Something New!

SIMONDS Planer Saw

It's called "Planer" because it makes such a remarkably smooth cut. In fact it leaves a sawed surface that is practically as smooth as it would be if run through a planer.

It is unlike a Novelty Saw in that it will stand heavy hand feed and will not burn the wood.

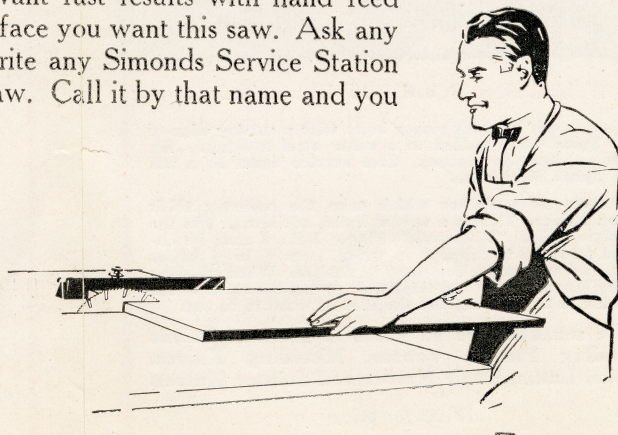

It is made 6 inches to 24 inches in diameter. It cuts off or splits. Whenever you want fast results with hand feed and require a smooth surface you want this saw. Ask any Simonds Salesman or write any Simonds Service Station about the new Planer Saw. Call it by that name and you will get the right blade.

Simonds Planer Knives.

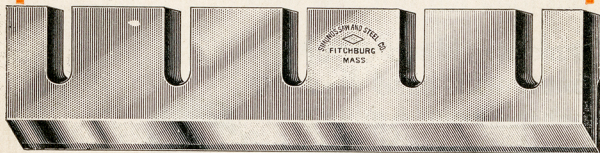

RED STREAK

High Speed Steel Knives

Simonds Red Streak High Speed Steel Knives are made of extra quality High Speed Steel, which is made in our own Steel Mills.

Red Streak Knives are accurately ground and balanced, and have greatest resistance to shocks. Simonds Knives run longer without grinding or jointing. They are heat treated in the most modern and scientific manner, thus assuring a uniform temper throughout.

These knives may be ordered from our factory. When placing orders specify length, width and thickness, make of machine, and kind of wood to cut.

Welded High Speed Steel Planer Knives

"Tungsweld," a thick planer knife with a cutting edge of High Speed Steel welded to a softer steel backing. An exclusive Simonds process. Give service equal to a full High Speed Steel knife.

Operates on machines which take the ordinary thick carbon knives. This is a welded knife, not brazed like the old style knife. "Tungsweld" Planer Knives may be obtained from 3½ to 6 inches in width, from ¾ to 5/8 inches thick, and any length that may be desired. When ordering specify length, width and thickness, giving the name of the machine to be used on, and the kind of wood to be cut.

We manufacture all kinds of machine knives including Planer, Veneer, Moulding Knives, Spoke, Lathe, Chair Knives and Jointer Knives.
