

Picturesque PORT ARTHUR

Over Sixty Illustrations, Portraying the more Important Points in and around Port Arthur

Published by The James Bayne Company, Grand Rapids, Michigan, U. S. A.

HE city of Port Arthur, with a present population of 14,000, occupies a commanding position at the head of Canadian lake navigation. The present prosperity and growth is due to several causes, among them being the location of the Canadian Northern Railway Lake Superior terminals here. We are the youngest city in Canada and are very proud of our position as the pioneer in municipal ownership and operation of

our utilities, among them being our electric street railway with over nine miles of track. We own and operate our electric lighting system and develop our own power for it and for our street railway and waterworks pumping plant, and are able to furnish power to local industries, the cost to users being \$20.00 per h. p. per annum for a 24-hour service. Our domestic light costs the consumer less than in any city in Canada. Our municipal telephone system has at present 1,000 domestic and business 'phones, which cost per year \$12.00 and \$24.00 respectively. Arrangements with the city of Fort William give subscribers an exchange of over 2,000 'phones, and this number will be increased during the present year to fully 2,400, as soon as new switch-boards, which are being installed, are completed. The city also owns and operates its own waterworks system, which is being rapidly extended.

These advantages and many others should, and do, make Port Arthur a very desirable place of residence, as all our franchises are yeilding a handsome surplus after providing for sinking fund and repairs, which surplus is applied to the reduction of taxation. In addition to these advantages the city has aquired and set aside a large tract of land for the location of manufacturing industries, which are sure to center here, as they will have the markets of

the great and growing west well within their grasp. There is not the least doubt that within 20 years the greater portion of the population of Canada will be west of the great lakes, so that from a manufacturing point of view this young city holds the key for those who are astute enough to take advantage of the situation and get on the ground while the conditions are most favorable for securing a foothold.

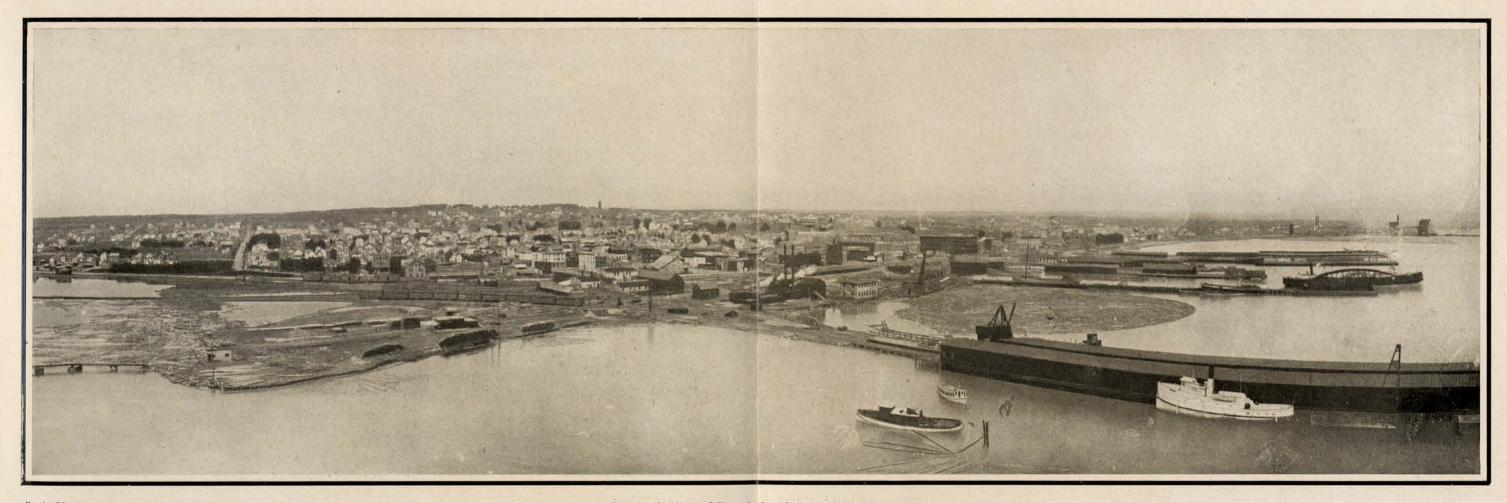

Among the manufacturing industries already established here are the Pigeon River Lumber Company and Vigars-Shear Company with an annual cut of 25,000,000 feet, which finds a ready market in the west. The handling of grain at this point is too well known to need elaborate comment. The British American Elevator Company handled during 1906-07 about 20,000,000 bushels of grain. The King Cleaning Elevator, for the special treatment of damaged and unmarketable grain, adds very materially to the total. The Canadian Northern Coal & Ore Dock Company has built at this point the most modern coal handling plant in Canada. The Atikokan Iron Company is another industry which will be of very material benefit to the city and district. Their blast furnace and coking plant has been erected during the past year at a cost of \$1,000,000, the capacity of the furnace being 200 tons of pig iron daily.

This bald statement of facts can be substantiated by figures, which are more convincing than anything else. The City Clerk and Treasurer, Mr. James McTeigue, will be glad to furnish further information to any one interested.
