TORONTO, ONTARIO.

## Gentlemen,-

I have much pleasure in introducing to you the Universal Moulding Book, being the first of the kind published in the Dominion, Containing full size sections of Mouldings in great variety, Architraves, Brackets, etc., with price attached, making a complete and valuable guide to those engaged in the building trade.

My Factory being replete with the newest and best kinds of Machinery, I are prepared to furnish anything in my line at reasonable rates and at short notice.

Thankful for past favors,
. I remain, yours truly,
WILLIAM BURKE.

# THE UNION EMERY WHEEL 

IS Now THE

## 

It has been awarded the first prize at every Fair where it has been exhibited during the past year in competition with other solid wheels.

The Cnion Emery Wheel is entirely mineral. Contains no glue, shellac, rubber or other gummy substance. They do not glaze or heat the work, are Absolutely free from smell, and require only three-fourths the speed and power to run them of other Solid Emery Wheels, and will do good work at less than one-half the speed. For this reason they are used successfully in foot lathes, and will grind knives or tools without drawing the temper.

The Union Emery Wheels save time and money, and are always in order and ready for use. A given amount of grinding or polishing can be done in less time, better and cheaper with the Union Wheel than with files, grindstones, covered wheels, or other Solid Wheels.

Our wheels are now ruming with complete success in Locomotise, Sowing Machine, Safe, Axle, Sal-Tron, Stove, Fork, Hardware, Gun, Mowing Machine, Mow, Saw, Tool, Watch, Tube, Boot and Shoe, Wood-Worknc, and other Manufactories, in Railroad, Repair, and other Machine Shops, and in Foundries; for grinding Stecl, Wrought, Cast and Malleable Iron, Brass, Rubber, Glass and Stone,--roughing castings of all kinds -grinding every description of tools required by mechanics ; AND Fon Gimance saws and grinding planing, curriers' and bookbindelis' kNivis, timy alde veqquilled. And we guarantee them for the above purposes, reserving the right, i whsatisiactory, of sending a wheel of a different grade in exchange.

The best Wellington Mills Emery, of all Nos., is used in the manufacture of the Union Emery Wheels-Nos. I to 16 for very rough work; 16 to :30 for rough and rapid grinding; 36 to 46 for finer grinding and sitw-summing; St to so for tool grinding and coarse polish ; 90 to washed flour for polishing.

## UNIVERSAL WOOD - WORKER, <br> HAMILTON, OHIO.

## PRICEIIST.

NO. 1.-UNIVERSAL WOOD WORKER, WITH BORING AND ROUTING MACHINE.
Is furnished with the Combined Adjustable Fence and Bevel Rest, Patent Gaining Frame, Patent Saw Frame, one $2 \frac{1}{2}$ inch and one 4 inch Moulding Head, one 8 inch Straight Head and Knives, Countershaft and Pulleys.

The following is a description of some of the pieces fumished with this machine :
The combined Adjustable Fence and Bevel Rest is fastened with two thumb screws to the back table top on which it can be mnved to and from the cutter knives. It serves as a guide for the work when jointing plain work, rolling joints, glue joints, hand matching; squaring bed posts, banisters, table legs; panel-raising, rabbeting, plowing, \&c. As it is adjustable, it can be changed quickly from a right angle to any angle, and is always ready for immediate use.

The Patent Gaining Frame is used for guiding the stuff when passing over the gaining hearl. It can be set in a moment for any desired angle or square cut, and slides in the recess provided in the top of the table, in which it rests firmly, requiring no bolting or other fastening to the machine.

The Patent Saw Frame is provided with a slot for the reeeption of the saw, rip or cross-cut. It serves as a bridge between the table tops and requires no fastening or bolting to the tables, being constructed to rest firmly between the same, thereby forming a most accurate and substantial saw table.

The Boring and Routing table, which is on the other side of the machine. is used for all kinds of boring and routing and is equal to any machine of this capacity.

The Boring Table has a slide of 13 inches, and 12 inches diop. The Routing Table has a lateral motion in a slot provided for in the Boring Table. On the same ber, table and fence posts can be routed and round ended mortices made.

This Machine is built entirely of iron and steel, in the most substantial manner. The table tops are accurately finished and ground to a true plane. The cast steel Arbor of $1 \frac{3}{4}$ inches diameter runs in self-oiling web boxes of long bearings, which are lined with the best anti-friction metal. The machine is provided with index to guide the operator in adjusting the beds for the depth of cut. required.

On the Front of Universal Side the machine will plain hard or soft wood up to 8 inches wide, and smooth it at the same time, so as to dispense for most work with finishing or sand-papering. The side is used to perform the following operations, which we guarantee in every particular to perform with the utmost accuracy and dispatch, viz.: Planing out of Hind, parallel or taper; Smoothing; Jointing, one or more pieces up to 8 inches wide and making a perfect glue joint, square or bevel; Squaring; Bevelling; Cornering and Chamfcring, which work can all be done with the same cutterhead, requiring only to adjust the tables for depth of cut wanted, and done in a moment while the machine is in motion.

Gaining and Plowing, making a square, bevel or round gain or groove from $1 \frac{1}{4}$ up to 8 inches, or making gains for letting in boxes for car and agricultural work, which require a bevel and square cut. Our patent Gaining Heads are so constructed as to make a smooth finished and accurate gain or plow, with or against the grain. Two or more gaining heads of different sizes and shapes, may be used at one operation.

Rabbetting, any cut from one-sixtcenth to one and one-half inches deep, and three and one-half inches wide. The rabbetting head is also used for halfing the ends of the work, tenoning, rabbeting between ends, etc., etc.

Panel Raising, raising and fimishing one or both sides of a panel at the same operation, with square, bevel, scotia, or ogee raise
NO. 2.-UNIVERSAL WOOD-WORKER, WITH STICKER OR MOULDING SIDE TO PLANE ONE SIDE.

## HARCOURT'S PATENT SASH CHATN:

The time has come when all Public Buildings and the better class of Private dwellings should be fitted up with something more enduring than any cotton or hemp sash line can be. It saves time, trouble and expense in replacing broken lines; and for a metal chain is astonishingly cheap. It is approved and adopted by the architects of both the Dominion and Ontario Governments, and is ordered tor the New Post Office Toronto, Central Prison, Toronto, Agricultural College, Toronto, besides many private buildings.

Read the following certificates from leading architects:-
Toronto, June 28, 1872.
Mr. J. ROLLO, Toronto.
Dear Sir, - I have much pleasure in bearing testimony to the excellency of the Sash Chain supplied by you, as I consider nothing else should be used for the sashes of large windows such as are in stores, public buildings; and also the larger windows in private buildings. I have had considerable experience with sash chains in the old country, and have never known them to break or get out of order, and those I got from you have given every satisfaction.

Yours truly,
HENRY MACDOUGALL, Architect, dc.
Mr. ROLLO :
Dear Sir,-I believe the Sash Chains imported by you are well adapted in point of strength and durability for hanging the heaviest sashes. The Bank of British North America has directed me to use them in their new building, which will be fitted up with heavy British plate glass. HENRY LANGLEY.

TT: Send for sample and Circular to J. ROLLO, Toronto, Sole Agent for the Dominion of Canada:
