T. G. HARRMAN, B. CO. LITH. TORONTO

THE present efficiency of STOVES is the result of centuries of patient study and experiment. How to combine the laws of heat and cold, to overcome the resistance, and bring under yoke each of these elements for the comfort and convenience of mankind, is a subject that has engaged the thought of many profound minds.

Discovery after discovery, and experiment after experiment, have been made, until now instead of being huddled together around a camp fire, or frizzled to suffocation in the smoky chimney corners where our forefathers sipped their ale and spun their yarns, it is ours to join the family circle around the kitchen RANGE—not the unsightly "black box" of years ago—but a "thing of beauty" in the home; or to indulge in "home sympathies and charities" in the cheering glare and genial warmth of an elegant Art Base Burner.

The stoves of our day form a part of our civilization. In the making of many stoves there is no end, but there is a limit to the number of really desirable ones.

Stoves and Ranges manufactured by Chown & Cunningham, (limited), have enjoyed the reputation of durability and efficiency for the past 30 years. The experience of these years enables them to produce such goods as are at once pleasing to the eye and perfect in operation, made and fitted by skilled workmen.

Their **Standard Range** is a FAVORITE with hundreds of housekeepers, who attest its many excellent qualities.

The **Art Favorite** for 1887 combines all the features of a first-class Base Burner. It is new, cheap and beautiful. It will give pleasure and satisfaction.

For these and other styles you will be safe and wise in seeking the local dealer who sells **Favorite Stoves and Ranges**.

If there be no agent write to us direct, and we will send you cuts and prices.
