Modernize Your Old Building with

SUPERIOR WINDOWS

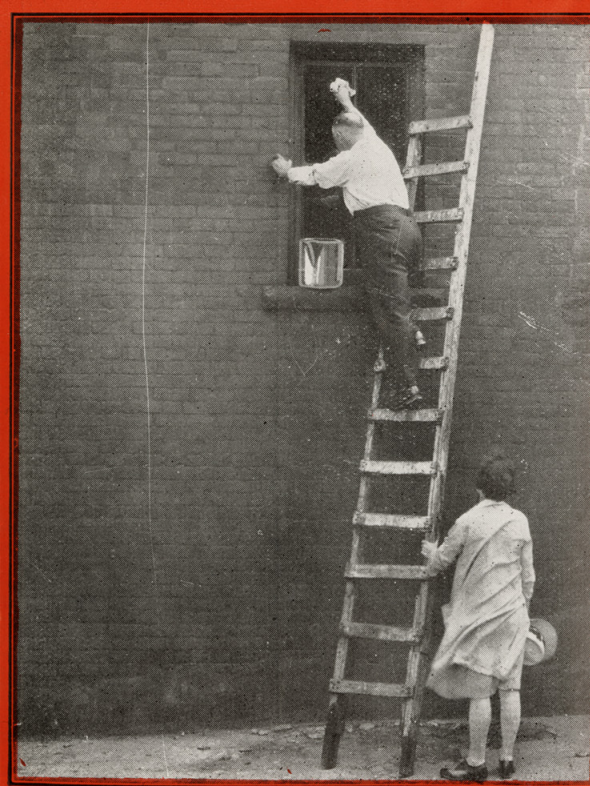

ONCE USED—ALWAYS USED

EVERYONE knows the many inconveniences caused by Old Style Windows—no Ventilation, without a direct draft, perhaps no ventilation at all because windows have stuck. When they need cleaning we shun the job and look upon it as a necessary evil fraught with danger due to the awkward positions we sometimes have to assume to achieve our object. Superior Windows have eliminated all this. By installing them in your present building you can have ventilation at ALL TIMES without direct draft, always easy to open, rain cannot blow in. Can be cleaned both sides without leaving the room.

If you have windows on weights and sash cords, we can remove the troublesome cords, and replace same with sash chain and apply our Superior hardware, which means that you can operate each window separately, and have all the rest of conveniences of tilt-in for cleaning or indirect ventilation, etc., as we have in the new way.

If your old windows have no weights we can counterbalance them by applying our Superior hardware, and you have the same advantage as the new window. In either case we use your present sash, if they are in good condition.

Which Way Do You Prefer?

When a Professional Window
Cleaner can make a costly
mistake and fall, what
chance have you?

Why then should you
Take the Chances?

SUPERIOR WINDOWS

(MADE IN CANADA)

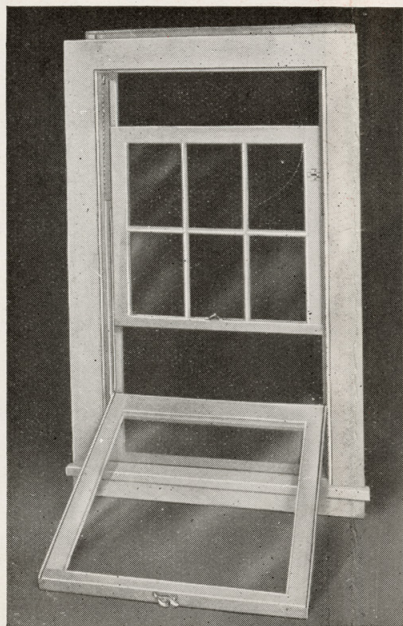

100% SAFETY

No More Balancing on
Window Sill or Ladder

Simple to Open Easy to Clean
Do Not Interfere with Outside Screen

“OUTSIDE
CLEANED
INSIDE”

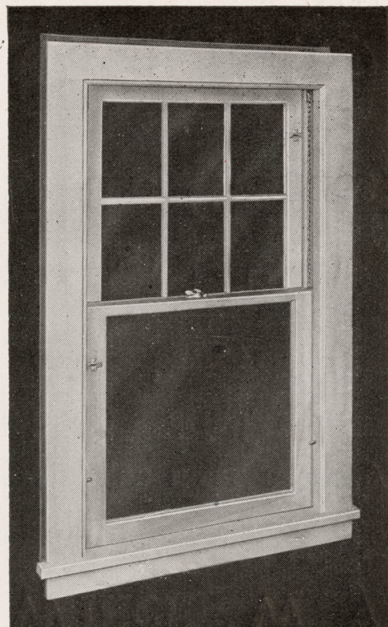

WEATHER PROOF

The Superior Windows are equipped with a perfect wind-proof and dust-proof weather stripping.

The Windows are closely fitted and will not rattle. They are constructed so that swelling or sticking from damp weather is greatly reduced, but these windows may be opened for ventilation, regardless of any amount of swelling.

EASILY INSTALLED

Superior Windows are easy and economical to install, because they are made of the regular standard stock. The Jamb and Sash are the same as your ordinary lip-windows. You will notice that the cost of manufacturing is practically the same, but you will have a weather-stripped window which is superior to all others, because the weather-strip runs into the sash, which means that the window is weather-proof no matter how much it shrinks or swells.

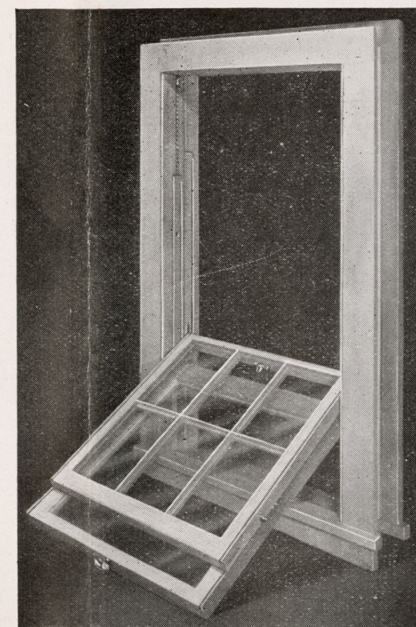

VENTILATION FOR HEALTH

The lower sash can be tilted in at different angles as desired.

This allows perfect ventilation without direct draft. No ventilators or other added devices necessary.

The window is locked while open, permitting ventilation and safety while away from home.

Rain cannot blow in, nor can curtains blow out. Ventilate while RAINING and STORMING.

EASY, SAFE CLEANING

Window Washing Made Easy.

Both upper and lower sash, tilted into the room, eliminates the danger and cost of washing windows from the outside.

Each sash is removed instantly to repair a broken glass, which is done without the use of tools or without marring the wood-work.

Does not interfere with the screen on the outside.

SUPERIOR WINDOWS

PATENTED

SUPERIOR Windows are the only windows to use in Houses, Apartments, Office Buildings, Hotels, Schools, Hospitals, etc., on account of the indirect ventilation, which can be had day and night, thereby allowing fresh air in your rooms at all times, even while you are away, as these windows are locked while open. This ventilating system is approved by Health Officers. Builders who install this window in their houses, will find ready sales for their buildings, because the buying public will soon be demanding these health-giving, labor-saving windows in the homes they intend to purchase. Superior Windows are absolutely wind-proof, dust-proof, and rattle-proof; three things that cannot be obtained with ordinary windows, unless at a great expense. The Superior Window is ALREADY equipped. You do not have to spend money to make them perfect. **FIRST COST—THE ONLY COST.**
