubt a great many brass buttons found circulation just by flattening the shanks. This state of things continued more or less for years, till the Decimal System was

introduced by Act of Parliament, and the present silver coinage issued.

Previous to this all wholesale or importing accounts were kept in sterling for French and English accounts, Halifax currency, or \$4 to the pound, for Canadian, and in dollars and cents for the United States.

### **Store Pay.**

This kind of business was on the whole more agreeable to salesmen than the system of cash sales.

Every builder or contractor made an arrangement with the various trades and stores for a line of credit, by which they could pay their workmen as much of their wages as possible with the smallest amount of cash.

Orders were given on the stores, and mechanics' wives went to make their purchases, carefully concealing their written "orders" as long as the knowing salesman failed to draw out the fact of their existence; the object of the caution on the part of the frugal housewives being to ascertain the "cash" price of the goods. If the "cat was let out of the bag" the salesman at once "stood at ease," knowing well that the customer had no alternative but to take out the value of the order. A few immigrants, in perfect innocence, would present these orders at once, much to the satisfaction of the salesman.

The block of buildings known as Ritchey's Terrace, and other large buildings, including churches, St. Lawrence buildings, etc., were largely paid for in this way.

The time of "strikes" had not then arrived, the supply of labor always being fully equal to the demand.

### **Retail Importing.**

The only retail importers of dry goods at this time were Mr. Peter Patterson, who occupied a portion of the present premises of Messrs. R. Walker & Sons, and was supplied direct by Messrs. Heron & Dickson, of Glasgow, who had arrangements to supply not more than one house in each principal town in Canada; and Messrs. Walker & Hutchinson, who also had ar-

rangements for getting their goods direct from Great Britain. Nearly every dry goods firm, as well as hardware and others, called themselves importers, and had the term on their signs.

This importing, however, was not direct, but was carried on through the wholesale houses to whom they gave their orders, which were sometimes delivered in the original packages. In this way, in after years, we imported almost every class of goods to order, including jewellery and fancy goods for one of the present leading jewellery houses on King Street, raw furs for manufacturing, oil paintings, fire-arms, fancy stationery, and, in fact, any class of goods for which an order was given.

#### Wholesale Trade in 1847.

In 1847 the wholesale dry goods trade was entirely confined to Yonge Street, south of King.

First came Mr. William McMaster, where the Dominion Bank now stands; next was Mr. John Robertson's warehouse. At the corner of Melinda Street, where the splendid warehouse of Messrs. Hughes Bros. now stands, was the old red brick store of Messrs. Ross, Mitchell & Co.; a door or two further south Mr. W. L. Perrin occupied a plain brick building, and below Wellington Street were Messrs. Moffat & Murray, and Messrs. Bryce, McMurrich & Co. On the east side, north of Wellington, was the warehouse of Messrs. Bowes & Hall, and these comprised the whole of the dry goods warehouses at that time. There being no houses exclusively in the millinery trade, that was done by the same houses.

The wholesale grocery trade was represented by Messrs. F. & G. Perkins, Mr. A. V. Brown, and Whittemore, Rutherford & Co.

There were no exclusively wholesale houses in the hardware trade, nor in earthenware, jewellery, hats, caps or furs. The oldest house in the latter trade is that of Mr. James H. Rogers; the business having been established by his father in 1815.

The large block at the corner of King and Toronto Streets was, in 1847, the finest wholesale house in the city, and was occupied by Messrs. Whittemore, Rutherford & Co. as a whole-

sale grocery warehouse, and afterwards they added dry goods, being the only house in which both classes of goods were combined. This building is at present being demolished to make room for the new Quebec Bank, thereby removing one of the most prominent of the old landmarks of the city.

### Prominent Men in 1847.

Amongst the prominent men to be seen on King Street in 1847 was the Right Reverend John Strachan, Lord Bishop of Toronto. Although small in stature, his lordship was dignified in manner and commanded universal respect.

Mr. Peter Brown—father of Messrs. George and Gordon Brown—was a gentleman of venerable appearance and much respected.

The Messrs. Ridout Brothers, hardware merchants, Mr. Rice Lewis, Mr. John Harrington, and Mr. T. D. Harris, all in the same business, occupied prominent positions as business men.

Mr. E. F. Whittemore, of the firm of Whittemore, Rutherford & Co., took an active part in every benevolent and philanthropic enterprise, and was distinguished for his temperance principles.

Mr. Hugh Scobie, proprietor of the *British Colonist*, was a man of commanding presence and universally respected.

### Lord Elgin.

In January, 1847, Lord Elgin—two months after his second marriage, to Lady Mary Louise Lambton, daughter of Lord Durham—sailed for America in the Cunard steamer *Hibernia*, and encountered unusually rough weather, the voyage being most uncomfortable. They arrived at Halifax on the 20th, intending to proceed to Montreal by way of Fredericton, but the condition of the roads was not suited to such an undertaking, so they re-embarked for Boston, arriving on the 25th. They set out for Montreal the following morning, and reached their destination on the 29th, three days' journey, and took up their abode at Monklands.

He was young and healthy, and could work eighteen hours a day; possessed an amiable temper, and always a pleasant demeanor, and did not consider it derogatory to his dignity to walk to church.

In 1849 the Rebellion Losses Bill was assented to, and riots occurred in consequence in Montreal. After this the seat of Government was removed to Toronto, in 1850.

Lord Elgin was very popular in Toronto, and his levees were always well attended. During the summer of that year he gave a *fête champêtre* at his residence, near where the Central Presbyterian Church now stands, and as the view as far as Queen Street was almost uninterrupted, the entertainment was as pleasant as the name was appropriate. The writer has a pleasant recollection of a cordial greeting and a hearty shake of his hand on that occasion.

The garden party given by the present Lieutenant-Governor on the occasion of the visit of the members of the British Association last year, showed by the surroundings the vast improvement that has taken place since that time.

The beauty of the grounds which surround the present Government House, with its luxurious furniture, and conservatory, fragrant with the perfume of rare exotics, contrasts in a striking manner with former times.

### Toronto Police Force.

There were about a dozen of policemen, having as a Chief Mr. George Sherwood. The Chief being a quiet, good-natured man, did not insist on any strict regulations as to the dress or discipline of the men.

They wore a sort of uniform, but without uniformity, except in one respect—they were uniformly slovenly. Day & Martin's blacking and white gloves were not considered at all necessary; the latter had not come into fashion, and as to the former, the men might say as to their boots what was generally said as to waggons and carriages, that if the mud was taken off they would be just as dirty in a short time again.

It could not be wondered at, that in a city so celebrated for

mud as Toronto, the buggies were allowed to remain for months in a dirty condition, when only a short time ago London *Punch* gives a conversation between a tourist in the Highlands of Scotland and his hostler. The tourist says, "Why haven't you cleaned my carriage, as I told you last night?" Hostler—"Hech, sir, what for would it need washing? It will be just the same when you be using it again."

There was not much improvement in the Police Force till the appointment of Captain Prince, who, by the introduction of a semi-military system of discipline, brought about a complete revolution in every respect; not only in the dress and discipline of the men, but in the selection of a superior class, both as regards physique and intelligence, forming in a short time a body of police equal to that of any city in the world.

The best men selected were from the Irish Constabulary, who had been drilled at the barracks in Phoenix Park, Dublin.

### **First Strike in Toronto.**

In 1847 the first sewing machine was introduced by Messrs. Walker & Hutchinson. The tailors in their employment, regarding this innovation as contrary to all their time-honored ideas of the manufacture of clothing, at once rebelled.

Had not the old needle been used by hand since the fig-leaves were made into garments in the Garden of Eden? Then, why should a new-fangled machine be invented to supersede the ancient system?

The machine was only in use a few days when Messrs. Walker & Hutchinson, finding it so objectionable, agreed to discontinue its use, and handed it over to their men to use it as they thought proper.

A day was appointed for the display of their triumph over machinery, and the discarded machine was exhibited on King Street, in the centre of a procession of the workmen, after which it was returned to the manufacturers in New York.

The firm, in order to remove every trace of dissatisfaction, treated the men to a banquet, given the same evening.

**Immigrant Fever.**

The effects of the potato famine in Ireland were painfully visible in the appearance of the immigrants arriving by Quebec during the summer. It was estimated that 240,000 had died from starvation in Ireland. It was not that the people who had the means failed to stretch out the hand of charity. Wonderful acts of liberality and self-denial occurred, but the whole means of Ireland were inadequate to support her destitute poor.

The British ships were too few to carry over the provisions necessary to save human life. Then every English heart, while looking with terror at the future, throbbed with sympathy for their dying brethren, and the relief distributed was received with the liveliest gratitude—the writer's brother being one of the "relief" agents appointed by the Government, related many instances of a most touching character in his district and towards himself personally.

Enormous sums were subscribed to relieve the distressed. Noble and fearless men ventured into the haunts of famine and distress, and examined the evil before trying to remedy it.

In the hour of calamity all differences of creed were laid aside, and the Roman and English priests met at the bed of the dying, joining in administering temporal and spiritual aid to the sufferers; and, by a kind Providence, a fine summer and better crops gradually brought about a better state of things.

The late Hon. W. E. Forster, when a young man, represented the Society of Friends in Ireland during the terrible famine, and his services as a distributor of relief earned for him the love and gratitude of many a suffering soul, though it was his strange fortune forty years later to be regarded as the worst enemy of Ireland.

When the world was horrified by the Phœnix Park murders, it came out on the trial of the assassins that Mr. Forster had been selected as another victim, so that, notwithstanding the respect and veneration with which the young Quaker had been regarded by the peasantry while engaged in the merciful work

of relieving hunger and soothing the pillow of death in 1846, yet the same peasantry held the kind-hearted, though firm and bluff Chief Secretary in utter execration, and taught their children to curse him as the representative of blood-and-iron tyranny.

As the result of imperfect nourishment, and other causes, the emigrants who left for America were decimated by ship fever, and hundreds were buried at Grosse Isle, below Quebec, who died on board the ships or at the quarantine station.

There were many cases in Toronto, and in attending these, Bishop Power and Dr. Grassett contracted the disease, from which they both died while faithfully and fearlessly discharging their duties.

### Bathing.

Before the Esplanade was formed, a favorite place for a swim was off Rees' wharf, nearly opposite the Parliament Buildings and other quiet spots along the shore of the Bay.

Here, on a fine summer's morning, many of the leading merchants and clerks from King Street might be seen indulging in the healthy exercise. The only restriction was as to time, there being none as to dress. No person was allowed to bathe after seven o'clock, before which time it was perfectly legal.

By those of us who had been accustomed to "disport beneath the crested wave" on the Atlantic Coast, *in puris naturalibus*, the privilege was highly appreciated and enjoyed.

One morning the writer chose a spot in front of the Commissariat Depot, which was always guarded by a sentry, who, with fixed bayonet, "walked his lonely round" in front of his box. These sentries appeared to be authorized to enforce the rule as to time.

Not knowing it was past seven o'clock, I had quite prepared for a dip, when the sentry advanced a few paces, and, in a very decided tone, said if I went into the water he "would do his duty." Not liking the look of the cold steel, and thinking that in this case discretion was the better part of valor, I quickly dressed, and apologizing for having mistaken the hour, beat a retreat.

**Great Fire on King Street in 1848.**

This fire originated eastward of the Cathedral, and spread rapidly as far as Jarvis Street, and northward to Adelaide, then across to the old City Hall and Market, all of which were speedily consumed. The Rectory of St. James escaped, but the Cathedral, taking fire from some sparks which lodged on the spire, was entirely consumed. One bucket of water would have extinguished it when first discovered, but there was no way of reaching it, the fire hose being quite inadequate for the purpose. The writer distinctly recollects the falling of the spire. When the fire had done its work, and the crash became inevitable, it was supposed the spire would fall outwards, and the spectators kept a long way off, when, to the surprise of every one, it fell almost perpendicularly, top foremost, the vane on the top striking the flag at the front door. The buildings on the opposite side were badly scorched, but escaped destruction.

**Establishment of Celebration of Queen's Birthday.**

To Toronto belongs the honor of having first inaugurated this celebration.

In the year when every throne in Europe was shaken when Louis Philippe and his illustrious Queen were driven by the mob from the Tuilleries, and every vestige of Royalty on which the latter could lay their ruthless hands was destroyed, and when in disguise the Royal pair escaped to England as a haven of refuge, never did our noble Queen sit more firmly on her throne; and the feeling of loyalty appeared to be intensified by the surrounding contrast.

At that time it was proposed to celebrate her birthday in Toronto, but it was not till the following year that it was fully kept, and shortly afterwards it was made a legal holiday, other cities having taken the matter up and followed the example set by Toronto.

In 1850 Monsieur Napheygi, Secretary to the celebrated Louis Kossuth, the Hungarian patriot and orator, who had

KNOX CHURCH IN 1848.

visited Toronto, assisted in the celebration of Her Majesty's birthday by a grand display of fireworks in front of the Parliament Buildings.

### First Retail Dry Goods Store on Yonge Street.

Up to 1849 the retail dry goods trade was confined to King Street, and to a very limited portion of that street.

The only dry goods sold on Yonge Street were in connection with groceries, in a store kept by Mr. James Leask, one door south of Queen Street.

Mr. John Macdonald having decided to start a store, with the enterprise and pluck which has characterized all his movements, decided to try the experiment of an exclusively dry goods business, and in a short time was doing a thriving trade, one door south of Richmond Street, then known as the "Large 103," that being the number on the street at that time, and the figures conspicuously painted in front of the building.

The result of this venture is referred to in the chapter on the Model Wholesale Dry Goods Warehouse of the Dominion.

### SELLING ON THE STERLING COST.

The system of selling at an advance on the sterling cost gave buyers the privilege of inspecting the invoice books before the arrival of the goods, and if the buyer knew of special cheap lines, and wished to favor a particular customer, these lots were selected beforehand and laid aside as soon as opened. In this way Mr. Macdonald secured many a lot which, by judicious advertising, he brought before the attention of the public and soon acquired the reputation of selling cheap goods.

The population of Toronto in 1847 was 21,050.

Total assessment, £122,981, or \$591,924; total expenditure, £7,288, or \$29,152.

The total importations to Toronto in 1848 were £197,225 5s. 3d., equal to \$788,901.05. The same year Montreal imported goods valued at £1,603,027 17s. 9d., or \$6,452,111.55, or nearly eight times as large as Toronto.

In 1849 Toronto showed value imported to be £326,863 17s. 9d., or \$1,307,455.55, and Montreal £1,236,533 6s. 3d., or \$4,-946,133.25, Toronto having within the year brought the proportion as compared with Montreal from one-eighth to about one-fourth.

| Hon. Jas. Leslie, <i>Provincial Secretary.</i>                            |   |
| Hon. J. B. Macauley, <i>Chief Justice.</i>                                |   |

It is worthy of note that the residences of all the leading men whose names are given were all south of Queen Street, except one or two who lived on that street. This will give a good idea of the improvement that has taken place in this respect.

The upper stratum of society was decidedly refined and intellectual, and not by any means as exclusive as some have represented it. Nothing so invidious in class distinctions existed as was found in Montreal up to a late period, when the line was distinctly drawn between wholesale and retail merchants, and in other ways the "upper ten" principle strictly carried out.

The number of churches in Toronto at this time was 27, divided as follows:—4 Episcopal; 1 Presbyterian Church of Scotland; 4 Wesleyan; 1 Presbyterian Church of Canada; 2 Congregational; 1 United Presbyterian; 1 Methodist New Connexion; 1 Catholic Apostolic; 1 Primitive Methodist; 2 Baptist; 1 Disciples; 2 Roman Catholic.

#### A Tour of Observation.

Before deciding on settling in Toronto, the writer took a trip to New York to consult with his friend and companion of the previous seven years, Mr. Edward Martin, who had preceded him, and had, like Mr. A. T. Stewart, brought out a stock of Irish embroideries, then giving employment to thousands of girls all over Ireland, and sold all over the world. My friend continued in the same trade, adding lace goods when the embroidery business fell off, and retired quite recently with a large fortune.

It was thought best that I should make a tour of several of the states as far west as Ohio, then the most rising and prosperous state in the west. Returning by the New York Central, all the large towns were visited up to Buffalo, and then Erie and Cleveland were reached by steamer. From the latter place, down to Cincinnati, the only mode of travelling was either by the stages or canal boats drawn by horses. There appeared to be nothing, either in the manners of the people met with or the mode of doing business, to induce me to settle on that side of the line.

Being invariably taken for an Englishman, and addressed as "stranger," I found that an Englishman was more of a foreigner than one of any other nationality.

There were whole villages in Ohio owned by Germans or Dutch, on the communistic principle, and no English spoken.

*Apropos* of speaking languages I may mention that having an uncle, who was an elder in the Methodist Episcopal Church, stationed near Syracuse, on my way through I called to see him. Having two daughters at a large school in the centre of the state of New York, he wished me to go and see them. The distance to drive being about twenty miles, we stopped to rest with one of my uncle's parishioners, and in conversation with the lady of the house she asked me whether I had spoken the English language before I came to America.

At once perceiving that her question was put on account of my being a native Irishman, I answered her accordingly.

Having seen persons from different parts of Europe in that country, and all speaking their own language, she naturally thought I should know mine.

We found my cousins boarding with the family of the sheriff of the county, and the lady herself busy with a broom, after using which to good purpose she was soon ready to entertain us in her drawing-room. "Helps" being hard to find, most of the ladies were obliged to help themselves.

Being everywhere reminded that I was now in a free country, I have frequently regretted not having crossed the Ohio River into Kentucky, where slavery was in full vigor, and human chattels were bought and sold every day; and never having experienced any particular oppression in the country from which I had recently come, I failed to appreciate the advantages of the freedom of which I was so constantly reminded as existing in the United States.

Describing the gaiety going on in Washington while slavery existed there at this time, Whittier writes :

Pitying God ! Is that a woman  
On whose wrists the shackles clash ?  
Is that shriek she utters human,  
Underneath the stinging lash ?  
Are they men whose eyes of madness  
From that sad procession flash ?

*Toronto "Called Back."*

Still the dance goes gaily onward—  
 What is it to wealth and pride  
 That without the stars are looking  
 On a scene which earth should hide ;  
 That the slave ship lies in waiting,  
 Rocking on Potamac's tide ?

This being the year in which Louis Philippe and his accomplished consort were driven from the Tuilleries, and every vestige of royalty ruthlessly destroyed, and Lamartine & Co. had established the Republic of "*Liberté, égalité, et fraternité*" in France, additional favor seemed to have been given to these principles.

While there was much to admire in the apparent absence of poverty, and a good degree of prosperity which seemed to exist, and an appearance of greater equality amongst all classes the further west I went, it was plainly seen that distinctions still existed, and society was divided into classes, as in every other community. There were some illiterate and others educated, some rude and rough in manners, others more refined and cultured.

To judge of the manners of the people at the *table d'hôte* of the best hotel in Cleveland at the time, and compare them with these seen at present, the decision must be, that a marvellous improvement has taken place, as well as in all other western cities.

This being the place where a stranger has the best opportunity of remarking the habits of people, my first impression was one of surprise that so little time should be devoted to table enjoyment. When the gong sounded there was a perfect rush, and a grab at everything that could be reached. Vegetables of all kinds, with pickles, were mixed up, and made to disappear before the waiters had time to present the bill of fare, and then fish, flesh and fowl were taken on the same plate, with a variety of puddings and pies ; all of which were conveyed to the mouth with the knife, the fork only doing duty while the meat was being cut ; and by the time a person not in a hurry got through with his soup, and was discussing the bill of fare,

the table was half empty, and almost entirely so by the time the substantial were reached.

The most surprising thing was to find these people afterwards quietly sitting round, apparently having abundance of time on their hands.

On returning to Canada a trip was taken to Quebec, including a short stay at the principal towns and cities *en route*.

Were it possible for a large proportion of the persons leaving the British Islands to postpone their decision as to their destination till they had travelled through the principal States of the Union, and over a portion of this Dominion, it can scarcely be doubted that by far a larger number would prefer Canada. But as, either through correspondence with friends, or the representations of interested agents, nearly all decide as to the place of their future settlement, they lose the advantage to be gained by actual observation.

This delightful trip, entirely by water on the lake and river steamers, could not fail to make a favorable impression. No longer addressed as "stranger," I everywhere found friends, and a thorough "home" feeling was constantly experienced, till on my return to Toronto there was no hesitation as to making it my future home.

#### First Return Visit to Europe.

The passage to England, on the Cunard steamer *Niagara*, in the winter of 1849-50 was a most perilous one. When on the Banks of Newfoundland we found ourselves suddenly surrounded by immense fields of ice, which increased so rapidly that in a few hours the man at the mast-head sung out, "Nothing but ice all around!" Having Her Majesty's mails on board, Capt. Leitch was not to be kept long in such a position, and having consulted with his officers, determined to push through. Orders were given to go ahead at half-speed, and after several hours of bumping and grinding, that was terrible to witness, the cry came from aloft, "Clear water ahead!" and on getting out of the ice we found the grand vessel almost as helpless as a log on the water. Every float on both paddle-wheels had been

literally torn to pieces, except six, and these vessels not being rigged for sailing, like the modern screw steamers, there was no prospect of progress from that quarter.

With the foresight which has characterized the Cunard Line from the commencement, duplicate floats were on board, and the carpenter's crew, in spite of the rolling of the vessel, in a comparatively short time had all the floats replaced, and we were soon again under full steam for Liverpool.

Shortly after arriving in London a partnership was formed with Mr. James Stevenson, with whom I had lived for several years in Dublin, and who was then residing in London, as buyer and manager with Munt, Brown & Co., Wood Street, London, Luton and Dunstable. Mr. Stevenson came to Toronto in the following spring.

#### Windsor Castle.

“ Imperial dome of Edward, wise and brave!  
Where warlike Honor's brightest banners wave.  
Thy royal piles that rise elate,  
With many an antique tower in massy state.”

Never having seen Her Majesty the Queen, I expressed a wish to visit Windsor with that object, and accompanied by my brother, who was buyer for the house of Brown, Davis & Halse, of Gresham Street, and afterwards for Cook Sons & Co., St. Paul's Church Yard, went down to that historical town.

We knew by the Royal Standard floating from the Castle tower that Her Majesty was at home, and after inspecting the portions of the Castle accessible to visitors during the Queen's residence there, and St. George's Chapel, and getting a splendid view of the surrounding country from the top of the tower, we had not yet seen any indication of the Queen's appearance, and were returning to the railway station to take the first train for London, when, while walking in a private street, without a single person in sight, we heard the noise of horses' feet, and presently an equerry in royal livery came in view, and immediately afterwards the Queen and Prince Albert, in an open carriage and pair, enjoying a quiet drive. We, of course, un-

WINDSOR CASTLE.

covered our heads, and in return had a most gracious bow and smile from Her Majesty, Prince Albert at the same time raising his hat in response to our salutation.

This was an opportunity seldom enjoyed, even by residents of London, and often earnestly desired by Americans, and although having seen Her Majesty frequently afterwards, no sight on state occasions was so gratifying as this one.

### **Commencement of Commercial Travelling in Canada.**

In 1850 the firm of Taylor & Stevenson was established, and their business was carried on at the corner of Yonge and Colborne Streets, in the building now occupied by Messrs. Buntin, Reid & Co. It was then newly built, and was one of the finest warehouses in the city.

Mr. Stevenson having had extensive connections with all the straw goods manufacturers in London and Bedfordshire, that trade was made a leading branch. The first importations of these goods, in the spring of 1851, were the largest that had ever been made into Canada, and having sent out circulars, we had buyers from Windsor in the west to Brockville in the east. The whole importations were closed out in a few weeks, and such was the quantity to be entered and packed that all hands were obliged to work for several weeks every night, except Saturday, till 2 or 3 o'clock, so as to get the goods forwarded within a reasonable time. To obviate this in future, the idea of taking the orders beforehand and shipping the goods direct soon took shape, and in the fall of that year samples were got out from the leading manufacturers, and the writer undertook to travel for orders.

After the close of navigation there was only one regular mode of travelling. Weller's line of Mail Stages left daily for Montreal and Quebec, and in this way the writer, who was the first commercial traveller in Canada, started from Toronto.

In these days of Pullman cars and commercial hotels, to hear travellers complain of the discomforts and annoyances is rather amusing to those who have ploughed through mud and slush,

sometimes carrying rails off the fences to "pry" the wheels of the stages out of the ruts, and again, in snow, carrying shovels to dig out the horses when large drifts were encountered; all which is known to the writer by actual experience.

The accommodation for baggage for nine or ten passengers consisted of a "rack" at the back of the stage, so that baggage trunks and 300 lbs. weight of samples were never even thought of up to the time of the opening of the railroads.

To meet this difficulty the writer had his samples sent out in miniature models, so small that samples representing *thousands of dozens*, for which he actually took orders, could all be carried in a small valise.

The experiment was a great success; the goods were all packed in England to the various marks, and in the spring of 1852 were shipped in bulk to the various merchants, from Quebec to Windsor, or sent to Toronto for distribution.

During that fall not a single traveller was met on the whole road, but the following season a gentleman appeared as a competitor from a New York house, and one or two others, amongst them Mr. Darling, of Montreal, in the hardware trade, and Mr. D. B. Macdonald, in fancy dry goods.

The summer trips by steamers were very pleasant, but in the winter there was nothing but hardships, and in crossing the ice at different points very great danger. My rule was, that wherever the mail driver would venture I would go.

On one occasion, in crossing from Belleville to Picton, the ice had melted, and in the whole distance across the Bay of Quinte no ice could be seen—the horses being almost knee deep in water. Again, in crossing from Kingston to Cape Vincent with four horses in the Mail Stage, and a heavy mail with a large number of passengers, where the ice was cracking, the horses had to "jump the cracks." Many rivers and canals were crossed in this way.

One adventure on the road will give an idea of snow drifts.

The town of Brockville was always to me, whether in summer or winter, a delightful resting-place, a sort of oasis in my travels from east to west, or *vice versa*. Young men away

from home in a new country will appreciate my feelings when I say, that to find a sort of Canadian home, when a young traveller, was indeed a delightful feeling. Here I always rested for a few days amongst my friends—the Hon. George and Messrs. John and James Crawford and their connections, and especially Mr. Sheriff Sherwood, and the late Hon. John Ross, whom I had the pleasure of meeting there frequently.

In the winter of 1853 I arrived there from the East in a heavy snow storm ; it was the 23rd of December, and I wished to get to Toronto by Christmas Day.

On the 24th the Mail Stage came along, and having supplied ourselves with wooden shovels, we started for Kingston. Having got on a few miles we found the drifts getting worse, and after repeated efforts in literally digging the horses out, we were compelled to put up at a small tavern on the road side, and here, with bitter regrets at my folly in not remaining at Brockville, where I might have spent a pleasant Christmas, we were compelled to remain all Christmas Day.

In the meantime the pathmasters had been notified by messengers that the track must be opened at their peril to allow Her Majesty's Mails to proceed.

On the 26th we again started, having much the same shovelling as before, when, having got on a few miles, we heard the sound of the down stage's horn, and knew the track had been broken, and arrived in Kingston in a reasonable time.

The formation of the Commercial Travellers' Association followed soon after the opening of the railroads, and has grown to immense proportions, as the annual reports of the various associations now existing abundantly show.

In the last year (1874) in which the writer travelled in connection with the Toronto Association, his orders taken, in the United States and Canada, with some assistance, represented close on half-a-million dollars, and during the year scarcely a day was lost. With the comforts and facilities afforded by the Pullman and Wagner cars, enabling travellers to work all day and travel at night, and the best hotels on the Continent

competing for the patronage of the commercial travellers, the occupation has become, from being a drudgery, quite a pleasant life.

Having served a good apprenticeship, and then given a son to succeed me in the Association, anything connected with commercial travelling is still a matter of great interest.

The following newspapers were published: *British Colonist, Christian Guardian, Daily Patriot and Express, Globe, North American, Canada Gazette, Church, Examiner, Mirror, Watchman.*

It will be seen that of all the papers published in 1850 only two continue, the *Globe* and *Christian Guardian*, the latter being the oldest established weekly paper in Upper Canada.

W. H. Smith says of Toronto in 1850:—"Let a traveller, starting from Montreal on a summer trip, proceed westward till he arrives at Toronto. He sees a city, which he is told fifty years ago was a swamp, with street beyond street and building after building. He sees town lots selling for £10,000 an acre where thirty or forty years ago flourished a garden; a magnificent church being erected where an old settler told him he once shot wild ducks."

In connection with the old Mechanics' Institute it should be recorded that Mr. Robert Edwards was the polite and obliging Secretary for many years, and it is also due to the memory of Mr. John Harrington to state that it was chiefly through his exertions and the liberality of the citizens that the present Free Library building was erected. The Music Hall in the upper part was, for years, the principal place for concerts, lectures and various exhibitions, and many celebrated men appeared from time to time on its platform, including Wilkie Collins, Proctor, Pepper, Punshon, and many others.

Important public meetings were held, and public balls and banquets took place in this Hall, for any of which its capacity would be insufficient at the present time.

The office of the Express Company, styled the European, United States and Canadian Express Company, was on Front Street, and James Burns was agent.

## Toronto in 1850.

In 1850 the principal streets running east and west were Front, King, Richmond, Adelaide and Queen; running north and south were Yonge, Church, Bay and York. These were the most thickly settled and best business portions of the city.

The two principal thoroughfares, and the streets containing the largest number of shops, were King and Yonge.

A little eastward of the centre of the city were situated the Market Building and City Hall. The old City Hall was a decent, old-fashioned pile of red brick, the front of which was on King Street. Beneath and behind was the Market, walled in, and enclosed with gates.

After the fire the new City Hall, the present one, was erected of white brick, opposite the Market Square, and running down towards the Bay.

This is a very strange looking building, and it was unfortunate for the reputation of the architect employed that he had not left the Province before he completed the building, instead of afterwards.

The old City Buildings having been destroyed in the great fire, a magnificent pile of buildings was erected in their place, called the St. Lawrence Hall and St. Lawrence Buildings.

At this time the St. James' Cathedral was in the course of erection; Knox Church, Holy Trinity, and St. Michael's had been built.

## Bonding System via United States.

“ In the spring of 1848 there were no new spring goods shown in Toronto till the middle of May, on the opening of navigation. The arrival of sailing vessels, which then conveyed all freight to Quebec, was looked for with great anxiety. The ladies, in the meantime, were compelled to wear their last spring bonnets, dresses and mantles, and the retail dry goods men had a chance of selling off their old stock from the previous season. The effect of this was that when the goods arrived in Toronto the country storekeepers, who awaited the event, came in a body to

the city, and at seven o'clock in the morning it was no unusual sight to see as many as thirty or forty on the street, awaiting the opening of the warehouses, and ready to grab at the first lot of goods they could get their hands on—styles and prices being considered a matter of no importance: they wanted British and foreign dry goods, and were determined to have them. There was no time for making prices; that was to follow after the rush, and each man filled his locker or bunk with an indiscriminate collection, subject to revision on the first opportunity. When, perhaps, his neighbor's back was turned, to make a fair exchange was considered no robbery, should he happen to spy a chance lot of something he coveted in his neighbor's bunk. As the goods were sold at sterling prices, with a certain advance added, the invoice book was then called into requisition, and goods entered accordingly. In this way the whole importations were generally pretty well cleared out in a few weeks, and as the country merchants were supposed to have laid in their whole season's stock, the wholesale houses had a quiet time in the warehouse after this, however it might be in the counting house, the financing following such a system requiring much tact and ingenuity. This state of things could not continue, with the increasing demand for early spring goods, and something must be done in the way of improvement. — While British and foreign goods were arriving at Boston or New York weekly, Canadian merchants were debarred from getting any of their importations from these ports *via* the American railroads, there being no law to permit it.

The firm of Hill, Sears & Co., of Boston, a branch of the London firm of Alfred Hill & Co., seeing a prospect of getting hold of the Canadian business, supported by the Montreal and Toronto wholesale houses, undertook to make arrangements for a bonding system, and after some negotiations with the Government at Washington, were successful in their object. In the spring of 1852 permission was given to allow goods for Canada to pass through on the bonding system at present in operation. The writer, with representatives of two other wholesale houses, spent a week in New York with brokers at the Custom House,

completing the arrangements for the despatch of the first goods by that route, and after many days' delay on the road, a large lot of goods, comprising the bulk of the spring imports, arrived at Oswego. >

Toronto Bay was then frozen solid, and as merchants east, west and north were anxiously awaiting the arrival of the goods, there was no other course but to make a channel for the steamer *Admiral* to get out. This was accomplished by sawing the ice from Yonge Street to the Queen's wharf, and in this way the spring goods arrived comparatively early. ??

### First Great World's Fair.

The year 1851 was remarkable for the grand project of Prince Albert to assemble a display of the industrial resources of the world. Subscriptions were raised, men of science were chosen to form a committee, and a colossal palace of glass was erected from a design suggested by Mr. (afterwards Sir) Joseph Paxton, head gardener to the Duke of Devonshire, at Chatsworth. The building from which the design was taken was the smallest of the conservatories of the "Palace of the Peak," and contained the celebrated *Victoria Regia* lily. When the great palace was built in Hyde Park, a mighty bazaar of nations was summoned.

Nor was the summons unavailing. Before the opening London was crowded with foreigners and native visitors, all anxious to enter the wonderful dome. Even immense London could not afford accommodation for the throngs that poured in; people walked the streets through the night or slept in cabs, unable to procure a bed.

And who that witnessed it can ever forget the opening scene? Her Majesty, in the pride of beauty and glory and domestic happiness, looking around on the representatives of all nations, while the Venerable Archbishop of Canterbury pronounced his benediction on that meeting of the nations in peace and prosperity.

Then day by day poured into that fancy palace the strangely mingled crowd of voluble Frenchmen, grave Germans, sharp

Americans, active, monkey-like Chinamen, and sensual-looking Turks ; while the rustics, who had never travelled beyond their native village, gazed with astonishment, and even with awe, as they entered the lofty transept, which actually enclosed tall elm trees, and where the tropical plants, the fountains, the statuary, and the rich fabrics of India realized the tales of the "Arabian Nights," and seemed the work of enchantment.

The building was afterwards removed to Sydenham, and was greatly enlarged so as to form the now celebrated Crystal Palace.

At this exhibition Canada was well represented, and obtained a large number of prizes and medals.

#### **Turning the First Sod of the Northern Railway.**

On October 15th, 1851, the first sod of the Northern Railway was turned by Lady Elgin, assisted by Mayor Bowes, nearly opposite the Parliament Buildings.

Mayor Bowes was in full official costume—cocked hat and sword, knee breeches, silk stockings, and shoes with steel buckles.

The earth dug by her ladyship, with a beautiful silver spade, was taken by His Worship a short distance in an oak wheelbarrow, the whole ceremony creating great interest.

Mr. F. C. Capreol had so far seen his much ridiculed scheme carried into effect.

No longer laughed at and spoken of as "Mad Capreol," as the writer has often heard him called, he had shown great method in his madness. Having been a fellow-passenger with him when crossing on his visit to England to raise the necessary capital—at first by a kind of lottery scheme, and afterwards in the legitimate way—I saw his determination to carry out his plans, and the clear prospect he had of the future of the undertaking.

Had his energies been spared, the Huron and Ontario Ship Canal might soon be an accomplished fact, not at all more improbable than the Manchester Ship Canal was fifteen or twenty years ago.

**Tariff in 1850-51.**

Mr. W. H. Smith, writing at this time on the tariff, says: "We are a queer people. While we are writing a public meeting is being held in the St. Lawrence Hall, Toronto, for the purpose, as the requisition says, of addressing a petition to Her Most Gracious Majesty, Queen Victoria, and the British Legislature, for the purpose of obtaining a more favorable home market for the staple productions of the country than we at present enjoy, and for the adoption of such a course of commercial policy towards the Colonies generally as may prove beneficial to them and to the Mother Country.

"Do not these gentlemen fear that the British Prime Minister, in glancing over the Canadian tariff, will be apt to tell the signers of the petition that 'Jupiter helps those who help themselves.'

"In our legislative wisdom we charge on sugar, tea and coffee, articles which we cannot produce ourselves, a duty of  $12\frac{1}{2}$  per cent.; while on tobacco, which we can grow, we charge the same.

"On wine, rum and brandy, which we do not make, we charge 25 per cent.; while whiskey, which we do make, we admit at  $12\frac{1}{2}$  per cent.

"On spices, fruits, etc., which we cannot produce, we charge 30 per cent.; while hemp, flax and tow, undressed lard, charcoal, broom corn, and wool are admitted at  $2\frac{1}{2}$  per cent.; and still further, as if this were not sufficient, we extend our liberality and admit pot and pearl ash, wheat and Indian corn duty free."

All dry goods, hardware, etc. at this time paid a duty of  $12\frac{1}{2}$  per cent. *ad valorem*.

In the fall of 1852 the locomotive *Lady Elgin* was tried, on the 6th October, on the Northern Railroad, by order of the Engineer, under whose direction the engine was erected. This was the first locomotive run in Upper Canada.

A considerable number of persons congregated near the Queen's wharf to witness the trial, and appeared much pleased with the "iron horse" as he snorted along the track. The rails were laid for about fourteen miles.

The contract for the railroad from Toronto to Guelph was given at this time to Messrs. C. S. Gzowski & Co., for £7,408 currency per mile—£355,600 for the whole distance.

It was also in 1852 that the contract for the establishment of a line of steamers between Liverpool and the St. Lawrence was completed, the contracting parties being Mr. J. Young, then late Commissioner of Public Works, and Messrs. Kean & McCarthy, the ship owners.

The conditions were that Messrs. Kean & McCarthy should keep up a regular line of large and powerful screw steamers to leave Liverpool for the St. Lawrence monthly or fortnightly, while navigation was open, and monthly during the winter to Portland; the maximum passage rates to be £21 sterling, first-class; £12 12s, second-class; and £6 6s., third-class. These steamers began to run the following spring.

Two years later the contract was annulled, and an arrangement made with the firm of Edmonstone, Allan & Co., of Montreal. The small fleet of the last named company has since developed into the line well known as the Allan Line of Trans-Atlantic Steamships.

At this time Toronto had begun to display a rapidity of growth and stability, produced by wholesome enterprise, both encouraging and remarkable. In describing its appearance in 1852 it was said that such strides had been taken in improvement that the effect produced on the mind of a stranger, when entering the bay and viewing the city from the deck of a steamer, was very pleasing and striking. In the evening the spires and domes, lighted up with the parting rays of the setting sun, the dark woods at the back, and the numerous handsome villas which flanked the bay, combined in creating an effective *coup d'œil*.

A most prominent object at the eastern end was the jail, by no means a picturesque or prepossessing one, but still might be taken as an indication of the generally substantial and appropriate character of the buildings, being a solid symmetrical mass of gray lime-stone, sufficiently significant of its purpose—perhaps in the same sense as that in which the traveller stated

that he always knew he was in a civilized country when he saw a gibbet!

Be this as it may, the writer has a distinct recollection of seeing two men hung off a platform erected on the west side of the wall which surrounded the building and which still remains.

The lighthouse on the point of the peninsula, the Lunatic Asylum, Government Wharf, Parliament Buildings, City Hall, and Trinity Church, all attracted the eye.

The sites of the St. James' Cathedral and St. Michael's, could also be seen.

### **The Industrial Crystal Palace.**

Exhibitions of the Provincial Agricultural Association of Canada West, incorporated in July, 1847, were held irregularly till 1852.

At the close of the Exhibition in Toronto in 1852, it was resolved to memorialize the Government to appropriate a certain sum of money to purchase land whereon to erect permanent buildings for the holding of their annual exhibitions.

To this resolution is due the structure then erected, for in granting to the Corporation of the City of Toronto the fee simple of that portion of the garrison reserve lying immediately south of the Lunatic Asylum, for a public park, the Government made it a condition that not less than twenty acres should be appropriated for the holding of the Provincial Association's annual exhibitions whenever it might be required for that purpose.

This condition was accepted by the Council with a liberality which did them honor, at once appropriating £5,000 for the purpose of erecting permanent buildings thereon.

On the 15th July, 1852, the corner stone was laid by W. H. Boulton, Mayor, in the presence of a large number of citizens. The band of the Royal Canadian Rifles performed at intervals during the ceremony.

This building was afterwards used as a military barracks, and was occupied by the 13th Hussars, the band of which regi-

INDUSTRIAL CRYSTAL PALACE.

ment for several years contributed so much to the pleasure of the people of Toronto ; and here, in 1860, His Royal Highness the Prince of Wales was entertained at a public ball.

The *Anglo-American Magazine* says :—" Dwelling in a city whose every stone and brick has been placed in its present position under the eyes of many who remember the locality as the sight of primeval woods the region of swamp ; of some who have seen the lonely wigwam of the Mississauqua give place to the log house of the earlier settler, and this in its turn disappear to be replaced by the substantial and elegant structures of modern art,—we find we are justified in yielding to the pardonable if vain desire to tell the wonderful metamorphosis of forty years.

" It is meet that we should rejoice over the triumphs of civilization, the onward progress of our race, the extension of our language, institutions, taste, manners, customs and feelings.

" In no spot within British territory could we find aggregated, in so striking a manner, the evidences of this startling change. In none should we trace, so strongly marked, the imprint of national emigration. In few discover such ripened fruits of successful colonization.

" The genius of Britain presides over the destiny of her offspring. The glory of the empire enshrouds the prosperity of the colony, the noble courage and strength of the lion inspires and protects the industry of the beaver. The oak and the maple unite their shadows over the breasts that beat in unison for the common weal.

" We boast not superior intelligence, we claim not greater or even an equal share of local advantages over the sister cities of our country ; but we assert, in sincerity of belief and in justice to ourselves, a rapidity of growth and a stability produced by wholesome enterprise as encouraging as it is remarkable.

" The fine bay in front of the city is formed by the remarkable peninsula (this was before the gap was formed) which, commencing at the river Don, stretches away westward, with a singular bend or curve at its western extremity, until it approaches the mainland opposite the garrison. Here a very

narrow channel, marked by buoys, admits vessels of almost any tonnage to shelter and safe anchorage.

"Over this extended sheet of water may be seen, in summer, many a graceful and tidy little craft, gliding along under the skilful management of the amateur crew—yachting being a favorite amusement and source of recreation to the inhabitants after the toils of the day and the confinement of their occupations. A considerable number of steamers, both British and American, arriving and departing almost hourly, and numerous sailing vessels, laden with the produce of the back country or freighted with valuable imports from other lands, impart animation and bustle to the scene, which truly indicates the commercial activity of a thriving population; while the wharves which skirt the bay, with their large warehouses and busy throng of stevedores, porters, carts and cabs, confirm this impression."

The assessed value of the property in the Corporation was \$12,465,600. The value of dutiable and free goods imported was \$2,778,388; the exports, \$1,636,824.

In the past year the beauty of the principal streets had increased very greatly. St. James' Cathedral had been completed, except the spire. This church, built of white brick (for which Toronto had become famous), in the restored style of architecture, was then decidedly the most beautiful and appropriate religious structure to be found in Canada. In the order of civil architecture, the Court House, then in course of erection, was considered to be as fine a structure of its own kind as the church.

But public buildings may sometimes proceed rapidly, while general distress prevents improvements in domestic architecture. This, however, was not the case in Toronto.

A correspondent of the Montreal *Herald* writes at this time: "Upon King Street we noticed the builders at work in five or six places, besides observing several new and handsome brick houses, where a year ago wooden ones stood. Our readers who are acquainted with Toronto will remember the corner of Bay and King Streets, which used to be disfigured by some wooden

ST. JAMES' CATHEDRAL.

shanties; these have been completely swept away, to make room for elegant brick houses. While the retailers have been improving their places of business, the wholesale houses have also continued to augment in number and beauty."

The present Bank of Commerce was then newly built, and was by far the finest wholesale warehouse in the city, and was about to be occupied by Messrs. Ross, Mitchell & Co., wholesale dry goods merchants.

During the times the Parliament remained in Toronto, between 1850 and 1857, many men celebrated in history could be heard to speak. Papineau, W. L. Mackenzie, Cauchon, Cartier, Prince, Merritt, Gagy, Drummond, Dorion, Hincks, D'Arcy McGee, Baldwin, John Sandfield Macdonald, and others.

When Mr. McGee rose to speak, the most profound attention prevailed, all admitting the superior charm of his eloquence. No matter what the subject of debate might be, it was invested with new interest, and having at command art, science, poetry, and history, his ideas were clothed in most beautiful language, and were full of originality, and given with such a sprinkling of wit and humor as never failed to delight his listeners.

In 1852 Mr. George Brown made his maiden Parliamentary speech, which occupied two hours.

On the 28th of December, 1853, Lord Elgin left Toronto, and was succeeded by Sir Edmund Head, in 1854.

### **The Esplanade.**

It is said that when the Grand Trunk Railway was being built, the Company offered to build stone wharves or quays along the front of the city, with iron bridges across the tracks at the principal crossings, and at less than the cost of the present Esplanade, but through the obstructiveness of some, and the squabbling and procrastination of others, of the Corporation, the offer was withdrawn.

At present, when so much public attention is directed to the proposed new street and general improvement of the city front, it may be interesting to refer to the various schemes proposed

from 1850 to 1854, and for this purpose we extract a few items from Maclear's *Anglo-American Magazine*.

The "Editor's Shanty" was supposed to be the resort of representative characters, under the *sobriquets* of the "Doctor," the "Laird," and the "Major."

These gentlemen met to discuss the current events, and to review the literature of the week.

The question of the proposed Esplanade having come up for discussion, the Laird begins :

"But, Major, what was ye gaun to say about the Toronto Esplanade at our last meetin', when Mrs. Grundy telt us the supper was ready? I see the newspapers are makin' a great fuss about it now. One day we have a long report from Cumberland to the Northern Railway directors, another day a letter from the City Surveyor about it, in another it is announced that Gzowski and the Grand Trunk contractors are gaun to make the thing at once. Did ye hear onything mair about it?"

MAJOR—"I was then going to draw your attention to a long letter which appeared in the May number of the *Canadian Journal*, prior to any of these you have just mentioned, the author of which signs himself "A Member of the Canadian Institute," and advocates strongly the importance of making provision for public walks, baths, wash-houses, etc., and sets forth a new plan for the Esplanade, by which the railways can be brought into the very heart of the city without the necessity of level crossings. I thought at the time that the plan, although probably too costly, and on too grand a scale, was a feasible one, and deserving of more attention than it seems to have received. Since then I am glad to see that the Chief Engineer of the Northern Railway has taken it up, and strongly recommended its adoption, with slight modifications."

LAIRD—"Before we gang any further, I would like to ken the correct meaning of level crossings, for there were nae railroads when I was at schule, maist saxty years syne, and I'm rather particularly concerned in this matter—one of my friends has a water lot near Yonge Street."

MAJOR—"When one railway crosses another on the same

horizontal plane, or where a railway crosses a street in the same manner, that is to say, without either being bridged, it is termed a level crossing, and they are the cause of a great many accidents."

DOCTOR—"You will recollect, Laird, of that serious collision, only a few months ago, near Detroit, when one passenger train ran into another on a level crossing, to the great destruction of life and property. Level crossings have always been a source of danger, and should, at any cost, be avoided, if possible, in crowded thoroughfares."

LAIRD—"I understand it noo. Indeed I thoct it was that, yet I aye like to mak sure; but I dinna see why the needna gang slower through a town; there's na use to biss through as if the deil was at their heels."

DOCTOR—"Yes, my good Laird, but there are innumerable chances of danger, however slow the trains may travel,—the locomotives themselves have been known to become unmanageable and run away. Horses are apt to get frightened, women and children may be overtaken while crossing the tracks, or old gentlemen, like yourself and the Major, who do not hear quite so well as in your younger years, may make even as narrow escapes as *he* did at Waterloo."

LAIRD—"Toot, mon, I can hear yon whussle half a mile awa'. I'm no sae deaf as a' that, and maybe there are some older and deafer than me (joking). I'll tell ye, Doctor, gin there be as muckle danger as you say, gentlemen in your profession should keep a *calm sough*. A broken leg noo and then would aye be mair grist to your mill. I think we'd better cry quits noo, as we're gettin' aff the thread, and I'm anxious to hear aboot this plan of the Major's. It's strange I didna see the letter he spoke of."

MAJOR—"Indeed, Laird, it's altogether my fault. I lent the *Journal* for May to a friend of mine, who only returned it a few days ago, but here it is; and, although the letter is rather long, it refers to various other matters, which we may discuss at another time. With your permission I will read the letter."

DOCTOR AND LAIRD—"Do. Go on, go on."

MAJOR—"There was a lithographed plan which accompanied the letter, and you will have some trouble to understand the letter without it. However, here goes."

[Major reads the letter]:

"To the Editor *Canadian Journal*,—The water frontage of Toronto, extending over a length of from two to three miles, and up to the present time almost unoccupied, is now about to be used for railway purposes.

· "Adjoining thereto, and extending about three-fourths of a mile along the south side of Front Street, immediately to the east of the old fort, a tract of land, averaging in width about 100 feet, was some years ago reserved for the public as a promenade or pleasure ground, which reserve is also being appropriated by the railway companies for their own use.

"Much has lately been written, and far more has been said, regarding the occupation of the water frontage by the railway companies. One party advocates the conversion of every foot of ground now lying waste, into track, brick and mortar. Another party, with more concern for the healthful recreation of future generations than the convenience of the present, insists on these reserves for pleasure grounds being retained for the purpose they were originally intended to serve. All must admit that the interests of the public and the railway companies are one in the most important particulars, and that every facility should be afforded them in endeavoring to establish their work; but, if in so doing it be found expedient that these public grounds should be surrendered for the purposes of business—the life and soul of all commercial cities—it ought not to be forgotten that posterity has some claim on the representatives of the public at the present day, and some effort should be made to provide breathing space for those who come after us.

"It will indeed be a reproach if, within the limits of the City of Toronto, comprising an area of six square miles, and which, half a century ago, was just emerging from the wilderness, a few acres be not set apart and held inviolate for these purposes."

ROLPH, SMITH & CO

## TORONTO ESPLANADE,

THE DESIGN OF KIVAS TULLY, C.E.

[BIRD'S EYE VIEW FROM THE NORTH AMERICAN HOTEL.]

DOCTOR—"I quite agree with the writer in many respects. It will indeed be a great reproach if space be not left for a few parks and public walks. She has now, exclusive of the proposed Esplanade and Terrace, only one lung for the airing of 40,000 human beings, with almost a certainty of that number reaching 100,000 in ten years. I refer to the College Avenue, a strip of land about half a mile long by 130 feet wide, and if that be insufficient now for the recreation of the inhabitants, what will it be in ten years hence?"

LAIRD—"Onybody will admit that the arguments in favor of public works are guid, an' that it's better to hae nae "level crossings" if ye can arrange so as no to hae them, yet if I understand your plan, Major, I dinna think it'll work weel. Look at the number of bridges required to cross the railways, and the trouble it wad be to climb up a slope as high as the tap of a locomotive, just to come doun the other side again, and a' the gudes frae the wharves wad hae to be drawn up to the bridge and doun again to the street, in the same way. I rather think the carters wad gie up work a'thegither."

MAJOR—"Ah, Laird, I see you are laboring under a mistake. You have forgotten that Front Street is already about as high as the bridges would require to be, and that slopes would be wanted only from the wharves upward, similar to the present roads from the wharves up to the level of Front Street."

[Major continues to read]:

"It is proposed to set apart a strip of land throughout the entire length of the city, of a width sufficient to accommodate nine railway tracks, to be level with the wharves, to be crossed only by bridges, and to be used solely as a railway approach and for railway connections.

"Front Street to be converted into a Terrace above the level of and separate from the railway approach, by a retaining wall and parapet, to be 120 feet wide, and planted with rows of trees throughout the entire length.

"The entire area south of the Front Street Terrace to be on the wharfage level, and reached by slopes from the bridges. The bridges may be of iron of a simple ornamental character.

"It is also proposed to reserve certain portions for the landing of steamboats, for private forwarders, for baths and wash-houses, or for general public service. The places allotted for this purpose on the plans are situated at the foot of York and Yonge Streets, and at the rear of the St. Lawrence Hall, and are named, respectively, the Niagara, the City, and St. Lawrence Basins; while contemplating improvements on so grand a scale, the selecting of a site to be dedicated to a great public building should not be lost sight of. I refer to one of which even now the want is felt, viz.: The Canadian Museum, for the formation of which the Canadian Institute is making strenuous exertions, and also a permanent home for that Society.

"The very best situation would doubtless be in the vacant space at the intersection of Yonge Street with the grand Terrace (where the Custom House and Soap Factory now stand), or south of the railway tracks facing the bridges from Yonge Street, as shown on the plan.

"There can be no good reason why the building should not be sufficiently extensive to include a Merchants' Hall and Exchange under the same roof, or offices for telegraph companies, brokers, etc., in its basement, or why it should not be as ornamental and imposing as its central position would require, or the purpose of its erection demand."

Mr. Cumberland's report is then read, when the Major proceeds.

MAJOR—"After these two documents we come to the last that has appeared on this subject—a letter from Mr. Thomas, City Surveyor. I feel rather fatigued, Doctor, perhaps you will read the extract marked. You will see that the leading feature of Mr. Thomas' plan is to build a street or Esplanade over the railway tracks on stone piers and brick arches, extending the whole length from Simcoe to Parliament Streets, with flights of stone steps leading up thereto at intervals. I can scarcely yet venture an opinion, but it seems to be rather an extravagant idea of the value of space, to put one street over another on arches, when the same object can be attained at much less cost by taking in sixty or seventy feet more of the bay."

DOCTOR reads : "I purpose, therefore, to make Front Street, from Simcoe to Parliament, a business street, and of such a width as not to destroy the Custom House, or the valuable wholesale and other stores already built and now in course of erection on the south side of Front Street to the Esplanade, securing the frontage of these valuable water lots.

"I would then leave from Front Street a depth of from one hundred to one hundred and fifty feet, for the building lots, whereon to erect, as may be required, the railway stations, the proposed large hotel, wholesale stores and goods warehouses, with other principal frontages to the railroads on the wharfage level on the south ; also to an Esplanade on the south of Front Street, constructed on piers and arches over the lines of railway, sixty-six feet in width, on the Front Street level, with an open space of twenty feet area for light and ventilation to the lower storey of the buildings in front of the tracks. The buildings would have their north frontage on Front Street ; passengers would enter the respective stations as the goods would be received on Front Street. The Esplanade, by this arrangement across the most central part of the city, would be in the proper place on the Front Street level, with the railroad cars running underneath, having arched openings on the north side of the railroad to the buildings, and on the south side to the wharfage, being in appearance like a continued station. The passengers would be protected from heat and dust in summer, and the trains from snow accumulations in winter.

"The buildings being erected with handsome stone frontings to the Esplanade and Bay, would give the city a magnificent appearance, with the arched frontage of the Esplanade as a basement to the whole.

"Trees may be planted for shade opposite the piers on the lower level, which would form an avenue for the raised Esplanade, along the entire distance, which might be limited at the outset, from Simcoe Street to George Street. From that point east and west the railroad may be open. The raised Esplanade over the railroad to have five lines of rails, with five arches in brickwork turned over them, continuous on stone piers, backed up with brickwork."

LAIRD—"Ah, doctor, I canna say I like yere plan either. Nane o' them are equal to the ane I had many a chat about wi' my auld friend, Sir R. Bonnycastle, now dead, poor man, an' wi' Mr. Howard, the architect. Keep awa' yere new-fangled plans frae me; what wi' yere bridges, an' brick arches, an' tree-plantin', and level crossin's, and so on, its enough to dumbfounder a body. Na, na, gentlemen, the auld plan is a plan ye can all understan', it's a simple one, an' the simplest way is often found the best way."

DOCTOR—"I confess I feel quite taken aback, not having thought of the subject before. It appears to me, however, that there are many good things in all of them, which, if combined together, might form a better plan than any one of them."

This ends the "sederunt" of these gentlemen in 1850, and it may be remarked in 1886, that if we cannot have a work as solid and grand as the Thames embankment in London, we can have one which in point of situation and beauty of prospect may form a more delightful promenade, and now appears to be the time for prompt action to secure its establishment.

### Rossin House.

With the prospect of railroads being built, and the consequent increase of travel, the want of a first-class hotel was much felt, and Messrs. Rossin Bros., very popular and enterprising gentlemen, then doing the principal watch and jewellery business, undertook to canvass the wholesale merchants and others interested in the growth and prosperity of the city, for subscriptions towards building an hotel worthy of the Queen City. The stock was soon taken up, and debentures of £100 or \$400 each were issued, one of which the writer willingly took in behalf of the firm, just as all others did, not with a view of making profit but to promote the enterprise. The ground was secured and the first hotel built and finished, and was placed in the hands of Mr. A. C. Joslin as proprietor. It being found that it did not pay, Messrs. Rossin Bros. bought up the debentures at 50 per cent. discount, which the holders were willing to lose

to keep the concern afloat, and in this way it was continued till it was burned down. It was soon re-built on a much grander scale, and has gone on increasing in size and splendor ever since.

In June of 1853 the Grand Trunk Railway was opened to Portland, and at the close of the year the Great Western was opened from the Suspension Bridge to Hamilton and London, and within a month was completed to Windsor.

The contract for the road from Toronto to Montreal was signed by Mr. Jackson and his associates on the arrival in London of the Hon. John Ross. The line from Toronto to Hamilton was undertaken by another contractor, at £1,000 more per mile than the Grand Trunk.

The writer travelled in the old leather-swung stage from Hamilton to London the night before the opening of the road, and in anticipation of their occupation being about to go the following day, the hotel-keepers at the different places where the horses were changed were especially grumpy.

The St. James' Cathedral organ, built by Messrs. Warren Bros., of Montreal, was put in its place on 17th May, and was worthy of the reputation of that firm. The choir at this time was composed of effective and well-trained singers, and the whole musical service gave great satisfaction.

### **Mercantile Agencies.**

The system of reporting the standing of business men by regular subscription rates was commenced in Toronto in 1855. Previous to that time there had been private correspondence with New York, but no regular agency had been opened, nor was the arrangement publicly known.

A Mr. Hart was sent to Toronto by the firm of R. G. Dun & Co. at this time, to obtain subscribers, and the firm of Taylor & Stevenson was among the first to give their names. Having received a sufficient number to warrant them in opening an office, Mr. Kimball arrived shortly afterwards from New York, and commenced his agency in the Exchange Buildings, Wellington Street.

The principle of giving information as to every man in business was not well received by a portion of the press. Several severe articles appeared, denouncing the introduction of such a system of espionage. The agents were called pimps, detectives, spies, informers, and eaves-droppers, and the business community was called upon to denounce the whole business, and stamp it out, as a blot on the respectability of the city. Lawsuits for defamation of character were threatened, and although the agent and his assistants were well received personally, the system was looked upon as wholly disreputable.

To think that a man's private business was to be exposed by strangers who had no legitimate means of knowing the circumstances, was said to be an outrage on public decency, and only a system of black-mail for the purpose of extorting money and compelling business houses to subscribe to the agency in self-defence.

Notwithstanding all this opposition, the business grew in strength from day to day, and merchants found that the information received was, on the whole, of a more reliable character, because more disinterested and independent, than could be obtained by references from one house to another. It had been known that merchants' references were more or less unreliable, on account of the interest they had in keeping up the credit of their customers, who, if in the books of a house to any great extent, would not be likely to receive an unfavorable character, and in this way other houses would be led to give them credit on the strength of these interested statements, often resulting in a loss to the new creditors, while the old had an opportunity of reducing their line of credit, and saving themselves either partially or entirely from loss.

In this appeared to be the secret of success of the mercantile agencies, the information given being alike to all subscribers, and recorded in their books for constant reference, with changes in rating given from time to time, and all preferences or securities regularly registered and reported.

The style of R. G. Dun & Co. was shortly afterwards changed

to Dun, Wiman & Co., by the introduction of Mr. Erastus Wiman into the firm. The name of

MR. ERASTUS WIMAN

is so intimately connected with Toronto as to deserve more than a passing notice. Although a resident of the United States, he is still a British subject, a Canadian and a Torontonion, and owes his present high position more to Canada than to the United States. In Toronto he commenced his career as a printer boy at \$1.50 per week, which at twenty he was proud to have advanced to \$4.50 per week. From this he became a market reporter, then commercial reporter on the staff of the *Globe*, and Superintendent of the Toronto Exchange, and in 1860 became connected with the mercantile agency of R. G. Dun & Co. He was subsequently promoted to the position of travelling reporter, and in 1862 became manager of the Toronto office, succeeding Mr. Kimball. In 1863 he was transferred to the Montreal office—both the Toronto and Montreal districts being placed under his administration. This continued till 1866, when he was transferred to the New York office, and admitted as a partner in the firm. Owing to the war the business had run down, and was sustained chiefly by the amount of money made in Canada. This success, with his knowledge of printing, gave Mr. Wiman great advantages, and firmly established his position. The business has grown to vast proportions. The books of the firm are published quarterly, and contain one million names. They employ forty printers, and have standing in type twenty tons agate, costing one dollar per pound.

There are one hundred and six branch establishments throughout the country—forty of the managers being Canadians, with salaries ranging from fifteen hundred to twelve thousand dollars per annum. There are about one thousand Canadians employed in the business.

On the death of Mr. Barlow, the interest of that gentleman passed into the hands of Mr. Wiman, and he became virtually the working-head of the entire agency. The consolidation of the two Canadian Telegraph Companies is due, to a great ex-

tent, to his assistance, placing the whole system on a paying basis, Mr. H. C. Dwight being made general superintendent.

Mr. Wiman has shown his liberality to this city in the free gift of the baths which are called after his name, and which cost about fifteen thousand dollars.

On returning from Europe after making spring purchases in February, 1855, on board the Cunard Steamer *Canada*, a terrible hurricane was encountered. One tremendous sea broke over the forward part of the ship, carrying an immense hawser, weighing several tons, off the fore-castle, and rushing along, stove in all the doors on the main deck, throwing the sailors down and breaking one man's leg. The water rushed into the intermediate cabin, and when the passengers jumped out of their berths, they found themselves up to the middle in water. On being removed to the saloon, where they lay wrapped in blankets waiting for dry clothing, one of them, a gentleman at present in Toronto, who had supposed the ship was sinking, asked amidst the raging of the storm, and much to the amusement of those who had similar experience before, whether "she was nearly full yet." The storm soon abated and Boston was reached in safety.

In June of the same year, when great numbers were going to the Paris Exhibition, a delightful passage was made in one of the Allan Line steamers from Quebec. Amongst the passengers were the late Col. R. L. Denison, of Toronto, and Messrs. Kirchkoffer, Meredith, and Fraser, of Port Hope, who proved to be most agreeable "*compagnons de voyage*." The two former never having seen the Old Country, and the two latter having been away from boyhood, described their sensations as being very peculiar on approaching the Irish coast, and everything they saw in Liverpool proved to be intensely interesting to them.

#### Paris in 1855.

Having completed my purchases in Britain, I went to Paris and got through my business there. In anticipation of a matrimonial arrangement in England, and a return to Paris in a few days, apartments were secured at my usual stopping place, the

Hotel de Tours, in the Place la Bourse ; and through the kindness of our commissionaires, a stand in the balcony of a fan manufactory in the Boulevard des Italiens was promised, from which a view of the great processions would be had.

Leaving England on the 16th of August, by the Great Western Railway from Birmingham, and stopping at Oxford, the unique classical and historical city of colleges, libraries, parks, gardens, meadows, and "academic groves," of indescribable beauty, so familiar to the greatest scholars of Great Britain for many centuries ; then through Reading and Windsor to London, and thence, *via* Dover and Calais, Paris was reached ; and here was spent the week during which the Queen's stay continued. While during the summer the great Exposition was the attraction, the grand sights connected with the Queen's visit caused quite a diversion to every point where the Royal party appeared.

#### Passports.

The system of passports being then strictly enforced, with the crowds that were then flocking into Paris the delay and annoyance was very great.

These passports were procured from the French Consul-General in London, and bore the Imperial Seal of France. They described minutely the bearer's height, measurement, color of eyes and hair, complexion, expression, shape of countenance, nationality, religion and destination, and, having passed all the inspections, must be deposited with the proprietor of your hotel, so that the police could have access to them at all times during your stay.

While the clash of arms and deeds of heroism on the fields of Balaclava, Inkerman and at Alma were still fresh, and the thunder of the artillery of the allied armies of Great Britain, France and Turkey was still booming at Sebastopol, Queen Victoria and Prince Albert, amidst scenes of unparalleled splendor, made their grand entry into Paris, to visit the International Exhibition in the Palais de l'Industrie.

By special order of the Emperor, great preparations were

made for this visit. Every house was cleaned or renovated, and the most lavish decorations were to be displayed, especially where the procession was to pass.

The success of the allied armies in the Crimea, the recent demonstration by the allied fleets at Sveaborg, and the commencement of another bombardment of the Russian lines south of Sebastopol, were circumstances of such happy augury, that the Queen seemed to carry victory and good fortune in her train, while the glorious weather gave unbounded hope and joy to the royal progress.

On the evening of the 18th of August, Her Majesty arrived at the Strasbourg railway station from Boulogne. Here a military band struck up the National Anthem, thrilling many a heart. At the close of the performance, Her Majesty, leaning on the arm of the Emperor, trod the soil of the bright Capital of France amid intense applause.

The Emperor was in full costume, and wore the riband of the Garter; Prince Albert, the Prince of Wales, and the Princess Royal came next with their suite; then Prince Napoleon, accompanied by a host of high officers of State. The illustrious party entered the open carriages, six in number, drawn by four horses, prepared to convey them to St. Cloud.

### The Procession on the Boulevards.

It was curious to observe the intense desire displayed by all classes to make this wonderful city look its best and fairest before the eyes of the Island Queen, and to inspire Her Majesty with a due appreciation of the claims which Paris had to be considered the gayest and most brilliant capital in the world; and these claims were overpoweringly displayed.

The great width of the Boulevards and the asphalt sidewalks afforded a splendid opportunity for displaying the decorations. The arch on the Rue Lapelletiere was very magnificent, while trophies, including sculpture of great merit, chains of streamers, hung with flags, evergreens and flowers, extended throughout the route. This was especially observable in that

PLACE DE LA CONCORDE.

noble street, the Rue de la Paix, near the Madeleine, the whole street being brilliantly ornamented.

Those who do not know Paris will have some difficulty in realizing the splendid aspect of the line of Boulevards, with the bright sunlight pouring down, without a cloud; the pavements and carriage ways swarming with people; the lofty houses with their jalousied windows thrown open and filled with spectators; the extensive range of balconies all occupied, and in every direction that indescribable air of excitement which marks a great event.

The route of the procession lay along the Boulevard de Strasbourg, the Port St. Denis, the Boulevards Bonne Nouvelle, Poissonniere, Montmartre, des Italiens, des Capucines, and the Madeleine, down the Rue Royal, across the Place de la Concorde, and by the Champs Elysees, the new Avenue de l'Emperatrice, and the Bois de Boulogne to St. Cloud.

About four o'clock, the troops, numbering fully 100,000 men—half of the line and half of the Imperial Guard—began to take up their position on this immense and splendid route, while penned in behind them the myriads of spectators settled into their places, to await the arrival of the illustrious visitors.

The Prefect of Police put the numbers down at 800,000. It is worthy of note that, during the whole week, not a single disorderly or intoxicated person was observed amongst these vast multitudes.

The sight of the military alone was magnificent in the extreme. The gay uniforms of the various regiments produced a marvellous effect—Chasseurs d'Afrique, Zouaves, Garde Mobile, Imperial Guard, Voltigeurs and Cent Gardes, all in the most picturesque costumes, and in great variety, formed a military spectacle unsurpassed in modern times, and seemed to impress the Royal party, and to be enjoyed with great admiration.

### **The Queen at Versailles.**

The party entered the Palace by the central gateway in the grand front. The Grand Court, 380 feet in width, is separated from the Place D'Armes by stone parapets flanking an iron

railing richly charged with gilded ornaments, and the central gateway is surmounted by the ancient Crown Shield of France, charged with three *fleur-de-lis*. At the extremity of this railing are groups of figures in stone—those on the right representing France victorious over Austria, by Marsy, with the statue of Peace; those on the left, France victorious over Spain, by Grardon, with the figure of Plenty. The Court itself slopes from the Palace, and on each side is a plain range of buildings erected by Louis XIV. for the use of his ministers. In front of these stand sixteen marble statues: on the right, Richelieu, Bayard, Colbert, Jandon, Massina, Jounville, Due Gray, Trounin and Touren; on the left, Suger, Du Greschin, Sully, Lalles-Mortier, Suffren, Duquesne and Condé. In the midst of the upper part of the Court is a colossal equestrian statue of Louis XIV. The lofty building on the right is the chapel, the architecture of which is remarkably florid and elegant. It is ornamented with Corinthian pilasters and a balustrade crowned by twenty-eight statues.

The Grand Trianon is a villa at the extremity of the Park, and was built by Louis XIV. for Madame Maintenon, after the design by Mansard. It is in the Italian style, consisting of one storey and two wings united by a long gallery pierced by seven arcades, fronted with Ionic columns and pilasters of Languedoc marble.

The garden of the Grand Trianon is laid out in a style similar to that of Versailles, and contains seven fine fountains in Carara marble. There are many excellent pieces of sculpture in various parts. The grounds in the rear are laid out in groves cut into labyrinths.

The Grand Trianon was always a favorite residence of Louis XIV., XV. and XVI. Napoleon also frequently resided in it, and made a direct road from there to St. Cloud.

As no opportunity was lost during the week of seeing all the sights, Versailles was the point of attraction on the 25th of August.

The Royal party were in the Park in the rear of the Palace, while immense crowds thronged the square in front. A deter-

mined effort had to be made to get through the gateway. A procession of officials appeared from another part of the Palace marching towards the main entrance to the Park. Seizing the opportunity we fell into the procession and soon found ourselves on the Grand Terrace, close to the Royal carriages, with only a select few standing around, while the splendid band of the Cent Gardes performed. Shortly afterwards the party drove towards the Grand Trianon along lines of statuary flanked by evergreen yew trees, forming perpendicular walls pierced with arches. This effect is produced by clipping the trees. As the carriage of the Queen and Prince Albert passed each fountain a salute burst from the water works, producing a most beautiful effect. These water works, commenced by Charles X., are the finest in the world, and have cost fabulous sums in being brought to their present perfection, receiving constant additions and improvements from the various reigning sovereigns.

As a reminiscence connected with Toronto, on entering a restaurant at Versailles, we noticed at a table close by Mr. and Mrs. William Henry Boulton.

After inspecting various grand galleries in the Palace, including the great hall of paintings, which if spread out would cover seven miles, we left this grandly historical building, having a delightful run to Paris by rail, some of the carriages having seats for passengers outside, on the top.

The rush to leave Paris after the departure of the Queen, was far greater than on her arrival. It seemed as if everybody wanted to get away at the same time, and here a hint may be given that might be useful in similar crowds, should they ever be witnessed in Paris again. Even if a knowledge of the language is possessed, it is an advantage sometimes to appear to know nothing about it.

The Paris gens d'armes, with cocked hats and swords, are formidable looking individuals, but if there is a rush for a train, and you are kept back, with the risk of losing your connection with the tidal train at Dieppe (which was to be our point of departure for Newhaven), a volley of English will be found to

confound the policemen, and to gain the victory. This plan was never known to the writer to fail, except on one occasion. The rule on all omnibuses and tramways of limiting the number of passengers is strictly enforced; and each passenger, no matter what the rush may be, is only admitted by ticket in the order of consecutive numbers. When the conveyance is full the board with the word "*complet*" is shown.

A story was told of a gentleman waiting at a certain point to get a 'bus for the Grand Exposition, but all appeared with this board at the back. At last he remarked that all the conveyances appeared to be going to "*Complet*," and he wanted to go to the Exposition. On going to the waiting room he got on in his regular order.

The writer undertook to jump on a 'bus having the word referred to, and hoped by the free use of English to confound the conductor, but this attempt proved a failure, and a firm "*Descendez vous, monsieur, si vous plait*," compelled a descent.

When will the Toronto Street Car Company adopt the French and English system of finding a seat for every passenger?

### Departure from Paris.

This occurred on Monday, the 27th August. As the brilliant staff of Generals, headed by a squadron of mounted Chasseurs, turned down the Rue Castiglione, it became evident that a splendid show was behind them. Very imposing the staff looked, backed by the scarlet uniform of the band of the Guides. After the Guides came four Piqueurs preceding four elegant carriages drawn by two horses, and three state carriages drawn by six horses. The splendor of these equipages, literally covered with gold, led the crowds to believe that they must contain the Queen and the Emperor, but glancing along the line they saw that the point of attraction lay still in the distance.

These carriages contained the suites of the two Courts. They were followed by eight splendidly-equipped Piqueurs, who were before a gorgeous state carriage, the body of which was green,

richly relieved by gilt ornamentation. In this vehicle sat the Prince of Wales, wearing over a black velvet tunic a tartan scarf. He appeared to take a boyish delight in the affair. In the same carriage with him was Prince Napoleon.

The next carriage, drawn by eight splendid horses, contained the Queen of England, the Emperor, Prince Albert, and the Princess Royal.

As this magnificent carriage, made for the Emperor's wedding, advanced, the most lusty cheers arose to greet the Royal party.

The Imperial carriages were followed by the Generals of division and brigade, the Cent Gardes, and a squadron of Cuirassiers of the Guard, preceded by their band.

From the railway station, where the ceremony of parting took place amid great enthusiasm, the Queen and party left for Boulogne *en route* for England.

#### Incidents During the Queen's Visit.

The Queen, accompanied by the Emperor, admired at the Exhibition a fine group in bronze, "*Le Lion Amoureux*." Immediately on the departure of their Majesties, it was removed to St. Cloud and placed in the apartments occupied by the Queen.

On the evening of the representation at the Grand Opera, just before starting, the Emperor sent to the Queen a bouquet of splendid exotic flowers, contained in a *porte-bouquet* of gold ornamented with diamonds and pearls, being one of the most exquisite productions of jewellery that could be conceived. The Queen was so enchanted with it that during the evening she was continually admiring it, and remarked, "I cannot describe the amiability with which I am received here; all is so magnificently and at once so delicately done, that it is impossible to find a fitting expression."

Upon her entrance into the gorgeous saloon of fountains at the Hotel de Ville, the Queen remained a moment breathless, speechless with admiration and surprise, and at last uttered these words: "Our English language has no word, no term, to express the feeling excited by such wonders. It is a dream, the realization of one of the Arabian Nights tales!"

**The Imperial Cent Gardes,**

as their name indicates, were one hundred in number, and nearly all six feet in height. When mounted they wore a light blue tunic, with crimson facings, a cuirass, and bright, silvery looking helmets, profusely decorated with gold, and carrying a double red and white feather. The epaulettes were gold and fringe gold, mixed with crimson silk. The breeches were white leather, the boots similar to the Horse Guards, the saddle-cloths crimson, richly embroidered with gold.

The writer on one occasion seeing them at night, observed that over all this gorgeous uniform they wore long cloaks of pure white cloth. Being attracted by their appearance at the entrance to the Gymnase Theatre, and hearing that the Emperor and Empress had just gone in, the temptation was too great to be resisted, and I soon found myself in a place nearly opposite the Royal box. With the free use of a "binocular" I had a splendid sight of the Royal pair, which was really the object I had in view at the time. The Empress was then in the very prime of her celebrated beauty, and being in mourning, without any ornament whatever, showed to the greater advantage. This circumstance occurred during a previous visit to Paris.

The cost of lighting the Palace and Gardens at Versailles amounted to \$31,250, and the ball at the Hotel de Ville to \$60,000.

In a few days after the departure of the Queen from Paris, the second bombardment of Sebastopol—which Prince Gortchakoff profanely designated as "a fire of hell"—commenced, on the 5th of September, and on the 8th the Russians fled.

When day dawned on the 8th, the flames of a great conflagration were seen in the centre of the city, and in a short time it was a mass of ruins. On the same day the assault of the Malakoff was undertaken by Marshal Pelessier, assisted by Generals Bosquet and McMahan, to whom the Marshal gave the credit of the assault. The taking of the Malakoff Tower compelled the Russian evacuation of Sebastopol.

Toronto can boast of two of the trophies which were dis-

tributed through England and her colonies, in the possession of two guns in the Queen's Park.

### Paris Universal Exhibition.

The building erected for the finer productions, remaining still, is familiar to visitors to Paris, situated on the Champ Elysees, close to the Place de la Concorde ; it is now used as a fine arts gallery. The annexes, extending for nearly a mile along the banks of the Seine, and used for machinery and heavy exhibits, were removed.

The splendor of the Panorama building, with its long line of jewellery, gold, silk, satins, paintings, sculpture, musical instruments, etc., was in some respects superior to London in 1851, but was surpassed by the Exhibition in 1867.

During the week, as far as time permitted, all the grand sights were witnessed and the various places of interest visited. The Palace of the Luxembourg, the Hotel des Invalides, and the Tomb of Napoleon, where streams of visitors passed in and out. Under the magnificent dome is the open crypt, on the polished granite walls of which are inscribed the names of the hero's great victories. In the centre stands the massive sarcophagus with marble statues around it. "Before you is the superb high altar, flooded with golden light from the painted windows, and around are the stately columns which support the lofty dome. The tomb is gorgeous in marble and gold."

Notre Dame Cathedral, with its jewelled splendors, the solid gold and silver utensils on the altar, the splendid robes of Popes, Bishops, and Coronation robes of Kings, including that of the Emperors Napoleon I. and III. Then the Louvre, with its frescoed walls and ceilings, marble pillars and long halls of paintings and statuary by the great masters, marble tables covered with rich cabinets of the rarest specimens of jewels and enamels. The Madeleine, the Palace of the Tuilleries, the Grand Exposition itself, which it would be vain to attempt to describe, were all done and thoroughly enjoyed before leaving the beautiful city on this visit.

The return to England was by way of Dieppe to Newhaven,

*Toronto "Called Back."*

and in another week we were on board one of the Allan steamers for Quebec, having again as a fellow-passenger, also returning to Toronto, our friend Col. R. L. Denison. After re-

NOTRE DAME CATHEDRAL, PARIS.

maining in Toronto till the close of the fall trade we returned to England, making St. Helens, near Liverpool, our home. This was a convenient point for attending to shipping from Liverpool, and as nearly three hundred trains a day passed the

“junction,” it afforded constant and easy access to the manufacturing districts of Lancashire and Yorkshire, as also to London, Paris, Ireland and Scotland.

While making my home in England, for the purpose of shipping goods weekly to Toronto, till 1858, two trips were made during that time, and the trade was closely watched. In 1856 the work of railway construction went rapidly on, and trade had never been so good—the importations had increased from \$2,286,508 in 1850, to \$6,670,500. The duty had increased from 12½ to 15 per cent., and no one foresaw the re-action that was so soon to take place, on the completion of the Grand Trunk and other railways, as well as the close of the Crimean war, when prices of produce returned to their normal condition.

#### **The Queen Opening Parliament, February 1st, 1856,**

at the close of the Crimean War, was an event of more than ordinary importance. Crowds of people assembled at all the points of the route from Buckingham Palace to the Palace Yard, and long before the usual time for opening Parliament every available spot in Parliament Street, Whitehall, the Horse Guards and along the Mall was occupied; numbers of ladies crowded the windows, and platforms along the route were filled. On no former occasion was there so monstrous an assemblage or so prevailing a sentiment of loyal curiosity.

At two o'clock Her Majesty left Buckingham Palace amidst the cheers of thousands of spectators who lined the Mall. In the state carriage, which was drawn by eight splendid cream-colored Hanoverian horses, were the Queen and Prince Consort, Her Grace the Duchess of Sutherland, and the Duke of Wellington. The Marquis of Breadalbane, Lord Chamberlain, and Earl Spencer, Master of the Horse, occupied the carriage which preceded that of Her Majesty. The other carriages forming the cortege contained the other high officers of the Queen's Household. Besides the Yeomen of the Guard, the escort consisted of two troops of the 1st Regiment of Life Guards and a troop of the Royal Horse Guards Blue, and the magnificent

appearance of this fine body of soldiers evidently sent a thrill of pride through the bosoms of all that beheld them. The procession passed through the dense rows of spectators, who, from time to time, burst forth into cordial cheering, which was graciously acknowledged by Her Majesty and the Prince Consort.

At the Horse Guards and through Whitehall, but more especially in Palace Yard, the crowd was immense. Here, along the front of the Palace, and along Parliament Street, was the line of peeress's carriages, which, in itself, was a dazzling sight. The most beautiful women in the world in full dress, ablaze with coronets of diamonds and jewels, all waiting the arrival of Her Majesty, was indeed a brilliant spectacle. Altogether it was a scene which, in the essential features, it would be impossible to witness outside of England.

Royal and Imperial pageants abroad might outstrip the scene in military pomp and magnificence, but where shall we seek for that warmth of loyalty, that devoted reverence and affection for the monarch, that unaffected interest in the personal welfare of the sovereign, which Queen Victoria's subjects display; and on the other hand, where look for the perfect confidence with which our Queen's womanly virtues and purity of private character, no less than her irreproachable conduct as the occupant of the throne, enable her at all times to meet her admiring people?

Her Majesty's arrival at the Victoria Tower was announced by the discharge of cannon from the Horse Guards' Parade, and a flourish of trumpets by the Royal Trumpeters on splendidly caparisoned steeds, themselves stiff in scarlet and gold, as also were the Royal coachmen and the grooms who walked at the head of each horse in the Royal carriage.

The Queen was received by the officers of the House of Peers, and entered the House led by Prince Albert and preceded by Lord Viscount Harding bearing the Sword of State, the Marquis of Winchester bearing the Cap of Maintenance, and the Marquis of Lansdowne carrying the Crown. A guard of honor, composed of a body of the Life Guards, dismounted, lined the

entrance to the House of Lords, and a company of the Scots Fusiliers Guards was drawn up in front of the Tower.

After the delivery of the Speech the Queen descended from the Throne, and left the House in the same order which had been observed on Her Majesty's entry.

### The Great Peace Rejoicings in London.

In April, 1856, peace was concluded, and was announced in London by the firing of guns in St. James' Park, and from the Tower, and the Lord Mayor read the despatch announcing the fact at the Royal Exchange.

A day was appointed for great peace rejoicings, and a general illumination, with a display of fireworks on a scale of magnificence never before attempted.

Being in London that day I first visited the Crystal Palace, when the great water-works were first opened, and played their grand part in the programme. The crowds were immense, and trains every five minutes for London were not sufficient to accommodate the tens of thousands who were rushing back to be in time for the grand display.

Some desperate efforts were made to secure even standing room on the trains. My brother-in-law, who accompanied me, having got into the same carriage, was suddenly pushed out in the scramble, and nothing more was seen of him till the next morning.

#### THE FIREWORKS IN GREEN PARK.

As the hour approached for the introductory discharge of fireworks, thousands entered the Park by the six new entrances which had been made to prevent accident. Deepening and thickening with wonderful rapidity, the huge mass extended itself on the soft and verdant carpet, and the large spaces in front of Buckingham Palace, the Mall and Constitution Hill, were crowded with spectators. A few minutes before the commencement of the fireworks, the Queen, Prince Albert, and the members of the Royal Family, Prince William of Prussia, and

other persons of rank, took their seats in the pavilion erected at the north end of Buckingham Palace, facing the Park. Her Majesty was received with loud demonstrations of loyalty and enthusiasm. The Royal party had an admirable view of the fireworks, and seemed to participate in the admiration which they excited. To describe the scene would require a large amount of time and space. For upwards of an hour and a half the air was luminous with the blaze of sun-stars and comets, the flight of shells, rockets, and Roman candles, descent of meteors, parachutes, and showers of pearls, silver and golden rain, shining serpents, and fire-flies, chasing each other through a sea of light resting on a bed of upturned human faces. The programme consisted of twenty-four divisions, and was not exhausted till eleven o'clock. It comprised everything new, curious or beautiful in pyrotechny.

Some of the fixed pieces were remarkably elegant. The stars, hoops and crosses elicited bursts of delight; cascades, fountains, and trees were represented with wonderful exactness, and one of the most beautiful devices was the formation in the air of sheaves of golden corn. But the great triumph of art was the concluding exhibition. It consisted of four fixed pieces, all of the most elaborate construction, with the words "God Save the Queen," illuminated in the centre. At the same time there was a grand discharge of Roman candles, batteries of pearls, streamers, and tourbillions, and rockets in red, blue, green and yellow. The effect was magnificent, almost magical, and when in addition to the above no fewer than ten thousand rockets were shot in the air, the scene was one which can only be witnessed once in a lifetime. The display in Hyde Park, Primrose Hill, and Victoria Park were, though all different in design, equally magnificent.

Having seen all four exhibitions, or the larger portion of each, we wended our way through the millions of people who crowded the streets, amid the blaze of illuminations which made it as bright as day, all along Pall Mall, Charing Cross, The Strand, Fleet Street, to Cheapside, arriving at our hotel between two and three o'clock in the morning.

### Great Naval Review at Portsmouth.

In 1856 there were ample opportunities for a buyer in Europe to combine business with pleasure in the way of sight-seeing. Having been in London at the opening of Parliament by the Queen, and at the peace rejoicings with fireworks and illuminations, a second journey was made, taking in the great Naval Review at Portsmouth. Leaving Liverpool by the Great Western Railway through Chester, I arrived at Portsmouth the day before the memorable event took place.

Never, at any period of our history, could we boast of a fleet as powerful in numbers and metal as that which floated at Spithead in April 1856. Such a mighty gathering of first-rates and gun-boats may not again be witnessed on these waters.

The people who, in 1854-5, met to cheer our gallant sailors to their duty, again assembled to cheer them from its performance.

In the same proportion as the fleet of 1856 exceeded that of Lord Howe in 1791, so the number of spectators exceeded that of sixty-five years ago. It was then considered a splendid effort to bring together a single line of ships extending for five miles; here we had a double line for a much longer distance, whilst hundreds of gun-boats, floating batteries, and mortar vessels, crowded the outer spaces off Ryde and Portsmouth.

On Saturday the fleet anchored, a stately line, with the *Duke of Wellington* at its head, bearing the Admiral's ensign. The *Rodney* and *London* had already taken up their position near the Nab as pivot ships round which the fleet was to sail. In the open spaces between the two divisions the water was sprinkled with boats carrying spectators, steamers filled with visitors, steering like pigmies through their colossal sisters; gun-boats puffing like locomotive engines; while in a mass off Ryde lay a host of craft forming clumps with their masts, relieved in yellow on the houses and trees of the town.

At no great distance off Southsea Castle lay the heavy forms of the floating batteries, rising and falling on the swell like

whales, and stretching from their vicinity far away past Monckton towards Browndown, where lay the heavy, round hulls of the mortar vessels in the grim gray rest that seemed to have its attractions.

The sun shone brightly on the white walls of Southsea Castle, with its tower soaring away above the embankments, bristling with guns, and on the varied crowd that covered the Esplanade. The entrance to the harbor was thronged with boats, some of which, filled with merry bearded faces, were carrying liberty men from the ships of war to the shore. Others were crowded to the thwarts with curious spectators, anxious to gain a view from the water.

Passenger steamers, gun-boats, and tenders to the fleet were perpetually passing in and out of harbor, bewildering the eye by their rapidity of motion and quick successions. Streaming down the streets of the town, visitors from London and elsewhere, curiously viewing the great guns in the embrasures, and peering into their muzzles, did not wait long, but rushing to the pier, invaded the steamers, which left the quays swaying to and fro in an alarming manner.

It is almost needless to say that the usual accommodation to travellers at hotels had long been pre-engaged and taken. Those who trusted to chance to find a bed were woefully disappointed in the endeavor to find a resting place.

The streets were filled with people who seemed totally at a loss how to spend the night. Tired groups might be seen wandering from street to street, making fruitless attempts at admittance at various houses, where the price seemed too exorbitant to any but millionaires. While wandering about the streets in this way the writer had offers of beds at a guinea apiece, or to be rowed over to the Isle of Wight for the same price, but the appearance of our soliciting friends not bespeaking extra accommodation, we declined their kind offer, and the night being fine, with the exception of a rest on a chair at an hotel, was spent in promenading the city.

The weather was most suitable, and never did a more delightful day shine upon the millions of spectators congregated at the

various points, commanding a view of the fleet and its evolutions. And splendid was the sight it was destined to shine upon, for never was there a more magnificent and gorgeous spectacle in ancient or modern times.

The "Great Cleopatra," could she have risen from her sarcophagus and been witness to it, would have envied our Island Queen her rule of a nation which can boast possession of the greatest and most splendid armament that ever floated, of which it might well be said :

" Britannia needs no bulwarks,  
No towers along the steep ;  
Her course is o'er the ocean wave,  
Her home is on the deep."

Although for days before the railways had been bringing thousands of visitors from all parts of the kingdom, and steamers from every port on the southern coast, teeming with human freight, had been day by day discharging their living cargoes, yet it was on the morning of the Review that the town presented the most extraordinary appearance.

From an early hour, and up to midday, thousands of excursionists were seen issuing from the various railway depots and wending their way in one continued stream toward the shore to secure a good position to witness the sight. Southsea common was literally teeming with human beings. From the ramparts and along the Esplanade to beyond the Castle, was one dense living mass. An immense grand stand was erected on the Esplanade for the accommodation of those who preferred to witness the Review from the land. The admission to the stand was ten shillings, a moderate demand compared with prices required for accommodation on board the steamers. But it was not only upon the land that the scene was interesting, nor was the interest on the waters confined exclusively to the Royal Fleet. There was another fleet important in itself, which contributed greatly to the splendor of the scene.

Our mercantile steamers are of a class that astonish and command the admiration of all who behold them. Several of these

were present, belonging to the Oriental and Peninsular Navigation Company, and the *Atrato*, the largest paddle-wheel steamer in the world, *La Plata*, *Trent* and *Tay*, belonging to the Royal Mail Steam Packet Company, were all thronged with visitors. The Directors of the Royal Mail Steam Packet Company and their friends were on board the *Atrato*. The steamers of the South-Eastern Company, from Folkestone, and those belonging to the South-Western Company were also present, together with many others from various ports, all swaying with passengers.

The French steamer *L'Imperatrice*, from Calais, with a numerous company of ladies and gentlemen on board, was among the list. She had a splendid brass band, which, in passing the Admiral's yacht, struck up "Rule Britannia"—a graceful compliment.

Nearly all the large steamers carried the French flag at the fore, in compliment to our gallant allies. On the arrival of Her Majesty she was at once conveyed by her state barge on board the Royal yacht, accompanied by Prince Albert and the other members of the Royal party and suite. The *Victory* and the other ships in the harbor manned yards and fired a salute as soon as the Royal Standard was seen flying at the masthead. Her Majesty was accompanied on board by the Lords of the Admiralty. The yacht then moved rapidly out of the harbor, when the forts immediately saluted.

#### The Queen's Arrival.

Never had monarch a greater opportunity of witnessing a people's loyalty and devotion than our august and beloved Queen had on the occasion of her reviewing her mighty and magnificent fleet on that day. The moment of Her Majesty's appearance in the port was a signal for that enthusiasm which is always displayed whenever she is graciously pleased to appear among her subjects. Simultaneous cheers burst from tens of thousands of loyal hearts, showing the hearty welcome of the "Sea Queen" by her delighted people. The review of such a fleet as the world never before beheld, equipped with

an efficiency which all the newest appliances of art and science had given to each of these powerful engines of war which composed it, and manned by seamen whose services our vast commercial wealth enabled us to command without limit, was most gratifying to all who witnessed it. This gorgeous and truly national pageant was a fitting spectacle in celebration of peace, and one which illustrated the greatness of our triumph, the immensity of our resources, and the solid basis of our strength.

The fleet as it appeared at anchor on the morning of the review, extending in a line east and west from pivot ship to pivot ship, covered a space of more than twelve miles, and comprised line-of-battle ships, frigates, corvettes, sloops, floating batteries, mortar ships, mortar boats, and gun-boats, and upwards of two hundred and forty sail, of which not more than ten were without steam power.

There never had been a time when the British Navy was more efficient than it was at that time.

The Queen was most enthusiastically cheered by the assembled thousands on the shore as the yacht pursued her way toward the Spit buoy, on rounding which the whole of the fleet manned their yards and commenced a royal salute. The scene was most imposing at this point.

The yacht then proceeded rapidly towards the westward, followed by a large fleet of steamers which were desirous of keeping pace with her, but which her superior speed rendered a matter of impossibility. As she passed along the line each of the men-of-war manned their rigging and cheered Her Majesty.

The French corvette of war *La Chavalor* manned yards and joined in the cheer of welcome. Then followed the sham-fight, and after the signal was made to cease firing the Royal yacht proceeded to the harbor under the salute of the fleet.

Southsea Beach, extending for many miles, afforded a splendid opportunity for the immense multitude, numbering fully half a million, to witness the whole spectacle. As the Royal yacht *Victoria and Albert* steamed close to the shore, the writer had a distinct view of the Queen and Prince Albert sitting on the deck.

The following is the list of the fleet with their order of sailing:—

## STARBOARD DIVISION.

VICE-ADMIRAL SIR G. SEYMOUR, COMMANDER-IN-CHIEF.

<i>Name.</i>	<i>Guns.</i>	<i>Crew.</i>	<i>Name.</i>	<i>Guns.</i>	<i>Crew.</i>
Royal George .....	102	920	Cossack .....	20	250

## SAILING SHIPS.

London .....	90	830	Belleisle .....	6	244
Rodney .....	90	820			

GUN-BOAT FLOTILLA.

CENTRE, RED—Algiers, 91; Flying Fish, 6; Ringdove, 6; Biter, 4; Starling, 4; Snapper, 4; Bustard, 4; Dove, 4; Loveret, 4; Fervent, 4; Beaver, 4; Opossum, 4; Firm, 4; Blazer, 4; Brazen, 4; Rainbow, 4; Redbreast, 4; Havoc, 4; Pioneer, 6; Lapwing, 6; Swinger, 4; Skylark, 4; Pincher, 4; Charger, 4; Grasshopper, 4; Mackerel, 4; Forester, 4; Whiting, 4.

VAN, WHITE—Colossus, 81; Victor, 6; Peter, 4; Thistle, 4; Sandfly, 4; Plover, 4; Carnation, 4; Insolvent, 4; Mayflower, 4; Spanker, 4; Traveller, 4; Louisa, 4; Erne, 4; Mastiff, 4; Lively, 4; Ruby, 4; Tickler, 4; Seagull, 4; Bulldog, 4; Hasty, 4; Herring, 4; Griper, 4; Thresher, 4; Julia, 4; Sepoy, 4; Manly, 4; Mistletoe, 4; Magnet, 4.

REAR, BLUE—Brunswick, 81; Intrepid, 6; Mohawk, 6; Stork, 4; Dapper, 4; Gleaner, 4; Magpie, 4; Redwing, 4; Badger, 4; Skipjack, 4; Forward, 4; Banterer, 4; Haughty, 4; Assurance, 6; Procris, 4; Goshawk, 4; Grappler, 4; Hyena, 4; Violet, 4; Weasel, 4; Jackdaw, 4; Hind, 4; Lark, 4; Snap, 4; Sheldrake, 4; Cockchafer, 4; Stanch, 4; Charon, 4.

LIGHT, STRIPED—Sanspareil, 71; Surprise, 6; Cheerful, 2; Daisy, 2; Pert, 2; Drake, 2; Angler, 2; Pet, 2; Rambler, 2; Wanderer, 6; Chub, 2; Onyx, 2; Janus, 2; Ant, 2; Nettle, 2; Decoy, 2; Partridge, 4; Coquette, 6; Beacon, 4; Brave, 4; Bullfinch, 4; Raven, 4; Hardy, 4; Tilbury, 4; Sparrowhawk, 4; Goldfinch, 4; Delight, 4; Bouncer, 4; Nightingale, 4.

This list of vessels, taken from the programme of the day, will give a good idea of the strength of the British Navy, especially when it is borne in mind that these ships were ordered only from convenient naval stations, and many more were scattered all over the world on every sea.

Since that time a new fleet, comprising the most magnificent specimens of naval architecture, has been built, and England's claim to the supremacy of the sea cannot be denied, and never since "first, at heaven's command, she rose from out the azure main," did Britain more triumphantly "rule the waves," than at the present time.

The most interesting feature in the day's movement was that reserved for the night, as an Emeralder might say, and was a thorough novelty to all who witnessed it. The illumination was effected by simultaneously lighting up the yards and port-holes with blue lights.

At nine o'clock gun-fire, the whole fleet at anchor burst into light as if by magic. The jets one above another, main topmast-high aloft, and the port of each opening at once, showing a vivid glare between decks, caused an unusual roar of cheering from the shore, which was echoed and given back by the boats

and the legion afloat. This, in the stillness of the calm night, had an effect as imposing as it was rare. Cheer upon cheer applauded the spectacle. From nine till ten, rockets were sent up thickly from the ships and rained a golden shower upon the "floating capital."

#### The Close of the First Decade.

After making his purchases for the Fall trade of 1856 the writer came out to Toronto and found everything apparently prosperous. The importations for the year exceeded those of any previous year, reaching a point equal to 1866, ten years later. Sales were large and payments good, and none seemed to anticipate hard times.

The progress of Toronto during the ten years ending in 1856 was accelerated by the opening of railways, east, west and north, and by that time its population was 45,000, showing an increase of 23,000 in ten years; the number of its houses was 7,476; the assessment of property had increased from \$69,000 to \$515,000, and the imports from \$750,000 to \$6,670,500.

Toronto had been reaping the first fruits of her connections through the Grand Trunk and Great Western Railways, and the close of this, the first decade, contained in this sketch, found Toronto improved almost beyond recognition to those who had not seen it during that time. The wide streets, containing splendid shops, and the number of handsome churches, all conspired to impress a visitor with the growing character of the place.

Dr. Mackay writes of it at this time as "a thing of yesterday, a mushroom, compared with the antiquity of Montreal and Quebec, though rivalling the one and exceeding the other in trade and population. It is built on the American plan of straight lines, preferring the chess board to the maze, and the regularity of art to the picturesque irregularity of nature. The streets are long and straight. There is a Yankee look about the whole place which it is impossible to mistake, a pushing, thriving, business-like, smart appearance in the people and the streets, in the stores, and in the banks and churches.

“Looked upon from any part of itself, Toronto does not greatly impress the imagination, but seen from the deck of a steamer, it has all the air of wealth and majesty that belongs to a great city. Its numerous churches, stores, and public buildings, its wharves, factories, and tall chimneys, mark it for what it is, a thriving place.”

During this decade the following buildings had been erected : The General Hospital, Normal and Model Schools, St. James' and St. Michael's Cathedrals, Knox Church, St. Lawrence Build-

FORMER POST OFFICE (PRESENT OFFICE OF RECEIVER-GENERAL).

ings, Nordheimer's Buildings on Toronto Street, the Exchange, Free Library Building, Post Office, City Schools, the University, several Banks, and the Rossin House Hotel.

Toronto was now the headquarters of the Royal Canadian Rifles. The science of photography had lately been discovered, and artists styled photographers and ambrotypists began to multiply.

Manufactures had not shown much progress, and consisted chiefly of wood-working and planing mills, boots, shoes, safes, soap, spices, paper, and blank books.

From the time of the introduction of the bonding system through the United States, British goods to Boston generally came to Toronto *via* Ogdensburg, and from New York *via* Lewiston, until the opening of the Suspension Bridge, and passengers sometimes had difficulty in making connections in winter.

In the winter of 1856-7 the writer had secured his passage to Liverpool by Cunard steamer from Boston, and started in good time to Prescott, intending to cross to Ogdensburg to connect with train for Boston. On arriving at Prescott a violent snow storm prevailed, and the captain of the steam ferry refused to cross. On telegraphing across to our agents, Messrs. Stark, Hill & Co., Mr. Stark, who had been a sea captain, immediately came across in a small row boat and offered to row me across. As the storm grew worse, while thanking the captain for his kindness and courage, I declined to risk both our lives when the steamer would not risk the crossing, and telegraphed to Messrs. Hill, Sears & Co., of Boston, to write to my family in England the cause of my detention. Not wishing to return to Toronto, I went on to New York and waited for the next Cunard steamer from that port.

## TORONTO FROM 1857 TO 1867.

---

### Financial Crisis in 1857.

Returning to make the spring purchases in Europe, and back to Toronto in February, 1857, there were indications of an impending change.

The stoppage for the time of railway operations and the circulation of money was soon felt all over the country, and the testing time of the 4th of March was the crisis, when payments at the banks were so bad as to cause a number of failures. In a short time the panic ensued with full force, and the whole picture suddenly changed. Railway enterprise suddenly came to an end; some of the largest houses were compelled to suspend payment. Old established houses smashed like glass bottles, and mercantile credit collapsed.

To show, however, that this state of affairs was not confined to Canada, one fact may be stated. During this year the deficiency in remittances from the United States to England amounted to nearly fifty millions sterling, the great bulk of which was never paid.

So depressed was trade in Toronto that hundreds of persons in the city who had heretofore enjoyed all the ordinary comforts of life, for the first time felt the sharp pinch of poverty. There was much suffering and want amongst the laboring classes, with a corresponding amount of drunkenness and crime. There is good reason to believe that several persons died of sheer starvation. For the first time in her history her streets swarmed with mendicants.

The *British Colonist* of August 4th says: "Pass when you will, you are beset with some sturdy applicant for alms. They dodge you round corners, follow you into shops, they are to be found at the church steps, and at the door of the theatre. They infest the entrance to every bank. They crouch in the lobby of the post office, assail you on every street, knock at your private residence, walk into your place of business, and beard you with a pertinacity that takes no denial.

"In this, our good city of Toronto, begging has assumed the dignity of a craft. Whole families sally forth and have their appointed round. Children are taught to dissemble, to tell a lying tale of misery and woe, and beg or steal as occasion offers."

This picture is far from attractive. The advent of brighter days, however, brought in a very perceptible change, and when trade assumed its normal condition, our streets ceased to be suggestive of poverty and mendicancy; but it was not till 1859 that business resumed its healthy appearance. The writer returned to Europe in May 1857.

#### The Desjardins Canal Accident.

During the writer's stay in Toronto at this time the most terrible accident which had happened since the opening of the railroads, occurred at seven o'clock of the evening of the 12th March, 1857, at the bridge over the Desjardins Canal, a mile east of Hamilton. The train from Toronto, consisting of a locomotive, tender, baggage car, and two passenger coaches, the latter containing about ninety-three persons, left about five p.m. When this train reached the junction just above Hamilton, it was ascertained that the train from Detroit had not gone down to Hamilton, as it was entitled to do before the Toronto train. After waiting twenty minutes the Toronto train came on. Just before reaching the bridge over the Desjardins Canal, the train left the track by the misplacement of a switch or some other cause, and ran upon the bridge. The force of the train knocked the bridge down, and engine, cars and all plunged into the canal thirty or forty feet below.

The catastrophe was sudden and awful, and the work of death was instantaneous and complete. The locomotive and tender were entirely submerged, and the baggage car partially so. The forward passenger coach turned bottom upwards, and sank so deep that the floor was but a few inches above the water. The rear passenger coach rested upon one end and was about half submerged. Most of the passengers in the rear of this coach escaped; the remainder were drowned.

The writer had a description of the scene inside this car, from one who escaped, by the wood-work being cut through with axes within a few inches of his head, and the scene described was terrible in the extreme.

Every person in the first car perished except four—two men and two children. One of the children was thrown out of the window on to the ice; the other was dragged out of a window, having been up to its neck in water for fifteen minutes. They were brother and sister; their father, mother and uncle perished,

Among those who were killed were Samuel Zimmerman, the great Railway King of Canada, and Captain Sutherland, owner of the well-known iron steamer *Magnet*, with other prominent men, both American and Canadian.

Mr. Hugh McSloy, of St. Catharines, having come over in response to a circular to see the spring opening of new goods, had made some purchases, and bid the writer good-bye, stating he would soon be back to complete them. At about 7.30 a telegram came from his brother to know whether he had left by that train, when a reply was sent accordingly. He was amongst the victims of the terrible tragedy.

British capital to the amount of \$450,000,000 was invested in the United States at this time.

The whole gold coinage of the United States from 1793 to 1st January, 1856, was only \$396,895,574; the silver coinage the same period was \$100,729,602, and copper \$1,572,206; the three together amounting to \$498,197,383.

All the gold would not suffice to pay back the capitalists and more than half of the silver would be required for the purpose.

**Art Treasures Exhibition in Manchester.**

"A thing of beauty is a joy forever."

The history of painting and its close identity, from the earliest periods, with the interests of religion and morality, and the rapidity with which the art is increasing its influence upon current opinion and thought, would render it nothing less than a scandal if nineteenth century religionists and moralists were indifferent to its tendencies and claims.

That will indeed be an evil day in which the range of moral sympathy is not wide enough to comprehend a love of all the pure and noble forms of art.

It is the duty of religion to cherish every delicate art which tends to embellish and reform human life and character. Piety is never more unwise than when she expels beauty from her tents, and by that act of excommunication drives her fairest sister into alienation and profanity.

Only a shallow observer of human society will lightly estimate the painter's power on the domains of human morals. Under what an obligation are we placed by some of the giant names of historic art—Fra Angelico, Botticelli, Guido, Bassano, Raphael, in his cartoons and pictures of the Divine Incarnation; Rembrandt, in his setting forth of Christ as the poor man's Saviour and friend, habited in coarse garments, concerting alternately with angels and men of low estate; and an amiable Caracci, in his overwhelming picture of "The Three Maries."

It is not possible to conceive a scoffing Michael Angelo, or a flippant Raphael. What masculine blows at drunkenness, debauchery, coxcombery and cruelty were dealt out upon canvas by Wm. Hogarth, long before philanthropy and temperance reform had become the rage.

English art has touched with subtle skill a wide range of religious emotions,—the form of a pure and beautiful woman transferred to canvas, the picture of a good man's face, the vision of a godly mother, busy in the hallowed sphere of home, are surely powerful side-lights upon the question of religion in daily life.

Never was a blow more fearlessly and directly dealt at the ruinous vice of gambling than was given by Mr. W. P. Frith R.A., when he portrayed on canvas in five divisions, the "Road to Ruin."

Every picture that denounces evil, that attracts to good, that kindles sympathy with pure and innocent pleasure, that awakens in us higher and holier affections, and makes us more kind to the brotherhood of men is, in a broad and healthy sense, moral and religious art.

In the entire history of the fine arts, there never occurred such a wonderful display as that which took place in Manchester in the year 1857. Amidst the throes of a commercial panic, which shook the world to its centre, when banks, public companies and mercantile establishments were tumbling down, bringing ruin and destruction in their fall, the merchant princes of Manchester undertook to collect from the private galleries of Great Britain, for the purpose of exhibition, the priceless gems of art, hitherto only seen by a select few, and to accomplish this a palace was erected and all expenses guaranteed by these gentlemen.

On the 5th of May, "I declare this Exhibition opened," were the words which, uttered by Prince Albert, gave to Manchester, the first city in the Empire in regard to its manufactures and the second in respect to its population, an Exhibition of its own, and differing in some respects from those held in London, Cork, Dublin, New York, and Paris, where industrial and art gatherings had been held. The treasures of art alone constituted this wonderful exhibition, such as the world had never beheld.

The birth of Princess Beatrice, on the 14th of April, caused the postponement of Her Majesty's visit till the beginning of July. Her Majesty was entertained during her visit at the mansion of the Earl of Ellesmere, Worsley Hall.

It so happened, the day of the Queen's visit to the Exhibition, the writer was removing from among the smoky chimneys of the celebrated glass and chemical works, and the furnaces of the copper and silver smelting works, of St. Helens, to the heart of

the cotton manufacturing district of Manchester, and, anxious to see the pageant, arranged by a study of "Bradshaw" to strike the spot where the procession would pass at a certain time; and with the Queen's well-known punctuality, not a minute was lost. The sight was very fine.

For seven miles, with crowds ten deep on the pavements, through which she had to pass before she reached the Art Treasures Exhibition, which the taste and wealth of Manchester had been the means of bringing together, every window was filled with human beings anxious to see Her Majesty. The whole city seemed to have ceased from the untiring, energetic labors of its manufactures, and appeared with one consent engaged in the more pleasing occupation of welcoming the Queen. Gigantic mills, with their enormous extent of bare walls, assumed a gay and festive appearance. Forests of flag-staffs grew as if by magic out of the factory roofs, while strings of banners between opposite windows bore devices of welcome.

Her Majesty, accompanied by the Prince Consort, the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice and Prince Frederick William of Prussia, left Worsley Hall in the following order: First carriage, containing Mr. Gibbs, tutor to the Prince of Wales and Lieut. Cowell, tutor to Prince Alfred; second carriage, the Hon. C. B. Phipps, C.B., and the two equerries-in-waiting; third carriage, the Lord Chamberlain (the Marquis of Breadalbane), Sir George Grey, Bart., Baron Moltke, in attendance on Prince Frederick William of Prussia; fourth carriage, the Marchioness of Ely, lady-in-waiting to Her Majesty the Queen.

### Reception in the Building.

As the audience rose and Halle, supported by Miss Novello and Sims Reeves, looking and feeling musical, began to attune their ears and voices for the Coronation Anthem—in glancing round we observed the following noteworthy people at the foot of the dais erected for the Queen: The Prince Consort, Lord and Lady Palmerston, Lord and Lady Stanhope, Lord Burling-

ton, Lord Wilton, Lord Ward, Mr. Granville Harcourt, M.P., and Frances, Countess of Waldegrave, Mr. Ex-Chancellor Gladstone and Mrs. Gladstone, Lord Talbot De Malahide, Messrs. Peto and Paxton, Sir Roderick Murchison, Williams of Kars, etc., etc.

The Queen was accompanied by the Prince Consort, the Prince of Wales, the Princess Royal and her intended, Prince Frederick William of Prussia; Princess Alice and Prince Alfred, Sir George Grey, Secretary of State; the Lord Chamberlain, Marquis of Breadalbane; the Mistress of the Robes, Duchess of Sutherland, and the Hon. Eleanor Sutherland, daughter of Lord Stanley of Alderley.

Her Majesty then knighted Mr. James Watts, merchant of Portland Street, and at the time Mayor of Manchester. This ceremony was performed by the Queen with the Peninsular and Aliwal sword of Sir Harry Smith, with two strokes given with wonderful grace—James Watts rising into Sir James, (here Lady Watts blushed, smiled and looked down). Sir Harry, retaking his sword, kissed the hilt recently touched by the fair hand of Her Majesty.

This done, Her Majesty commenced her walk through the Exhibition. The route was, of course, chronological, beginning with Van Eyck, and ending with Leighton and Millais.

It was noticed that she lingered longer over the early German School than any other part of the Exhibition. As for the Royal children, it was easy to see, as the policemen observed, that Mulready's "Boy having his hair cut," and Webster's "Slide" were more after the children's heart than the best Raphael or the finest Mabrise.

Amongst modern paintings, the greatest crowd seemed to collect around the "Death of Chatterton," where several policemen were stationed to keep back the crowd. The Royal party then, retracing their steps, studied the series of British portraits, also chronologically arranged, forming a perfect English history; afterwards the Enamels, Venetian Glass, Metal Work and Ivories.

Her Majesty before leaving the building partook of a hand-

some luncheon served by Mr. Donald, and is said to have praised most highly a particular mixture, which, on Her Majesty enquiring what it was, Mr. Donald immediately called "Donald's Royal Art Treasures Nectar, patronized by Royalty." Her Majesty smiled at the "patronized" and left the building amid enthusiastic cheers, and blushes from Mr. Donald such as Scotchmen alone can blush.

"To wake the soul by tender strokes of art."

The works of art contained in the Exhibition were divided into the following sections: 1. Paintings by Ancient Masters; 2. Paintings by Modern Masters; 3. British Portrait Gallery; 4. Collection of Historical Miniatures; 5. Museum of Ornamental Art; 6. Sculpture; 7. Water Color Drawings; 8. Original Drawings and Sketches by the Old Masters; 9. Engravings; 10. Photographs.

The number of paintings by ancient masters, commencing with Cimabue in 1240, and ending with Jean Baptiste Greuze in 1805, including the Marquis of Hertford's contribution of forty-four, was 1,123. The number of what were classed as modern masters, commencing with Hogarth in 1740, up to 1857, was 689. The number of portraits, 386; of water colors, 969; works of sculpture, including a few bronze, 160. The collection comprised works by every great artist, ancient and modern, and of every school of art. The whole of these works of art were insured for five millions sterling, much below their real value. The number of visitors was 2,500,000.

#### Royal Mail Cunard Steamer "Persia."

The voyage to New York by the Cunard steamer *Persia* in the winter of 1857-8 was unusually stormy, as may be judged from the report of the ship's "log" published in New York papers on our arrival. The statement of having encountered "tremendous hurricanes," although rarely reported, was no exaggeration. For several days we "lay to," making about two knots an hour—just enough to keep the engines in motion. One of

the immense paddle-boxes, forty feet in diameter, was carried away with one sea, and other damage done. The voyage lasted over sixteen days, nearly double her usual time. Lord and Lady Napier and suite were passengers, and his lordship suffered greatly from sea-sickness, while her ladyship, whose cabin was nearly opposite that of the writer, scarcely ever missed her morning salt water bath, and was present at almost every meal at the table in the saloon.

As this magnificent ship was then the finest afloat, and was the last of the paddle steamers, except the *Scotia*, a notice of her may not be out of place.

This leviathan vessel, then the largest steamship in the world, left Liverpool on the 26th June, 1856, commanded by Captain Judkins, the Commodore of the Cunard Mail Packets, on her first voyage across the Atlantic. This Company having the exclusive contract for carrying the mails, the position of Commander of one of these steamers was at that time one of great importance, and the rank equal to a commander in the Royal Navy.

As the whole Continent was on the *qui vive* for the arrival of these steamers at Boston or New York, when the signals went up by firing guns by day or rockets at night, a whole fleet of steamers and boats of every size were seen racing for the great object. Then the scramble up the ladders, the rush for the latest papers and despatches, and the rush back to the city of news reporters for the daily papers, and the competition to publish the latest news, was a lively scene.

The Captain, in full naval uniform, giving orders through his silver trumpet, before the days of electric bells, as he stood on the bridge was the observed of all observers. If we are about to start, I see him on his elevated position, and it is interesting to notice how quickly and completely the inward thought and purpose alters the outward man. He gives a quick glance to every part of the ship. He casts his eye over the multitude coming on board, among whom is the English Ambassador and suite. He sees the husbands and wives, mothers and children, entrusted to his care, the valuable cargo,

the carefully counted mail bags, all pouring in, and his form as he gives orders for our departure seems to grow more erect and firm. The muscles of his face swell, his eyes glow with a new fire, and his whole person expands with the proud consciousness of his importance and responsibility.

In these days of cablegrams, the importance of a Commander is chiefly dependent on the shortness of the passage made by his ship, as is described on the arrival of the *Etruria* at New York, on having made the fastest passage on record. "The steam was puffing out of her sides in short, painful gasps, like the quickened breath of a grand race-horse, tired, and resting after a great burst of speed. Commodore Theodore Cook was proud as the proudest man in America, as he walked down the noble ship's gang-planks, and then stood up so straight that he nearly fell backwards. No one seems to have been prepared for the phenomenal time she had made."

In November, 1858, "Westward!" was the cry. The more that was learned of the great countries to the North-West, the stronger grew the desire to establish uninterrupted communication therewith. The means of access to the Eastern seaboard were already numerous and easy. An open route to the banks of the Saskatchewan and to the shores of the Pacific was wanted. The feeling was that more would be gained in a single year by trading with the North-West than by ten years of the closest communication with the lower Provinces. The Mediterranean would not bear upon its bosom so great a burden of wealth as would our lakes and rivers, should the country become the highway between the two great oceans—the connecting link between China and Europe. In this year the Buffalo and Lake Huron Railway was opened.

The first Toronto City Directory was published by William Brown, the writer having lent him a copy of the London (England) Directory as a model. It was only copied in the classification of the names, the addition of the street directory, as at present, not being adopted for several years afterwards.

In July of this year the writer went to Quebec to meet his

family coming out from England by the *North American*, Captain Grange, and had the pleasure of meeting Rev. John Maclean, now Bishop of Saskatchewan, Rev. Dr. Hellmuth, late Bishop of Huron, and Rev. Mr. Fleury, Chaplain of the Molyneux Blind Asylum in Dublin, to whom I frequently had the pleasure of listening in the chapel attached to the institution, as also the delightful music of the choir, the members of which, including the organist, were all inmates. These gentlemen had been exceedingly kind and attentive to my family during a long and stormy voyage, and on their arrival in Toronto all paid us a visit, expressing, at the same time, their surprise and delight at the fine appearance of the city.

In this year the 100th Regiment, to which Toronto contributed a large quota, was enrolled in the Regular Army as the Prince of Wales' Royal Canadian Regiment of the line; Major-General Viscount Melville was appointed Colonel-in-Chief. The Regiment sailed in three detachments, the first from Quebec, by the Allan steamer *Indian*, nearly 500 strong; the second per *Nova Scotian*, 435 strong, and the third per *Anglo-Saxon* with remainder.

In July, 1859, the *Agamemnon*, in laying the Atlantic cable between Valentia Bay, in Ireland, and Trinity Bay, Newfoundland, a distance of 1,650 nautical miles, was in great danger; the coils broke adrift and the cable was displaced, as she was nearly thrown on her beam ends; the electric instruments were all injured and the deck boats got adrift.

On the successful accomplishment of the undertaking, on the 17th of August, messages were exchanged from the Queen to the President of the United States. Lord Napier was then British Minister at Washington.

Fetes were given at New York, and a reception to the officers of the *Agamemnon* by the City Council; on that occasion, amongst the toasts proposed was the following:

"The people of Great Britain and Ireland, joined to us in the Court of Neptune. May that nuptial tie never be put asunder."

**Visit of the Prince of Wales to Canada, 1860.**

On the 9th of July, the Prince, accompanied by the Queen and Prince Consort to Plymouth, embarked on board the line-of-battle ship *Hero*, ninety-one guns, Captain Seymour, having as an escort the ship *Ariadne*.

The suite of His Royal Highness consisted of the Duke of Newcastle, Secretary of State for the Colonies; the Lord-Steward of Her Majesty's Household, Earl of St. Germain; His Royal Highness' Governor, Major-General Hon. R. Bruce; equerries-in-Waiting, Major Teesdale, R.A., and Capt. Gray, Grenadier Guards; Dr. Acland, His Royal Highness' physician.

The Prince was commissioned to represent Her Majesty in the opening of the Victoria Bridge, and on all public occasions; to hold levees and receive addresses while in Canada; and in travelling through the United States he was to assume the title of Baron Renfrew.

The squadron arrived at Halifax on the 29th of July, and after visiting Prince Edward Island and New Brunswick proceeded to Quebec, where, leaving the men-of-war, they proceeded to Montreal, arriving on the 25th of August. The Royal party remained there for several days, during which the Prince opened the Industrial Exhibition in the Crystal Palace, attended a magnificent ball given in his honor, laid the corner stone, being also the last stone, of the Victoria Bridge, and clinched the last bolt of the Bridge (a silver rivet) with stout and sturdy blows.

After stopping at Ottawa, Brockville and Kingston on the way up, the Prince arrived at Toronto on the 7th of September, and met with a magnificent reception, the preparations being on a scale far surpassing those of the other cities he had visited. The Prince disembarked at the western extremity of the Esplanade. Here a splendid pavilion was erected facing the city; the hangings were of crimson, blue and white, and the building was adorned with green leaves and festoons of flowers. The whole was surmounted by a Royal crown, on all sides protected by flags.

The greatest charm was the entrance arch, which spanned the

street and was really magnificent. It was of the Grecian order, but exceedingly rich in ornament, and stood sixty feet high. The pillars were massive, palmated at the top. The interior of the arch was adorned with beautiful fresco paintings, and the whole surmounted with a shield bearing the Royal Arms and a Royal crown supported on each side by a fine display of flags. A semicircular platform was erected, with tier upon tier of seats, and was ornamented with shields and banners, and more than 10,000 people were in position on it.

In the open space was a troop of cavalry, and in the centre was a great level platform, with the dais and throne under a gorgeous canopy.

Here the Prince was received by the Mayor, Corporation, Judges, Members of Parliament, Officers of the Army and Volunteers, etc.

After the reading of the address the National Anthem was sung by 5,000 children, under the leadership of Mr. John Carter, the Cathedral organist.

It is impossible to do justice to the imposing spectacle presented when the vast assembly stood up and united in one tremendous burst of cheering, which lasted several minutes, the ladies waving their handkerchiefs and men nearly killing themselves with shouting the loyal hurrahs, while several bands played the National Anthem.

The Prince was intensely affected at this glorious welcome, which was so hearty and magnificent.

A procession of militia, firemen and national societies filed past, drooping banners and cheering vociferously. The Prince's carriage followed the procession through the principal streets, cheered by the people, while flowers were strewed before him. Night having come on by this time the city was most brilliantly illuminated, and the whole formed a spectacle which, for magnificence, was never surpassed in Canada. The Prince and suite were entertained during their stay at Government House.

On Sunday the party attended divine service in St. James' Cathedral, and were met at the door by Bishop Strachan, Rector

Grasset, and other clergymen. The sermon was preached by the Bishop, from the text, "Give the King Thy judgments, O God, and Thy righteousness unto the King's son." The demeanor of the Prince during the service was what might have been expected. He joined heartily in the responses, and his entire manner might be copied by some church-going young men with decided advantage.

The Orangemen had erected a splendid arch at the intersection of Church and King Streets, with a large painting of King

GOVERNMENT HOUSE AND ST. ANDREW'S CHURCH.

William III. in a conspicuous position. Instead, however, of the party driving under the arch along King Street, the carriage went down Church to Wellington, and so to the Government House. It transpired that this was done by the positive order of the Duke of Newcastle.

During the week the Prince visited all the principal objects of interest, and planted a tree in the Horticultural Gardens, at the same time opening the rustic arbor then recently erected. He also planted an English silver oak in the Queen's Park,

which stands to the east of the guns, and laid the foundation stone of the statue to the Queen, surrounded by civic, provincial and other dignitaries; and in addition to all he turned the first sod of the Toronto Grey and Bruce Railway.

He attended a public ball, given in his honor, in the Crystal Palace, wearing the uniform of a colonel of the British Army, unattached, and led off the dance by taking the hand of the accomplished wife of Mayor Wilson, one of the present Chief Justices of Ontario. The ball was a brilliant scene, and wound up the entertainments given in honor of the Prince in Toronto.

He next visited Hamilton, and then proceeded to New York, where the demonstrations were almost extravagant, and did the people of that city much credit.

The squadron sailed from Portland in November, arriving in England in a short time.

#### 1860 to 1865.

Outside of general events, the local history of Toronto from 1860 to 1865 was that of the proverbially happy country that has no history. The close of the decade of the fifties had witnessed commercial depression, stagnation in trade and manufactures, starvation and misery. The first half of the decade of the sixties brought commercial vigor, activity in trade and manufactures, abundance and prosperity.

It was the story of Pharaoh's kine reversed. The American war caused the country to be overrun with commissariat agents purchasing stores for the army. American gold poured in in steady streams, and produce of all kinds could not be supplied to meet the demand.

Farmers and merchants reaped a golden harvest, and many a fortune was accumulated by trader and speculator. Toronto had its share in the general prosperity, and the condition of the city was one hitherto unexampled.

During this period the speculation in gold reached its climax. Fortunes were made and lost in exchanges between New York and Toronto. Goods bought in American currency and paid

for in gold at a high premium, corresponding with the depreciation in American currency, gave the importers of American goods room to realize immense profits.

As an illustration of the difference in the values of the currency at one time, the writer and the late Mr. A. W. Lauder, M.P.P., when starting to New York to meet our families, who had been visiting in England, took \$40 each to a broker on King Street, for which we received \$100 in American currency, and as the price of everything on the American side had remained unchanged—their argument being that a dollar was still a dollar, which they soon found to be rather a delusion—the fare to New York, which from the Suspension Bridge was \$10, was to us only \$4, while a charge of \$4 a day at the St. Nicholas' Hotel, New York, was to us just \$1.60. Travellers to Canada soon found out the real value of their currency, compared with ours, when coming off the boats to make their purchases.

One gentleman, on purchasing an article on King Street, the price of which was 25 cents, and getting 15 cents change out of his dollar bill, was so chagrined that he vowed he never again would put his foot on Canadian soil.

The return to specie payments was much more rapid than any one had anticipated.

Mr. J. G. Bowes, who had filled the civic chair in 1848-49-50, and had been described as the ablest man who ever filled the office of Chief Magistrate up to that time, was again honored with the confidence of his fellow-citizens by being elected in the years 1861-62-63.

Mr. Bowes spared neither time nor expense in keeping up the dignity of his office and attending to his duties; his hospitality and benevolence extending far beyond the emoluments attached to the office. The respect in which he was held was most marked whenever he made his appearance, and the almost universal recognition accorded him was proof of his great popularity.

On public occasions Mr. Bowes always appeared in official costume, which, although not ornamented with the gold chain,

as the Lord Mayors in England, was most appropriate and becoming.

Dr. Russell, of the *London Times*, writes: "The city is so very surprising in the extent of its public edifices that I was fain to write to an American friend in New York to come up and admire what had been done in architecture under a monarchy, if he wished to appreciate the horrible state of that branch of the fine arts under his democracy. Churches, cathedrals, markets, post office, colleges, schools, mechanics' institute rise in imperial dignity in the city. The shops are large and well furnished with goods.

"In the winter time the streets are filled with sleighs, and the air is gay with the carolling of their bells. Some of the sleighs are exceedingly elegant in form and finish, and are provided with very expensive furs, not only for the use of the occupants, but for display. The horses are small, spirited animals, of no great pretension to beauty.

"The people in the street are well dressed, comfortable looking, well-to-do; not so tall as the people in New York, but stouter and more sturdy looking. Their winter brings no discomfort, as fuel is abundant, and when the wind is not blowing high the weather is very agreeable."

Anthony Trollope says: "Toronto, as a city, is not generally attractive to a traveller. The country around it is flat; although it stands on a lake, that lake has no attributes of beauty. The streets of Toronto are paved with wood, or rather planked, as are those of Montreal or Quebec, but they are kept in better order. I should say that the planks are first used in Toronto, and then sent down by the lake to Montreal, and when all but rotted out, they are again floated off by the St. Lawrence, to be used in the thoroughfares of the old capital."

This is somewhat hard upon Quebec, but is highly flattering to Toronto. But there is no rose without its accompanying thorn; at this time another writer informs us that if the streets of Toronto are better than those of other towns, the roads around it are worse.

"I had the honor," he writes, "of meeting two distinguished

members of Parliament at dinner some few miles out of town, and returning back a short time after they had left the host's house, was glad to be of use in picking them up from a ditch into which their carriage had been upset."

### The Death of Prince Albert.

On the 14th of December, 1861, occurred the most mournful event in the reign of Queen Victoria, the death of the good and universally beloved Prince Consort, Prince Albert, a double calamity to the kingdom, since it also removed for a long period from public life and public usefulness the affectionate and inconsolable Queen.

Not Britain alone, but all Europe, and distant India and America, felt this blow as the shock of an earthquake. In every place of worship throughout the land, on that fatal Sunday morning, the congregations met in deep sorrow, and the tears of multitudes were shed in regret for the bitter loss, and compassion for the heart-broken widow.

For even the distant homage due Her Majesty's high estate was swallowed up in the sympathy of woman for woman. Nor was she less revered as the mighty sovereign when recognized by all as the weeping widow, and true and earnest were the prayers raised for Her Majesty and her fatherless children.

England never saw King or Consort who so greatly won the respect, the confidence and love of his people. Under his quiet, unassuming and profoundly judicious influence the kingdom was blessed with prosperity and domestic tranquility, his children were trained in the paths of virtue, honor and religion, and the Royal Consort became not only an example to the country, but to all Europe. The blessings conferred on society by the good Prince Albert can never be forgotten, and posterity will regard with reverence the name of a Prince who, though early removed from earth, left behind him the glory of a holy and useful life.

"Only the actions of the just  
Smell sweet and blossom in the dust."

### Buying in Europe.

#### ITS PLEASURES AND RESPONSIBILITIES.

It has been said of a celebrated New York millionaire and merchant prince, that during his visits to Europe he would never turn aside to witness any exhibition or display that had not immediate connection with his own business; and yet it is a question whether, in the case of his own buyers who regularly visited the markets, such a course would not have deprived them of using one of the very best means of educating their taste and informing their judgment as to the results of the skill and the beauty of the productions of those who contribute to these exhibitions. Besides, all work and no play, in this as in every other department of labor, is not good policy.

There may be a few to whom a sea voyage is a pleasure, but to most persons crossing the Atlantic becomes a weary and monotonous duty, altogether apart from the dangers incurred. Not a few of the buyers with whom the writer was acquainted met with a watery grave. Wilson, of Toronto, Silver, of Halifax, and Cameron, of Montreal, are amongst the number.

The rule is, that the pleasure of the trip is confined to *terra firma*, and to combine business with a reasonable amount of pleasure is both desirable and profitable.

As one of the magnificent ocean steamers floats at anchor in the Mersey, or the St. Lawrence, or her dock in New York, she appears to the beholder a "thing of beauty," and on going on board, how often the exclamation is heard from untried passengers and their friends when they enter the main saloon, and gaze on the elegant carpets, luxurious sofas and arm chairs, mirrors, panels and gilding, the racks of shining glasses, satin damask curtains, handsome piano, etc., "How beautiful everything is, and how nice it must be to cross the ocean in such a vessel!"

Their admiration increases as they view the steward's pantry adjoining, with its glittering electro-plate and piles of earthenware, all fitted in so as to weather every storm, with a place for everything and everything in its place. Then the houses on

deck for butcher, baker, pastry cook, ice, vegetables and meat, and the perfection of ranges in the cook's gallery, are all inspected with pleasure. The bedrooms are next visited, with the purest of bed linen, toilet utensils, marble basins, damask curtains, electric bells, and so on to the engine room, and from stem to stern, the size of a pin's head of anything cannot be found out of place; all that art and skill, combined with wealth, can do to make a voyage pleasant and comfortable has been done.

And now the hour of sailing has arrived, and under a full head of steam the noble vessel moves out seaward, a thing of life as well as a thing of beauty. If sailing from New York, the decks are crowded with passengers as they pass Staten Island and view the charming villas and merchants' mansions so thickly studded all over that beautiful suburb. Soon outside of Sandy Hook, now for the first time the heavy swell and roll of the Atlantic is felt, and presently the scene changes. The indefatigable stewards are already at work. The elegant crimson silk-embroidered table-covers give place to the plain "Turkey red," and the satin damask to worsted. The linen covers are soon doing duty on sofas, where wet boots would prove fatal to rich plush covering, and the ominous guards are attached to the dining-tables, something which all sea-goers understand.

A certain lady writer has said that in naming the Cunard steamers in some of which she crossed, while there was a *Persia*, *Gallia*, *Etruria*, etc., it was a wonder that none had been named the *Nausea*; and Dickens said that on his first trip to America he counted twenty distinct smells; but that was long before the late improvements in ventilation and other matters, and must have included the smell of beautiful flowers in the saloon, and the fragrant odors of the cuisine; and yet there is something on board every ship to justify the lady's remark as to the feelings that are experienced when once on the "rolling, foaming billows." At the worst, at the present time, the voyage is short, and enjoyed greatly by most after the first *desagreements* are over, and England is soon reached.

The buyers who go to Europe from Toronto are chiefly

confined to the dry goods and millinery trades; while a few visit the markets for fancy goods and toys, a few more for china and earthenware, and one or two for jewelry, watches and watch materials; in these branches of business a visit twice a year, or once at least, is indispensable; and while a good share of pleasure may be enjoyed, in the variety of scene, the attentions of business men, and the delightful scenery through which the journeys lie, yet the responsibility is very great.

In the dry goods and millinery trades especially, the buyer is thrown very much on his resources as to whether he shall risk the novelties which are constantly coming forward, and then as to the quantity that would be safe. This applies, of course, to fancy goods, while as to goods of a staple character he must be wide awake as to *price*, which is the main point.

The responsibility is enhanced where one buyer has to select every class of goods; but even where the ground to be gone over only includes the goods for one large department, a buyer must not only possess judgment and taste, but have a quick perception of the value and suitability of the goods. Promptness of decision is absolutely necessary, as his time is valuable and limited.

Every buyer of dry goods must make Manchester one of his principal points; here, in the very heart of the cotton trade of the world his contracts must be made for printed and plain cotton goods, and many classes of dress goods and small wares. If he has time to go through the various mills and manufactories, he cannot fail to be instructed and interested; and as every experienced buyer has his eyes and ears open, he will gain information of great practical value.

The print trade must be regarded as one of the greatest importance, and the perfection to which these goods have been brought during the present century is one of the greatest triumphs of art and science, whether regarded as to the finish and style, or their marvellous cheapness.

As late as 1860, in the very district where calico printing is now carried on so extensively, Squire Raven owned the parish of Ravensborne, a fine estate in the most rural part of Lancashire.

In this parish he ruled supreme. By his orders, in the Squire's servants' pew on Sundays was ranged a row of serving-maids in the old Lancashire costume—a calico jacket, a Lancashire bed-gown, and a striped linsey-woolsey petticoat—a very pretty costume, no doubt, and formerly a costly one, for the old-fashioned chintz, in the good old days of Queen Charlotte, would have cost five shillings instead of five pence a yard. If the Squire's ukase had been as powerful in Parliament as in his own parish, the long line of manufacturing towns and villages which, beginning at the green oasis of said Squiredom, stretches into Yorkshire, and gives employment to millions of operatives, might be still in the future.

The cheapness of machinery has swept away a crowd of prejudices and flooded us with comforts and luxuries unknown to past generations. The reference to Lancashire takes the writer back to his former residence at Brandlesholme Hall, near Bury, just nine miles from Manchester.

From my hall door one could look out on a forest of factory chimneys, extending for miles in every direction. Yonder is the old seat of the Peel family, in which the late Sir Robert Peel was born, and here the calico printing, from the hand block work to the copper cylinder productions, has been carried on from its commencement. Just behind is the Peel monument on Holcomb Hill; on the other side is the Grant monument, erected in honor of the family of that name who, coming here from Scotland, by wonderful skill and industry in this trade, accumulated an immense fortune.

Away in the distance is Bolton, where, amongst a wilderness of factories, only one can be named—the firm of Barlow & Jones, who have supplied the world with quilts and counterpanes, all made and bleached in their own works. A little nearer is Ratcliffe, where the firm of R. Bealey & Co. divide some of the business with Barlow & Jones; and a buyer from Canada, and especially from Toronto, will be sure of a cordial welcome to the beautiful mansion, and grounds and conservatories of Mr. Bealey, as the writer can abundantly testify from happy hours spent in that delightful home.

The same may be said of the cotton spinning works of Mrs. I Robinson Kay, at Summerseat, the town being entirely occupied by the employees of the firm, some 5,000 finding employment and the kindest treatment.

In the Wesleyan Church a tablet to the memory of the late Rev. J. P. Hetherington, a most intimate friend of the family, is placed in the chancel, and in the adjoining yard is seen the tomb beneath which he is buried. This church is the free gift of the firm for the use of the work people, who with the family are the sole worshippers.

Walmersly House, the family residence, is a fine specimen of the princely mansions of these manufacturers; the furniture and decorations inside corresponding with the beauty and magnificence of the surroundings. Here has ever been found the most unbounded hospitality without ostentation, and finest style without a particle of affectation; and here delightful evenings were spent, which are pleasant to the memory of the writer.

Five miles on the other side is Rochdale, where the river Roche, after the water has been used in various ways, carries off the off-scourings of hundreds of factories, including those of Mr. John Bright and others, in the flannel and druggat trade.

Yonder are the paper works of Messrs. Wrigley & Co., who supply the London *Times*, and pay to the excise about £80,000 sterling a year.

All around are the works of the Rylands, Bannermans, Henrys, Westheads, Phillips's, Barbours, Hoyles, Ashtons Watts', etc. The sight at night, when the factories are lighted up, forms a fairy scene which is quite indescribable. The thousands of windows, as far as the eye can reach, illuminated, which, with the hum of machinery on all hands, show the enterprise of the capitalists (nearly all self-made men) who control this trade and give employment to such vast masses of people.

From Bury to Manchester trains can be had about every ten minutes, by a choice of three lines of railway, besides omnibuses, from the top of which a splendid view may be obtained, and a delightful ride on one of the finest roads in the world.

The nephew of the writer, Mr. J. C. Kay, proprietor of one of the oldest and most extensive foundries and engine works in Lancashire, will introduce any Canadian buyer who may call to any of these large manufactories, which will well repay a visit. His residence is Heaton Grove, and the works are on Bolton Street, Bury.

It will be evident from the advantage of being in the centre of this district, that a house with large capital and being in a position to place orders of from 50,000 to 100,000 pieces of prints, can always get bottom prices, besides being able to avail themselves of opportunities of a depression to get even below the cost of production.

The Tuesday meetings of the Lancashire manufacturers in the Exchange in Manchester is a sight which, once witnessed, is not soon forgotten. The hum of thousands of voices by which, without any visible signs in the way of goods or samples, and in the quietest manner, yarns and goods to the value of millions of pounds sterling change hands, is something marvellous. East Indian, Turkish, Greek, Australian, Canadian, and other resident merchants contract for goods for their different markets, while the spinner contracts with the weaver, and the weaver with the finisher or printer; the cotton is bought on the spot by telegraph to Liverpool for cash. The merchant or manufacturer in this way can calculate to a penny what his profit will be, and sometimes as many as 500,000 or 750,000 pieces of one line of shirtings, for Calcutta, are bought and sold in a few minutes.

A transaction was mentioned to the writer, in Manchester, in which such a lot of goods was sold in Calcutta in the morning and repeated four times in twenty-four hours by telegraph. A large portion of the trade of Canada in this class of goods has been lost to England through the competition with Canadian and American manufacturers, who produce on the whole a purer article.

One of the most interesting branches of manufacture in Manchester is the cotton velvet trade. The perfection to which cotton velvets and velveteens have been brought within the

last few years would in itself require a separate paper to explain.

Rivalling in lustre the very finest productions of silk velvets from Crefelt and Lyons, they possess a brilliancy and finish that fit them for the use of royalty itself ; and yet, wonderful as it may seem, these goods when taken from the looms in Lancashire are simply fustians, such as are worn by bricklayers and other artizans at their daily work ; very few would suppose that the process of turning these fustians into velvets is accomplished by boys and girls, thousands of whom are employed in that trade. The cloth is stretched on frames, and these boys and girls, with sharp-pointed knives, cut every thread so as to form the " pile " on the face, (this being done on the silk velvets by the threads being cut each time the shuttle passes through, but it is hand-work in the cotton trade,) and afterwards comes the singeing, dyeing and finishing, which brings them to a state of perfection that is truly wonderful.

Passing from the cotton to the linen manufactures, we remark that while Russia, Scotland, and England are large producers, we must go to the great centre of the flax-growing districts in the north of Ireland for the chief supplies. Not only Canada and the United States, but almost every country in the world, here find goods of every grade to suit their wants. Wherever you travel, by land or sea, alike in the cottage of the peasant and the palace of royalty, every table is furnished with the productions of the thrifty and enterprising linen bleachers and manufacturers of Ulster.

From the rough brown diaper to the finest bleached satin damask, all can be procured in this market. The navy and mercantile marine, and also railway companies of almost every nation, here place their orders for table linen and towels, and orders are taken for every design, whether Royal Arms, crests, monograms, names of vessels, or anything that may be required. These are woven into the fabric with exquisite skill. Cambric handkerchiefs in millions are here produced at prices low enough for the school-child, and others so fine that a microscope would be necessary to count the threads ; and lastly, the

threads (chiefly made in Gilford), as fine as a lady's hair, are produced by the perfection of machinery.

The buyer who visits this district in the season is delighted with the beauty of the plant from which all these fabrics are produced. The delicate blue flowers, as beautiful as the "forget-me-not," waving in millions in the breeze, as far as the eye can reach, is a lovely sight.

The view of immense tracts of country covered with the linen during the bleaching process has been partially changed by the introduction of chemicals.

Leaving the linen district proper, the buyer of shirts and collars, previous to the changes in the tariffs both of Canada and the United States, would visit Londonderry, where thousands of operatives are employed in this trade, although the goods manufactured there are sent to Glasgow to be finished and boxed. The trade in these goods has almost entirely dropped, nearly all the goods of this class being now made in Canada and the United States for home consumption.

To complete purchases in heavy linen goods, a buyer will go on to Glasgow, visiting Dundee, Dunfermline and other places, and will place his orders for white and printed muslins, winceys, handkerchiefs, shawls, and many classes of dress goods.

For Scotch tweeds, the neighborhoods of Hawick and Bannockburn will be visited.

Returning to England, the woollen districts of Yorkshire, including Leeds, Huddersfield, Bradford, Halifax, Heckmondwike, will be ransacked for cloths, blankets, and upholstery goods; and for carpets, Kidderminster and other places.

Nottingham and Leicester will be visited for lace goods and hosiery, and the buyer of millinery will take in Luton and Dunstable for straw goods.

Crossing over to the Continent, he will visit Lyons for velvets and silks, Grenoble for gloves, St. Etienne for ribbons, and in Paris he will select fine dress goods, and a variety of fancy articles of rare beauty and fine workmanship. Here he can select from a stock of fans, from 1 to 3,000 francs each.

The luxury of buying can only be experienced in Paris,

especially if the goods be artificial flowers. In an elegantly furnished room, on a luxurious sofa, the buyer will be waited on by ladies of refinement and taste, who with charming grace submit their samples of flowers for his selection. These are imitations of every natural flower, with many of a purely fancy character, either mounted or unmounted, and of exquisite workmanship. When the order is given and goods made, they are packed in cartoons got up in the well-known style of perfection.

Then visiting Switzerland, he will buy his embroideries in St. Gall, and silks in Zurich.

In Germany there are Chemnitz for fine hosiery, Crefelt for velvets, and Berlin for fancy wool goods.

In London he will complete his purchases, as here, in the great market of the world, he will find every manufacture represented, whether British or foreign.

It will be admitted that the position of a buyer for Toronto is no sinecure, and few require such a combination of qualifications. To be a successful buyer, taste, judgment, tact, promptness of decision, and self-reliance are all necessary; and while there are many pleasures connected with the travels of a regular buyer, there is much responsibility.

In London, buyers are paid from £500 to £5,000 sterling a year, according to their experience, £1,000 being a common salary. Buyers from Toronto for fancy goods, watch materials, electro-plate, toys, and such goods, do not go over as much ground as dry goods and millinery buyers, yet have to visit France, Switzerland and Germany, as well as London, Birmingham, Sheffield, and other places in England.

The grocery and hardware trades do not necessitate a regular system of visiting their sources of supply, the bulk of these trades being done by samples or through agents.

### **The Fenian Raid.**

In March, 1866, the Fenians had formed an elaborate military plan for the capture of Canada, including the seizure of the Grand Trunk Railway by Sweeny, with 30,000 men. A mass-

meeting, attended by 100,000 persons, was held at Jones's Wood, New York, and drilling went on openly all over the Northern States.

The most vigorous efforts were made to repel any invasion. Bodies of volunteers were despatched to the principal points along the frontier.

Bishop Lynch issued a circular denouncing Fenianism, and calling upon the people to repel the threatened invasion. A meeting of the St. Patrick's Society was held and Fenianism denounced. A Defence Committee was formed for the protection of the city, and liberal subscriptions were given amid great enthusiasm, the late Mr. William Cawthra heading the list with \$1,000.

At this time the Canadian forces consisted of 10,000 regular troops; 11,000 volunteers on frontier service; 15,000 volunteers ready for immediate service, and 80,000 militia balloted for and ready to be called out.

The excitement subsequently subsided for a time, till, on the night of the 29th of May, the demented creatures made a dash across the Niagara River from Buffalo, under Colonel O'Neill, and captured Fort Erie. The number was variously estimated at from 500 to 2000.

When the news reached Toronto the greatest excitement prevailed, as it was supposed by getting a foothold large reinforcements would soon follow, and that they would probably reach Toronto before their progress could be checked. The moment the news was received by the Government, troops, both regular and militia, were despatched as rapidly as possible from Toronto.

Two columns of troops were directed by different routes to Fort Erie; one—consisting principally of regulars, with a battery of field artillery, amounting to about 1,500 men, under the command of Colonel Peacock, 16th Regiment—proceeded by way of Niagara Falls and Chippewa; the other—composed altogether of militia, about 500 in number, under the command of Colonel Dennis—went by the Welland Railway through Port Colborne.

The Fenians remained in possession of Fort Erie till the morning of the 2nd of June, when they advanced towards Port Colborne. Colonel Booker, on whom the command of the militia devolved, found them strongly posted at Ridgeway. He immediately attacked them, at first with success, but finding himself opposed to superior numbers and his ammunition failing, he returned towards Port Colborne with a loss of six killed and forty wounded; the enemy suffering about equally.

Colonel Peacock did not reach Fort Erie till after night, when the Fenians re-embarked, leaving a few of their wounded and a few stragglers, in all about sixty men, in the hands of the Canadians.

The brunt of the battle fell upon the Queen's Own Rifles, five of whom were killed. They were so placed as to be without support, and behaved with the utmost gallantry. The bodies were removed to Toronto, and were displayed in the drill shed for several hours on a platform draped with black. The coffin of Ensign McEachran occupied the middle and front position, covered with the Union Jack; that of Corporal Defries was placed on the right, and that of Private Anderson on the left. The coffins of Privates Alderson and Tempest were placed behind and above, covered with flags. The procession from the drill shed to St. James' Cemetery was led by the band of the 47th Regiment. The Mayor and Corporation, with an immense concourse of citizens, accompanied the funeral. The burial service was read by the Rev. J. H. Grasset. Several other members of the Queen's Own died from the effects of wounds and exposure, amongst whom were Mewburn, Matheson, Leckie and McKenzie.

A handsome monument in the Queen's Park commemorates their bravery.

To prevent further attempts nine steamers on the lakes were temporarily turned into gunboats, and 20,000 troops stationed at different points along the frontier.

Colonel O'Neill, and other ringleaders, including a Protestant and Roman Catholic chaplain, were tried, and the writer was

present when the Colonel was sentenced to be hung. The sentence was not carried out, however, having been commuted to imprisonment in the Penitentiary; and so ended the great invasion.

#### Decimal Currency and American Silver.

During this period the Halifax Currency was abolished and the Decimal System introduced; at the same time all accounts in banks and warehouses were changed from pounds, shillings and pence to dollars and cents, thereby assimilating the whole system to that of the United States, getting rid of the confusion with sterling money and facilitating exchanges generally.

During, and subsequent to the American War, American currency became depreciated, and the premium on gold rose to a corresponding degree, at last reaching to 250 premium. The effect of this fluctuation was to drive the silver and gold in the United States out of circulation, leaving it in the hands of brokers and speculators, and specie became an article only to be bought and sold in the Gold Room in New York, where scenes of intense excitement might be witnessed every day. The effect of this was to send it over to Canada in large quantities, where it passed freely in the purchase of cattle and produce, as well as of every kind of merchandise, at a discount of from four to five per cent. The "nuisance" commenced when the banks refused to take it, and the greatest inconvenience was experienced by merchants, when making deposits or paying duties at the Custom House, and messengers were running round the city every day to get it changed into bankable funds. At the same time the want of a Canadian silver and copper currency was sorely felt. At this juncture the Hon. Francis Hincks, Minister of Finance, undertook to grapple with the difficulty, his first act being to issue twenty-five-cent paper "shin-plasters," and afterwards to get an Act passed for the issue of a silver and copper coinage, which was shortly afterwards shipped to Canada from the Royal mint. At the same time Mr. Hincks undertook, through the agency of Mr. Weir,

of Montreal, to buy up all the American silver in Canada and ship it back to the United States. The value of the same was reduced by the Government, and every precaution taken to prevent its re-importation. This put an end to what was long known as the "silver nuisance."

This decennial period was not marked by any extraordinary progress, being more a time of recuperation of resources than of actual advancement.

The importations at the end of 1866 were a little less than they had been ten years previously, amounting to \$6,340,679; the city expenditure was \$322,892, compared with \$299,848 in 1856; retrenchment and economy had been judiciously exercised and the future made all the brighter in consequence.

The opening of the Street Railway by Mr. Easton in 1861, from Yorkville to the St. Lawrence Market, was hailed with great delight, and a good deal of excitement took place when the first car arrived at the corner of King and Yonge Streets. The undertaking, not proving profitable, was afterwards handed over to Mr. J. G. Bowes, who was the owner up to the time of his death.

One or two locomotive engines had been built by Mr. James Good at his works on Queen Street, from whence they were taken down Yonge Street to the Northern Railway track with quite a display of pride on the part of the citizens generally.

Between 1860 and 1869 Toronto was visited by three Princes besides H. R. H. the Prince of Wales. After him came Prince Alfred, as midshipman in the Royal Navy; leaving his ship at Halifax he paid Toronto an informal visit, and was received with every demonstration suitable to the occasion. As Duke of Edinburgh he has since sailed round the world.

Prince Arthur, Duke of Connaught, arrived in Toronto in 1869, and won all hearts by his princely demeanor. Of more commanding presence than either of his brothers, his appearance created great enthusiasm. He appeared in a public procession and was loudly cheered. The Prince planted a tree in the Horticultural Gardens as a memento of his visit. The Grand Duke Alexis, of Russia, also paid Toronto a visit and was well received.

The increase of manufactures since 1856 was not very remarkable, and consisted of chemicals, brushes, confectionery, engines and boilers, pumps, scales, vinegar, trunks and saddlery, stained glass, carriages, refrigerators, and brass work, all of which gave employment to numbers of operatives, and contributed to the growth and prosperity of the city.

Notwithstanding the financial crisis and consequent depression experienced in Toronto during this period, improvements went on. Churches, banks, several benevolent institutions and private residences sprang into existence. The city continued to extend in every direction, and the population continued to increase. The Esplanade had been built, forming a continuous street, which proved a great convenience in reaching the wharves to which access previously could only be had by coming up from one wharf to Front Street and down to another, and the receiving and shipping of goods were greatly facilitated.

## TORONTO FROM 1867 TO 1877.

---

### Confederation.

When the clock struck midnight on the 30th of June, 1867, the joy bells of St. James' Cathedral rang out; it was the 1st of July, the birthday of the new Dominion. Confederation was accomplished and Toronto was once more a capital. The capital only of a Province, it is true, but that Province the wealthiest, the most enterprising, and the most populous in the Union. The day was observed by the greatest rejoicings in the city. What with bonfires, fireworks and illuminations, excursions, military displays and musical and other entertainments, the citizens and the thousands of strangers who crowded the streets did not want for amusement. Since the visit of the Prince of Wales no such day had been witnessed in Toronto.

To celebrate the event a banquet was given in the Music Hall, over the present Public Library room, at which the Hon. John A. Macdonald and Hon. George Brown were the principal guests, as having united for the accomplishment of this grand and crowning work. Their mutual interchange of compliments on the occasion, when each spoke of the other as respectively the greatest statesman and patriot Canada had ever produced, was a striking feature on this memorable and festive occasion.

### Paris Universal Exposition, 1867.

From December 1866 to January 1868, the writer crossed the Atlantic six times, keeping up a constant correspondence with Toronto, as far as circumstances would permit, a large portion of the time being spent on the water.

While Toronto was recovering from the reaction caused by the cessation of the American war, with the consequent loss of demand for Canadian products, and the alarm of further Fenian invasions was subsiding, important events were transpiring in Europe, some of which are memorable as matters of history.

The most remarkable trial of modern times, that of the Tichborne claimant, was going on in the Westminster Hall, London. London and Paris were visited by the Sultan of Turkey and the Viceroy of Egypt. The splendid Exhibition in Paris was the great centre of attraction for visitors from all parts of the world, amongst whom were numbers from Canada, and many from Toronto.

The building of the Paris Universal Exposition of 1867 was erected in the Champ de Mars. The palace consisted of eight elliptical galleries, intersected by sixteen transversal avenues, each about five hundred feet long, and all radiating from a central garden. These avenues were described as streets, named after the various countries whose particular section of the palace they abutted on.

There were the Rue d'Alsace, Rue de Normandie, Rue de Flandres, Rue de France, Rue de Lorraine, Rue de Provence, Rue de Belgrave, Rue de Russia, Rue d'Afrique, Rue de Prusse, Rue d'Autriche, Rue de Suisse, Rue des Indes, Rue d'Angleterre, Rue des Etats Unis, Rue de Canada, and the Grand Vestibule.

The palace had sixteen different entrances. The Exhibition Park filled the whole of the Champ de Mars from the Point de Jena to the Ecole Militaire, and was covered with buildings erected by all nations, representing the exact mode of life in each country, both as to the style of the interior and the costumes of the inhabitants.

The Russian stables and post-house were elegant looking buildings. The marble steps that led to the elegant ornamented polished steel doorway, were beautifully engraved and inlaid. The majolica balustrades were remarkably handsome. The stables contained stalls for twenty horses, which were led

every day by a Russian groom in the Czar's livery, and put through their paces. The Emperor's Pavilion was furnished and decorated in gorgeous style, and was an object of great attraction.

There was the Palace of the Bey of Tunis, the Prussian Garden and Pavilion, Egyptian Okel, and model of the Catacombs of Rome, model of the house of Gustavus Vasa, in the Swedish quarters, Turkish Mosque and Palace of the Pacha of Egypt, the Egyptian department with costumes and figures, the establishment of the Bey of Tunis, and the English Cottage and Terra Cotta Boiler-house. The outer of the seven concentric ovals, in the vast range of buildings, about one mile in circumference, was entirely taken up with restaurants of every nation in the world, where the attendants, in native costumes, served their own countrymen and others with refreshments to which they had been accustomed in their own country; and in addition, there were the magnificent Spanish, Swedish, Austrian, Turkish, Japanese and Chinese cafes in the Park.

No attempt is made to describe the wonders of the exhibits; one article only can be mentioned from amongst the long line of cases of Lyons silks, which were purchased by Grant & Gask of London—a silk dress, richly embroidered, was sold by that firm at their grand display after the Exhibition was over for £1100 sterling. This particular dress the writer saw, and was credibly informed of the price at which it was sold when in London.

The Sunday before leaving Paris on this trip was spent with several Canadians, amongst whom was Mr. Richard Brown, of Brown Bros., of this city. Having met at the Wesleyan Chapel in the Rue Roquepine, a visit was paid to the celebrated cemetery of Pere La Chaise, where repose the ashes of kings, queens, emperors, statesmen, poets, philosophers, musicians, painters, and all ranks of Parisians, down to the humble workman; and here crowds of people resort on Sundays to decorate the tombs. In the evening the sight of the Champs Elysees, at ten o'clock, being still daylight, was such as even Paris herself

has never witnessed before or since. The climax of splendor had been reached. From the Place de la Concorde to the Arch of Triumph was one stream of carriages, while on both sides the various exhibitions were in full blast.

The following Thursday, the 11th of July, may be regarded as the turning point in the history of Napoleon III. He had seen Paris arise under his direction, as with a magician's wand, to a point of unparalleled grandeur. Mile after mile of magnificent new boulevards had sprung into existence. The Exhibition had eclipsed all those which preceded. Paris had been visited by kings and emperors, and on the day named a grand review of the troops took place in the presence of Abdul Aziz, then the Sultan of Turkey; Ismael Pacha, G.C.B., Viceroy of Egypt, being there the same week.

This was the last peaceful military display ever witnessed by the Emperor. Not very long after the Franco-Prussian war broke out, terminating in the surrender at Sedan. "*Sic transit gloria mundi.*"

The same day the writer left Paris for London, accompanied by Mr. Richard Brown and the late J. H. Mead, who, being an excellent French scholar, as well as a gentleman of very general information, made a very agreeable fellow-traveller.

As an incident of the Exhibition, the writer had an opportunity of seeing the Empress Eugenie in one of the picture galleries, where from the peculiar shape of the building allowing no long views, the Royal party had the advantage of a quiet inspection. The Empress had become quite matronly in appearance since 1855, but still retained marks of beauty which were very attractive.

### Fenianism in Manchester.

While residing in Manchester, in 1867, the trial and execution of Allen, Larkin and O'Brien, for the murder of Policeman Brett, took place.

Two Fenian head centres, Kelly and Deasy—who were styled Colonel Kelly and Captain Deasy, officers of the Fenian Army—

having been arrested, were put in irons and locked in the police van with a number of other prisoners.

The van proceeded over Ardwick Green, and along Hyde Road, a fine open street nearly a mile in length, toward the prison. It was drawn by two horses and was guarded behind by seven policemen, with Brett inside the door, while each prisoner was locked in a separate compartment.

The van had proceeded about half up the road, when, in passing under the viaduct of the London and North-Western Railway, a volley of shots was fired at both horses and men. The policemen dropped from the van and spread themselves out wide. There was a rush of thirty or forty men (said to be Irish) upon the police and the van. One had a hatchet, another a hammer, and a third a bayonet, with which they set to work to break open the van; one man took a revolver and fired it into the lock. At last several men, with large stones, broke through the top of the van and the panels of the door behind, and set all the prisoners, including the Fenians, at liberty. The policemen collected in a body to prevent the prisoners from being liberated, and Brett refusing to give up the key, several revolvers were discharged. Sergeant Brett was shot over one of his eyes and died shortly afterwards. It was proved that Allen fired the fatal shot.

The trial which followed was one of the most remarkable in history. The Fenians threatened to burn up the city, and the greatest excitement prevailed.

Troops, including dragoons, hussars, and infantry, amongst which were the 42nd Highlanders, with artillery, poured into Manchester, while policemen from the surrounding towns were ordered into service. The splendid new assize courts, where the trial was held, was guarded by immense bodies of police, who were heavily taxed to keep back the crowds.

After every day's trial the police van was escorted to the prison by a strong body of military marching before, behind, and on each side, the whole width of the streets, while policemen stood on the van with loaded revolvers to meet every or any attack that might be attempted.

After the fullest and fairest trial Allen, Larkin, and O'Brien were found guilty and sentenced to be hung.

The writer—using his unfailing talisman to gain admission to every place of interest after working on the feelings of a policeman for nearly two hours, and speaking of Canada and America—succeeded in getting admittance to the Court Room, and was present when the death sentence was passed.

Larkin, amid the shrieks of some of the female relatives of the prisoners, jumped up in the dock and shouted "God save Ireland!"

The morning of the execution of these three men was so foggy that those on the opposite side of the street could not see the terrible spectacle. The streets around the Old Bailey at Salford, where they were hung, were barricaded with immense beams of timber, and all traffic was suspended till all was over.

The judges at the trial were Justices Blackburn and Mellor. For the prosecution, Sir J. B. Karslake, Attorney-General, and Mr. Hinman; for the defence Mr. Digby Seymour, Q.C., Mr. Sergeant O'Brien, Mr. Cottingham and Mr. Ernest Jones.

#### **Assassination of Thomas D'Arcy McGee, M.P.**

Having, when a young man of twenty-three, been one of the accomplices of the Smith-O'Brien rebellion in 1848, Mr. McGee escaped in the guise of a priest to America, and when the amnesty was granted became a loyal citizen of Canada; and at the time of his assassination represented Montreal West in the House of Commons. He was a man of high personal character, and of remarkable talents and accomplishments.

Mr. D'Arcy McGee was most earnestly opposed to the Fenian Conspiracy, and by speech and writing warned his countrymen against it.

On the night of April 7th, after an eloquent speech in the House of Commons in favor of loyalty and unity, he was shot dead from behind, at the door of his lodgings. The agent of the bloody deed was James Whelan. The murder was planned by forty Fenians in Montreal, among whom lots were

cast as to who should execute the deed, and the lot fell upon Whelan. He was hanged on the 11th of February, 1869.

Sir John Young was sworn in as Governor-General on the 2nd of February.

**Tariffs of England, United States and Canada from  
1869 to 1876.**

Having retired from the direct importing trade in 1869, the writer accepted the agency of the firm of Potters & Martin (Limited), of Manchester, England, for the United States and Canada. This firm had been established nearly a century before, the head at one time being Sir John Potter, under the style of Potters & Norris, and subsequently of Potters & Taylor; the present Mr. Thomas Bailey Potter, M.P., continuing the business till the introduction of Mr. Martin as partner, is well known as the friend of Mr. Cobden and Mr. John Bright, and is still the chairman of the Cobden Club, and a representative free trader.

Having been a buyer of American goods for many years, I had a good knowledge of the leading lines of their domestic manufactures, which up to a comparatively recent period had been limited in both number and extent; and having engaged three travellers to look after the Canadian business, I undertook to do all the American trade myself, and with this view got up an immense line of samples weighing some five hundred pounds, and comprising a full assortment of British dry goods, besides everything in French and German goods for which an order was likely to be obtained. During six years of this business I had the best opportunity of seeing the operation of the tariffs of the three countries. Every invoice passed through my hands, and all the correspondence, extending from Halifax to Winnipeg, and Baltimore to St. Louis, was carried on by myself directly, while the ground gone over twice a year was about 5,000 miles each journey.

The amount of business done in the States may be judged from the sales of the year 1875, representing in American money about \$300,000. That amount was done from a very few lines of the samples carried, and if a fair proportion of the

goods previously imported from England had been ordered the amount could have reached the millions. But the rapid growth of their manufactures from season to season, under the high tariff, gradually excluded line after line, and instead of having six hundred pounds of samples, one hundred pounds would be amply sufficient to represent all the goods there was any chance of selling, and by the end of 1876 the United States were independent of the world for all necessary goods; those which might be called luxuries only being required for their wants.

The firm which I represented did not seem to appreciate the real position of affairs, and in the face of these facts would supply me with lists of members of the Cobden Free Trade Club, amongst whom were a few American names, including that of Rev. Henry Ward Beecher.

To circulate literature of that kind amongst my clients would have been as ineffectual as the efforts of Free Traders in 1885, described by the Philadelphia *Free Press*, which says:—"The Free Traders are preparing to smash the tariff again. The performance will resemble the efforts of an over-ripe tomato to smash a stone fence."

In taking orders, it was necessary to take the American tariff constantly as a *vade mecum*. This required constant study, with its endless distinctions in specific and *ad valorem* rates, and both combined. It was evident that no branch of industry had been overlooked, and that every manufacturer, small and large, had been at Washington and had a clause inserted for his own benefit, and so the manufactures spread and grew with amazing rapidity. The average rate on our goods was about 60 per cent. *ad valorem*, and this was always payable in gold, the premium on which, during this period, averaged nearly 20 per cent. To illustrate the actual cost of foreign goods to the importer, it may be stated, that at the highest rate of duty paid this year (1886) in Canada, goods can be laid down at about 65 per cent. advance on the sterling cost, or 3¼ cents to the penny.

The simplest way the leading importers in the States used to

arrive at the probable cost of goods, in giving their orders, was the latter calculation of so many cents to the penny. As nothing in dry goods paid less than 35 per cent. *ad valorem*, no goods could be laid down at less than 4 cents, while most cost  $4\frac{1}{2}$  to 5 cents. The effect of this high rate of duty was to bring some British manufacturers to establish their works in the States.

Messrs. Coats and Clark, the great thread manufacturers, finding the difference in duty between thread in hanks and on spools to be so great (on the latter the duty, being specific, reached to an average of 72 per cent. *ad valorem*), opened large establishments in New Jersey, where now their thread is all spooled, giving employment to hundreds of operatives, and by so much depriving Paisley of the payment of these people's wages, and all the corresponding advantages. All this time American goods were being shipped to England free of duty, and the climax was reached when, on my last trip, I was asked to take samples of American cottons, these being largely sold close by the warehouse in Manchester, and offer them for sale in Canada (!) while not a yard of similar goods made in England was sold in the whole of the United States. This proposal I at once begged to decline; it would have been too humiliating. The goods referred to, admitted free into England, were liable at the time in the States to a duty of five cents a square yard, and ten per cent. *ad valorem*. This did not appear to me to be in any sense "fair trade" the opinions of the great Manchester manufacturers to the contrary notwithstanding. About the same time the firm of Randall, Farr & Co., of Hespeler, Ontario, who were extensively engaged in the manufacture of Alpaca cloths, not being able to compete with British goods, removed their whole machinery to Massachusetts, and never returned.

#### Metropolitan Church.

During the residence of Rev. Dr. Punshon in Toronto, the congregation worshipping in the old Adelaide Street Church, corner of Toronto Street, feeling the necessity of increased accommodation, as well as of having a building of more modern

style, in looking round for a site, fixed their attention on McGill Square, then about to be sold. The late Rev. Dr. Taylor and Dr. Punshon, with other members and trustees, soon secured the property, relying to a great extent on the services and influence of Dr. Punshon to raise funds for the erection of a church in the centre of the square.

The corner stone was laid in 1870, and soon the present magnificent structure appeared in its grand and beautiful proportions.

The building has so often been described, and is so familiar to both citizens and visitors, that any present description is quite unnecessary; besides, any attempt to describe the churches of Toronto would involve a larger amount of space, from the vast number that has sprung up of late years, than these pages could afford.

The Metropolitan Church with its beautiful grounds, so splendidly ornamented with trees and flowering shrubs, as well as flower beds, belongs not only to the Methodist body, but to the whole city of Toronto, forming, as it does, an open square, which is at once a boon and ornament to Toronto, and remains a lasting monument to the memory of Dr. Punshon, and also to Drs. Taylor, Ryerson and Green, as well as laymen who contributed liberally towards its erection.

While some churches in Methodism are more elegant and greatly more expensive, there is not one in the world—take it altogether, internally and externally, the grounds included—which, in all its appointments, is so complete as the Metropolitan Church of Toronto. Messrs. Langley & Burke were the architects.

A beautiful stained glass window, in memory of Mrs. Punshon, who died at their residence on Bond Street, was placed by Dr. Punshon in the south-west gallery.

#### In 1870 and 1871

Toronto had become a very important commercial centre. The principal streets wore an aspect of staid, unpretentious prosperity. They had begun to spread out indefinitely; the area of

METROPOLITAN CHURCH.

the population had been widely and rapidly extended. From the Provincial Lunatic Asylum on the west, to far eastward beyond the Don, stretched mile upon mile of densely populated thoroughfares. To the northward, Bloor Street had long since ceased to be anything more than a nominal boundary between Toronto and Yorkville. The Esplanade on the City front had become a hive of railway and general industry. Jarvis Street had been beautified with elegant and stately residences. King and Yonge Streets continued to monopolize the lion's share of the retail business; but Front and Wellington had developed into the centre of the wholesale trade, and many large and wealthy establishments had headquarters there.

A writer in the *Canadian Illustrated News* (Montreal), at this time indulges in some rather severe strictures on the aspect of our streets, which he describes to be, generally speaking, either dirty or narrow, with the light of heaven almost shut out; or broad, wretchedly paved, certainly with a number of sufficiently handsome houses, but at the same time with an undue preponderance of common, and generally having the appearance of being laid out on the sand-flat. He admits, however, that Toronto possesses two principal streets, sufficiently broad, well lit, and well paved, and lined with handsome shops. Some of this gentleman's comments on the social aspect of the streets are suggestive and entertaining.

“Between the two principal streets of the Western Capital is a great gulf, made by the inflexible laws of society and fashion—a gulf as great as separates the Bowery from Broadway, the Rue de Rivoli from Rue Mont Parnasse, or Regent Street and Rotten Row from the humble thoroughfares of Pentonville and the City Road.

“The buildings on King Street are greater and grander than their neighbors on Yonge; the shops are larger and dearer; and last, but not least, King Street is honored by the daily presence of the aristocracy, while Yonge is given over to the business of the middle-class and the beggar. Amid the upper classes there is a performance that goes on daily, that is known among *habitués* as ‘doing King.’ It consists principally of

marching up and down a certain part of that street at a certain hour, performing, as it were, 'Kotow' to the goddess of fashion, and sacrificing to her sister divinity of society.

"At three o'clock in the afternoon the first stragglers appear on the scene, which extends perhaps a quarter of a mile. These consist principally of young ladies, whose proper place should be at school, and young men attired in the height of fashion. By the time these ardent devotees have paraded a few times, the regular *habitués* make their appearance, and till six o'clock in the evening one side—for one side only is patronized—is crowded to excess.

"It is rather considered 'the thing' to patrol King Street in this manner; and of a fine evening every one who belongs to the *elite*, as well as many who do not, may be seen perseveringly trudging up and down, no doubt to their great comfort, and to the intense discomfiture and dismay of others less smiled upon by nature or less favored by their tailors or their dressmakers. King Street is in a way a great social 'Change,' where everybody meets everybody and his wife; where the latest fashions are exhibited, and the last quotations of the matrimonial market are exchanged.

"Would you see the newest style in hats or panniers? They are to be seen on King Street. And would you know how many young swells are doing nothing for a living? You are sure to find them on King Street. Would you wish to hear the last imprudence of young Harum Scarum, or the progress of Miss Slowcome's engagement? You may be sure before you take half-a-dozen turns some conversant, intelligent busy-body of your acquaintance will have whispered the facts of the case in your ear, all of which he has 'on the best authority, sir.' It is on King Street that Clelius makes his appointment with Clelia for their afternoon walk; that Thersites, jealousy stricken, scowls at Adonis; and that Pomponia depreciates the value of her dear friend Amaltheus' new silk and trimmings. There Cornelia, the careful mother, brings out her treasures and exhibits to the public gaze those desirable lots of which she is so anxious to dispose on advantageous terms. While far above

all, Diogenes, in his garret, little more roomy or commodious than the ancient 'tub,' looks down upon the motley throng, notices their petty follies and foibles, and thanks his lucky stars that he is not as other men."

In 1871 the population was 56,000, an increase in ten years of 11,000. During the next three years Toronto, in common with the Province, enjoyed an unexampled epoch of prosperity. A remarkable impetus was given to all the usual branches of trade; and the commerce, both wholesale and retail, assumed such proportions as not even the most sanguine had hoped for. More than 13,000 were added to the population, and both public and private enterprise kept pace with this rapid increase. The streets were full of bustle and activity.

Mercantile palaces were built by some of the leading houses, and many of the finest mansions and most beautiful churches in the city were erected.

The progress made since Confederation had been amazing. Not only had its area and population largely increased, but it had been greatly beautified by the erection of huge business establishments, and palatial private residences; and it had developed a commercial enterprise and energy which seriously endangered the pretensions of Montreal to the mercantile supremacy of the Dominion.

It was during 1872-74 that Toronto began to make the rapid strides in commercial enterprise that placed her in the proud position she now occupies. They were years of unusual prosperity, and trade of all kinds received a remarkable impetus. Happily the foundations then laid of the city's mercantile greatness were sufficiently solid to resist the shock of the reaction that followed.

In July, 1873, a delightful passage was made to England in the Allan steamer *Polynesian* from Quebec. After passing through the Straits of Belle Isle large icebergs were seen, while the weather was that of summer. Amongst the passengers were Dr. and Mrs. W. T. Aikens, of Toronto, and the family of Mr. and Mrs. Gammon, of Chicago, visiting Europe for the first time. The fine weather gave an opportunity for games of

various kinds on deck, those of shuffle-board and quoits being the favorites. A very pleasant time was spent in London in sight-seeing.

#### Return of Rev. Dr. Punshon to England.

During my stay in Manchester, in 1873, the late Rev. Dr. Punshon—who, had he lived, would have done as much to recommend Canada, and Toronto in particular, to the attention of the English people as any other man, having frequently stated he was bound to the country by the dead and the living—returned to England. In company with Dr. Gervase Smith and other friends, we met him at the railway station on his arrival from Liverpool.

The Wesleyan Conference being then in session in the Free Trade Hall, the Doctor was expected to attend one of the evening meetings. The Conference, numbering about six hundred ministers, occupied the great platform, while the audience was fully six thousand in number.

Dr. James occupied the presidential chair, and all were on the *qui-vive* for the appearance of Dr. Punshon, who was known to have arrived. Soon he entered quietly at the back of the platform and took a seat, but was instantly recognized, when the immense audience stood up, and between clapping of hands and waving of handkerchiefs, round after round, the scene baffles description. For the time all the Doctor could do was to stand with head bent down and eyes streaming with tears, until an opportunity was given afterwards for giving expression to his feelings in words. It was a scene never to be forgotten.

In 1874 a voyage from England was made in company with several Toronto gentlemen, including the late Rev. Dr. Jennings. One of the passengers was the now celebrated Mr. Joseph Arch, M.P., who, it is reported, took the oath in the House of Commons dressed in a suit of corduroy, and appeared at a banquet given in his honor, amongst a number of noblemen and gentlemen, dressed in a tweed suit.

Mr. Arch was accompanied by a secretary, and represented

the Laborers' Trade Union of England; himself a working-man. Their object was to get information as to the desirability of emigration on a large scale. After travelling extensively through Canada and the United States they returned to England, but no practical results followed.

On the passage many lively discussions on politics took place, in which Mr. Arch showed himself to be a man of good common sense and of moderate views, with a decided tendency to the democratic side. He is a Methodist local preacher.

### St. James' Cathedral Clock.

About ten years ago the citizens of every denomination united to purchase the world's prize timekeeper from Benson & Sons, of London, and succeeded in placing it in the tower on Christmas Eve, 1875.

This clock possesses a threefold movement, *viz.*, keeping time, chiming, and striking the hours and quarter-hours. The combined weights to keep it going are over three thousand pounds; the pendulum is over sixteen feet in length, the end weight being two hundred and fifty pounds. The quarter-hour chimes are a copy of the famous Cambridge chimes in England, composed by Handel one hundred years ago, and may become in time, to citizens of Toronto, what Bow Bells are to inhabitants of London.

The year 1875 had been marked by a very perceptible reaction in the commercial world of Toronto.

The year 1876 came in gloomily, and with murmurs against the trade policy, and yet improvements went steadily on. New streets were being opened up in all directions, and the population went on increasing.

At the close of 1876 the imports to Toronto had reached \$11,231,543; the value of taxable property was \$47,150,362, and the population had grown to 71,693. It will be seen from the above that the value of the imports had nearly doubled in ten years; the greatest increase having taken place between 1871-72. After a period of prosperity a time of depression set

in that continued till 1878, when the city began slowly to recover from the effects of evil times.

Several new and additional manufactures had been introduced, amongst which were fine jewellery, steam gauges, engines and general machinery, watch cases, elevators, rubber stamps, cork cutting and varnishes.

The highest point the duty had reached up to this time was twenty per cent. *ad valorem*, except on one or two articles on which, by way of incidental protection, twenty-five per cent. was charged. These goods were principally ready-made clothing.

# TORONTO [FROM 1877 TO 1886.

## Protection versus a Revenue Tariff.

The question of Protection *versus* a Revenue Tariff, inaugurated in 1878, brought in the Tilley Tariff and National Policy.

Previous to 1858 the manufacturing industries of Toronto were few and small. At this time, in the Parliament of United Canada, then sitting in Toronto, a protective tariff was introduced by Inspector-General Cayley, the rate being twenty per cent., and, as previously stated, on some goods twenty-five per cent. The improvement was soon perceptible in the immediate impetus given to manufactures, which continued till 1866, when Inspector-General Galt cut down the tariff to fifteen per cent., producing a disastrous change. Manufacturers who had invested large capital in machinery, at once losing confidence, became discouraged, and commenced to withdraw their capital from what appeared to be a policy of fluctuation and uncertainty,—a state of things which continued till 1878.

It will be seen by comparison with the Tariff of the United States that in general the principles are the same. Although the rates of duty in Canada are much lower there is evidence of a similar arrangement for the protection of home manufacture, especially those in actual operation throughout Canada.

## Exhibition Buildings.

These magnificent buildings were opened by His Excellency the Earl of Dufferin, in September, 1878. The palace is built with solid brick foundations, with sides and roof of glass, and

affords admirable accommodation for the display of goods. The cost of the buildings was \$250,000.

Through the suggestion of Mr. J. J. Withrow, the indefatigable President of the Industrial Exhibition Association, the whole of the material of the original Crystal Palace was utilised in the erection of the present building, thereby effecting a great saving, and accounting for the similarity in appearance of the two buildings. The design was copied by Mr. Sandford Fleming from that of Sir Joseph Paxton for the London Crystal Palace, in 1851.

The grounds, sixty acres in extent, are the finest in the Dominion. They are most beautifully situated on the shore of Lake Ontario, and from there a splendid view of Toronto and the surrounding country and lake can be obtained.

The other buildings comprise horticultural and machinery halls, apiary, dairy, and horse and cattle pens, etc. The buildings and grounds are kept in the most perfect order.

#### The Marquis of Lorne and H.R.H. the Princess Louise.

The appointment of the Marquis of Lorne to succeed the Earl of Dufferin as Governor-General of Canada gave great satisfaction.

The Vice-regal party sailed from Liverpool on the 14th of November, 1878, in the Allan steamship *Sarmatian*, and arrived in Halifax on the 23rd, having had a very rough passage. They were met by the Duke of Edinburgh, who, with a naval squadron, had come to meet his royal sister. Leaving for Montreal the following Wednesday, and stopping at various places on the way, they arrived in Ottawa in a few days.

The Governor-General held his first New Year's Day reception at Rideau Hall on the 1st of January, 1879.

Their first visit to Toronto was on the 20th of January, on their way to the Falls, and was quite informal; their object being to get a winter view of Niagara.

The lamented death of the beloved Princess Alice had occurred on the 14th of December. Under the circumstances it

EXHIBITION BUILDING.

was considered best to defer the Vice-regal visit till after the harvest of 1879, and the Governor-General having consented to open the Exhibition, the date of their visit was fixed for that time.

When Toronto had been visited by three princes it was scarcely expected she would so soon afterwards be honored by a visit from one of Her Majesty's daughters, and when the announcement of the appointment of the Marquis of Lorne as Governor-General was made, it was received with intense pleasure.

The Earl of Dufferin, in his speeches on the occasion, in truly eloquent and beautiful language described the character of the Princess Louise, and congratulated the country on this distinguished mark of the Queen's love and affection for Canada, in consigning her favorite daughter to her care; at the same time portraying the character of Her Royal Highness, from actual knowledge, in colors which he well knew how to use. As an artist, musician, and scholar, she excelled in every accomplishment, and her benevolent and kind disposition was truly and beautifully described.

Her visits to Toronto fully confirmed the description given by His Lordship, and Toronto fully sustained her reputation for loyalty by giving the Vice-regal pair a right hearty reception. The party arrived in Toronto on September the 4th, and were received with a guard of honor, and by all the civic and military dignitaries.

The Exhibition was opened on September the 6th by the Marquis and Princess Louise, amidst great enthusiasm. There was a general illumination at night. They left for London on the following morning. Returning on the 18th, Her Royal Highness laid the foundation stone of the Home for Incurables, and the Governor-General presided at the opening ceremony of the Credit Valley Railway.

During this and subsequent visits all the public institutions were inspected, especial attention being given by Her Royal Highness to those of a charitable and benevolent character, including the General Hospital.

The Grand Opera House was destroyed by fire in November, 1879.

On the 25th of March, 1880, the Hon. George Brown was shot in the thigh and succumbed to the effects the following May. The funeral was attended by an immense concourse of people, and business was almost entirely suspended while the procession was passing. Bennett, the murderer, was tried and executed for the crime.

In June, the Hon. John Beverley Robinson was appointed Lieutenant-Governor of Ontario.

During this year Prince Leopold visited Toronto, accompanied by the Marquis of Lorne and the Princess Louise on their third visit. The Princess and Prince Leopold left for England by the steamer *Polynesian*, on the 31st of July.

On the 6th of August a fight occurred between Roman Catholics and Orangemen, and one policeman was fatally wounded.

Dr. W. H. Russell writes: "Toronto, seen under the most disadvantageous circumstances" (it was pouring rain when his party arrived), "was voted to be very surprising, and my friends were not prepared for such fine buildings and such a great array of wharves and quays on the bay, and the great fleet of craft alongside them. Toronto has increased in all the elements of wealth and consequence by bounds, and since 1861, when I was there, the population has doubled and is still increasing very rapidly."

The Doctor pronounces the University to be worthy of a great nation, a noble Norman pile, beautifully situated.

#### **Farewell Visit of the Vice-regal Party.**

Having on several occasions expressed the pleasure with which they visited Toronto, the Marquis of Lorne and Her Royal Highness the Princess Louise, before leaving Canada, paid a farewell visit to the city.

On the 12th September the Vice-regal party arrived at the Union Station, and were received with a guard of honor of one hundred men of the Royal Grenadiers, accompanied by their

band. A large number of civic and military dignitaries were present to welcome the distinguished party.

Additional interest was manifested from the fact that another member of the Royal family, Prince George of Wales, second son of His Royal Highness the Prince of Wales, was with the Vice-regal party, and for the first time in Toronto. The first day was spent in visiting the public institutions, including the Home for Incurables, General Hospital, Infants Home and House of Providence

In the evening they attended a concert in the Horticultural Pavilion, given by J. T. Thomson. The artists were Signori Brignoli, Poggi, Adamouski, Madame Teresa Carreno, and Miss Carrie Mason.

The next day the Exhibition was visited, and preparations were made to present the Marquis and Princess Louise with a farewell address. By one o'clock the Queen Street Avenue was lined with immense crowds of people, while detachments from the Queen's Own Rifles and Royal Grenadiers took up their positions around the gates of the enclosure. An archway was erected on the mound which rises in the centre of the flower plot, surmounted with the Royal Arms, hedged in on either side with flags, and decorated with flowers, and having the words "Welcome to Toronto," "Lorne and Louise," artistically displayed.

The steel helmets of the Body Guards were the signal of the approach of the Vice-regal party, and amid a down-pour of rain they entered the enclosure and stood on the dais, in front of which about 3,000 people presented an unbroken covering of umbrellas. As they made their appearance, cheer after cheer arose from the assembled multitude, the pouring rain being ineffectual to dampen their enthusiasm. When the cheering for the Marquis and Princess had subsided, some one called out for three cheers for Prince George. Not catching the words at first, as referring to himself, the Princess turned towards him and pleasantly said, "That's you." The cheers were given heartily, and Prince George bowed his acknowledgment.

When the ceremonies were ended the Princess drove to the

Hospital for Sick Children, and the Marquis to the Exhibition. They left Government House on the 14th; Toronto, as usual, having done herself honor in this display of genuine loyalty.

#### Arrival of the Marquis of Lansdowne.

The new Governor-General, Lady Lansdowne and suite arrived by the Allan steamer *Circassian*, at Quebec, on the 23rd of October, and were met by Lord Lorne and the Cabinet. The Marquis of Lansdowne took the oath of office the same day, after which they proceeded to Ottawa.

#### FIRST VISIT TO TORONTO.

On the 9th of January, 1884, His Excellency the Governor-General, Lady Lansdowne, Lord and Lady Melgund and suite arrived at the Union Station, where they were met by His Honor the Lieutenant-Governor and Captain Geddes, A.D.C.

A guard of honor from the Queen's Own Rifles, composed of one hundred men and the Band, assembled to meet the distinguished party, who were immediately driven to Government House.

The first day was spent in sight-seeing. The route taken was through the principal streets to the University. In the evening a large number of the leading citizens were invited to meet the party at Government House.

The next day they went to the Falls, and crossing the new Suspension Bridge, were landed on American soil for the first time in their lives. On their return to Toronto on the 12th, His Excellency proceeded to the City Hall to receive the Address of the Corporation, to which he replied in the most felicitous terms. The Vice-regal party visited the Hospital and other institutions. The Marquis and Lord Melgund visited the Granite Rink and attended the ball of the Royal Canadian Yacht Club.

In letters to the London *World* addressed to eminent persons, an independent critic said, at the time of his appointment as Governor-General of Canada, to the Marquis of Lansdowne:—

“There is no Englishman of your age whom I could congra-

HIS EXCELLENCY THE MOST HONORABLE THE MARQUIS OF LANSDOWNE,  
G.C.M.G., ETC., ETC., GOVERNOR-GENERAL OF CANADA.

tulate with equal warmth and sincerity upon the assumption of an arduous and anxious post. Everything is in your favor. You carry with you more than promise, more even than the first fruits of performance.

“A singularly blameless youth was crowned with the highest honors at the first University of the world. The advantages to which you were born, and which are not possessed to the same extent or in the same degree by any but the peers of historic English titles, have been turned by you to admirable account. You have acquired a valuable insight into the routine of office, and you have shown, both in the House of Lords and elsewhere, that you possess that power of speaking which is indispensable to public men of your race.

“The Canadians will recognize in Lady Lansdowne a guarantee that they are about to welcome a Vice-Queen after their own heart.”

#### The Semi-Centennial Celebration

took place in Dominion week. The 6th March was celebrated by the opening of the Free Library by the Lieutenant-Governor, and a reception by the Mayor in the City Hall, this being the proper day for the commemoration of the birth of the city in 1834 ; but it was deemed advisable to postpone the celebration till Dominion week.

The celebration commenced on Monday, 30th June. Flags, bunting, mottoes, and evergreens were used in the decorations, and the scene, looking down one of the principal streets, was simply a vista of fluttering colors. The whole week was given to pleasure, and thousands of sight-seers, from all parts of the Province and the United States, crowded the city.

Monday, June 30th, was the municipal and historical day, specially commemorative of the city's municipal organization and progress. The procession comprised municipal bodies, police, fire brigade, etc.

Tuesday, July 1st, military day ; grand street parade and review, comprising visiting and city corps to the extent of over four thousand men.

Wednesday, July 2nd, trades and industrial day, specially commemorative of the progress and standing of the commercial interests of the city. The parade comprised members of the different labor organizations of the city, each with a tableau, illustrative of the trade followed; also representatives with illustrative tableaux from all the mercantile and manufacturing establishments of the city. It consisted, in part, of waggons, on which various mechanics were plying their daily vocations.

Thursday, July 3rd, "U. E. Loyalists" day, commemorative of the settlement of the U. E. Loyalists in Canada, one hundred years ago. In the afternoon there was a reception at the Government House, and in the evening the Oratorio of Redemption was given at the Horticultural Gardens, also a grand display of fireworks in the harbor, and imitation naval combat.

Friday, July 4th, benevolent societies day; parade comprising uniformed and un-uniformed lodges of Masons, societies of all kinds, etc.

Saturday, July 5th, commemorative of our educational institutions. The parade comprised over 8,000 children from the public and separate schools of the city.

### **Captain Joseph Dutton, R.N.**

This popular and favorite Commander, as Commodore of the Allan Line, always took charge of the newest ship; and having had the pleasure of his personal acquaintance, I desire to pay some small tribute to his memory.

On land an accredited local preacher of the Wesleyan Church, he never failed to fulfil the duty on board his ship, except by consent to give place to regularly ordained clergymen. Those who have crossed with him will remember his appropriate sermons and his leading of the singing, while he accompanied himself on his melodeon, which he always had in addition to the piano belonging to the ship. Not alone in the saloon did he study to please and profit the passengers by getting up concerts, but on certain nights in the week, and also on Sunday afternoons, he got the sailors to carry his melodeon into the steerage, much to the delight of the passengers. Here, accompanied by

a number of the saloon passengers, he would sing and play and then call on those around for a song or recitation, the response to which often showed a wonderful amount of talent, scarcely to be expected from such a motley crowd, many of whom, who, from necessity or economy, were travelling in this way, would put to the blush those who would not deign to associate with them on the saloon deck.

As a total abstainer Capt. Dutton was a pattern of firmness and consistency. On his ships no sailors were allowed any intoxicating liquors, and in his place at the head of the table, while surrounded constantly by the most distinguished passengers who had the place of honor, neither wine nor other liquors ever passed his lips. At the same time he never interfered with the chief steward, who attended to the wine list—and every passenger ordered what he wanted *ad libitum*—but kept on the even tenor of his way, always ready to “crack a joke” when chaffed on his temperance principles, giving offence to none and setting a good example to all. Once a week he delivered a temperance address in the steerage. His genial manners, united with the fearlessness and bravery of the true seaman, inspired every passenger with the most perfect confidence in times of danger. When relieved from the severe duties incident to stormy weather, all his efforts were directed to make the time pass pleasantly for the passengers, a contrast in this respect to many who were almost unapproachable beneath the weight of their responsibility. His pleasant humor turned at one time on composing what himself and his intimate friend, Dr. Punshon, called “logograms,” which consisted in making the name of a town or city out of a sentence given impromptu.

The writer, having on one passage lost his perpendicular by a sudden lurch of the ship, saved himself from an actual fall by grasping a rope attached to one of the life-boats, but in doing so was caught by another rope, taking the skin off his legs, and causing him to lie on a sofa in the saloon for several days. Capt. Dutton soon propounded as one of his logograms, “Mr. T. has a sore leg.” The answer was shortly given in the

name of the town "Sorel." Many a dull hour was relieved and enlivened by such innocent amusement.

In these days of fast sailing a passage made in the *Poly-nesian*, under command of Capt. Dutton, in five and a-half days from sight of land to land, is worthy of mention. Although faster sailing has been made from Sandy Hook to Queenstown, this was the shortest sea passage of which there is any record.

Those who have seen the Captain's family come out from New Brighton on the Company's tender to meet him, and have seen the joy of all, will sympathise with them in their loss, which will also be felt by those who waited for his ship to have the pleasure of crossing with him.

#### Population of British Cities.

Professor Seeley, speaking of the expansion of England, says: "As an instance of a lack of a due conception of the spread of the British race, how many people, on being asked to enumerate the twenty most populous British cities, would think of including Melbourne, Sydney and Montreal. And yet, leaving London with its five millions out of the list, the following are the fourteen chief cities and towns in the order of population :

<i>City.</i>	<i>Population.</i>	<i>City.</i>	<i>Population.</i>
Glasgow .....	671,595	Sydney .....	250,000
Liverpool .....	573,202	Dublin .....	249,602
Birmingham .....	421,258	Edinburgh .....	236,002
Manchester .....	338,296	Bristol .....	215,457
Leeds .....	327,324	Bradford .....	209,564
Melbourne .....	305,000	Nottingham .....	205,298
Sheffield .....	300,563	Montreal .....	200,000

And in the next fifteen would be found Adelaide and Toronto, each with over 100,000 inhabitants."

He proceeds to remark of Toronto, that it is "a political centre of great activity, where originate plans and projects that largely influence Dominion politics; the tone of its intellectual life is higher, and it is generally admitted that there is a more assured type of culture and urban refinement by the shores of Lake Ontario than even in the Island of Montreal."

Comparative Population of Seven Canadian Cities.

	1871.	INCREASE IN TEN YEARS.	1881.	PER CENT. OF INCREASE.	1884.
Toronto .....	56,092	36,323	86,415	54.05	102,000
Montreal * .....	107,225	33,522	140,747	31.21	200,000

\* Since 1881 Montreal added Hochelaga with 40,000.

In reference to Toronto, the Fredericton (N.B.) *Reporter* says, "The growth of Toronto is something astonishing. The census of 1881 gave that city a population of 86,415. In 1885 the assessors' returns place it at 111,800, and this may be regarded as under the mark, as the census would be taken in a more liberal manner. That city is now fast approaching Montreal in the number of its inhabitants, and when the next census is taken, if it continues to make the same rapid progress it has in the past five years, it may be the first city in the Dominion in numbers. Its growth in wealth and its substantial improvement are very remarkable."

Climate of Toronto, 1885.

Toronto is situated in North Latitude 43.49, and West Longitude 79.71; 5 hours, 17 minutes and 26 seconds later than Greenwich time.

While writing the above, on the 19th of January, 1886, at one o'clock in the afternoon, the thermometer stood at thirty degrees, just sufficiently below freezing-point to prevent a thaw. The universal desire was expressed that we would not lose our snow, the sleighing being good and everybody wishing it to continue. The disappointment felt by the absence of snow at New Year's would seem strange to people in Britain, but is well known to those who have resided in Canada any length of time. The thermometer is in this respect a sure indicator of the state of trade, which rises or falls according to whether we are favored with a good fall of snow or otherwise, its absence being regarded as a calamity by all business men; so any feeling of compassion towards us by those at a distance on the ground of climate would be entirely thrown away.

As to the fall of rain, it will be sufficient to mention that nature is very propitious; there always appears to be a supply of the right degree and at the right seasons for all agricultural purposes.

In 1885 the number of days on which rain fell was 103; the average in forty-five years, 112 days.

As to whether more rain is desirable or beneficial there will be a difference of opinion. The writer never left his home in Lancashire, summer or winter, without an umbrella, and it was said that rain fell in the neighborhood of Manchester about 250 days in the year. The effect of this was to keep every bit of grass in a state of constant verdure unknown in America, but it may have disadvantages as great as the absence of such a quantity has in Canada.

The quantity of fruit shipped to England will show that the climate is well adapted to the ripening of all vegetable productions, which abound in perfection in the neighborhood of Toronto.

The pictures representing Canadian winter costumes are very misleading, and a plain statement of facts from actual experi-

ence will form a more correct standard than that of any thermometrical character.

If I were asked in England why the ladies in Canada wear furs, I should reply that they also wear them there, and very nearly to as great an extent, and partly because it is the fashion as well as for comfort. If asked why men wear heavy fur caps and coats, I should say it was the fashion also, and not so much a necessity. In no city in the United States, where the cold is quite as great as in Toronto, can you find men wearing the headgear referred to, and a Canadian is instantly recognized when appearing in this costume; so that it is evidently not because of the rigor of the climate, and yet it is one of these things that tend to fasten this idea on the minds of people abroad.

The first winter the writer spent in Toronto he was much struck with this fact, and not to possess a "set" of furs—consisting of a great cap, a pair of gauntlets up to the elbows, and a fur muffler, made out of a whole mink or fox skin with the head carefully preserved and worn as an ornament in front—was to make yourself a marked man and altogether unfashionable. Nevertheless, the writer, who soon commenced going back and forward to England and France, persisted in wearing his usual clothing, and from that time to the present has never worn one single article different from what he wore on the other side of the Atlantic, and on the ocean in winter.

The heaviest outer garment was a heavy beaver coat with a fur collar, and this did service on land and sea in the most severe weather, and was found just as necessary on a night journey from Manchester to Glasgow as in an open sleigh in Canada. An ordinary felt hat was the warmest head covering, and no inconvenience was felt from want of fur.

I will state one fact for the information of those who pity Canadians who have to travel in winter. I have driven from Toronto to Kingston, in what I will call a one-horse sleigh (known here as a cutter), 180 miles in three days, and returned in the same time; with snow so deep that I was in danger of overturning in the drifts, and with no warmer clothing than I have

described, except to have a buffalo skin for knee covering; and felt no more discomfort than I have experienced in one of the journeys from London to Liverpool. I have told this many times in England, but friends who were in the habit of "baiting" their horses every ten miles on their beautiful roads were so incredulous that they would not be convinced the thing was possible, and yet it was a simple fact.

Mr. Burdette, under cover of what is intended as a humorous strain, unwittingly represents every soul in Toronto as swathed in furs. The London *Times* could have done no more and no worse.

A walk along our principal streets any day, the coldest that comes, will demonstrate the fact that the great majority of the people do not find it necessary to wear furs. There are comparatively few days during the winter when a man who knows how headaches and baldness are superinduced finds it prudent to wear so much as a fur cap. The people of Ontario generally have less need of furs than their friends of many of the States of the Union where the plug hat prevails all the year round.

The custom of wearing furs by gentlemen must have originated at the time when the beaver, mink, otter, fox, wolf, raccoon, and the bear were trapped by the Indians in the neighborhood of our present cities, and being found useful for articles of clothing, have continued in use and will do so till these animals are gradually exterminated from the country.

Not many years ago the same ideas were entertained in Toronto of the climate of Manitoba and the North-West as are now held by many in Great Britain with regard to Ontario, and yet the Canadian Pacific Railway Co. assert of the climate of Manitoba, that "it is healthy: there are no epidemic diseases, no malaria; spring, clear and bright; summer, warm with cool nights; autumn, balmy and pleasant; winter, uniform, dry and bracing."

It would be just as incorrect to put down the whole of Canada as having the same climate, as to compare the State of Florida, where flowers bloom all the year round, with northern

Minnesota. It must be remembered that the whole of England is farther north than Toronto, and that Aberdeen is seven degrees still farther.

That fur coats are not confined to Canada, it may be stated that a Boston gentleman, last winter, purchased an overcoat costing \$4,000, and it is declared that it could not be duplicated for a much larger sum. It contains sixty-nine Russian sable skins of the finest quality. The overcoat, which is quite large, is of the finest German castor; the body and sleeves being lined with sable, while a broad collar and deep cuffs of this costly material give a rich finish to the garment. Although so warm that the wearer would not feel the most intense cold, the overcoat is much lighter than our ordinary ulster.

Much misapprehension certainly exists in England with respect to the climate of Canada, including Toronto. The imperfect knowledge possessed by the great mass of the British people as to the immense extent of this Dominion has led to the error of giving to each portion the character of the whole; and when travellers who happen to be in Montreal during the "ice carnival" describe ice palaces, toboggan slides, and skating rinks, and when snow-shoes, blankets coats, and tuques are represented in pictures and photographs, the general idea conveyed to persons at a distance is one of discomfort, whereas the very contrary is the fact.

At what season is there so thorough enjoyment as when all this goes on? Young and old alike enter into the spirit of the season; and the very horses in the sleighs seem to keep time in their prancing with the musical tinkle of the sleigh bells.

Every resident in Toronto knows that the absence of snow and frost in the winter is regarded, instead of a boon, as little short of a calamity. The bracing air, with the thermometer verging towards zero, instead of having a depressing effect, is quite exhilarating, and everybody is more healthy and hearty.

The writer, after a residence in Toronto of over thirty years, can positively assert, that he has suffered more discomfort from

the climate of England and France in one winter than all he has spent in Toronto, and this is true, whether applied to travelling or staying at home.

In the former the want of heat in the railway carriages, (except the hot water tins for the feet, which soon cool, and are altogether inadequate to impart comfortable warmth on a night journey,) affords a striking contrast to the comfort in our Canadian cars, where, if there be any discomfort, it is from excess of heat; and leaving out the higher class of hotels and private residences of Europe, which are heated by all modern systems of steam and water, the great bulk of houses are entirely unprovided with proper heating arrangements, such as are common all over America. The writer knows well from experience the feeling in England, in cold, raw weather, of crouching over a fire in a grate, when the face is burning while the back is almost freezing; and to go to bed was something to be dreaded, unless, indeed, a fire was ordered specially in the grate, and the warming pan applied to the bed linen before you ventured in.

The most intense cold experienced by the writer in his life was during a night spent at a manufacturer's house in Staffordshire. An extra supply of bed-clothing seemed ineffectual to keep up the desired warmth during sleep, and in the morning, on lifting the water jug, instead of water, a solid lump of ice, having burst the jug, rolled on the floor. The second jug was tried, with the same result; but the gentleman being a manufacturer of these articles, did not suffer as much as his guest. Such a thing has never happened in all my travels in Canada, the arrangements for heating bed-rooms being so much more complete and convenient. Such a thing could scarcely ever happen in Toronto, and it is of Toronto I am writing, and not of some of the Hudson Bay stations.

In churches and public halls the same difference is perceptible. The custom of wearing overcoats in these places, so prevalent in Great Britain, not being necessary in Canada, they are all so comfortably heated.

**Snow.**

Snow ! snow ! beautiful snow !  
It falls upon king and pauper alike,  
Regardless of station, of wealth, or of might.  
The white cloaks of courtiers it contrasts to shame ;  
To the blush of the cheek it adds freshness and flame.  
To the festive in age, or the sportive in youth,  
Earth's winter garlands are atoms of mirth.  
Then welcome the snow, though heavy the fall,  
God's emblem of purity, power over all.

—*Sheard.*

In England it is a common expression that it is cold enough for snow. We say in Toronto that it is too cold for snow, by which is meant that snow is never accompanied by intense cold ; and what in London is little short of a calamity, by the obstruction of traffic, when a heavy fall of snow takes place, in Toronto the event is hailed with joy ; no one is inconvenienced, but, on the contrary, traffic is more easy and travelling more pleasant. The sleigh-runners immediately take the place of wheels, and heavier loads can be drawn with less fatigue to the horses, which the animals seem to understand quite as well as to feel, and everything is delightful and exhilarating.

So carefully is the snow guarded that in Montreal there is a law to impose a fine for using wheels when runners can be used ; and in Toronto the Street Railway Co. is prohibited from removing the snow off their tracks, and compelled to put on sleighs.

The winter enjoyments consist of skating, curling, tobogganing, and ice-boating, and for all of these the facilities are unlimited. The bay in front of the city, with its thousands of skaters, with numerous rinks in all parts of the city, which, under cover of splendid glass roofs, with comfortably heated dressing rooms, and every convenience, might well excite the envy of skaters who, for want of better, hasten to the "Serpentine" in London when ice has formed, and continue to use it long after it has lost its native purity, and when it would not

tempt any small boy in Toronto to skim on its dark surface. Canada is indeed beautiful in her winter aspect.

One cannot imagine how animated and brilliant is Toronto when she puts on her snow-shoes, and gets herself up on runners, and fills all the air with the chimes of the sleigh-bells. There is an endless variety in design, and pattern, and color of sleigh, and robe, and bell, and plume, and the streets look like Christmas as long as the snow lasts. Even the street cars feel the infection, and mount themselves on bobs (short runners), and jingle the loudest bells, and take the best half of the street.

Robt. J. Burdette, after a visit, asks: "Who are these in blanket suits? It is pleasant to tarry among people whose girls wear satin slippers when they dance, and 'arctics,' when they wade through the snow. Our fair Canadian cousins have no dread of comfort. The snow has no terrors for them. They dress for the storm as sensibly as for the reception. They dress prettily; and if there is a prettier figure on the North American Continent than a daughter of Canada, apparelled for the ice or the toboggan-slide, herself a part of the snow-drifted landscape, a picture of health and comfort that fairly softens the piercing wind into a sense of warmth, I have not seen it.

"She dresses in perfect harmony with the winter and landscape. She has a complexion clear as the ice of Ontario, and her warm blood shines through it rich as the flashes of the Aurora, graceful and free in every movement. Everybody dresses for the winter when it comes, and yet it is a climate no more severe than that of York state.

"I was the only man in Ontario," says Mr. Burdette, "with a stiff felt hat and a cloth overcoat" (this is hyperbolic, as stiff felt hats and cloth overcoats are in the majority), "and felt all the time I was in the Province as though I was a lost Arctic explorer and had eaten my fur overcoat, cap, mittens, and boots, and was waiting for a rescuing party to find me."

It will be evident that the following description is also written by this most celebrated of American humorists:—

### The Toboggan

is a sled with a single runner which spreads clear across the bottom. The top of the toboggan is just like the bottom. It is somewhat thicker than a sheet of writing paper, and about as long as an after-dinner speech. Its seating capacity is only limited by the number of people who can get on it.

The urbane and gentlemanly conductor sits aft and uses one of his lithe and willowy legs for a steering apparatus, by which he guides the toboggan some way or "rudder." It is easy to slide down hill on a toboggan; in fact, after you start down you can't do anything else. True, you could fall off: that is easily done. The flying-machine is not high, so that you have not far to fall; still, if you have to fall from a toboggan half way down the slide, or else fall down stairs with a kitchen stove, you take the stove and the stairs every time; it isn't so exciting, and it isn't so soon.

The prince and I walked up the stairway for the purpose of sliding down the bannister on a toboggan. The president of the Club took his place aft; somebody said "Let her go." Then we stopped and the president said, "How did we like it?" I left my breath at the top of the slide and we had to go up and get it. There it was, a great gasp, three and a half inches long, sticking in the air like an icicle just where I had gasped it when I started. I took it down, stuck it in my left lung and began to breathe again with great freedom. The toboggan is to any other way of getting down hill what flying is to going to sleep. If I was in a hurry and it was down hill all the way, I would rather have a toboggan than a pair of wings any day.

### Departure of Toronto Troops for the Northwest.

When the rebellion, led by Louis Riel, had assumed such proportions as to demand a call to arms, the Government order to prepare for immediate departure reached the commanding officers in Toronto on the 27th of March. During Friday night and the early hours of Saturday, the 28th, orderly sergeants were busily engaged in scouring the city informing the men of the start-

ling news. At an early hour the drill shed presented an animated appearance, the men having flocked to their answer to the roll call. Such was the enthusiasm manifested that great disappointment was felt that only two hundred and fifty men of each regiment could be sent to the front. As the sentiment displayed was one of cheerful alacrity in responding to the call to arms in the country's defence, there was no holding back or hesitation, and the number required was soon made up.

On the 30th March tens of thousands gathered at the Union Station to see the gallant volunteers depart for the scene of action, and all through their dreary route their progress was looked for with the deepest anxiety and most heart-felt sympathy. The march over the ice, and the heroic fortitude displayed through intense cold and fatigue throughout the entire journey, as well as the bravery displayed in the different engagements with the enemy, have all become a matter of history. Thousands of hearts in Toronto throbbed in sympathy with her citizen soldiers during those memorable months, and prayers were constantly offered in all the churches for the success of our arms and the safe return of our sons, when victory had crowned their efforts.

### Return of the Toronto Contingent.

WELCOME HOME—JULY, 1885.

War-worn, sun-scorched, stained with the dust of toil,  
 And battle-scarred, they come victorious.  
 Exultantly we greet them, cleave the sky  
 With cheers, and fling our banners to the wind ;  
 We raise triumphant songs and strew their path  
 To do them homage. Welcome home !  
 We laid our country's honor in their hands  
 And sent them forth : undoubting, said farewell,  
 With hearts too proud, too jealous of their fame,  
 To own our pain. To-day glad tears may flow ;  
 To-day they come again and bring the gifts,  
 Of all earth's gifts most precious—trust redeemed.  
 We stretch our hands, we lift a joyful cry,  
 Words of all words the sweetest, " Welcome home !"  
 Oh brave, true hearts ! oh steadfast, loyal hearts !

They come, and lay their trophies at our feet ;  
They show us work accomplished, hardships borne,  
Courageous deeds, and patience under pain,  
The country's name upheld and glorified,  
And peace, dear purchased by their blood and toil.  
What guerdon have we for such service done ?  
Our thanks, our pride, our praises and our prayers,  
Our country's smile, and her most just rewards ;  
The victor's laurel laid upon the brows,  
And all the love that speaks in " Welcome home ; "  
Bays for the heroes, for the martyrs palms ;  
To those who come not, and though dead yet speak,  
A lesson to be guarded in our souls  
While the land lives for whose dear sake they died  
Whose lives, thrice sacred, are the price of peace ;  
Whose memory, thrice beloved, thrice revered,  
Shall be their country's heritage,  
To hold eternal pattern to her living sons.  
What dare we bring ? They, dying, have won all ;  
A drooping flag, the flowers upon their graves,  
Are all the tribute left : already theirs  
A nation's safety, gratitude and tears,  
Imperishable honor, endless rest.

—*Annie Rothwell.*

Should some Rip Van Winkle have fallen asleep in 1850, waiting for the hourly omnibus for Yorkville, at the corner of King and Yonge Streets, and awaked on the 23rd July, 1885, he would not have been surprised at the sight of a " Union Hotel, by Jonathan Doolittle ; " nor would he have mistaken any other face on a signboard in place of Her Majesty, Queen Victoria, as did that mystic individual mistake the sign of George Washington for the ruddy face of good King George. The evidences all around would soon undeceive him, and he would quickly discover that Queen Victoria still reigned over a happy and contented people.

The return of the Queen's Own, Royal Grenadiers, and Governor-General's Body Guard, amidst the spontaneous display of welcome by the tens of thousands of Toronto's citizens, was a sight seldom equalled, and one to be remembered by the present generation, and to be recorded in Canadian history and

perpetuated by the well-earned tokens of the appreciation of Her Majesty and the English people, by the medals worn on the breasts of the heroes, these having been struck in the Royal mint and with the immediate sanction of Royalty.

On this day, amid a blaze of bunting, under triumphal arches from north to south and east to west, the return of the citizen soldiers was greeted with an ovation only equalled by that given to the Guards in London on their return from the Crimean War covered with blood stains and martial glory.

#### ARRIVAL AT NORTH TORONTO.

The movement of the Governor-General's Body Guards towards the ground indicated the arrival of the train and the commencement of the cheering.

The troops disembarked amid the strains of "Johnny comes Marching Home," and "Home, Sweet Home," by the bands of the regiments. The cheers were taken up by the spectators along the streets as the column came into view.

On Yonge Street the sight which met the eye was one which had never before been presented. Looking southward the view was beautiful. Arches, flags, banners, festoons of flowers and evergreens, with multitudes of spectators in windows and on housetops, as well as on the crowded thoroughfares, as street after street was passed, under arch after arch, formed a scene which could only again be repeated under like circumstances, and which will in all probability never occur. It was joyful, enthusiastic and loyal, and will live in the memory of all who witnessed it while life shall last.

Under any circumstances the return of volunteers to their homes and friends would be a cause of rejoicing; but when they come having bravery, victory and peace inscribed on their banners, their march is a triumphal procession.

Our gallant defenders, under the command of Colonels Miller, Grasset, Otter and Denison, with General Middleton as Commander-in-chief, will have their names and deeds recorded on the page of history as examples of heroic endurance and bravery. The distance travelled, hardships endured, battles

fought and won, thorough discipline without a single act of insubordination, cool courage, steadiness under fire, and the crowning result in the capture of the leaders and the entire suppression of the rebellion—all distinguished this short campaign of less than four months as one of the most remarkable of ancient or modern times.

#### How to see Toronto in 1886.

In order to get a correct idea of the city, let a visitor enter an open carriage at the Queen's Hotel, and proceed eastward. He first sees the Union Station, a fine modern building, and the Walker House, a large hotel at the corner of York Street. In front is the extensive factory of Ewing & Co.; in the rear of which are the large new stables of the Dominion Transport Co., and on the opposite side of Lorne Street, those of Shedden & Co., carriers to the Grand Trunk Railway.

Proceeding to Bay Street, passing a splendid block of warehouses, and looking north to Queen, the site of the new Court House, and perhaps City Hall, comes into view. This, when completed, will form a new square, and be an ornament to the city. From Bay to Yonge, passing spacious and elegant warehouses, the Custom House and new Bank of Montreal are reached.

At this point, on looking up Yonge Street, the traveller will be reminded of the view up Broadway, New York, the appearance of the street here being very fine and imposing. Splendid wholesale warehouses, banks and public offices, with stores of every description, stretch away far beyond the reach of vision, giving the impression of a thorough business city, the traffic at this point being very great.

From Yonge to Church he will find continuous lines of handsome warehouses, occupied by the large wholesale grocery merchants and boot and shoe manufacturers. On passing Scott Street a view of the Great North-Western Telegraph Co.'s building, the Ontario Bank, and several large Insurance and wholesale dry goods warehouses, is obtained; and, in passing on to Church, the Front Street entrance of Messrs. John Macdonald & Co.'s wholesale dry goods warehouse.

From Church Street to the Market are more wholesale grocery and provision houses.

Passing the St. Lawrence Market, the City Hall, and Drill Shed, the largest building is the immense premises of the Street Railway Co., with a variety of manufacturing establishments, including a spice factory, canned fruit and pickle warehouse refrigerators, oil and boiler works, soap and candle factory, and Taylor's safe works; also the extensive distillery and other premises of Messrs. Gooderham & Worts.

The large building used as a glucose factory, recently burned down, has been re-erected, and is now in operation as a syrup factory.

Turning north to King Street, and going east to the Don, the large brewery of the Thos. Davies Co., with fine private residence and grounds, are to be seen. Then westward, passing the St. Lawrence Market and buildings, he will see the St. James Cathedral, with its celebrated clock, and the highest spire in America, the height being 316 feet; thence along ranges of the finest retail stores, with their plate glass fronts, will be seen the favorite promenade.

On passing Church Street a view will be had of the Public Library, and in the distance the grounds of the Metropolitan Church.

At Toronto Street the view as far as Adelaide Street is very fine: in front is the Post Office, and on either side are handsome and lofty buildings occupied by Building Societies, Land Companies, Insurance Companies, and the former Post Office which is used as the offices of the Deputy Receiver-General, the Inland Revenue Department, and the Inspector of Weights and Measures.

Proceeding to Yonge Street, on the north the *Globe* office as also that of the *World* are passed, and on the south the palatial stores of Walker & Sons and W. A. Murray & Co., when the fine view north and south is again obtained, the Dominion Bank being especially noticeable; at this junction the traffic of the Street Railway Company and of general business can be best appreciated.

Still westward, the splendid buildings of the *Evening Telegram* and the *Mail* strike the eye; and at the corner of York, the Rossin House occupies a most commanding position, having two frontages, affording separate entrances, which are most convenient.

Next come in view the Government House and grounds, St. Andrews Church and Upper Canada College.

By extending the drive in this direction, the immense works of the E. & C. Gurney Co., the Silver Plate Co., Mason & Risch's piano factory, H. E. Clarke & Co.'s trunk factory, are all seen; and still farther are the engine works of Inglis & Hunter, the agricultural implement works of the Massey Manufacturing Co., the Abell Engine and Machine Works, and

ROSSIN HOUSE.

the Gutta Percha and Indian Rubber factory. The drive here would end at the Exhibition grounds, including the Zoological Gardens, which should certainly be visited.

Leaving Parkdale and Brockton, and turning north from Queen Street at Spadina Avenue, after passing the Asylum and Trinity College, at the head of this splendid avenue—the future “Champs Elysees” of Toronto—Knox College appears, and from this point it is difficult to select the best route in which take in all the splendid private streets which would well repay an inspection.

Taking College Street, and passing Beverley, St. George, and other handsome streets, to reach the University, a visitor can not fail being impressed with the beauty and magnificence of

KNOX COLLEGE.

the surroundings. The University buildings, Meteorological Observatory, Divinity School, and splendid mansions, follow in rapid succession. The Queen Street Avenue, rivalling in beauty the finest in Europe, and the Queen's Park, are such as Toronto citizens may feel proud to show to visitors to the city.

Driving north are seen the monument to the Queen's Own and the fine statue of the Hon. George Brown, and a little to the westward of the Park gate the beautiful building of the Baptist College and McMaster Hall stands.

Thence eastward to Sherbourne Street a view may be had of the romantic ravine separating the city from Rosedale. If the latter suburb is visited, the ravine may be crossed by either of three handsome bridges, and the scenery here cannot fail to delight the eye in summer.

In Rosedale are some elegant mansions, and here are the new and spacious grounds of the Athletic Association, with a grand stand and all suitable appointments.

Sherbourne Street itself has become the residence of many leading merchants and manufacturers, and will impress a stranger most favorably.

The streets intervening between Sherbourne and Yonge are Jarvis and Church, the former still retaining its character for beauty and style, and the latter steadily rising in importance, which will be enhanced by the new block paving. Both of these latter streets ought to be traversed, especially as sight-seers invariably visit the Horticultural Gardens, and the Normal and Model Schools.

On Bond Street, bounded on the south by Queen, and on the north by Gould, a view of the finest churches in the city may be had. The splendid proportions of the Metropolitan, with its fine tower and beautiful grounds; the magnificent Roman Catholic Cathedral of St. Michael, with its lofty and graceful spire; the elegant and substantial Congregational Church of Bond Street, with its tower and dome, are all in full view on this street. While in the distance may be seen the spire of St. James' Cathedral, and the tower of St. James' Square Presby-

terian Church on Gerrard Street; also the new Orange Hall on Queen Street, and the Normal School grounds, having the principal entrance on Gould Street, and forming the square surrounded by Gould, Gerrard, Church and Victoria Streets.

A traveller from England taking this route in summer cannot fail to be struck with the beauty of the shade trees on all the principal private streets, and the profusion of flowers displayed on every hand, which have become a source of rivalry, and the cultivation of which is now studied as a science.

### Toronto the Centre of the Dominion.

A few years ago a book was written to prove that St. Louis was geographically the central city of the world, and that eventually it must become the commercial centre, and very plausible reasons were given to prove the statement.

The immense resources of the country of which it was the centre, in iron, coal, gold, silver and cotton, and its growing manufactures, were used to show its probable destiny.

Toronto puts forward no such claim, and yet, while Winnipeg may more properly be considered the geographical centre of the Dominion, a glance at the map will show the splendid position of Toronto as a commercial centre, and as a resort for tourists; and it is safe to say that, in the near future, no city on the continent will be more celebrated for general attractiveness, and that the present hotel accommodation will soon be altogether inadequate for the crowds who will flock here in the summer. The contiguity to the Falls, with the prospect of a Free Park on the Canada side, will attract travellers from Hudson Bay to the Gulf of Mexico, and from Halifax to Vancouver:

As a central point of arrival and departure, either east, west, north or south, her advantageous position cannot be exaggerated.

The chain of lakes north and west, the Canadian Pacific and Grand Trunk Railways, and the navigation through to the Atlantic Ocean, *via* the St. Lawrence, all promise a future for Toronto such as has never been dreamed of before.

Who would have predicted ten years ago that a traveller could take a car at the Union Station, or at the foot of Yonge

NORMAL SCHOOL.

Street, and by going to North Toronto Station purchase a ticket, and perhaps even check his baggage, for China or Japan? And yet all this will be an every day occurrence within a short time.

The completion of the connection at Callander, making the route from New York to Winnipeg *via* Toronto the most direct, will at once give her all-rail communication with the great North-West and the Pacific, equally good in winter as in summer.

Toronto is fast becoming the wholesale centre of the Dominion. Once Quebec enjoyed the good luck, but for some reason or other a blight fell upon the ancient capital, and the business houses that flourished on St. Peter Street forty years ago are there no longer. Montreal for years back did the bulk of the business, but for the last fifteen years Toronto has been gradually taking it away from her. At the present rate of progress Toronto will lead Montreal in ten years, perhaps in five.

Toronto possesses one advantage which alone is sufficient to account for her success. We have a choice of seaports, and the competition in freight and charges which such an advantage confers. We can receive our importations either by the St. Lawrence or by New York, and have the same advantage with regard to our exports. If Toronto becomes the wholesale centre many other things must follow. The headquarters of the Grand Trunk Railway must come here before long.

Many Montreal houses are now opening branches, or removing their whole business to Toronto, and there are certain indications besides that Toronto is now the wholesale centre of the Dominion, and is going to march at the head of the procession.

#### Population and Assessment Returns.

Toronto commenced business as a city fifty-one years ago, with a population of 9,254. To-day, according to the just completed assessment rolls, the population is 111,800. An increase of 102,000, or the multiplication of the population by twelve in half a century, is a pretty good record, and Toronto people may well be proud of it.

Should the rate of increase not diminish, another half-century will see in the site of the present Toronto a city of almost half a million. As it is, Toronto takes a place with the cities of the second class as to population in the empire.

There are only forty-seven larger cities in the British Dominions, and England herself can boast of only eighteen which have a greater population. We are larger than Aberdeen, Cork, Derby, Greenock, Halifax, Huddersfield, Northampton, Norwich, Plymouth, Preston, Southampton, or Stockport.

There are only seven larger cities in Germany, nineteen in the United States, seven in France, and seven in Russia. We rank with Detroit, Milwaukee, Bremen, Stuttgart, Blackburn, Oldham and Sunderland, all of which stand in the neighborhood of 111,000.

The following grand annual total assessments will show the gradual increase which has been made in the value of taxable property in the city for the years indicated :

ASSESSMENTS.		ASSESSMENTS.	
1871 .....	\$29,277,235	1879 .....	\$49,753,402
1872 .....	32,487,772	1880 .....	50,165,539
1873 .....	41,775,844	1881 .....	53,559,910
1874 .....	43,472,512	1882 .....	55,964,899
1875 .....	46,506,280	1883 .....	59,561,143
1876 .....	47,150,362	1884 .....	65,683,877
1877 .....	47,614,393	1885 .....	69,225,114
1878 .....	49,053,765	1886 .....	72,721,559

#### TORONTO STREET.

The realty and personalty on this street is assessed in round numbers at one million dollars, one-seventieth of the total assessment of the city, and is only a block in length.

#### POPULATION OF TORONTO AT DIFFERENT PERIODS.

1817 .....	1,200	1850 .....	25,000
1826 .....	1,677	1854 .....	40,000
1832 .....	4,000	1857 .....	45,000
1834 .....	9,000	1871 .....	56,000
1842 .....	15,000	1881 .....	86,000
1845 .....	19,000	1884 .....	100,000
1847 .....	22,500	1886 .....	110,000

VALUE OF BUILDINGS ERECTED DURING THE YEARS

1882 .....	\$1,757,630	1884 .....	\$2,033,235
1883 .....	1,506,740	1885 .....	3,449,375

Of the buildings erected in 1885 the proportion was :

	NO.	VALUE.
For miscellaneous manufacturing and others.....	33	\$168,000
Social and charitable institutions .....	22	230,000
Schools and churches.....	9	61,000
Hotels.....	5	17,000
Business buildings .....	181	488,000
Residences.....	900	2,028,375
Various improvements .....		465,000
		<u>\$3,449,375</u>

Commercial Travellers' Association.

There are five Commercial Travellers' Associations in Canada: Toronto, with a membership of 2,300; Montreal, 1,500; London, 500; Winnipeg, 150; Halifax, N.S., 150.

We give the following statistics of the Toronto C. T. A. :

Reserve Funds.....	\$100,000
Gain for last year .....	13,930
Membership .....	2,300
Increase last year .....	77

As an interesting item, showing the growth of commercial travelling in the United States, the history of which nearly corresponds with its date in Canada, one of the leading men says, "There are now about 80,000 travelling salesmen in the United States; their expenses are \$1,500 each, which means an outlay of \$120,000,000 a year, and if you count on an average salary of \$1,000 a year each, it will swell the total to \$200,000,000 a year. This immense sum is scattered all over the country. It keeps up the hotels and is one of the most important items of railroad passenger receipts. The character of the travelling salesman has changed in these ten years; you will find very few boys and fewer drunkards on the road. The competition is so great and expenses so heavy that firms have to send out their best men, and salaries of from \$3,000 to \$5,000 a year are by no means uncommon."

With some modifications the above figures will apply to Canada according to its numerical proportions.

### Toronto Custom House.

In any country or city where the revenue is raised by indirect taxation, the history of the Custom House is, to a great extent, the history of its growth in trade and manufactures.

There was a time in the history of the importing trade of Toronto when the duty was five per cent. *ad valorem*, and the Government of the day, with great liberality, took the importers' note at six months in payment.

No doubt this gave a stimulus to the trade, which has resulted in placing Toronto at the head of all American and Canadian cities of its population in the extent of its imports.

About the same time that the importations commenced in this way to Toronto, the non-importing merchants got their supplies in what is now called "Niagara by the Lake," where merchants went regularly to make their purchases up to the time when the seat of government was changed to Toronto, in 1821.

Others got their goods in Montreal, and these were brought up the St. Lawrence and along the shore of Lake Ontario in batteaux; while over the portages they did the best they could in the way of transport.

The intelligence of some of these gentlemen may be judged from the following incident, which is given on the best authority, the writer giving nothing from personal knowledge previous to 1847.

One of the firm of McDougal Bros. having made his purchases in Montreal, returned home in advance of the goods, having his invoices with him; the brother, who remained in Toronto, on looking over one invoice discovered a line of cloth, with number of yards and prices stated, and immediately underneath was the word "ditto" also having the length and price. On enquiring from the buyer what "ditto" meant, he replied he could not tell, as he was quite sure he had not bought any such goods as "ditto." Steps were immediately taken to have the article returned on its arrival, as the goods appeared to come to a good deal of money.

TORONTO CUSTOM HOUSE.

My first entry at the Custom House was made in the fall of 1848, being a little over twelve months from the time of arriving in the country, and being the youngest man who had made direct importations to the city. My faith in the future of Toronto was based on two facts: first, the water communication in front, with a beautiful harbor, and second, the fine agricultural country stretching away in the back; and in addition to this there was confidence in the taste and wealth of the people sufficient to warrant the importation of a fine class of goods, as shown by the fact that one case alone was valued at £800 sterling, the contents of which, with all other goods, were speedily disposed of.

Mr. Stanton was the collector at this time, and the duty was  $12\frac{1}{2}$  per cent. *ad valorem*.

As the whole importations that year were under a million dollars in value, the Custom House staff, inside and outside, did not exceed four or five, not one of whom remains in the service.

Mr. Stanton was succeeded by Mr. Meudell, and in 1851 the staff had slightly increased; Mr. T. McCarthy, still in the service, being the only one remaining of the number in the service at that time; Mr. Thomas Scott was surveyor, Mr. John Cameron, chief clerk, and Mr. Robert Emery, landing waiter.

Shortly after the introduction of the "bonding system" through the United States, the private bonded warehouses were authorized as a convenience to importers, who, commencing to receive goods at all seasons of the year, discontinued the custom of opening their whole importations at one time; country merchants visiting the market more frequently, and importers taking their goods out of bond as orders were given from samples, or, in the case of dry goods, by opening only a portion of any class of goods at one time.

The appointment of "lockers" followed this arrangement, and the first who acted in that capacity were Mr. James Stitt, some time superannuated, Mr. R. G. A. Paton, the present polite and courteous cashier, and Mr. Alex. Duff, now gauger; all

of whom were justly popular for their obliging and attentive manners, as well as the faithful discharge of their duties. Of the former and the latter the writer can speak from experience (Mr. Paton having to do with the grocery trade). On the arrival of goods, these gentlemen were always ready to lend a hand and use a truck to get a lot of goods off the street sometimes after ten o'clock at night, when by getting the goods in they would be covered by insurance.

The conscientious discharge of duty, the unvarying readiness to oblige and willingness to impart information, on the part of Mr. Scott, are all well known to present as well as past importers. When it was necessary to see Mr. Meudell he was to be found at his post, and if a question arose on any point in which he differed with an importer, if he showed any disposition to act in an arbitrary manner, a gentle reminder that as the servant of the public he must be accommodating invariably resulted in the offer of a friendly pinch of snuff, a box of which he always kept on his desk, and the matter came to an amicable conclusion.

The gradual increase in the importations, with the rate of duty at various periods up to the present time, when they have reached such a large figure, will be found in another place.

The Custom House staff in 1854 consisted, in addition to the gentlemen already named, of Hon. Captain Curzon and George Henderson, clerks; J. P. Dunn, landing waiter, and A. Macpherson, who succeeded Mr. John Boyd, father of the present Chancellor, who was the first appraiser.

The present surveyor, Mr. John Douglas, entered the service in 1855, having occupied the position of chief clerk before his present position, which he assumed on the death of Mr. Scott. The long and valuable services of Mr. Douglas are, and will be, associated with the history of the importing trade of Toronto, long after the present time. His uniform courtesy and gentlemanly deportment are too well known to the merchants of Toronto to give the statement even the shadow of flattery. Having known Mr. Douglas during the whole of his connection with the service, the writer can say he never heard a

breath of complaint, but, on the contrary, universal respect always expressed towards him.

Mr. Meudell was succeeded by the Hon. Robert Spence, and after his death Mr. T. C. Scott acted as collector. An effort was made to have him appointed to the collectorship, but the petition for the object was never presented, a number of merchants and others, including the Hon. George Brown, refusing to sign, on the ground that the appointment of collector should continue to be a political one. Mr. J. E. Smith was appointed to the office, and on his retirement Mr. John Douglass acted as collector till the appointment of the Hon. Jas. Patton, Q.C., LL.D., who now occupies the responsible position.

In 1886 the Custom House staff consists of collector, surveyor, chief clerk, cashier, assistant cashier, seventeen clerks, three acting clerks, three appraisers and two assistant appraisers, two gaugers and lockers, three lockers, one engineer and two assistants, eighteen landing waiters, nine packers and porters, one housekeeper and messenger, and four messengers.

#### CIVIL SERVICE EXAMINATIONS.

The time has now happily gone by when, by an act of political legerdemain, persons from mechanical, agricultural or other pursuits, without any training or qualification, might have been metamorphosed into civil service officers, and placed in positions for which they were entirely unfitted, contrary to every recognized principle of trade or commerce.

Should a contractor for any large undertaking require skilled workmen, as carpenters, plumbers or bricklayers, and the best accountant in the Dominion apply for an engagement, it is easy to know what his answer would be. Why the rule should be reversed in the case of public departments is peculiar, and could only be applied on the ground of their having the power to conduct the business on a principle that would inevitably lead to the ruin of ordinary commercial undertakings; experience and competency being indispensable in every business where private capital is invested.

The Civil Service examinations must ultimately result in

greater efficiency and economy when the infusion of the new element shall have had time to develop. It is said that already the effect is apparent in the introduction of a more advanced system, in accordance with modern ideas of mercantile life, and resulting in quicker and more correct returns being made to the Government. Should the reform result in a system of remuneration corresponding with services actually rendered, as is the rule in every well-ordered mercantile establishment, and promotion given only on the ground of merit, it will prove alike advantageous to the service and beneficial to the officers, and in a few years the whole service will be purified and improved so that Canada may claim to have established a system of Civil Service equal to that which is styled "the pride and glory of Britain."

#### Total Imports to Toronto Since 1849.

The fiscal year ending 31st December, 1863, and ending 30th June, 1885. The year 1864 showing six months to 30th June.

1849 .....	\$1,280,549	1868 .....	\$6,833,132
1850 .....	2,286,508	1869 .....	6,658,867

	TONS.		TONS.
1874 .....	81,000	1880 .....	268,000
1875 .....	110,000	1881 .....	228,000
1876 .....	139,000	1882 .....	182,000
1877 .....	154,000	1883 .....	213,000
1878 .....	171,000	1884 .....	394,000
1879 .....	241,000		

Shipped chiefly to San Francisco, Portland, Oregon, Washington Territory, Alaska, Hawaiian Islands and China.

The Imports of Toronto Compared With Cities in the United States.

FOR FISCAL YEAR ENDING 30TH JUNE, 1885.

	VALUE.	DUTY.	AVG. PER CT.
Milwaukee.....	\$407,452	\$160,973.00	39.50
Detroit.....	2,062,398	284,198.00	13.30
St. Louis.....	2,601,001	1,036.77	39.88
Buffalo.....	4,744,610	873,323.00	18.20
Cincinnati.....	1,930,000	762,917.00	39.50
Chicago.....	10,585,347	4,133,675.00	39.05
<b>Toronto</b> .....	<b>18,032,110</b>	<b>3,274,950.00</b>	<b>18.17</b>

It will be noticed that the average of duty at Detroit and Buffalo is much below the other ports, which can be accounted for because of the large bulk being of the produce of Canada, and less from foreign countries.

The above figures were received through the kindness of the Collectors at these ports. It will be noticed that the Toronto imports are nearly equal to all the others put together.

## Exports from Toronto in 1885

include the following goods manufactured in the city:

BOOKS.	VALUE.	CARRIAGES.	VALUE
Australia .....	\$7,065	British West Indies.....	\$727
New Zealand.....	2,044		
Bermuda and West Indies.....	118	MACHINERY.	
Spanish West Indies .....	46	Australia.....	3,829
Newfoundland .....	88	Argentine Republic .....	450
South Africa .....	1,168	New Zealand.....	293
		Chili.....	200

This trade will receive an impetus through the Indian and Colonial Exhibition that may develop into large proportions, especially with the facilities for shipment *via* the Canadian Pacific Railway and its ocean connections.

## FOR YEAR ENDING 30TH SEPTEMBER, 1885.

Produce of the Fisheries.....	\$914
Produce of the Forest.....	308,463
Animals and their Produce.....	991,874
Agricultural Products.....	1,284,657
Manufactures .....	289,276
Miscellaneous.....	16,573
<b>Total Exports.....</b>	<b>\$2,891,757</b>
Quarter Ending 31st December.....	\$1,411,514

VIEW OF TORONTO, 1886.

## TORONTO IN 1886.

---

FAIR TORONTO ! Queen City of the West,  
Of all thy sister-cities thou art best ;  
As far as eye can reach, from Don to Humber,  
Rise towering spires in goodly number ;  
Cathedrals, churches, schools, and mansions rise  
In stately grandeur towering to the skies.  
A noble harbor fronts thy southern bound,  
And gentle hills encircle thee around ;  
From north to south, and east to west expand  
Streets, avenues and roads, so wisely plann'd,  
That strangers visit thee with ease, and find  
In thee a home at once just to their mind ;  
Long live Toronto ! loud her praises swell,  
Here Commerce, Art, and Nature love to dwell.

—*Imrie.*

It will be no exaggeration to say that no city on the continent is making greater progress than the City of Toronto. Within ten years the population has doubled. Not only has this increase occurred within the limits, but the city has thrown off shoots east, west and north, which are now rapidly assuming the proportions of towns.

Indeed, one suburb, which a decade ago was a series of farms, with cottages scattered here and there, has been recently incorporated, and its large population, its populous streets, its handsome stores and private residences well entitle it to the dignity of a town,—and this is Parkdale.

The population within the limits now reaches 111,000. That without will no doubt very shortly bring it up to 140,000. Ten years ago Toronto extended from the Don to Bathurst Street, and from the Bay to College Avenue. Spadina Avenue north of St. Patrick Street was a field, where the troops were reviewed, and Sherbourne Street above Carlton resembled the "forest primeval."

It is possible now to walk from half a mile east of the Grand

Trunk crossing on the Kingston Road to within half a mile of the lake shore, on Queen Street (a distance of about four miles), through an avenue of shops, and to inspect store windows on Yonge Street from the Bay to the hill north of the city, which was formerly regarded as the country.

Nothing illustrates the growing opulence of the city more than the character of the places of business and the architectural improvements on the private residences. A shop is not a shop now unless provided with the metropolitan plate glass front,

OSGOODE HALL.

and the tendency in every business is in the shape of extension, —in short, to occupy two or three buildings where formerly one was sufficient.

Where many cities have one fine street of which they are justly proud, as Euclid Avenue in Cleveland, and Wabash Avenue in Chicago, none can boast of so many fine streets or private residences of finer build or more elegant design.

The old square house which was the palace of a merchant years ago, has given place to a building of Elizabethan or other

fashionable style, in which the taste for ornamentation is fully gratified.

Formerly Jarvis Street was the home of the wealthy, and then Sherbourne laid claims to rivalry; and while these go on improving constantly, new competitions for style and elegance are springing up both on the north and west.

To the person whose business confines him to the centre of the city, a visit to what recently were fields is at once a revelation and surprise. New streets have been opened out, new and magnificent mansions have been erected, comfortable houses for the middle classes have been built, and places of business to meet all local wants have been provided. In addition to this, there are very few points which are not within five minutes' walk of the street cars.

The enormous development of Toronto of late years is largely the result of a liberal policy which has brought the railroads of the Province, and with them a large portion of the northern and western sections, to our doors. There are to be added to this, the public spirit of the people, the business enterprise of the merchants, the good sanitary condition of the city, and the presence of all those religious and other metropolitan advantages which persons retiring from active business life elsewhere naturally seek. Toronto is making great strides toward being the Chicago of Canada.

### **The Ontario Assembly in 1886.**

Ontario's Legislature was convened with the old time civil and military display. The cannon of the Toronto Field Battery, stationed on Wellington Street, thundered a salute as Lieut-Governor Robinson, attended by Capt. Geddes, A.D.C., drove from Government House, under escort of Denison's troopers, to the legislative headquarters of the Province, there, for the sixth time in his gubernatorial capacity, to present the Government bill of fare to the people's representatives for digestion during the session.

As His Honor's sleigh made its way through the throng of

spectators in front of the building, the guard of honor from C Company, Infantry School, presented arms to the strains of the National Anthem, while the cannon kept on booming. The Legislative Chamber overflowed with civil and military magnates, legislators, politicians, and the beauty and fashion of the Provincial Capital as represented by upwards of two hundred of the fairer sex. All the galleries were jammed. It was generally remarked that the ceremony was unusually large and brilliant.

#### STATE DINNER AT GOVERNMENT HOUSE.

The festivities that followed the opening were on a larger and more brilliant scale than usual. Government House was the scene of a magnificent state dinner, which eclipsed anything hitherto attempted in that line at Government House. The table was a perfect gem in the way of decoration and arrangement. It was laid in the ball room with covers for fifty-six. Mrs. Robinson herself designed and superintended the work. The centre piece was a miniature lake, in which fragrant flowers of rare delicacy and hue floated amidst tender green vines and lovely leaves, being refreshed by a gentle spray from a rockery, surmounted by a device in which the word "Ontario" glittered in gas. The lake was flanked by a profusion of flowers, and numerous little ornaments and devices added to the beauty and effect of the display, the *tout ensemble*, under a brilliant flood of light, being really magnificent.

#### Toronto Board of Trade

was incorporated in February, 1845, the council being composed of the following gentlemen:—Thomas Clarkson, President; E. F. Whittemore, Vice-President; John Harrington, Treasurer; Charles Robertson, Secretary; Messrs. W. P. Howland, James Brown, jun., William McMaster, William Henderson, John Shaw, Charles Robertson, J. G. Worts, T. D. Harris Rice Lewis, George A. Piper, Henry Fowler, John Henderson. Members in 1886, 822; total income last year, \$5,553.35.

-----------------------	---------------

**Toronto Gas Works.**

The Gas Works of Toronto were originated and built by the late Albert Furniss, in 1842, who was also the builder of the Water Works. The present Consumers' Gas Company originated in 1847, and the first meeting of the subscribers for stock was held on the 29th October, 1847, when Directors were appointed for the management of the Company. The Act of Incorporation was passed in 1848. The Directors had not proceeded far with their arrangements for the construction of the Works before they ascertained that the Gas Works then in use could be purchased, and they unanimously decided on concluding the bargain for their purchase. The late Charles Berczy, Postmaster, was the first President of the Company. The Directors in 1852 were Charles Berczy, Hugh Miller, John T. Smith, David Patterson, J. Arnold, M. Betley, I. C. Gilmor, W. Mathers, S. Alcorn, E. C. Hancock, S. Platt, and James Strange. When the Company took over the Gas Works the price of gas was \$5 per thousand, net, besides a large meter rent, and the quality from ten to twelve candles.

On September 30th, 1847, there were one hundred and sixty-four street lamps and three hundred and seventeen gas consumers, and the total amount of rental for gas for fifteen months—two quarters at 25s. and three quarters at 20s.—amounted to only £4,619 7s. 10d. The first manager was Mr. John Watson, who only occupied the position for a short time, when he was succeeded by the late Henry Thompson, who occupied the position until 1874, when he was succeeded by W. H. Pearson. The gas manufactured up to September 30th, 1854, was 14,000,000 cubic feet.

The quality of gas now supplied is from seventeen to eighteen candles, and the price charged to small consumers \$1.25 per M., medium size consumers, \$1.15, and very large consumers, \$1.10. Gas stoves and engines, \$1 per M. No charge now is made for meters. Over one hundred and twenty-six miles of pipe were laid up to September 30th, 1885. There are two thousand five hundred and fifty-seven street lamps, and six thousand seven

hundred and seventy eight consumers. Gas rentals amounted to \$353,498.26 for the year ending September 30th, 1885, and the gas made was 273,483,000 cubic feet.

The present officers of the Company are: James Austin, President; Larratt W. Smith, Vice-President, and W. H. Pearson, Secretary. There are one hundred and fifty-four hands now employed by the Company, and its business is rapidly increasing.

### **Toronto Water Works.**

Toronto is supplied with water from Lake Ontario by means of pumping engines, manufactured by Messrs. Inglis & Hunter, of this city, having a capacity of 12,000,000 gallons per twenty-four hours; also two Worthington Duplex Engines of a capacity of 12,000,000, making a total of 24,000,000 gallons. The building of the Water Works in which they are placed is a handsome structure at the edge of the bay.

The reservoir at Rose Hill, from which the water is distributed, is beautifully situated to the north of the city. The wonderful growth of the city will be seen by a comparison of the following statistics with the system in 1847:

Total mileage of water pipes .....	144
Number of hydrants .....	1,414
Number of services .....	22,000
Number of hydraulic hoists .....	140
Gallons of water pumped in 1885. ....	3,543,735,410

It is interesting to notice that in 1847 there was no hoist of any kind in any building in Toronto. All goods and furniture were carried to the different floors, while passengers had to walk up stairs. The first two hoists were of the old wheel and rope pattern, and one was placed in the present Bank of Commerce building by Messrs. Ross, Mitchell & Co., and the other in the warehouse at present occupied by Mr. P. Jacobi by Taylor & Stevenson in 1853.

### **Meat Markets and Horses of Toronto.**

Contrasting with the inferior meat of former times, the markets of Toronto, for splendid supplies of first-class meats, cannot be surpassed anywhere. The display at Christmas time

is another evidence of Toronto's great progress, and would do credit to any city in the world.

In connection with this, reference may be made to the wonderful improvement that has taken place in all classes of horses, which are to be seen in such numbers on our streets. Whether for saddle, carriage, or heavy draught, no city in America can show finer specimens of horse-flesh, and it is only in point of size that they are excelled in Britain. The finest display of heavy draught horses in the world is to be seen on the first of May in Manchester, when, in splendid new brass-mounted, shining harness, and gaily decorated with ribbons and flowers, the proud teamsters display their leviathian animals, sleek and fat, in a procession extending for miles in length. Toronto horses belonging to the railway companies are quite equal in symmetry and condition.

#### Toronto a Manufacturing City.

A Sheffield teacher gave a school girl, for a home lesson, a composition on the question of trade. Next morning she brought an excuse for not having done her task, and also handed to the teacher a note which her brother had sent, and which contained the following:—"Trade is the substance of things hoped for, and the evidence of things not seen.' It will come 'in the sweet by-and-bye.' Trade! trade! where art thou? Come forth and show thyself."

This is the problem which the greatest political economists in the world are trying to solve to-day. An Imperial Commission has been appointed in England to find out where her trade has disappeared to, and the cause of its decline; with this only result so far, that new markets must be found to supply the place of those that have been lost.

It is probable the youth knew nothing of the theories of Free Trade and Protection, and did not know that Sheffield goods were excluded by a hostile tariff from what had formerly been the largest market for these goods; nor that the manufacturers of Connecticut and Rhode Island were sending in similar goods to England entirely free; he only knew the sad fact of poverty and all its attending evils.

When—either by defective legislation or some unfortunate circumstance, as the Cotton Famine during the American War—tens of thousands of industrious operatives are reduced to the verge of starvation, it is a dreadful state of things, and it must be gratifying to the citizens of Toronto, that happily no such state of things exists here; trade is a visible and tangible reality, and there appears every prospect of steady progress in the future as there has been in the past. While no class is oppressed all are benefitted.

*List of articles manufactured in Toronto, the importation of which has fallen off in a ratio corresponding with the home production:*

Agricultural Implements	Electro-plated Ware.	Ornamental Iron Work.
Bagatelle Tables.	Envelopes.	Paper Manufactures.
Baking Powders.	Fire Works.	Paper Bags and Boxes.
Bed Comforters.	Furniture, all kinds.	Paper Hangings.
Bedsteads.	Fur Caps, Hats, Muffs, &c	Pianos.
Billiard Tables.	Gas Fixtures.	Pickles and Sauces.
Bird Cages.	Gloves, leather.	Rasps and Files.
Biscuits.	Gutta Percha Goods.	Saddlery.
Blacking.	Hats and Caps.	Satchels.
Blankets.	Hollow Ware.	Scales and Balances.
Blank Books.	Horse Shoes.	Shirts.
Boots and Shoes.	Horse Shoe Nails.	Show Cases.
Boot Laces.	India Rubber Manuf'rs.	Skates.
Building Brick.	Ink, writing & printing.	Soaps.
Bridges, iron.	Iron Bolts and Nuts.	Spices.
Candles, tallow.	Jellies and Jams.	Stoves and Furnaces.
Carpet Bags.	Jewellery, manuf'rs of	Suspenders and Corsets.
Carriages and Sleighs.	gold and silver.	Telegraph Supplies.
Cloaks, fur.	Linen Clothing.	Tin Manufactures.
Cloaks, cloth.	Meats, smoked and dried.	Trunks and Valises.
Clothing, Cotton.	Mill (& other) Machinery.	Whips.
Collars and Cuffs.	Mouldings, gilded.	Wire Work.
Colors and Paints.	Mouldings, wood.	Wooden Ware.
Copper Manufactures.	Musical Instruments.	Woollen Clothing.
Corks.	Oil, lubricating.	Woollen Hosiery.
Cottons, grey and white.	Oil, illuminating.	Woollen Underclothing.
Earth Closets.	Organs, parts of, & reeds.	Woollen Yarns.

The cottons mentioned, although not manufactured in the city, are largely sold here by manufacturers and their agents, and are controlled by Toronto merchants; this also applies to denims, drillings, and other lines of goods. The list could be greatly extended if goods manufactured in the Dominion were enumerated.

When it is remembered that at the commencement of our sketch there was just one stove foundry, one soap and candle factory, and one or two other unimportant kinds of goods manufactured in Toronto, the list speaks for itself. It must be borne in mind, however, that this does not by any means include all the branches of manufactures, as new industries are starting up constantly, for which we have no comparison to make in imported goods.

It would be impossible to over-estimate the importance of these manufactures to the city, not only giving employment to thousands of the population, but forming a large market for the agricultural productions in the surrounding country, and also attracting buyers of every class of goods; all tending to the circulation of money, and contributing to the general prosperity.

No thoughtful person can walk down any of the leading thoroughfares in the morning, or at six o'clock in the evening, without being struck with the crowds of well-dressed men and women, all tending toward or returning from the centre of these industries; and he must, indeed, be void of patriotism, whose feelings are not thrilled by the sight of so much enterprise and industry, making our streets vie with those of Manchester or Nottingham. Nor is there any reason to doubt that, before long, we may see the numbers greatly increased. While the extension of manufactures may embrace those not so cleanly, no one would object to see even the linen overalls and the wooden clogs which, in other cities, although corresponding with the work of the operatives during the week, are often replaced by silk and patent leather on Sundays and holidays.

A spool of cotton may appear trifling, but few people, except the initiated, are aware of the gigantic business done in this article. In Paisley, Scotland, there are employed in the trade thousands of operatives,—one mill alone employing over 3,000 hands, earning good wages, and employed all the year round. When factories in other trades are shut down for lack of orders, the spool cotton mills do not suffer much, if any, from depression. Torontonians will be pleased to hear that this important branch of manufacture is to be established in Toronto by Kerr

and Co., the well-known Paisley manufacturers. Machinery of the newest and best description will be imported from home, and workers brought out from Paisley to teach others here.

Great Britain having, through hostile tariffs, lost access to the markets of many countries which were formerly the best outlets for her trade, is now turning her attention to new fields for her enterprise, and in the future will look to India, China, Japan, Burmah and Siam to take her surplus productions. As these countries comprise about one-third of the population of the earth, there is abundant scope, and it will indeed be a novel sight to find the young Dominion competing with the mother country for this very trade, with all the advantages on the side of Canada, in being so much nearer the field of operations.

From the long list of Toronto manufacturers a few old-established firms are selected as representing the "wonderful growth and progress" of the city in its manufactures:—

*J. & J. TAYLOR, TORONTO SAFE WORKS.*

This is one of Toronto's representative institutions, whether as it regards the enterprise of the firm or the growth and progress of the city in substantial wealth.

The demand for safes as security against fire or burglary has kept pace with the accumulation of gold, silver, bank notes, bonds, mortgages, and jewellery and watches, all of which are now protected from all harm and danger.

It was indeed a sight worth seeing, to be permitted to inspect the nineteen safes at present being exhibited at the Indian and Colonial Exhibition in London. For beauty of finish, both internally and externally, these specimens of Toronto workmanship need fear no competition at such an exhibition; and even if England were admitted to the friendly rivalry, it is a question whether anything finer could be produced.

It is now over thirty years since the firm of J. & J. Taylor commenced the manufacture of safes in Toronto. During that period over forty thousand have been distributed throughout the Dominion, from British Columbia, Manitoba, and the North-West Territories, to Newfoundland and the Maritime Provinces.

It has been their constant aim from the first to keep pace with the times by adopting every improvement that would make security, if possible, doubly secure in all the work that might pass through their hands. That they have succeeded beyond their most sanguine expectations is evidenced by the fact that for many years they have done by far the largest portion of the bank safe work and the Government work of the Dominion; and in offering their safes to the general public, this is, perhaps, the best guarantee that their safes stand univalled in the Canadian market.

The burglar-proof bank safes shown by J. & J. Taylor in

London are of the quality used by all the best monetary institutions of Canada, and embody all the best-known materials and points of construction in general use, as well as several additional improvements that are peculiar to themselves, and patented by them. In brief, these safes are made without seam or joint of any kind on the outside corners, the frames and body being welded continuously around the entire safe. They are also fitted in all corners with J. & J. Taylor's improved solid triple corners of five-ply welded steel and iron. The safes are locked with revolving bolts on all sides of door, secured with back shaft combination locks capable of some forty-one million (41,000,000) changes. The spindles and arbors are of J. & J. Taylor's patent enlarged centres. Door jambs are stepped and rabbetted, also tongued and grooved, and fitted with improved rubber tube packing. Doors operate on J. & J. Taylor's improved Crane hinges and Cam lever bars. Also, after careful and expensive actual tests with dynamite, this firm have adopted the new Holmes' electric time lock with Newbury's dynamite safety devices.

The fire-proof safes also present special features. They are all made with J. & J. Taylor's patent non-conducting steel flange doors and fronts, solid round corners, and continuous angle iron frames. They are fitted with combination locks, and hardened steel plates for protecting the locks. The filling is of the best fire-proof resisting qualities.

The firm devote their attention exclusively to the making of burglar-proof and fire-proof securities, combination locks and bank locks. They employ about two hundred hands, and have capacity for making about fifty safes per week. The factory has a working floor of about 68,000 square feet, and faces on Front and Frederick Streets.

The locks on the vaults of Dominion Finance Department, Ottawa, St. John, Winnipeg, P. E. I., and Toronto, are all made by them, also the vault doors, etc. The safes of the firm are a credit to themselves, to the city of Toronto, and to the Dominion.

*TAYLOR BROTHERS.*

The Don Paper Mills may be considered the oldest established manufactory of importance in Toronto, dating back to 1845. The manufacturing plant is situated on the River Don, three miles from the city, and comprises three mills, the united production of which is about four tons of paper every twelve hours. The lower mill is devoted to the manufacture of roofing and carpet, felt, grocers', dry goods, and express wrapping paper; the middle makes all kinds of printing, colored, and book paper, and at the upper mill is manufactured manilla and hanging papers. There is also a paper bag factory in connection with the works.

The location of the mills was selected on account of the running water which is essential to the manufacture of paper, and the entire establishment is replete with the most improved machinery and appliances, amongst which is a Harper Improved Fourdrinier Paper Machine. The trade of the firm is co-extensive with the Dominion, and Toronto may justly pride herself in this representative establishment, as supplying every want connected with the trade.

In connection with the paper trade, the firm operates an extensive steam saw-mill, and altogether gives employment to a large number of operatives, all contributing to the growth and prosperity of the city.

---

*BROWN BROTHERS & CO.*

In the manufacture of books and the publication of every form of diaries, this firm is the longest established in the city, and in the latter trade stands unrivalled in the Dominion. The house was founded in 1846 by the father of the present firm, which was formed ten years later. The business includes every branch of book-binding, from the plainest to the most ornamental and highly finished work. The most improved and labor-saving machinery is employed, and the general facilities for production are unsurpassed.

The business is thoroughly systematized in departments, and the stock comprises every description of paper, stationery, and a full and complete stock of book-binders' and printers' materials. The trade extends all over the Dominion, and has latterly been pushed to the far east,—the greater portion of the books shipped to Australia and New Zealand, as well as to foreign countries, are the productions of this establishment, which holds a front rank amongst the numerous manufacturing establishments of Toronto.

The exhibits at the London and Colonial Exhibition are attracting much attention, and reflect much credit on the firm and on Toronto.

---

*ROLPH SMITH & CO.*

While the principle laid down in "Toronto Called Back," of giving the history of the importing trade and manufactures, is strictly carried out, this firm is selected as being exceptional.

The history of lithography and engraving is so inseparable from both of the above-named interests as almost to be included in them. The work executed for all other branches of trade, and for banks and public institutions, stamps it with great importance, and exhibits in a remarkable manner the progress of trade and its constantly increasing requirements, and this applies in a very special manner to Toronto.

For many years the writer or his partner, on their half-yearly trips to Europe, made a rule of placing their orders for stationery and all printed, lithographed, or engraved matter in the hands of some large house in London or Manchester, immediately on their arrival, so as to have it ready for shipment with goods. This necessity no longer exists, as everything in the way of account-books, invoices, cards, cheque-books, promissory note forms, and circulars, which were then ordered in England, are now done quite as well in Toronto, and the duty and freight saved besides.

The business of this firm was originally founded by Mr. John Ellis, in 1849, in a small engraving shop on King Street, and from him it passed into the hands of Mr. J. T. Rolph, the senior

member of the present firm. In 1873 Mr. Rolph admitted his brother, Mr. Frank Rolph, and Mr. David Smith, as partners, under the present style of Rolph, Smith & Co.

The exhibits of the firm forwarded to London for the Indian and Colonial Exhibition are a fair representation of the regular work executed in the business. They consist of twenty-one large walnut frames, containing specimens of their work, comprising colored show cards, labels, lithographed portraits, and all kinds of commercial work, such as cheques, notes, drafts, letter, note and invoice headings, lithographed menu cards, copy book head-lines, embossing, etc. These specimens are alike creditable to the skill and enterprise of the firm and to the business men of Toronto, and will undoubtedly attract much of the attention of the colonies, as well as of this Dominion. The extensive new premises in course of erection on Wellington Street West will afford increased facilities for carrying on the business.

---

#### *HEATING OF BUILDINGS IN TORONTO.*

This is of so much importance, combining health and comfort with the beauty and adaptation of house furnishing, as to have become a matter of scientific skill, as well as one of the ornamental arts.

In 1847 the only stove in use was the square, unsightly, box-shaped article, and these were of all sizes, from the smallest up to those large enough to admit a whole stick of wood without being sawn or split. The gradual introduction of coal, which at this time was only used by blacksmiths, led to great improvements in the shape and designs of stoves. Some were made as open grates, which added much to the cheerfulness of sitting rooms.

To witness the display at one of the annual exhibitions, or in one of the large manufacturing establishments, is to see in a most remarkable manner, as much as in any other branch of manufacture, the progress of taste and refinement, as well as in arrangements for comfort. The rarity and beauty of the

designs, as well as the arrangements for promoting health, and the convenience of "self-feeders," in which the fire need never go out the whole winter, are truly marvellous.

The stoves of the present day are not only useful but highly ornamental, and other heating arrangements, whether from furnaces supplying hot air, or by steam, or hot water, all are made to appear as part of the furnishing of hall or drawing room.

THE E. & C. GURNEY CO. (LIMITED),

was founded originally in Hamilton, in 1843, for the manufacture of stoves and other castings suited to the requirements of that time.

Since then the firm has taken the lead in introducing every improvement and new design, till at the present time the business has extended to Toronto, Winnipeg, Montreal, and has also extensive scale works at Hamilton, and also carries on the manufacture of agricultural implements at Dundas.

The Toronto branch was established about sixteen years ago, by Mr. Edward Gurney, junior, under whose management it has grown to its present gigantic proportions.

The buildings on King street, erected by the firm, four stories high and 400 x 60 feet, are occupied as store-rooms and mounting shop, and another of the same dimensions utilized as a foundry. These have been supplemented by a large addition the present year, making the whole arrangements complete in every department.

The very best talent and unlimited capital are employed in producing every article of the most approved and artistic construction for the heating of buildings, from the cottage to the palace. Stoves and ranges of every description, combining beauty with utility, are manufactured, and shipped all over the Dominion; and as a result of their exhibits in London, no doubt a large trade may be anticipated with Australia, and possibly with Great Britain, the stoves now in use in Canada being equally suitable for all these countries.

The specialties of the firm are steam and hot water boilers, with the Bundy radiators, adapted to every building and to

every part of any building, and these, when ornamented with the new coil screens, whether in hall or drawing-room, may be made to correspond with the most luxurious furniture, and become an attractive feature in the general effect.

The firm in Toronto employs from 175 to 200 hands.

---

*THE GRAND "TRUNK" HOUSE OF THE DOMINION.*

If any person would like to have proof of the wonderful development of commercial travelling within the period of the present reminiscences, let him read of its first commencement, and then take a walk through the baggage-rooms of the Union Station and inspect the vast piles of iron-bound, grimly-defiant, smasher-proof contrivances which contain the samples of home and foreign manufactures, used by the army of 2,300 commercial travellers of the Toronto branch alone, by which the large manufacturing and wholesale establishments are represented from the Atlantic to the Pacific, and the comparison will be found to be rather surprising. The history of the firm of

H. E. CLARKE & CO.

is intimately connected with this branch of trade.

Mr. Clarke commenced business about thirty years ago, in a small store on Yonge Street, his staff consisting of one boy. The writer recollects distinctly of his purchase from Mr. Clarke of the first commercial trunks for the firm, on the opening of the Northern and Grand Trunk Railways, and since that time the demand has steadily and rapidly increased, with a corresponding improvement in the manufacture and convenience of these articles. No less remarkable has been the progress of the trade in trunks, satchels and valises for the tourist, and especially in everything to suit the convenience of ladies.

The old flat-bottomed scow has given place to the noble three-decked "Saratoga," where everything appertaining to ladies' dress, from tip to toe, parasol and fan included, may be arranged in compartments from which they will emerge without crease or wrinkle.

Messrs. H. E. Clarke & Co. occupy large premises as a factory, employing a large staff of workmen, and have recently enlarged and beautified their retail store on King Street, making it the leading establishment of the kind on the continent.

### The Queen's Hotel,

founded by Captain Thomas Dick in 1862, received its name, no doubt, from the well-known loyalty of its founder, and while a "rose by any other name would smell as sweet," there is an appropriateness in this being applied to the leading hotel in the Queen City of the West that will always strike a traveller, especially from Britain. This attachment to everything appertaining to royalty was further evidenced by Capt. Dick in the name given to the steamer built for him on the Clyde, which he called *Her Majesty*.

The writer crossed to England with him when going over to place the contract, and when all had been completed, and the steamer was on her way out, she was unfortunately lost. This was regarded as matter of great regret, not only by the Captain, but by all Toronto citizens.

From the commencement the aim of Captain Dick was to provide a comfortable home for his guests, as distinguished from the "caravansary" style of most hotels in America, and in this he was most successful, even to the minutest detail. The present proprietors, Messrs. McGaw & Winnett, have followed up the original design, making constant improvements in every department. This popular hotel has recently been renovated and changed in many respects from the first to the third story. A year ago its elegant and commodious dining-room was very handsomely frescoed. During the last three months many of the parlors, corridors and halls have been tastefully decorated and painted. New private staircases have been fitted up in the Queen Anne style. Each landing has a magnificent stained glass window, and as one ascends these unique windings the idea must flash upon him that he has mistaken the Queen's Hotel, and is ensconced in some baronial hall. The halls and corridors have all been relaid with costly and luxurious carpets.

When all these changes are added to the previous commodious and handsomely furnished drawing-rooms and bedrooms, with bathrooms, to say nothing of the fine suites of rooms which were fitted up for the Princess Louise and the Marquis of Lorne on the occasion of their first visit to Toronto, as well as other suites that were prepared several years ago, in a magnificent style, for the reception of the Grand Duke Alexis, then heir apparent to the crown of Russia—the Queen's stands unrivalled in this respect by any hotel in the Dominion, and as

THE QUEEN'S HOTEL.

regards the *cuisinerie* and the daily *menu*, nothing is left to be desired.

Need we wonder, then, that the Queen's is largely patronized, not only by guests of the first standing from all parts of the Dominion, but also from the United States, England and the Continent. In May, 1880, their Royal Highnesses Prince Leopold and Princess Louise occupied a suite of apartments at the Queen's. His Excellency the Earl of Dufferin, Governor-

General, and the Countess of Dufferin, also occupied apartments at this hotel.

The situation is delightful, commanding a splendid view of Toronto Bay and Lake Ontario, and from its proximity to that splendid sheet of water, the cool breezes can be enjoyed all through the summer, making it a most desirable resort for visitors from the south.

The beautiful grounds around are both spacious and airy, and with croquet and chevalier lawns, nothing more pleasant could be desired by business men, pleasure seekers or tourists. The Queen's is furnished with all the latest modern improvements, having a handsome passenger elevator and electric bells, and in addition will be found the most polite attention to every wish of its guests.

The building being only three stories high, covering a large area of ground, and used exclusively as a hotel, having lawns on either side, with means of exit from the house, in addition to those in front and rear, renders it almost impossible for an accident to take place from fire, and consequently the Queen's is looked upon as the safest hotel in the Dominion of Canada, and is regarded with pride by the citizens of Toronto as an establishment worthy of a great city.

#### Toronto's Natural Advantages.

We get here no earthquakes such as those of which the San Franciscan sleeps in nightly dread. We get no fervid heat, such as in New York often slays its scores in a day by sun-stroke. We get no excessive degree of cold, such as all places to the east, west and north, and some to the south, including Chicago and St. Louis, suffer from. We get no cyclone or wind-storm, such as all the cities west of us, even as near as Detroit, are subject to. No western cyclone ever yet reached this district. We get no floods, such as periodically inflict loss and suffering beyond calculation upon many of our sister cities. Nature has done everything for our comfort, providing even for the absence of the mosquito, which is just beginning to ply its proboscis elsewhere.

### Toronto a City of Churches.

Wherever God erects a house of prayer,  
The devil always builds a chapel there ;  
And 'twill be found upon examination  
The latter has the larger congregation.

—*Daniel Defoe.*

If this celebrated man, the father or founder of the English novel, was living in Toronto to-day he would scarcely venture to introduce the above lines into a satire on churches and church-goers. The congregations worshipping in Toronto churches would show a very different result from what is implied in the above verse. In no city in the world are churches more numerous, or the congregations larger, in proportion to the population, and it is safe to say that in this respect the church accommodation is larger than in any other city. Taking the average capacity to be one thousand, and the number of churches in Toronto and suburbs at one hundred and twenty, the entire population, if present at one time, could nearly be accommodated; and this cannot be said of any other city. Although this can never happen, it is evident the average attendance must be very large and the accommodation abundant.

It is safe to say, that nowhere else can such a sight be witnessed on a fine Sunday evening, within the same limits, as in Toronto, when the churches are emptied of the crowds of worshippers and the sidewalks are blocked with the throngs returning to their homes.

The writer having spent Sundays in every large church-going city on both sides of the Atlantic, can make this statement without fear of successful contradiction; nor is there anywhere to be seen better dressed or more respectable looking congregations than worship in Toronto churches.

What the feelings must be of those who absent themselves from Toronto churches on Sunday I cannot imagine, never having such an experience, but it seems as if that very absence would preach a sermon which, to every freethinker or agnostic, would be as powerful in favor of Christianity as if a sermon were listened to inside the walls of a church.

The ringing of the bells is at an end, the rumbling of the carriage has ceased, the pattering of the feet is heard no more, the flocks are folded in the numerous churches. For a time

ST. ANDREW'S CHURCH, KING STREET WEST.

everything is hushed, but soon is heard the deep pervading sound of the organ, rolling and vibrating through the buildings and out into the streets, and the sweet chanting of the choirs makes them resound with melody and praise, while it is poured

forth like a river of joy through the recesses of the city, elevating and bearing the soul on a tide of triumphant harmony to heaven. The wanderer about the streets at such a time is not a proper subject for envy.

In writing of Toronto as a city of churches, the men who, by their faithful discharge of duty and their advocacy and influence, have been to a great extent instrumental in educating the religious element up to the present high standard of church-going in Toronto, ought not to be forgotten. The following are amongst those to whom much of the credit is due, and as the names are given entirely from memory, and none given whom the writer has not heard preach since 1847, any omission will be overlooked:—

BAPTIST.

Rev. Messrs. Piper, Fyfe, Caldecott, Castle, and Thomas.

CONGREGATIONAL.

Rev. Messrs. Roaf, Ellerby, Marling, Lillie, Burton, Powis and Wild.

PRESBYTERIAN.

Rev. Messrs. Burns, Topp, Barclay, Gregg, Taylor, Parsons, King, McLeod, MacDonnell, Kirkpatrick, Milligan, Robb and Kellogg.

EPISCOPAL CHURCH.

Bishops Strachan, Bethune, McLean and Sweatman; Rev. Messrs. Grasett, Baldwin, Lett, Givens, Sanson, Williams, Darling, Pearson, Scadding, Lewis, Jones, Rainsford, Dumoulin, Langtry, McCollum, McCarrol, Bilkey, Boddy, A. H. Baldwin and Morgan Baldwin.

METHODIST.

On account of the itinerant system of the Methodist Church, the array of names will necessarily be much greater than of the others.

Rev. Messrs. Hetherington, Cooney, Harvard, Richey, Evans, Wood, Rice, Stinson, Wilkinson, Squire, Bishop, Douse, Douglas, Elliott, Ryerson, Rose, Taylor, Green, Spencer, Sanderson,

Borland, Howard, Williams, Hall, Lavell, Stevenson, Punshon, Cochrane, McClure, Savage, Potts, Briggs, Dewart, Dorey, Johnston, Antliff, S. J. Hunter, W. J. Hunter, Clarkson, W. W. Ross, Jeffrey, Jeffers, Hannan, Learoyd, McRitchie, Stafford, Poole, Bridgeman, Harper, Laird, Starr, Blackstock, S. P. Rose, and Shorey.

#### ROMAN CATHOLIC.

Not having heard any preachers of this Church except Archbishop Lynch and Rev. Mr. Teefy, I can only say that both of these gentlemen are distinguished for literary ability and devotion to the interests of their Church.

The improvement in the numbers and respectability of the worshippers since they were confined to the comparatively insignificant church on Power Street is something marvellous, and no one visiting any of the handsome Roman Catholic churches in Toronto can help being struck with the decorum and reverence observed during the service.

#### CHURCHES.

The total number of churches at present in Toronto is one hundred and ten, divided as follow:—Episcopal, 26; Presbyterian, 18; Baptist, 11; Methodist, 25; Roman Catholic, 9; Hebrew, 1; Congregational, 7; Reformed Episcopal, 2; Unitarian, 1; Lutheran, 1; Catholic Apostolic, 1; Plymouth Brethren, 2; Miscellaneous, 5.

#### THE SALVATION TEMPLE.

The Salvation Temple just completed is quite an imposing structure with its castellated bastions, combining in appearance the castle, the barracks and the temple. The frontage is 106 feet, with a depth of 100. It is built of red brick with stone facings. A space of 22 feet has been divided off in front to be used as offices. Through this portion three entrances reach the Temple; the central one being broad and lofty. The height of the ceiling inside is 32 feet, and the width 96, with no roof columns. This is the widest span without support of any

public building in Canada. The walls are four feet thick, and are capable of standing an enormous strain.

The auditorium will hold about 2,500 people, and there is not a bad seat in the house; the ventilation is perfect, as are also the acoustic properties.

The Temple is constructed in amphitheatrical form and has one gallery at the back. The ground floor rises from the centre, and a passage runs entirely round next the wall.

The officers conducting the services sit on the north side, with the soldiers and audience all about them. The soldiers for the most part occupy the pit, or dress circle. This latter

THE SALVATION ARMY TEMPLE.

arrangement is in accordance with the system followed by General Booth in England. The ceiling of the Temple is of varnished wood, while the walls are finished stucco work in plaster. Texts and mottoes will be used as additional ornaments. The entire height of the building, which comprises four stories, is 80 feet to the top of the tower, and 50 feet to the centre and slates. The windows are all stained glass with Scripture mottoes. A pair of iron gates close in the front entrance, over which appears in stone letters the single word "Hallelujah." The entire cost will be about \$40,000.

## THE SALVATION ARMY

reports that the organization is at work in one hundred and fifty-one cities, towns and villages throughout the country. It has outposts in fifty-three places. In five places land has been secured for building purposes, while there are barracks in forty places. The number of officers in 1885 was 418, number of corps 148, and outposts 47. The attendance numbered 269,000, being an increase over the previous year of 76,612. The amount of money received and expended weekly on the local corps was \$2,905.

The Temple was formally opened on the arrival of Marshall Ballington Booth, who came this way from Australia (on his return to England) to dedicate the building. The "Council of War" continued from the 1st to the 8th of May, and was the occasion of enthusiastic demonstrations. The daily processions accompanied by bands of music, were witnessed by immense crowds of people, and at night the vast auditorium of the Temple was crowded to excess. On Sunday, the 2nd, the formal dedication took place, and each succeeding day and evening through the week there was a change of programme, including a Hallelujah Wedding and Infant Dedication.

On the night of the latter ceremony a number of officers and soldiers who had been imprisoned for noisy demonstrations appeared in prison costume and related their experience. In connection with the presentation of the infant the Marshall stated that twenty-eight years ago he was taken by his parents sixty miles in England to be baptized by the Rev. Jas. Caughey, so well known in Toronto, who is still living, and commencing again to preach as an evangelist.

The Marshall gave a striking account of his opening campaign in Manchester,—the extraordinary language used in the posters having brought immense masses of the people to see and hear,—and then of his arrest and imprisonment; all of which had a thrilling effect on the vast audience. He left for England the following week, accompanied by Commissioner Coombs and William Gooderham, Esq., of this city.

### **Toronto an Educational Centre.**

This position claimed for Toronto will be admitted by all. From the lowest step in the ladder to the highest, no city can boast of equal advantages in the shape of education. The Common School system, a lasting monument to the ability, wisdom, and indefatigable exertions of the late Dr. Ryerson, has been brought to a state of perfection perhaps unequalled in the world. Framed on the models of all the best systems in every

UNIVERSITY OF TORONTO.

other country, it combines the best feature of all, and improvements on most.

Rising in the scale, it will be found that no educational want has been left unsupplied; whatever the pursuit or profession the student may intend to follow through life, he will find a school, academy, college or university in which he will have full scope for his ambition. From the Public Schools, there is a step upwards to the Model Schools, then to the Collegiate Institute, Upper Canada College, and to the University of Toronto. Then there are technical schools, including the School of Practical Science and the Ontario School of Art.

A city possessing so many advantages for students must afford increasing attractions from year to year, the high standing of its professors, and the honors to be obtained, whether as medals, scholarships, fellowships, or other degrees, offer inducements superior to those of any other city in the Dominion, and must lead ultimately to the federation of other colleges with the University of Toronto.

In addition to the colleges named are Knox College, Trinity College, the Baptist College, and St. Michael's. There are also the College of Pharmacy, Toronto School of Medicine, Trinity Medical College, Veterinary College, Canadian Institute, and School of Divinity, or Wycliffe College.

The Normal School, for the training of teachers, was established in 1847. The present buildings were erected in 1851, the corner stone being laid by the Earl of Elgin, and in the month of November, 1852, the buildings were opened. They were then described as being elegant in architectural appearance, commodious in their accommodations, and healthy in their situation. They are at present an ornament to St. James' Square, the grounds surrounding the building being beautifully laid out with trees and flower beds, and in addition there is a handsome conservatory.

The Educational Museum is a source of attraction to visitors, as well as valuable to the students, and contains paintings, statuary, and curiosities of various kinds, plaster casts of Egyptian, Assyrian, Babylonian, Persian, Grecian and Roman antiquities. It also contains philosophical apparatus, being representative, on a small scale, of the South Kensington Museum.

TORONTO EN.

**Toronto a Musical City.**

High on the shore sate the great god Pan,  
While turbidly flowed the river,  
And hacked and hewed as a great god can,  
With his hard bleak steel, at the patient reed,  
Till there was not a sign of a leaf, indeed,  
To prove it fresh from the river.

He cut it short, did the great god Pan,—  
How tall it stood in the river !  
Then drew the pith, like the heart of a man,  
Steadily from the outside ring,  
Then notched the poor dry, empty thing,  
In holes, as he sate by the river.

“This is the way,” laughed the great god Pan,—  
Laughed while he sate by the river,—  
“The only way, since gods began  
To make sweet music, they could succeed.”  
Then dropping his mouth to a hole in the reed,  
He blew, in power, by the river.

Sweet, sweet, sweet, O Pan,  
Piercing sweet by the river,  
Blinding sweet, O great god Pan !  
The sun on the hill forgot to die,  
And the lilies revived, and the dragon-fly  
Came back to dream on the river.

—*Elizabeth Barrett Browning.*

Prior to the period when the present reminiscences commence there was little to note of the musical history of Toronto. The writer is indebted to the *Toronto Mail* for some account previous to 1847.

It appears by the earliest records, that as far back as 1818 the sole instrumental artist of Toronto was a Mr. Maxwell, distinguished “for his quiet manner, for the shade over one eye, and for his homely skill on the violin.”

With military music the townspeople were familiarized by the occasional performances of the regimental bands which were stationed here from time to time. The ecclesiastical music was entirely destitute of organs or melodeons.

At the Church of St. James' a Mr. Hetherington officiated as clerk, and his mode of procedure was to announce the psalm or hymn, give out the tune on the bassoon, and then accompany the vocalists present with original and often grotesque improvisations on that instrument. At one time a choir was formed at this church with a bass viol, clarionet and bassoon as the accompanying instruments. The music was almost entirely confined to the churches that then existed; the choirs being accompanied by flutes, violins, violoncellos, and occasionally a trombone. It is said that Mr. James Baxter organized and led a choir at the old Methodist church on King Street, near the present site of R. Hay & Co.'s establishment, in 1831.

The first impetus of a permanent character given to music was through the services of the late Mr. John Ellis and Dr. McCaul; the former distinguished by his performance on the violoncello, with which Toronto audiences were favored gratuitously for many years, and the latter on the piano, showing himself to be an accomplished musician as well as composer.

For many years Dr. McCaul was the patron of every enterprise which contributed to the pleasure and advantage of the citizens. No meeting for any object of a literary, benevolent, or pleasurable character was considered complete without the presidency of Dr. McCaul, and whenever he took the lead his felicitous remarks, always mingled with real Irish humor, invariably resulted in success.

Through the influence and efforts of Dr. McCaul, selections from the oratorios were first given in 1845, in the Parliament Buildings. Monsieur Bley, a talented violinist, was brought over from New York to conduct, and with him were engaged Miss Andrews, Miss Northrall, and Mr. Miller, as principal vocalists. Two concerts were given, which were very successful and excited great enthusiasm. Dr. McCaul presided at the piano, and the *Toronto Mail* says, "was received with a burst of applause on making his appearance on the platform." The result of this new venture led to the inception of the idea of establishing a Philharmonic Society. Monsieur Bley, having been induced to remain in Toronto, was appointed conductor of

the new organization, which started in 1846. Dr. McCaul was the President and Mr. Ellis the instrumental manager.

This Society gave a concert in the University Hall, Parliament Buildings, on St. George's Day, April 23rd, 1847, a few days after the writer's arrival in the city, for the benefit of the Irish and Scotch relief funds. Among the vocalists were Mr. J. D. Humphreys, who became Toronto's favorite tenor, Mrs. Searle, and Messrs. Ambrose and Barron.

After a short stay in Toronto, Monsieur Bley returned to France, and the Society was started afresh in 1848, with Dr. Strathy as vocal conductor and pianist, and Mr. Schallehn as "*chef d'attaque*" of the orchestra.

The first concert was given in the City Hall on the 28th of December, 1849, which created quite an excitement; some of the most difficult morceaux of the great masters were given with fair success. The second of these concerts was given in the Temperance Hall, on the 31st of January, 1850, under the patronage of the Earl and Countess of Elgin. Mr. Schallehn was a clever clarinet player, and was bandmaster of the 71st Regiment.

In 1851 the Toronto Vocal Music Society was formed in the room of the old Philharmonic. Dr. McCaul was the President, the late Chief-Justice Draper, Vice-President, and Dr. Clarke, Conductor. At the first of the reunions of this Society, in May of that year, the solo vocalists were Miss Davis (afterwards Mrs. F. Thomas) and Miss Harris; among the choral numbers given was Handel's "Hailstone Chorus," from "Israel in Egypt." These meetings culminated in a public concert in the following December. The programme embraced selections from the works of Handel, Weber, Rossini, and Mendelssohn. The soloists were Miss Davis, Mr. Hecht, baritone, and Mr. T. Cooper, tenor.

The second concert was given in June, 1852, in the St. Lawrence Hall, which had just been opened. This concert was given in commemoration of Moore, the poet. Mr. Paige, tenor, and Miss Paige, soprano, made their appearance and became great favorites with the public.

After this a new organization was formed under the old title of the Philharmonic Society. Dr. McCaul was elected President, Mr. Fred. Widder, vocal manager, Prof. Croft, instrumental manager, Dr. Clarke, conductor, and Mr. F. Griebel, leader of the orchestra.

Mr. Griebel, who came to Toronto with the Jenny Lind concert troupe, was one of the greatest violinists ever resident in the city.

The first open meeting of this Philharmonic Society was held on the 25th of April, 1854, in the University Hall, Parliament Buildings. On the programme was a symphony of Beethoven's, the "Hallelujah Chorus" from the "Mount of Olives," a cornet solo from Mr. Harkness (bandmaster), the overture to "L'Italiana," and a violin solo, "The dying scene," from "Lucia," by Herr Griebel.

At the third meeting, Herr Griebel played De Beriot's first concerto for violin, and one of Paganini's concert solos. The Chorus sang Handel's "Fixed in his everlasting seat."

This society next figured at a concert in aid of the patriotic fund for the Crimean War sufferers, in the St. Lawrence Hall, February, 1885. The programme included the "Funeral March," by Beethoven, piano solo, Mr. Haycraft; song, "Oh, God, preserve the mourners," Miss Davis; solo and chorus, "Qui tollis," Mr. Hecht; fantasia, on the "Cujus animam," Mr. Hayter; song "Ruth," Mrs. Beverley Robinson; song, "I would be a soldier," Mr. L. W. Smith; piano and violin *duo* on "William Tell," Messrs. Griebel and Haycraft; "Heroes of the Crimea," Mr. Humphreys; piano solo, "La Violette," Mr. Klophele; song "The sea is Merry England's," Mr. Barron, (then late Principal of the U. C. College). This concert excited unbounded enthusiasm, and was very successful.

The patronage of music lovers was at this time diverted from the society by the introduction of subscription concerts given by Mr. and Miss Paige. This resulted in the fall of the Philharmonic Society, and musical matters were comparatively neglected till the arrival of Mr. John Carter, who accepted the post of organist at the Cathedral Church of St. James, then

newly built. Mr. Carter arrived in Toronto in October, 1856, and the aspect of the musical world of Toronto was soon completely changed.

Mr. Carter was not long in developing the resident talent, for in the following year he gave the first oratorio performance ever given in Upper Canada. The oratorio selected was the "Messiah," and was given on the 17th December, 1857.

The work was accomplished in twelve weeks, and such was the enthusiasm created, that the concert room was filled to the doors.

Mr. Carter was assisted by Herr Griebel, and Messrs. Noverre, Maul, Schmidt, and Martin Lazare, amongst the instrumentalists, and by Miss Davis, Miss Kemp (afterwards Mrs. Cobban), Miss Robinson, Mrs. Poetter and Mrs. Scott. Among the vocalists were Messrs. Jacob Wright, Sugden, Barron, C. Grasett, Briscoe, Lang, Jas. Baxter and F. Roche.

"Judas Maccabeus" was performed in 1858, under the direction of Rev. Mr. Onions, who started an opposition scheme which divided musical society into two parties, known as the Onionites and the Carterites. The feud, however, was of rather an amicable nature.

The Rev. Mr. Onions had Mr. Noverre as leader of the band, and Mr. G. F. Graham as organist. His vocalists were Mr. and Mrs. Hickok, Mr. Lindsay, Mrs. Dunlevi, C. J. Martin, Mr. Humphreys, Mr. John Baxter, the Misses Robinson, Madame Wookey, Mrs. Hastings, Miss Searle, Mrs. Emerson, and Messrs. Briscoe, Sugden and Vial. The band and chorus were advertised as numbering two hundred.

At one of these oratorios, the writer and his party sat near a gentleman of the legal profession, recently out from London, who criticised the performance of each vocalist, and during the performance of one tenor singer, not appreciating his efforts, he made himself conspicuous by shrugging his shoulders and screwing up his countenance, at the same time exclaiming loudly enough to be heard, "Oh, Sims Reeves!"

Having lately heard that celebrated tenor, in Exeter Hall, we could partly sympathize with his feelings, but not so far as to

lose the enjoyment of the Toronto performance, which was highly creditable to all concerned.

The rivalry resulted in each party giving the "Creation." In 1861 Mr. Carter formed the "Toronto Musical Union," and Mr. Onions the "Metropolitan Choral Society," under the direction of Mr. Martin Lazare, a most able musician. Some of the performances of this gentleman on the piano were truly marvellous, especially "medleys" and "fantasia" with one hand.

In 1863-4 Mr. Carter, as director of the Musical Union in connection with the Mechanics' Institute, in the Music Hall over the present Free Library, gave occasional concerts; and among the works produced were the "Messiah," "Judas Mac-cabeus," the "Creation," the "Lay of the Bell," the "Stabat Mater," and the operas "Il Trovatore," and "Martha."

In 1872 Mr. Robert Marshall, in connection with Mr. Alex. Mills, undertook to reorganize the Philharmonic Society, and succeeded in inducing a sufficient number of instrumentalists and vocalists to combine for this purpose.

Dr. McCaul was appointed President, the veteran Dr. Clarke, Conductor, Mr. Robt. Marshall, Vice-President, and Mr. John Hague, Secretary.

The first concert of this new society was given in October, 1872, when the "Messiah" was given in Shaftesbury Hall. The chorus consisted of twenty-eight sopranos, twenty-six altos, forty-eight tenors, fifty basses, and eight principals—in all one hundred and fifty.

The orchestra, under the direction of Mr. Marshall, consisted of twelve violins, three violas, three basses, two double basses, two flutes, two clarionets, one bassoon, one horn, two trumpets, and two drums—total thirty.

The solo vocalists were Messrs. J. G. Sheriff, Marriott, Martin and Pearson, and Mrs. Grassick, Mrs. Cuthbert, Miss Hillary, Miss Clarke and Miss Thomas.

The pianist was Mr. H. G. Collins. This was the last occasion on which Dr. Clarke conducted at an oratorio.

Mr. Marshall wielded the baton, until the arrival of Mr. Torrington in 1873. This event marked a new epoch in the musical history of Toronto.

F. H. TORRINGTON.

This gentleman received his musical training as Cathedral organist, choirmaster, pianist, etc., under James Fitzgerald, of Kidderminster (pupil of Dr. Corge, Bristol), under whom he was articled for four years. As violinist he was a pupil of Geo. Hayward, Birmingham. In 1854, Mr. Torrington was elected a member of the London Society of Sciences, Literature

F. H. TORRINGTON.

and Arts, for which he has a diploma. After a successful career in England he came to Canada, and was engaged in Montreal as organist of Great St. James' Street Methodist Church, a post he held for twelve years. During this period he developed his musical talent, and worked hard to cultivate public taste for the best class of music. For a considerable portion of this time Mr. Torrington was bandmaster of the 25th Regiment, and as

founder and director of various vocal and instrumental societies, his services as solo organist and violinist were in constant demand. His reputation brought him to the notice of Mr. Gilmore, and he was engaged by that gentleman to form a representative Canadian Orchestra to take part in the first great Peace Jubilee at Boston. During this visit Mr. Torrington was asked by Mr. Gilmore to take up his residence in Boston, and a short time afterwards was offered and accepted the position of organist and musical director at King's Chapel, which position he left for the one he now holds at the Metropolitan Church, Toronto. During Mr. Torrington's residence in Boston he was engaged as teacher of the piano and organ at the New England Conservatory of Music, solo organist at the Music Hall Concerts, one of the first violins in the Harvard Symphony Orchestra, solo organist at the Saturday afternoon organ concerts in Henry Ward Beecher's Church, Brooklyn, N.Y., concurrently with Messrs. S. P. Warren, Geo. W. Morgan and other eminent organists. His services as conductor of musical societies were in much demand in and around Boston, and in the last Great Jubilee, six societies which Mr. Torrington was conducting took part. In connection with this event he was extensively engaged as conductor of the Mass-rehearsals preparatory to the great gathering of the *twenty thousand* voices which met together on that occasion. During the period of his residence in Toronto his work speaks for itself, as, in addition to the palpable improvement in church and choir music which he has effected, and the training of pianists, vocalists, organists and choir-masters now to be found occupying positions in Toronto and other Canadian cities, he has produced with large chorus and orchestra, through the medium of the Toronto Philharmonic Society, the following works of the Great Masters, many of them heard for the first time in Canada, and some for the first time on this side of the Atlantic :

Messiah, Elijah, Creation, Lay of the Bell, Fridolin, St. Paul, Stabat Mater, May Queen, Hymn of Praise, Walpurgis Night, Naaman, Fair Ellen March and Chorus (Tannhauser), March Cortège (Reine de Saba), March and Chorus (Life of the Czar),

Miserere Scene (Trovatore), Mors et Vita, Israel in Egypt, Spring's Message, Bride of Dunkerron, Rose of Sharon, Judas Maccabeus, Gypsy Life, The Last Judgment, Acis and Galatea, Preciosa, Redemption, Rose Maiden, Crusaders.

Mr. Torrington is also Conductor of the Hamilton Philharmonic Society, and in that capacity has produced in Hamilton, Romberg's "Lay of the Bell," "The Messiah," "Elijah," "Hymn of Praise," "Naaman," "Rose of Sharon" and "Samson." And with the Toronto University Glee Club Mendelssohn's music of "Antigone," in the original Greek, and Max Bruch's "Frithjof."

#### CHAMBER MUSIC.

The extent to which classical music is cultivated in private in the shape of trios, quartettes, and quintettes for stringed and other instruments, is generally considered a fair indication of the degree of musical taste that has been developed in a community.

The earliest quartette party in Toronto consisted of Herr Griebel, first violin; Mr. Noverre, second violin; Mr. Childs, tenor, and Mr. Ellis, bass.

After the death of Mr. Griebel, a piano quartette party was formed as follows: Mr. Carl Pieler, piano; Mr. Ernest Pieler, violoncello; Mr. Thomas, tenor, and Mr. Noverre, violin.

Although the amateur players on stringed instruments were few, there were in proportion to their number many fine and valuable instruments among them. Mr. Thomas had the Walmsly bass that belonged to Mr. Ellis (who died in 1877, at the age of 83,) and an Amati tenor; Mr. Marshall had a beautiful Testore; Mr. E. R. Parkhurst had a Johaine Baptiste Guadagnini, date 1751; Mr. H. Parkhurst, a Jacob Stainer, and Mr. Torrington is the owner of an Amati.

From a host of star artists who have appeared in Toronto since Jenny Lind's arrival, we name the following:

Piccolomini, Mario, Santley, Carlotta Patti, Rudersdorff, Parepa Rosa, Catharine Hayes, Cary, Lucca, Canissa, Madame Anna Bishop, Di Murska, Kellogg, Thalberg, Rubinstein, Vieuxtemps (the king of violinists), Arabella Goddard, Wieni-

owski, Sauret, H. C. Cooper, Lichtenberg, Theresa Liebe, Alfred Jaell, Camilla Urso, Prinne, Listerman, Remenyi, Joseffi, Teresa Carreno, Brignoli, Nillson, Lehmann, Musin, Rummell, Wilhelmj, Fabre, Leopold D'Meyer, Paul Julien, Brega.

Among the clubs, the Mendelssohn and Beethoven Quintette, the Damrosch and Thomas Orchestras, and Gilmore's Band have appeared from time to time in Toronto.

The Toronto Quartette Club is composed of Mr. J. Bayley and Herr Jacobsen, violins; Mr. Fisher, viola; and Mr. Correll, cello.

#### JENNY LIND.

The arrival of Jenny Lind, the "Swedish Nightingale," in America, in 1853, created such a sensation as was never known in the musical world. The sale of tickets for her first concert in New York was a great event. The first choice of a seat being set up for competition, was purchased by Genin, the Broadway hatter, for five hundred dollars.

On her first appearance she carried all hearts by storm, not for her great beauty, either of face or figure, but the irresistible charm of her simple and natural manner. Once heard, Jenny Lind could never be forgotten. Nor was her wonderful gift as a songstress the only cause of the royal ovations she received wherever she made her appearance. Everywhere she was fairly worshipped for her goodness and benevolence.

Although she had hundreds of letters every day asking her for help from all sorts of applicants, no worthy cause was overlooked. Her purse was always open to afford relief, and no request to give her services towards any charitable object was denied.

The foundation of the Protestant Orphans' Home in this city is due to her kind-hearted benevolence. In New York especially, the Jenny Lind mania became so strong that fabulous prices were paid for anything that might be preserved as a memento of her visit.

It was said that chambermaids at the hotel sold the combings, and even stray hairs from her hair-brushes, at large prices, and so of every article of which she had made use at the table.

Jenny Lind was the first and greatest star artiste Toronto has ever seen. Her one concert was given in the St. Lawrence Hall, in the fall of 1853.

Before the time announced, on the sale of tickets at Nordheimer's, the window shutters were put up, and the door strongly barricaded to keep back the crowd and allow applicants to enter in batches. So great was the scramble that coats were literally torn on men's backs; and to the great amusement of the crowd, one gentleman, determined to secure his prize, hoisted a small boy over the heads of the people, and in this way the boy procured a ticket. The price of admission was ten shillings, or two dollars.

Those who were present at the concert will remember her rendering of the simplest and most familiar songs. "Comin' through the rye," and "John Anderson, my Jo," were given, although with a slightly foreign accent, with great beauty and simplicity of expression; but while the air was so familiar, the variations, from the lowest to the highest range of the voice, were such as were never heard in Toronto, and were perfectly indescribable; and so of all the other numbers on the programme.

THE "SWEDISH NIGHTINGALE" AT WASHINGTON IN 1853.

The immense National Hall was crowded to its utmost capacity, notwithstanding big prices and inclement weather. Among the notabilities in the front seats, were President Fillmore, Daniel Webster, Henry Clay and John Howard Payne.

Jenny opened with the "Flute song," her voice contesting rivalry for purity and sweetness with a flute in a duett; then the once famous "Bird song," and next the "Greeting to America." The volume of plaudits which followed each piece was emphasized by Mr. Webster, who rose and made the singer a profound bow, as if responding for the country to her greeting.

In response to a rapturous encore, Jenny Lind turned in the direction of John Howard Payne, the author of the song, and gave "Home, Sweet Home," with all the wonderful tenderness,

purity and simplicity fitting both the air and the words of the familiar song. Before the first verse of the song was completed, the audience was fairly off its feet. People ordinarily demonstrative clapped, stamped and shouted as if they were mad, and it really seemed as if the uproar would never end.

Meantime, all eyes were turned upon Payne, a small-sized, gray-haired man, who blushed violently at finding himself the cynosure of so many glances. It was the most thrilling episode in his life.

Jenny Lind (Mdme. Goldschmidt) has been importuned by her friends and admirers to appear once more in public. Her voice is said to have lost none of its sweetness, and to retain much of its power.

She sings a good deal in private, so that she has preserved the flexibility of her voice, and the command of it which made her famous in her younger days. She has finally yielded to the solicitations which have been forced upon her, and has consented to re-appear in a concert in London.

This event will take place during the summer season, and is looked forward to with very great pleasure by all musical people in the metropolis.

MRS. JOHN BEVERLEY ROBINSON AND MRS. J. G. BEARD.

Any account of the progress of vocal music in Toronto would be incomplete without the name of Mrs. John Beverley Robinson, wife of the present Lieutenant-Governor of Ontario.

This gifted and accomplished lady, possessing a fine appearance and exquisite voice, was ever ready to respond to the call of the citizens on every occasion, on behalf of any charitable or benevolent enterprise, and her singing always elicited the most hearty applause. The amounts raised by Mrs. Robinson's services for these noble objects were very large, amounting to many thousands of dollars; one excellent institution here, "The Home for Incurables," having, in 1874, received the sum of \$2,000, the result of one of her charitable concerts. Only a comparatively small number of citizens know how much they

are indebted to this lady for the existence of some of the institutions of our city.

Mrs. J. G. Beard also contributed largely to the same objects, especially the Girls' Home. Her services as leading soprano in the choir of St. James' Cathedral, as well as at all such concerts as have been alluded to, are well known to many in Toronto.

As amateurs these ladies have never been surpassed, and even by the great artistes who have visited the city, seldom excelled.

#### THE MUSICAL FESTIVAL.

To Mr. Torrington is due the conception of establishing a series of musical festivals in Toronto, after the model of those given in England and the United States, and the first of these, which took place on the 15th, 16th and 17th of June, will be memorable in the musical history of Toronto. The first concert consisted of the opening chorus of *God Save the Queen*, followed by Gounod's sacred trilogy, "*Mors et Vita*;" the second was a miscellaneous concert; the third was Handel's sublime oratorio of "*Israel in Egypt*," and the fourth the Children's Jubilee and miscellaneous concert, in which 1,200 children took part.

The solo performers were as follows: Soprano, Fraulein Lilli Lehmann, Mrs. E. Aline Osgood, Mrs. Gertrude Luther; contralto, Miss Agnes Huntington; tenor, Mr. Albert L. King; baritone, Mr. Max Heinrich; bass, Mr. D. M. Babcock; organ, Mr. Frederic Archer; piano, Mr. Otto Bendix; harp, Mme. Josephine Chatterton; violin, Herr Henri Jacobsen.

The festival chorus comprised 1,000 voices, and the orchestra 100 performers. Mr. F. H. Torrington was the musical director.

Whatever Mr. Torrington's ambition may be in the future, unless some grander compositions appear than Gounod's "*Mors et Vita*," and Handel's "*Israel in Egypt*," he can expect no greater success than he has already achieved in the performance of these great works.

The interpretation of the conception of these great composers, and the thorough execution of their great works, is only second to the compositions themselves, and in the Toronto festival, the

masterly manner in which, in every part of light and shade, whether of vocalization or instrumentation, Mr. Torrington rendered every word and note in the programme, has placed him in the front rank of musicians.

To sum up in one word, the whole festival was perfect in all its parts, and the delighted audiences who had the opportunity of listening will look forward to a repetition of the musical feast with confident anticipation.

The best building the city afforded, having been utilized, proved to be most adequate to the occasion. While it would be most desirable that a music hall could be built to accommodate double the number which attended the festival concerts, yet as there is a limit to the powers of the human voice and ear, the whole advantage was on the side of the building used for these concerts, and of both performers and listeners who were present. It is well known that at the Crystal Palace and other large places, no matter what the number of the performers may be, the outside rim of the 20,000 people who attend do not enjoy the music, from the fact that it is impossible to hear at such a distance.

Toronto could afford to have a hall sufficient to accommodate six thousand people, and at prices within the reach of all; and chorus and orchestra might then be increased in a corresponding degree, without loss of the general effect so delightful on the late occasion.

The officers of the Musical Festival Association, who so ably carried out the arrangements, were as follows: Geo. Gooderham, Honorary President; S. Nordheimer, President; J. B. Boustead, J. Herbert Mason, P. Jacobi, Vice-Presidents; James McGee, Treasurer; Jas. C. McGee, Assistant Treasurer; John Earls, Honorary Secretary; Edmond L. Roberts, Secretary; A. L. Ebbels, Recording Secretary.

The festival was successful financially as well as artistically, and reflects the highest credit on all concerned.

The musical festival orchestra comprised twenty first violins, fourteen second violins, ten violas, ten cellos, ten double basses, two flutes, one piccolo, two clarionets, two oboes, two bassoons,

four horns, six cornets, three trombones, two tubas, kettle drums, big drums, side-drums, cymbals, triangle and gong.

At the Children's Jubilee a most interesting programme was successfully carried out, several of the celebrated soloists taking part. The children, however, were the chief attraction. When their youthful voices, with pleasing freshness and simplicity, struck the chorus "Hark to the Rolling Drum," the vast assemblage listened with marked attention, and many a father and mother looked with pride upon their children, whose appearance and behavior reflected much credit on the city.

Mr. Torrington, taking the place of Mr. Schuch, next conducted them in singing the national song of his own composition, entitled "Canada," the first verse of which runs:—

O Canada, fair Canada !  
Name ever dear to me ;  
A home for all who leave the shores  
Beyond the bright, blue sea.  
We love our land, though young it be,  
Its sunshine and its storms,  
Its faces fair, and hearts sincere,  
Affections strong and warm.  
We love our land,  
We love our flag,  
Beyond all others seen ;  
God prosper our Dominion fair,  
Our country and our Queen.

At a particular part in the closing verse each child suddenly produced a small Union Jack and waved it in the air. The beautiful sight of 1,200 flags, together with the patriotic sentiment and excellent singing of the song, created the greatest enthusiasm, and the last verse had to be repeated.

It was a pretty sight to see 2,400 little hands waving in the air in the action songs, led by Mrs. J. L. Hughes, in illustration of the words being sung at the same time. At the close of the concert the entire chorus joined in God Save the Queen.

THE TORONTO VOCAL SOCIETY,

Founded last season by Mr. W. E. Haslam, for the practice of glees and unaccompanied part songs, is the latest enterprise.

## TORONTO CHORAL SOCIETY.

This society was organized in 1879 by Mr. Edward Fisher, and has during its existence performed many of the greatest works of the great composers, including the principal oratorios, compositions for chorus and orchestra, and solos with orchestral accompaniment.

## THE TORONTO PHILHARMONIC SOCIETY.

The principal soloists are Mrs. Bradley, Mrs. (Corlett) Thompson, Mrs. Jenkins, Mrs. (Torrington) Parker, Miss Hillary, Miss Corlett, Mrs. Caldwell, Mrs. J. B. Baxter, and Messrs. Warrington, Blight, Taylor, Curran, Schuch, and Sims Richards.

The principal instrumentalists of the Philharmonic Society are: Messrs. Bayley, Jacobsen, R. Cowan, T. Aikenhead, and Mr. Campbell, violins; Mr. Obemer, viola; Messrs. Correll and Daniels, cellos; Mr. Claxton, bass; Mr. Young, trombone; Mr. Williams, tuba, and Mr. C. Reiddy, tympani.

## ST. MICHAEL'S AND ST. BASIL'S.

In these churches the very highest class of sacred music is performed, under the direction of Vicar-General Laurent. The grand masses of Mozart and Haydn, the Gregorian Chant, and other works of the great masters are given with splendid effect. Mr. Lemaitre is organist of St. Michael's, and amongst the soloists in these churches are Mrs. Petley, Miss Bolster, Mrs. O'Hara, Miss Meyers, Miss Murphy, and Messrs. Ward, McNamara, and McCloskey, with forty chorus singers.

In church music the two organs of 1847 have increased to fully one hundred; and the choirs are now composed of trained voices from the various musical societies.

The removal of the regular troops from Toronto by the English Government caused the want of a military band for several years, the last being that of the 13th Hussars, under command of Colonel Jennings. That want has been well supplied of late years by the splendid bands of the volunteers: the Queen's Own, Mr. Bayley bandmaster, and Royal Gren-

diers, with Mr. Toulmin, also the Governor-General's Body Guards, and the Garrison Battery of Artillery. Besides the fine band of "C" Company, Infantry School, which completes the list of military bands, there are the bands of Heintzman & Co., the Massey Manufacturing Co., and Christian Brothers, all of which contribute to the pleasure of the citizens, and show a wonderful development of musical talent in our midst.

### The Manufacture of Pianos in Toronto.

In a work professing to give a sketch of the wonderful growth and progress of Toronto, and the development of its manufacturing industries, and also of its present character as a "musical city," nothing can be more appropriate than to refer to the manufacture of musical instruments, and especially of pianos. No better evidence of the advancement of Toronto in wealth, culture, and refinement could be found than in the existence in her midst of extensive establishments for this branch of manufacture, and in the prospect of constantly increasing demand. The specimens forwarded to the Indian and Colonial Exhibition in London must remove every trace of misconception as to the state of society in the Queen City of the West, and of Canada in general, and show a state of educational refinement that no other class of exhibits could possibly do.

#### *HEINTZMAN & CO.*

The first piano made in Toronto was manufactured by Mr. John Thomas, about 1847. In 1860 Mr. T. A. Heintzman, the founder of this firm, removed to Toronto from Buffalo, where he had been engaged in the manufacture of pianos for the previous ten years. First in connection with Mr. Thomas, and then on his own account, he entered energetically into the business, having no competition in the manufacture of pianos for several years. From that time to the present the growth of the business has been marked by steady progress, and during the past few years has shown an increase of fifty per cent. every year, and especially in the last ten years, has shown a total increase of 800 per cent.

The present staff numbers one hundred and forty men, who turn out an average of from twelve to fifteen pianos a week. The perfection to which this firm has brought their instruments is shown in the magnificent specimens now being exhibited at the Indian and Colonial Exhibition. These consist of one "concert grand" piano, and one "semi-grand," and five different styles of upright pianos. On the grand pianos there are two very important patents. First, the patent bridge, which gives a very brilliant, distinct and beautiful singing quality to the treble notes. Second, the improved action, which makes it less complicated, and less liable to get out of order. The upright pianos are all constructed in different styles, and the workmanship and designs of the cases are excellent. One is in American blistered walnut, which looks very neat, and another upright is finished in mahogany and satin wood, with carved fretwork. Another smaller upright piano is got up in a very pretty figured French burl walnut, with beautifully carved trusses. Two more of the ordinary stock pianos are finished in rosewood.

All the upright pianos have Mr. Heintzman's patent desk, a very complete arrangement for supporting music. Many professors of music, both in London and elsewhere, have examined these instruments, and pronounce them first-class in every respect. No doubt many of them will find their way into the English and colonial markets.

J. E. Adkins, Royal College of Music, London, says: "I can bear testimony to the excellence of Messrs. Heintzman & Co.'s piano, both as regards workmanship and tone."

Herr Max Blume, F.S.S., London, from the Conservatory of Music, Leipsic, writes: "Having tried the pianos made by Messrs. Heintzman & Co., at the London and Colonial Exhibition, I must say, without hesitation, that they are, without doubt, to my liking, the finest pianos I have ever tested; their tone, touch, and mechanism are perfection, whilst the solidity of their construction and workmanship is the finest I have ever seen in the pianoforte making."

Henry Wienkowski, from the Vienna Conservatory, says: "I

have the most sincere pleasure in saying that I have never met with a piano I can so confidently recommend for quality of tone and delightful touch, and can really say that it more than surprises me to see that so perfect an instrument is made in Canada. Having travelled through the United States for three years, I had the opportunity of trying the very best American pianos, and gave recitals at Chickering Hall, playing on Steinway and Weber pianos, and consider the Heintzman piano equal to the very best in the world."

The exhibit of pianos has been visited by several members of the Royal family, including the Crown Princess of Germany, and the Princess Louise, also the ex-Empress Eugenie, all of whom, having tested them personally, have given them unqualified praise. Before the Toronto Industrial Exhibition opened, these pianos always took first prize at Provincial Exhibitions, and at the Industrial have carried off first honors, also medals at Centennial in Philadelphia, and Sydney, N. S. W.

---

*MASON & RISCH.*

"Triumphant success! Our pianos are greatly admired for their true tone quality and beauty of design. The Queen, Princess Louise, and other members of the Royal party delighted with them," were the contents of a cable despatch from London to the above firm, on the opening of the Indian and Colonial Exhibition.

This exhibit is displayed within a handsome canopy, occupying six hundred square feet of space, and consists of eight pianos. Four are out of the ordinary stock, two being uprights, one a concert upright, and one a grand. Of the other four it may be said, they are magnificent and beautiful specimens of workmanship: one is a finely polished mahogany grand, supported on elegantly carved legs. Around the sides run eleven carved panels, each of a different design. Two other pianos are uprights, one finished in silver and green, the other in gold and olive, both elaborately and delicately carved

and fretted in metal and wood carving. The last is a polished walnut upright of fine finish and tone.

The pianos of Mason & Risch are noted for their rich, sympathetic, and flute-like tone quality and durability. The business was established in 1871, and assumed the present style in 1878, during which time it has steadily increased, till at present one hundred hands are employed in all the branches.

From the commencement of the business, the aim of Mason & Risch has been to secure a substantial and enduring success by deserving it. The Mason & Risch "Parlor Grand Pianos," are instruments of the highest artistic excellence. In their development the best scientific skill of the firm has been employed, and in the results attained, it is safe to say that new problems in tone science have been successfully solved.

Musicians who have examined these instruments are unanimous in their expressions of praise; the great master, Dr. Franz Liszt, pronouncing them "excellent, magnificent, unequalled." As a token of his high appreciation, he had his portrait painted by Baron Joukovsky, son of the renowned Russian author, and personal instructor of the Emperor Alexander II., and presented to the firm. This portrait is now in London in connection with the Piano Exhibit. At the Toronto Exhibition in 1879 the Mason & Risch pianos obtained two special diplomas and the gold medal.

From their manifold excellence of tone, touch and workmanship, the Mason & Risch pianos have received from the highest musical authorities in Europe, United States and Canada, the most unqualified recognition.

The Mason & Risch factory is one of the most extensive in the country, and is complete in every department. It is supplied with the best labor-saving machinery, and with every facility for superior production. The lumber yard is stocked with the best material, which is seasoned for three or four years before being used, and in addition has been subjected to a patent drying process, for the use of which the firm has had a large royalty.

*OCTAVIUS NEWCOMBE & CO.*

This firm does not claim to be one of the pioneers of piano manufacturing in Toronto, but to have commenced operations with all the benefit of the experience gained by experiments made previously in piano building. In 1871 Mr. Newcombe, with two others, established a first-class pianoforte business in Toronto. It was continued with success during a partnership of seven years, after which the firm assumed its present style.

Beginning in a careful way, with a staff of skilful and experienced artisans, their aim was to manufacture a superior class of pinafortes, strong, durable, and of true musical quality, that would in time take the place of the costly American instruments, and supersede the inferior ones, whether of Canadian or foreign make. By adopting the latest and most approved system of construction, endeavoring to produce only the very best grade, and sparing no expense in making any possible improvement, their pianos have gained a position and reputation that has secured for them an increasing demand.

Their factory is conducted on the principle of a division of labor, the work passing through many hands before it is completed, each man being required to make his part perfect before it is received by the next, and each department being in charge of an experienced foreman, and all under the supervision of the firm. As their pianos have become known, their merits have been recognized and acknowledged by the musical public.

They have been selected by teachers for their own use, and for the severe work of schools, convents and colleges, which is the best evidence of their substantial character, thoroughness and durability, as well as their superiority in touch and tone. A tone clear and liquid in the treble, mellow and well sustained in the centre, and resonant in the bass, and affording in all the registers a harmony clear and equal, and of that sympathetic nature which, under the hands of an artist, arouses the enthusiasm of the listener, and demonstrates that the Newcombe pinafortes are unsurpassed in these qualities.

At the World's Exhibition in New Orleans, in 1885, a striking

illustration of this effect occurred in a piano recital by Mrs. Marguerite Samuel, whose great talent as a pianist was recognized by all musicians in that city. The programme selected was strictly musical. The vast space of the building did not prevent her *finesse* of execution and delicacy of tenor being immediately apparent to her critical audience. All the numbers were choice and conscientiously rendered. There was the prayer of Lohengrin, arranged by Liszt, with its orchestral tones and immense difficulties; Weber's Barcarole of Oberon, full of poesy; the Polonaise of Chopin, brilliant and at the same time thoughtful; Les deux Alouettes of Lecktizki, a warble of birds in springtime, with fresh perfumes in it of vernal breezes; the Rondo Capriccioso of Mendelssohn, ideally representative of that composer's dreamy and finished style; and the "Suis moi" of Gottschalk, so passionately nimble.

Here was enough to try not only the best piano, but even the distinguished pianist. Both stood the test victoriously. The "Newcombe" piano expressed all that was asked: the vigorous sonorities of Wagner, the agility and brilliancy of Liszt, the thoughtfulness of Chopin, the grace of Weber, the sparkling melody of Lecktizki, the sweetness and polish of Mendelssohn, and the passionate lightness of Gottschalk.

The *Musical Courier*, of New York, says of the Newcombe pianos exhibited at New Orleans: "Toronto is noted for its advancement in education and musical taste, and has, within the last decade, made remarkable progress in manufactures, and is now the centre of pianoforte industry of Canada. There are a number of piano factories in Toronto making the various styles of these instruments, and doing such a successful business that the importation of instruments from Europe has almost ceased.

The enterprise of Messrs. Newcombe & Co., and their confidence in the substantial character of their work, is shown by the fact of their placing their pianos where they can be compared with the best instruments of United States makers.

The style of these pianos indicates a Northern degree of solidity and strength that ensures durability, and they possess

a pleasing symmetry of design at once graceful and appropriate. The woods used in the cases are American wave walnut, and French burl, an agreeable change from rosewood. The actions of these pianos are creditable specimens of material and workmanship, and give a full round satisfying tone which is much admired."

The Newcombe pianofortes sent to the Exhibition in London comprise some half-dozen instruments selected from their regular styles. From a musical point of view these pianos are magnificent specimens of skill and industry, and will, no doubt, create as favorable an impression in London as they did at the World's Exposition, New Orleans, 1884-5. In external appearance they are everything that could be desired, evidencing the practical good taste for which the firm has already earned a good reputation. The large grand and small parlor grand are both in rosewood, the latter being an exceedingly pretty model. One upright is chiefly of French burl walnut, relieved with plain walnut, so as to set off the rich coloring and figuring of the natural burl in fine relief. Another upright is in mahogany—a richly-panelled design, some fine emblematical carving in the centre panel, but with a fret running straight across the front of the upper frame; brass continuous hinges and candelabra are attached at each side to a fret work of crystals. The design is both unique and elegant to a degree. The other styles are in rosewood and American wave walnut, and are chaste and beautiful in appearance, and perfect in tone and finish.

On "awards on musical instruments" at New Orleans, the *Times-Democrat* says: "The Newcombe Pianoforte heads the list with the first silver medal, and jurors' report of commendation for construction, quality of material, workmanship, even tone throughout the instrument, and general excellence from a musical as well as a mechanical point of view. This is a genuine triumph for the manufacturers, who have not only had to compete with other foreign makers, but with the wealthy and enterprising exhibitors from the great centres of pianoforte manufacture in the United States, New York, Boston and Baltimore."

*LANSDOWNE PIANO CO.*

Messrs. A. & S. Nordheimer having acquired such high reputation for American pianos of the most celebrated makers, for whom they have been the exclusive agents, amongst which are the Chickering, Stodart & Dunham, the Steinway, Haines & Gabler, that, notwithstanding the high rate of duty on these instruments, their customers being willing to pay the higher prices so as to secure an instrument of first-class quality and excellence (some of these pianos having been in use for forty years), still continue to supply these instruments.

Nevertheless, to meet the demand for instruments less expensive, and yet such as they could recommend, they established the present firm for the purpose, appointing Mr. Gerald Heintzman as managing partner, who, from his well-known practical experience as a manufacturer, will co-operate with Messrs. Nordheimer in placing the enterprise in the front rank of the manufacturing industries of Toronto.

Their capital being practically unlimited, and their facilities unsurpassed, a bright future is in prospect for the company, and another star in the galaxy of Toronto's manufacturing establishments now shines at the grand display of Indian and Colonial exhibits at Kensington, London.

The Lansdowne Piano Co. have sent to the Indian and Colonial Exhibition six instruments. They are all "cabinet grands," and form a magnificent collection, both as regards beauty of finish, and perfection of tune. One of these possesses a handsome case, consisting of inlaid work, carving, and other ornamentation in lavish profusion, yet with such exquisite taste and skill that it stands as a perfect gem of workmanship.

The others are from the Company's stock of inlaid and polished walnut, and are a credit to the manufacturers and to Toronto. Many musical critics have pronounced these pianos to be without equal in the country, and their superior excellence is attested by all competent judges who have tried them.

In addition to other advantages possessed by this firm, with its great manufacturing facilities, they have secured several

important additions to their staff, including one of New York's best tune and action regulators.

Hitherto the success of the Lansdowne Piano Co. has far exceeded their expectations, and, according to the judgment of competent connoisseurs, they seem destined to play a prominent role in the manufacture of pianos in Toronto.

In connection with the manufactures and exhibits of the Lansdowne Piano Co. is a novelty in the shape of an "upright grand," patented by Mr. A. Gunther, of this city, and manufactured by this Company. The patent consists in producing an instrument having all the internal construction of a grand, with the convenience in shape of an upright. This object is gained by the sounding board being cut obliquely from left to right under the keyboard, and having a peculiar scale of strings in connection, the strings and bass being very long.

It was in compliance with Mr. Gunther's solicitation that the Lansdowne Co. undertook the manufacture of these instruments which has been accomplished with such unqualified success in the completion of several of these "upright grands."

The style of the "Lansdowne Piano Co." was adopted with the approval of His Excellency the Governor-General.

---

### **Benevolent Institutions.**

General Hospital, Home for Incurables, House of Industry, House of Providence, Girls' Home, Boys' Home, Protestant Orphans' Home, Infants' Home and Infirmary, Andrew Mercer Eye and Ear Infirmary, Industrial Refuge, News Boys' Lodging and Industrial Home, Dental College and Infirmary, Haven and Prison Gate Mission Home for Aged and Infirm, Burnside Lying-in Hospital, Magdalen Asylum, Hospital for Sick Children.

#### **THE LAKESIDE HOME.**

The Lakeside Home for Little Children, the convalescent Home in connection with the Hospital for Sick Children, occupies a site on the West Point of Toronto Island, nearly one

THE LAKESIDE HOME.

CRIP CO.-EAST.

hundred yards north-west of the light-house and the same distance from the south shore of the island. The building is twenty minutes' walk from the dock at Hanlan's Point, and the plot of ground on which it was built was leased by the Corporation of the City of Toronto, as the deed states, so that "a convalescent Home for Sick Children" should be "erected thereon, in connection with the Hospital for Sick Children." The Lakeside Home is very prettily situated, just on the spot where the little sick ones can have all the advantage of the invigorating and health-giving breezes of Lake Ontario. The building, as will be seen by the engraving, is of very attractive appearance. It is constructed of wood, and built in that light and airy style which architects consider best suited to places designed for summer residences. It has two stories, and each floor has a space of twenty-eight hundred square feet. It is lighted throughout with large windows, and a broad stairway leads from the entrance hall to the second story. On the ground floor there is a large dining room, a pantry, kitchen, board room and two large wards for forty children. On the second floor there is a large hall, on either side of which is a large ward for the use of the boys and girls respectively. Opening from these wards is a smaller room, which is occupied by children in advanced stages of disease. At the east end of the hall is a commodious bath-room, which is fitted up with the most improved appliances. The interior of the building has been finished in Canadian pine, and every provision has been made for the comfort of the inmates. A broad and shady verandah runs round the north-west and south sides of the building. This is two stories in height, and is reached by wide doors which open from the boys' ward. Here the little invalids are placed during portions of each fine day, and on the hottest day they receive the full benefit of the cool breezes which blow in from the broad expanse of Lake Ontario. A laundry and washhouse has been erected at the east end of the building, and an ample supply of pure water is brought from the lake by means of a windmill on the lake shore. The entire expense of building the Home and bringing it to its present state of com-

pletion has been borne by Mr. J. Ross Robertson, of the Toronto *Evening Telegram*, who attaches to his gift the condition, "The Lakeside Home as well as the Hospital for Sick Children, Toronto, shall be open without any charge to the children of Freemasons. Seven brethren, members of the Grand Lodge of Canada of Ancient, Free and Accepted Masons, have been named as those who have the privilege of presentation. Each applicant must have the endorsement of any one of the following:—Messrs. Daniel Spry, Barrie; Dr. J. A. Henderson, Kingston; George Birrell, London; J. J. Mason, Hamilton; David McLellan, Hamilton; J. G. Burns, Toronto, and Wm. J. Hambly, Toronto." Mrs. S. F. McMaster is the President of the Hospital for Sick Children, and to her is due a great deal of the success that has attended that institution.

#### Toronto a Literary City.

Were Toronto to be judged by the number of people who read the party political articles in the daily papers, it would rank high in the scale of literature, and if the demand for works of fiction were a proof of literary taste, then our Public Library and its branches would bear testimony that the citizens of Toronto were a truly intellectual people; but while these tests may be applied to indicate the taste of the majority, and would certainly show the tendency to be in the line of both of these habits, it is a pleasing fact that a large number cultivate a taste for literature for its own sake, and for the improvement of their minds.

The number of non-political newspapers, and of those representing the various religious denominations, is as great as in any other city of its population. The number of book stores and publishing houses, together with the large amount of books imported throughout the year, is a good indication of the extent of the private libraries which exist in the city and of the number of their readers.

It cannot be said that, in proportion to the population, there is a greater taste for literature than in previous years. Although there was no literary institution of a popular char-

acter, except the Mechanics' Institute, that was always well patronized, and the average intelligence of the people of Toronto was quite equal to what it is at the present time, at least in book literature. While efforts were made to encourage a taste for reading generally, especial attention was given by the managers of the Mechanics' Institute to impart technical knowledge. Nor was the cultivation of the faculties for appreciating the beautiful in art, thought and feeling, as well as for enjoying the truths of physical science, neglected.

That elegant and reflective literature which tends to moralize, to soften and adorn the life and soul of man, and the *belles lettres*, which operate for the advancement of the mental condition of the middle and humbler classes of society, might now as well as then hold a higher place in public estimation, and with advantage be more generally called into practical requisition. The Canadian Institute, which now ranks so high as a literary and scientific institution, did not come into existence till 1849, since which time it has done much in the higher sphere of literature, and takes the highest rank amongst Canadian literary societies.

Amongst the literati of Toronto may be named Drs. Wilson, Scadding, Loudon, Hodgins, and Withrow, and Prof. Goldwin Smith, who is contributing largely to the literature of the city. The *Week* newspaper, of which he is editor-in-chief, holds a place between the ordinary newspaper and the magazine; the latter being represented by only one, The *Canadian Methodist Magazine*, which is alike creditable to the publishers, the contributors, to Toronto and the Dominion.

It is an interesting question, whether the taste for solid reading is more cultivated amongst the young men of 1886 than those of 1847 and whether their general intelligence is greater. The number of amusements and attractions of various kinds which Toronto now affords may have a tendency to reduce the hours spent in study, and thereby prevent the acquisition of knowledge which, in the absence of these surroundings, made the old Mechanics' Institute itself the leading attraction for young men.

It cannot be denied that the newspaper is the great educator

of the nineteenth century, and that no literary power can compare with it.

Rev. Dr. Talmage says: "The newspaper is the 'flying roll' of the Apocalypse. It is book, pulpit, and platform, all in one. And there is not an interest, religious, literary, commercial, scientific, agricultural or mechanical, that is not within its grasp. All our churches, schools, colleges, asylums, and art galleries feel the quaking of the printing press. The vast majority of citizens do not read books.

"How many treatises on constitutional law, or political economy, or works of science are read? How many elaborate poems or books of travels? How much of Boyle, or De Tocqueville, Xenophon, Herodotus, or Perceval? Whence, then, this intelligence and the capacity to talk about themes secular and religious—the acquaintance with science and art—the power to appreciate the beautiful and the grand?

"Next to the Bible, the newspaper,—swift-winged, and everywhere present, flying over fences, shoved under the door, tossed into counting-houses, laid on the work bench, read by all—white and black, German, Irishman, Spaniard, American, old and young, good and bad, sick and well, before breakfast and after tea, Monday morning, Saturday night, Sunday and weekday. The man who neither reads nor takes a newspaper is a curiosity."

The literary taste of the people of Toronto may be judged by the value of the importation of books for the year ending 31st December, 1885. The value for the first quarter was \$47,761; the second, \$50,076; third, \$57,234, and fourth, \$63,299, making a total of \$218,370, or an average of two dollars a head of the population. The addition of the value of books published in Canada would show a considerable increase in the amount.

#### The Globe and Mail.

These two great leading political papers—the former representing the Liberal Reform, and the latter the Liberal Conservative party—are published daily, morning and evening, and also weekly. Both wield an immense influence, and have extensive circulation throughout the Dominion, and also in

Great Britain. For literary talent and enterprise, these papers compare with the first-class leading press of New York and London, nothing being wanting to furnish the latest news through the associated press despatches, and through special correspondents, several times a day.

The *Globe* newspaper contains its own history.

THE GLOBE BUILDING.

From 1847 to the time of his death, the writer had a good opportunity of observing the career of the late Hon. George Brown. While the principle of *de mortuis, nil nisi bonum* was not adhered to in his paper, it is only just to say of himself, when he is gone, that, apart from politics, he was a man highly respected for every generous and noble quality. He was genial and pleasant in manner, honorable in his dealings, kind and benevolent in disposition.

In the days when business men were thrown together in the Montreal steamers for a couple of days at a time, the writer has spent pleasant hours in his company, in conversation and chess playing, a game in which he excelled.

THE MAIL BUILDING.

The glory of his career culminated in his coalescence with Hon. John A. Macdonald and the other gentlemen who founded the Confederacy, and the painting now opposite the main entrance to the Parliament Buildings, in commemoration of the great event, and in which the Hon. George Brown is one of the most prominent figures, will perpetuate his name even more than the monument to his memory in the Queen's Park in Toronto.

### The World and News.

The *World* has well supplied a want previously felt, in the shape of a one-cent morning paper, and is remarkable for the full reports of all leading topics, as well as ably written editorials, which display a large amount of literary ability and sound common sense, on all questions of the day.

The *News* is the only one-cent paper published both morning and evening, and is fast rising in importance, and shows a rapidly increasing circulation both in and around the city.

### The Evening Telegram.

The *Evening Telegram* has for some years past been commonly recognized by the public as the principal paper in Toronto. It is now in the ninth year of its existence. The first number was issued on the 17th April, 1876, and from that

time down to the present six editions of it have appeared every afternoon, except on Sundays and holidays. It was founded by its present proprietor, Mr. John Ross Robertson, who had previously been connected with several newspaper enterprises in Toronto, and had acquired a reputation as an energetic and capable man of business. During the first year of its existence it was issued at two cents. It filled an acknowledged want in local journalism, and met with considerable success from the first. In 1877 the price was reduced to one cent, and the effect was at once apparent in a largely extended circulation, which, from that time forward, grew with rapid strides. Advertising patronage was a necessary accompaniment of increased circulation, and by the time the paper had been established three years it had begun to yield a large and lucrative revenue from this source. Of late years it has been subjected to very keen rivalry, but as a local advertising medium it has fully held its own, and is to-day one of the most profitable newspaper enterprises in Canada. It is read by people of all classes, and is more extensively sold on the streets and in the news stores than any other paper in the city. Its present circulation ranges from 17,000 to 19,000; on Saturdays it runs up to 21,000 and 22,000. The *Telegram* was the first daily paper started in this Province on independent or non-partisan political principles. From the date of its first issue until now it has kept itself entirely untrammelled by party ties, and has always been ready to award its approval or its censure upon considerations of merit alone. Speaking in general terms, its pervading tone is decidedly liberal, but it is in no sense the organ of any hard-and-fast school of politicians, and it criticises both sides with the utmost freedom. It has from the first devoted special attention to municipal matters, a feature which has had no slight share in contributing to its very remarkable pecuniary success. It has also been noteworthy for the freshness and comprehensiveness of its local news, in which respect it has generally distanced its larger and older contemporaries. Its editorial notes and articles are light and readable, the writers carefully avoiding the ponderous, unwieldy

THE TELEGRAM BUILDING.

style which mars the effect of so many of the articles in the morning dailies.

The fine building in which the *Telegram* has its headquarters, at the south-west corner of King and Bay Streets, was erected expressly for its accommodation. The structure was completed in 1881, and was fitted up with all the latest improvements, and with little regard to the mere question of expense. The counting-room and the private offices are the handsomest for their size of any in Canada, and the private office of Mr. Robertson is considered by connoisseurs the most artistically furnished office in the Dominion. Indeed, outside of one or two offices in New York and Philadelphia, there is no office in America that will compare with the private office of the *Telegram*. Within its walls there are thousands of dollars' worth of statuary, oil paintings, etchings and bric-a-brac. The etchings of the "Breaking up of the Agamemnon," and "A Lancashire River," by the celebrated etcher, Seymour Haden, are gems; and an oil painting entitled "The old Politician," by Guzzardi, is regarded as one of the finest specimens of that kind of work in the Dominion. This office also contains a marble bust entitled "The Coquette," a veiled figure, by Bazzanti, of Florence, which is so perfect that the lines of the face may be seen distinctly through the marble veil. The velvet decorations, and the leaded glass screen which separates the private office from the main office, are highly commendable pieces of work. The furniture is in keeping. The front office is finished in cherry, mahogany, and Hungarian ash, and the ceiling and cornices, in plaster, are so finished in detail and design, that they attract the attention of not only those who are interested in that kind of work, but the thousands of visitors who yearly visit the office to inspect its contents. The *Telegram* is printed on a Scott Webb Perfecting Press, which has capacity for printing from 25,000 to 30,000 impressions per hour. The appointments of the establishment are fully commensurate with the spirit of enterprise which characterizes the general management. The editorial department is, beyond comparison, the most comfortable to be found in the city. The

library and chief editor's room are artistically furnished, and no expense has been spared to render them pleasant for the gentlemen who occupy them. Of the business of the *Telegram* it is almost unnecessary to write. It is not an unusual thing of a Saturday to see sixteen to eighteen columns of the paper occupied by small type advertisements, varying from one to three lines each. The returns from this source are considerable, and it has been stated that they average over one hundred dollars a day which is certainly a large amount for a paper published in Toronto. Take it all for all, the *Evening Telegram* is an honorable monument to the energy and enterprise of its proprietor.

#### The "Christian Guardian" and Methodist Book and Publishing House.

The *Christian Guardian*, the chief paper of the Methodist Church in Canada for many years, and now the sole organ of United Methodism in Ontario, Quebec, the Northwest, and British Columbia, was started in the fall of 1829. Its first editor was the late Dr. Egerton Ryerson. In 1879 the present editor, Dr. Dewart, issued a jubilee number, for which Dr. Ryerson wrote an article, giving an account of the origin of the paper. He took the long and toilsome journey to New York to obtain printing material, spending six days and nights between Lewiston and New York. The first number of the paper was issued on November 22, 1829.

During these early years the *Guardian* did valiant battle for equal religious rights and privileges. Dr. Ryerson was editor for nearly nine years with some breaks, which were filled by Revs. James Richardson, Franklin Metcalf, and Ephraim Evans. In the earlier years of the *Guardian*, before the establishment of the political papers that have since become famous, it was a leading organ of public opinion in a greater degree than since it has become more strictly a religious paper. During its whole course it has vigorously contended for all moral and social reforms, as well as defended the doctrines and usages of

Methodism. Of the editors which succeeded those already named the Rev. Jonathan Scott was in office four years ; the Rev. Geo. F. Playter two years ; the Rev. G. R. Sanderson five years ; the Rev. James Spencer nine years ; the Rev. Dr. Jeffers nine years ; the Rev. Dr. Dewart, at the present date (1886), has been in office seventeen years.

REV. EGERTON RYERSON, D.D.

The Wesleyan Book Room was begun at the same time as the publication of the *Guardian*. The publication office was on "March Street, north of the new court-house." It was afterward removed to the present stand on King Street East. At first it was a small bookstore doing a very limited business. But it has steadily grown, till it has become an extensive pub-

lishing house. It probably publishes a larger number of books and other publications than any other house in Canada. It gives employment to over one hundred fifty hands; and does a great deal to supply both Methodists and others with wholesome religious literature. The present Book Steward, Rev. William Briggs, D.D., has done much to extend the business.

#### Free Library.

The good the Free Library is accomplishing in informing and brightening the life of large masses of people should make its operations welcome. The growth of the Toronto Library, owing to its efficient management, has been steady and onward, and its future seems bright and assured. The increasing rate of its book circulation is very marked, and the interest taken by its promoters, is manifested in a practical way by a handsome addition to the reference department in the shape of a donation of some 2,000 volumes, the valuable private collection of Mr. John Hallam, of this city. It may be hoped that others will follow his example, and multiply the resources and attractions of the Public Library until it becomes the pride of Toronto.

The largest private library in the city is that of Professor Goldwin Smith. The Ontario Parliament Library ranks first in importance amongst those of a public character, and contains 25,000 volumes. Next comes Osgoode Hall with 20,000 volumes, chiefly on legal subjects. The University Library is in every way worthy of that splendid institution, and occupies one of its handsomest rooms.

The Canadian Institute has 4,000 volumes; Normal School, 5,000; Free Library, 38,000; Trinity College also possesses a large library which is steadily increasing. There are seventy-two newspapers and periodicals published in Toronto. The five daily papers are the *Globe*, *Mail*, *Telegram*, *World* and *News*. These are all published every morning, except the *Telegram*, which continues as it commenced, as an evening paper. As such it is, perhaps, both as to its popularity and circulation, without an equal in any city of the size of Toronto in the world.

### King Street in 1886.

In every city there is some street which is the special resort of ladies for promenading and shopping. Here strangers and visitors first receive their impressions of the wealth and taste of the citizens, and in reporting their opinions to their friends, the effect will be favorable or otherwise just as they are struck with the elegance of the shops and the richness of the goods displayed.

King Street, Toronto, has long been known to travellers as the centre of attraction, but the tourist of 1886, in describing the splendid plate glass fronts of immense establishments especially in the dry goods trade, would completely cast in the shade all previous descriptions.

To illustrate the subject of Toronto's growth and progress, two of the King Street stores are selected, and the first is that of

#### *MESSRS. ROBERT WALKER & SONS.*

as being the oldest established house in the trade. While scores, if not hundreds, of dry goods stores on King Street have either changed their entire form, or failed, as the writer knows by experience and losses, there is only one which can date its existence back to 1847, when this sketch commences. The firm of Walker & Sons was originally established in 1836 by the late Mr. Robert Walker, and in 1847 the firm was Walker & Hutchinson. In that year two stone-fronted buildings, the first in the city, were erected by Mr. Peter Paterson and Mr. Walker, at a cost of \$30,000. In 1867 Mr. Walker acquired the whole site, pulled the two buildings down and erected the present magnificent building, at a cost of \$50,000, and since that time it has been enlarged and increased to its present immense proportions. Every visitor to the city is at once struck with the imposing appearance of this establishment, which is, indeed, an ornament to the city, and a self-evident proof of its wonderful progress and advancement. The front of the building is of ornamented cut stone, surmounted by a large figure of a lion,

the trade mark of the firm. For the first thirty feet the front of the structure is entirely composed of plate glass, running from the sidewalk up to a massive ornamental iron girder, extending the entire width of the building. The windows and doorway contain over 1,500 square feet of glass. The interior is beautifully finished, and in addition to the front, light is supplied still further from an ornamental dome, which adds greatly to the general effect.

The premises extend to Colborne Street, where there is another entrance, and altogether it may be said to be the finest retail dry goods and clothing house in the Dominion. The staff consists of nearly one hundred salesmen, cashiers and bookkeepers, and the average stock amounts to about a quarter of a million dollars.

In 1847 this firm and Mr. Peter Paterson were the only retail importers in Toronto. The business is conducted on the departmental system, and the European markets are visited semi-annually by one of the firm, their immense capital giving unsurpassed advantages in purchasing direct from the manufacturers.

While King Street has always had the reputation of possessing the finest shops, as London has Regent Street, New York its Broadway, Boston its Washington Street, and Chicago its State Street, there are in each of these certain houses distinguished as the leaders of fashion and as caterers to the highest taste. The house of

*W. A. MURRAY & CO.*

may, in this respect, be considered as the "Swan & Edgars," or "Marshall & Snelgroves," of Toronto, as in this splendid establishment may be found the richest classes of goods, to meet the requirements of the most refined and wealthy or the most fashionable. From the "layettes," to the "trousseaux," for wedding or christening, ball or opera, every want can be supplied by "modistes," "costumieres," and "coiffeures," not excelled by Mr. Worth himself. So perfect are the arrangements

in every department, that a special room is provided, where may be seen, by artificial light, the effect of shades for evening dresses, at any hour of the day.

The senior partner, Mr. W. A. Murray, having graduated in some of the large houses in Britain, two of which are already described, and having been a buyer in 1854, when the present business was established, brought to Canada all the experience and judgment already acquired; and, devoting all his attention to the buying department since that time, by continuous visits to the British and foreign markets has not only kept abreast of the fashions, but has had the advantage of leading them in Toronto by anticipating the styles and designs in course of preparation for the coming season.

The fact of Mr. Murray having crossed the Atlantic this season for the one hundred and twenty-fifth time, is a sure guarantee of the experience he brings to bear on this department of the business.

The splendid plate glass front of this establishment extends from 17 to 27 King Street East, and here are displayed the finest productions of British and continental manufactures. The interior arrangements are simply perfect in every detail, the departments being so connected that each harmonizes with the other, and the light has been studied with such artistic skill as to be adapted to each class of goods, advantageous alike to the buyer and seller.

Every article in woollen and linen drapery, silks, hosiery, lace goods, haberdashery, house furnishings, including the finest curtain materials, millinery and mantles, is to be found in this well-regulated establishment.

The staff consists of about one hundred salesmen, besides cashiers and bookkeepers, and from one hundred to two hundred workwomen are employed, according to the season, in the dress-making and millinery departments. Mr. John Drynan, a member of the firm, has the general management, and Toronto may well take a pride in this, as a representative house in its line, of the wonderful growth and progress that are still going on.

### The Art of Pottery.

While other arts, as painting and sculpture, have been cultivated to please the taste and delight the eye, the art of making vessels of earthenware for domestic use, and in particular of turning them into shape on a wheel, is of very remote antiquity, and was undoubtedly suggested by the instinct of necessity.

In Egypt, all the processes of mixing the clay, of turning, baking, and polishing vessels and vases, are represented in the tombs of Thebes and Beni Hassan, and to-day may be seen in the potteries of Staffordshire—as witnessed by the writer in his frequent visits to the pottery district—the same kind of wheel, and the potter moulding the clay into beautiful shapes of great variety by his manipulation while the wheel revolves. No art has a more wonderful record of self-sacrificing and heroic perseverance and endurance in experiment, nor more wonderful success in discovery in bringing it to its present perfection, than the art of pottery.

The Palissy's, Wedgewoods and others, by their chemical research have produced the variety of enamelled and variegated ware which rival in beauty the finest china, which, according to Chinese chronology, has been made in that country for thousands of years.

In Chelsea, porcelain was made so beautiful that George II. bestowed the light of his countenance upon it, and it became all the rage; one service was purchased by the King for £1,200.

Then comes the Wedgewood ware, manufactured by the Wedgewood's, of Burslem (a place well remembered by the writer as having spent the coldest night of his life there),—at first, tableware, dense, durable, well glazed and cheap; then the Queen's ware; then terra cotta, a kind of pottery in which Wedgewood was enabled to imitate porphyry, granite, Egyptian pebble, and other beautiful stones; then basalt, or black ware; then white porcelain biscuit, having a smooth wax-like appearance; then jasper, or white porcelainic biscuit, of exquisite delicacy and beauty.

But although the Chelsea and Wedgewood ware were both

beautiful, and are now sought out by connoisseurs,—as much as five guineas a piece for dessert plates, and twenty-five guineas for a couple of tea cups having been paid,—it was a West-of-England man who discovered the clay in Cornwall from which the pure porcelain is made, and the clay is largely shipped to Staffordshire to be manufactured.

The discovery of felspar, at Belleek, County Donegal, Ireland (only celebrated before for the catch of eels), led to the establishment of the pottery there, and the most beautiful ware is produced. Hand-painted dishes were shown to the writer when visiting this establishment (just six miles from the Atlantic coast), the prices of which were from twenty to fifty guineas each; the painting being done by first-class artists.

The terra cotta ware at Torquay, in Devon, is very beautiful and fashionable, as are also the Royal Worcester and Royal Derby ware, placing the English manufactures high up in the scale of pottery, as seen at Kensington and other places, where the largest collection of the productions of all countries are on permanent exhibition. To add one more to the list of enterprises in Ireland, the Vodrian ware, manufactured in Dublin, deserves special notice, being awarded the first prize medal at Cork Exhibition, in 1883.

*MR. GLOVER HARRISON,*

of the China Hall, King Street, has for the past twenty-five years made this art his study, and in catering for the citizens of Toronto has done much to educate the taste of the people in this branch of trade, combining the useful with the ornamental more than in any other department; while on the other hand his efforts have been appreciated by all classes, from the highest, who have expended their wealth in furnishing and decorating their houses (showing as much as in anything else the wonderful progress of Toronto), down to the humblest, who have suited themselves in every article necessary for comfort and convenience. Mr. Harrison visits all these sources of production periodically, including Limoges and Sevres in France, and Dresden, in Germany. A visit to his galleries of art

treasures will be found exceedingly interesting and instructive, and everything in glass, as well as earthenware, to furnish the mansion, hotel, or cottage, will be found in endless variety and beauty.

#### **New Buildings Approaching Completion.**

Bank of Montreal, College of Pharmacy, Manning's Arcade, Orange Hall.

#### **Buildings Proposed to be Erected this Year.**

Young Men's Christian Association Building, St. Alban's Cathedral, St. Mary's Roman Catholic Church, Sherbourne Street Methodist Church, Parliament Buildings, Court House, Quebec Bank.

#### **The Manning Arcade**

is of the Italian Renaissance style, ornamented with polished granite pillars, and sculptured emblematic figures, two being caryatides supporting entablatures on each side, and one male figure in the centre representing Labor, which add much to the beauty of the design.

To form a perfect arcade, it will be extended to the north, and is an ornament to King street.

#### **New Bank of Montreal.**

This beautiful building illustrates in a remarkable manner the progress of architecture in the city.

The material is Ohio stone, and the style of the composite order of architecture, in which the Corinthian largely predominates, and is the most ornate of all classical styles. The Corinthian is the most elaborate of all Grecian orders. The merit of its invention is ascribed to Callimachus, a celebrated sculptor of Athens, about 540 B.C. He is said to have taken the idea from observing the leaves of the acanthus, growing round a basket which had been placed with some favorite trinkets upon the grave of a young Corinthian lady—the stalks which rose

among the leaves having been formed into slender volutes by a square tile which covered the basket.

The capital is larger and more ornamental than in the other orders, spreading in the form of a basket, and commingling the richest and lightest vegetation with the decorations of previous orders.

The pilasters of the Bank of Montreal are richly sculptured, the designs, surmounted by mask heads, emblematic of various subjects. On the south are: (1) Commerce, (2) Music, (3) Architecture, (4) Agriculture. On the east front are: (1) Industry, (2) Science, (3) Literature, (4) Arts; and over the main entrance are the arms of the Bank of Montreal.

This splendid work has been executed by Messrs. Holbrook & Mollington, architectural sculptors, who also performed the fine work on the Custom House. Messrs. Darling & Currie are the architects.

The interior will be superbly finished in stucco, and being one complete room, with dome light, will present a magnificent appearance.

#### **Toronto Post Office in 1886.**

No greater evidence of the growth and the expansion of the commerce of Toronto can be given than by a comparison of the business of the Post Office Department during the period covered by the present sketch.

When the present office of the Receiver-General, on Toronto Street was built for a new post office, none but the most sanguine doubted its capacity for all its requirements for many years to come, but while it was still a comparatively new building it was soon found to be quite inadequate to the rapidly-growing business of the city, and in 1873 the present beautiful structure was erected.

A more suitable situation could not have been chosen than that on which it stands, surrounded, as it is, by buildings in every way worthy of the neighbourhood, and in close proximity to the business portion of the city.

The building is of three stories, faced with cut stone, elabo-

rately ornamented, and the internal arrangements are admirably adapted to the never-ceasing business transacted.

A side door at the western end of the building leads, by a handsome staircase, to the offices of Mr. M. Sweetnam, the Post Office Inspector, and his assistant and other officials.

The present staff consists of Mr. Thos. C. Patteson, postmaster; Mr. John Carruthers, assistant-postmaster; 5 first-class 12 second-class, and 49 third-class clerks.

There are 74 letter carriers, 3 caretakers, and 7 porters; 95 street letter boxes, and 3 branch post offices.

Through the politeness of the postmaster the following statistics are given for the year ended 31st December, 1885:

Amount of money orders issued .....	\$309,203
Amount of money orders paid .....	1,356,163
Number of orders paid .....	80,086
Amount of deposits in Post Office Savings Bank .....	\$495,364
Amount of postage stamps sold .....	228,751
Number of letters delivered by letter carriers, exclusive of box holders and general delivery .....	7,937,461
Number of letters posted .....	11,288,680
Number of post cards posted .....	3,328,260

In the month of February no less than nineteen English mails were despatched from Toronto—fifteen *via* New York and four *via* Halifax—and this in twenty-four working days, and in March, April, and May about twenty each month; so that a daily mail to England from Toronto may be looked for in the near future.

#### Toronto as a Place of Residence.

If the city possesses all the advantages to which reference has been made, it will be admitted that no element in the constitution of a great city is wanting. The capitalist who would invest money to advantage can here find a promising field for enterprise. There is also plenty of room for more manufacturing industries.

The man of leisure, with fixed income, may find in Toronto a

TORONTO POST OFFICE.

delightful home, and live just as his means may allow, even to the enjoyment of luxury. The mechanic and tradesman can, by industry and economy, secure a comfortable home on easy terms, and in Toronto every reasonable wish may be gratified, and the new settler find a welcome to any class of society which may be congenial to his taste.

#### Governors-General of Canada since 1847.

Earl of Elgin, Sir Edmund Head, Lord Monck, Sir John Young (Lord Lisgar), Earl of Dufferin, Marquis of Lorne, and Marquis of Lansdowne.

#### Lieutenant-Governors of Ontario.

Major-General Stisted, Sir W. P. Howland, Hon. John Crawford, Hon. D. A. Macdonald, and Hon. John Beverley Robinson.

#### Mayors of Toronto.

William Lyon Mackenzie, R. B. Sullivan, George Gurnett, John Powell, George Munro, Henry Sherwood, William Henry Boulton, John G. Bowes, Joshua G. Beard, John Beverley Robinson, G. W. Allan, John Hutchinson, David B. Reid, Adam Wilson, Francis H. Medcalf, James E. Smith, S. B. Harman, George D'Arcy Boulton, Joseph Sheard, Alexander Manning Angus Morrison, James Beaty, jun., W. B. McMurrich, Arthur R. Boswell, Alexander Manning, W. H. Howland.

#### Extent of City.

Total number of miles of streets, one hundred and sixty-six; of which forty miles are cedar blocked, ten miles are cedar and gravel, fifty-four miles are macadamized, and the remainder graded or unimproved. Miles of sidewalks, two hundred and fifty. The work of substituting stone and other material in place of wood has commenced, and the experiment of granolithic *versus* stone will soon be tested on King Street. The stone now used is quarried in Pelee Island, and is consequently cheaper than imported stone. If blocks sufficient to extend the whole width of the sidewalk could be procured in Canada it would be found the most durable.

### **Toronto Street Railway Company.**

Those who are acquainted with Philadelphia know that with its population of nearly three-quarters of a million, there are no tenement houses of four to eight stories, in which a number of families are crowded together, with the terrible risk from fire. Covering more ground than New York, it affords space on which every family can have a home, and this is almost entirely due to the street car service affording easy access to the farthest limits of the city, and around Fairmount Park, with its 3,000 acres, and to the manufacturing suburbs of Germantown.

Applying this to Toronto, it must be admitted that the spread and expansion of the city has been in proportion to the extension of the street car service, and the increase in the value of property in the suburbs is due to the same cause. No city in America can boast of a more efficient street car service than that furnished by the Toronto Street Railway Company, and nothing but very large capital and enterprise could have brought it to its present state of efficiency.

To interrupt this traffic would be to throw Toronto back to the "jolting" times of a quarter of a century ago, and reduce the value of property in all the distant portions of the city. A company which has contributed so much to the health, comfort and convenience of the citizens, and to the enhancement of the value of property in and around the city, as well as giving employment to such a large number of men, must be regarded as public benefactors, and are fully entitled to every financial benefit that may accrue from their enterprise while lawfully and justly carried on.

The Company owns sixty miles of track, and employs three hundred and seventy-five men. The number of horses in the service is seven hundred and fifty, number of cars one hundred and sixty-five sleighs and omnibuses one hundred and sixty. The value of the buildings erected by the Company is about \$250,000, with others in course of erection. The entire stock of the Company is owned by Hon. Frank Smith and Mr. R. M. Keiley.

**Street Traffic.**

There is no city of the size of Toronto, in Great Britain or America, which shows so extensive street traffic, as the writer knows from personal observation. Having said this, the rest of the world might be included. This arises chiefly from the position Toronto occupies as the great distributing centre of the Dominion. The receiving and shipping of imported and manufactured goods, which are sent to every point from Halifax to Vancouver—the representatives of Toronto houses now regularly visiting the whole of this immense field—have created this wonderful amount of business traffic on our streets, evidencing the solid and substantial progress the city has made in a comparatively short time.

Had our Rip Van Winkle, instead of coming from Holland, been acquainted with the topography of London, and in some day during the week of the Industrial Exhibition "waked up" from his long sleep, at the Dominion Bank (leaving out the powdered wigs, plush breeches, silk stockings, and gold-headed sticks of the footmen, and throwing in continuous lines of street cars), he might naturally fancy himself at Oxford Circus, with Oxford Street stretching away at one side, and the Regent Street Quadrant at the other; or should a "block" occur, as in the case of some procession, might imagine he was standing somewhere between the Bank of England, the Royal Exchange and the Mansion House; and as to the wholesale trade, if at the corner of Scott and Front Streets, might imagine himself in St. Paul's Churchyard, with a view from Ludgate Hill on the west, to New Cannon Street on the east, where are to be seen the finest specimens of warehouse architecture in London.

Returning to Yonge and King Streets, he would find carriages of every style, private and public, including phaetons, broughams, waggons, coupes, market carts, dog carts, rockaways, pony carriages and hansom in endless variety, also drays, lorries, merchants', manufacturers', express, and tradesmen's delivery wagons,—all producing a scene of bustle and activity only to be witnessed in a great and prosperous city, and showing a marvellous contrast with the appearance of the streets in 1847.

The Model Wholesale Dry Goods Warehouse of the  
Dominion.

It is no disparagement of other large wholesale importing dry goods houses, of which Toronto is so justly proud, and to which much of the description that may be given will apply, to select one as *par excellence* the model house of the Dominion; and if a knowledge of its history from the commencement furnishes a qualification for the work, the writer can safely undertake it.

Having had the pleasure of knowing Mr. John Macdonald before he commenced business, and having been our best customer for the two years he remained in the retail trade, I had an opportunity of witnessing the success of his first venture. His rare judgment as a buyer, and carefulness as a financier, gave him, from the very first, a sound position, resulting in a decision to seek a wider field for his enterprise. The "pent up" confines of a retail store did not afford scope for his ambition, and while becoming parties to the transfer of his business, it was with regret we lost a customer who had, in addition to meeting every engagement, promptly and honorably acquired sufficient capital to embark in the wholesale importing trade.

On his first visit to Britain his arrangements were made on such a solid basis as to be a guarantee of the success which followed. The system of buying from large general houses had prevailed almost entirely in Canada and the Maritime Provinces, and this Mr. Macdonald, at the very outset, avoided. He saw no reason why he should not go to the fountain-head of supply, and give his customers the benefit of the intermediate profits previously enjoyed by these large houses in London, Glasgow and Manchester, and whatever commission he paid for his introduction to manufacturers was more than made up by cash discounts.

The saying that "goods well bought are half sold" was in this instance soon verified. Taking Mr. Lyle as a junior partner and buyer, with goods purchased on such advantageous terms,

JOHN MACDONALD & CO.'S WAREHOUSE.

the firm had no occasion to "push trade," but, as Mr. Macdonald at the time remarked to the writer, he "would wait for customers to come, and then dictate his own terms," or in other words, "the goods would sell themselves."

On the retirement of Mr. Lyle from the firm, and his departure for Africa, where he is now doing a lucrative trade in ostriches and coffee, the facilities afforded by the bonding system through the United States led Messrs. Macdonald & Co. to introduce the system of having a resident buyer in Europe and by weekly shipments afford merchants an opportunity of assorting their stocks from time to time, thereby precluding the necessity of laying in a stock for the whole season, as had hitherto been the rule, and also saving a large amount of interest and the accumulation of bad stock.

This formed another element in the rapid growth and extension of the business, as buyers were attracted from all parts to select from the weekly arrivals. From that time to the present, the business has been marked with uninterrupted prosperity, and has attained to a magnitude unequalled in the Dominion, and a fame co-extensive with the great inter-oceanic highway, now successfully completed from the Atlantic to the Pacific.

If a visitor to New York wants to see a grand business and splendid system, he finds his way to A. T. Stewart & Co., or H. B. Chaffin & Co.; if in London, he will go to Cook, Sons & Co., St. Paul's Churchyard, the Fore St. Warehouse Co., or J. & R. Morley's; if in Manchester, he will visit Rylands & Sons, Bannerman's, or Philips's; and so in Toronto he will be directed to the house of John Macdonald & Co. The situation of the warehouse is quite unique, having equally fine frontages on Wellington Street, Nos. 21-27, and on Front Street, Nos. 28-34.

The building, which is six stories in height, is massive and plainly elegant, and in every respect adapted for the business. The light is perfect, both from the north and south, with additional advantages in this respect from the west side, thus affording buyers the greatest facility for inspecting the stock, while the arrangements for the display of goods, affording perfect access to each section, make it easy and pleasant.

To most people visiting an establishment of this kind, their ideas are influenced either as consumers, who look upon these goods as supplying one of the great wants of mankind, or as producers, who are interested in the sale of the goods, and wish for more orders, while to the buyer the chief consideration is as to how much profit he could make out of such or such a lot of goods.

To anyone who has had connection with the home markets and manufacturing districts, his associations immediately connect him with the sources of supply, and as every article, from a pin or needle to the finest productions of the looms of Lyons or Nottingham, has a history which would in itself form an interesting paper, he cannot resist the impression made on his mind of the immense influence which a great distributing centre such as this, between the producers and the consumers, must necessarily have on the thousands who are dependent not only for the comforts but the necessaries of life on the success of such a business. All through the process of manufacture, from the inventor to the designer, and then through the manufacturer and shipper, till the retail merchant and consumer are reached, what vast interests are concerned in the management of such an enterprise on both sides of the Atlantic!

What buyer, who has taken a run through some of the large manufactories of Lancashire or Yorkshire, and conversed with some of the humble yet intelligent operatives, has not been asked whether he had brought good orders from Canada, and has not seen their faces brighten up if he could give an encouraging answer? While they have the world for a market, they know more of Canada and Australia than of any other country.

The aim of the firm throughout has been to systematize the business after the model of first-class British houses, and to accomplish this successfully the departmental system has been most efficiently adopted and carried out.

To give to each buyer the entire management of his own department, and throw on him the responsibility, is the principle which has been found to work so successfully in all the British warehouses, and Messrs. Macdonald & Co.'s business has been

no exception to the rule. The business is divided into departments, from the entering room to the warehouse and counting-house, each having a recognized head, and the discretionary power afforded furnishes a motive to excel which no other principle could effect.

To attempt a detailed account of the working of the business would far exceed the limits of these pages, and nothing beyond a cursory glance can be given. There are six principal departments, which, with their subdivisions, are as follows:—

**STAPLES.**—Prints and general Manchester goods, flannels and blankets, linens and jute goods.

**DRESS GOODS.**—Hosiery and gloves, ribbons and corsets, gents' furnishings.

**MANTLES AND SHAWLS.**—Silks, satins, crapes, laces, muslins, and embroideries, British and German knitted goods.

**WOOLLENS.**—Canadian tweeds, imported woollens, rubber goods.

**HABERDASHERY.**—Wools and wool work, British and foreign fancy goods, Japanese and papier mache goods.

**CARPETS AND OIL CLOTHS.**—Brussels and tapestries, supers and three-ply carpets, Dutch and hemp carpets, upholsterers' goods, raw silk and jute coverings, damasks, reps, ferries, plushes, piano and furniture felts, etc.

These six departments are managed by experienced buyers, who visit the markets periodically, making the home office in Manchester their rendezvous, and where orders are sent between seasons to the resident buyers.

A reference to the chapter on "buying in Europe" will show the ground to be gone over by these gentlemen in making their purchases, and, in addition to this, large orders are placed for goods manufactured in other countries, as China and Japan, which are not visited.

The firm employs thirteen travellers, extending their operations from the Atlantic to the Pacific, and altogether the staff comprises about 100 in all departments.

Mr. Paul Campbell has the entire management of the financial and general conduct of the business.

### Corsets.

Whatever may be the opinion as to the use of corsets, from a hygienic point of view, whether as improvers or supporters of "the female form divine," it is certain that the trade is one of vast proportions, and perhaps with the exception of Japan and some barbarous or semi-civilized nations, the corset is considered as an indispensable part of female attire in every country. Germany, France, Great Britain, the United States, and Canada give employment to thousands of girls in this suitable and appropriate branch of industry.

#### *THE TELFER AND HAROLD MANUFACTURING CO.*

of this city is selected for special notice as an evidence of the progress of the city in this branch of manufactures, in giving employment to a large number of operatives, and as being devoted exclusively to the manufacturing for the wholesale trade of the Dominion, no goods being sold to the retail trade.

The premises occupied by this firm were built especially for them, having every appointment and arrangement for the carrying on of the business in the most convenient manner, and for the comfort of the employees.

The writer, who for several years represented in America the leading corset manufacturers of England, had much pleasure in inspecting the various processes through which these goods pass, in the establishment of Messrs. Telfer & Harold, and found the division of labor so perfectly carried out, and the machinery so complete, as to reduce the cost of production to a minimum. The insertion of eyelets by a machine is done so rapidly as to be well worth a visit, and all through the various stages to the fine embroidery work, which is a marvel of skill and taste, every arrangement is perfect and the best talent employed.

The firm has agents in Victoria, B.C., Winnipeg, Man., Montreal, and Halifax.

### The Lace and Embroidery Trade.

Having been the first exclusive importer of these goods in Toronto, and having had an intimate acquaintance with the

trade for twenty-five years, the writer has pleasure in noticing the establishment of the firm of

*WHITE, JOSELIN & CO.*

who are at present, and have for many years been the only exclusive importers of these goods in the wholesale trade in the Dominion.

The enormous capital required to pay designers who are constantly employed to produce novelties to meet the insatiable demands of fashion and trade, and the necessity of a large export trade such as England has to all the markets of the world, renders it probable that in this branch of trade Canada must continue to import for many years to come. Even the United States, with its immense population, cannot in this particular manufacture compete with Nottingham, only one factory of lace curtains having so far attempted the production of lace goods.

Lace is not a describable article. Malines has long been famous for a lace coarser and stronger than that of Brussels. Mechlin lace, properly so called, has been surpassed by that of Nottingham.

Malines lace is made on a cushion with a battalion of pins stuck into it. Each young worker has two small knobby sticks in her hand, to which are attached shining white threads, and with these she manœuvres among the pins with a rapidity that is surprising. Thread by thread the delicate fabric progresses to its completion. All this work is done by the girls in their own homes, there being no manufactory. In contrast with this is the Jacquard loom, which is a most wonderful piece of mechanism. The patterns of Nottingham lace being registered, each manufacturer jealously guards against any infringement of his designs; and yet a single thread of difference may be sufficient to evade the penalty of infringement. A case occurred some years ago where a suit was entered for infringement, and before a decision could be given, a lawyer was commissioned to go from London to Nottingham to see the pattern actually produced on the loom.

The extent of the trade may be measured in millions of yards. France and Belgium supply hand-made pillow lace, as do the English counties of Buckingham, Hertford, Nottingham, and Devon. Limerick, in Ireland, was long celebrated for her lace, which was brought to such perfection that a pair of gloves, enclosed in a silver-mounted and clasped walnut shell, was a usual and very acceptable present, but the great trade at this time is in machine lace from Nottingham, Honiton and Tiverton.

The embroidery trade has also changed its seat. Formerly thousands of females in Ireland and Scotland found employment in what was called "sprigging" muslin, but at present the trade is almost exclusively carried on by machinery in Switzerland, and from these sources of supply Messrs. White, Joselin & Co., who visit the markets regularly, import their goods, which are distributed from Toronto all over the Dominion.

The spacious warehouse occupied by the firm contains four extensive floors, to which access is had by an elevator, and all are fully stocked with complete lines of the various manufactures of Great Britain, France, Belgium and Switzerland, comprising the greatest novelties in the trade.

The senior partner, Mr. White, has brought an experience of 25 years to the successful carrying on of the business, and is ably supported by the Messrs. Joselin Brothers.

In addition to the lace and embroidery trade, the handkerchief department is made very attractive in every class adapted to the ladies' trade.

### Yonge Street in 1886.

If the writer on the Montreal *Canadian Illustrated News* in 1871, who spoke of the "great gulf" between the frequenters of King and Yonge Streets, the latter, according to his statement, being the resort of the "middle class and the beggar," were to make such a statement in 1886, he would deserve to be tarred and feathered. The rapid progress made on Yonge Street as a business thoroughfare has already placed it on an equal footing with the aristocratic King, and the carriages to

be seen any day lining this street, testify to the high class of trade it has secured.

By way of contrast with the time of the first dry goods store in 1849, amongst a number of splendid shops which now attract crowds of customers, one is selected as illustrative of our subject, and in accordance with the principle laid down in reference especially to Toronto as an importing centre.

The building known as Page's Block, erected by the late John Hillyard Cameron, was considered the finest block of retail stores in the city.

*MESSRS. T. EATON & CO.*

having built up a large business at the corner of Queen Street, sought to extend it, and for this object secured the stores where their present building now stands.

When Mr. Eaton commenced pulling down the fine front of the building, people were amazed at what appeared to be folly and destruction, but when the present front, with its splendid plate glass windows and lofty floors, made its appearance, their wonder was turned to admiration, and a splendid addition had been made to the palatial stores of Toronto.

The internal arrangements are complete in every respect. Thirty-five departments, embracing not only everything belonging to the dry goods trade, including carpets, millinery, and house furnishing goods, but also various classes goods a little distinct from the regular branches (as is the custom of the mammoth establishments in Britain to add boots and shoes, perfumery, toilet and fancy articles to the stock of drapery goods), are all managed with perfect system and discipline.

Whoever would have predicted in 1847, when there was not a single dry goods house on Yonge Street, that such an establishment would be found in 1886, would certainly be the subject of ridicule, and especially should he have ventured to say that the sales of one hundred and fifty salesmen and ladies would be all for cash, he would be put down as a dreamer. It is no exaggeration to say that the cash sales of this house exceed those of all the stores in Toronto in 1847. This will be admit-

ted as a proof of the "wonderful growth and progress" of the city during that period.

The facilities for purchasing are on a scale corresponding with the arrangement of the departments. Passenger elevators constantly in operation afford pleasant access to each floor, and the one-price system, now thoroughly established by all first-class houses in Toronto, is at once satisfactory and honorable to buyer and seller.

The system of checking sales and giving change is quite up to the best either in Britain or the United States, and the establishment reflects the highest credit on the enterprise of the firm and on the city of Toronto.

Mr. Eaton is still further extending by connecting with a new wing which will have a front on Queen Street, and, when completed, will compare with the finest stores in Great Britain or America, forming at once a promenade, arcade, and grand bazaar.

### Great Increase in Imports.

Comparative imports at Montreal and Toronto for year ending 30th June, 1882:—Toronto, \$19,311,210; Montreal, \$45,611,927.

Duty on importations for month of January:—

	1885.	1886.
Montreal.....	\$552,804	\$497,735
Toronto.....	281,583	296,350

Total imports for fiscal year ending 30th June, 1886, \$18,310,145; duty, \$3,419,265; average, 18.67 per cent.

In 1847 Toronto imported one-eighth as much as Montreal; in 1849 Toronto increased to over one-fourth, and as above, in 1886, to over one-half.

The amount of importations at Toronto for the first ten days of February, 1886, was equal to the amount entered during the whole year of 1848, and the duty collected for one week of 1886, equal to the whole of the same year.

### The Arcade.

The front entrance is on Yonge street, to the beauty of which its imposing cut stone facade, with its wide archway and Egyptian pillars in bas-relief, are a valuable addition.

The spacious passage-way is furnished with shops, resembling

YONGE STREET ARCADE.

the Burlington Arcade in London, glittering with much that is attractive, and a stairway leads to gallery, offices, and studios.

Let us hope that in the future it will increase in attractiveness, when every spot will be fully occupied, making it a place of resort not unlike the Palais Royal in Paris.

**Summer Resorts.****QUEEN'S PARK.**

Just west of the Osgoode Hall on Queen Street West will be found a beautiful avenue of nearly a mile in length. Chestnut and maple trees flank the carriage drive and pathway, which in the vista open out upon the Queen's Park. Going north the intersection of the Yonge Street Avenue is reached, and we pass from the grateful shade of the long line of chestnuts into the verduous sunlight of the open Park, one hundred acres in all, including the University grounds, which have been fenced off from the city property. The Park is a favorite resort during the hot weather, and contains the University Buildings, Observatory (Meteorological Office), Wycliffe College, Volunteers' and Hon. George Brown's monuments, and a score of beautiful villas; it is also the site selected for the erection of the new Provincial Parliament Buildings.

**EXHIBITION PARK.**

These grounds, originally used exclusively by the Industrial Exhibition Association, have for some time been thrown open to the public all the year round, except for two weeks in September, during the Exhibition.

Under the superintendence of Mr. Chambers, the Commissioner of Parks, these grounds have assumed a most beautiful appearance, being laid out in the most artistic manner as landscape gardens, and having a profusion of shrubs and flower-beds, which increase in beauty from season to season.

Further improvements are in progress this season—new roads are being made, new sidewalks laid down, a number of new flower-beds have been formed, and the whole of the grounds will this year present a more beautiful and attractive appearance than they have at any previous Exhibition.

**LORNE PARK.**

This favorite resort is beautifully situated on the north shore of Lake Ontario, fourteen miles from Toronto, and can be reached in twenty-five minutes by rail, or forty-five minutes by

water. It commands a splendid view of the lake. It has recently been laid out in cottage and camp lots, of which there are two hundred, with main avenue of one hundred feet, and streets of sixty-six feet, leaving fifty acres for recreation grounds.

The grounds will be lighted by electricity, a proper water supply and system of drainage arranged for, and everything has been done to make this the most pleasant summer resort in Ontario.

No intoxicating liquor will be allowed to be sold on the grounds, or on the steamer plying to the park.

### Canadian Pacific Railway.

On the first of November a message was received by the Governor-General at Ottawa from Her Majesty, congratulating the Dominion Government on the accomplishment of the great work; and on the ninth of the same month, Sir John A. Macdonald received a telegram from Mr. Van Horne, and the Premier of British Columbia, congratulating him on the completion of the C.P.R. Mr. Sandford Fleming also telegraphed, stating that the first through train had accomplished the journey from Montreal to Vancouver in five days, and that the trip would shortly be accomplished in four days.

At a banquet given in Montreal to Sir George Stephens and Hon. D. A. Smith, the former said in his speech: "When Sir John A. Macdonald stated in London that the termini of the Canadian Pacific Railway were Liverpool and Hong Kong, he was not indulging in a flight of eloquence. He was stating in simple language a sober fact.

By the proposed line of steamers from Vancouver to the far East, the crossing point of the Canadian Pacific Railway will be reached. In 1861 it took from ten to twelve days for troops to be conveyed from Halifax to Quebec. In 1870, during the Red River rebellion, it took eleven weeks from Quebec to Red River, and ninety-five days from Toronto to Winnipeg. Now the whole distance can be traversed in six days. Troops and stores can reach the Pacific coast from Liverpool in thirteen or fourteen days.

In summer, from Montreal to Vancouver can be done in four and a half days; in winter, Halifax to Vancouver in six days. With steamers making fourteen to fifteen knots, the passage from Vancouver to Yokohama can be made in twelve days, from England to Japan in twenty-six days, from England to Hong Kong and Shanghai in thirty-four days. From England to Hong Kong, *via* Brindisi, takes forty to forty-four days, and *via* Gibraltar, forty-nine to fifty-three days; from England to Calcutta, thirty-eight days; and *via* Halifax, adding seven days for Atlantic passage, the distance can be done in twenty-eight days.

Lord Lorne, in his article on the Canadian Pacific Railway, says: "Had not the Americans derived new life and hope from the time that civilization was carried inward from the coast, and the mere fringe of the New England colonies and the Carolinas and New York had blossomed into a nation controlling the Mississippi, and master of all the regions which pour their wealth through the great market place on the shore of Michigan—the city of Chicago." And his lordship asks, "Why should not Canada have its Chicago?"

Either his lordship had forgotten to mention Toronto, or he did not wish to show any partiality, as he must know that Canada has her Chicago, and that can be no other than Toronto, situated on Lake Ontario, in a position corresponding almost exactly with Chicago on Lake Michigan. Toronto is quite as favorably situated as regards her water communication, and much nearer the seaboard, and as a centre of railways equally well situated, and commanding a larger extent of country for trade, which will be secured to Toronto as quickly as the great Northwest is settled. Even now her trade extends from ocean to ocean, whereas Chicago has no trade whatever to the eastward, and is chiefly confined to the States of Illinois, Indiana, Iowa, Wisconsin and Minnesota, and has to compete with St. Louis, Milwaukee and St. Paul; and if her trade has developed to such large proportions in half a century, what may Toronto not expect, with her immense field for enterprise, during the same period? Surely it must become even greater than the trade of Chicago.

### Dominion Day, 1886.

The nineteenth birthday of Confederation, amidst the usual celebrations that took place, was especially remarkable at Winnipeg by the arrival there of the first through passenger train for Vancouver, which left Montreal on June 28th. Its arrival was greeted with a grand military display, the firing of a *feu de joie*, thunder of artillery, and the cheers of the assembled multitude.

The civic address to the President and Directors of the Canadian Pacific Railway contained the following: "We have no doubt as to the influence this stupendous work will have upon the commercial progress of the grand old Empire of which we are proud to form a part.

"We know that the consummation of this work will unite and consolidate an extensive British Colonial Empire in America, and that by placing our own girdle around the Continent territories now lying waste and desolate will be brought under the beneficent influence of civilization and commerce, maintaining in British hands that supremacy that would appear to be the heritage of the Anglo-Saxon and Celtic races."

This was the first train run on the twenty-four hour time system introduced by the C.P.R. Co. The train to connect left Toronto on the 28th at seventeen (five p.m.) o'clock.

This train arrived at Port Moody on the 5th July, and was received with great enthusiasm. The Victoria band playing "See the Conquering Hero Comes."

### Toronto Zoological Gardens.

Toronto is the first city of its size to have established zoological gardens. To Alderman Harry Piper belongs the credit of having established gardens in this city.

The nucleus, at first consisting of two white mice, soon became the centre of a collection of a sufficient size to warrant their exhibition, for which a small fee was charged. This collection soon increased to such an extent as to necessitate the use of a large space of ground on Front Street, where it still

grew and proved a grand success both financially and as a source of amusement and recreation to citizens and visitors.

In 1884 the Zoological and Acclimatization Society was chartered by letters patent, Mr. Harry Piper being appointed managing director. The removal of the animals to the new buildings in Exhibition Park entitles the institution to the name of Zoological Gardens, and the arrangements for future exhibitions are complete in every respect. Visitors can have access to the gardens by a choice of conveyance both by land and water, and during the time of the Industrial Exhibition the electric railway will land passengers on the spot. The Society has built a station on the Great Western Division of the Grand Trunk Railway, also landing passengers at the gardens.

The buildings are arranged for the classification of animals, carnivorous, herbivorous and omnivorous, with provision for aquatic and amphibious animals also, and will be largely increased to provide for further accessions to the collection.

#### Queen Victoria's Jubilee.

The year 1886 being the fiftieth year since Her Majesty's accession to the throne in 1837, it was intended to celebrate this year as the jubilee, but in consequence of the Indian and Colonial Exhibition, and to allow more time for the preparations, which will be on a scale of unparalleled grandeur and magnificence, the event has been postponed till 1887, when the full fifty years shall have elapsed. The following lines in honor of the occasion, from a poem composed by Mr. John Imrie, of Toronto, are worthy of a place in this connection :—

1. Our noble Queen, all hail !  
 On this thy Jubilee;  
 True hearts shall never fail  
 To love and honor thee.

CHORUS.—Victoria, to thee,  
 From loyal hearts and free,  
 At this glad time,  
 From every clime,  
 Come shouts of Jubilee!

**The Indian and Colonial Exhibition held in London,  
England, 1886.**

When Albert "the Good," Prince Consort, first conceived the idea of inviting all nations to exhibit the productions of their skill and industry in London, the project was entertained with some doubt, but when the crystal structure was reared in Hyde Park, and all countries poured in their treasures, and after the invocation of a blessing by the Archbishop of Canterbury, the youthful Queen, surrounded by her great ministers of state, and ambassadors from all foreign nations, amid the strains of music and the boom of artillery, proclaimed the Exhibition open, and when for six months the millions of visitors had gazed with wonder and awe at the vastness of the building, so high as to enclose large elm trees, and then had feasted their eyes on all that was rare and beautiful, the grand result showed the wisdom of the undertaking.

This was followed by another in New York in 1853, then came Paris in 1855, London again in 1862, then Paris in 1867, after that Vienna, and the Centennial in Philadelphia, next Paris in 1878, then came Antwerp, and the "Fisheries" and "Inventories" in London.

In all of these Great Britain and her colonies were largely represented, but it remained for the year 1886 to see the British Empire alone in her dignity and grandeur, represented by her Indian and Colonial subjects, and the productions, varied and exhaustless, of their mines, fisheries, forests, agriculture, animals and manufactures, at the great centre of the Empire over which Her Majesty reigns in the happy and appropriate character of Empress of India and Queen of Great Britain and Ireland and all her Colonies.

This Empire, on which the sun never sets, and the roll of whose drum beat never ceases round the habitable globe as it is taken up every hour while the earth revolves on her axis, with a population numbering one-fifth of that of the whole world, will undoubtedly make such a display as will astonish all mankind.

From the continent of India, including the newly annexed Kingdom of Burmah, have poured in countless treasures of gold, silver, jewels, diamonds, ivory, silk and gold embroideries, shawls, tapestries, and other fine manufactures of fabulous value.

From "Ceylon's Isle," where the spicy breezes blow so softly, have come coffee and spices, and from the land

" Where the feathery palm trees rise,  
And the date grows ripe under sunny skies ;  
And midst the green islands of glittering seas,  
Where fragrant forests perfume the breeze ;  
And strange, bright birds, on their starry wings,  
Bear the rich hues of all glorious things ;  
And from far away, in this region old,  
Where rivers wander o'er seas of gold,  
Where the burning rays of the ruby shine,  
And the diamond lights up the golden mine,  
And the pearl gleams forth from the coral strand."

Will come all that the imagination can conceive of, or the Arabian Nights have pictured of richness, grandeur, magnificence and luxury.

From Australia, embracing New South Wales, Van Dieman's Land and New Zealand, have been sent the great natural productions of these vast countries,—animals and their produce, in the shape of wool, meats and cheese, and the celebrated woollen manufactures of Nelson, with a variety of other specimens worthy of a great nation.

The gold fields of Australia, already represented in the Crystal Palace at Sydenham by a pyramid showing the bulk of gold shipped to England, from its first discovery up to a comparatively recent period, exhibit much that is still more magnificent.

From Africa have been sent ostrich feathers, coffee and ivory, and men of every shade, from the dark Hottentot to the European colonist, unite to make their very best display.

And so, from the isles of the sea, Newfoundland, Bermuda and the West Indian Islands, and some in the Pacific Ocean,

have vied with the other in this great peaceful and brotherly rivalry.

The representation of the great Dominion of Canada, the brightest jewel in the Imperial Crown, is already assured in a manner worthy of her greatness, and from the Atlantic to the Pacific the varied productions of her mines, fisheries, forests, agriculture, animals and manufactures is already displayed, to show to the world the vast strides made by this young giant in the march of civilization, arts, sciences, trade, commerce and manufactures; and Canada will undoubtedly be able to give a good account of herself, even when side by side with the rich productions of her sister colonies, and the great continent of India itself.

No one city will excel Toronto in the exhibition of what is both useful and beautiful.

Who can predict the result of this union of the great British family, brought together in this way for the first time? The Hindoo of India will shake hands with his brother, the red man of the Canadian forest; and the New Zealander, described by Macaulay as one day sitting on London Bridge sketching the ruins of St. Paul's, will be there to falsify the prediction on behalf of his future countrymen, and will see in the wonders exhibited but the beginning of the extension of the brotherly inter-communication of trade and commerce, when Canada, with Toronto as its commercial centre, will be the great highway between India, Australia and the central heart of the Empire, and as Sir George Stephen, quoting the words of Sir John A. Macdonald, has just expressed it the termini of this great highway will be Hong Kong and Liverpool. Then will soon arrive the time when those vast regions, traversed by the iron road, will be peopled by untold millions of happy and contented settlers, all true in their allegiance to the great Empire of which Canadians are now amongst the most loyal subjects.

The Council of the City of Toronto, with his Worship the Mayor, as Chief Magistrate, may well be congratulated on assuming their responsible duties at such an auspicious epoch. So

many circumstances happily conspiring and harmoniously uniting to launch our fair city on a career of prosperity and progress hitherto unequalled, and, as the next ten years will undoubtedly show, compared with which the advancement of the past will dwindle into insignificance.

The writer who, in 1896, describes Toronto with a population of 250,000, will assuredly refer to the present year as the most remarkable period in her history.

The completion of the Canadian Pacific Railway, the last rail on Callender Junction spiked down on the 18th of January, making the distance from Toronto to Winnipeg shorter by two hundred and thirteen miles; the commencement of shipments to Australia, New Zealand, China and Japan; the coincidence of the Indian and Colonial Exhibition and the jubilee of Her Majesty's coronation, all combining as happy omens of the great future, augur well for the men who have undertaken to grapple manfully with Toronto's greatest needs, and when the history of the next decade is written, it will contain a description of the great works accomplished by the grand scheme of combining the health of the inhabitants with the encouragement and development of new manufacturing industries, and last, but not least, the enjoyment of the people.

With a grand promenade in front of the city, beautified with shade trees and approached in safety by handsome bridges thrown over the railway tracks, without danger to the thousands of men, women and children who will crowd down towards the steamboat wharves, and affording a prospect finer than that from the Thames embankment in London.

With a fleet of vessels along the wharves of the Don, and trains of cars in the railway yards adjoining, unloading coal from the Saskatchewan, and ores of iron, copper and silver, to be smelted in the furnaces whose chimneys will rise all around, and the same cars and vessels taking in return cargoes of Toronto manufactures to be distributed from Halifax to Vancouver, and to China, Japan, Australia and India; with our streets crowded with travellers from all countries, students from Japan and China at our University, mingling with British

soldiers of horse, foot, and artillery regiments, having Toronto as headquarters, and not a few merchants from the far east, as wise men making their purchases, will far exceed what may now be regarded as a fancy picture.

To realize all this as accomplished in the history of Toronto only requires the carrying out of the plan so happily outlined on the occasion of the recent inauguration of the Chief Magistrate, and the support promised by the chosen representatives of the people, who will certainly approve of what is so plainly the interest of the present and future generations, and by judicious management of the finances and credit of the city will impose no heavy burden, while it secures inestimable benefits for the city for all time to come.

The completion of the Canadian Pacific Railway, and, what is sure to follow, a line of ocean steamers from Vancouver to Hong Kong, and thence through British territory to Calcutta, together with the formation of the Dominion of Australia, point to the near approach of what must happen in the closer union of all British countries.

Every thinking mind must look back with wonder and admiration on the past years of the now waning century. These have been years of miraculous progress, of vast revolutions in surrounding empires, of startling discoveries in science, of beneficial changes in social life.

Time and space have become the servants of science. The telegraph enables us to converse with absent friends instantaneously, or by the railway we fly to see them on the wings of swiftness; and England, in the midst of the changes of other nations, rears her proud head, great and glorious, powerful and peaceful, rejoicing in that precious liberty of mind and body which constitutes her the Queen of Nations.

As children separated from the parental home anticipate with joy a reunion, so are England's sons, the world over, looking forward to the grand family gathering of 1886.

HIS ROYAL HIGHNESS THE PRINCE OF WALES.

THE QUEEN'S JUBILEE  
AND  
TORONTO "CALLED BACK."

---

Indian and Colonial Exhibition, South Kensington,  
London, 1886.

"That they all may be one!" That mother and daughters,  
Tenderly linked like the Graces in love,  
Girdling the globe, over lands, over waters,  
May be united beneath and above.  
Here on this orb's upper hemisphere olden,  
There on that younger half-circle beneath,  
Everywhere shall one sweet union enfolden  
England's fair scions in olive-twined wreath.  
All to be one! What a blest federation!  
Britain, Imperial Queen of the World,  
Sealed as one heart, one life, and one nation,  
Under one cross, one standard unfurled:  
Owning one law of religion and reason,  
Speaking one language, and rich in its wealth,  
Proud of the past, and the bright present season,  
And the grand future of hope and of health.  
So may the whole world's glorious communion,  
Nature, and Science, and Commerce, rejoice;  
Growing together in one happy union,  
Filling the welkin with gratitude's voice.  
Canada, Africa, Zealand, Australia,  
India, continents, isles of the sea,  
Adding your jewels to Britain's regalia,  
One with Old England the home of the free!

—*Martin Farquhar Tupper.*

**Opening Ceremonies.**

The Exhibition was formally opened by Her Majesty on the 4th of May, and was characterized by the impressive, peaceful pomp and pageantry of a Royal progress, and was one of the most remarkable the world has ever seen.

The weather was beautiful. Crowds gathered along the route taken by Her Majesty from Buckingham Palace, and greeted her with enthusiastic cheers.

The main hall in which the opening ceremonies were conducted was crowded with the *elite* of London. The large number of foreign princes and diplomats who attended in court dress, combined with scores of British officers present, in full glittering uniforms, made a magnificent spectacle.

The Prince of Wales, Duke of Edinburgh, Prince Henry of Battenburg and his wife (Princess Beatrice), and the Crown Princess Victoria of Germany, led the Royal procession through the building, and were followed by Lord Hartington, the Marquis of Salisbury, Earl Derby, and scores of other distinguished persons. So great was the rush to witness the Royal procession to the Exhibition building that it required, besides a strong force of cavalry, upwards of 1,000 policemen to keep a passage-way for the Royal carriages through the streets. When the Queen's carriage arrived the entrance was surrounded by throngs of distinguished persons. The Royal guard of honor lined the corridors when Her Majesty alighted and passed into the building. When the Queen appeared in the hall she was greeted with enthusiastic cheers.

The opening ceremonies were simple, and consisted of a carefully prepared programme of music, the presentation of addresses to the Queen by the Colonies participating in the Exhibition, and a formal declaration by Her Majesty that the show was open.

The music was grand. Among the numbers was "Home, Sweet Home," sung by Albani. The immense choir, accompanied by the great organ and orchestra, rendered the Halle-lujah Chorus with powerful effect.

The chief feature of the opening ceremonies was the singing of the new British Ode composed by Tennyson for the occasion. The poem is in four parts—one of welcome to the exhibitors; one of prayer for the inheritance by the Colonies of England's attributes; the third describing the loss of the United States, and the lesson of it; and the fourth an appeal for the unity of the Empire.

Her Majesty was immensely pleased and much affected by the singing of the ode. She smiled and nodded approval over each patriotic sentiment rendered, and was fairly radiant with pleasure when the vast audience caught up the poet's spirit and vented their joy in deafening thunders of applause. The text of the ode is as follows :

Welcome, welcome ! with one voice  
In your welfare we rejoice,  
Sons and brothers, that have sent  
From Isle, and Cape, and Continent,  
Produce of your field and flood,  
Mount and line and primal wood.  
Works of subtle brain and hand,  
And splendors of the morning land ;  
Gifts from every British zone.  
Britons, hold your own !

May we find, as ages run,  
The mother featured in the son ;  
And may yours forever be  
That old strength and constancy,  
Which has made your fathers great  
In our ancient Island State ;  
And where'er her flag may fly,  
Glorying between sea and sky,  
Make the might of Britain known.  
Britons, hold your own !

Britain fought her sons of yore ;  
Britain failed, and never more,  
Careless of our growing kin,  
Shall we sin our fathers' sin.  
Men that in a narrower day—  
Unprophetic rulers they—

*The Queen's Jubilee and*

Drove from out the mother's nest  
That young eagle of the west,  
To forage for herself alone.  
Britons, hold your own !

Sharers of our glorious past,  
Brothers, must we part at last ?  
Shall not we, through good and ill,  
Cleave to one another still ?  
Britain's myriad voices call :  
Sons, be welded, each and all,  
Into one Imperial whole—  
One with Britain, heart and soul,  
One life, one flag, one fleet, one throne,  
Britons, hold your own !  
And God guard all.

All the parts were sung in English but the second. This had been translated into Sanscrit, by Professor Max Müller, as a mark of courtesy to the large number of Orientals attending the Exhibition.

A noteworthy incident in the ceremony was the presentation to Her Majesty, by Sir George H. Chubb, of a master key of the most elaborate workmanship, which could open any of the 500 Chubb locks in the Exhibition. This choice and costly specimen of the locksmith's art is adorned with jewels of all kinds, and decked with many a dainty and symbolic device. It is well worth a minute description. Imagine it, half a foot long, made of burnished gold, set off with enamel and a variety of jewels, the bow being hexagonal in shape. In the centre of the hexagon, as seen from one side, is a golden representation of the head of a lion in high relief, langued with ruby, crowned and set in red enamel surrounded with a band of white enamel, with the inscription, "The Colonial and Indian Exhibition." From this central circle radiate to the angles of the hexagon six shields in raised blue enamel, each bearing a symbol in gold of the colony or dependency—the animals chosen being the sheep, elephant, tiger, opossum, beaver and buffalo. At the bow end of the key, and surmounting the bow, is the Imperial crown, the band of which is jewelled with rubies and emeralds. The pin

of the key as it leaves the hexagon starts from a centre of four elephants' heads, whose trunks form a socket on either side of the bow. The radiating shields are of yellow gold and bear the names of several of the Colonies, whose symbols are of the obverse, and in the centre of a small nugget of gold. This key represented symbolically the opening of the Exhibition by Her Majesty, after which she handed it to the Prince of Wales.

In addition to the distinguished personages named above Her Majesty was accompanied by several young Princes and Princesses, including in all thirteen of her children and grandchildren; all the former being present except the Duke of Edinburgh, who commanded the fleet in Greek waters.

When the Prince of Wales had read the address on behalf of the Commissioners of the Exhibition, and the Queen had read her reply, he kissed the hand of Her Majesty, but she drew him towards her and kissed him on the cheek.

Thus ended a most significant and appropriate celebration, which, as the first strictly Imperial pageant, attests the strength and unity of the British Empire, and emphasizes that desire for still closer union which has become almost a passion of patriotic hearts, whether they beat in the younger Britain beyond the seas or in the old Island Home.

### **International Exhibitions.**

Among the institutions which have developed in the long reign of Queen Victoria, none are, perhaps, more remarkable than the series of great exhibitions inaugurated by that of 1851, when all nations were invited to London.

The Exhibition of 1851 was open from May day until the 15th of October, during which time it was visited by 6,170,000 persons, while the receipts were over half a million pounds sterling, and the surplus profits amounted to £150,000, which sum was devoted to the promotion of science and art.

The following were the three Exhibitions of 1886, with the respective attendance up to the end of October, when the Edinburgh finally closed with a surplus of £17,000:—Indian and Colonial, London, 5,378,120; International, Edinburgh, 2,740,000; International (Shipperies), Liverpool, 3,132,516.

## THE INDIAN EMPIRE.

While the Empire of India held the leading place, from the point of view of antiquity and a past civilization, her romantic history, and the gorgeous coloring which characterized her productions; her gold and silver works that were rich and rare; carpets of exquisite workmanship; cloths interwoven with precious metals; carvings in wood and ivory; models of ox-drawn palanquins and mystical carriages, decorated with gold and silver and rare woods; fans made from the feathers of the Indian ibis,—nevertheless, even India must suffer by comparison when in juxtaposition with the young and vigorous colonies of the Empire.

## THE CANADIAN EXHIBITS

Created a profound impression on the British mind. The people of England had never before been able to realize the extent and variety of Canadian resources, and it may be said with confidence, that this country never stood in anything like as high estimation amongst the British people as she does to-day. The magnitude of her public works, the healthfulness of her climate, and the immensity of her territorial extent, were made apparent through the Exhibition as no other means could have accomplished.

Commemorative diplomas and medals have been awarded to every exhibitor at the Indian and Colonial Exhibition, numbering about three thousand of each.

The medals are of bronze, and are very handsome in design and finish. They are about double the size of an ordinary penny. On the obverse side is a profile portrait of the Prince of Wales, while on the reverse are the words, "Colonial and Indian Exhibition, 1886," surrounded by a cluster of oak leaves.

The diplomas are large-sized and of exquisite design and finish, being artistically colored. Britannia is represented, trident in hand, seated on a throne guarded by the British lion. Behind her stand two figures, one with torch in hand, the other spinning cotton, both representing, according to the interpretation, the march of progress and the speed of enlightenment in

the British Empire. Directly in front of Britannia, who extends her right hand in friendly welcome, are groups of individuals attired in characteristic costumes of the various Colonies. Here the noble red man, with uplifted head, presents his contribution to the wealth of the Empire; while there his more thinly-clad fellow-subject from the burning plains of India, the lordly Zulu, or under-sized negro, laden with the product of his clime, seemingly vie with one another in their amiable glances in the direction of welcoming Britannia. Without an open window is seen a purple sea, on which is calmly floating a British man-of-war, reminding the Colonists of their security at all times.

## TORONTO EXHIBITS.

No city could compare with Toronto in the number and variety of her exhibits, as shown by the large number of medals and diplomas distributed. The number presented through the Education Department alone was 137, and advantage was taken of the presence in Toronto of the Governor-General and Lady Lansdowne to make the presentation. This interesting event took place on the 4th of May, at a conversation given in the Normal School buildings; the proceedings being interspersed with vocal and instrumental selections. The recipients of medals were connected with the Normal and Model Schools, the Art School, Public and Separate Schools, Collegiate Institute and various Colleges, School of Practical Science and Toronto University, and exhibitors of school supplies, books and musical instruments, and proved a most interesting occasion; the principal feature being the address of His Excellency on fine arts, which was replete with information and both complimentary and encouraging to the students.

An interesting description of the arrangement of the educational exhibits and the general effect was given by Dr. S. Passmore May, who was the Commissioner in charge, under the direction of Hon. G. W. Ross, Minister of Education. Dr. May has published a complete report, and also a catalogue of the whole educational exhibits, which are very valuable and interesting.

The number and variety of Toronto exhibits reflect great credit on our manufacturers and artists, whose names are worthy of being placed on record, and are hereby given, all of whom have also received medals and diplomas.

## MUSICAL INSTRUMENTS.

As might have been expected, the pianos attracted an unusual amount of attention and patronage, several of the instruments having been purchased by the Queen and by wealthy and distinguished persons, for use in palaces and mansions. Dr. John Stainer, in his report on the Toronto musical instruments, says he "was struck by the high standard of excellence, alike in tone and mechanism." A large number of pianos and organs were sold during the Exhibition. Although the cost of making the pianos is greater in Canada than in England, he doubts not but that from their excellence the Canadian instruments will hold their own anywhere.

MESSRS. MASON & RISCH.

His Royal Highness the Prince of Wales complimented Mr. Mason personally on the excellency of their exhibit, and in company with the Crown Princess of Germany (the Princess Royal), his eldest son (Prince Albert Victor), and the Duke of Cambridge, paid a second visit and expressed their approval. The Princess Louise and Madame Albani also inspected the instruments, and Her Majesty the Queen ordered one of their upright pianos to be sent to Windsor Castle.

MESSRS. OCTAVIUS NEWCOMBE & CO.

This firm also had the honor of Her Majesty's command that one of their grand pianos be sent to Windsor Castle to be placed in the Queen's Audience Chamber. The instrument was selected by Sir Arthur Sullivan, and his judgment was confirmed by Dr. Stainer, organist of St. Paul's Cathedral.

R. S. WILLIAMS & SON.

Her Majesty chose one of the pianos of this firm for Windsor Castle. The selection was made by Mr. Dyson, of Windsor, specially appointed tuner to the Queen, their Royal Highnesses the Duke and Duchess of Connaught, and the Duchess of Albany.

Orders for various classes of manufactured goods were received by Toronto firms, amongst which were the Massey Manufacturing Co., for agricultural implements; McFarlane, McKinlay & Co., for window shades; Joseph McCausland and Son, for stained glass; Messrs. J. & J. Taylor, for safes, which have been shipped to Australia, Great Britain and Ireland; and a profitable trade may be looked for in our various branches of manufactures as the result of the display made at the Exhibition.

The financial results of the Exhibition have been extremely satisfactory. The report of the Finance Committee shows a clear surplus of £32,235. This result is largely due to the unceasing pains taken by the Prince of Wales to forward the

HON. SIR CHARLES TUPPER, G.C.M.G., C.B.  
(High Commissioner for Canada in London); Executive Commissioner.

interests of the Exhibition. Of this sum £25,000 is assigned to the Imperial Institute, which is the successor and natural heir of the Indian and Colonial Exhibition.

HON. SIR CHARLES TUPPER, G.C.M.G., C.B.

All the exhibitors from Toronto speak in the highest terms of the indefatigable exertions, inexhaustible patience, and uniform courtesy displayed by Sir Charles Tupper during the exhibition.

### Rebellion of 1837.

In the session of Parliament at Toronto, in 1836-37, Dr. Rolph used the following language: "Our geographical situation is singular. To the south we are barred from the Atlantic coast by the American Republic; to the north and north-west you pass through barren lands to mountains covered with everlasting snows, and among Indian tribes unknown; and to the east we are intercepted by the sister Province, the very Province with which it is proposed to unite us."

The state of political affairs may be judged from the language used at this time by an English organ of the Opposition: "Henceforth there must be no peace to the Province; no quarter for the plunderers; agitate! agitate!! agitate!!! Destroy the revenue; denounce the oppressors. Everything is lawful when the fundamental liberties are in danger. The Guards die; they never surrender."

At public meetings the Imperial resolutions were denounced as a breach of faith and a violation of right. Resolutions were adopted to use as little as possible of imported articles paying duty, and to raise a Papineau tribute in imitation of O'Connell's Repeal Rent. Such was the state of affairs in Canada while yet His Majesty William IV. sat on the throne of Great Britain.

On the 15th of June, 1837, five days before the accession of Her Majesty Queen Victoria, Lord Gosford tried the effect of a proclamation on the agitation which was convulsing society. He assured the people that the Imperial Parliament had neither

violated nor was about to violate the just rights and privileges of His Majesty's Canadian subjects. This proclamation was torn in pieces by the *habitans* in Lower Canada, amid cries of "A bas la proclamation!" The French-Canadians rallied to the popular cries "Vive Papineau! Vive la liberté! Point du despotisme!"

In Upper Canada, William Lyon Mackenzie in his journal declaimed on the condition of public affairs with scathing bitterness. He thus wrote:

"Canadians! Brother Colonists! Your mock Parliament has done its duty; bills and badgerings have followed each other in quick succession.

"Ye false Canadians! Tories! Pensioners! Placemen! Profli-gates! Orangemen! Churchmen! Spies! Informers! Brokers! Gamblers! Parasites and knaves of every caste and description, allow me to congratulate you! Never was a vagabond race more prosperous! Never did successful villainy rejoice in brighter visions of the future than ye may indulge. Ye may plunder and rob with impunity; your feet are on the people's necks; they are transformed into tame crouching slaves ready to be trampled on. Erect your Juggernaut; the people are ready to be sacrificed under the wheels of the idol.

"The four-pound loaf is at a Halifax shilling (20 cents); the barrel of flour brings twelve dollars. Woe and wailing and pauperism and crime meet us at every corner of the streets. The settlers and their families on the Ottawa, in Simcoe, in the rear of the London district, and many new settlements, seldom taste a morsel of bread and are glad to gnaw the bark off the trees, or sell their improvements for a morsel to keep away starvation.

"The settlers are leaving the country in thousands for lands less favored by nature, but blessed with free institutions and just government. The merchants are going to ruin one after another; even sycophancy and degrading scurrility have failed to save them this time. They cry out, Why is it so? I pity them not. Money, wealth, power, was their god, the Dagon of their idolatry. Let them cry aloud and spare not, perhaps even now he will help them.

"But why are want and misery come among us? Ah! ye rebels to Christianity, ye detest the truth, ye shut your ears against that which is right. Your country is taxed, priest-ridden, sold to strangers and ruined. What then? Ye share the plunders! Like the Lazarroni of Italy, ye delight in cruelty and distress, and lamentation and woe."

Mr. Mackenzie died in 1861, and even at that time he must have been himself astonished at the wonderful changes which had taken place in the condition of the country during the previous twenty-four years of the reign of Queen Victoria; and had he lived during the following twenty-six years and witnessed the Jubilee—with its glorious associations and unparalleled record of progress and prosperity, and nowhere greater than in the Dominion of Canada, and the City of Toronto—no doubt he would rejoice with every other loyal subject—as he afterwards proved to be—at the results of the benign and benignant sway of her who sits upon England's throne and lives in the hearts of her Canadian subjects.

It must not be inferred from the preceding historical extracts that the Canadian people had become disloyal: although a large number joined in the abortive rebellion, they were only a small minority of malcontents, while the great body remained true to the Government, their loyalty being intensified by the insurrection which had taken place.

### **Toronto's Loyalty.**

Toronto, always foremost in her allegiance to Great Britain, manifested her loyalty to the young Queen on the occasion of her Coronation, on the 28th of June, 1838.

The citizens of Toronto, in their expression of joy, joined heartily in the celebration. Public rejoicings, dinners, speeches, and fireworks were the order of the day and evening.

A grand procession of firemen was the principal public feature and formed a fine display, being headed by the bands of the Queen's Rangers and of the Royal Foresters. The fire engines, drawn by two or four horses, were magnificently

decorated, and mottoes of loyalty were prominently displayed on flags and banners, amidst which were the names "Victoria," in a wreath of Rose, Thistle, and Shamrock, and "British Supremacy," City of Toronto arms in gold, three gilt lions, gilt Irish harp, and the motto of the City of Toronto in gold—"Industry, Intelligence, Integrity."

#### The Princess Victoria,

Born May 24th, 1819; baptized same day; vaccinated early in August same year; presented at court, February 24th, 1831; visited Powis Castle, Wynstry, Beaumaris, and other parts of North Wales, and attended the Eisteddfod, 1832; presented Colors to 80th Foot (first public act), August 3rd, 1833; confirmed by Primate, August 30th, 1835; attained legal majority, May 24th, 1837; accession to throne, June 20th, 1837.

#### The Princess Victoria at the Bazaar.

Miss Martineau relates an anecdote of the Queen when she was a nine-year-old Princess, with no knowledge of the great future before her, and the story shows that she "was reared in as much honesty and care about money matters as any citizen's child," being rigidly guarded against any extra expenditure. At a Tunbridge Wells bazaar, the Princess had bought presents for nearly all her relatives, and spent her last shilling when she recollected one cousin more, and saw a box that she thought would just suit him. The price of the box was half a crown, and the shopkeeper placed it with the other purchases, when the governess admonished him with the remark, "No; you see the Princess has not got the money: therefore, of course, she cannot buy the box." The shopkeeper offered to keep the box for her, and the Princess exclaimed, "Oh, well, if you will be so good as to do that." Next quarter day, before seven o'clock in the morning, the Princess appeared on her donkey to claim her purchase, and this time, having the requisite money, she was enabled to carry off in triumph the box intended for her cousin.

**Queen Victoria's Accession.**

"The King is dead! God save the Queen."

At five o'clock on the morning of Tuesday, the 20th of June, 1837, the Primate of all England and the Lord Chamberlain reached Kensington Palace, where the Princess Victoria then resided, to inform her that her uncle, William IV., had died at Windsor Castle at 2.12 that morning, and to hail her as Queen.

The messengers had to knock long at the Palace door before the porter could be roused, and when at length admitted they were turned into a lower room and apparently forgotten. They had to ring several times, and an attendant declared that "the Princess was in such a sweet sleep that she could not venture to disturb her." "But," said they, "we come on business of state to the Queen, and even her sleep must give way to that." The young Queen shortly entered the room in a loose white night-gown and shawl; her night-cap thrown off and her hair falling upon her shoulders; her feet in slippers; tears in her eyes, but perfectly collected. The first words of the Queen were a request that the Archbishop would pray for her. They knelt together, and as Miss Wynn states: "Victoria inaugurated her reign like the young king of Israel in the olden time, by asking from the Most High, who ruleth in the kingdom of men, an understanding heart to judge so great a people."

Her Majesty's first act was to write a tender letter of condolence to Queen Adelaide, widow of the late King, and she addressed it to "Her Majesty, the Queen," remarking, when told that this was inaccurate, that she was "quite aware of Her Majesty's altered character, but I will not be the first person to remind her of it."

A Privy Council was held at 11 o'clock, and consequent upon the short notice some of the members had not time to wait for the robes of state; the Duke of Cumberland, Lord Glenelg and others appearing in undress. The Cabinet Ministers and other Privy Councillors then knelt before the throne and took the oath of allegiance. At 10 o'clock next forenoon Her Majesty was formally proclaimed Queen of Great Britain

and Ireland, and when she presented herself at one of the windows of St. James's Palace, she was greeted with deafening cheers by the multitude assembled outside. The Queen wore a black silk dress, with a crape scarf over her white tippet, and a little black chip bonnet. Deeply moved by the enthusiastic manifestations of popular loyalty, she repeatedly bowed to the people, who, even while the proclamation was being read, cried out, "God save the Queen."

### The Coronation.

The Queen's Coronation took place in Westminster Abbey on Thursday, the 28th June, 1838, with great pomp and ceremony, even the dawn of the day being announced by the guns of the Tower and those of a temporary battery in St. James's Park. All London turned out, and the line of route from St. James's Palace to the Abbey was crowded from pavement to housetop. The procession was long and imposing, and its several branches were separated by mounted bands and detachments of Life Guards. There were numerous grand new carriages of foreign representatives and different branches of the British Royal family. There were twelve of Her Majesty's carriages, each drawn by six horses, attended by four grooms walking, while the state equipage of the Queen was drawn by eight cream-colored Hanoverian horses with a yeoman of the guard at each wheel and two footmen at each door and one at the head of each horse.

The royal progress was marked with continuous enthusiasm, and the young Queen was much affected.

Meanwhile the Abbey's space was utilized to the utmost. The grand procession entered the choir shortly after noon, the Queen wearing a royal robe of crimson velvet furred with ermine and bordered with gold lace, while round her shoulders were the collars of her orders, and on her head was a circlet of gold. She was preceded by the Bishop of Winchester bearing the Bible. Some of the foreign ambassadors were magnificently dressed, especially Prince Esterhazy, whose dress down to his

boot heels sparkled with diamonds. The only ambassador who received special attention from the crowd was Marshal Soult, who represented the King of France.

Immediately on the Queen's entrance the National Anthem was performed by orchestra and choir, while the vaulted roofs of the Abbey resounded with the acclamation of the spectators. At the conclusion of the Anthem the Primate announced to the east, south, west, and north, "I here present unto you Queen Victoria, the undoubted Queen of the realm; wherefore, all you who are come this day to render your homage, are you willing to do the same?" Each time the Archbishop made this demand the people loudly acclaimed, "God save Queen Victoria," trumpets sounded and drums were beaten; the Queen meantime remaining standing.

After Her Majesty had made her first offering of an altar cloth of gold, she handed over an ingot of gold, a pound in weight, to the Archbishop, who put it into the oblation basin. The religious service then proceeded. In taking the oath, with her right hand upon the gospel and herself kneeling, the Queen said, "The things which I have heretofore promised I will perform and keep, so help me God." Her Majesty kissed the book and signed a transcript of the oath. While anointing the Queen on head and hands, in the form of a cross, the Archbishop pronounced these words:

"Be thou anointed with holy oil as kings, priests and prophets were anointed; and as Solomon was anointed king by Zadok the priest and Nathan the prophet, so be you anointed, blessed, and consecrated Queen over this people, whom the Lord your God hath given you to rule and govern in the name of the Father, and of the Son, and of the Holy Ghost. Amen."

After other prayers the Bishop placed the crown reverently on the head of the young Queen. Then arose a great shout, "God save the Queen," with cheers and waving of hats and handkerchiefs, while the grandeur of the spectacle was heightened by the peers and peeresses putting on their coronets, and the bishops their caps, and the kings-at-arms their crowns, trumpets meanwhile sounding and drums beating. After

this came the enthronement and the homage, with kissing of the Queen's hands.

Her Majesty received the two sceptres from the Dukes of Norfolk and Richmond, on which the trumpets and drums once more sounded, and the assembly cried out, "God save Queen Victoria!" "Long live Queen Victoria!" "May the Queen live forever!"

The Archbishop then presented the Bible to Her Majesty and again led her to the throne, after which he was the first to do homage, followed by all the lords spiritual and the lords temporal according to their rank. Each removed his coronet, touched the crown on the Queen's head, and spoke thus: "I do become your liege man of life and limb and of earthly worship, and faith and love I will bear unto you, to live and die against all manner of folks, so help me God." The last created baron having sworn allegiance, the Queen showed where her own homage was due by removing her crown while she received the Holy Communion. Then the last blessing having been uttered, with the crown on her head, the sceptre in one hand and the orb in the other, the Crowned Majesty of England left the Abbey. The whole gorgeous array swept after her.

### The Queen's Crown.

The crown in which Her Majesty appeared at the coronation weighed little more than three pounds, while the crown made for George IV. weighed over seven pounds, and was much too large for the Queen.

The new one made for her was composed of hoops of silver enclosing a cap of deep blue velvet. The hoops, which were completely covered with precious stones, were surmounted with a ball covered with small diamonds, and had a Maltese cross of brilliants on the top. In the centre of the cross was a splendid sapphire, while the rim of the cross was clustered with brilliants, and ornamented with rich *fleur-de-lis* and Maltese crosses. In front of the Maltese cross, which was also in front of the crown, was the enormous heart-shaped ruby, once worn by the

chivalrous Black Prince. The value of the jewels of the crown was estimated at £112,760 (\$563,000), comprising—

20 diamonds round the circle . . . . .	£30,000
2 large centre diamonds . . . . .	4,000
54 smaller diamonds at angles . . . . .	100
4 crosses, each with 25 diamonds . . . . .	12,000
4 large diamonds on top of crosses . . . . .	40,860
12 diamonds in the <i>fleur-de-lis</i> . . . . .	10,000
18 smaller diamonds in the <i>fleur-de-lis</i> . . . . .	2,000
Pearls, diamonds, etc., in arches and crosses . . . . .	10,000
141 diamonds on the mound . . . . .	500
26 diamonds on the upper cross . . . . .	3,000
2 circles of pearls on rim . . . . .	300
	£112,760

#### The Coronation Chair.

King Edward's Chair, as the coronation chair is called, contains the famous stone from the Abbey of Scone, where the Scottish kings were crowned. This stone is commonly called Jacob's Stone, or the Fatal Marble Stone. It is about twenty-two inches long by thirteen broad, and eleven inches deep, of a steel color, with reddish veins. Tradition says it is the stone on which Jacob laid his head when he slept at Bethel. It was brought to Byzantia, in the kingdom of Galicia, in Spain; thence to Ireland by Simon Brach, who was King of Scots about 700 years before Christ; thence to Scotland by King Fergus, about 370 years later; and in the year 850 A.D., it was placed in the Abbey of Scone by King Kenneth, who caused it to be enclosed in a wooden chair, and a verse to be engraved on it, of which this is a translation:

"Should fate not fail, where'er this stone is found,  
The Scots shall monarchs of that realm be found."

#### The Regalia.

From amongst the crowns and other regalia, carefully kept in the Tower of London, the following were used at the coronation ceremony: St. Edward's staff, the spurs, the sceptre with the cross, the pointed sword of temporal justice, the sword of

mercy, the sword of state, the sceptre with the dove, the orb, St. Edward's crown, the palma, the chalice, and the Bible.

### The Coronation Medal

Represented the crowned head of the youthful Queen. The medallion was surrounded by a wreath; immediately above it was a crown between the two words "God save," and underneath "Victoria R" An ode was written for the occasion, the first verse of which is as follows:—

"All hail, Queen Victoria, all hail to this day,  
So teeming with promise, we welcome it here,  
As the bright stream of glory pursues its glad way,  
And the blessing of thousands ascends in that cheer."

### The Queen and Her Family.

It was on the 24th of May, 1819, that Victoria Alexandrina, Queen of Great Britain and Ireland and Empress of India, was born at Kensington Palace. She was the only child of George III.'s fourth son, the Duke of Kent; and though her father's death, in 1820, left her heiress to the English throne, she was not acquainted with the fact until she was thirteen years of age, and she cried much on hearing it, while presently remarking, "There is much splendor, but there is much responsibility." She was brought up in strict retirement, but carefully prepared for the high duties which devolved upon her on the death of William IV.

The marriage between the young Queen and Prince Albert, projected by King Leopold and Baron Stockmar, was known to Her Majesty two years before the intention became known to the Prince himself. Writing to her uncle at the close of the Prince's first visit to this country, she begged him "to take care of one now so dear to her."

The marriage was celebrated on the 10th of February, 1840, and in the years of married life which intervened before the Prince Consort's death on the 14th December, 1861, five daughters and four sons were born to the happy couple. "They

say," wrote the Queen in 1844, "no sovereign was ever more loved than I, and this because of our happy, domestic home, and the good example it presents."

The first ten years of the Queen's widowhood were spent in seclusion, for though grief did not prevent the necessary duties of the sovereign, it caused her to avoid publicity as much as possible. Besides the loss of her husband and daughter, the Princess Alice, the Queen suffered a severe trial in the beginning of 1871, when her eldest son, the Prince of Wales, had an almost fatal attack of typhoid fever. At the thanksgiving service for his recovery, held in St. Paul's Cathedral on 27th February, 1872, 13,000 persons attended. For the husband she loved so well, and has mourned for so long, the Queen raised the stately Frogmore Mausoleum. The Albert Memorial in Hyde Park, on the site of the first Exhibition building, is also an enduring monument of her love and affection, while statues in London, Liverpool, Manchester, and other towns, are popular memorials of the "Good Prince."

### The Heir Apparent.

Of the twenty-three kings who have reigned in England since the traditional incident when Edward I. presented to the Welsh chieftains, at Cærnarvon, his infant son as a prince "born in their midst, who could not speak a word of English," only twelve previously bore the title "Prince of Wales."

The title is the principal one attached to the eldest son, or in the event of his death, the grandson of the reigning sovereign; so that it does not invariably fall to the heir apparent, who may not be grandson of the sovereign. Neither James I. nor William IV. was Prince of Wales, and George IV. was the last bearer of the title before the birth of its present holder.

To the Princedom of Wales are annexed the Duchy of Cornwall and Earldom of Chester, in England; the Duchy of Rothesay, Earldom of Carrick, Barony of Renfrew, and Lordship of the Isles, in Scotland, besides the titles of Prince and High Steward; and in Ireland, the Earldom of Dublin.

The present Prince of Wales, and Heir Apparent to the

Royal and Imperial throne of Queen Victoria, is Albert Edward, Her Majesty's eldest son, who was born at Buckingham Palace on Lord Mayor's Day, November 9th, 1841, and was baptized on the 15th of January following; the King of Prussia being one of his sponsors. His Royal Highness received his early education under the Rev. Henry Birch, rector of Prestwich; Mr. Gibbs, barrister-at-law; the Rev. C. F. Turner, and Mr. H. W. Fisher. After studying a session at Edinburgh, he entered at Christ Church, Oxford. After attending the lectures at the latter seat of learning for a year, he, in 1860, paid his visit to Canada and the United States, where he was received with much enthusiasm. Next year he was at Cambridge University, and in the following year he travelled extensively in Europe, Syria and Egypt, accompanied by the late Dean Stanley. It was on the 8th of January, 1862, that he was ordered to be prayed for as "Albert Edward." In the following year he was admitted to the House of Peers, and was also made a Privy Councillor, while on the 10th of March he married the Princess Alexandra, of Denmark, who met with an enthusiastic welcome in England.

The Prince was made a Knight of St. Patrick on the occasion of his visit to Ireland in April, 1868. During his extensive travels in the following year he visited Constantinople and Sebastopol, and in the summer of 1870 he inaugurated the Victoria Embankment on the Thames, besides opening the Workmen's International Exhibition at Islington.

On the 12th of November, 1871, His Royal Highness was attacked with typhoid fever, and his recovery was despaired of from the 6th to the 13th of December, but next day his recovery commenced, and on the 27th of February following he was able to attend with his royal mother the thanksgiving service held in St. Paul's Cathedral.

In the beginning of 1874 he attended the marriage of his brother Alfred, Duke of Edinburgh, at St. Petersburg. On the perversion of the Marquis of Ripon, and his resignation of the Masonic Grand Mastership, that dignity was accepted by the Prince of Wales, who was installed with grand cere-

monial in the Royal Albert Hall, on the 28th of April, 1875. In the same year occurred one of the great features of his lifetime—his visit to India—for which Parliament voted £112,000, and this sum more than covered the expenses of his triumphal progress through the great Indian Empire. Like his father, the great and good Prince so long mourned, he has taken a deep interest in the great exhibitions in London and elsewhere. To him belongs the honor of having established the Royal College of Music, and of proving by his visit to Ireland in 1885 that the Irish people are not the disloyalists they are pictured; and to him will also belong the honor of establishing the grand institution in London which is to symbolize the unity of the vast Empire of his mother, the jubilee of whose prosperous reign we celebrate.

His Royal Highness is making to himself friends of something nobler far than the mammon of unrighteousness. He is winning the hearts of the people and their children. He has a marvellous aptitude for translating the teachings of his father into very substantial facts. The Colonies are now in high favor with young men, thanks to the Colonial Exhibition. The working-men, and the boys and girls from the public elementary schools, were there by thousands, and when the Imperial Institute is opened they will continue to go and learn much to their advantage. The people of over-crowded British towns and the great Babylon of London have seen with their eyes how wide and wealthy a place God has given to the Anglo-Saxon race, especially in Canada and Australia. On all sides it may be seen that the set of the popular tide is towards those mighty lands whose people and products the Prince has helped to photograph on the imagination of their hearts. Britain may laugh at revolution and socialistic vagaries so long as the Throne busies itself in caring for the health and wealth of the people.

#### **The Royal Household.**

The personal household of Queen Victoria is composed of over a thousand persons, costing a yearly sum of \$1,925,000. It consists of a Lord Steward, Lord Chamberlain, a Master of

the Horse, each with a salary of \$10,000; a Keeper of the Privy Purse at \$11,000, with three assistants at \$3,000 each; a Treasurer, a Controller, a Vice-Chamberlain, a Controller of Accounts, a Master of the Household, a Master of the Ceremonies, a Master of the Buckhounds, each at \$6,000 per annum; a Grand Falconer at \$6,000, an Usher of the Black Rod at \$10,000, a Mistress of the Robes at \$3,000, eight Ladies of the Bedchamber at \$2,500, ten bedchamber women at \$1,500 each, ten maids of honor at \$1,500 each, fourteen equerries at \$3,500 each, eight pages of honor at \$750, eight lords-in-waiting at \$4,000, fourteen grooms-in-waiting at \$2,000, ten gentlemen ushers at \$400, ten sergeants-at-arms at a similar salary; a Poet Laureate (Lord Tennyson) at \$500 per annum; a painter in ordinary, a marine painter, a sculptor in ordinary, a surveyor of pictures, at \$1,000; an examiner of plays at \$3,000, a principal *chef de cuisine* at \$4,000, a principal cellar master at \$2,500; 9 housekeepers, 130 housemaids, and lastly, one official ratcatcher at Windsor at a salary of \$80, and another at Buckingham Palace at \$60.

#### Her Majesty's Civil List.

This subject was brought under notice of Parliament on the 22nd of November, 1837. The Queen had placed unreservedly before Parliament those hereditary revenues transferred to the public by her immediate predecessor.

The Chancellor of the Exchequer, Mr. T. Spring Rice, pointed out that while previous sovereigns had inherited considerable personal property, Queen Victoria had not done so, and she would further be deprived of the revenue of Hanover, which had become a separate kingdom. The house voted £385,000, though Mr. Hume made a great effort to have the sum reduced by £50,000.

The Civil List Act provided that while the Queen lived all revenues of Crown lands should be part of the Consolidated Fund, and that "for the support of Her Majesty's household, and the honor and dignity of the Crown of the United Kingdom of Great Britain and Ireland, there shall be granted to Her

Majesty during her lifetime a net yearly revenue of £385,000," which sum the schedule thus appropriates:—Her Majesty's privy purse, £60,000; salaries of household and retired allowances, £131,260; expenses of household, £172,500; royal bounty, alms, etc., £13,200; unappropriated balance, £8,040.

### The Queen's Dominions.

The dominions over which the Queen-Empress reigns, as the sixth Sovereign of the House of Brunswick, have an estimated area of 8,991,254 square miles, of which Great Britain and Ireland represent only 121,115 square miles. Her Majesty's subjects in all parts of the world number about 316,000,000, or more than eight times the extent of the British and Irish population, and nearly one-fourth of the population of the globe. These vast dominions, on which the sun never sets, have a yearly revenue of more than £210,000,000 sterling, their aggregate public debt is nearly £1,100,000,000 sterling, while the yearly value of their imports and exports is about £1,080,000,000 sterling. In the fifty years of Her Majesty's reign, the area, population and the wealth of her dominions have enormously increased, and her Empire is the greatest that ever existed in the world's history.

### The Year 1887

Will be a year of jubilees. Among the things which will see their fifty years' lifetime between now and Christmas, and which have proved of immense advantage to the community, will be the practical application of electricity as a means of communication; the introduction of phonography by Isaac Pitman, and the establishing of building societies.

By means of the electric telegraph the antipodes are practically brought within a speaking distance of our shores; Pitman's phonography has revolutionized the newspaper press, and building societies have proved of immense benefit to the thrifty among the working classes. The jubilee of these will no doubt be fittingly celebrated.

**The Queen's Jubilee.**

The Queen attained her 68th birthday on May 24th, and the 20th of June completed the fiftieth year of her glorious reign. There have been but three similar jubilees in our history.

The jubilee of Henry III. was kept on the 19th of October, 1265, and the festival celebration was hardly a joy-inspiring one. The next royal jubilee was that of Edward III., kept on the 25th of January, 1377, in connection with which also there seems to have been little cause for jubilation. On the 25th of October, 1809, the jubilee of George III. was celebrated with more joyous hilarity than characterized that of the two predecessors. The Queen's Jubilee excels them all in the loyalty and affection of her subjects.

**“Carmen Sæculare.”**

LORD TENNYSON'S JUBILEE ODE.

## I.

Fifty times the rose has flower'd and faded,  
Fifty times the golden harvest fallen,  
Since our Queen assumed the globe, the sceptre.

## II.

She, beloved for a kindness  
Rare in fable or history,  
Queen, and Empress of India,  
Crown'd so long with a diadem  
Never worn by a worthier,  
Now with prosperous auguries  
Comes at last to the bounteous  
Crowning year of her Jubilee.

## III.

Nothing of the lawless, of the Despot,  
Nothing of the vulgar, or vainglorious,  
All is gracious, gentle, great and Queenly.

## IV.

You then loyally, all of you,  
Deck your houses, illuminate  
All your towns for a festival,  
And in each let a multitude

*Toronto "Called Back."*

371

Loyal, each to the heart of it  
One full voice of allegiance,  
Hail the great Ceremonial  
Of this year of her Jubilee.

V.

Queen, as true to womanhood as Queenhood,  
Glorying in the glories of her people,  
Sorrowing with the sorrows of the lowest !

VI.

You, that wanton in affluence,  
Spare not now to be bountiful,  
Call you poor to regale with you,  
Make their neighborhood healthfuller,  
Give you gold to the Hospital,  
Let the weary be comforted,  
Let the needy be banqueted,  
Let the maim'd in his heart rejoice  
At this year of her Jubilee.

VII.

Henry's fifty years are all in shadow,  
Gray with distance Edward's fifty summers,  
Ev'n her Grandsire's fifty half forgotten.

VIII.

You, the Patriot Architect,  
Shape a stately memorial,  
Make it regally gorgeous,  
Some Imperial Institute,  
Rich in symbol, in ornament,  
Which may speak to the centuries,  
All the centuries after us,  
Of this year of her Jubilee.

IX.

Fifty years of ever-broadening Commerce !  
Fifty years of ever-brightening Science !  
Fifty years of ever-widening Empire !

X.

You, the Mighty, the Fortunate,  
You, the Lord-territorial,  
You, the Lord-manufacturer,  
You, the hardy, laborious,

*The Queen's Jubilee and*

Patient children of Albion,  
 You, Canadian, Indian,  
 Australasian, African,  
 All your hearts be in harmony,  
 All your voices in unison,  
 Singing "Hail to the glorious  
 Golden year of her Jubilee!"

## XI.

Are there thunders moaning in the distance?  
 Are there spectres moving in the darkness?  
 Trust the Lord of Light to guide her people,  
 Till the thunders pass, the spectres vanish,  
 And the Light is Victor, and the darkness  
 Dawns into the Jubilee of the Ages.

Only six sovereigns of England since the Norman Conquest attained an age equal to or beyond that which the Queen attained on the 24th of May, 1887. These were: Queen Elizabeth, who reached 69 years; James II., 68 years; George II., 77 years; George III., 82 years; George IV., 68 years, and William IV., 72 years. Her Majesty's reign has only been twice exceeded in length, namely, by Henry III., who reigned for 56 years, and by George III., who reigned for 60 years; but the reign of one other sovereign, Edward III., equalled it by extending to 50 years.

Queen Victoria is only eighth in descent from James I., a long stretch of history being covered by the seven intervening lives. She is fourteenth in descent from Edward VI., twenty-eighth in descent from Henry I., thirty-fifth in descent from Alfred the Great, and thirty-seventh in descent from Egbert, the first sole monarch of England. The ramifications of her pedigree connect her with many other illustrious personages in addition to those already named.

**India.**

The fiftieth year of Queen Victoria's reign was celebrated in the capital cities of different Provinces of her Indian Empire, in the most festive manner, on the 16th of February.

At Calcutta, Bombay, Delhi, Lahore, and many towns in the north, western, and central Provinces, and in the loyal Native States, also at Mandalay, in the newly annexed Dominion of Burmah, the utmost loyalty was displayed.

At Calcutta, the Viceroy of India, Lord Dufferin, with the Commander-in-Chief, Sir Frederick Roberts, reviewed the troops on the Parade-ground; afterwards attended with Lady Dufferin a thanksgiving service at the Cathedral, where the *Te Deum* was sung; and in the afternoon, at a public assembly, ninety-two deputations from various bodies, municipalities, and local communities, educational institutions, representatives of trade, of the professional classes, and of different races and religions in Bengal, presented their congratulations to His Excellency to be sent to the Queen.

They were introduced by the Lieutenant-Governor of Bengal. Lord Dufferin made an eloquent speech, assuring them that Her Majesty the Queen and Empress watches over the interests of the people of India with affectionate solicitude. The military bands played the National Anthem, and there was a grand display of fireworks in the evening. On the same day thanksgiving services were held at the English, Scotch, Roman Catholic and Greek churches, the Jewish synagogue, and the Brahminical temples.

By order of the Viceroy, 23,307 prisoners for minor offences and for debts throughout India were released upon this happy occasion.

At Bombay, the proceedings commenced with a parade of troops. The streets were crowded with natives, who displayed great enthusiasm. In the evening the buildings were brilliantly illuminated with festoons and coloured lamps, and with gas-devices with the words "God Save the Queen," "We are Happy," "England and India United." The triumphal arch over the Queen's statue was magnificently illuminated, and the city generally presented a splendid appearance.

At Poonah, the Duke and Duchess of Connaught gave a State Ball. The Duke held a grand parade of troops. The Duke and Duchess left for Bombay in the afternoon of Wednesday, when

three thousand Eurasian and European children were in procession singing the National Anthem; and there was a general illumination and grand display of fireworks in the evening.

The peculiarity of the Indian celebration has been the heartiness with which the natives, despite the stories of their discontent, have taken part in it. So important a personage as the High Priest of Baidaijanath, one of the most sacred shrines of Lower Bengal, has led in the native observance, and has further issued an appeal to the Hindoos, drafted in true Oriental fashion, to do honor to the Empress. He says, "May that great Empress, under whose protection religious ceremonies have been practised without molestation for fifty years—may that august Empress Victoria live long! The lustre of her reign, which illumines the hollow vales of the wilderness, and the concealed places, and which brightens the night itself, has like a second sun made India blossom like the lotus by dispelling the gloom of injustice originating from the severe tyranny of Mohammedanism.

"May the Empress Victoria, under whose kindness all her subjects have grown strong in the strength of religion and happiness—may she live a hundred years with her sons and friends. May the Empress under whose influence uninterrupted peace reigns in India live long! It behooves you Aryans, one and all, to pray for long life for the Empress. May that Empress in whose Empire men of science sing with delight the manifold blessing of telegraphs, railways and other inventions; may the Empress, whose moonlike deeds spread a halo of light far and wide—may the Empress Victoria be victorious. This is my constant prayer to Shiva."

On the 20th of June, at Madras, the Jubilee was celebrated by the Governor unveiling a statue of the Queen, and the illumination of the city in the evening.

On New Year's Day, 1877, Queen Victoria was proclaimed Empress of India with great pomp and ceremony at Delhi and other Indian cities, and the ten years which have elapsed since that time have fully established the title, as the display of loyalty in the great Indian Empire fully testifies.

**Fifty Years' Progress.**

No equal period in the history of the world has witnessed such advances in science and speed, such rapid development in the useful arts, such an increase of comfort, liberty and enlightenment. Since Queen Victoria ascended the British Throne the population of Great Britain and Ireland has increased from 26,000,000 to 37,000,000. The acquisition of foreign territory by Great Britain is without a parallel in the history of the human family. She bears rule over one-third of the surface of the globe, and over nearly one-fourth of its population. Her possessions abroad are in area sixty times larger than the parent state. She owns three millions and a half of square miles in America, one million each in Africa and Asia, and two and a half millions in Australia. At the Indian and Colonial Exhibition in London, in 1886, sixty-eight colonies and dependencies were represented, varying in extent from Gibraltar, with its two square miles, to Canada with her three millions and a half. In the fifty years her aggregate wealth has more than trebled, her foreign commerce has increased five-fold; the imports of the United Kingdom have increased from £66,000,000 to £374,000,000. During the same period the imports of the British Possessions have increased from £26,000,000 to £218,000,000. The public revenues of the United Kingdom have grown since the Queen's accession from £55,000,000 to £93,000,000, and of the British Possessions from £23,000,000 to £115,000,000. In 1837, the shipping of the United Kingdom was 9,000,000 tons, this year it will reach 64,000,000 tons. In the fifty years the average entered and cleared at ports in the British Possessions had increased from 7,000,000 to 78,000,000 tons.

The penny postage was introduced soon after the Queen came to the throne, and in 1839 the total number of letters delivered in the United Kingdom was 82,471,000. In 1885 what was their number? The total was 1,403,000,000 letters, 496,000,000 newspapers and books, and 172,000,000 post-cards, making a total of 2,065,000,000.

The increase of wealth in the United Kingdom in the fifty

years has been enormous, the taxable income having risen in thirty years from £308,000,000 to £631,000,000, or in the proportion of 105 per cent.

When Queen Victoria ascended the throne, Australia was only a convict settlement, British India belonged to a commercial company, the South African Colony was little more than a barren rock, and the Dominion of Canada was shorn of an immense territory by the Hudson's Bay Company. These are marvellous facts and figures of material progress within one reign, but what is quite as important is the fact that the enlightenment, enfranchisement and bettered condition of the masses, the growth of civil liberty, of art and culture, have kept pace with the vast strides in population, trade and wealth, Newspapers, schools, churches and benevolent societies have grown as never before, and accomplished practical results as they grew. Laws have improved, humanity advanced, wages increased, and the prime necessities of life cheapened, till now it is the deliberate judgment of the most cautious statisticians that the British labourer is 30 per cent. better paid, 40 per cent. better housed, 50 per cent. better clothed, and 150 per cent. better educated, than he was in the reign of William IV.

### Royal Jubilee Exhibitions.

The celebration of the Queen's Jubilee in England was inaugurated by exhibitions in Manchester, Liverpool, Saltire and Newcastle. It was fitting that Manchester should be assigned the first place on the list. The great Lancashire town has long been in the van of the great army of progress. In population, in wealth and independence, it has made vast strides in the last fifty years.

#### THE MANCHESTER JUBILEE EXHIBITION

was opened by their Royal Highnesses the Prince and Princess of Wales, amidst a scene of great magnificence and unbounded enthusiasm, on the 3rd of May. The Royal visit extended over two days, and the decorations and illuminations were of the most elaborate character. Miles of Venetian masts, triumphal

arches with flowers, countless flags and gay streamers, with the hundreds of thousands of spectators, formed a brilliant scene. The second day was given to Salford.

#### LIVERPOOL.

The Royal Jubilee Exhibition was opened on the 16th May by Her Royal Highness the Princess Louise and the Marquis of Lorne, in the name of Her Majesty. The demonstration in Liverpool was essentially a popular one, being both spontaneous and enthusiastic, and the manifestation of love and affection for the Princess Louise was unbounded.

#### SALTAIRE AND NEWCASTLE-ON-TYNE.

The Exhibitions in these towns were opened in the name of the Queen by their Royal Highnesses the Duke of Cambridge and the Princess Beatrice respectively.

#### Opening of the People's Palace.

The first public appearance of Her Majesty in the Jubilee year occurred on the 14th of May, when the People's Palace in the East End of London was opened by the Queen with great pomp and pageantry of ceremonial, and with a full and loud chorus of loyalty and enthusiasm which will in future time mark the 14th of May as a red-letter day in the annals of a glorious reign. The spectacle provided for the East-Enders was of the greatest possible interest. Besides the Queen herself, the Prince and Princess of Wales and nearly the whole of the Royal family then in England graced the proceedings with their presence, and nothing was wanting in the shape of pomp and parade that could heighten the attractions of the scene. Her Majesty was in excellent spirits and visibly enjoyed the hearty acclamations of the myriads of working people who lined the route and filled the great hall of the new Palace.

An interesting incident of the day's proceedings was a visit to the Mansion House, being the first time, since 1838, Her Majesty was entertained by the Lord Mayor of London in his civic residence. The Lord Mayor and Lady Mayoress had invited 800

guests to participate in the ceremony of receiving Her Majesty and the other members of the Royal family. The decorations were superb, and the scene of the grandest description. The Lord Mayor's youngest daughter, Miss Violet Hanson, had the honor of presenting Her Majesty with a bouquet of orchids, roses, and geraniums, the latter being arranged to form the City arms. In receiving the bouquet the Queen made a kindly observation to the young lady and kissed her affectionately. This was the first occasion on which Her Majesty had appeared so far east of Temple Bar, and the hundreds of thousands of cheering voices of the "masses" prove that the rule of the Queen to-day is as surely as at any prior date "firm based upon her people's will."

JUBILEE SERVICE IN ST. MARGARET'S CHURCH, WESTMINSTER.

The State Jubilee Service of the House of Commons was celebrated on the 22nd of May, and was a pageant worthy of the occasion. It was the first time in the reign of any English Queen that such a service had been held, and was celebrated with great pomp. Over 400 members met in the Speaker's House, and 40,000 people assembled to witness the ceremony. The Queen's Westminster volunteers formed an escort, and kept the passage clear. The leading clergy of the city churches and Westminster Abbey, and the Bishops, marched in procession from the House of Commons to Westminster, where 600 ladies had already assembled.

The two ex speakers, Lord Eversley and Lord Hampden, were in the church together with the Archbishops of Canterbury and York.

When all were seated the scene was a remarkable one, such as had never before been witnessed. Speaker Peel, like King Saul, head and shoulders above his fellows, walked in a dignified manner, robed in his State attire and with becoming ceremony, to his seat in front of the mace, which betokened the sitting of the House of Commons in church. Messrs. A. H. Smith, Gladstone, Goschen, Edward Stanhope, Lord Churchill, Sir Henry Holland and other leaders and ministers followed.

When all were seated, "God Save the Queen" was sung with great fervor, and the beautiful service of the Church of England was rendered in the most effective manner. Bishop Ripon preached an eloquent sermon. At the conclusion of the service the Speaker and his attendants returned to the House of Commons. The scene was a remarkable one, and will form a chapter in the history of the nation.

### The Queen's Jubilee.

To attempt a detailed account of the various forms of the Jubilee Celebration in different parts of the world, would be altogether vain, and would itself fill a volume. A brief reference to what took place in the leading cities on both sides of the Atlantic may, however, prove interesting, and this is all our space will permit.

#### LONDON.

Never in the world's history did so many circumstances combine to produce a grand and glorious spectacle as on the 21st of June, when all that boundless wealth, military pomp and illustrious rank could do to heighten the effect of a State show of loyalty, or demonstrate the affection of a people for their sovereign, was done, and the result exceeded every display of the kind in ancient or modern times.

London had spent her wealth with a lavish hand; everything that skill and money could do to transform the world's metropolis into a dream city of splendor had been accomplished, and the weather was perfect. Thousands of people sat up all night to secure their places. A steady stream of carriages and pedestrians poured constantly all night until dawn, through the city towards the West End. At five o'clock in the morning every point of vantage along the streets composing the royal procession route was secured. At nine o'clock this line was on each side a compact mass of people.

#### AT WESTMINSTER ABBEY.

The scene at Westminster Abbey was most brilliant. Every seat was filled, and every person present was a person of dis-

tion. It seemed as if every locality in the world had sent one or more of its representatives to do honor to England's Queen on Britain's greatest holiday. There never, probably, in modern times, assembled under one roof an audience so well and so brilliantly arrayed. Every man present, entitled to wear a uniform or decoration, displayed it. The scene presented was indescribable.

The line of the procession from Buckingham Palace to Westminster Abbey was from the Palace portals along Constitution Hill, Piccadilly, Regent Street, Waterloo Place, Pall Mall East, Cockspur Street, Northumberland Avenue, Thames Embankment, and Bridge Street to the Abbey.

The line of route was kept by nearly 20,000 troops, representing all branches of the service, and in addition 600 boys from the naval training ships were drawn up at the base of the Nelson Monument. At Buckingham Palace the two services were equally honored, the Guards lining one side of the roadway at Buckingham Palace gates, and on the other side the blue jackets were posted. The same services were also represented in a like manner at the entrance to Westminster Abbey.

The first of the Royal procession was composed of Indian princes and a few minor German princes. The second part was composed of fifteen carriages, the occupants being the King of Denmark, the King of the Belgians, the King of Saxony, the King of the Hellenes, the Crown Prince of Austria, the Crown Prince of Portugal, the Queen of the Belgians, the Crown Prince of Greece, Prince George of Greece, the Grand Duke of Mecklenburg Strelitz, with their attendants.

#### HER MAJESTY APPEARS.

As the Queen, in an open carriage, emerged from the Palace gates thousands of voices were lifted up in cheers, the applause being accompanied by the music of many military bands. The carriage was drawn by eight cream colored horses, and was a large one of chocolate color with red wheels, and having the Royal Arms emblazoned on the panels. Red morocco harness with gilt mounting was used for the horses. The servants wore state liveries of scarlet and gold.

## A CAVALCADE OF PRINCES.

The Prince of Wales, the Duke of Edinburgh, the Duke of Connaught, her sons; the Crown Prince Imperial of Germany, the Marquis of Lorne, Prince Christian, and Prince Henry of Battenburg, her sons-in-law; and Prince Albert Victor and George of Wales, Prince Alfred of Edinburgh, and Prince William of Prussia, her grandsons,—all rode in full uniforms beside the Queen's coach as a bodyguard. When the people at the Palace had shouted themselves hoarse cheering for the Queen, they continued to cry out long live the Prince and Princess of Wales.

The other carriages containing members of the Royal Family were of a gorgeous character, horsed with four bays each, and all open. On reaching Regent Circus, where six main streets converge, the sight was a memorable one, the streets being all splendidly decorated. The procession, as viewed from the Duke of York's column passing down the Hill from the Circus to Pall Mall East, was a sight to be remembered. The shouts of the multitude were loudly heard as one vast roar. On reaching Trafalgar Square the crowds were tremendous, and completely eclipsed any assemblage that had ever gathered in that great square. On the procession nearing the Abbey by the Thames Embankment, the troops saluted, the guns fired, and the bells of the churches rang out merry peals, and flags were run up; the cheering continuing till the Queen had reached the Abbey.

## A SCENE OF SURPASSING SPLENDOR.

Inside the Abbey the picture was one of surpassing beauty and absolutely dazzling. The jewels worn by the ladies flashed and reflashd as they reflected the rays of the sunbeams that found their way through the transepts. The three tiers of galleries seated about 10,000 persons. The peers and peeresses were seated in the south transepts; the ambassadors and diplomatic corps right and left of the peers; members of the House of Commons in the north transepts, while the seats for members of the reigning families of Europe were within the communion rails. All the great learned societies and corpora-

tions were represented, whilst the notables of the law, science, art, agriculture, and workingmen representatives from all parts of the kingdom had seats duly allotted to them.

#### A GRAND AND THRILLING SERVICE

The Queen's advent was arranged so that she entered the Abbey precisely at noon. Dr. Bridge, organist of the Abbey, who had for the occasion a specially trained choir of 250 voices, selected from the great choirs of London, and a number of eminent soloists, besides a large accompaniment of brass instruments and drums, gradually drew the immense congregation into silence to be prepared for the Queen's coming by rendering a number of selections in a manner that made every person within hearing of the great organ eager to catch the softest notes. When the Queen reached the Abbey, the State trumpeters in gold and crimson uniforms executed fanfares from the organ loft nearly in the centre of the building. When the clergy, at the head of the Royal procession, moved into the church the National Anthem was rendered on the organ—the music was thrilling. The audience rose as a unit and lent their ten thousand voices to accompany the choir. The effect was so grand, so profound, that many were moved to tears. At this moment the Queen appeared. Then the singing ceased and the "Processional March," by Handel, was given by the organ during the progress of the Queen and the Royal Family to the dais.

When they were seated, the Archbishop of Canterbury and the Dean of Westminster, who had taken their places within the sacristy, began the services by asking God's blessing upon the Queen. The *Te Deum Laudamus* was then sung by the choir to the music composed by the Prince Consort, according to Her Majesty's request. The Lord's Prayer was then said, and the responses adapted to the occasion were intoned. Then three special prayers were offered up, after which the *Exaudi te Dominus* was sung with organ and brass band accompaniment. The lesson for the day was then read by the Dean of Westminster, after which Dr. Bridge's special anthem selected

by the Queen was rendered, followed by the choral *Goltha*, composed by the Prince Consort. In the rests the National Anthem was produced.

Two more special prayers for the defence of the Faith, the spiritual welfare of the kingdom, and for peace and love, followed, and were supplemented by the benediction which was pronounced by the Archbishop. When the benediction had been said, the Queen's sons knelt before her and kissed her hand. They arose, and Her Majesty kissed each upon the cheek. The princesses next advanced to the Queen and kissed her hand, and she kissed them all, favoring some twice, making unusual demonstrations over the Princess of Wales and Princess Beatrice; other relatives of the Queen then saluted, and she shook hands with some and kissed others, kissing the Crown Prince Frederick William of Germany twice, very heartily each time. At all this the congregation applauded warmly. Nothing in connection with the affair was more touching than these affectionate greetings extended to the Queen by her children in the presence of the throng that filled the Abbey. They spoke eloquently of the domestic love which has ever been characteristic of the Queen and her family.

#### LONDON AT NIGHT.

The illuminations were like the transformation scene in a pantomime. As the natural light faded, every window blazed and flashed, and as night darkened the whole city became a flood of light. Beautiful and elaborate designs in gas were to be seen everywhere, and in every pane. In the windows of private houses were to be seen old-time candles and colored oil lamps in clusters. Up to a late hour there seemed to be no diminution in the crowds which went singing, a living stream, good humored and enthusiastic.

The number of congratulatory telegrams to the Queen from public bodies and private individuals all over the world was so overwhelmingly large that it was impossible to answer them individually. The Queen was greatly touched by such expressions of loyalty and devotion from all classes of her subjects.

## THE QUEEN'S JUBILEE GIFT.

The joint Jubilee Gift to the Queen from all her children and grandchildren is a gold and silver centrepiece for a table, adorned with precious stones. It comprises three parts resting on a common base, in the centre of which are the British Arms bearing the inscription, "Her Children and Grandchildren to our Beloved Mother and Grandmother." The middle portion consists of a vase adorned with the arms and the portraits of the donors. It has a solid gold lid surmounted by the Royal Crown. To the right and left respectively, are a lion and a unicorn.

## PARIS.

A Jubilee Garden Party was given at the British Embassy. The guests numbered 1,000, and included the members of the Diplomatic Corps, the Cabinet Ministers, M. DeLesseps, M. Ferry, the Duc De Broglio, M. Floquet, and Marshal McMahon.

The *Journal des Debats* says: "We cordially envy Englishmen and would give a great deal could we ever be what they are to-day, a people mad with joy and happiness. This universal homage is paid not only to the Queen, but to the woman who has given an example of two great virtues of royalty—gravity and dignity. Her influence has been great and salutary; and her great merit is, that in using her prerogative for the public weal she has never been tempted to strain its exercise."

## NEW ZEALAND.

The celebration was commenced on the 20th, and was continued for three days throughout the country. The greatest enthusiasm prevailed, the natives joining heartily in the festivities. Thanksgiving services, balls, concerts and illuminations, were extensively indulged in, and the utmost loyalty was displayed.

## RUSSIA.

The Russian press commenting on Queen Victoria's Jubilee says: "The British people's love for their Queen is merited by the internal reforms and improvements in the condition of the

masses, which have been effected in England during the fifty years of Her Majesty's reign."

## AUSTRIA.

The *Official Gazette* at Vienna says: "Millions of voices throughout the world-wide Empire extol the queenly and womanly virtues of Victoria. The day marks a long epoch in the political welfare of her realm. The whole world sympathises with the festival, for the fame of the Queen's blessed rule reaches every quarter of the globe. This sympathy is most cordially shared in by Austria's Sovereign."

## AFRICA.

At Pietermaritzburg, Natal, on June 20th, thanksgiving services were held in honor of the Queen's Jubilee, after the Governor reviewed the troops. A number of children's festivals were held, and in the evening the town was illuminated. On the 22nd, 30,000 Kaffirs had a joy dance in the presence of the Governor. At Capetown the festivities included a grand military demonstration and the firing of 100 guns.

## GIBRALTAR.

The Queen's Jubilee was celebrated by religious services in the Spanish Cathedral. The streets were beautifully decorated and the vessels at anchor were gay with bunting. There was a review of the garrison, and at night the promenades were all illuminated.

## AUSTRALIA.

The Jubilee was celebrated in Melbourne, Australia, with great enthusiasm; also in New South Wales and Queensland.

## CHILI.

Queen Victoria's Jubilee was celebrated at Valparaiso with great rejoicings.

## GERMANY.

The *Berlin Post* says: "What makes Germany a sympathetic onlooker at the Jubilee is the plenitude of events which has crowded the last half century. This is a period of importance in the world's history, not only for Englishmen, but for the

whole civilized world. The English people will feel that they have great reason for gratitude which cannot be better expressed than by more and more foresightedly and resolutely facing the great inevitable tasks of the future."

NEW YORK.

The flags of Great Britain and the United States were draped together in the vestibule of Trinity Church on the 19th of June, and several thousand persons attended the Jubilee Choral Services to celebrate the fiftieth anniversary of Her Majesty Queen Victoria. Each person received a programme of the services printed in red, blue and gold, with the Royal Arms emblazoned on the title page.

The few places mentioned, scattered over the five great divisions of the globe, are only given as representing the universality of the celebration, not only in the colonies and dependencies of Great Britain all over the world, but in foreign countries, nearly all of which were represented in London. In China, Japan, Turkey, Algeria, Italy, Servia, Bulgaria, Spain, Egypt, Norway, Sweden, Denmark, Holland, Switzerland, and in nearly every town in these countries the celebration was kept on a scale of great magnificence.

DOMINION OF CANADA.

From the Atlantic to the Pacific, in hamlet and village, city and town, whether the inhabitants were English, Irish, Scotch, French, German, Indian or Ethiopian, all united as Canadians to honor their Queen, and enjoy a hearty celebration of Her Majesty's Jubilee. If some solitary cynic, or false-hearted traitor may have nursed a feeling of disloyalty, either through ignorance or unmanly insolence, and by a threadbare recital of Ireland's wrongs for fifty years, or by the use of contemptuous epithets towards majesty itself, should have introduced a "rift within the lute" of the general harmony, or cause a blot on the fair escutcheon of Canada's fame, they are so insignificant as to only mar their own enjoyment of the universal Jubilee rejoicings.

It would have been the pride of the writer to have recorded the celebration of this glorious Jubilee in his native as in his adopted country, but, alas! that one element should still exist in Ireland which only reacts on their own natural instincts, and deprive themselves of the enjoyment of their innate noble and generous characteristics, so celebrated in prose and rhyme from time immemorial. Yet the fact must be acknowledged and deplored. Ireland, the sister of England and Scotland in peace and war, sharer of her glories and equal inheritor of her grand historic achievements and renown, has not done herself justice on this glorious occasion. Nor was this feeling confined to her own shores, but one or two self-constituted missionaries of agitation and discord, sought to introduce this same element amongst us in this fair land, by threats against the representative of Her Majesty in this Dominion, which, unfortunately for themselves and happily for Canada, only redounded to the honor and distinction of the noble Marquis of Lansdowne, and to their own utter shame and discomfiture. The names of these gentlemen are Mr. William O'Brien, M.P., and a Mr. Kilbride, who appeared as a representative "evicted tenant," living in a fine mansion with lawn, conservatory, avenue and gate-lodge, and yet would not pay his rent.

As landlords in Canada expect their tenants to pay their rent when due, Mr. Kilbride would not improve his position by emigrating to this country, as, to use a common Irish expression, he appears to have a "very good America at home." While these gentlemen were indulging in their rodomontade, the Marquis of Lansdowne and his lady were pursuing the "even tenor of their way," in receiving addresses and holding levees at Government House. Their visit of three weeks to Toronto called forth a display of spontaneous enthusiasm, such as was never accorded to any Governor-General in Canada. Their entry into the city on the 3rd May was one grand ovation from the railway station to Government House, and during their stay, on every occasion, whether in visiting public institutions or reviewing our volunteers, the affectionate devotion of the citizens was of the most marked character.

## TORONTO.

The most enduring monument to commemorate the great event will be the erection of a new hospital for sick children, for which the citizens have voted the sum of \$20,000.

The Jubilee celebrations were inaugurated by a Military Church Parade, on the 19th of June, when a Thanksgiving Service was held in St. James' Cathedral. The Bishop of Toronto and several leading clergymen officiated. The troops which marched to the church headed by their bands consisted of the Governor-General's Body Guard, Toronto Garrison Artillery, members and ex-members of the Queen's Own Rifles, Tenth Royal Grenadiers, and Army and Navy Pensioners. The service, which was most appropriate, was rendered unusually attractive by the addition of the services of the band of the "Queen's Own" to the musical programme. Major-General Sir Frederick Middleton and Colonel Gzowski, A.D.C., were present in the congregation. The sermon was preached by the Rev. Dr. O'Meara.

The Jubilee celebration was observed by religious services in the other churches on the same day, all of which were intensely interesting and fervent.

**Jubilee Praise and Thanksgiving Services.**

While no language could portray, or pen describe, the emotions which thrilled and vibrated in the hearts of the millions of Queen Victoria's subjects in all parts of the world, as in ode and anthem their voices joined in loud and harmonious acclaim in expressing the sentiments contained in "God Save the Queen," and with the swelling notes of the organ, now melted to tears and again lifted in rapture to the very gate of heaven, they gave expression to their feelings of gratitude and love for all the blessings enjoyed under the beneficent rule of our Empress Queen; yet if it were possible to collect and publish the sermons and addresses of ministers and laymen of all denominations, "distinct as the billows, yet one as the sea," who, in tens of thousands of churches in all parts of the world, on

the 19th and 21st of June, 1887, expatiated on the theme of the Victorian age, comprehending all its vast and mighty interests, the personal goodness and virtues of the Queen, the purity of her court, the example of domestic love with its world-wide influence on society, the development of art, science, trade and commerce, the spread of civilization and education, the advance of literature, the origination of numberless benevolent and religious institutions, and the general advancement and present grandeur of the British Empire during the past fifty years, they would form a volume such as the world has never seen, and such a memento of the grand Jubilee as would eclipse all former histories of nations or monarchs since the world began.

The appointment of the 30th June and 1st July for the Jubilee celebration proved to be both appropriate and successful, combining the usual Dominion Day rejoicings with the anniversary of the Queen's accession. The principal feature of the first day's proceedings was a grand procession of nearly 12,000 children from the public schools, which was witnessed by immense crowds of the citizens, and was a sight of which any city the size of Toronto might well be proud. Nearly every child wore a jubilee medal or badge, while flags and banners were plentifully displayed.

#### Jubilee Service in the Metropolitan Church.

A grand united religious and musical service, in which all the Evangelical Churches were represented, was the crowning event of the 30th June. The magnificent edifice was crowded to overflowing, and was beautifully decorated with flags, plants and flowers. The musical portion of the service was the chief attraction, the selections being of the most appropriate and loyal character, and were quite as eloquent and even more inspiring than were the beautiful addresses delivered by the speakers. A large number of distinguished gentlemen occupied the platform, amongst whom were the Hon. Sir Alexander Campbell, the newly appointed Lieutenant-Governor of Ontario; Hon. O. Mowat, Premier; and W. H. Howland, Esq., Mayor

also prominent clergymen of all denominations, while in the body of the church were members of the City Council, and representatives of the various National and Benevolent Societies, all moved by the same spirit of enthusiasm, and joining with the choir of nearly 200 voices in the music set apart for the audience, with "glad hearts and voices," to swell the general harmony.

The service commenced with Mr. Torrington's performance on the organ of Gounod's *March Cortège*, which was followed by the singing of "God Save the Queen" by the vast audience. The effect of this inspiring hymn, when joined in by thousands of voices, was most thrilling. The other selections were chiefly the same as given in Westminster Abbey, including Dr. Bridge's Jubilee Ode and Anthem. The addresses were practical, enthusiastic and eloquent, but above all breathed the spirit of true and genuine loyalty throughout.

The closing song and chorus were composed by Mr. F. H. Torrington, and were sung with great spirit and feeling:

Old England calls upon her sons  
 To honor England's Queen ;  
 Her sons respond, and daughters too,  
 To keep her memory green.  
 With loyal hearts and ready hands  
 The Empire's children stand,  
 Prepared to do, prepared to die !  
 For Queen and native land.

CHORUS.

Victoria ! Our Queen beloved,  
 With loyal heart and hand,  
 Thy colonies and fatherland  
 United by thee stand.

For fifty years our country's flag  
 Hath borne, o'er earth and main,  
 The name of Empress, Queen below'd,  
 With neither spot nor stain.  
 Long may it bear Victoria's name,  
 Long o'er us may she reign,  
 And for our Empire broad and grand  
 May she new honor gain.

Upon our Queen, our Country, Flag,  
God's blessing ever rest,  
With peace and plenty everywhere,  
Her people's homes be blest.  
God save the Queen, her people pray,  
From hearts sincere and free ;  
God save our lov'd Victoria,  
And crown her Jubilee.

AT THE SYNAGOGUE.

The services held by the Jewish residents were remarkable for their intense devotion to the person and character of Queen Victoria. The beautiful and appropriate prayers, the music and eloquent sermon by Rabbi Phillips, were all expressive of the reverence in which Her Majesty is held by the Jewish people throughout the world. He alluded in thrilling tones to the flag of England, which lent its protection to the Jew as well as the Gentile. The Jewish merchant kings had found guardianship beneath its folds, and Jewish legislators had found honored places in the Imperial courts. God had been gracious unto His chosen people and provided them with a protectress in their well-beloved Queen. At the conclusion of the discourse the ark was opened and prayers were offered for Her Majesty. The choir sang a number of Psalms in the original tongue, and the service concluded with the National Anthem in English.

**Mr. Torrington's Amateur Orchestra.**

In the evening a jubilee concert was given by the above organization, and was a splendid success. The appropriateness of the selections, and the excellent style in which they were rendered, elicited the enthusiasm of the audience. The feeling was one of mingled surprise and delight. To hear the performance of an orchestra of a year's existence, display such proficiency in time and brilliancy in execution must have surprised most of those present, and will, no doubt, have the same effect on those who still have the pleasure only in prospect. Toronto may now confidently look forward to being independent of foreign aid in producing the highest class of instrumental as

well as vocal music by her own unaided talent. The orchestra numbers sixty performers, comprising sixteen first violins, ten second violins, four violas, five 'cellos, four double basses, five flutes, two piccolos, one oboe, one clarionette, three horns, two cornets, one trombone and tympani.

### Dominion Day.

The grand event so long anticipated was one to be long remembered as perhaps the most remarkable and the most thoroughly delightful day in the history of Toronto. The clanging of bells all over the city at 11 a.m. announced to the 150,000 people of Toronto that the demonstration in honor of Her Majesty's Jubilee, in the shape of a procession, had started toward the Exhibition Grounds. The route was thronged with immense crowds of spectators, who cheered heartily as the various organizations appeared. The road was kept clear by a detachment of mounted police, after which came the Mayor and Aldermen in carriages; following them were the Trustees of the Public and Separate Schools, the Industrial Exhibition Trustees, and Board of the Public Library; then came the following societies, military corps and organizations in the order named, bands, banners and flags being interspersed in regular order:—Retired Officers, Army, Navy and Militia, in uniform; Veterans, Army and Navy; Veterans, Volunteers; Governor-General's Body Guard, Toronto Field Battery, Garrison Artillery, Queen's Own Rifles, Tenth Royal Grenadiers, Irish Protestant Benevolent Society, and Sons of Ireland, Sons of Canada, St. David's Society, Sons of England, St. George's Society, Young Men's Protestant Benevolent Association, Orangemen, Foresters, Knights of Pythias, Ancient Order of United Workmen, Manchester Unity (Oddfellows), Knights of the Maccabees, Peter Ogden Lodge (Oddfellows), Toronto Butchers' Association and the Toronto Fire Brigade.

The appearance of the procession was very fine, and took an hour to pass one point. Had the trades of the city joined in, the length would have been immensely extended, but they have reserved their procession for Exhibition week. At the grounds loyal and patriotic speeches were made by Mayor Howland,

Hon. O. Mowat, the Premier of Ontario, and others ; altogether the arrangements for the full enjoyment of the day were most successfully carried out, and added another to the long list of the exhibitions of Toronto's loyalty.

### Toronto in 1887.

Never in her history has Toronto made such rapid strides in all that constitutes progress and prosperity as during the past year. Houses, blocks, streets and avenues are still being built and opened up in every direction, and if any one should keep pace with the rapid improvements going on, he will have discovered the principle of "perpetual motion," as in no other way could track be kept of the marvellous growth of the city. Not only is the number of the buildings greater than in any previous year, but the style of private residences is more elegant, the surroundings more beautiful, and the expenditure of wealth more apparent than ever before. Warehouses have gone up in rapid succession, and the style of architecture, as well as the internal arrangements, are of the most modern and substantial character. As is usual in most large cities, the tendency is for each kind of wholesale trade to concentrate in one point. The dry goods trade, formerly confined to Yonge and Wellington Streets, has extended to Front and Bay, where whole blocks of warehouses have been erected, and what a short year ago was vacant land is now covered with magnificent buildings for the use of merchants and manufacturers.

As a specimen of this class of architecture we give a view of the new block on the corner of Bay and Wellington Streets, on the spot alluded to in our first edition as the historic residence of Mr. Mercer, where, in his small rough-cast cottage, he dispensed marriage licenses, and made shoes during his lifetime.

#### WYLD, GRASETT & DARLING.

This building of five stories is massive and striking, the style being an adaptation of the Romanesque. The basement is of large rough blocks of Credit Valley brown stone. Above this rises the ground story of Ohio grey stone. The walls above are

NEW WAREHOUSE OF WYLD, GRASETT & DARLING.

of red brick with stone dressings, and are surmounted at the corners with round stone conical-topped pinnacles. The entrance consists of two heavy dwarf arches at the corner of the two streets, with stone steps leading to a triangular porch in which is the main doorway. This consists of an interior arch supported upon red granite columns with carved capitals. The main and vestibule doors are of oak. Heavy columns of Bay of Fundy red granite, with carved capitals, separate the windows on the Bay Street front. The counting-room and offices are fitted in oak with polished pine ceilings. Elevators (of which there are three), speaking tubes and a dumb-waiter afford every facility for the despatch of business. The heating and ventilating arrangements are of the most complete character, as are also the fixtures for the display of goods; while the light admitted through plate-glass windows on the north, east and west affords every advantage to buyers. Mr. David B. Dick is the architect.

#### HOTEL ACCOMMODATION.

The interest connected with any institution contemporaneous with the reign of Her Majesty Queen Victoria, especially in a young city like Toronto, must be greatly enhanced on a Jubilee festival such as is now being celebrated. Amongst the institutions of Toronto as a commercial city none are more important than its hotels, as upon the accommodation they furnish will depend largely the inducements offered to visitors from all parts of the world to spend their time and money in studying the attractions and resources such a city may contain.

#### THE ROSSIN HOUSE

Is one of the few establishments that possess a history of half a century, although, as has been stated in the first edition of this work, it had not assumed its present name till 1853. The Rossin House has been under various forms identified with the history of Toronto for over fifty years.

In 1832, on this site, Mr. James G. Chewett erected the British Coffee House, which became a popular rendezvous of the leading citizens, being at the time the only place having

the character of a "club house." In 1837 it was taken by the Government for military purposes. After its relinquishment by the Government it was conducted by Mrs. Ellah, as a hotel, and while under her management it became the club house of the Toronto Club. In this hotel the Hon. Colonel Bruce, Secretary and Aide-de-Camp to the Earl of Elgin, resided during his term of office.

From the time when Mr. Mark H. Irish, the present proprietor, assumed the management in 1876, the Rossin House has had a career of prosperity previously unknown. Having brought his well-known enterprise and ability, backed up by years of experience in the business, to bear upon the management, the hotel soon rose to a high character as possessing every characteristic of a first-class institution. Travellers from all parts of the world found their way to its precincts, and had their highest expectations fully realized in the comforts and conveniences it afforded. Distinguished visitors from Great Britain and the United States have here been entertained from time to time.

In 1860, His Royal Highness the Prince of Wales, with his suite, occupied apartments in the Rossin House. The same suite of rooms has been occupied by Prince Alfred (Duke of Edinburgh), and later by Prince Leopold, the late Duke of Albany. Lord Dufferin and party also occupied the same rooms, and amongst other distinguished guests have been many celebrated artists, including Mrs. Langtry and Madame Adeline Patti.

There are few hotels in Canada or the United States which equal the Rossin House for accommodation.

The number of its bedrooms is 187, all furnished in first-class style, while its drawing-rooms and boudoirs are perfectly sumptuous in their artistic decorations and furniture. Suites of apartments have been provided for families, with bathrooms and every convenience and comfort. The general arrangement of the house may be said to be complete in every detail. A handsome passenger elevator affords easy access to every floor, in addition to which are five stairways leading from the top-

most story to the ground floor. At night, the heads of these points of egress are distinguished by red lamps, so that guests have only to approach one to find a way open to the street. For additional safety the staff remains on duty till midnight, when the hotel is surrendered to the care of four watchmen who tread the corridors, and make their regular rounds until four o'clock in the morning, when one section of the day staff commences its duties. The sanitary arrangements are perfect; the *cuisinerie* unexceptional, and the situation most central, commanding and convenient. The ventilation of the building is thorough and complete. The two dining halls when thrown into one will accommodate 450 guests, and the citizens of Toronto may well feel a pride in having a hotel, which, for fifty years, has held so conspicuous a place in her history.

#### Cathedral of St. Alban the Martyr.

The corner-stone of this building was laid on the 16th of June, 1887, by the Right Reverend Arthur Sweatman, D.D., Bishop of Toronto. The Cathedral Chapter was incorporated in 1883, and the Cathedral building was commenced in 1885.

The establishment of a Cathedral for the Diocese of Toronto has been under consideration for many years, the object being to have a Church and Episcopal residence altogether distinct from ordinary parochial organizations, and forming a central point in the diocese from which the Bishop, with the advice of his Chapter, may exercise the functions of his office and his oversight over the whole diocese. The Cathedral will be built in a central position as regards the city and suburbs, being a little north of Bloor Street, between Albany and Howland Avenues, and when completed will be an ornament to the city. The work will be of red Credit Valley stone, in the early English style, and the design is in every way worthy of a Cathedral of the Church of England. The architect is Mr. R. Windeyer.

After devotional exercises His Lordship laid the stone, using a handsome gold and silver trowel. Beneath the stone were deposited copies of the daily and Church papers, the current coins, with a memorial containing the date, the name of the building,

the names of the Queen, Governor-General and Lieutenant-Governors, the Building Committee, Architect and Contractors. In his address His Lordship stated, that the property had increased in a few years from \$4,000 to \$58,000, and predicted that Bathurst Street, having a leading outlet to the north, would become a second Yonge Street. Houses are being built rapidly in the neighborhood and there is no doubt the erection

ST. ALBAN'S CATHEDRAL.

of this elegant building with a Chapter House and See, which will cost, when completed, \$250,000, will enhance the value of property in the neighborhood and attract a superior class of residents.

Rev. Dr. Potts, President of the Methodist Conference, by special invitation made an appropriate address, expressing the hope that the Cathedral might be made a blessing, and that the Bishop might be long spared to preside over it.

DEAN.

The Right Reverend the Lord Bishop of Toronto.

CHAPTER.

The Ven. the Archdeacon of Peterboro'. The Ven. the Archdeacon of York. The Rev. Canon Brent, M.A. The Rev. Canon Scadding, D.D. The Rev. Canon Stennett, M.A. The Rev. Canon O'Meara, LL.D. The Rev. Canon Dumoulin, M.A. The Rev. Canon Osler. The Rev. Canon Tremayne, M.A.	R. Snelling, Esq., LL.D., Q.C., <i>Registrar of the Diocese.</i> The Hon. Geo. W. Allen, Senator. His Honor Judge Benson. Progress of Trade and Manufactures.

As the best evidence of the above a list of Importers and Manufacturers is given, not by way of a directory, nor at the request, or with the knowledge of any of those whose names are given, but to show the growth of the city during the past forty years, as will be seen by comparison with the list of business men in 1847. This list is by no means complete, as some names may be omitted and new business enterprises are constantly springing up in the city, either by removal from other places or directly by the investment of capital in manufactures through the confidence felt in the protection afforded by the present tariff. It will be borne in mind that the names of importers and manufacturers only are given, whereas all business houses in 1847-1850 are mentioned, a list of which in 1887 would far exceed our limits.

PERMANENT EXHIBITION OF MANUFACTURES.

The fact is now demonstrated in Toronto that the growth and prosperity of manufactures does not diminish the importation of British and foreign goods, but that the importation of goods which are not made in Canada goes on steadily side by side with home manufactures. And so the wise and judicious policy which has proved so successful, and has so immensely promoted the growth and prosperity of Toronto, has, at the same time, been equally beneficial to the farming interests by securing a large home market for all their productions.

#### **The Permanent Exhibition of Manufactures.**

Nothing in modern times has tended more to create competition, develop talent and promote the cultivation of art, science, trade and manufactures, than the exhibitions which have taken place during the past thirty-six years.

The idea of establishing a Permanent Exhibition of Manufactures in Toronto will be no exception to this rule, and the advantages to manufacturer and merchant in thus meeting for mutual exchange must be obvious. The exhibition of our domestic manufactures in a condensed form will save the merchant much trouble and expense, and promote the prosperity of both himself and the manufacturer. The building erected for the purpose is in every way suitable and convenient. The light, the arrangement of the goods, and the central position—being opposite the Queen's Hotel—will, no doubt, all tend to its success, which may already be said to be assured. Messrs. Nicholls and Howland deserve much credit for the conception and establishment of the Permanent Exhibition of Manufactures and Commercial Exchange in Toronto. Being free to the public, it will become a resort for visitors to the city.

#### **Sherbourne Street Methodist Church.**

This place of worship was opened on the 3rd of June, the services continuing for two weeks. Bishop Hurst, of Buffalo, Drs. Douglas and Carman, and Rev. E. A. Stafford officiated. The opening services were supplemented by an eloquent sermon

preached on Sunday, the 26th of June, by the celebrated English Wesleyan divine and author, Rev. Mark Guy Pearse, who has thrilled and delighted large congregations by his sermons and lectures in Toronto and other cities in Canada during his late visit.

The building is in the Romanesque style of architecture, and is built of grey Credit Valley stone, with dressings of brown stone from the same quarries. The effect is harmonious and

SHERBOURNE STREET METHODIST CHURCH.

artistic, and the appearance is pleasing and attractive. The interior arrangements are excellent; the view of the platform being unobstructed, and the acoustic properties are good.

The gallery is of horse-shoe form, and has a light, ornamental appearance, having an iron front of rich design, decorated in bronzes. The windows are of stained glass. Folding chairs have been introduced instead of pews, and afford more room and equal comfort. The cost of the building will be about \$50,000. Messrs. Langley & Burke are the architects.

### Proposed Drives Round the City.

The proposed park system, by which a continuous drive round the city, by connecting the present parks, may be secured, is daily gaining favor, and is likely to be carried into effect before long. This scheme will, undoubtedly, tend more to make Toronto attractive than anything before attempted. When accomplished, the most romantic scenery, especially in the neighborhood of Rosedale, will be developed, and with the assistance of art, all the natural beauties enhanced to such an extent as to surprise and delight even those who have lived all their lifetime in the neighborhood, and present new features of beauty and interest to all visitors to the city.

In connection with the Don improvements now going on, the north-eastern portion of the city will shortly assume a position, as regards picturesque and romantic scenery, pleasure resorts, and sites for residences, equal to any around Toronto.

### Trans-Pacific Steamers.

The most important event of the year for the Dominion in general, and Toronto in particular, has been the arrival of the steamship *Abyssinia* at Vancouver, from Yokohama, on the 14th of June, having made the passage in thirteen days fourteen hours, and being the first of the line. She had twenty-two cabin passengers for Liverpool, New York, and eastern points. Her cargo consisted of 2,830 tons of tea, silk and curios for Victoria, Winnipeg, St. Paul, Chicago, London, Hamilton, Toronto, Buffalo and New York.

Although the contract for carrying the mails to India *via* the Suez Canal has been renewed, the granting of a subsidy to a line of steamers between Vancouver and Hong Kong by the Imperial Government may now be considered *un fait accompli*, and it is reported that a British regiment is to be sent over the Canadian Pacific route to India within a short time; so that the prediction of a year ago is likely soon to be realized with regard to the prospects of Toronto on the line of this great highway.

**Buildings Completed Last Year.**

Bank of Montreal.	Permanent Exhibition of Manu- factures
College of Pharmacy.	Grant Lithographing Co's Build'g.
Manning's Arcade.	Sherbourne St. Methodist Church.
Orange Hall.	Avenue Road Methodist Church.
Young Men's Christian Associa- tion Building.	Episcopal Church of St. Parnabus.
Quebec Bank.	Beverley Street Baptist Church.
New Fire Hall, Lombard Street.	R.C. Church of Our Lady of Lourdes.

**Buildings in Course of Construction.**

Parliament Buildings.	Barber & Ellis Co.'s Warehouse and Factory.
City Hall and Court House.	St. Alban's Cathedral.
Canadian Bank of Commerce.	St. Mary's R. C. Church.
Medical Council Hall.	Bloor Street Presbyterian Church.
Cornell's New Block.	

**Proposed Buildings and Churches.**

O. Newcombe & Co.'s Piano Manufactory.	Chalmer's Presbyterian Church.
Herr & Co.'s Piano Manufactory.	St. Augustine's Episcopal Church.
Methodist College.	St. Simon's Episcopal Church.
Drill Shed.	Richmond Street Methodist New Church.
Canada Life Assurance Building.	Western Methodist Church.

**The Railways of the United Kingdom.**

In the year 1842 there were 1,857 miles of railways open, and in that year the trains carried 18,453,504 passengers, while the aggregate traffic receipts amounted to £3,820,122. At present the authorized capitals have an aggregate of £927,743,988 sterling, or about \$4,600,000,000. Adopting the year 1843 to compare with that of 1885, the following results are disclosed:

	1843	1885
Miles of railway open . . . . .	1,952	19,165
Total actual capital . . . . .	£65,530,792	£818,858,058
Passengers . . . . .	23,466,896	697,213,031

**Canadian Railways.**

In 1849, when the writer made his first journey to Montreal and Quebec, the only railroads in Canada were a few miles between Lachine and Montreal, and from Laprairie to St. John's, and were of the most primitive character, the rails being plain plates of iron fastened with iron spikes. The carriages were of English make and fashion, having doors at the sides only, and the compartments, consisting of six seats in each, were on the *vis-a-vis* principle. The Lachine road was utilized for the conveyance of the Upper Canada mails, and those passengers who preferred going through that way to Montreal rather than "shooting the rapids," or in case of the steamers not going through the same evening. In 1887 the principal railway statistics of the Dominion give the following figures:

Total mileage of railways completed . . . . .	11,523
Amount of capital paid up . . . . .	\$653,759,944
Passengers carried . . . . .	9,861,024
Tons of freight carried . . . . .	15,670,460
Train mileage . . . . .	30,481,088

**Remarkable Features in the Royal Jubilee Procession.**

Each section of the procession was preceded and followed by an escort of Life Guards, by heralds, and by grooms in gorgeous divery. The Life Guardsmen alone, with their magnificent horses, were a sight.

The staff of the Duke of Cambridge, the General commanding in chief, consisted of fifty generals—all of whom had been in battles, and nearly all of whom are distinguished soldiers—with their white plumes waving in the air, and their prancing steeds; the sight was one never to be forgotten, for who will again see half a hundred generals in procession? They were followed by native officers of the Indian Cavalry in gorgeous uniforms.

Every man of the picked troops which lined the streets, 10,000 on each side, was fully six feet in height.

Prince Frederick William, Crown Prince of Prussia, who is extremely popular in England, in his pure white uniform, shown off to perfection by his magnificent physique, out-topping all his Royal companions, was the "observed of all observers," and attracted more attention than even the Indian princes, although resplendent with diamonds and jewels.

Prince George of Greece, a splendid youth of seventeen, and six feet three inches in height, who is every inch a sailor, was much admired.

The decorations of the streets and houses along the route of the procession were most beautiful and elaborate.

The weather, which was essentially "Queen's weather," was perfect, and no single accident or unpleasantness occurred during the day to mar the enjoyment of the millions who witnessed the magnificent pageant.

### **The Children's Fete in Hyde Park.**

No description of the Jubilee celebrations would be complete without some account of the children's *fete*. This was an assembly of an eminently domestic kind, one which appealed to all hearts and touched a sympathetic chord in every breast. The unnumbered thousands of spectators were all of one mind, and the happiness of the children was reflected in all faces present. The arrangements were perfect in every detail. The military bands, of which there were ten, were stationed at various parts of the ground and played at intervals throughout

the day. In addition to a squadron of Life Guards, and a large number of the Foot Guards, there were 3,000 policemen, of whom 100 were mounted, co-operating with the military in keeping the ground clear. There were ten marquees, in which the food was distributed to the children, presided over by a number of the leading nobility, both ladies and gentlemen. The extent of the catering arrangements may be gathered from the fact that Messrs. Spiers & Pond supplied no fewer than 27,700 meat pies, as many cakes, as many oranges, 56,000 buns, and 9,000 gallons of lemonade and ginger ale.

As to the amusements, there was a small army of about 450 entertainers. Twenty Punch and Judy shows, eight marionette theatres, eighty-six cosmorama views and peepshows, nine troops of performing dogs, ponies, and monkeys, hundreds of Aunt Sallies and knock-'em-downs, a hundred large lucky dip barrels, a thousand skipping ropes with jubilee handles, 10,000 small balloons, and 42,000 toys, distributed at the centres of amusements, and to each child was given a Jubilee medal and mug.

The Prince and Princess of Wales, and their sons and daughters, accompanied by a large number of the Royal guests, visited the Park during the *fete*. The children rushed towards the Royal guests, when all etiquette vanished, and the princes and princesses, who seemed delighted at their position, mixed among the children with perfect freedom and pleasure. All at once the children began to sing "God Bless the Prince of Wales." When the Queen arrived, the children massed themselves along both sides of the road where Her Majesty passed, when the bands played the National Anthem and the children all sang with grand effect. When the Queen departed the whole assemblage sang "Rule Britannia."

This was a fitting and beautiful exhibition with which to close the public celebration of the grandest event in the history of any monarch of ancient or modern times.

Of the sixteen reigning sovereigns of the present time, leaving out the Queen herself, and including the President of the United States and Pope Leo, four were actually present, and all

the others were represented on this glorious occasion. In the historic Abbey of Westminster, built by King Edward the Confessor, which, more than 800 years ago, Pope Nicholas II. ordained to be the place of enthronement for the monarchs of England, whose walls are hallowed by monuments to all whom England holds great—kings, statesmen, heroes, philanthropists and poets—the Queen, surrounded by her children, her grandchildren, and her great-grandchildren, returned thanks to the Almighty for her fifty years of reign. To witness this act of homage to the Divine power there came kings, princes, and potentates, and representatives from every nation in the world. Never in the history of England has so proud a sight been seen. There were Peers of the Realm, the Commons, High Officers of State; India furnished her princes, Canada and Australia and all the Colonies sent men who have sustained the dignity of the Crown in these distant lands. But hark! the benediction is pronounced, the choir sends up the final song of praise and triumph, its echoes die away in the groined roof of the Abbey: the great portals open, the brilliant procession files down the nave, issues forth, and wends its way back to the Palace. At this moment the lonely splendor of the crown vanishes. The reward of fifty years of beneficent reign has come. As the Queen passes the crown shines out in all its glory, but no longer alone, for it is illumined by the upturned faces of thousands and tens of thousands and millions of her grateful people, as they shout with one heart and one voice, "Long live the Queen."

#### Jubilee Choral Concert.

Dr. Mackenzie's "Ode," set to music by Mr. Bennett, was given at the Crystal Palace on the 24th of June, by 3,500 performers and celebrated soloists, before an immense audience, Madame Albani, an artiste of whom Canada may well feel proud, being the principal soprano singer, and was triumphantly successful. The "Ode" opens with a full chorus:

*Toronto "Called Back."*

419

"For fifty years our Queen, Victoria, hail!"  
Wild clanging bells and thund'rous cannon  
Shook the air and made it quiver  
From Dee to Tamar, Thames to Shannon.

O Queen, the people of thine homelands greet thee,  
One in impulse, one in heart,  
Hushed are all discordant wranglings,  
Foemen stern now cease their janglings,  
Sword and shield are laid apart!  
O Queen, in harmony thy lieges meet thee!

Sons of the Dominion  
See, they lead the way!  
From where Atlantic surges,  
Pacific wavelets, play,  
From storied town and riverside,  
From mountain and from plain,  
An ancient throne their rallying-point,  
"God save the Queen!" their strain.

Come now from Austral lands,  
Up from the under-world:  
Firm hearts and willing hands,  
Wide is their flag unfurled!  
Hark, their stentorian cheer,  
Heard once in deadly fight,  
Once when for cause held dear  
Brave souls that knew no fear  
Struck home for Britain's might.

And India's dusky sons pass on  
In glittering array,  
The last and greatest tribute laid  
Before the throne this day.

More than crown of monarch precious  
That which now thy people give thee,  
Flower-entwined, made of blossoms  
Gather'd in the beauteous garden  
Where forever bloom scent-laden  
Words and deeds of purest nature.  
Loving daughter, wife devoted,  
Tender parent, friend so faithful,

*The Queen's Jubilee and*

Ever with the stricken grieving,  
 Ever with the glad rejoicing,  
 Lo, on this great day we crown thee,  
 Queen of all our hearts, Victoria !

Lord of life and light and glory,  
 God of our world-empire's story,  
 Low we bow before Thy throne,  
 Praise is Thine, and Thine alone.  
 King of kings, protect this nation,  
 Lord of lords, be our salvation  
     In the stress of trouble's day.  
 O Most High, on Thee relying,  
 Now and ever ill defying,  
     We securely rest for aye !

Now in one heartfelt bond of love  
     For her who wields our Empire's power,  
 Now on this day of Jubilee.  
     Now in this glad and solemn hour  
 Let the prayerful anthem rise  
 High and higher to the skies.

As a climax, the author's new verse, which was added to the National Anthem, was given with all the force of choir, organ, orchestra, and the distant booming of cannon, which were fired by electricity from the conductor's desk.

The composer succeeded in infusing local coloring into each section represented in his composition. The arrival of the Canadians is indicated by the imitation of sleigh bells, and so with the other divisions of the Colonies, the music being adapted to each. The new verse added to the National Anthem is as follows :

For her we thank Thee, Lord,  
 And now, in glad accord,  
     Thy goodness praise.  
 Strong thy defence and sure,  
 Keep her from harm secure,  
 So may thy love endure  
     Through a' her days.

Letter from the Queen.

The following letter from the Queen has been received by the Right Hon. the Secretary of State for the Home Department:—

“ WINDSOR CASTLE, June 24th.

“ I am anxious to express to my people my warm thanks for the kind, and more than kind, reception I met with on going to and returning from Westminster Abbey, with all my children and grandchildren.

“ The enthusiastic reception I met with then, as well as on all these eventful days in London, as well as in Windsor, on the occasion of my Jubilee, has touched me most deeply. It has shown that the labour and anxiety of fifty long years, twenty-two of which I spent in unclouded happiness shared and cheered by my beloved husband, while an equal number were full of sorrows and trials, borne without his sheltering arm and wise help, have been appreciated by my people.

“ This feeling, and the sense of duty towards my dear country and subjects, who are so inseparably bound up with my life, will encourage me in my task, often a very difficult and arduous one, during the remainder of my life.

“ The wonderful order preserved on this occasion, and the good behaviour of the enormous multitudes assembled, merit my highest admiration.

“ That God may protect and abundantly bless my country is my fervent prayer.

“ VICTORIA R. AND I.”

---

The entire celebration may be said, in the language of the *Times*, to have left “ Cavilling dumb with delight ” :

“ Amidst a tumult of rejoicing, unequalled in the memory of this and many past generations, the Jubilee culminated in a passion of festivity and thanksgiving. Only they who have lived in and through it can realize the wondrous thrill and glow.”

A TESTIMONY OF LOYALTY.

The *Post* says:—“ Congratulation is due both to the Queen and to the people. No Sovereign ever received more sincere testimonials of respect and affection. Never has a people testified its loyalty in a more admirable fashion.”

## THE PAGEANT WORTHY OF THE OCCASION.

The *News* says:—"The pageant was worthy of the country and of the occasion. Flattery could not say more, and the truth does not allow the soberest chronicler to say less. The Queen's welcome was perhaps the heartiest, as it certainly was the most magnificent, she ever received."

## DEMONSTRATIONS OF A NATION'S LOVE.

The *Standard* says:—"The august ceremony passed off with splendid success, amidst such demonstrations of a nation's love as these islands have rarely seen. Nothing occurred to mar the noble and imposing character of the whole scene. Never within the memory of the present generation has England witnessed anything half so splendid."

## THE GOOD VICTORIA.

The *Telegraph* says:—"The Jubilee has come and gone in a blaze of pleasure, success, and happy national emotion. The good Victoria, the centre and climax of the spectacle, was greeted with such cheers of love, reverence and benediction as no crowned head ever before received."

## Jubilee Gifts for Her Majesty.

The permanent memorials of the Queen's Jubilee consist of numerous benevolent and charitable institutions all over the Empire; also of statues, public buildings, and various enterprises which will perpetuate the event throughout all time to come.

The gifts presented to Her Majesty comprise the rarest and most valuable productions of all climes, and are now to be seen in the form of a museum.

The German Crown Prince, on behalf of Emperor William, presented a marble slab, upon which is carved the arms of Germany and medallions of the Emperor and Empress.

The King of the Belgians presented a beautifully figured silver cup, two feet high.

The King of Denmark gave a china vase painted by one of the foremost artists.

The Queen of Hawaii presented a feather screen.

At Windsor, the Queen unveiled a statue of herself, the gift of the citizens of Windsor.

Her Majesty also received the gift from the women of England, subscribed by over three millions of her subjects. This valuable and interesting gift was a sum of £80,000 (\$400,000), which was presented in the presence of two hundred peeresses. This present will take the form of an equestrian statue of the late Prince Consort, to be erected in Windsor Park. The surplus funds will be devoted to the permanent benefit of the poorer classes.

The money is to be applied to the founding of an institution for promoting the education, and maintaining of nurses for the sick poor in their own homes. The centre of the institution is to be in London, with branches in Edinburgh and Dublin. As the Queen has always, since the death of her husband whom she nursed in his illness, taken the deepest interest in nursing the sick, and delights in visiting the homes of her servants, and even of the peasantry in the neighborhood of Balmoral in case of sickness, it was at her suggestion that the money is to be applied in this way.

The present was accompanied by an address on vellum, fringed with gold, bearing the Royal arms, and ornamented with the arms of the cities of London, Liverpool, Glasgow, Dublin, etc. The presentation was made by Lady Stafford, who was accompanied by a deputation of about 150 ladies.

The Pope's gift consists of a mosaic reproduction of Raphael's fresco representing an allegorical figure of Poetry.

Amongst the valuable presentations made from the Colonies was a gold casket studded with Cape diamonds, and a casque of native wood mounted in silver and jewels from Natal.

The address from Madras is enclosed in a gold casket. The model of an elephant and its mahout is exquisite, and the goldsmith work of the most elaborate kind.

An ivory casket containing the address from Bombay is richly carved in vandykes and Indian arabesques. The four gold corner columns are each surmounted by the Imperial Crown, while the end panels carry the Royal arms and those of the city of Bombay in solid gold.

The collection of the Jubilee gifts is being exhibited at the Bethnal Green museum. The total number is 779.

The final figures show the exact amount of the Women's Jubilee offering to amount to £84,116, of which the contributors are: in England, 2,206,122, and the amount, £62,670; Scotland, 415,165, and £10,371; Ireland, 158,620, and £3,685; Wales, 172,948, and £3,118; Guernsey and Alderney, 8,883, and £256; Jersey, 4,703, and £104; Isle of Man, 3,290, and £128; foreign, 5,859, and £1,258; Ceylon, 100,000, and £1,182; Burmah, 70,000, and £744; and Straits Settlements, £325 in amount. Of this sum, £10,000 is set aside for the erection and completion of the statue of the late Prince Consort, which is an enlarged replica of the statue by Baron Marochetti at Glasgow, and is to be erected in Windsor Great Park. £70,000 is to be applied to the institution for nurses, who are to be styled, "The Queen's Messengers." This institution may not improbably be grafted into St. Katherine's Hospital, which, from the time of Queen Phillippa, has always enjoyed the patronage of the queens of England. The surplus beyond these sums is to be devoted to the purchase of a personal ornament, which it is hoped will be worn by the Queen, as an additional and ever present reminder of the affections of her 3,000,000 of subjects who contributed, and of the other millions who, had time permitted, would doubtless have availed themselves of the opportunity.

The address of congratulation sent to Queen Victoria was signed by 1,132,608 women of Great Britain.

### The Imperial Institute.

As the outcome of the Indian and Colonial Exhibition, and at the same time the most enduring memorial of the Queen's Jubilee, the Imperial Institute has become an important factor among the institutions of the empire.

A sum of £310,000 has been raised, exclusive of the contributions from India, and the foundations of the building are already laid. By the charter the Corporation is bound to establish an endowment fund of £140,000.

Thanks to the energy displayed by the Prince of Wales, and the zeal with which his efforts have been seconded, the Imperial Institute has been launched in a manner which will go a long way to assure its ultimate success. The Imperial Institute is intended to illustrate the material advances of the empire, to afford means of comparison with what is done by other countries, to establish means of obtaining commercial information, to further the advancement of trades and handicrafts, by special exhibitions and otherwise, and to promote technical education, and the industrial arts and sciences. It is intended to be representative, not merely of what has been done throughout the empire, but of what is doing and is about to be done.

In this Institute the Dominion will have an opportunity of displaying her resources and progress in every department, and by a perpetual display, although the exhibits may be changed from time to time, the productions of Canada will be constantly under the inspection of visitors from every part of the world, and it may confidently be expected that in the future, as in the past, Toronto will hold a conspicuous place, and that her exhibits will attract the attention and excite the admiration of millions of people.

The Colonial Ministries have been expressing their opinion as to the wisdom of extending the Queen's title so as to cover the colonies. The Marquis of Lorne approves of the title of "Queen of Great Britain and Ireland, Queen of Canada, Australasia, South Africa, of the Colonies and Dependencies, and Empress of India."

## PREFACE TO THIRD EDITION.

---

IN this progressive age, events of great importance crowd into a short space of time. Even in one year, the history of Toronto embraces many topics full of interest for the present, and pregnant with hopes for the future. It has been the aim of the writer to place on record the most prominent facts and incidents which have transpired during the present year, and partly to anticipate some of the "coming events," as they appear to "cast their shadows before."

Judging from the partial realization of the predictions which I ventured to make two years ago, there is a strong probability that in the year 1896, concluding the decade, all the prospects of Toronto's progress and growth held out in 1886 will be fully realized.

The present edition has swollen to quite 518 pages, being an addition of over 180 pages, and as this has involved large additional expense, not counting any labor, as it has been more of a pleasure, the price of the present volume will be slightly increased, which I hope will not be deemed unfair or unreasonable. The flattering reception the work has received is in itself a large compensation for the time expended, and as it was my first attempt at book-making, cannot be otherwise than pleasing and satisfactory. The distribution of nearly 500 copies in Great Britain and Ireland (300 having been ordered by the Mayor and Aldermen of the City), has elicited the most satisfactory evidence of the favor with which information as to the "wonderful growth and progress of Toronto" has been received; and if, as I stated in the first chapter, desirable citizens shall be added to her population through the influence of TORONTO "CALLED BACK," I shall be amply repaid for my humble efforts to accelerate the progress of the Queen City of the West.

C. C. TAYLOR.

35 GROSVENOR STREET, *October, 1888.*

## ODE TO LAKE ONTARIO.

THOU inland sister-sea, Ontario !  
To glide upon thy bosom is sublime ;  
There note thy peaceful, steady, onward flow,  
Ceaseless and constant as the course of time !

Thy waters seem the same,—yet ever new—  
Fed by a thousand streams on either side ;  
The same clear sky, the same thy depths of blue,  
Free as the nations bord'ring on thy tide !

Vast upper-lakes feed thee with lib'ral hand,  
From higher lands as new as thine hath been ;  
Where still the Indian and his wigwam stand,  
He half amaz'd with what his eyes have seen !

To thy embrace—like gallant lover bold—  
Niagara rushes in his mad career,  
Till tir'd and spent, past whirling eddies cold,  
He calmly sinks to rest when thou art near !

Last of the inland seas ! yet nearest home—  
Thy waters soon shall swell the mighty deep,  
And mingle with the ocean's briny foam,  
There shalt thou rest—and there forever sleep !

—*Imrie.*

## EXPLANATION.

Government House was the temporary residence of the Prince of Wales in 1860, while members of his suite occupied apartments in the Rossin House.

In 1880, Prince Leopold, on his first visit to Toronto, occupied apartments in the Queen's Hotel, and, on his return from the Western States, is registered, with his suite, at the Rossin House.

EDWARD F. CLARKE, M.P.,

*Mayor of Toronto.*

# TORONTO "CALLED BACK"

(FROM 1888 TO 1847)

AND

## QUEEN'S JUBILEE.

---

### Toronto in 1888.

Perhaps never in the history of the world did a new year dawn on a young city more auspiciously than 1888 has dawned on our young and prosperous city of Toronto. Her citizens may appropriately say, "The lines have fallen unto us in pleasant places, and we have a goodly heritage."

Beautiful for situation, the central point of attraction for the whole Dominion, Toronto is also fast becoming a centre of everything that constitutes a great city—manufactures, commerce, education, fine arts, all have a home here, and extend their influence from ocean to ocean, while as a "city set on a hill," the name of Toronto has become the synonym of order, morality, temperance and religion.

Benevolent and charitable institutions abound on every hand, and are rapidly increasing, so that to-day there is no class of sick, poor, helpless or unfortunate unprovided for, and it may literally be said there is "no complaining in our streets." Allowing for the average changes in business, and a few failures, the position of Toronto to-day is one of prosperity, contentment and enjoyment, while the prospects are of the most hopeful and cheerful character.

By the suppression, or total extinction of the liquor traffic, every source of misery and of crime would be abolished, and many of those places at present provided for the unfortunate

and criminal classes would cease to exist, making our fair city a model for the world.

The Fleming By-law, by which over ninety saloons and places for the sale of liquor have been closed, was a step in the direction intimated, and although not followed up by a further reduction the present year, there is no reason why the movement towards total prohibition should not still advance towards complete accomplishment. In the meantime the establishment of a dipsomaniac institution is contemplated.

There is not a shadow of doubt as to the future of Toronto, and everything tends to the complete realization of the apparently sanguine hopes entertained by the writer when, two years ago, he ventured to publish them.

The two years of the civic administration of Mayor Howland, supported by the two best councils the city had ever seen, have been marked by a steady progress and improvement in the expansion of the city, a rapid increase in the value of property, the initiation of large schemes for the future, and looking to a still greater increase of wealth and population. These great undertakings very properly having in view the requirements of a great city are conceived, and it is to be hoped will be carried out, with a spirit of enterprise and liberality commensurate with the anticipated wants of its future greatly increased population.

The choice of the people resulting in the election of

EDWARD F. CLARKE, ESQ.,

in the double capacity of Member of the Provincial Legislature and Chief Magistrate for 1888, will no doubt be fully justified by the course he intends to pursue as foreshadowed by his comprehensive inaugural address, and the present council may be confidently expected to support and sustain His Worship in every measure calculated to promote the welfare and prosperity of the city; and it is to be hoped that no parsimonious or cheese-paring policy of obstruction, or show of false economy, will either prevent or retard the carrying out of the schemes at present contemplated, either for the improvement or beautifying of the city.

## THE ESPLANADE.

It will be seen by reference to the plan of Kivas Tully, Esq., in 1850, for the construction of bridges across the then proposed railway tracks, that it will soon be forty years since the importance of these structures was considered, and now that the whole front of the city is "grid-ironed" with railway tracks, which thousands of persons are obliged to cross, especially in summer, it seems quite time that this should form a part of the plan at last decided upon of improving the water front and forming the street already referred to in these pages, which beyond the lines of traffic shall form a promenade to which, by the erection of bridges, thousands of persons can resort without danger of life or limb.

The extension of the esplanade to the "windmill line," and the entrance of the Canadian Pacific Railway at the east end in conjunction with the Grand Trunk Railway, now happily united in the grand undertaking of carrying out all these improvements, in the shape of a grand union station, and safe approaches from all the leading streets, and the formation of a "belt line" of railway around the city, will afford facilities for business and pleasure hitherto unknown.

## PARKS AND DRIVES.

The beauties of Toronto, and its romantic and picturesque surroundings, can never be fully disclosed or enjoyed by either her own citizens or by visitors, until some such comprehensive scheme as that proposed by Alderman Gillespie has been carried out, and it can scarcely be conceivable that what would contribute so materially, not only to the attractions of our otherwise beautiful city, but to the enhancement of the value of all property through which, for a distance of over seven miles, continuous drives may be formed, can meet with any considerable opposition.

There is no class of citizens which would not be benefited by the facilities afforded both for walking and driving, as well as pecuniarily, by the increase in the value of property gen-

erally, by the influx of visitors from all parts of the world, the circulation of money spent in horses, carriages, and all the accessories to their maintenance.

The plan proposed embraces all the picturesque and romantic scenery surrounding the city, and when completed will have developed scenes of beauty and grandeur hitherto unknown. Commencing on the banks of the Don, on either side of which will be a new street, and proceeding northward through Riverdale Park, the drive to Rosedale will reveal the natural beauties of that lovely suburb, which, assisted by art in the magnificent bridges which span the ravine, cannot fail to charm the eye and gratify the taste of every lover of the grand and beautiful. It is proposed to continue this route towards the Mount Pleasant Cemetery—already the most charming resort as a "city of the dead" of all the "final resting places" around the city. Here the effects of scientific landscape-gardening are exhibited to perfection, art assisting nature in developing every fine point of hill and dale. In this neighborhood the reservoir grounds will add much attractiveness to the scenery, and from this point the visitor may return by another of the ravines to his starting point, or proceed by way of Yonge to Bloor Street, where the drive continues to High Park, thence southerly to where a connection will be formed with the proposed Parkdale drive on the lake shore, again to connect with the new street in front of the bay, ending again at the Don improvement.

#### THE ISLAND.

While the pleasure resorts of Toronto are attractive and numerous, the Island is essentially the citizens' special property, and is rapidly developing into a healthful and invigorating place of recreation and amusement, as well as a suburb for summer residence. By reference to the description already given in these pages, the transformation that has taken place is something marvellous, and while there is yet room for improvement, great progress has been made towards making the Island *par excellence* the resort of the masses of Toronto

citizens. Its convenience for access by splendid ferry steamers every few minutes from every point, with the pleasure of enjoying the cool breezes while on the water, and the facilities for reaching every part by good plank walks, while shaded in most parts by trees, are all invaluable to those who would combine the advantage of economy, with travel by land and water. There are now three distinct points of attraction. The western, or Hanlan's Point, the eastern, or Wiman Baths and Ward's Hotel, and the centre, where is now being rapidly formed the "Island Park." Through the liberality of the City Council, and the untiring and enthusiastic care and attention of the Chairman of the Property Committee, Alderman John Irwin, some fifty acres have been reclaimed, by filling lagoons with earth, and levelling and beautifying what only a short time ago was an irregular sandbank, and flower beds already delight the eye and regale the sense. The formation of large continuous wharfage will afford facilities for accommodating every description of craft, from the tiny skiff to the large steamer, and the landing and embarking of the tens of thousands of passengers who will throng its platforms.

There are at present about 100 houses on the Island, an Episcopal church, two large hotels, with the prospect of a third, the large building used in summer as a Home for sick children, of which a cut is given in the first edition. The advantages of the Island to the citizens of Toronto cannot be exaggerated, and will increase with her population.

### Central Position of Toronto.

Having already claimed for Toronto its position as the Commercial Centre of the Dominion, both as a distributing and shipping point, the constantly increasing number of new projects, of railway extension and of mining experiments, add additional weight and importance to her claims. The completion of a railway to James' Bay will shortly add another to her connections with Europe by the shortest of all routes, and what with being already the centre of literature, manufactures, trade, science, and education; the central point where tourists may choose

their destination either east, west, north, or south, and visit all the grandest scenery on the American continent in the most convenient and inexpensive manner, where the disciples of Nimrod and Izaak Walton may indulge their passion or love of adventure with certain success amongst the thousands of islands and lakes, all within easy distance, Toronto can "hold her own" against all competitors. And to sum up, it is not too much to say, that not only does she occupy the centre of the Dominion of Canada, but the centre of the Empire on the Western Hemisphere, as truly as London does in the Eastern, as her contiguity to India, Australia, the West Indies, and all other British possessions, fully shows.

#### Winter of 1887-1888 in Toronto

Will be remembered as, perhaps, the most delightful and enjoyable in the memory of the oldest inhabitant.

If anything were necessary to be added to what has already been said in favor of the climate of Toronto, the experience of the past winter would be sufficient to prove its salubrity and healthfulness.

There has been sufficient snow to make excellent sleighing for several months, and frost to afford the lovers of winter amusements every facility for skating and tobogganing, without a single day of what may be called extremely cold weather.

In this respect Toronto seems to be especially favored, and without anything like depreciation of the position of our neighbors across the line, may be allowed to congratulate herself on being free from the extremes which have been reported from many States of the Union.

From one of their own papers published in Cincinnati, we give a rather humorous poem, after the style of Longfellow, which aptly describes the weather there the late winter, while it may be stated as a fact, that in one week, one hundred and fifty persons perished from cold under the most terrible circumstances, in the Dakota territory alone; children having been frozen to death, on their way home from school, and men and women,

attending to their ordinary duties within reach of their own homes, so terribly and rapidly were they stricken with the fatal blast, the thermometer indicating from forty to fifty below zero.

## SONG OF THE BLIZZARD.

Mr. Blizzard, from the north-west,  
 From the land of the Dakotahs,  
 From the land of the Missouri,  
 From the wild and howling prairies,  
 Where the snow is piled like mountains,  
 And the lakes are frozen solid—  
 Now and then comes strolling southward ;  
 Comes across the Mississippi,  
 Makes a bee line for Chicago,  
 Paralyzes all he finds there ;  
 Then he scoots for Indiana—  
 Mr. Blizzard, of the north-west—  
 Scoots across the Hoosier counties,  
 Filling all the air with snowflakes,  
 Freezing every ear he touches.  
 Till he strikes our Cincinnati—  
 Strikes her hard and strikes her often,  
 Says the town is to his liking,  
 And he'd like to make a visit.  
 So he blusters up our thoroughfares,  
 Whistles shrilly down our alleys,  
 And he has no kind of manners,  
 For he goes where he's not wanted,  
 Pushes into private places,  
 Pinching ears and slapping faces,  
 Blowing skirts with impoliteness,  
 Taking liberties unheard of,  
 Does this saucy Mr. Blizzard.  
 He should go back to the north-west,  
 To the land of the Dakotahs,  
 To the land of the Missouri,  
 We don't like him and don't want him  
 And request him to skedaddle.

Another fact is worthy of being recorded for the information of those at a distance, who have supposed that the Dominion of

Canada is a region of ice and snow, where travel in winter is impossible except in dog-trains on the snow, the Canadian Pacific Railway from end to end, or from the Atlantic to the Pacific, has not been interrupted in its traffic during the whole winter, while its competitor, the Northern Pacific, has been blocked with snow, and has encountered the most terrific blizzards.

This is the more remarkable and incredible, as the former runs much farther north, and the isothermal lines run parallel with the latter, although in a much higher latitude.

### The Don Improvement.

When the celebrated Thomas Steele, already referred to in these pages, who combined within himself the title of "head pacificator" in connection with his friend Daniel O'Connell, and distinguished abilities as a civil engineer, had by his skill changed the tortuous bed of the river Liffey into a straight channel, from the Four Courts to King's Bridge, the citizens of Dublin rejoiced at the enhanced beauty and convenience accomplished by this triumph of engineering skill.

The large expanse of marsh on the banks of the river, from which malaria spread all around, especially at low tide, was transformed into a beautiful promenade, the line of parapets and flag walks being continued to King's Bridge at the entrance to Phoenix Park, and new streets and buildings soon took the place of desolation; one of the principal buildings erected on the spot being the Great Southern and Western Railway terminus.

At the commencement of the reminiscences of Toronto "Called Back" the neighborhood of the Don presented a scene much worse than what is described above. A vast expanse of stagnant water and marsh extended as far as the eye could reach from the Don bridge, and only the most miserable shanties afforded shelter to the wretched inhabitants who, from sheer want and inability to occupy better tenements, were obliged to find shelter in the neighborhood. It was a

common occurrence to witness the victims of fever and ague, which prevailed to an alarming extent, sitting on doorsteps and shivering in the fits which were followed by a burning fever.

It was no wonder the progress of the city was steadily westward, as it had continued for years to be. To have predicted at that time the change which has taken place, would have subjected the venturesome prophet to the ridicule and contempt of the listener.

The changes have been partly natural and partly artificial. The opening of the gap which formed the present island must have had much to do with the flow of the water, and has effectually stopped the stagnation which existed previously. But who shall undertake to prognosticate the future of this neighborhood, when the schemes proposed, and in actual progress, shall have been carried out? It may be said that the most sanguine expectations will undoubtedly be realized, as there is no limit to the room for extension. So the progress must also be illimitable, only bounded by the lack of enterprise, which some short-sighted individuals may manifest in the destiny of the rapidly growing, wide-spreading city.

To those who have not lately visited the neighborhood east of the Don, it will be, as has been remarked of other portions of the city, at once a revelation and surprise, to find splendid, block-paved avenues and streets, with sewers, gas, and water, blocks of fine residences and beautiful churches, already in course of erection. The system of parks and drives already described will disclose scenes of beauty, and picturesque and romantic loveliness, which nature has furnished with a lavish profusion, not to be equalled in any of the other suburbs of the city. These ravines, extending on both sides of the Don, the new streets on both sides of the river when the channel shall have been completed, with the proximity of several parks, will present features of rare attraction and beauty.

The commercial advantages to be gained are already referred to in these pages, and although only two years have elapsed since they were spoken of, and may have appeared

over sanguine, the prospects are at present bright as to their realization.

The value of property since annexation has increased with incredible rapidity, and as new factories spring up, which they undoubtedly will, the demand for residential property will keep pace with the influx of population, and so the ratio of progress will undoubtedly equal, if not exceed, that of any other portion of the city: for as the river Thames made London, why should not the river Don assist in building up another great city in Canada?

In addition to all the other advantages possessed by this growing suburb, the prospect from the upper portions of the neighborhood is unsurpassed for beauty and extent, the whole city lying like a splendid picture before the eye of the delighted beholder. Turret and dome, spire and steeple, mingling with the chimneys of large factories, with the blue waters of Lake Ontario as a frame, is a scene of beauty unsurpassed on the continent.

#### Markets of Toronto.

Food and raiment are the chief, and it may be said the only, necessities of life, and having these we are commanded to be "therewith content." If so it becomes a question of great importance to those who reside, or intend to settle in a city, how far these great wants can be supplied, both as to quality and price. As regards the raiment, the splendid displays made in our palatial stores abundantly testify. Here the millionaire and his family can procure the most luxurious and comfortable articles their most fastidious taste or extravagant wishes may desire, while the most lowly and humble laborer, or artizan, can find everything equally suitable to his wants, at prices corresponding with his means and requirements. As to food, in no city or country can be found more ample or abundant supplies to suit the circumstances of rich or poor.

The great divisions of food—flesh, fish, fowl and vegetables—which constitute the bulk of market supplies that Toronto, with other cities, looks to for the wants of her teeming popula-

tion, are in such abundance and at such prices that the poorest family may enjoy all of these without stint.

The display of meats in our markets will compare with the best in Great Britain, comprising even what may be considered delicacies, as venison, and at certain times a "bear steak" is easily procurable.

The fish markets are supplied daily, in addition to those indigenous to our own lakes and rivers, in the shape of salmon trout, whitefish, maskelonge, and brook trout, with salmon from both the Atlantic and Pacific Oceans, and also from the Saguenay. Cod, haddock, halibut, mackerel, herring, bass, and many other varieties are to be had in abundance. Oysters, in the season, and turtle, of which London aldermen might feel proud, are always within reach. Fowl are so cheap that no family need go without a Christmas goose or turkey, while fruit and vegetables in every variety are plentiful and cheap.

The Agricultural Exhibition, held yearly in our magnificent grounds, affords ample evidence of the resources of the country in all natural products as well as manufactures, and while these display the wealth of the country, in a combined and condensed form, to delight and astonish the thousands of visitors who crowd the buildings and grounds on these occasions, a want is felt for a place more centrally situated where a permanent exhibition of cattle and their products, as well as horses and other animals, may be made, and to meet this want it is proposed to erect

#### AN AGRICULTURAL HALL,

so conveniently arranged, and of such size as to attract the farmers and cattle and horse dealers from all parts of the Dominion to compete for prizes, and for the purpose of mutually stimulating each other in the production of the finest and purest specimens of the highest breeds it is possible to exhibit.

In the promotion of this laudable enterprise, Alderman Frankland of this city has taken a prominent part, both in his civic capacity and as a leading shipper of cattle, of which trade he may be said to be the pioneer, having sent to the value of

millions of dollars to Liverpool and other English markets. Through the influence of Mr. Frankland and other leading agriculturists and cattle dealers, this project is likely to be soon carried to a successful issue.

Here also are to be exhibited all dairy products, especially cheese, which has become an article of extensive manufacture and export, while the quality has attained the highest reputation in foreign markets. The products of the apiaries throughout the country are also of remarkable extent and excellence, as the display at the London and Colonial Exhibition in 1886 gave most convincing proof, and will be fully represented in the Agricultural Hall.

#### Views In and Around Great Cities.

Leaving London Bridge, or Ludgate Hill Station, by the Dover and Calais mail train, and having experienced a ninety minutes' passage and a "supply of basins," proceeding to Paris, and arriving in the early morning at Amiens, after enjoying a cup of coffee at the railway buffet, the traveller, from the heights of Montmartre, obtains his first view of the "most brilliant capital" of Europe.

The splendid palace of the Tuileries, Palais de Luxembourg, Palais de l'Industrie, the Hotel des Invalides, Old Notre Dame Cathedral, the Madeleine, the Champs Elysees, Place de la Concorde, and the magnificent new Boulevards, all appear to the ravished sight as a beautiful picture.

In London, the view from the top of St. Paul's and the Monument, on a clear day, is one of surpassing grandeur, extending from Hampstead to Sydenham.

There are magnificent views from the highest points in and around Dublin, Cork, Glasgow, Liverpool, Leeds, Oxford, Nottingham and Manchester.

From the Walker monument on the far-famed wall of Londonderry, the view of the historical water of Lough Foyle, away off to Moville and Greencastle, is full of beauty and interest.

## EDINBURGH.

Few places can equal Edinburgh in its surpassing beauties, its exquisite blending of nature and art, where art seems but the suggestions of nature, and in its multiplicity of charms. The delightful irregularity of the whole place possesses a peculiar fascination, and the halo of romance which surrounds almost every object in the old city gives to each an interest that is undying.

From the Castle, the top of Arthur's Seat, Salisbury Crags (from which the writer once had a magnificent view of Holyrood Palace, enhanced by the marching of a regiment of Hussars, along the winding road at the foot of the mountain), and the Calton Hill, we have a variety of prospects, and each and all vie with the other in the extent and beauty of the scene surveyed.

We behold from every point of vantage a most pleasing arrangement of Grecian column, delicate spire, tower and turret, and little of anything to mar the delightful grouping of the whole.

From Princes Street we take in a scene reminding us of childhood's days and fairy lore; for like some great monster that has crept into the lovely gardens beneath, the huge rock stands bearing on its crest the famous old Castle on its back, and ancient, weather-beaten, and weather-stained houses (some, twelve or thirteen stories high), that for centuries have defied the elements. The view from the New Town at night, when these high houses are lit up, rising story upon story, appears like a scene of enchantment.

Inside the Princes Street Garden, where stands the Sir Walter Scott Monument, we find the suggestions of nature admirably followed, and nature herself undisturbed. From beside a fountain of great beauty we look upon sloping banks, luxuriantly covered with ivy, and which are here and there adorned with monuments to distinguished statesmen.

By rustic bridges that span "the accessories to railway invasion" past the foot of the stupendous rock, that rises

abruptly bare and rugged, and by winding paths on the hillside, we climb to the breezy height above, where, in gay scarlet tunic and waving tartan, some soldiers are leisurely strolling, and again survey the scene. Through the interstices of the trees we take in the same objects as before, but a blue mist softens and enhances their beauty.

While standing on the highest point of the Castle rock, in front of St. Margaret's Chapel, surveying the magnificent panorama that extends itself before us, out to where the Firth, holding in tender embrace the lovely town, stretches east and west along the horizon, the National Monument, standing harp-like against the eastern sky, looks even in its incompleteness a thing of beauty. Neither pen nor pencil can successfully convey to those who have not yet beheld its wonders, any idea of the real beauty of the bonnie town.

Crossing to New York, a view from the top of any of its lofty buildings is rich in variety of river and ocean, city bustle, and suburban life and seclusion.

Montreal, Quebec and Halifax, all abound in grand, picturesque and beautiful scenery.

Baltimore, the "Monumental City," looks to great advantage from the top of Constitution Hill. Chicago from the tower of the water works, Boston from the door of the Capitol, with its celebrated parks.

St. Louis from its highest point commanding a view of the Mississippi River and magnificent bridge; Washington from the front of the Capitol looking away through Pennsylvania Avenue to the Government buildings and White House, and on the other side down the Potomac, full of historic interest; and so of Milwaukee, St. Paul, Detroit, Cleveland, Buffalo and Rochester, all have some special points of beauty and attractiveness, and all of these have been seen by the writer—and yet it must be conceded, that none of all these cities surpasses views of Toronto, or combines so many attractive features as our Queen City of the West. In making this assertion, it is done without prejudice, and purely as the result of observation and comparison.

To appreciate the force of what may be considered exaggeration

tion, the visitor to Toronto must take various stand-points, as well as choose appropriate occasions to do justice to the views.

## TORONTO.

From east, west, north, and south, each point of observation presents Toronto in a different aspect, and displays a variety of beauty and grandeur. The view from the Island is very fine : but from the deck of a steamer, as each street is passed, the observer is struck with the commercial greatness of the city, and the beautifully symmetrical arrangements of the streets, as each vista stretches away displaying splendid warehouses, banks and public buildings, it cannot fail to impress a visitor with the magnificence of so young a city.

*From the East.*—The distant view of Toronto from the Scarboro' heights appears as a panorama, such as are indelibly photographed on the mind. The picture is complete, the canvas is a marvel of coloring, the combined art of nature and man is revealed.

From the hilly platform the forest of tree-tops slope into the fertile fields, which in turn disappear under the roofs of the scattered homes, which stand out from the main streets. Forming a boundary on the left, the blue waters of Ontario, glistening like a constellation of diamonds, stretch away to the far-famed Niagara shore ; away to the west the eye loses its power in a labyrinth of housetops, while to the northward woodland battalions are marshalled, calmly awaiting their destiny in the face of an out-reaching metropolis.

*From the West.*—Standing on one of the balconies of the main building in the Exhibition grounds during the fair, a view may be obtained which, perhaps, combines more points of interest than could be found in any of the towns or cities mentioned.

Here is a combination of the urban and pastoral, the commercial and industrial, unsurpassed in any country. The grounds themselves, studded with buildings devoted to the exhibition of the industrial and manufacturing interests of the country, display in the most attractive and condensed form, the wealth, prosperity and progress of the Canadian people.

Machinery in motion, agricultural implements of the most labor-saving description, house-heating arrangements, of the most approved and effective, as well as of the most ornamental character; carriages and waggons, in every variety are all displayed in the different buildings, in greatest perfection.

The main building is a fitting "Crystal Palace," in which the finer branches of manufactured goods, adapted to every want, whether of necessity or luxury, from the soap tablet to the first class piano, are found in profusion; the fine arts department not being the least attractive. Again returning to the outside exhibits, we find agricultural and horticultural halls filled with the productions of the soil—fruits, flowers, and vegetables, as well as the cereals—which will compare with those of any other land. The apiary is well stocked with the productions of the "busy bee," the honey exhibited having become celebrated by the diplomas obtained by the exhibitors at the Indian and Colonial Exhibition. Returning to obtain external views of the scene, a panorama of beauty, contentment and happiness, presents itself to the eye.

Lake Ontario, with the Island nestling on its placid bosom, the sailing craft of all sizes from the skiff to the three-master, scores of steamers plying to and from the Island, and the various pleasure resorts, including the grounds themselves, beautiful drives, terraces, and flower beds, groups of happy people promenading or reclining on the greensward, all the attractions of the horse ring, the display of horses and cattle, with the proximity of the Zoological Gardens, themselves sufficient to attract thousands of visitors. Then extending the range of observation over the city, dome and steeple, turret and spire, factory and warehouse, crowd upon the vision, and display the enterprise and progress of a prosperous and rapidly advancing city.

*From the North.*—Proceeding from the new Parliament Buildings northward, the surroundings are strongly suggestive of the "academic groves" of Oxford. The splendid University Buildings, the Meteorological Observatory, Wyckliffe College, McMaster Hall and Baptist College, St. Basil's Roman Catholic College, the School of Technology and on the most beautiful

site in the neighborhood will shortly rise the proposed Methodist College in all its beautiful proportions, when all these will form a galaxy of literary institutions unequalled in America. It may be anticipated that on the completion of the buildings, the Queen's Park will assume new features of beauty, and if it cannot vie with the "meadows" of Oxford, there will be such rivalry as to the attractions produced by art assisting nature as to make this one of the most beautiful parks on the Continent.

PROPOSED NEW METHODIST COLLEGE.

Professor Goldwin Smith, in a lecture on Oxford, describing the velvety sward connected with the colleges, related an anecdote of a lady having been delighted with their beauty and verdure and the smoothness of the grass, and on expressing her admiration to one of the gardeners, and asking whether she might not have such grass in her lawn, was told that it was the easiest thing in the world, as she had only to go on mowing her and rolling for about 300 years, and her grass would be quite

as good. The citizens of Toronto may anticipate a great deal of beauty and verdure long before that time in the grounds of the colleges and private residences in the Queen's Park.

Crossing Bloor street and proceeding along Avenue Road, the site of the new Upper Canada College is reached, and from this point a magnificent view may be obtained.

At present, from the grounds of Hon. John Macdonald, or Samuel Nordheimer, Esq., the most complete view of the whole city and suburbs may be had. A perfect bird's-eye view of public buildings, streets and houses is now presented from east to west, and far across bay, island and lake, even to Niagara Falls—a distance of some forty miles—the spray of which may be distinctly seen on a fine day.

#### Wealthy People of Toronto.

Not more than about thirty years have elapsed since the first person in Toronto died wealthy; a fact which shows that such a thing as wealth being inherited was unknown, and that the accumulations of the inhabitants of Toronto since its first settlement, have either been by the increase in the value of property, or by profits of business industry.

Amongst the former may be reckoned the late Hon. Mr. Crookshank, Hon. William Allan, Jesse Ketchum, and Samuel Jarvis, who, having obtained large tracts of land where the city of Toronto now stands, found themselves possessed of property before they died worth many millions of dollars by the natural increase in the value.

Amongst those who acquired wealth by steady business enterprise, one of the first was Mr. John Harrington, followed by Mr. Rice Lewis, the Messrs. Ridout Bros, all in the hardware trade; and Messrs. Michie, in the grocery; and later, Hon. Wm. McMaster and Mr. Robert Walker, in the dry goods trade; Messrs. Gooderham & Worts, in the distillery business, may be said to complete the list of those who had acquired great wealth up to the time of their death, and not one of all these had any capital with which to commence business; Mr. Robert Wilkes, in the watch and fancy goods trade, may be added to

the list as having acquired a large amount of riches, while yet a comparatively young man.

Such has been the rapid increase in the value of property within the last twenty-five years, and the development of trade and manufactures, that the list of living men who enjoy not only competence, but positive and real wealth, will be best seen by a glance at the figures which indicate their share in bank stocks and other investments, as well as their actual capital in various business enterprises.

Toronto Conservatory of Music.

INAUGURAL ODE.

*On the Opening of the Toronto Conservatory of Music.*

As when to weary watchers of the night,  
Appears the silver star which ushers in  
The dawn of day ere yet Aurora's robes  
Sweep through the portals of the East, and leave  
A train of saffron glory : so to us,  
Weary of waiting, shines the welcome star  
Which ushers in the dawn of brighter day  
For music and her devotees, who here,  
In our Conservatory, find at length  
A home and resting place, and from the storms  
That raging, roar and beat upon the world,  
Be safely sheltered, where no icy breath  
Of cold disdain, nor passion's fever heat,  
Can chill or blight the opening blossom.

Here

The gentle spirit of Cecilia,  
To whom the Angels listened ere she passed  
To join their white-robed choir, will abide,  
And brood with dove-like wings, Protectress blest,  
O'er all young hearts that to the Highest give  
Music, the purest incense of the soul;  
Music the only never-failing fount  
To quench life's thirst when other springs run dry ;  
Ambrosia of the gods on which to feed  
And satisfy heart-hunger.

Harmony

Is not of man's devising, but Divine  
In origin. It had its wondrous birth  
At the Creation, when through infinite space  
Rrolled, as a tide from Nature's orchestra,  
Her first grand Symphony. Its principles,  
Deduced from natural laws, have now become  
Science profound, whose torch shall cast its light  
From our Conservatory walls.

Then strike

Thy lyre, Apollo ! Let the brilliant train

*The Queen's Jubilee and*

Of muses nine appear : Melpomene,  
 Calliope, Euterpe, lead the way—  
 Fling wide the door in sign of welcome !

May

All blessings, as a beam of sunshine, fall  
 Upon this shrine of culture, which we here  
 Do dedicate on this auspicious day,  
 To music and the sister sciences  
 Of Oratory and Philology,  
 May all in harmony abide, and ne'er  
 Amongst our chosen band be heard one false,  
 Discordant note, but each ring clear and true ;  
 True to our trust, and to the authority  
 Of One on whom we all rely, and true  
 To those whose training is our care ; so thus  
 Forgetting self, make Truth our Polar Star.

—Charlotte Jarris, (*Rosalia*).

To Mr. Edward Fisher, who has been appointed musical director, is mainly due the founding and organization of this institution. The Toronto Conservatory of Music has been incorporated by letters patent, with a capital of \$50,000, and is designed to offer advantages to students in music, similar to those enjoyed in the cities of Europe and America, where they have been demonstrated for many years.

The departments of instruction comprise the piano, voice, organ, violin, violoncello, flute, oboe, clarinet, saxophone, bassoon, horn, cornet, trombone, euphonium and tuba ; orchestral and *ensemble* playing, sight singing, church music and oratorio, theory of music, elocution and dramatic action, languages, musical history, acoustics and mental philosophy.

The faculty is distinguished by ability in each department ; and when the directors shall erect a suitable building in which to carry on their operations, another attractive addition will be made to the numerous institutions possessed by Toronto for carrying on the work of higher education, and affording students at home and from abroad, every facility for acquiring the most refining and elevating accomplishments at the lowest possible cost.

### The New Canadian Bank of Commerce.

This magnificent building occupies the site of two of the old landmarks of the city. At the corner of Jordan street in 1847, and for several years afterwards, stood a white frame building two stories high, having a business entrance on King Street and a private one on Jordan Street, and was occupied for several years by Mr. William Osborne, a land agent. There the writer, when a very young man, spent many a pleasant evening in company with Mr. Osborne's daughters and sons-in-law, the late Thomas Wheeler, George Bilton, and Thomas Jordan, with many others of Toronto's most respected citizens, and many from other parts of the province, including Mr. Counter, then Mayor of Kingston, and Rev. Dr. Richey, father of the present Lieutenant-Governor of Nova Scotia. To the west stood the old *Globe* building, which was erected in 1836, and was at first occupied as a private house by the late Dr. Barclay, after which it was purchased by the Commercial Bank. In those days there were stone steps up to the door. In 1850 the *Globe* took possession of it.

Erastus Wiman was then a reporter, and C. W. Bunting was a printer in the composing-room. Mr. Houston, the Librarian at the Parliament Buildings, was a reporter at the time of the completion of the Atlantic cable. Since that time the building, having been vacated by the *Globe*, has been occupied by persons of various trades up to the time of its demolition.

### "The Empire."

The *Mail* having ceased to represent the principles of the Liberal Conservative party in the Dominion, a joint stock company has been formed to publish a paper which, as its name implies, advocates the integrity of the British empire, and at the same time the policy of the Liberal Conservative Government of Canada, known as the National Policy.

It must be a matter of congratulation to all loyal Canadians that a paper has been established which will, to a large extent, counteract the injurious influence of those who, for ulterior

objects, have for some time been engaged in representing the United States as offering advantages superior to those enjoyed in Canada, and extolling everything on the other side of the lines, the effect of which is to depreciate Canadian interests and her attractions.

To those in Europe into whose hands the *Empire* may fall, the information it will disseminate must prove invaluable, because it will be reliable, and it is to be hoped that its wide circulation, which is assured, will tend to promote the best class of emigration to the Dominion, and that Toronto will have a large share, as our city and country only require the plain truth to be told to have their great attractions appreciated; and this will be adhered to in the columns of the *Empire*, which is published daily and weekly.

#### Methodist Book and Publishing House.

The congregation worshipping in the old Richmond Street Church having decided to erect a new building on McCaul Street, the Methodist body has purchased the old premises, to which, when completed, the entire business at present carried on in King and Court Streets will be removed. The corner stones of the new church were laid by Hon. John Macdonald and William Gooderham, Esq., on the 16th June, and in them were deposited the coins of Canada, the daily papers, and the publications of the Methodist Publishing House, including a copy of Toronto "Called Back."

As the present venerable walls will remain intact there will be neither demolition nor desecration in the change, as, although the gospel will no longer be preached from the pulpit, nevertheless, from this centre of literature will be disseminated gospel truth in the various forms of newspaper, magazine, a variety of Sunday-school publications, and secular and religious books, by every respectable author, dead or living, which, by the power of the press, will convey to millions of readers throughout the Dominion beneficial influences, far out-reaching all the local advantages hitherto derived from this sacred

edifice. The plan of the new building, while embracing the old walls, will extend to Richmond Street, where will be the principal front, and to Temperance Street on the south, where also will be a handsome front, the design showing a fine elevation on both streets.

NEW METHODIST BOOK AND PUBLISHING HOUSE.

The arrangements for the convenience and despatch of business will be of the most complete character. The whole plant, machinery and printing presses, will be of the most modern and perfect description, while the facilities for carrying on the rapidly growing and extending work of the concern, in the

printing, binding, publishing, sale and delivery departments will be most extensive, making the Methodist Book and Publishing House of Toronto the first as it is the oldest establishment of the kind in the Dominion, and having a world-wide reputation.

The business of the establishment has made wonderful progress under the able management of Rev. William Briggs, D.D., Book Steward.

### St. James' Cathedral.

It will be a matter of gratification to all classes of our citizens to know that the venerable and magnificent pile known by the above title is in process of renovation and decoration throughout its interior, which will entitle it when finished to be called a new church. It will be forty years, in 1889, since the old building on the same site was destroyed by fire, and it was then little expected that so splendid a specimen of ecclesiastical architecture would rise from its ashes. The comparatively recent completion of the spire, and the addition of the celebrated clock (the dial of which is to be enlarged) with the musical chimes, have rendered this building the chief object of attraction to the eyes of all who visit our city.

The improvements comprise the thorough painting and beautifying of the interior, and the re-arrangement of the seating accommodation, which will be considerably increased, the introduction of a splendid new organ, and the transformation of the east transept porch into a baptistery. The latter will be accomplished by raising the floor, and laying it in encaustic tiles, with the treads and risers of the steps in polished colored marbles. The font will stand in the centre, raised on a platform of marble and tiles, the walls lined or panelled with colored marbles for a height of nine feet. The ceiling will be groined and decorated in gold and color, and the whole guarded by a pair of brass or wrought-iron gates to preserve it from unwarranted intrusion. The chancel will be floored with tile and marble, thereby adding much dignity and beauty to that part of the sacred edifice.

The present organ will be removed, and the south gallery entirely re-arranged for seating accommodation. The new organ will be placed at the north end, the space for which will be gained by removing the side galleries, which at present spoil the noble proportions of the great arcades, and hide the triple lancets of the aisle windows, and also destroy the vertical lines which, in Gothic work, are so essential, and to which the style owes so much of its charm. This change will admit the effects of light and shade, and the exquisite perspective made by the intersecting lines of arches beyond arches, which one naturally expects to see in such a beautiful and nobly arcaded building as St. James' Cathedral. The position of the organ will be novel and unique. It is proposed to divide the instrument by placing a portion on each side of the chancel against the north wall in the aisles, the choir and solo organ to be on the west side. The cost of the organ will be \$12,000, and total cost of improvements about \$70,000.

#### Young Men's Christian Association.

This valuable institution has, from a very small commencement, kept pace with the growth and progress of Toronto, and has accomplished much in forming and developing the character of the young men of the city since its first organization. This took place on the 18th February, 1864, with Mr. Robert Baldwin as President. On November 1st following, the first annual business meeting was held, when Professor Daniel Wilson, LL.D., was elected President. The first report showed the expenses to be \$44.49.

In 1865 the Association removed from the basement of the Temperance Hall to rooms over 151 Yonge Street. These rooms were open to the public as free reading-rooms, and the membership rapidly increased. During the Fenian raid, in 1866, the rooms were kept open all day and evening, and through the liberality of B. Homer Dixon, Esq., arrangements were made for keeping the rooms open permanently all day. Mr. Dixon became a member, took charge of the library, to

which he donated several hundreds of volumes, and, at his own expense, issued the first printed catalogue in 1869.

YOUNG MEN'S CHRISTIAN ASSOCIATION BUILDING: (CORNER YONGE AND MAILL STREETS).

After various changes the building known as Shaftesbury Hall was erected, at a cost of about \$30,000, the corner-stone being laid June 1st, 1872, by Hon. John Macdonald, who was President for seven years.

Having decided to erect a finer building further north, the Association sold Shaftesbury Hall for \$55,000, and erected the present magnificent pile at the corner of Yonge and Magill Streets. The building was completed and formally opened in October, 1887, and is one of the most attractive and splendidly equipped buildings on the continent. The total cost is \$80,000.

In addition to the reading-room, elegantly furnished parlor and library, there is a magnificent lecture-hall, also a spacious gymnasium, furnished with every appliance for athletic exercises of the most approved character, and also swimming baths. An orchestra has been added to the attractions, and is becoming very efficient.

The membership increased from October 1887 to June 1888 from 600 to 1,250 members.

There is also a west end branch in flourishing condition, which is about to erect a large building.

The Association carries on its work also among railway men, at points in and around Toronto, and will shortly erect a building at York station for this object.

The financial statement for the past year shows an income of over \$5,000. The present President is S. Caldecott, Esq., and the General Secretary is William McCulloch, Esq., with a strong board of trustees and directors.

### **The Grand Trunk Railway of Canada.**

The recent amalgamation with the Northern and North-Western, as well as the former acquisition of the Great Western, identifies this great pioneer highway of Canada more than ever with Toronto, especially as the Northern had the honor of being the first in actual operation; and while the name of the latter will now be lost, her history will ever be identified with the growth and progress of Toronto, opening up as it did the means of transit for the vast productions of the forest, which have found their way to both home and foreign markets by the facilities the road has afforded. And yet, all that it has done in the past are as nothing compared with what may be expected

in the future, her connections now being capable of illimitable expansion, affording facilities for the development of trade and manufactures, as well as the development of mines and minerals, the products of fisheries and agriculture as well as of the forest.

The fact of another stupendous undertaking having been accomplished, with a business sufficient to make both of these immense undertakings remunerative, must be nothing less than astounding to the reader of these pages who refers to their commencement, within the period recorded in the reminiscences of the writer.

Alderman Harvie, of this city, who was connected with the Northern from its commencement, has in his possession the first time table ever used, and is a sort of literary curiosity, being in ordinary handwriting and bearing date June, 13th, 1853, at which time the road was open to Bradford. The first passenger train left Toronto at 10.30 a.m., arriving at Bradford at 12.45, the distance being about 40 miles. He also has the first Passenger Tariff, of which a copy is given :

Ontario, Simcoe, and Huron Railroad Passenger Tariff, June, 1853,—in Halifax currency (20 cents to a shilling):—

FROM	Davenport Road.		Thornhill.		Richmond Hill.		King.		Machell's Corners.		Newmarket.		Holland Landing.		Bradford.	
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.
Toronto .....	0	7½	1	0	1	3	1	10½	3	1½	3	9	4	0	4	4½
Davenport Road .....			1	3	1	10½	3	1½	3	9	4	4½	4	4½	4	4½
Thornhill .....					0	7½	1	3	2	6	3	1½	3	4	4	4½
Richmond Hill .....							1	0	1	10½	2	6	3	1½	3	9
King .....									1	0	1	3	1	10½	2	6
Machell's Corners .....											0	7½	1	3	1	10½
Newmarket .....													0	7½	1	3
Holland Landing .....															0	7½

The first tickets have on one side, "Ontario, Simcoe & Huron Railroad," and on the other a representation of the Union Jack, surmounted by a crown and the letters O. S. H. R. in the centre; "From Toronto to Barrie."

Mr. Harvie was an officer on this first passenger train ever run in Upper Canada, and issued the first ticket and handled

Of British patriot blood is in our heart;  
Still I am glad you think I have done my part.

BRITANNIA—Bravely. You Arctic wastes no more need slay  
My gallant sons. Had Franklin seen this day  
He had not slept his last long lonely sleep  
Where the chill ice-pack lades the frozen deep.  
“It can be done; England should do it.” Yes,  
That is the thought which urges to success  
Our struggling, sore-tried heroes. Waghorn knew  
Such inspiration. Many a palsied crew  
Painfully creeping through the Arctic night  
Have felt it fill their souls like fire and light.  
Well, it is done by men of English strain,  
Though in such shape as they who strove in vain  
With Boreal cold and darkness never dreamed  
When o'er the Pole the pale aurora gleamed  
Perpetual challenge.

CANADA— Here's your empire route.  
A right of way whose value to compute  
Will tax the prophets.

BRITANNIA— Links me closer still  
With all my wandering sons who tame and till  
The world's wild wastes, and throng each paradise  
In tropic seas or under southern skies.  
See Halifax, Vancouver, Sydney, set  
Fresh steps upon a path whose promise yet  
Even ourselves have hardly measured. Lo,  
Far China brought within a moon or so,  
Of tea-devouring London. Here it lies,  
The way for men, and mails, and merchandise,  
Striking athwart your sea-dividing sweep  
Of land—iron road from deep to deep,  
Well thought, well done.

CANADA— No more need you depend  
On furtive enemy or doubtful friend,  
Your home is on the deep, and when you come  
To the Dominion's land you're still at home.

BRITANNIA—And woe to him, the statesman cold or blind,  
Of clutching spirit or of chilling mind,  
Pedantic prig or purse-string tightening fool,

Who'd check such work and such a spirit cool.  
 Yours is the praise and may the profit flow  
 In fullest stream midst your Canadian snow  
 A true Pactolus. Trade's prolific fruit  
 Should freely flourish on our Empire Route.

—Pouch.

When Archbishop Taché first went to the North-West in 1845, he left Lachine, on June 24th, in a long bark canoe, manned by six *voyageurs*, and going by the Ottawa and Mattawan, crossed Lake Nipissing, and passed thence by the French River into Lake Huron, and so onwards by Lake Superior, the Kaministiquia, across Lake Rainy River, Lake of the Woods, and the Winnipeg River, to St. Boniface, which his Grace reached on August the 25th, the journey occupying sixty-two days. It was deemed quick work in those days to make the journey in two months.

Colonel Wolseley, at the head of the first Red River expedition, left Toronto in May 25th, 1870, taking the Dawson route, and his advance guard did not enter Fort Garry until August 24th.

On June 21st, 1887, the first train from Montreal was despatched to the Pacific Coast, and reached the new city of Vancouver at noon the following Sunday, making the journey of 2,900 miles in 136 hours, beating the time between New York and San Francisco by twenty hours.

The journey from Montreal to Winnipeg, which took Archbishop Taché sixty-two days, was made in just the same number of hours.

#### Atlantic Steam Navigation.

Canada has the honor of having built the first steamship that crossed the Atlantic Ocean.

The "Royal William" was built in Quebec, and was launched in the presence of Lord Gosford on the 30th of April, 1831. Of 360 tons burthen, length 160 feet, and breadth 44 feet, she was propelled by steam, with wheels, or "flyers," had three masts, and was schooner rigged. Her first trip was to Halifax, in August, 1831.

The "Royal William" left Quebec for London on 5th August, 1833, the voyage occupying 20 days, having touched at Pictou, Nova Scotia, for coals, from which port she sailed to Cowes in 17 days.

The "Great Western" left Bristol on the 8th April, 1836, and arrived at New York on the 23rd of the same month.

On the 28th March, 1838, the powerful and well-built steamer "Sirius," of seven hundred tons, and three hundred and twenty horse power, sailed from the London Docks, touched at Cork, and after a tempestuous passage arrived at New York on April 22nd, a twenty-four days' passage.

Lieutenant R. Roberts was afterwards lost while in command of the ill-fated steamer "President," in 1841.

In June, 1888, the Cunard steamer "Etruria" made the voyage from Queenstown to New York in 6 days 1 hour and 37 minutes, averaging over 450 miles a day.

### Labour Organizations and Strikes.

Were it possible for any cause to retard the progress of Toronto in its career of prosperity, there is none so prolific of evil as the combinations of trades when they result in strikes. These invariably do great injury to all classes, by deranging the plans of capitalists and employers who are willing to invest their means in the various enterprises which tend to benefit the whole community, but are often deterred from doing so by the fear of inability to make independent arrangements for skilled or unskilled labor. This labor, which it is the right of every man to dispose of to the best advantage, is controlled by organizations which deprive the individual of his personal liberty to use his God-given birthright according to his own judgment and common sense, and at the same time dictate to the employer the terms upon which he may alone invest his capital, thereby creating an antagonism between those who ought to be in a position to arrange their personal affairs to mutual advantage, which is contrary to the spirit of liberty which is supposed to characterize the present age.

The history of these organizations proves that nothing has

been accomplished for the masses of society by their influence, apart from legislation. The sweating system practised in England, and also in America, proves their inability to reach the very classes that need assistance and protection. If they have effected reforms of abuses, and have relieved any class of workers, it is the duty of the leaders of the movement to produce the examples; but the fact remains that labor and capital will both find their level according to the invariable law of supply and demand, and to make cast-iron rules to regulate the wages of operatives must inevitably tend to check the ambition and crush the energies of the ingenious, the industrious and the most skilful workmen, and defeat their own object, which should be, in the future as it has been in the past, that the employees of to-day shall become the employers of to-morrow, as the history of every city, Toronto not excepted, abundantly proves to be the case.

No better example of the absurdity and futility of strikes could be furnished than that given in these pages, when a combination was formed against the introduction of sewing machines, when the leaders of the movement assumed an importance quite commensurate with that of men at present agitating the question in more extensive spheres of labor, and who would now expose themselves to ridicule by refusing to use an article of universal use all over the civilized world. The writer, also, can call to mind the time when some of the first railroads were opened in England, it was confidently predicted that there would be no use for horses when railroads became general, and yet, as is shown in another place, the existence of railroads creates a demand for what was supposed to be their disuse.

It is to be hoped that Toronto has seen an end of these movements, which are so destructive to her progress and prosperity, and that the public and private enterprises now being carried on will not be impeded either by interference with private rights or by threats or intimidation.

No one can question the right of one or more persons to "strike work" and demand higher wages; that is a matter be-

tween themselves and their families, which they are bound to support ; but should these persons demand a certain amount of wages, and threaten the employer with injurious consequences to his business, or say to other men, "you must not work for your living except with our consent," when these men are wise enough to adopt the time-honored maxim, "half a loaf is better than no bread," then any organization, insisting on their rules, establishes a tyranny altogether inconsistent with human freedom and civilization. Whatever reason or excuse there may be in Great Britain, where tradesmen and mechanics, as well as capitalists, have to compete with other countries on entirely unequal terms ; where the fallacy of free trade with those who do not reciprocate, takes the bread out of the mouths of their own people, and benefits those countries where these classes are protected, there is no excuse for the same classes in Canada or the United States, whose wise legislators have not only protected the manufacturing industries, but by the same Act are protecting all employed in these industries against the influx of free trade productions, and also indirectly protecting the agriculturist by creating a home market, and by keeping money at home increase the wealth of the whole community.

No amount of sophistical argument can controvert the hard, stern logic of facts which abound on every hand in Toronto and throughout the Dominion, to prove the advantages of protecting our people from foreign competition, and this argument by no means assists those who talk of "protecting labor," by endeavoring to stay the tide of emigration. All able-bodied, industrious men and women, who may come to our shores will have all the "protection" they need when they arrive here. If they will use their brain and muscle, they will find a place *somewhere* in our Dominion where this kind of capital can be turned to account.

As this volume is likely to have a large circulation in Great Britain, the writer has no hesitation in saying that never in the last forty years was there a better prospect for the classes referred to, whether of skilled or unskilled labor, than presents itself at the present moment, and no better proof of this could

be given than in the success of the very men who would now stay the tide of emigration by a kind of dog-in-the-manger policy. During these forty years there never was a time when such statements were not made, as might have deterred these very men or their forefathers from landing on our shores, and yet "they came, they saw, and they conquered" all difficulties, and what has been done in the past may be done in the future, and even to a larger extent. Are our towns and cities to cease growing? Is our population going to decrease? Who will dare to predict such a thing in the face of such unparalleled progress, while the prospects of the future are even more encouraging?

As "turn about is fair play," it is respectfully suggested that these well-to-do tradesmen and mechanics who have hewed out homes for themselves, and enjoy abundance and comfort in Toronto, would give a chance to some of their less fortunate brethren on the other side of the Atlantic to change places, and go back to where they came from, at least for a time, and give others a chance, by making room for them here. This would be real benevolence, and would be sure to have its reward. The writer does not say that Toronto or other towns should be inundated with surplus labor of any kind, but he does say that *once here* they can be distributed amongst the varied industrial occupations with which Canada abounds; even Paisley weavers who have come here have made excellent farmers, and hundreds of instances can be given of persons adapting themselves successfully to occupations to which they had never been accustomed, and so the labor market has always maintained its equilibrium. Therefore, let it be repeated, that every man, woman and child, with brain and muscle, sobriety and industry, will find a place in our community, and never know what want is. This principle of inherent right both in capital and labor has been fixed for all time by the highest authority in the universe, "Friend, I do thee no wrong, didst thou not agree with me for a penny? Take that thine is and go thy way. Is it not lawful for me to do what I will with mine own? Is thine eye evil because I am good?"

**Western Methodist Church.**

One of the most remarkable features of the growth and progress of Toronto is the multiplication of its churches.

New places of worship for all denominations are springing up rapidly in the city and suburbs, without apparently depleting those already occupied, as is the case in most large cities, by the tendency to reside in suburban districts. The erection of a magnificent church where only a short time ago the Methodist body had already occupied the ground on every hand, and from so humble a beginning, is especially worthy of mention.

The erection of many elegant mansions in the neighborhood of Bloor Street and Spadina Avenue gave the first impulse to the movement, and from worshipping in a tent, in June, 1887, on a fine site on Bloor Street from Major to Robert, the small number of members soon erected a wooden building, which at present holds seven hundred persons.

This temporary place of worship is used, while a superb church is in course of erection, and which will soon reach completion.

The building is 200 feet long on Bloor Street, with a width of 92 feet. The design is the modern Romanesque. It is being built of gray Credit Valley stone, with brown stone ornamentation, and roof of purple slate and terra-cotta tiles.

A tower one hundred and twelve feet high, by twenty-two feet square, rises from the north-east corner, and a lower one at the opposite side. The façade will have broad, turretted projecting gables coped with stone. Handsome stained-glass windows will light the interior.

The auditorium will be one of the finest in the city. The centre of the ceiling will be a lantern, forty feet in diameter, carried on massive ribs springing from the wall. The shape of the room will be amphitheatral, curved galleries will run round three sides, while a large arched recess will receive the organ and choir.

The seating capacity will be sixteen hundred. The church will be handsomely furnished in every part, and the heating,

lighting and ventilation will be arranged after the most modern improvements. No effort is being spared to make this one of the finest churches in the city, and it will cost, when complete, about \$90,000. The location cannot be surpassed, and already surrounding property is feeling the effect of the church's erection in its rapidly increasing value. Elegant mansions are springing up in the neighborhood, such as for architectural splendor and beautiful surroundings would be a credit to any city; and many of the resident owners will find in this new

NEW WESTERN METHODIST CHURCH.

church their spiritual home. Six gentlemen may be named as the prime movers of this new enterprise. Their names are:— W. J. Gage, T. Eaton, C. R. S. Dinnick, B. Westwood, G. A. Walton, and M. Paul. They formed the nucleus from which has sprung this church of marvellous growth.

The mainspring of its wonderful success is to be found in the personality of the pastor, Rev. T. W. Jeffery. His people greatly admire and love him as a pastor and preacher, and to him especially is due the establishment of this new church, which so

greatly honors Methodism and justifies the pride felt in its construction.

#### Departure of the Marquis of Lansdowne.

In accordance with the precedent of his predecessors, the Marquis of Lansdowne paid a special farewell visit to Toronto. The Queen City of the West, always in the van of loyal receptions, has maintained her character by the display of heartfelt and enthusiastic demonstrations on the occasion of each visit paid by our late Governor-General and Lady Lansdowne, and when lately amongst us, on the eve of his departure for a still higher position, there was no diminution of the exalted opinion entertained by our citizens of the popularity of His Excellency during his term of office in the Dominion.

The esteem in which they were held personally was enhanced by their encouragement and patronage of the arts, sciences and literature of the Dominion, while at the same time everything that tended to promote and develop the resources of this great country had their fullest support, so that not only from Toronto, but from all parts of the Dominion, Lord and Lady Lansdowne will carry with them the heartiest sympathy of all classes on entering on their more exalted career, and the most earnest wishes for their happiness and success.

During their stay in Toronto they were the recipients of a number of addresses from the City Council, various national and other societies, all expressing the most cordial sentiments. Their last public act in Toronto was the opening of the school called by their name.

After a splendid demonstration in their honor at Ottawa, on the 23rd of May, the ex-viceregal party proceeded to Quebec, where they took their departure for Liverpool per Allan steamer "Sarmatian," and arrived in Lough Foyle, Londonderry, on the 1st of June.

By a remarkable coincidence the steamer arrived at the same time as the "Circassian," with the new Governor-General and family on board, bound for Quebec, and had an opportunity of exchanging courtesies.

### Arrival of the New Governor-General.

The Right Honorable Lord Stanley of Preston arrived in Ottawa on the 10th June, having made a fine and pleasant passage to Quebec.

His Lordship was accompanied by Lady Stanley, his eldest son, Lieut. Edward Stanley, of the Grenadier Guards, Captain Jocelyn Bagot, Military Secretary, Lieut. McMahon, and Mr. Victor Stanley, His Lordship's second son, and a midshipman in Her Majesty's navy, and three younger children.

On the 11th Lord Stanley, with a military escort, proceeded from Rideau Hall to the Parliament Buildings, and in the presence of a distinguished assemblage was sworn in as Governor-General of the Dominion, the oath being administered by Sir William Ritchie. His Excellency then signed the oath of allegiance, and also the proclamation by which he proclaimed himself Governor-General.

"Nobility is a graceful ornament to the civil order. It is the Corinthian capital of polished society,—*Omnes boni nobilitati semper favemus.*"—*Edmund Burke.*

The Right Honorable Frederick Arthur Stanley, Lord Stanley of Preston, G.C.B., is a younger son of the fourteenth Earl of Derby, by the Honorable Emma, second daughter of the first Baron Skelmersdale, and is the heir presumptive to the Earldom of Derby. He was born on January 15th, 1841, and received his education at Eton. In 1864 he married Lady Constance, eldest daughter of the fourth Earl of Clarendon. In April, 1858, Lord Stanley entered the Grenadier Guards as ensign, and in June, 1862, he became lieutenant, captain and adjutant. He retired in 1865. He is now the colonel of the Lancashire Militia, a supernumerary A.D.C. to Her Majesty, and a J.P. for Lancashire and Westmoreland. He was a Lord of the Admiralty in 1868, and Financial Secretary of War from 1874 to 1877, when he became Secretary of State for War. In 1885 he held the office of Secretary of State for the Colonies, and in 1886 was appointed President of the Board of Trade, and was raised to the peerage with the title of Lord Stanley of Preston.

**HIS EXCELLENCY SIR FREDERICK ARTHUR STANLEY,  
BARON STANLEY OF PRESTON, G.C.B.,**

*Governor-General of Canada.*

### The Fisheries Treaty.

Although not interested commercially in the fishery question, Toronto, bound by the strongest ties of sympathy with the Maritime Provinces and the empire at large, any question affecting either the sister provinces or the peace of Great Britain, must necessarily excite the deepest emotions of her people, and the decision of the British and Canadian Governments, in the selection of the Right Honorable Joseph Chamberlain as plenipotentiary, and Sir Charles Tupper to represent Canadian interests, in connection with the Honorable Lionel Sackville West, British Minister at Washington, gave the highest satisfaction.

The representative of the American Government, Mr. Bayard, the Secretary of State, gave additional confidence to our people, and a guarantee that the question would be discussed on its merits, and fairly and honorably dealt with.

The results of the deliberations fully justified the hopes that were entertained, and both in Canada and Great Britain produced a feeling of intense relief and thankfulness that this long-standing dispute, which might have led to a disruption of the feelings of international amity and mutual regard between the two great Anglo-Saxon nations, had been brought to such an amicable settlement without any act of humiliation on the part of either of those concerned; but by mutual and kindly concessions fair and reasonable to both, and satisfactory to the two Governments.

It is to be hoped that the negotiations so ably carried on and successfully terminated, and approved of by both nations, will not be neutralized by any action on the part of the American Senate, on whom the responsibility now rests, of consummating the act of the Joint Commission, when the time of the *modus vivendi* shall expire, or by again opening up the vexed question and thereby necessitating negotiations *de novo*, with the prospect of greater difficulty in the way of a settlement. No better proof of the fairness of the treaty could be found than the fact that extreme politicians on both sides complain that their

interests have been sacrificed, and in the strongest language deprecate the humiliation that their respective nations have submitted to.

### Commercial Union or Unrestricted Reciprocity.

Breathes there a man so void of grit,  
 Who loves his country scarce a whit.  
 Who, with the spirit of a clam,  
 Would kiss the toe of Uncle Sam,  
 And beg him take the tub in tow,  
 As we can never make it go?  
 If such there breathe, I tell you what.  
 We might administer *boycott* :  
 Not cruel or too harsh, you know,  
 But just enough to make him go—  
 Not be at home if he should call,  
 Nor often notice him at all ;  
 Upon him let not beauty smile,  
 Nor chum his dismal hours beguile,  
 Nor neat domestic spread his couch,  
 Much less consent to wed the slouch,  
 Or cook his grub or soothe his breast,  
 Or sew a button on his vest.  
 But let him wander, lost, about,  
 A woe begone, unsavory lout,  
 Till he is happy to resign  
 And plod his way across the line,  
 Or, in his abjectness, go down  
 Without regret, without renown.

—*Rev. John May.*

During the past year an attempt has been made to prove the advantages that would arise to the Dominion by closer commercial relations with the United States, and, under the above titles, to establish clubs for the purpose of agitating the question. While no Canadian will deny the importance of a reciprocal interchange of the natural productions of the soil, and the advantages that accrued to both countries while the Reciprocity Treaty was in existence, the question assumes quite another shape when it is proposed to extend the principle to manufactured goods, and even should this become a matter of mutual and reciprocal arrangement, unrestricted reciprocity would be

not only injurious to Canadian interests and her self-dependence, but absolutely impracticable while the present tariffs relating to British and foreign goods exist in Canada and the United States.

This agitation, commenced by a few individuals, none of whom have the confidence of the mass of either the commercial or agricultural portion of the people of Canada, without any intimation from the people of either country, has been carried on for some time, and representations have been made at public meetings, chiefly in country places, calculated to mislead those who do not understand the impossibility of any such arrangement as they propose without discriminating against Great Britain, and striking at the very root of our manufacturing industries at the same time, and also reducing our large wholesale trade to a level with that of the smaller American cities, whose wholesale merchants are only in the position of jobbers for the large importing houses of New York and Boston, while the merchant princes of Montreal and Toronto, stand on an equality with the largest importers in any American city.

This Commercial Union movement is now generally spoken of as the "Wiman-Butterworth-Goldwin-Smith fad," and the resolutions in its favor, moved in the Parliament at Ottawa last session, having been discussed at such a length as to have been a waste of valuable time, both in the Commons and Senate, and having been rejected by an overwhelming vote, may be considered as having received their "quietus." While the few gentlemen who have kept up the agitation have spoken of the movement as "spontaneous," it is remarkable that nothing was heard of it, either in the cities or the rural districts, until Mr. Wiman, whose interests are chiefly in the United States, suddenly introduced the matter, and up to that time the question had never been discussed, and even now no proposition has come from the people or the Government of the United States to warrant the supposition that they would consent to such an arrangement, and much less would any class of the people of Canada, if properly informed on the subject, commit themselves to a policy so suicidal to their interests, and so degrading to

their ambitious aims towards self-dependence and self-government. Without anything to gain Canada would have everything to lose. The policy under which she has achieved such marvellous success, and advanced by bounds in material progress and development, would be swept away, and the benefits handed over to a foreign power, while the national instinct that binds Canada to Great Britain would be extinguished, and her birth-right to England's historic glory and renown bartered for a "mess of pottage."

It is unaccountable that so distinguished a *litterateur* as Professor Goldwin Smith, who is so strong an advocate of Imperial Federation, can be so inconsistent as to argue in favor of Commercial Union, knowing, as he must, that it will tend towards political union, and if entertained at all by the United States, would be only as a step towards annexation.

If there is to be commercial union, it must be with Great Britain, where a market is open for all our products, and by which our tariff will be left entirely in our own hands.

### Genuine Versus Quasi Loyalty.

There is a Canadian loyalty which is not necessarily British loyalty. Every tendency to separation, or independence, or towards annexation, is so far inconsistent with true allegiance to the Empire of Great Britain.

It cannot be denied that, amongst the less thoughtful and intelligent, and some flippant, self-conceited, youthful Canadians, this element is unfortunately to be found.

It commences with the indulgence of home, where, in this country, restraint is little exercised, and the child, for want of wholesome discipline, passes through childhood and school days into premature manhood with, at best, a superficial education and with most incorrect ideas of respect for superior age or experience, and exaggerated notions of self-importance.

This spirit of the American age, unless counteracted, is likely to develop into irreverence for authority and disrespect

towards all in high positions in the State. The feeling of loyalty towards our beloved Queen is quite as strong in Canada as in any part of the British Dominions amongst those who understand our relations to the throne of Great Britain, and our obligations to reverence everything belonging to our glorious ancestral history; and with the exceptions named, the loyalty of the Canadian people is both hearty and enthusiastic, notwithstanding the attempts that are made from time to time to infuse republican ideas into these thoughtless minds.

A feeling of irreverence may exist even where the defence of Canada as a Dominion may be loyally made without reference to the integrity of the Empire, or regard for the person of our gracious and beloved Sovereign.

There could be no better means of counteracting this tendency than is afforded by the Imperial Federation League. Let the principles of union with the mother-land and her colonies throughout the world, and the principle of a united empire, of which Canada forms an integral part, be instilled into the youth of Canada, and we shall soon have genuine instead of quasi loyalty.

Having witnessed many of the grandest naval and military displays in honor of Queen Victoria that have occurred during her reign, both in Great Britain and France, it is worthy of record that on every occasion the greatest enthusiasm was displayed. On the occasion of the royal visit to Paris in 1855, the great naval review at Portsmouth, and on the return of the troops from the Crimean war, at all of which the writer was present, as might be supposed, there was nothing to mar the universal devotion to the person of Her Majesty, and both in Canada and the United States, amongst all classes, the same respect has been manifested and witnessed for forty years, during which time only in one instance was disrespectful language heard. For the credit of both the civil and military services of the country, the name and words of the person and his apologists shall be ignored, and, like "The blot on the Queen's head," written in London by a Canadian of some celebrity (more, however, with mistaken than disloyal intentions),

consigned to oblivion; thus proving the universality of the esteem of all classes of her subjects, and also of those of foreign nationalities.

It is sincerely to be hoped that the increasing tendency to closer union with the mother-land, will have the effect of dissipating every feeling of estrangement, and that the day is not far distant when every child born under the British flag, whether in Toronto or Melbourne, Vancouver or Halifax, Bermuda or Heligoland, in every part of the vast British Empire, will be considered as much a Briton and citizen of Great Britain as if born within the sound of Bow Bells.

### Imperial Federation.

When the first practical movement towards the formation of an Imperial Federation League was made in Toronto there was a suspicion that underneath was a covert attempt to strike at the root of the National Policy, it being thought by some that any movement towards federation would necessitate a uniformity in the tariffs of England and her colonies.

As the question became ventilated, and British statesmen expressed their views on the subject, and with the noblest sentiments of liberality, stated in the most unequivocal terms, that the self-governing colonies would in no wise be expected to deviate from the tariff arrangements best adapted to the circumstances of each, and that the idea of Imperial Federation did not involve the necessity of any such sacrifice being made, it was found that no such idea was entertained. The immediate result of this new light being thrown on the subject was to attract persons of all political views, with the principles of the integrity of the Empire, and the union of all the colonies with Great Britain for mutual defence and general support, as their sole bond of union.

On this assurance, many in Toronto who held aloof at once entered heartily into the scheme, and, after a most enthusiastic meeting in Association Hall, on the 24th March, the Toronto branch of the Imperial Federation League was formed.

It is not intended that the Imperial Federation League shall formulate a definite policy in carrying out their principles, but to allow time and circumstances to develop the points on which all the colonies can agree to maintain the integrity of the Empire, and, at the same time, preserve their own autonomy. As the British Constitution has been firmly established, through the cumulative wisdom and sagacity of her great statesmen in past centuries, so will the question of Imperial Federation, from time to time, gradually, but surely, tend towards its grand consummation. Whether it may take the form of representation in the Imperial Parliament, or in other ways, the silken bond of union that now binds all British subjects throughout the world to the mother-land, will undoubtedly be strengthened, and whether for defence or support, for sympathy or material progress, there never was a time in the history of the British Empire when the same determination existed, wherever the Union Jack floats all around the world, to preserve intact the glorious institutions so dear to every British heart.

Right Honorable Sir John A. Macdonald, G.C.B., P.C.

"*Si monumentum requiris, circumspice.*"—On Sir Christopher Wren, St. Paul's Cathedral.

Although this distinguished statesman does not represent Toronto as a parliamentary constituency, yet there is a sense in which he represents not only this city, but every city and town in this great Dominion. Wherever trade, commerce and manufactures flourish, and beyond the limits of the centres of population, where agriculture, and all that appertains to the happiness and prosperity of a contented people, abound on every hand, Sir John A. Macdonald has raised a monument of undying fame as the leader by whose consummate skill and far-seeing and comprehensive judgment the Dominion of Canada has attained to her proud position not only as an integral portion of the British Empire, and the brightest jewel in the British Crown, but has come into prominence, before the civilized world, and in proportion to her population, has outstepped all

THE RIGHT HONORABLE SIR JOHN A. MACDONALD, G.C.B.,

(MEMBER OF HER MAJESTY'S PRIVY COUNCIL.)

*Premier of the Dominion of Canada.*

rivalry. In no city from the Atlantic to the Pacific, are the results of the great scheme of Confederation and the National Policy, with the completion of the Canadian Pacific Railway, more apparent than in this rapidly growing and prosperous centre.

It is no flattery to say that in Toronto Sir John A. Macdonald has enshrined himself in the hearts of all the loyal, unprejudiced and influential citizens as a public benefactor. Space will not admit of any enumeration of the benefits Toronto has derived directly and indirectly from the policy inaugurated by the present Government, and which has become firmly established as that which is most conducive to the interests not only of the manufacturing classes, but by creating a home market, extends its influence to the agricultural and laboring classes as well, all of which are enjoying a measure of prosperity not surpassed in any country on the face of the globe.

The visits of the Premier of Canada to Toronto are always welcome, and while he continues to guide the affairs of state with the same judicious hand, he will retain the unbounded confidence of all who have the interests of Toronto at heart, and who are willing to place these interests above all party politics and desire to maintain the integrity of the glorious empire, which has, by conferring especial distinction on our Canadian Premier, thereby honored the whole people of Canada.

From the time the writer, while yet a youth, arrived in this country, and taking no interest in Canadian politics, but observing and listening to the parliamentary debates and watching the career of the greatest men in the country, from the days of Papineau, Baldwin, D'Arcy Magee, and others, whose names are already referred to in these pages, down to the present, he soon singled out John A. Macdonald as the patriot statesman who was destined to raise his country above all party strife, and by his tact, judgment and great ability, was alone capable of fusing the conflicting elements of religion and nationality into one homogeneous confederacy, and this, with the aid of his able coadjutors, he has successfully accomplished.

The opinion first formed has never changed. Whether in opposition or power, overwhelmed with slander by his opponents or idolized by his friends, the writer always maintained that he, as the Disraeli of Canada, would raise her to the proud position she now occupies as a country enjoying the greatest possible freedom in connection with the greatest monarchy the world has ever seen.

Like the immortal Beaconsfield, whom Sir John resembles in more than one respect, he never condescended to reply to the language of vituperation so often heaped upon him, and, beyond the use of good-natured and witty repartee and the *bonhomie* of gentlemanly courtesy, allowed all the slander of his opponents to pass unheeded by.

One great characteristic of Sir John A. Macdonald is his disinterestedness, which is essential to true patriotism. Lord Bolingbroke has said, "Neither Montaigne in writing his essays, nor Descartes in building new worlds, nor Burnet in framing an antediluvian earth, no, nor Newton, in discovering and establishing the true laws of nature on experiment, and a sublimer geometry, felt more intellectual joys than he feels who is a real patriot, who bends all the force of his understanding and directs all his thoughts and actions to the good of his country. When such a man forms a political scheme, and adjusts various and seemingly independent parts in it to one great and good design, he is transported by imagination or absorbed in meditation as much and agreeably as they; and the satisfaction that arises from the different importance of these objects in every step of the work is vastly in his favor.

"But he who speculates in order to act, goes on and carries his scheme into execution. The execution, indeed, is often traversed by unforeseen and untoward circumstances, by the perverseness or treachery of friends, and by the power or malice of enemies.

"If the event is successful, such a man enjoys pleasure proportionable to the good he has done—a pleasure like to that which is attributed to the Supreme Being in a survey of His works." This pleasure is, perhaps, except the gratitude of his country, Sir John A. Macdonald's sole reward.

**Twenty-first Anniversary of Canadian Federation.**

This event was celebrated by a number of distinguished Canadians in London on the evening of 12th of July, amongst whom were Lord Knutsford, Lord Lansdowne, our late Governor-General, Sir Charles Tupper, Hon. Oliver Mowat, Sir Adam Wilson, Mr. Dalton McCarthy, M.P., etc.

The chair was occupied by Mr. McLeod Stewart, Mayor of Ottawa, and patriotic speeches were delivered, in which Canadian loyalty to Great Britain was the prominent topic, with direct reference to still closer union through Imperial Federation. Canada being at once the eldest and the youngest daughter of the Imperial house of which Great Britain is the head, received the congratulations of all the distinguished men present on the auspicious occasion.

While there are many thousands who can trace their Canadian ancestry back through more than two centuries, during which Canada has a glorious history and a long roll of heroes, yet the Canada of the Dominion is young, this year being her twenty-first birthday, and well may she feel proud of her majority. Her progress and resources are at once marvellous and infinite, while her position gives her advantages possessed by no other country.

The Dominion sits astride the civilized world. Its territories lie in the very track of one of the great lines of commerce of the future. On one side it commands the Pacific, on the other the Atlantic. It holds out one hand to the civilized West, and the other to the swarming and non-awakened East. The short way from China to Europe lies through Canadian territory; and, thanks to Canadian enterprise, it is now possible to travel from England to Australia without once leaving the shelter of the British flag.

In 1867 the provinces were isolated states, now they are a nation with enormous resources, a vast commerce, a well-organized military establishment, a splendid system of railway and water communication, and every quality except population, which is required for a great and powerful state. Canadian

enterprise and ambition have risen by leaps and bounds since the opening up of the magnificent territories of the North-West.

For many years to come Canada need not fear to receive the influx from the old world, or even from the more thickly settled portions of the new ; she still retains her supremacy in the fisheries and forests. The Canadian Pacific Railway has opened up a wheat field millions of acres in extent, and at a bound the Dominion has become one of the granaries of Europe.

The ranching regions will soon come to rival Texas or Queensland in cattle. Nor are the resources of the West limited to agriculture and pasture. Gold and almost every other metal are found in abundance, and an inexhaustible supply of coal.

With all these advantages, it will be impossible to stay the progress of this great and glorious country.

**Honorable Oliver Mowat, Q.C., LL.D., Attorney-General and Premier of Ontario.**

Rarely has it occurred that the leader of any Government has held office for a period of sixteen years without a break, and yet so great has been the popularity of the Premier of the Province of Ontario that such is his record, and it would seem that his continuance in power depended entirely on his own will in the matter.

Having been Provincial Secretary in 1858, he became Postmaster-General in 1863 ; was a member of the Union Conference for the Confederation of the British Provinces in 1864, and was appointed Vice-Chancellor of Upper Canada the same year. He resigned this office in 1872, on being called upon to form a new Administration in the government of Ontario, and was sworn in as a member of the Executive Council and Attorney-General.

His unswerving loyalty to British institutions, and his advocacy of the integrity of the Empire, have marked his public career, and been expressed on all public and official occasions, especially during the late Jubilee celebrations and on his late

(REUTERS)—Published by permission of William Bryer, from his Copyright picture.)

NEW PARLIAMENT BUILDINGS, TORONTO.

visit to Britain. His patronage of all religious and benevolent enterprises has gained him the reputation of being emphatically "The Christian politician." His manner is both courteous and dignified. As a debater he is concise, argumentative, and convincing. His language is well chosen, and, without any special claim to oratory, he has the faculty of holding the attention of his listeners, whether on the side of the Government or in Opposition. The subjects of debate being more provincial than national, and more local than general, limit, to a certain extent, his scope for eloquence, and it may be safely asserted that had he a wider field he would show himself equal to every occasion as a statesman of great ability.

The name of Oliver Mowat will be identified with the history of Toronto for all time to come, if only in connection with the erection of

#### THE NEW PARLIAMENT BUILDINGS

commenced during his administration, and now rising in their magnificent proportions in the Queen's Park, and will, when completed, be a fitting Capitol to accommodate the assembled wisdom of the premier Province of this great Dominion.

The buildings will be of great architectural beauty, of the style known as the Neo-Greek. The outside walls will require 200,000 cubic feet of cut stone, and there will be used thirteen millions of brick. The building will be 512 feet long, by a depth of 276 feet, and 190 feet in height. The legislative chamber will be 112 by 80 feet, with a ceiling 52 feet high.

To the Mowat Government is due the credit of having decided on Credit Valley stone—so near our doors—and also having contracted for the whole building on terms combining economy with grandeur and solidity. The cost will be about \$1,250,000. The building will be completed within three years.

#### Population of Toronto.

Polk's Directory for 1888 computes the population at the beginning of the year to be 153,078, and if this be correct, it may be safe to say that at the end of the year it will reach 160,000.

The number of names in the Directory is 55,354 in the city proper, of which 51,026 are individual names, which are supposed to represent an average of three inhabitants to each, making the above total.

The growth of the city population for the past ten years has been rapid, as is shown by the increased number of names published in the Directory from year to year, as follows:—

1879—20,226.	1884—36,359.
1880—21,119.	1885—39,409.
1881—23,166.	1886—41,287.
1882—23,879.	1887—45,220.
1883—35,592.	1888—51,026.

From the above figures it may fairly be expected that the prediction ventured two years ago, that in 1896 the population of Toronto will reach 250,000, will be realized.

### Imports and Exports.

The Imports and Exports of Toronto for year ending 30th June, 1888, were as follows:—Value, \$19,950,533; Duty, \$3,961,755; Exports, \$3,562,090.

### Toronto Board of Trade.

OFFICERS OF THE BOARD FOR 1888.—*President*, W. D. Matthews, jun.; *1st Vice-President*, D. R. Wilkie; *2nd Vice-President*, J. J. Davidson; *Treasurer*, George Maclean Rose; *Secretary*, Edgar A. Wills; *Council*, Hon. John Macdonald, W. Christie, W. R. Brock, W. Ince, Hon. James Patton, Elias Rogers, E. Gurney, Hugh Blain, H. N. Baird, W. B. Hamilton, R. W. Elliot, Robt. Jaffray, A. M. Smith, A. B. Lee, S. F. McKinnon; *Board of Arbitration*, W. D. Matthews, jun., Elias Rogers, L. A. Tilley, W. Galbraith, G. M. Rose, J. D. Laidlaw, B. Cumberland, J. H. G. Hagarty, Thos. Flynn, J. L. Spink, John Earls, R. S. Baird; *Representatives on Harbor Commission*, A. M. Smith, G. A. Chapman; *Representatives on Industrial Exhibition Association*, W. B. Hamilton, J. D. Laidlaw, H. W. Nelson; *Solicitor to the Board*, W. H. Beatty.

Total membership, 1st June, 1888, 915. Income last year, \$10,274,35; expenditure, \$5,973,04; balance on hand, \$7,095,78.

Arrangements are now being made to erect a Board of Trade building, which will be an ornament to the city. The site of the new building is the north-east corner of Yonge and Front Streets, now known as the American Hotel. The property has cost \$55,000, and the estimated cost of the building is \$200,000.

### Foreign Consuls in Toronto.

Total Value of Assessable Property, 1887.....	\$83,259,533
Increase.....	\$14,350,467
Total Estimated Expenditure.....	\$4,115,894

### British Telegraph Around the World.

To have telegraph communication between Great Britain and her possessions in every part of the world, independent of foreign control, is a desideratum likely soon to be enjoyed. In January last, Mr. Norman, the commissioner of the *Pall Mall Gazette*, on his way to Japan, standing on the shore of the Pacific Ocean, held an hour's conversation with his chief at a distance of over 7,000 miles, and the communication, which thirty years ago would have taken three to four months to make, was accomplished in four minutes, over a circuit of 15,000 miles. The wire outstripped the sun by eight hours,

the time being one o'clock in the afternoon at Vancouver, when it was nine o'clock at night in London. In one of the messages Mr. Norman said, "I can see the Pacific as I write. In a few days I shall start for a four thousand mile voyage in another English ship—the *Parthia*—over another ocean, yet I am able to report myself to you as quickly and easily as if we were speaking through a tube at our office."

A consultation is now going on between Mr. Owen Jones, one of the directors of the Pacific Cable Company, and Mr. Sandford Fleming, on the laying of a cable from Vancouver to the Hawaiian, Friendly, and Fiji Islands, New Zealand and Australia. Mr. Jones says the project meets the heartiest approval of all the Colonies. The electric wire will then stretch round the world in British territory; distance will disappear, and space no longer intervene as a barrier between the ocean-sundered members of our Imperial family.

### The Late Emperor Frederick.

"Great, valiant, pious, good, and clean,  
 Sublime, contemplative, serene,  
 Strong, constant, pleasant, wise,  
 Bright effluence of exceeding grace!"

—*Christopher Smart.*

Twice in these pages has the name of this great and good man appeared. When in the pride of youth and manly beauty in 1857, the writer saw him with his affianced bride in the Royal procession to the Art Treasures Exhibition in Manchester, and only last year as he was the "observed of all observers" in the cavalcade of Princes at the Jubilee celebration, as the procession moved towards Westminster Abbey, and now, alas! within so brief a period, the civilized world is called upon to mourn his loss.

A hero in war, Emperor Frederick was a promoter of peace; brave as a lion, gentle as a lamb. The kind and loving husband, the indulgent father, and obedient son; patient in suffering, unselfish and considerate, he never swerved from his duty as an Emperor and ruler of a great nation, even while suffering

than three years after his visit to Toronto, brought home his young bride, Alexandra of Denmark—the Princess so much beloved ever since.

The Princess left her Danish home on February, 26th, 1863, followed by all the tokens of a people's love. From all the houses on the way from the Amalienborg Palace to the station waved the flags of England and Denmark: the streets were thronged, there was a rain of flowers from every window, the soldiers and militia turned out to do her honor, and mayors and burgomasters were eloquent in their addresses to the Daughter of the Land who was leaving them.

The Princess, accompanied by her father and mother, the King and Queen of Denmark, embarked at Antwerp, on March 4th, in the royal yacht *Victoria and Albert*, with a guard of honor of English war-ships.

At Gravesend the Princess first set foot on English ground, and here the Prince of Wales was awaiting her. He went on board the yacht, and as he reached the deck Princess Alexandra advanced to the door of the state cabin to meet him. His Royal Highness, with a quick step, proceeded towards the doorway, and, taking his bride by the hand, with a natural impulse gave her a warm lover-like kiss.

From Gravesend a special train took them to the Bricklayers' Arms Station. Then six carriages—in the last of which were the Prince and Princess, with her father and mother—took them right across London to the Great Western Station at Paddington; a wonderful drive through the multitude which thronged the streets, and was itself almost the most amazing sight the world could show, the crowds numbering millions of the people. The scene at London Bridge was beyond rivalry; as the carriages arrived on the bridge the Danish members of the suite involuntarily rose from their seats and gazed at the tremendous spectacle, which was formed purely of the people, who crowded every building from the ground to the roofs, and were massed along the quays on both sides of the river, and thronged the shipping in the Pool to the right of the bridge. As the Princess' carriage appeared, such a terrific

shout burst forth that she was for the moment alarmed, but the Prince quickly reassured her. None who were present will ever forget the swaying masses at the Mansion House—the swarming crowd swallowing up the scanty guard of troopers and police, and surging round the carriage.

The City had made a magnificent display; clothed with streamers and rich hangings, the myriad masted ships all bunting, the bridges a mass of flags and flowers. Along Cheapside, through old Temple Bar (since removed), and so by Trafalgar Square and the splendid streets of the West End, to Hyde Park; seventeen thousand volunteers were drawn up four deep on each side along the route through the Park. These were the early days of the volunteer movement, and the sight was a novel and splendid one.

The marriage was celebrated in St. George's Chapel, Windsor, on the 10th March. The scene was splendid and the procession magnificent. There were old statesmen in the rich robes of Knights of the Garter, great warriors in their uniforms, foreign princes, with the Indian Maharajah Dhuleep Singh, one blaze of diamonds, the great dignitaries of the land and of the city, and the Royal families; the eight beautiful bridesmaids "being unmarried daughters of dukes, marquises and earls," and, observed of all, the mother of the Prince—the widowed Queen in her dress of simple black, attended by her ladies in deep mourning.

Fanfares of the trumpets had sounded as the different processions filed into the chapel, but as the Prince entered—looking royally in his purple mantle, and bowing low as he passed the Queen, in a private pew, high up in the building—the music burst forth in a triumphal march. Then the sound of the trumpets heralded the coming of the bride, and the Princess appeared clad all in white, and, as a picturesque reporter said, "a prettier Princess and a more gallant young Prince were never seen out of a fairy tale." The Archbishop of Canterbury performed the ceremony, and after breakfast in St. George's Hall, the royal pair started for the honeymoon, which was spent at Osborne, in the Isle of Wight.

That night London was illuminated, the theatres were thrown open to the people, and throughout the United Kingdom there were general rejoicings—children were fêted, the poor were feasted, and special demonstrations were made in every city and town in Great Britain.

With such happy auspices began a union which, in 1888, has so happily reached its twenty-fifth anniversary; thus was commenced a quarter of a century of united public and domestic life and work. During the twenty-five years the love of the English people for their idol has not in the least diminished. Her beauty of person, and charming manners, have captivated all hearts, and the home-life of the family at Sandringham Hall is a model of domestic happiness and enjoyment.

The silver wedding was celebrated with much heartiness, and in a variety of ways. A sum of over \$10,000 was contributed by the British Colonies to purchase a gift as a memorial of the happy event.

The writer has a pleasing recollection of having seen the Prince and Princess of Wales, with their first-born, drive from Marlborough House on an afternoon, when, with the baby on her knee, the charming Princess displayed at once her motherly love and unaffected simplicity by dispensing altogether with nurse or attendant; and by such ways has she won the love and affection of all hearts at home and abroad.

#### Sir Charles Tupper's Budget Speech.

The masterly exposition of the financial position of the country in 1888, delivered by Sir Charles Tupper at the last session of Parliament, and to which the writer had the pleasure of listening, must have convinced every unprejudiced mind of the marvellous progress of the Dominion. Without the slightest effort after oratorical effect, the prosperous condition of all the industries of the country was stated with perspicuity and clearness, and the most indubitable evidence produced from the reports of the "Captains of Canadian industry" in every department. The iron trade, with its smelting furnaces,

locomotive works, and rolling mills, all were in steady progress, while the cotton and woollen manufactures were reported to be in a healthy and flourishing condition, but no facts or figures can afford as conclusive evidence of general prosperity as the returns of deposits in the Post Office Savings Banks; and for the information of persons abroad they are here given, to show the marvellous progress of the Dominion during the past few years:—

YEAR.	DEPOSITORS.	ON DEPOSIT.
1878.....	25,535.....	82,754,484 03
1879.....	27,445.....	3,105,190 80

### Queen Street in 1888.

While King and Yonge Streets still maintain their superiority in point of fine buildings and splendid stores and warehouses, Queen Street is rapidly assuming an important position as a leading thoroughfare and business centre. While Yonge Street may boast of her almost indefinite length to the northward, and has already extended her improvements and progress by the absorption of Yorkville and Deer Park, Queen Street is, at least to the eastward, capable of still more indefinite expansion. Having already absorbed the village of Leslieville, from the Woodbine to the Humber Bay, the distance is about seven miles in a straight line, and is a continuous street of brick and mortar, except at the extremities, where there is still room for filling up. There cannot, however, be less than five miles of stores and houses along the route, and the modern erections in the shape of blocks of buildings are of a very imposing character, while the proposed new buildings, which will have

W. H. TAYLOR DEL. 1852.

TRINITY COLLEGE, QUEEN STREET WEST.

their principal approaches from Queen Street, will enhance the attractions of the street. Already the front view of the Metropolitan Church and square, the Orange Hall, Osgoode Hall, and a number of churches, add much to the grandeur of the view; while in the near future will be added the splendid front of the new City Hall and Court House, in the centre of a square, which will become a thing of beauty in the centre of the city, the selection of the site having been of a most favorable character; and above all will be the magnificent view of the Queen Street Avenue, which from this point extends to the Queen's Park, and which in point of beauty is not surpassed by any drive in the world, the foliage of the magnificent trees in the summer time affording a grateful shade to the pedestrian, as well as to those who ride on horseback or drive in carriages. This view extends to the new Parliament Buildings, which will soon rise in their grand and beautiful proportions, and will undoubtedly elicit the admiration of all visitors to our city. Proceeding westward, Trinity College with its beautiful grounds is passed, and still farther the thriving village of Parkdale, at present adjoining Toronto, is to a stranger a continuation of the same, but soon to be annexed, as is the inevitable destiny of all suburban towns contiguous to great and growing cities.

#### Vancouver, British Columbia.

While Toronto holds her central position in the great Dominion, she can afford to rejoice in the prosperity of her sister cities on the line of the great inter-oceanic highway from the Atlantic to the Pacific. The young city of Vancouver must in future be a place of great importance to the city of Toronto, as already in her harbor, by every steamer from Japan, are arriving large shipments of goods, especially tea, on C.P.R. through bills of lading to Toronto, the freight of which is only two and a-half cents a pound, thereby reducing the cost to a minimum; as there is no duty, we may be said to have a free breakfast and tea-table. And thence are shipped thousands of bales of Canadian cottons, which pass near our

city, indicating the incredible progress already made towards the fulfilment of the trade anticipated in a previous article. As to Vancouver itself, a year ago it consisted of a dozen straggling huts. The present population is 8,500; the main street, built through the virgin forest, as it stood a year ago, is flanked by granite blocks, having altogether twenty-four miles of streets—the stumps of the trees having been blown out by dynamite. The town is lighted by electricity; there is semi-weekly communication with China and Japan by steamship, and very shortly it is expected that the mails for the United States and Canada will pass through her post-office for distribution all over the continent. It is believed there is no record of the building of a similar town, with all the improvements of modern civilization, within so short a space of time.

**Cabinet Ministers of the Dominion, 1888.**

<i>Premier</i> .....	Right Hon. Sir John A. Macdonald, G.C.B., P.C.
<i>Minister of Public Works</i> .....	Hon. Sir Hector Langevin, K.C.M.G., C.B.
<i>Minister of Finance</i> .....	Hon. George E. Foster.
<i>Minister of Railways and Canals</i> .....	Hon. John H. Pope.
<i>Minister of Customs</i> .....	Hon. Mackenzie Bowell.
<i>Minister of Militia and Defence</i> .....	Hon. Sir Adolphe P. Caron, K.C.M.G.
<i>Postmaster-General</i> .....	Hon. John G. Haggart.
<i>Minister of Agriculture</i> .....	Hon. John Carling.
<i>Minister of Inland Revenue</i> .....	Hon. John Costigan.
<i>Secretary of State</i> .....	Hon. F. A. Chapleau.
<i>Minister of Interior</i> .....	Hon. Edgar Dewdney.
<i>Minister of Justice</i> .....	Hon. Sir John S. D. Thompson, K.C.M.G.
<i>Minister of Marine and Fisheries</i> .....	Hon. Charles H. Tupper.
<i>Without Portfolio</i> .....	Hon. Frank Smith.

Hon. Sir Charles Tupper, Bart., G.C.M.G., C.B., has resumed his official position as High Commissioner for Canada in London.

**Street Extension.**

At the end of 1887 the total mileage of streets was 195, being an increase in two years of twenty-nine miles. There are now sixty-five miles of block-paved streets, showing an

increase of twenty-one miles. There are fifty-six miles of Macadam, and the remainder consists of cedar and gravel, graded or unimproved streets.

This report is a good index to the general growth and expansion of the city, notwithstanding the complaints of tardiness on the part of the Board of Works, which are sometimes heard, and the comparisons made between the state of our streets and those of such cities as London, Liverpool, or Manchester, always to our disadvantage. It ought to be known, however, that the chief difference consists in the cost, both of making and repairing the streets. The actual cost of the London pavements is said to be £100,000,000 sterling, or \$500,000,000, this sum being invested in 7,000 miles of streets. According to our proportion of population and street mileage, Toronto will have to expend one thirty-fifth as much as London, or about fourteen millions of dollars, to attain to the same degree of perfection. If our municipal authorities receive from the citizens *carte blanche* to adopt the best material for pavements, to place that material on the most improved bed or foundation, without any restriction as to cost, and when done, to employ men whose constant attention shall be devoted to the repairing of the streets, by never allowing a single imperfect block, either of wood or stone, to remain, but by immediately substituting another; and lastly, by adopting a perfect system of scavenging at night, then, and not till then, shall Toronto have streets as perfect as the cities named, and all the other principal cities in Great Britain.

In addition to this, the city fathers must have power to use their best judgment as to the best kind of pavement on every street in the city and for every sidewalk, without being hindered or delayed by the opinions of private individuals, on the principle that the public highways are for public accommodation, and the expense should be borne by general taxation. In no other way can beauty and uniformity of the streets be secured, and obstruction and delays in improvements prevented.

The extension of the street railway system has kept pace with the extension of the streets, and it is expected that in

the near future electricity will be utilized for still further adding to present facilities for reaching the outlying districts and suburbs, where buildings are rapidly rising and new streets are being opened up, so that every class of the citizens can, at a trifling expense, reach their homes for many miles round the city. In addition to these advantages a belt railway for a circuit of fifteen miles, with stations at close intervals, would complete the accommodations of our rapidly filling city, and, at the same time, enhance the value of property everywhere within this radius.

### Toronto the Centre of Inland Navigation.

Having spoken of Toronto as a railway centre, it would not be doing justice to her claims not to say something of her exceptionally advantageous position as a centre of water communication. To those who have never actually travelled on our lakes it is difficult to convey a correct idea of the vastness of these inland seas. To give figures would not be so illustrative of the immense extent as simply to state, what has often been done before, that Lake Superior would contain the whole of England. This being the upper in the great chain of lakes, and Ontario the lowest, whether for business or pleasure the traveller can take passage on a splendid steamer and make a trip westward for a thousand miles on fresh water, while he can go as far east as the Atlantic Ocean. Such are the facilities for water travel during the season of navigation that the pleasure seeker or tourist in Toronto may choose any length of voyage, to innumerable pleasure resorts, from one mile to one thousand, at a very moderate cost, and in the most comfortable manner. The magnificent steamers of the Canadian Pacific Railway Co., though not leaving the port of Toronto, may be reached by rail in a few hours, and the luxury of water travelling enjoyed to perfection.

It is to be hoped that the day is not far distant when Toronto shall not only be the centre of inland navigation, but, by the enlargement of the canals, ocean vessels of sufficient

tonnage will be seen arriving at our wharves, with unbroken cargoes from Liverpool, London, and Continental ports. When that time comes the Queen City will possess advantages for commerce, both in the shape of exports and imports, unsurpassed on the continent of America.

### Freight Traffic in Toronto.

As an evidence of the increase in the collection and delivery of freight in Toronto, the number of horses employed in connection with railway business is here given:—

In 1857, Hendrie & Shedden employed . . . . .	28
In 1888, Hendrie & Co. employed . . . . .	100
In 1888, Shedden Co. employed . . . . .	138
In 1888, Dominion Transport Co. employed . . . . .	74
	312
	28

Above are exclusive of horses employed by city expresses, of which the number is legion, and which had no existence in 1857.

### Comparative Expense of Living in Canada in 1878 and 1886.

Comparing forty classes of skilled workmen, the result is that the wages received in 1886 averaged 25 per cent. higher than in 1878. The wages of unskilled labor show an increase also of 25 per cent. In 1878 the wages for skilled workmen were \$1.77<sup>8</sup>/<sub>100</sub> per day; in 1886, \$2.22<sup>5</sup>/<sub>100</sub> per day; increase 25 per cent. For the general workman in 1878, \$1.37<sup>1</sup>/<sub>100</sub> per day; in 1886, \$1.72<sup>1</sup>/<sub>100</sub> per day.

As to the prices of the necessaries of life, an enquiry into thirty different articles of food and drink showed the purchasing power of one dollar had increased twelve and a-half per cent., as compared with 1878. For example, with a dollar you could buy one-third more sugar than in 1878; of tea, one-fifth more; of oatmeal, one-fifth more; of other articles about as much in 1886 as 1878. The wages had therefore increased, so that the man who, in 1878, earned \$530, can now earn \$663,

the result being \$133 more with which to purchase the necessaries for his family than in 1878. These facts are based on the assumption that in 1878, as well as 1886, the workman received steady employment.

**New Buildings in Course of Erection, or Lately Completed, in Addition to those Already Enumerated.**

St. Paul's R. C. Church.	House and Hospital of Sisters of St. John.
Eastern Baptist Church.	Mr. F. Torrington's New College of Music.
Spadina Ave. Methodist Church.	Rice Lewis & Son's Warehouse.
Bathurst St. Methodist Church.	Buntin, Reid & Co.'s " "
Dovercourt Road Baptist Church.	W. Warwick & Sons' " "
Western Congregational Church.	Ontario Rolling Mills.
Immanuel Baptist Church.	Western Collegiate Institute.
St. Helen's, Brockton, R.C. Church.	Victoria Skating Rink.
London and Canadian Loan and Agency Company.	Gas Company's New Works.
School of Science and Biology.	Masonic Hall Buildings.
Toronto Club.	

During the year a number of fine wholesale warehouses have been erected on Front, Bay, Colborne, and Scott Streets.

**PROPOSED NEW BUILDINGS.**

Board of Trade Buildings.	Building for Toronto Union Mission.
Hospital for Sick Children.	North-Western Fire Hall.
New Upper Canada College.	

The rapid development of the city outside the fire limits renders it impossible to obtain accurate information as to the number and value of the buildings going up. Some of the most splendid specimens of residential architecture in this "city of homes" are now rising beyond the limits within which building permits are necessary to allow of their erection. Never in the history of Toronto have private residences been designed after so substantial and tasteful a fashion. Fronts of brown stone and pressed brick, with beautiful grounds, are

to be seen everywhere on the outskirts of the city, costing treble what would have been expended five years ago.

It may, however, be said that the number of buildings in course of erection far exceeds that of any previous year, and as only an approximate estimate of their cost can be given, it

BRITISH AMERICA ASSURANCE COMPANY.

(Established 1855.)

J. MORRISON,  
*Governor.*

JOHN LEYS,  
*Deputy Governor.*

J. H. EWART,  
*General Agent for Canada.*

is safe to say that the expenditure on buildings at present under contract will reach to from eight to ten millions of dollars. The Assessment Commissioner reports that the assessed value of property for 1889 shows an increase of fifteen millions of dollars over 1888.

**Lord Stanley's First Visit to Toronto.**

In compliance with the request of the Industrial Association, that the Governor-General would open the annual Exhibition, Lord Stanley paid his first visit to Toronto.

The viceregal party, consisting of Lord and Lady Stanley and four sons, Miss Lister, Hon. Capt. C. Colville, and Lieut. McMahon, A.D.C., arrived in Toronto on the morning of the 10th September, and were met at the Union Station by Mayor Clarke and the members of the Reception Committee. At the special request of His Excellency a guard of honor was dispensed with, and the military were represented by Colonels Otter and Gray. Amid the cheers of the assembled citizens the distinguished party drove to their quarters at the Queen's Hotel, where they remained as guests during their stay in the city.

The favorable impression produced by the intercourse of Lord and Lady Stanley with the people since their arrival in the country—while enjoying their leisure in the Province of Quebec, endearing themselves to all classes, and especially to the French Canadians, who were delighted to find that the new Governor-General was proficient in French conversation—had prepared the citizens of Toronto to give them a right hearty reception, and, with a spontaneousness worthy of her previous record, the Queen City left nothing undone to show her loyalty to the representative of Her Majesty, and, at the same time, demonstrate the high esteem in which Lord and Lady Stanley, personally, were held.

While a long line of illustrious men have filled the high position of Governor-General, Lord Stanley suffers nothing by comparison with any or all who have preceded him, and while making no effort at brilliant oratory, his easy, dignified style of address and his comprehensive views of every subject which he touched in replying to the various addresses, expressed in chaste and beautiful language, and with great felicity of terms, commended themselves to the judgment and found a response in the hearts of all who listened to him, in a way that none

of his predecessors have excelled; while his kindness of manner and benevolence of countenance have left an indelible impression on all who have heard or seen him.

The time allotted to the visit to Toronto was limited to two days, and was fully occupied. On the first day addresses were presented by the bishop, clergy and lay representatives of the Synod of the Diocese of Toronto, followed by St. George's Society, the Methodist Conference, the Sons of England, the Army and Navy Veterans, and the St. Andrew's Society. In the afternoon His Excellency paid a visit to the Board of Trade's rooms, where he was also presented with an address. The day was wound up with a display of brilliance and enthusiasm never before excelled on any occasion, in the city. The Horticultural Pavilion—in a blaze of illumination—was the place chosen in which to present the civic address, and, surrounded by the representatives of the civil and military organizations—the latter in full uniform—with the thousands who crowded the immense building, Mayor Clarke read the address, to which His Excellency replied in most felicitous terms, expressing on this as on every other occasion the pleasure and gratitude felt by himself and Lady Stanley with the cordiality of their reception. The streets through which the procession passed were gay with flags and illuminations, and everything throughout the day and evening passed off with great eclat, and will long be remembered as a red-letter day in Toronto.

The great event was the opening of the Exhibition on the 11th, at half-past two o'clock, previous to which His Excellency received and replied to an address from the Irish Protestant Benevolent Society at the hotel, and also from the President and Faculty of the University, which was visited by the viceregal party. From this they visited Osgoode Hall, the Educational Department, and Public Library.

Immense crowds attended the opening ceremony of the Exhibition, where His Excellency was escorted by "C" Company of Infantry and the Governor-General's Body Guard. The address of the Industrial Association was read by Mr. J.

J. Withrow, the President, and was replied to in appropriate language and terms of the highest admiration of the progress and prosperity of Toronto and the Dominion generally. After a careful inspection of the exhibits the viceregal party proceeded directly to the residence of Alderman Hallam, where an address was presented by a large number of "Lancashire lads and lasses," to which His Excellency replied in happy language. The grounds were beautifully illuminated, and amid a display of fireworks the party withdrew.

A dinner at Government House, to which representative men in every department were invited—after which a test of the fire brigade was witnessed from the Rossin House—wound up the day's proceedings.

The feeling is universal that Lord and Lady Stanley may always anticipate a like cordial welcome whenever they may visit the metropolis of Ontario, as both have won all hearts by their urbanity and unostentatious manner on every occasion during their visit. The party left for Kingston on the morning of the 12th, amid the enthusiastic cheers of the multitude.

### The Christian Institute.

The building in which the work of the Christian Institute is to be carried on has just been completed, and, in point of architectural beauty and internal arrangements, is not only a valuable addition to our numerous philanthropic and benevolent institutions, but a credit to its founder and an ornament to the city. The object of the Institute is to develop an interest in the study of the Scriptures, and to foster and encourage amongst its members, of both sexes, a missionary spirit, and, by the free use of reading room, library, and missionary museum, cultivate a religious and literary taste, with a view to practical missionary work, both home and foreign. The arrangements are very complete as regards class rooms, reading rooms, lavatories, together with a large lecture hall capable of seating 400 people. The inception of the undertaking is mainly due to Mr. Alfred Sandham, for many years

CHRISTIAN INSTITUTE.

Secretary of the Young Men's Christian Association, who will be the Secretary and Manager. The expense of the building, which amounts to \$30,000, has been entirely defrayed by Mr. William Gooderham.

### **Retaliation and the Bonding System.**

In reading President Cleveland's message, issued on the rejection of the Fisheries Treaty by the United States Senate, where he speaks of our ports being frozen in winter, one might suppose that he was living before the bonding system was first introduced, and to which full reference is made in a previous chapter, and in which the writer took an active interest at the time, when Canadians were, for want of railroads, confined to the St. Lawrence route. But it is almost incredible that a gentleman in his high position should not be aware of the marvellous change that has taken place. Our railroad connections with the seaports of St. John and Halifax have revolutionized the whole import and export trade, and find Canada to-day entirely independent of United States ports, so that the immediate effect of retaliation would be to injure the United States trade in the same proportion that the Canadian business would be built up and increased. Some of the English papers have fallen into the same error as the President regarding our winter connections, and the present agitation must prove of immense benefit by enlightening the world as to our present geographical position; and the ventilation of the whole question will undoubtedly redound to the welfare and prosperity of this great Dominion, and develop her strength and independence.

President Cleveland ought to know that had our present railway facilities existed at the time, Canadians never would have gone to Washington to ask for the privilege of allowing British and foreign goods to pass through that country in bond—something that then was a necessity; nor would the ports of New York, Boston, and Portland, have had the trade from which they have enjoyed so rich a harvest these thirty years;

and had not the State of Maine, by a diplomatic blunder, been allowed to project itself across our legitimate path, we should now have the shortest route to the seaboard, in addition to those already possessed by Canada.

When a line of steamers shall be placed on the Atlantic route, from the nearest Canadian and British points, that will make the passage in four and a-half to five days, not only will both the freight and passenger traffic be diverted from New York and Boston, as far as Canadian passengers and freight are concerned, but also United States passengers and shippers from the West will assuredly give a preference to what will be the shortest sea route from America to Europe, and *vice versa*.

#### Number of Immigrant Arrivals and Settlers in the Dominion from 1876 to 1887.

YEAR.	IMMIGRANTS.	SETTLERS.	YEAR.	IMMIGRANTS.	SETTLERS.
1876	36,549	25,633	1882	193,150	112,458
1877	32,285	27,082	1883	206,898	133,624
1878	40,032	29,807	1884	166,596	103,824
1879	61,032	40,492	1885	105,096	79,169
1880	85,850	38,505	1886	122,581	69,152
1881	117,016	37,991	1887	175,379	84,526

#### Industrial Fair and Agricultural Exposition, 1888.

**PATRONS**—His Excellency the Governor-General; Hon. John Carling, Dominion *Minister of Agriculture*; Hon. C. Drury, *Minister of Agriculture* for Ontario. **OFFICERS**—John J. Withrow, *President*; W. F. McMaster, *1st Vice-President*; Wm. Rennie, *2nd Vice-President*; H. J. Hill, *Manager and Secretary*; James McGee, *Treasurer*. **Board of Directors**—Wm. Christie, D. C. Ridout, W. B. Hamilton, A. Smith, R. Davies, Geo. Booth, W. S. Lee, P. G. Close, Col. John Gray, James Crocker, J. E. Mitchell, R. W. Elliot, Geo. Leslie, jun., Ald. E. W. Barton, Ald. J. B. Boustead, B. Saunders, G. Vair. **Honorary Directors**—The Mayor of Toronto, Ald. J. McMillan, J. H. Pearce, W. H. Storey, J. P. Bull, C. Bonnick, J. P. Edwards, Fred. Nicholls.

The Exhibition of 1888 has been in every sense a complete success; the receipts have been \$59,354, showing an increase over 1887 of \$7,455. The benefit derived from these annual exhibitions by the city is incalculable, and the interest increases year by year, so much so, that Toronto bids fair to monopolize the advantages due to her central position, and exhibitors will be saved the loss of time and expense and inconvenience of moving their exhibits from place to place, while visitors will gain by the superior attractions offered by a grand display in Toronto, more than the difference in expense from visiting their local fairs. Indeed, such is the rapid progress being made by our city in all material prosperity, and the convenience of her central position and facilities for communication to and from all parts of the world, that the day is not far distant when she may undertake to invite the co-operation of our sister colonies to get up a second Indian and Colonial Exhibition, and even one of an International character; the only difficulty that might be anticipated being the want of sufficient accommodation for the millions who would visit our city, but if continued for the usual period of six months even that might be provided for. Should the Prince and Princess of Wales consent to open such an Exhibition in Toronto, there is no doubt whatever of its success.

#### Council of the Corporation of Toronto, 1888.

*Mayor*—Edward F. Clarke, Esq., M.P.P.; *Aldermen*—Messrs. Barton, Baxter, Bell, Boustead, Carlyle (St. Andrew's Ward), Carlyle (St. Thomas' Ward), Denison, Dodds, Drayton, Fleming, Frankland, Galbraith, Gibbs, Gilbert, Gillespie, Hallam, Harvie, Hewitt, Hill, Irwin, Johnston, Jones, Macdonald, Maughan, McDougall, McMillan, Morrison, Pells, Piper, Ritchie, Roaf, Shaw, St. Leger, Swait, Verral, Woods. *Executive Committee*—Alderman McMillan, *Chairman*, Messrs. Carlyle, (St. Thomas' Ward), Denison, Dodds, Fleming, Galbraith, Gillespie, Harvie, Irwin, Johnston, Morrison, Roaf.

**Imports of Coal to Toronto for Year ended 30th  
June, 1888.**

Anthracite, 320,257 tons; bituminous, 192,463 tons; total, 512,720 tons.

Forty years ago the only coal used in Toronto was for blacksmith purposes, showing the vast increase of our manufacturing industries. By the removal of duty off anthracite coal, these industries are greatly encouraged, while private consumers have the benefit of a reduction in price of one of the chief necessities of life.

Should a policy of retaliation be enforced by the United States, the whole value of this coal, amounting at retail prices to over three millions of dollars in Toronto alone, would be kept in the country by the development of Canadian coal mines, which are amply sufficient to supply all our wants.

**Toronto's Police Force and Citizen Soldiers.**

In the days of Toronto's comparative innocence, referred to in a previous chapter—before Captain Prince, with the iron rod of military discipline, compelled the policemen to polish their boots, wear white cotton gloves, and button their coats up to the throat; when peaceable and order-loving citizens were permitted to stand or walk wherever they pleased, and the order to "move on" was unknown—a dozen policemen were considered sufficient to guard the lives and property of the citizens. It must be admitted, however, that in proportion to the population, the amount of crime was fully as large as at present. The Brookes' bush gang for years kept the eastern part of the city in terror, committing robberies, and even murders, as well as every other species of crime, and such a state of lawlessness existed as under the present system would not continue for many days. No doubt many minor offences were allowed to pass unnoticed under the free and easy system then existing, and the guardians of the peace, while by no

means countenancing crime, might frequently be found fraternizing with the citizens in a way that at present would shock the feelings of the advocates of the Fleming by-law; and many frequenters of taverns, especially of the better class, found the arm of a friendly policeman his only support while reaching the home which, unaided, he could not find. As every policeman was personally known, and belonged to the city, this kindly feeling was not to be wondered at.

This semi-military system was continued under the *regime* of Major Draper, and is now under the present Chief, Lieut.-Col. Henry James Grasett, late of H.R.H. the Prince of Wales' 100th Regiment. Whether the drill in firearms will prove advantageous, or is compatible with the ordinary duties of a police-constable, except for self-protection, is very questionable. A strict *surveillance* exercised over citizens, by the men whom they pay for the benefits of protection of life and property, may engender a feeling of antagonism that ought not to exist. While the police are representatives of laws made by the citizens, and on this ground ought to receive their support, a partial administration of the law is worse than none at all, and as common law is said to be common sense, an injudicious officer may bring reproach on the whole body.

The system carried on at present by Sir Charles Warren in London has brought discredit on the whole body of the Metropolitan police, which hitherto has been proverbial for politeness, and the firm, and yet considerate, discharge of their duties, and friendly feeling with the people. This all may exist, while they may be a terror to evil-doers.

In no city are citizens prevented from waiting for cars or omnibuses—which is a matter of necessity—the kerbing in Cheapside and the Strand being lined with people for this purpose at all hours, and so of other cities; and while the law forbids the obstruction of thoroughfares, which is very proper, to show partiality in enforcing this law cannot but create bad feeling. If, while a crowd is allowed to collect in front of a window and gape at a checker-board pattern of figures, only known to the initiated, while pedestrians, both ladies and gentlemen, are forced to take the carriage-way in order to pass,

and, at the same time, in another place, a passenger waiting for a tramcar is roughly handled, then it is time to enquire whether this is performing the duties of policemen, either properly or judiciously. If the sidewalks are to be kept clear, there is abundant scope amongst habitual loiterers and loafers who, both on week-days at the corners, and on Sunday nights infest the neighborhood of our churches, where brainless, beardless boys are allowed to line the sidewalks and stare at respectable people coming out of the various places of worship. They certainly would be compelled in cities in Great Britain to "move on," or they would be moved off.

Under our present Chief of Police, and Police Commissioners, there is little danger of any overbearing conduct on the part of the men being overlooked; at the same time, the citizens have a right to look to them that every such case, when brought home to the transgressor, shall meet with prompt and condign punishment.

The police force consists of the chief, deputy chief, staff inspector, four inspectors, two sub-inspectors, thirteen sergeants, and two hundred and three men. The detective department consists of one inspector, one sergeant, five officers, and three divisional officers. Total, 235. Mounted police, who patrol the suburbs, and are ready for any special emergency, are seven in number.

The patrol system is of the most perfect character in all its arrangements. There are sixty boxes, from which instantaneous communication can be made with the central station, where are three waggons and horses and men always ready to answer every call.

The police force of Toronto is undoubtedly the finest on the continent of America, and will compare with any in Europe. Since the adoption of the helmet their appearance is similar to the British police, the uniforms being alike. In physique the Toronto men are above the average of those either in Great Britain or America, there being only two men under five feet nine inches, while a large proportion measure six feet and over.

There is only one division of city police—the College division in Dublin, whose duties lie in the vicinity of the Castle,

Bank of Ireland, and Trinity College—which is above the average of our Toronto men; the men in that division being all six feet or over.

The men have been largely selected from the Irish Constabulary, and Canadian volunteers, while some have served in the police of Glasgow and London and other cities in Great Britain, and some have served in the various regiments of the British army. They are all either English, Irish, Scotch, or Canadian. In religion, 93 are Episcopalians, 53 are Presbyterians, 62 are Methodists, 2 are Baptists, 2 are Congregationalists, 22 are Roman Catholics, and 1 Lutheran.

While the citizens must feel satisfied that such officers as Colonels Otter and Grasett have been transferred from their former positions in our volunteer regiments to equally responsible places in our city, Toronto can badly spare such men who have done so much to bring the city regiments to a high state of efficiency, and who have given them a name and distinction. Such men are wanted who shall keep the standard high, and impart a high tone to our volunteers, so that they may—should the presence of regular troops, either transient or permanent, shortly result from our being on the great highway to the far East—be able to compare favorably with the rank and file; and while we cannot have men of whom our Governor-General is a noble type, we should have commanders who, by social position and environments—*"sans peur et sans reproche"*—shall secure the confidence of the citizens, and, at the same time, stand side by side with the British officers who have always combined the bravery of the soldier with the polish and refinement of gentlemen.

### The Future of Toronto.

The year 1888 is remarkable as being the bi-centenary of the revolution which placed William the Third on the throne of England, and the ter-centenary of the destruction of the Spanish Armada, but who will venture to predict the future of the Dominion of Canada in another century, or even the progress of Toronto during the next fifty years, or at the first centennial of her history?

The population of the United States is said to be 60,000,000, and that of Canada to be 5,000,000, so that if the Dominion is ever to reach to what the States are now it will require 55,000,000 of people to be added to her present population. It is evident that if this is to be accomplished, every legitimate means must be resorted to, to promote immigration to our vast uninhabited territories, where there is plenty of room for all these millions, and abundant resources of every description to supply their wants and promote their happiness. Just as the prairies of the west, and the older agricultural districts of the Dominion, increase in wealth and population, so will the towns and cities flourish in a corresponding degree.

It will be easily seen from the position of Toronto that she must continue to extend her borders, reaching out, within a comparatively short time, to embrace all the present suburbs, which will inevitably be enclosed within her limits, and become incorporated as one great city. Already Leslieville and Brockton have fallen into rank, and soon must Parkdale, having no chance of extension in any direction, join us: then will follow West Toronto Junction, Carleton; and on the north, Deer Park, Davisville, and Eglinton will follow Yorkville; while Chester will be united to Leslieville, and all to Toronto.

In addition to what has already been said in reference to the population, it is safe to say that many now living will see Toronto with half a million of inhabitants.

The advantages already described as to her position as a central point for manufactures, trade, literature, and fine arts, her means of access to so many pleasure resorts, her beautiful parks and squares, shaded sidewalks, healthful climate, and her educational advantages, cannot fail to attract large numbers of wealthy, retired families to reside, and capitalists to invest, in our city.

"See Naples and die!" says an Italian proverb, just as though after that there is nothing else worth living for! It may yet become a proverb to say, what is already worth saying,

"SEE TORONTO AND LIVE IN IT!"
